EXECUTIVE SUMMARY

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, has revealed that there are 5 FTTS sites within approximately 0.075 miles of the target property.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, has revealed that there are 5 HIST FTTS sites within approximately 0.075 miles of the target property.

AMERICAN NICKEL ALLO	318 THIRD AVE.	0 - 1/8 (0.000 mi.)	AT404	856
Database: LEAD SMELTER 2, Date of Government Version: 04/05/2001 Site number:: 250				

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, has revealed that there are 22 US AIRS sites within approximately 0.075 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/15/2019 has revealed that there are 358 FINDS sites within approximately 0.075 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 2 NY HSWDS sites within approximately 0.075 miles of the target property.

EXECUTIVE SUMMARY

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2019 has revealed that there are 284 NY MANIFEST sites within approximately 0.075 miles of the target property.

NY SPDES: New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

A review of the NY SPDES list, as provided by EDR, and dated 01/30/2019 has revealed that there are 3 NY SPDES sites within approximately 0.075 miles of the target property.

NY COOLING TOWERS: This data includes the location of cooling towers registered with New York State. The data is self-reported by owners/property managers of cooling towers in service in New York State. In August 2015, the New York State Department of Health released emergency regulations requiring the owners of cooling towers to register them with New York State.

A review of the NY COOLING TOWERS list, as provided by EDR, and dated 01/08/2019 has revealed that there are 11 NY COOLING TOWERS sites within approximately 0.075 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 0.075 miles of the target property.

FULTON MUNICIPAL WOR	NEVINS, DEGRAW AND S	0 - 1/8 (0.000 mi.)	W262	530

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 25 EDR Hist Auto sites within approximately 0.075 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 12 EDR Hist Cleaner sites within approximately 0.075 miles of the target property.

EXECUTIVE SUMMARY

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

NY RGA LF: The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

A review of the NY RGA LF list, as provided by EDR, has revealed that there are 12 NY RGA LF sites within approximately 0.075 miles of the target property.

NYC-HA WYCKOFF GARDENS (Continued) **1000550126**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"2/2/07 - Raphael Ketani. I called up Joseph Magro of Chief Energy (718) 438-6676 and he told me that there was no whistle on the vent pipe and so the oil came out onto the sidewalk - about 3 gallons. He said that the driver put down absorbent and that they are cleaning the sidewalk now. I tried to get ahold of the owner of the property, but had to leave a message. 2/5/07 - Raphael Ketani. I finally reached the owner, Peter Rayo (718) 858-0702. I asked him about the spill. He said he wasn't aware anything had happened. He said he would call me back. 2/7/07 - Raphael Ketani. I called Mr. Rayo. He said that he spoke to his super. and everything is cleaned up. He said it was the super's fault as he ordered too much oil. Mr. Rayo said that the buildings had been owned by his son-in-law who did nothing to maintain them. He said the judge gave his law firm the buildings to maintain by court order in a matrimonial suit between his daughter and the son-in-law. He said he is stuck with the stupid super. He said that he will have a whistle put on the vent pipe so that the spill doesn't happen again. Based upon the small size of the spill and my conversations with Joseph Magro and Mr. Rayo that the spill has been cleaned up, I am closing the case. "

DEC Memo:	"10/16/06-Hiralkumar Patel. DEC Rahman spoke with Ms. Brown. as per Ms. Brown, initially it was thaught that oil was coming through ceiling but later they discovered oil was on the rail track and was not dripping from ceiling. oil has been cleaned up properly. 10/20/06-Hiralkumar Patel. received fax from Rachel Kron from NYC

Actual:
41 ft.

N/R LINE (Continued) **S108295000**

Tansit. as per Ms. Kron they have removed about 180 gal of oily water from different part of track on 10/14/06. they found more oil on Wed. 10/18/06. took oil sample. oil is more viscous that #2 oil. they believe it coming through base of track floor. 11/3/06-Vought-Spill transferred from DEC Patel to DEC Vought. File review by Vought Fax from MTA Offfice of System Safety (Rachel Kron 646-252-5777)-10/19/06. Enclosed is the spill summary from the spill reported on Saturday October 14, 2006 and again observed on Wednesday, October 18, 2006 . Spill noted on tracks at Pacific and 4th Ave. (N/R line) in Brooklyn at 412am on Sat, 10/14. On track F1/Southbound local. Initially reported to OSS at approximately 11am as 2 and 1/2 gallons and adsorbents applied. At approximately 1:30pm OSS received a call stating there is 200ft of trough (3 inches deep) with oil/water in one area and 15 Ft of trough (2 inches thick) in another area with oil/water. The oil appeared to be brown in color similar to engine/hydrualic oil but more viscous than No. 2 oil. OSS responded by hiring Clean Ventures and recovered 180 gallons of oil/water mix via vacuum truck. On Tuesday night similar conditions were observed in the track. On Wednesday, OSS observed another 5 gallons on F-1 track and samples were collected in both the liquid form and on absorbent pads. It is more viscous than No. 2 oil. There is no indication of the source of the material. There is no staining on the ceiling and no identifiable cracks in the walls in the area or on the tracks. Therefore, it may be seeping through the base of the track floor . Samples will be sent for analysis (for fingerprinting via GC as per subsequent email from DEC Brown). 11/3/06-Vought-Spill transferred from Patel to Vought. Vought sent email to Brown requesting current status and site visit (if necessary). 11/13/06-Vought-Received call and spoke to MTA DeLuca and once initial clean was performed by MTA problem did not reappear (seepage did not continue). As such DeLuca requesting no further action which was approved by Vought. If problem reappears, additional site visit will be performed and potential sources will be investigated by DEC. Spill closed by Vought. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 5/3/04 tipple responded as requested by USCG. Tar balls floating up from mass on bottom of canal. DEP also responded as requested by USCG because it was near thier outfall. The petroleum on the bottom of the canal is an old problem that apparently had been disturbed, tarballs were floating up from the bottom resulting in a sheen. Barring the dredging of the canal, this will continue to be an occasional annoyance. "
Remarks:	"Caller reports unknown amount of what is believed to be oil in the Gowanus Canal. Caller believes it is coming from the Unknown Fuel Depot at 210 Douglas Street. Coast Guard is enroute to the scene. No cleanup company has been contacted as of yet. "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Town: New York City
Record Added Date: 06/05/2017
Record Updated Date: 07/13/2017
Update By: GWCROSS
Site Description: Location The site is located at 234 Butler Street in the Gowanus neighborhood of Brooklyn, New York (Kings County) and is denoted on the New York City Tax Map as Block 411, Lot 24. Alternative addresses for the site include 226 Nevins Street and 228 240 Nevins Street. The site is located in an urban environment. Site Features The site occupies an area of about 52,000 square feet and consists of a two-story, brick and concrete masonry commercial building and

234 BUTLER STREET (Continued) **S121102082**

adjoining one-story warehouse building along Butler Street, a brick and concrete masonry maintenance building containing eight contiguous vehicle garages along Nevins Street, and an exterior, concrete-paved parking and storage lot for sanitation trucks. According to a 1956 USGS Brooklyn N.Y Quadrangle 7.5-minute Series Topographic Map, the site sits at an elevation of about 12 feet above mean sea level (msl). The topography of the site is generally flat, and the surrounding area slopes to the west towards the Gowanus Canal, which adjoins the site to the southwest. The site is located on the northeastern portion of the city block bound by Butler Street to the north; Nevins Street to the east; Block 418, Lot 1, followed by DeGraw Street to the south; and Block 411, Lot 14 and the Gowanus Canal, followed by Bond Street to the west. Current Zoning and Land Use According to the New York City Planning Commission Zoning Map 16c, the site is located within a M2-1 manufacturing district. M2 districts occupy the middle ground between light and heavy industrial areas. The district has a maximum floor area ratio (FAR) of 2.0. The Department of City Planning is in the process of rezoning the Gowanus neighborhood to allow for more residential development; therefore, a mixed-use commercial and residential project is anticipated to be built at the site. The project will be consistent with the goals of the City Council as embodied in the NYC zoning districts. The New York City Department of Finance classifies the site buildings as G-1 garage/gas station . The site has been owned by 226 Nevins Street Corp. since 1978. Past Use of the Site The following historical site usage may have led to site contamination: ? -City pipe yard (1904); ? -NYC water supply, gas and electricity department repair companies (1945 to 1949); ? -McNally Trucking Corp. (1969); ? -Truck and automotive maintenance Inc. (1976); ? -Sanitation Repairs (1976 to the present); ? -Truck parking and motor freight station (1977 to 1988); ? -Diesel Corp. (1985 to 1992); and ? -Truck parking and sanitation truck repair (1991 to 2007) Site Geology and Hydrogeology The site is located in a developed area of Brooklyn, New York that is generally covered with paved roads, walkways and buildings. The built environment is generally underlain by fill material used for construction and development since the mid-1800 s. The following description of the proposed brownfield site geology and hydrogeology is derived from the environmental reports referenced in the Environmental Assessment section below. The area surrounding the Gowanus Canal, including the proposed brownfield site, was originally part of the former Gowanus Creek and associated wetlands. In 1848, the State of New York authorized construction of the Gowanus Canal as well as the draining and filling of the wetlands of South Brooklyn. By 1869, the Gowanus Canal was completed with the current street configuration surrounding the canal. According to soil descriptions provided in previous environmental investigations (discussed in Attachment C), the subsurface strata at the proposed brownfield site consists of historic fill material characterized by fine to coarse sand with varying amounts of cobbles, gravel, coal ash, brick, wood, clinkers, glass and paper ranging from directly below the surface to depths of 8 to 20 feet. The fill layer is underlain by silt and sand with trace amounts of gravel. Weathered bedrock was encountered at about 151 feet below ground surface (bgs) and bedrock (Fordham Gneiss) was encountered at about 159 feet bgs. According to the Fulton Municipal Works Former Manufactured Gas Plant (MGP) remediation investigation, groundwater depths range from about 5.65 to 7.05 feet bgs. Groundwater elevation measurements recorded from

234 BUTLER STREET (Continued) **S121102082**

monitoring wells in the area indicate that the shallow groundwater, on the east side of the Canal, generally flows westward toward the Gowanus Canal at high and low tide levels. Groundwater in this area of New York City is not used as a potable water source. Potable water is provided to the site by the City of New York and is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Tank Info:

Tank Number:	005
Tank Id:	21665
Material Code:	9999
Common Name of Substance:	Other

Equipment Records:

J02 - Dispenser - Suction Dispenser
C03 - Pipe Location - Aboveground/Underground Combination
L00 - Piping Leak Detection - None
G01 - Tank Secondary Containment - Diking (Aboveground)
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
I02 - Overfill - High Level Alarm
F00 - Pipe External Protection - None

Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	12/01/1985
Capacity Gallons:	7000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	12/09/2015

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Investigative Work Plan submitted on 11/5/07. 5/25/12: J.kann - spill priority assigned as P0 as a part of monthly reporting. 7/22/14: J.Kann - reviewed work plan. 3 permanent wells should be installed. Comments sent to NYCHA in an email today. 12/30/14: J.Kann - part of multi site stip. SIR due 3/14/15 6/3/15: J.Kann - The SIR was submitted on 4/3/15. The SIR was reviewed. 6 borings were advanced and 12 soil samples collected. Minor exceedences of PAHs in 2 locations but attributable to historic fill. 3 groundwater wells were installed and water samples collected and analyzed. Groundwater concentrations were all below TOGS 1.1.1. Site visit made today. Wells were gauged. Water only in wells. Spill closed. NFA. "
Remarks:	"removing a 10,000 gallon heating oil tank. under the tank there was some trapped water that had a petroleum sheen on it. less than 10 gallons are visible."

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY PAH'S FOUND IN SOIL, MTBE FOUND IN GROUNDWATER. PAH'S MAY BE FILL RELATED, RATHER THAN PETROLEUM RELATED. SITE TRANSFERRED FROM KOLLEENY TO I. ISLAM. 11/10/05- Reviewed the GW monitoring report dated Sept. 28, 2005 submitted by Shaw Envtl. The site's only GW contamination remediation through natural attenuation was under semi-annual monitoring by GW samplings. Of the four monitoring wells, only one well was showing MTBE concentration ranging from 9ppb to 44ppb during the last four sampling events. During the latest sampling event in Sept/05, the MTBE level (9ppb)in that well was below TOGS guidance value. However, based on the historical data of the site and as per discussion in a meeting (11/9/05)with consultant & NYCDDC, it was decided to close the spill case and NFA letter is issued today. - II"
Remarks:	"caller received results of soil tests that were done at water pumping station which indicated contamination "

DEC Memo:	"06/10/08 - LZ This spill has been consolidated with spill # 9810785 since they are related to this same property occupied by Bayside Fuel Oil Depot Company. See information about Spill #9810785 in the cabinet files. Especially, a report by a Cleaner Environment, dated 3/2/99 brings detailed information about contaminated soil at 267/285 Bond Street. 267 Bond Street is the address of the office and 285 Bond Street is the address of the service garage on this same property belonging to Bayside Fuel Oil Depot Company. Both the spills refer to contaminated soil found outside those buildings; Spill # 9810785 refers to contaminated soil in connection to removed USTs; Spill # 0208144 is about contaminated soil found at undetermined location on the site 08/21/07 - Zielinski Spoke with Tom Gibbons; he said that the department would determine soon whether the site is accepted into the Brownfield Cleanup Program; he would copy me on the decision. 08-14-07 - Zielinski In his letter, dated August 7, 2007,

BAYSIDE FUEL OIL DEPOT (Continued) **U003074649**

(eDocs) Marcus Simons of AKRF asserts that the spill site has been accepted into Brownfield Cleanup Program, BCP # C224080. Tom Gibbons of DEC is the project manager. 07/05/07- Zielinski Spill #9810785 related to the the subject spill. See information about Spill #9810785 in the cabinet files. Especially, a report by a Cleaner Environment, dated 3/2/99 brings detaied information about contaminated soil at 267/285 Bond Street. 267 Bond Street is the address of the office and 285 Bond Street is the address of the service garage on this same property belonging to Bayside Fuel Oil Depot Company. Both the spills refer to contminated soil found outside those buildings; Spill #9810785 refers to contaminated soil in connection to removed USTs; Spill # 0208144 is about contaminated soil found at undetermined location on the site 05/25/07 - Zielinski Sent a letter to Vincent Allegretti,Bayside Fuel Oil Depot Corp.,1776 Shore Parkway Brooklyn, NY, requesting information about a cause of the release and summarizing the cleanup activities, observations, post-excavation sampling results (if necessary), and also including contaminated material disposal manifests or any other documentation (i.e. invoices, bills, etc.) of cleanup activities must be submitted to this office no later than one month from the date of this letter, Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO contaminated soil letter sent/od/mt 11/14/03 TJD Marcus Simons (AKRF) @ 646 459 3527 called today to inform DEC that AKRF has been retained by prospective purchaser to perform investigation in accordance with DEC directives. AKRF was given 30 additional days to submit an investigation work plan for this site. 3/28/05 - Austin - Reassigned from DeMeo to Zhao - site is a former MOSF - work done under VCP agreement? - review for closure - end"

Remarks: "caller was hired to do aphase 2 test while doing testing contaminated soil was discovered on the site property owner is victor allegretti 1776 shore parkway brooklyn 11214 soil samples are being sent out for testing caller will contact regional office with more info"

Environmental Interest/Information System
SUPERFUND NPL

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 6/22/2000 Abra Consulting (718-624-7490) submitted lab results associated with this site. There was no explanation of what these samples were or what they wanted the state to do with them. There was NO WRITE UP submitted. Lab is South Mall Analytical Labs (516-293-2191) Date is 6/15/2000 - Lab Analysis Number is 107408 thru 107411 Test results show four soil samples tested for VOC and SVOC Sample #1 - clean for VOC - minor hits on SVOC Sample #2 - clean for VOC - slightly higher hits on SVOC (Fluoranthene=566 ug/kg - Pyrene=807 ug/kg) these were highest Sample #3 - clean for VOC - clean for SVOC Sample #4 - clean for VOC - some hits on SVOC - highest hits are: Fluoranthene=920 ug/kg; Pyrene=965 ug/kg; and Chrysene= 487ug/kg 12/2/2003 Transferred from Sangesland to Rommel 7/22/05 TAS Checking the address there is now a KFC located at the site. 11/2/05 TAS Left message with Blandford Construction. A site visit should be conducted and additional followup performed if necessary. 11/20/07: Transferred to Sun/Sellberg. (JS/MS) 4/7/08: Letter send requesting TCR/SIR to KFC HQ in Kentucky. (JS/MM) 5/29/08: Extension granted, paperwork due June 20, 2008. 7/17/08: KFC parent, Yum Brands, state they only lease the property from owner. They are not responsible for any spills or environmental concerns. Gave info for property owner. JS/MM 08/05/08: Transferred to Kolleeny/Mandac. - JK 10/6/08: 2nd letter to RP (in eDocs), TCR or SIWP submission deadline 11/7/08. JK/MM 10/31/08: Received phone call from Heron Jones of Whitaker, Brooke & Harrison Inc. Real Estate Management (RP), asking what I needed to close spill. I explained we needed data from tank closure showing no impacts, or new investigation in former UST area showing no impacts. Mr. Jones faxed me some data, asking if that was what I was looking for. Data were for stockpile soil sample for waste classification. I called him back, explained that data were for soil removed from site; I needed data for end-pt samples mentioned in spill report, showing what's left in ground. He said he thought he might have that and would mail to me. -JK 11/05/08: On 11/3/08, received 7/19/00 Tank Closure Summary rpt by Abra Consulting & Contracting, Inc. from Mr. Jones. Report summarizes removal of 10 550-gal gasoline USTs, and presents end-pt sample results showing no VOC exceedances, but SVOC exceedances from sample on east side of pit, and text mentions field evidence of petroleum impacts from tanks, including PID readings up to 648 ppm. Rpt concludes by recommending a soil & GW investigation. I called Mr. Jones and explained that tank closure rpt he'd sent indicated tanks had leaked, and recommended further investigation, and that he must submit work plan for investigation. I sent him follow-up email: As we discussed on phone, NYSDEC requires that potential impacts to GW at site be investigated before we can consider spill closure. You indicated you may not be able to meet deadline of Nov. 7, '08 for submission of site investigation work plan. Please send request for deadline extension, indicating reasonable amount of time you will need. Ideally, investigation work plan should involve proposal to drill 2 or 3 borings (preferably 3)

KENTUCKY FRIED CHICKEN STORE (Continued) **S104621791**

in or around area where USTs were formerly located, down to local water table, and collecting soil and GW samples. Use of Geoprobe or similar direct-push drill rig and temporary well points to collect GW grab samples (rather than installing permanent wells) is acceptable. Feel free to contact me if you have questions. - JK 11/06/08: Received email from Heron Jones: As we discussed yesterday on phone that we would need an extension from November 7, 2008 deadline to have this test done. I am in contact with company that did work in 2000 but they cannot give me a complete date as yet. I wrote back: Deadline is not for performing any tests or actual site work, it is for submission of an investigation work plan. Consultant should be able to give you an estimate of time they will need to prepare an investigation work plan. Typically, 3 or 4 weeks should be more than sufficient (I'm sure it could be done in a week, with proper motivation). Please send request for an extension of deadline for submission of an investigation work plan by tomorrow, Nov. 7, '08, since that is current deadline. - J. Kolleeny 11/07/08: Received email from Mr. Jones: Due to fact that we just got in touch with contracting company that did work at site, we are asking for 3 weeks extension from Nov. 7, '08 deadline date to submit an investigation work plan. I wrote back: Your request for 3-week extension of deadline for submission of investigation work plan is approved. New deadline for submission of investigation work plan is Nov. 28, 2008. Please be advised that failure to meet this deadline may result in referral of spill case to Legal Department for initiation of enforcement proceedings. Feel free to contact me if you have questions. - JK 12/01/08: Received email from Mr. Jones: I have been in touch with Mindy at Abestway, contracting company that did the work. He explain to me that he will get the paper work to me and here I am Dec. 1 and still nothing from him. After several calls to his office and mobile phone, and a walk-in visit to his office I was told he is on vacation and will be back on Thursday. I am asking for another extension please. I sent email reply: I will extend deadline until Friday, Dec. 12, 2008, but no further. This deadline is for submission of a site investigation work plan, which does not have to be an extensive document - a few pages of text describing site history (in terms of petroleum storage, tank removal, reported spill cases, etc.), proposing several locations to drill borings to collect soil and groundwater samples, and describing sampling methodology, and a site diagram showing proposed drilling locations. If this consultant cannot accommodate your scheduling requirements, you should find another consultant who can. Any qualified environmental consulting company can put together an investigation work plan like this; it does not need to be done by company that has previously worked on this property. Please contact me if you have any questions. - JK 01/08/09: Reviewed and approved Limited Subsurface Investigation work plan dated 1/5/09. Work to be completed includes installation of 3 temporary monitoring wells, collection of soil and groundwater samples, and submission of an investigation summary report. SIR due 03/09/09. A. Avracen is to email and send a hardcopy of work plan with corrected date and site address. Contact info: Consultant - Cosmos Environmental Services Alexander Avracen ph: 516-374-7890 cesalex@msn.com RP - Heron Jones Whitaker, Brooke, & Harrison, Inc. 261 Adelphi Street Brooklyn, NY 11205 Office ph: 718-834-2500 ext. 11 Cell: 917-642-2124 heron@wbhinc.com (JK/KG) 01/20/09: Rec'd hardcopy and pdf of subsurface investigation work plan with requested changes. (JK/KG) 01/29/08: On 1/21/09 Jon rec'd email from John Hofmann of

KENTUCKY FRIED CHICKEN STORE (Continued) **S104621791**

Environmental Assessment & Remediations (EAR - hofmann@enviro-asmnt.com, (631) 447-6400 ext. 113) with a scope of work that included plans to conduct a subsurface investigation. A subsurface investigation work plan submitted by Cosmos was already approved. Mr. Jones has decided to use EAR instead of Cosmos. On 1/22/09 Jon emailed Mr. Jones the following: Mr. Jones, This is problematic for us, as we already consider there to be an approved investigation work plan in place. In addition, what Mr. Hofmann has submitted is not really a work plan, with the scope of work in the body of an email and 1 attached aerial photo with proposed drilling locations shown. In addition, his scope of work does not include soil sampling (which we require), and his assumed regional groundwater flow direction (NW) differs from the direction assumed in the Cosmos work plan (SW). Since the actual groundwater flow direction at the site has yet to be determined, Mr. Hofmann's proposal to drill two borings in his presumed down-gradient direction does not adequately cover other possibilities. At this point, Mr. Hofmann should either implement the existing approved investigation work plan, or he should modify and complete his work plan to meet our requirements, and submit the complete plan (text, site location figure, and site plan with proposed drilling locations) to DEC as a pdf and a hard copy. The report should be submitted to the attention of Ms. Kathleen Green, who is the case manager for this spill site. Ms. Green's phone number is (718) 482-4602, and her email address is kxgreen@gw.dec.state.ny.us. In either case, the deadline for submission of the investigation summary report will remain March 9, 2009. Please let me know if you or Mr. Hofmann have any questions. Sincerely, Jonathan Kolleeny On 01/28/09, EAR submitted a SIWP which required some modifications. A revised plan was resubmitted and approved on 01/29/09. Scope of work includes installation of 3 temporary monitoring wells, collection of soil and groundwater samples, and submission of an investigation summary report.(JK/KG) 03/04/09: Sent the following email to John Hofmann: As a reminder, the subsurface investigation summary report for the above-referenced site is due on Monday, March 9th. Can you please provide me with a quick update on this site. Have the temporary wells been installed and soil and groundwater samples collected? Please let me know if you have any questions. Rec'd email from John: I have called in for utility mark outs (ticket #90610115), but they have been delayed due to the weather. I soon as I get clearance I will schedule this work which should be very soon. I will notify when we have an exact date. If you have any questions or concerns please contact me anytime. (JK/KG) 03/05/09: Spoke to Heron Jones to make sure he was aware work at site had not been performed. He said that he had not heard from the consultant in a few weeks and called the consultant on Monday (3/2/09) to find out the status of the investigation. (JK/KG) 03/16/09: Rec'd email from Hofmann stating that work is scheduled for 3/18, the laboratory results will take an additional 10 days and the report a week to prepare. I told him to submit the report no later than 4/8/09. (JK/KG) 03/31/09: Left voice message for John Hofmann requesting that he let me know whether the site work was conducted. Rec'd email from Hofmann; work was performed and he plans to submit the report before 4/8/09.(JK/KG) 04/09/09: Rec'd pdf of investigation summary report on 4/8/09; under review. (JK/KG) 04/22/09: This spill case was closed on 4/22/09 and a No Further Action letter was sent to Mr. Jones. The report does not indicate the presence of petroleum-related contamination in soil at the site. Boring B-1 had

KENTUCKY FRIED CHICKEN STORE (Continued) **S104621791**

limited VOC contamination in groundwater. There were a few detected PID readings from soil samples collected at B-1, with a max of 13.8 ppm. A groundwater sample was not collected at the downgradient boring but soil analytical results did not indicate any VOC or SVOC contamination. One soil sample collected at B-2 had a PID reading of 1.2 ppm. The soil at the water table is clayey and tight, limiting the migration of any contamination. (JK/KG) 04/28/09: Rec'd hardcopy of SIR.(JK/KG)"

Remarks: "lot was a gas station years ago and caller is removing tanks and found some contaminated soil"

DEC Memo:	"6/30/14- Zhune spoke to Mark from PTC. He said Mosses was doing inspection couple of month ago at this site and Tim Demeo is doing a follow up. 6/30/14 TJD Site inspection. Multiple PBS vilations noted - unregistered tanks in service identified. Multiple unreported spills identified including product found in outside storage yard (soil affected), inside secondary containment structures for AST's and on concrete surfaces in main garage area, basement and indoor storage area. Out of service tank trucks are being utilized to improperly store waste fuel throughout facility. Facility is being improperly operated as a TSDF. Several hundred drums of petroleum impacted soils are stored in drums are located within trucks and within the indoor storage area at facility. Facility representatives (Mark Salamac and Bob Lamarada) have been directed to transport offsite and properly dispose of all petroleum products not currently stored in registered vessels and transport and dispose of all improperly stored drums contained petroleum impacted soils - proof of properly disposal of all regulated waste being improperly stored at facility is required to be presnted at settlement conference scheduled for July 17, 2014 at the Region 2 office. Facility personnel have been directed to bring all tanks at the facility into compliance with PBS regulations. DEC further required the immediate clean-up and removal of spilled product identified throughout the facility. 7/11/14 TJD File review. Multiple spills open at this location. Spill #1403412 & 1403303 have been closed and cross-referenced to the oldest open spill file at this address for oversight by a single DEC project manager (DeMeo). Primary spill # for this address is 1112454."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource

CROSSBAY BAY CONTRACTING (Continued) **1007760513**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Update By:	KALEWAND
Site Description:	Location: The site is located in an urban area along the Gowanus Canal, within the Borough of Brooklyn, on the northwest corner of Nevins Street and Degraw Street. Site Features: The site is currently improved with a two-story building, which occupies approximately 2,000 square feet of the parcel (242 Nevins Street) and a one-story building, which occupies approximately 16,000 square feet of the parcel (254 Nevins Street). The remainder of the parcel consists of parking, storage, and outdoor work areas associated with the buildings operations, to include vehicle and equipment storage and repair. Current Zoning and Land Use: The site is currently zoned for industrial and manufacturing use (M2-1 district). The buildings are occupied by an automobile repair facility, commercial hauler, automobile upholsterer, production studio, plumbing contractor and general contractors whose operations include vehicle and equipment repair. Adjoining parcels are used for industrial, parking, and open space/recreational purposes, with the surrounding area generally consisting of industrial/commercial uses. Past Uses of the Site: Past use of the site includes a coal company (approximately 1886 to 1950), automobile/vehicle repair (approximately 1938 to 1950, and 2013 to present), an unpermitted solid waste management facility (prior to 1994), a Resource Conservation and Recovery Act Large Quantity Generator (1988), and various trucking and contracting companies (approximately 1969 to present), including a petroleum transporter. Site Geology and Hydrogeology: The site is located in a developed area of Brooklyn, generally covered with paved roads, walkways and buildings. The subsurface strata at the site consists of historic fill material characterized by loose silty sand with varying amounts of silt, sand, gravel, ash, asphalt, brick, clinkers, cobblestone, concrete, glass fragments, metal, and wood extending to depths of as great as 15 feet below grade surface (bgs). The historic fill material is underlain by alluvial deposits consisting of poorly sorted sands with gravel and marsh deposits, referred to as meadow mat, which consists of interbedded sands, clays and silts. Bedrock (Fordham Gneiss) was encountered at a depth of about 159 feet bgs. Groundwater was encountered between 4.54 and 5.6 feet bgs and generally flows westward toward the Gowanus Canal.

Contact Name: ECO JENNIFER OKONUK
DEC Memo: "Ketani responded to the site. 7/6/11 - Raphael Ketani. I arrived at the site at about noon time. The site was a large yard with a gray building on the back left corner that fronts on Nevins Street. The address is 242 Nevins Street (near Degraw and Nevins), Brooklyn, 11217. Several companies had their signs on the corrugated fence. These companies were Brooklyn Truck & Equipment, Phoenix Services Corp. (718) 567-2023, and Cole Partners, Inc. (718) 875-8300. I entered the yard and saw a red painted trailer (posssibly with a cement pump) on the left that had been leaking hydraulic fluid. The floor of the front half of the yard appeared to be partially paved and partially laid with paving stones. There was a steel plate in one location with holes in it. Vehicles were parked on both sides of the front half of the yard, but I did not see any leaks. Next, I went to the back half of the yard. The ground appeared to be only dirt. There were vehicles and construction machines parked along the west side and north edges of the yard. The Gowanus Canal bordered the west side of the yard and the water level was nearly even with the yard (maybe 3 feet below ground level). Most of the trucks belonged to two different garbage carting companies, M&G Carting, 303 5th Avenue, NY, 10016, (212) 689-0332, and Flash Recycling, 132 Ludlow Street, NY, 10002, (212) 673-6194 (Prince Street Station, P.O. Box 515, NY, 10012). Some of the trucks had leaked either motor oil or hydraulic oil. There was oil on the ground near one of the Flash Recycling

242 NEVINS STREET (Continued) **S105841715**

trucks. One of the M&G Carting trucks looked like it hadn't been operational for a long time. There was a rolling container near this truck with many plastic bottles that had contained motor oil. I didn't see any leaking from the container, but this was not a proper container for liquids of any kind. After my tour of the back half of the yard, I entered the gray building. In many places, there was oil on the floor. I saw a zipper drain that looked like it may contain sludge. I entered the office of Brooklyn Truck & Equipment and met ECO Jennifer Okonuk (718) 482-4885 and the owner of the business, Bob Hepplewhite (718) 237-7976. ECO Okonuk informed me that she had called in the spill. She had been making inspections of garages when she came across Brooklyn Truck & Equipment. She said that she had issued two tickets to Mr. Hepplewhite, for noisome and unwholesome. Mr. Hepplewhite, ECO Okonuk and myself toured the garage. ECO Okonuk pointed out the area with oil saturated Speedi Dri next to a 275 gal. waste oil tank and a 275 gal. tank that Mr. Hepplewhite said contained fresh motor oil for the trucks. One of the workers at the garage dug through the Speedi Dri and showed us that there was a concrete floor below. I pointed out to Mr. Hepplewhite that there were containers of motor oil on racks in the back of the oil contaminated area. He said that these weren't his and that they were empty and had been there since before he had moved his business in. Mr. Hepplewhite added that the oil tank next to them also wasn't his and he knew nothing about it. Next, we went outside to the yard. I asked Mr. Hepplewhite about the trucks. He said that he makes extra money by leasing space for parking the trucks. I pointed out the spilled oil, the rolling container with oil bottles, and the derelict truck. I told him that he had to inform M&G Carting and Flash Recycling and get them to clean up the site and remove the oil bottles and the derelict leaking truck (ECO Okonuk claimed it was leaking). He said that he will do this. ECO Okonuk and I asked about the steel plate in the back half of the yard and the perforated steel plate in the front half of the yard, and whether he leased both halves. Mr. Hepplewhite said that he leased only the gray building and the back half of the yard. He added that the plates covered sewer tanks. He went on to say that when it rains, the entire yard floods 8 to 10 inches because the sewers back up under the street. Mr. Hepplewhite added that even the Gowanus Canal floods during the rain storms and spills into his yard. The yard and the vicinity is a low area. ECO Okonuk told me that she has seen this happen, too. He also stated that the building to the south can not be sold because there is oil underground from the coal gasification that took place many years ago. Mr. Hepplewhite commented that the EPA and the NYC DEP did borings throughout the yard and elsewhere because of the underground contamination. While we were in the yard, Andrew Kelly, enforcement officer - Emergency Response Engineer with the ER Unit (718) 595-4761 of the NYC DEP arrived. We went back inside the shop and I went over what needed to be done to clean up the site. These items were: 1) clean up the saturated Speedi Dri and make sure fresh absorbent is kept at this location for any future spills that take place 2) hire an environmental company to do soil borings in the saturated area, along the sides of the zipper drains and in the back half of the yard - if contamination is found, then it will have to be cleaned up 3) call M&G and Flash and have them clean up their spills 4) clean up the floor of the garage and have someone keep on top of the spills with absorbent and power washing (Mr. Hepplewhite stated that the garage is powerwashed once a month) 5) hire a company to clean out

242 NEVINS STREET (Continued) **S105841715**

the zipper drains (Mr. Hepplewhite said that there is a plug at the end of the last zipper and that nothing can flow to the sewers) I told Mr. Hepplewhite that the DEC will be sending a contaminated soil letter to him and to the owners of the property with a C-c to ECO Okonuk. I added that we will want a clean up report after everything is done. Mr. Hepplewhite said that he understood. There was one other spill case for the site. It was #0510846. It involved a 200 gal. oil spill to the yard and the street and the sewer on 12/16/05. Bonafide Energy was the responsible party. A valve had broken. The site was cleaned up by 4/21/06 and the case was closed. 7/8/11 - Raphael Ketani. I tried contacting M&G Carting (212) 689-0332 to let them know that they have to clean up the spilled oil around and under their trucks. However, I reached the answering machine of Frank Mormando. I left a message for him to contact me. I contacted Billy Huang, the owner of Flash Recycling (212) 673-6194. I told him that he had to clean up the spilled oil from under and around his trucks and the pool of stinking leachate. He said that he will get one of his crew to do this. I told him that the oil has to be put in an appropriate container for oil disposal and that the DEC will do an inspection next week to see whether he has complied with our request. I added that if the oil and leachate aren't cleaned up, then he could face fines and penalties. Mr. Huang said that the oil and leachate will be removed. I looked up the property ownership using ACRIS. The latest deed for block and lot 418 and 1 is held by 242 Nevins, Inc., 444 Third Avenue, Brklyn, 11215. The deed date is 7/27/05, it was prepared on 10/5/05, and filed on 1/12/06. The property manager is Marino Mazzei, Bonified Realty, 140 Portland Road, Highland, NJ, 07732, (718) 788-2222. I spoke to Mr. Mazzei and told him about the leaking red painted trailer, the leaking trucks and the spills at Brooklyn Truck & Equipment. I told him that Mr. Hepplewhite will take care of the spills in his garage and that the trucking companies have been notified about the spills from their trucks. Mr. Mazzei said that he will visit the site and see to it that everything is cleaned up. I sent a CSL to 242 Nevins, Inc. regarding the hydraulic fluid that is leaking from the red trailer and the leaking trucks. Another CSL went to Mr. Mazzei regarding the same issues. I also sent Mr. Hepplewhite (718) 237-7976 and Mr. Mazzei CSLs with the 5 items from above. Later, Mr. Mormando, the owner of M&G Carting (212) 689-0332, called me back. He said that he will clean up the spill under and around his trucks and he will have the rolling container emptied. 7/12/11 - Raphael Ketani. Mr. Mazzei cell (347) 231-6440 called. He said that everything that the DEC was concerned about in the garage and in the yard has been cleaned up. He invited me to check the place. I told him that I will this week. However, I added that Mr. Hepplewhite still has to hire an environmental company to do soil borings in the former oil saturated area and along the sides of the zipper drains. He said that he understood. 7/19/11 - Raphael Ketani. The CSL to 242 Nevins Inc. was returned in an unopened envelope as ATTEMPTED - NOT KNOWN. 8/5/11 - Raphael Ketani. I made an unannounced site visit. The oil spill under the red trailer had been cleaned up. The small oil spills next to and around the garbage trucks had also been cleaned up. The small rolling trash dumpsters (about 1.5 cu. yds. each) had been emptied. I met Mr. Hepplewhite. He showed me the area inside the garage that had been badly affected by spilled oil. He said that the oil was actually on sheets of plywood, not on the garage floor. This appeared to be true as most of this area of the garage floor was very clean as if there had never been oil tanks

242 NEVINS STREET (Continued) **S105841715**

here. It was cleaner than it could have been if someone had power washed the floor. All of the tanks and buckets had been removed. However, I did see a darkened corner of this area next to the racks which used to hold containers of oil. I knelt down at this corner, but didn't sense any oil odors. I assumed the darkening to be the result of moisture as it had rained heavily earlier during the week and the corrugated walls were not sealed to the floor. There still were mud puddles in the backyard where the garbage trucks were. Next, he showed me the new location of the waste oil tank. It was now in a larger tank which served as secondary containment - should any of his workers spill oil while transfering it to the tank. The tank was in between the two back garage doors. Mr. Hepplewhite showed me the zipper drains. They were now covered by steel plates which fit flush with the garage floor. The plates had holes so that wash water can enter the drains. He lifted up one plate and I could see the concrete bottom of the drain. There were no odors and the bottom of the drain looked to be in good condition without any cracks. Lastly, he showed me the drums of sediment that had been removed from the drains. The lids were securely attached to the drums and they looked to be ready for pickup. Mr. Hepplewhite said that the person who runs the waste oil pickup company will arrange for the drums to be picked up. I looked at the floor of the shop and it was very clean, except for a small puddle under one engine. This engine had just been drained. I pointed this out to Mr. Hepplewhite and he said that the spill will be cleaned up immediately. After this, I left. As the former waste oil tank area was very clean and as the zipper drains didn't smell as if they had oil and were in good condition, I decided that soil borings weren't necessary at the site. As the spills appeared to have been remediated, I have determined that there is no threat to the public or the environment. Therefore, I am closing the spill case. DLE had issued tickets. So their case will remain active. "

Remarks: "The whole ground of the garage is saturated. Been dumping there for 6 years. No clean up as of yet."

DEC Memo:	"12/20/05-Sharif// Mr. Feroze and I responded to the site on 12/16/05.Approx. 200 gallons spilled all over the yard. Possible source of the spill is a oil tank truck owned by Bonafide Energy whose valve broke and spilled oil. The side walk and street were impacted. PTC has been hired by Bonafide Energy, Marino Mazzei,(718)788-2222 to clean up the yard and remediate the site.I notified DEP about their sewer impact and Mr. Dennis Huacon,(718)595-4722 from Pollution Prevention Section responded to the site. I sent a letter to Marino Mazzei Bonafide Energy, 444 3rd Avenue, Brooklyn, NY 11215. 04/21/06 Sharif Rahman-Rec'd investigation report from ENVIROTRAC. A total of 12 borings were attempted in the reported area of the spill as per previously submitted work plan.Samples were collected and screened visually,olfactoraly and with a PID for the presence of oil.No petroleum contamination was discovered in the lab analytical result. Photographs were included.NFA required."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"During a PBS inspection on 11/1/11, petroleum staining was found on the ground around various UST's. In addition, there was a sheen visible on the water, which should not be present, in the secondary containment basin of Tank 005. On the floor of the boiler room, there were spill pads saturated with petroleum. 1/27/12 Spill case opened today at request of DLE. PBS settlement conference held today. General Counsel will be issuing a consent oprder to PTC shortly. PTC was told today to provide sampling locations and depths of the unpaved areas where contaminated soil was found. They provided photos showing no visible contamination at the unpaved areas. No photos of the secondary containment area of Tank 005 or of the boiler room were provided. PTC stated that those areas were cleaned and epoxied (photos to be required in the compliance schedule). At the meeting, PTC was told that photos opf these areas are required. bf 2/24/12 Yesterday, sent e-mail to Nathan Edeson, engineer. He also e-amiled me on 2/15/12 and called and left messages on 2/15, 2/21, and 2/23. He requested approval of their sampling plan and a copy of the PBS Inspection Report. The contaminated soil in the yard was removed according to PTC. Tjhey will sample in the affected areas. I replied to Mr. Edeson by e-mail yesterday requesting a list of contaminants they plan on sampling for and I provided the inspection report. He replied that they will sample for B-Tex. Today I responded stating that they need to sample for the contaminants listed in Table 3 of CP-51. I sent attached a pdf of Table 3 to the e-mail. bf 9/10/12 Called N. Edeson (917)299-4340. Left voicemaikl message requesting the status of the sampling results. bf 7/11/14 TJD File reassigned from Falvey to DeMeo. Spill #1403412 & 1403303 have been closed and cross-referenced to oldest open spill at this location (1112454) for oversight by a single DEC project manager (DeMeo). All documentation for the above referenced spills will be saved under this file. 08/03/16 TJD File review. PTC and their consultant (Nathan Edison, P.E.) have completed all required investigatory and remedial actions required under the consent agreement. All improperly stored solid waste (drums) have been removed and disposed of in accordance with applicable regulations. All tanks have been emptied and removed or properly abandoned in place. Soil borings have been advanced in all accessible areas and samples collected for laboratory analysis - minor SVOC contamination consistent with urban fill were identified which does not require further investigation or remediation. Groundwater samples were collected from upgradient and downgradient of site with all target analytes within acceptable limits. Based upon the investigation findings no further action in required at this time. Documentation has been uploaded to DECDOCS. "

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110014449409

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Site Description The Gowanus Canal is a man-made navigational waterway in southeastern Brooklyn, Kings County NY. Nearly the entire canal is bounded by hard urban shorelines in the form of bulkheads, moorings, and retaining walls. The site definition includes only the canal and its attached barge slips, totaling slightly over 1.5 linear miles of waterway. Averaging 100 feet in width, the open water area defined as the site totals approximately 1,000,000 square feet or 29 acres. The canal also serves as a storm water drain for the surrounding area. Currently, approximately six square miles of highly urbanized land drains into the canal. Sanitary sewers no longer discharge directly; however, numerous combined sewer overflows (CSO) continue to discharge to the canal during storm events. Industrial discharges from a wide variety of industrial processes were also historically routed to the canal, via private discharge pipes or the municipal sewers. Stagnant water conditions have plagued the canal since its initial construction. To combat this, a flushing tunnel at the north end of the canal was constructed in 1911 to divert water from the Buttermilk Channel to maintain flow through the canal to Gowanus Bay. Operation of the flushing system has had numerous problems resulting in lengthy periods during which it was inoperable. Significant upgrades to this system are scheduled over the next few years to increase the volume of water flushing the canal. Currently the flushing tunnel has been de-activated to facillitate its upgrade and an qxygenation system has been installed at the upper end of the canal. The first of three new tunnel pumps was brought back on line in Jan 2014, and the remaining two are slated for start up in April. Site History Prior to European settlement, this area formed a large tidal marsh, drained by Gowanus Creek and surrounded by higher ground to the west (present-day Carroll Gardens) and east (present-day Park Slope). In the mid 1800s, the Canal was constructed, more or less along the alignment of Gowanus Creek, by straightening and deepening the stream channel and dumping the excavated materials behind rows of timber piles along the shoreline. Combined with other urban filling activities in the surrounding area, the result was a large area of

GOWANUS CANAL SITE (Continued) **S110487590**

reclaimed land with a dendritic, dead-end canal providing barge access through the middle. The canal offered barge access far inland into Brooklyn, effectively increasing Brooklyn s available tidewater frontage for water-borne commerce. Development of the area was rapid, and by 1869, the layout of the canal and the local street network were essentially complete. Long term decline of the local manufacturing economy has led to a marked decrease in commercial use of the Canal, with only a handful of petroleum distributors and concrete batch plants as regular users. Roughly the northern half no longer hosts barge movements as a result of siltation due to the significant CSOs which discharge street waste and sewage solids. The canal has not been dredged in several decades, consequently, substantial amounts of sediment have been deposited in upstream areas, and water depths approach zero at low tide. The sediment consists largely of solids settled from stormwater and CSO discharges. Presumably, industrial discharges to the canal have diminished in line with the de-industrialization of the surrounding neighborhood, although this is difficult to verify directly due to a lack of historical records for comparison.

Env Problem: Water quality issues have plagued the Gowanus Canal almost since its construction. Tidal flushing is largely ineffective due to the length, narrowness, and circuitous layout of the canal channel. Operation of the flushing tunnel has improved the situation during the years when flushing was being conducted; however, the current tunnel requires significant upgrades and is likely to be off-line for a year or more as the upgrades are performed. The canal is currently classified by NYSDEC as Class SD water body, acknowledging that natural or man-made conditions limit attainment of higher standards. Even the SD standards are not currently met. Oily sheens are common on the water surface during low tides, dissolved oxygen levels are low and surface contamination has been identified. Sediment quality is also low. Ongoing CSO discharges have resulted in extensive deposits of settled solids, particularly in the more sheltered areas near the upper end. Some parts of the canal bottom are exposed at low tide. Another particularly important contributor to sediment quality problems is the presence of three former manufactured gas plant (MGP sites) along the length of the canal. Although all three MGPs have been closed for decades, coal tar-impacted sediments have been identified at numerous locations along the length of the canal. The three MGPs are all covered by cleanup agreements with NYSDEC, and are at various stages of investigation,remedy selection and implementation. The Fulton Works, immediately east of the canal at its northern extremity, is in the Remedial Investigation process. The Carroll Gardens site (also widely known as Public Place) is in the Brownfield Cleanup Program, and is slated for remediation and redevelopment as a mixed commercial/residential project. The former Metropolitan works, immediately south of the 9th Street bridge, was partially redeveloped under a Voluntary Cleanup Agreement in 2002-2003. However, more work remains to be done part of the MGP facility lies beneath an active retail building. A Remedial Investigation began in March 2010. Numerous oil storage and handling facilities, asphalt plants,manufacturing facilities and chemical, paint, fertilizer and plastic manufacturers have, or continue to, operate along the canal.

Health Problem: People using the canal for recreational purposes such as swimming and boating may come into direct contact with chemical contaminants and harmful biological organisms. People should avoid any activity that

GOWANUS CANAL SITE (Continued) **S110487590**

would result in swallowing or accidentally ingesting Canal water. Additionally, people using the canal for any purposes should wash their hands or shower after contacting the water, especially before eating and at the end of the day. Those people who are considering eating fish and shellfish caught in the Canal should follow the NYSDOH consumption advisory for fish and shellfish taken from the Upper Bay of New York Harbor. This advisory specifically includes: The NYSDOH recommends that women of childbearing age and children under the age of 15 not eat any fish from the Canal. Other people should eat no gizzard shad, white perch and crab hepatopancreas and crab cooking liquid. Also, other people should eat no more than one meal per month of American eel, Atlantic needlefish, bluefish, rainbow smelt and striped bass. People should eat no more than one (1/2 pound) meal per week of all other fish species except blue crab meat (six crabs per week).

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 11/21/2003 Reassigned from Rommel to Sun. See also Spill # 96-07280 at the same location. 11/26/2003-This spill (#95-06588) is closed on 11/26/2003. The spill is to be investigated and remediated under Spill # 96-07280. 08/25/06-Sun-This spill is reopened since the site address for this spill is 169 Third Avenue, while the site address for Spill #96-07280 is 156-170 Third Avenue. Two sites are across street from each other and are separated by Third Avenue. (Sun) 08/28/06-Sun approves the Site Investigation Work Plan. The Site Investigation Report is due 11/29/06. (Sun) 01/05/07-Sun approves the Subsurface Investigation Report with the incorporation of the following recommended item: 1.Install monitoring wells hydraulically down-gradient of existing monitoring wells MW-3 and MW-4 to delineate the extent of groundwater contamination emanating from the site. However, the Department disapproves the implementation of a Monitored Nature Attenuation (MNA) at this time due to high concentrations of BTEX, including 1,600 g/L for Benzene in MW-3. A more aggressive remedial action plan, including local treatment may be required. There is a typo in the Report on Page 18 under Section 6 Evaluation of Results. In the last paragraph, it states that presence of BTEX concentrations ranging from non-detect to 1,740 g/L. It should be from non-detect to 4,410 g/L . 1,740 g/L is only for Total Xylenes per Table 3. Pursuant to the Stipulation Agreement signed and dated effective December 30, 2005, the Department requires a Remedial Action Plan (RAP) and a revised Subsurface Investigation Report with additional delineation as stated above be submitted by February 21, 2007. (Sun) 02/21/07-Sun: The Department received an updated Subsurface Investigation Report. Based on the result of this additional surface investigation, it is concluded that the contaminant plume has not migrated beyond MW-5 and MW-6. (Sun) 02/23/07-Sun: The Department approves the updated Subsuraface Investigation Report submitted by Impact Environmental, dated February 21, 2007. The Department requires that the Remedial Action Plan be submitted by March 23, 2007. (Sun) 04/16/07-Sun: Sun received a Remedial Action Plan,submitted by Impact Environmental, dated 04/16/07. An on-site enhanced bio-remediation using two combined technologies, Waterloo Emitter and BioCritter is proposed to address the groundwater contamination on-site. (Sun) 05/18/07-Sun: The Department approves the Remedial Action Plan (RAP)submitted by Impact Environmental, dated April 16, 2007. The Department requires that the

169 3RD AVENUE (Continued) **S102150706**

Remedial Action Plan be implemented by August 18, 2007. (Sun) 10/17/07-Sun: A Notice of Non-Compliance was sent from DEC Attorney, John Urda to the RP (Joseph Macchia, Jr) and his Attorney, Howard D. Stave for failing to commence the system startup as required on August 18, 2007 and therefore are in violation of the Consent Order. Pursuant to Paragraph 1 A. of the Order, the Respondents have 14 days from today's date to either cure the violation or submit payment of the suspended portion of the civil penalty. (Sun) 10/29/07-Sun: DEC recreived an email from Walter Berninger of BEI that they are presently working on the installation of this remedial Action Plan submitted by Impact Environmental and approved a few months ago. Based on the limited time frame given BEI installed the four wells last week along with the pits and this morning we received the emitters. I am not asking for any more time as we expect to have everything operational by this Wednesday but, I felt I needed to to let you know it was moving forward. (Sun) 10/31/07-Sun:Sun visited the site today to witness the start-up of the remedial system. Sun confirms that the system startup has commenced within 14 days of John Urda's October 17 letter to Joe Macchia, Jr and his Attorney, Howard Stave. (Sun) 11/19/07-Sun: Sun received the following email from WAlter Berninger of BEI, Joe Sun, Today my Guy Butch will be installing the flow controller and needle valves at the 3rd Avenue site. We did find out that the picture in the approved plan was set up incorrectly. The Rotometer is used with the needle valve to set the flow from the emitter.The picture shows it connected after the regulator and that does nothing. After talking to Waterloo and testing here in our office we discovered it was backwards and will be making the changes.We have been going weekly and everything is working fine. (Sun) 11/19/07-Sun: Sun sent the following email to Walter Berniger, You are absolutely right that the position of needle valve was incorrect before. Please resubmit the revised construction diagram by November 30, 2007. (Sun) 07/09/08-Sun: Quarterly Monitoring Report dated May 2008 showed that total BTEX concentrations ranged from 1 ppb to 34 ppb and MTBE concentrations ranged from ND to 31 ppb. (Sun)

---------- 7/24/08: Reassigned from Joe Sun to Chanda. 8/5/08: Chanda received a Monthly Monitoring Report, prepared by Berninger Environmental, Inc., dated July 2008. The Monitoring Report indicates that monitor Emitter wells (E-1 through E-4) on a monthly basis. No floating product was detected during this monitoring period. Site monitored, system operations and maintenance performed, and DO readings taken on July 17, 2008. (see eDocs) The Next Quarterly Report will be submitted in September 2008. 9/8/08: Chanda received a Quarterly Monitoring Report prepared by BEI, dated August 2008. (see eDocs) GW Moniroring report indicated the groundwater at the site are contaminated. The next Quarterly Report be submitted to DEC by 12/15/08 for review. 10/6/08: Chanda received a Monthly Monitoring Report, prepared by Berninger Environmental, Inc., dated September 2008. 5/27/09 This spill case transferred from K. Chanda to J.A. Maisonave. - JAM 7/21/09 Received Monitoring Report for month of June 2009 submitted by Berninger Env., Inc. dated June 30, 2009. Ten wells were gauged, no free product was detected during this monitoring period. I called Walter Berninger and told him that monthly monitoring and quarterly groundwater sampling should continue; however, report frequency can be reduced from monthly to quarterly. Reports should summarize all monitoring and sampling events for the

169 3RD AVENUE (Continued) **S102150706**

previous quarter. This includes all sites under the Northland Marketing Consent Order. - JAM 9/14/09 Reviewed a Groundwater Monitoring Report for 3rd Qtr 2009 submitted by Berninger Env., Inc. dated August 31, 2009. Ten monitoring wells were gauged and wells MW-1 thorugh MW-6 were sampled for lab analysis. Wells EW-1 through EW-4 were not sampled. Free product was not detected in any of the wells. Well MW-3 had a total BTEX concentration of 573ug/L. Well MW-1 had a total BTEX concentrations of 38ug/L. The other wells were ND. The site map does not include groundwater flow direction. This report is uploaded to eDocs. - JAM 1/7/10 Reviewed a Groundwater Monitoring Report for 4th Qtr 2009 submitted by Berninger Env., Inc. dated December 31, 2009. Ten monitoring wells were gauged and 6 sampled for lab analysis Free product was not detected in any of the wells. Wells MW-1, MW-2 and MW-3 had a total BTEX concentrations of 20ug/L, 34ug/L, and 61ug/L, respectively. Wells MW-4 through MW-6 were ND. This report is uploaded to eDocs. - JAM 2/4/10 Issued letter to Joseph Macchia regarding several spill cases managed under the Northland Marketing Consent Order. The letter, with the excerpt regarding this spill is as follows: The New York State Department of Environmental Conservation (NYSDEC) has reviewed several quarterly monitoring reports for the above referenced spill cases, which are being managed under an Order on Consent between NYSDEC and the Respondent. Our review has identified a number of problems with the reports and with the way the spills are being addressed. To remedy these problems, the NYSDEC requires the following: 1. Groundwater samples collected from all sites should be analyzed for the TAGM 4046 list of petroleum related VOCs (see attached). 2. Groundwater sample result summary tables must indicate the proper units of concentration (e.g., g/L, mg/L, etc.) and should include a column totaling the VOC concentrations for each well. 3. Groundwater gauging data, including water table elevation, should be included in all reports along with an updated water table contour map indicating the groundwater flow direction determined during that monitoring event. 4. The reports should include a discussion of data gathered during that monitoring event. If an active remedial system is operating at a specific site, then a discussion of system performance should be included. 5. The monitoring reports should include an additional section presenting recommendations for future work at the site based on the data gathered during that monitoring event. After reviewing several quarterly reports, the NYSDEC has the following site-specific comments: 169 3rd Avenue, Brooklyn NYSDEC Spill No. 9506588 Monitoring wells must be surveyed and gauged to accurately determine groundwater flow direction. Wells EW-1 and EW-4 should be included in the quarterly monitoring events. Letter uploaded to eDocs. - JAM 3/23/10 Meeting held today at DEC Region 2 Offices to discuss the status of sites included in the Northland Marketing Consent Order. Those in attendance were as follows: Joseph Maisonave, NYSDEC Jon Kolleeny, NYSDEC Joseph Macchia, Northland Marketing Walter Berninger, Berninger Environmental The discussion regarded items included in DEC's letter issued to Joseph Macchia on Feb. 4, 2010. Items 1 thru 5 should be included in the next quarterly GW monitoring rpts and all site-specific requirements will be addressed under separate letters. DEC verbally approved reducing the groundwater gauging/monitoring and reporting requirements from monthly to quarterly events. - JAM 7/1/10 Reviewed a Groundwater Monitoring Report for the 1st Qtr 2010 submitted by Berninger Env., Inc. (BEI) dated March 31, 2010. Ten monitoring wells were gauged and sampled

169 3RD AVENUE (Continued) **S102150706**

for lab analysis on March 8, 2010. Free product was not detected in any of the wells. Total VOC concentrations ranged from 2 ug/L in wells MW-5 and MW-6 to 441 ug/L in wells MW-3. Well MW-3 is the most down-gradient well. The iSOC vessels continue to operate in 4 of the wells and dissolved oxygen levels show that they are working properly. BEI recommends continuing quarterly groundwater monitoring and measuring dissolved oxygen in all the wells. BEI also reommends collecting water samples to perform a bacteria plate count to determine if there are bacteria present to reduce VOC contamination. Report uploaded to eDocs. - JAM 05/23/11: This spill transferred from J. Maisonave to J. Kolleeny. Reviewed quarterly mon rpts by Berninger Envt'l Inc. dated 12/31/10 and 3/31/11 (both in eDocs). Dec. 2010 rpt gives GW results for 12/3/10 which show significant dissolved contam remaining only in well MW-3, which had 210 ug/L total VOCs (up from ND in Sept. 2010), including 130 ug/L benzene. Rpt recommends continued maintenance of oxygen diffision vessel and quarterly monitoring until spill closure is approved; next sampling scheduled for March 2011. March 2011 rpt gives GW results for 3/9/11 which show significant contam remaining only in well MW-3, which had 1,429 ug/L total VOCs, big increase from 210 ug/L in Dec. 2010. Rpt recommends continued maintenance of oxygen diffision vessel & quarterly monitoring until spill closure is approved; next sampling scheduled for June 2011. - J. Kolleeny 12/05/13: Reviewed Sept. 2013 Mon Rpt by Berninger Envt'l, dated 9/30/13 (in eDocs). Results of gauging/sampling of 10 on-site wells on 9/3/13 showed no LNAPL detected; well MW-1 had 18 ug/L total VOCs (up from ND in June 2013), well MW-3 had 67 ug/L tVOCs (up from 13 ug/L in June 2013); other wells were ND or had negligible VOC levels. Based on data, BEI recommends spill closure, but until closure is approved, they will continue monthly maintenance of iSOC oxygen emitters in four wells (E-1 thru E-4) and quarterly GW sampling, with next sampling event scheduled for Dec. 2013. I will meet with Berninger & RP on 12/6/13 to discuss this & other sites. - J. Kolleeny 12/06/13: At meeting with Berninger Envt'l (Walter B.) and Joseph Macchia (RP), this site was discussed; Berninger provided site plan and GW data table (in eDocs as brief) for reference during meeting. Berninger presented this site as candidate for spill closure. I noted that site plan in Sept. 2013 Mon Rpt does not show four emitter wells E-1 thru E-4, and that GW flow map did not use most-recent water table measurements. I asked that Berninger prepare a formal spill closure request summarizing site history (tank removals, soil removal, remedial actions, whether or not RAP was submitted/approved, etc.), with up-to-date GW flow map, and asked that it include discussion of whether or not soil contam mentioned in Spill Caller Remarks was addressed (and how). Berninger said he would put this together and submit. - J. Kolleeny 06/23/15: Reviewed monitoring rpt for March 2015 by Berninger Env'tl, dated 3/31/15 (in DecDocs). Cover letter to rpt asks that I note the conclusions & recommendations section of rpt, as BEI will be requesting closure of this site. Results of GW sampling on 3/3/15 showed well MW-1 had 3 ug/L total VOCs (up from ND in Dec. 2014), well MW-2 had 765 ug/L tVOCs (up from 188 ug/L in Dec. 2014), well MW-3 had 37 ug/L tVOCs (down from 174 ug/L in Dec. 2014), well MW-4 had 1 ug/L tVOCs (same as in Dec. 2014), wells MW-5 and MW-6 were both ND (same as they were in Dec. 2014). Rpt includes table with depth to water measurements for all site wells, but site plan figure showing water table contours only lists water table elevations for wells MW-1, MW-2, MW-3, MW-4 & MW-6 (i.e., not for

169 3RD AVENUE (Continued) **S102150706**

MW-5). I checked eDocs and found past rpt by Impact Envt'l which provides top of casing elevations for wells MW-1 thru MW-5, with different elevations for most wells from BEI's numbers. BEI rpt's Conclusions section states that VOCs and MTBE have decreased to zero or below stds in almost every well, detected levels are very low and BEI has recommended closure ; there is some fluctuation due to rise and fall of GW. Rpt's Recommendations section states that BEI recommends site closure as all wells have little to no VOCs, and any remaining will naturally attenuate; BEI will continue to operate/maintain oxygen emitters and conduct quarterly GW sampling until closure is approved. I sent email to Walter Berninger of BEI: Walter, I ve looked at BEI s March 2015 monitoring rpt for this site. Rpt s Recommendations section states that BEI recommends spill closure, but 1st page cover letter states Please note conclusions & recommendations section of rpt as BEI will be requesting closure of this site. This is a little confusing; will there be a separate document requesting spill closure (as there was for GMR site on Randall Ave. in Bronx and for Boston Road site), or is this rpt official spill closure request? One other small detail I found a data table with Top of Casing Elevations for all 6 monitoring wells at site in a rpt from Feb. 2007 by Impact Ent'l (see attached). TOC numbers differ from those in your March 2015 rpt (which also doesn t include a TOC number for well MW-5). If you plan to prepare a separate spill closure request rpt (or another quarterly monitoring rpt), please revise site plan figure showing water table contours to include corrected water table elevations (based on Impact s TOC data), unless BEI re-surveyed wells and got different numbers. Also, please show tank locations (as well as pump islands) on site plan, and please include in text of letter/rpt information you mentioned about fill ports being cleaned out. Feel free to call to discuss any of this. - JK 07/27/15: Reviewed monitoring rpt for June 2015 by Berninger Envt'l, dated 6/30/15 (in DecDocs). Gauging & sampling of 10 on-site wells (6 monitoring wells & 4 O2 emitter wells) on 6/1/15 showed no LNAPL detected in any wells; well MW-2 had 237 ug/L total VOCs (down from 765 ug/L in March 2015), well MW-3 had 10 ug/L tVOCs (down from 37 ug/L in March 2015); other wells were either ND or had very minor VOC detections. Rpt recommends spill closure, but states that BEI will continue to conduct monthly maintenance on oxygen emitter vessels and quarterly GW sampling events until spill closure is approved, with next GW sampling event in Sept. 2015. I sent email to Walter Berninger: Walter, On 7/17/15, I received another monitoring rpt for this site, dated 6/30/15. Rpt again recommends spill closure (like March 2015 rpt), but in context of a quarterly monitoring rpt. June 2015 GW numbers in wells look good (total VOCs in well MW-2 went back down, from 765 ug/L in March to 237 ug/L in June 2015), but I d still like to resolve issue of different top of casing elevations provided in an earlier rpt by Impact Envt'l, compared with TOC elevations provided in your rpts for this site (which don t include any TOC elevation for well MW-5), and I d also like to obtain confirmation that contaminated material in tank fill port(s) has been cleaned out, before I close spill case. Finally, site plan should be revised to show tank locations, in addition to showing pump island locations. Please let me know if BEI will be preparing/submitting a separate spill closure request letter rpt which addresses these outstanding issues. - JK 11/23/15: Reviewed qtrly monitoring rpt for Sept. 2015 by Berninger Envt'l, dated 9/30/15 (in DecDocs). Gauging & sampling of 10 on-site wells (6

169 3RD AVENUE (Continued) **S102150706**

monitoring wells & 4 O2 emitter wells) on 9/17/15 showed no LNAPL detected in any wells; well MW-1 had 34 ug/L total VOCs (up from 2 ug/L in June 2015), well MW-2 had 10 ug/L tVOCs (down from 237 ug/L in June 2015), well MW-3 had 6 ug/L tVOCs (down from 10 ug/L in June 2015), well MW-4 had 1 ug/L tVOCs (same as in June 2015), well MW-5 was ND (same as in June 2015), well MW-6 was ND (same as in June 2015), well EW-2 had 9 ug/L tVOCs (up from 7 ug/L in June 2015), well EW-3 had 34 ug/L tVOCs (up from 1 ug/L in June 2015). Rpt states that DEC's comments about well TOC elevations have been addressed & corrected for Sept. 2015 revised site plan, and site plan has GW contours showing flow to East and includes inset table listing TOC elevations provided by Impact Envt'l. Rpt concludes that VOC concentrations have decreased to very low levels in most wells, and that D.O. readings in emitter wells show vessels are successfully enhancing O2 levels in GW. Rpt states that BEI will continue to operate O2 emitters in four EW wells, and that next GW sampling event is scheduled for Dec. 2015. - JK 01/12/16: Reviewed qtrly monitoring rpt for Dec. 2015 by Berninger Envt'l, dated 12/31/15 (in DecDocs). Gauging & sampling of 10 on-site wells (6 monitoring wells & 4 O2 emitter wells) on 12/01/15 showed no LNAPL detected in any wells; well MW-1 was ND for VOCs (down from 34 ug/L total VOCs in Sept. 2015), well MW-2 had 95 ug/L tVOCs (up from 10 ug/L in Sept. 2015), well MW-3 had 15 ug/L tVOCs (up from 6 ug/L in Sept. 2015), well MW-4 had 1 ug/L tVOCs (same as in Sept. 2015), well MW-5 was ND (same as in Sept. 2015), well MW-6 was ND (same as in Sept. 2015), well EW-2 had 10 ug/L tVOCs (had 9 ug/L in Sept. 2015), well EW-3 had 3,226 ug/L tVOCs (up dramatically from 34 ug/L in Sept. 2015). Rpt notes that well EW-3 showed a large spike in VOCs and stated that BEI will continue to monitor this well. Nevertheless, rpt concludes that VOC levels have decreased to near zero in most wells, and that D.O. readings in emitter wells show vessels are successfully enhancing O2 levels in GW. Rpt states that BEI will continue to operate O2 emitters in four EW wells, and that next GW sampling event is scheduled for March 2016. - J. Kolleeny 08/05/16: Reviewed quarterly GW monitoring rpt for March 2016 by Berninger Envt'l, dated 3/31/16 (in DecDocs). Gauging & sampling of 10 on-site wells (6 monitoring wells and 4 oxygen emitter wells) on 3/1/16 showed no LNAPL detected in any wells; well MW-1 was ND for VOCs (same as in Dec. 2015), well MW-2 had 12 ug/L total VOCs (down from 95 ug/L in Dec. 2015), well MW-3 had 41 ug/L tVOCs (up from 15 ug/L in Dec. 2015), well MW-4 was ND (had 1 ug/L tVOC in Dec. 2015), wells MW-5 & MW-6 were both ND (same as in Dec. 2015), well EW-2 had 10 ug/L tVOCs (same as in Dec. 2015), well EW-3 had 9,240 ug/L tVOCs (up dramatically from 3,226 ug/L in Dec. 2015), well EW-4 had 27 ug/L tVOCs (up from ND in Dec. 2015). Rpt notes that EW-3 had very significant spike in VOCs, says BEI will continue to monitor it and that source is most likely former tanks at site. Rpt states that BEI will continue to infuse Oxygen using emitter wells, and that next quarterly sampling event will be in June 2016. - J. Kolleeny 08/08/16: Reviewed quarterly GW monitoring rpt for June 2016 by Berninger Envt'l, dated 6/30/16 (in DecDocs). Gauging & sampling of 10 on-site wells (6 mon wells & 4 oxygen emitter wells) on 3/1/16 showed no LNAPL detected in any wells; well MW-1 had 11 ug/L total VOCs (up from ND in March 2016), well MW-2 had 3,687 ug/L tVOCs (up dramatically from 12 ug/L in March 2016), well MW-3 had 38 ug/L tVOCs (down from 41 ug/L in March 2016), well MW-4 had 2 ug/L tVOCs (up from ND in March 2016), wells MW-5 & MW-6 were both ND (same as in March 2016), well EW-2 had 371 ug/L

169 3RD AVENUE (Continued) **S102150706**

tVOCs (up from 10 ug/L in March 2016), well EW-3 had 10 ug/L tVOCs (down dramatically from 9,240 ug/L in March 2016), well EW-4 was ND (down from 27 ug/L in March 2016). Rpt notes that well MW-2 had significant spike in VOCs, well EW-2 showed a moderate increase in VOCs, and well EW-3 showed a very significant decrease in VOCs; rpt states that BEI will continue to monitor wells and that source is likely former tanks at site. Rpt states that BEI will continue to infuse oxygen using emitter wells, and that next quarterly sampling event will be in Sept. 2016. - J. Kolleeny 01/23/17: Reviewed quarterly GW mon rpt for December 2016 by Berninger Envt'l, dated 12/30/16 (in DecDocs). Gauging & sampling of 10 on-site wells (6 mon wells & 4 oxygen emitter wells) on 3/1/16 showed no LNAPL detected in any wells; well MW-1 had 1 ug/L total VOCs (down from 23 ug/L in Sept. 2016), well MW-2 had 101 ug/L tVOCs (down from 377 ug/L in Sept. 2016), well MW-3 had 49 ug/L tVOCs (up from 13 ug/L in Sept. 2016), well MW-4 had 1 ug/L tVOCs (same as in Sept. 2016), well MW-5 was ND (same as in Sept. 2016), well MW-6 was ND (same as in Sept. 2016), well EW-1 had 1 ug/L tVOCs (was ND in Sept. 2016), well EW-2 had 4 ug/L tVOCs (down from 8 ug/L in Sept. 2016), well EW-3 had 4 ug/L tVOCs (down from 34 ug/L in Sept. 2016), well EW-4 was ND (down from 1 ug/L in Sept. 2016). Rpt notes that 8 of 10 wells sampled were either ND or had very low detections of VOCs, and other two wells consistently show low VOC levels (?). Rpt states that BEI will continue to infuse oxygen using emitter wells, and that next quarterly sampling event will be in March 2017. - JK 06/12/17: Reviewed quarterly GW monitoring rpt for March 2017 by Berninger Envt'l, dated 3/31/17 (in DecDocs). Gauging & sampling of 10 on-site wells (6 mon wells & 4 oxygen emitter wells) on 3/13/17 showed no LNAPL detected in any wells; well MW-1 had 8 ug/L total VOCs (up from 1 ug/L in Dec. 2016), well MW-2 had 1 ug/L tVOCs (down from 101 ug/L in Dec. 2016), well MW-3 had 4 ug/L tVOCs (down from 49 ug/L in Dec. 2016), well MW-4 had 1 ug/L tVOCs (same as in Dec. 2016), well MW-5 was ND (same as in Dec. 2016), well MW-6 was ND (same as in Dec. 2016), well EW-1 had 1 ug/L tVOCs (same as in Dec. 2016), well EW-2 had 9 ug/L tVOCs (up from 4 ug/L in Dec. 2016), well EW-3 had 3 ug/L tVOCs (down from 4 ug/L in Dec. 2016), well EW-4 had 5 ug/L tVOCs (up from ND in Dec. 2016). Based on data, BEI concludes that VOC & MTBE levels have decreased to nearly zero or below stds at more than half of wells sampled (?), with some fluctuations due to rise & fall of GW; elevated D.O. readings in EWs indicate emitter vessels are successfully enhancing O2 at those wells, & oxygen tanks were replaced at EW-1 & EW-2 on this visit; 8 of 10 wells have very low VOC levels and most wells have consistently low levels. BEI recommends continuing to infuse O2 with emitter vessels in EWs. Next quarterly sampling event is scheduled for June 2017. - J. Kolleeny 08/07/17: Reviewed quarterly GW mon rpt for June 2017 by Berninger Envt'l, dated 6/30/17 (in DecDocs). Gauging & sampling of 10 on-site wells on 6/2/17 showed no LNAPL in any wells; dissolved VOC numbers in wells were very low (worst was 38 ug/L total VOCs in MW-4). Rpt concludes VOCs have decreased to near zero / low levels in most wells, and that D.O. readings in emitter wells show they are successfully enhancing dissolved O2 levels. Rpt states that BEI will continue to infuse O2 with four emitter wells, with next quarterly sampling scheduled for Sept. 2017. - J. Kolleeny 11/20/17: Reviewed quarterly GW monitoring rpt for Sept. 2017 by Berninger Envt'l, dated 9/30/17 (in DecDocs). Rpt states that gauging of 10 wells on 9/18/17 showed no LNAPL in any wells; GW sampling showed no significant VOC

169 3RD AVENUE (Continued) **S102150706**

levels in any of on-site wells. However, well gauging data table and water table contour map show that a new well, MW-1B was installed across street from site at 156-170 3rd Ave (sp. no. 9607280) as required in my 6/12/17 letter for that site, and GW data table shows new well MW-1B had 8,733 ug/L total VOCs. There is no mention in text of rpt of well install'n or sampling results. Nor does rpt indicate it is now a combined monitoring rpt for both spill sites, as requested in my 6/12/17 letter. Rpt states that VOCs & MTBE at monitoring and emitter wells have decreased to low or ND levels, and that BEI will continue to infuse oxygen w/oxygen vessels in emitter wells. Next quarterly sampling is scheduled for December 2017. - JK 02/01/18: Reviewed quarterly GW monitoring rpt for Dec. 2017 by Berninger Envt'l, dated 12/31/17 (in DecDocs). Rpt states that gauging of 10 wells on 12/19/17 showed no LNAPL in any wells. GW sampling showed well MW-1 had 23 ug/L total VOCs (up from 3 ug/L in Sept. 2017), well MW-3 had 21 ug/L tVOCs (up from 5 ug/L in Sept. 2017), well EW-2 had 27 ug/L tVOCs (up from 9 ug/L in Sept. 2017); other on-site mon & emitter wells had very low or ND VOC levels. However, text states that new well MW-1B installed across street at spill site no. 9607280, 156-170 3rd Ave., experienced a good decrease in VOCs since previous quarter. GW data show well MW-1B had 7,547 ug/L tVOCs (down from 8,733 ug/L in Sept. 2017). Rpt concludes that 7 of 11 wells sampled have very low detections of VOCs, and VOCs in most wells have consistently remained low. BEI will continue to infuse oxygen with emitter vessels; next quarterly sampling is schedule for March 2018. I sent email to Justin Halpin of BEI, cc's to Walter Berninger of BEI, Joseph Macchia (RP) stating that mon rpts should indicate they are now for both 3rd Ave Bklyn spill sites, that impacts in new well MW-1B should be delineated with addt'l wells in sidewalk and may require active remediation. Suggested that wells at 169 3rd Ave with consistent low or ND results (e.g., MW-5, MW-6, EW-1) may be removed from quarterly monitoring program, and if levels in wells remain low, BEI should consider requesting spill closure so they can focus efforts on impacts across 3rd Ave. - J. Kolleeny 05/09/18: Reviewed quarterly GW monitoring rpt for March 2018 by BEI, dated 3/31/18 (in DecDocs). Rpt is combined for both 169 3rd Ave. (sp 9506588) and 156-170 3rd Ave. (sp 9607280) sites. Well gauging on 3/26/18 showed no LNAPL detected in any of 11 wells checked (including emitter wells and well MW-1B at 156-170 3rd Ave); GW flow direction continues to be to ESE. GW sample results for 3/26/18 showed well MW-1 was ND (down from 23 ug/L total VOCs in Dec. 2017), well MW-2 had 3 ug/L tVOCs (down from 7 ug/L in Dec. 2017), well MW-3 had 783 ug/L tVOCs (up from 21 ug/L in Dec. 2017), well MW-4 had 1 ug/L tVOCs (same as in Dec. 2017), well MW-5 was ND (had 0.44 ug/L VOCs in Dec. 2017), well MW-6 was ND (had 0.49 ug/L VOCs in Dec. 2017), well EW-1 was ND (had 1 ug/L VOCs in Dec. 2017), well EW-2 had 38 ug/L tVOCs (up from 27 ug/L in Dec. 2017), well EW-3 had 19 ug/L tVOCs (up from 7 ug/L in Dec. 2017), well EW-4 was ND (down from 3 ug/L VOCs in Dec. 2017), and well MW-1B (across street at 156-170 3rd Ave) had 8,024 ug/L tVOCs (up from 7,547 ug/L in Dec. 2017). Rpt notes that VOCs increased in wells MW-3, MW-1B, EW-2 and EW-3, but does not mention significant increase in MW-3; states that VOCs have decrease to or near ND in 7 wells. Rpt further states that iSOC emitters are successfully enhancing O2 in GW. BEI will continue to infuse O2 via 4 emitter wells. Rpt states that BEI will be requesting closure of sp. 9506588 at 169 3rd Ave in order to focus remedial efforts on sp. 9607280 across street; in meantime, they will suspend

169 3RD AVENUE (Continued) **S102150706**

sampling of some wells which have consistently shown little to no contam, such as MW-5, MW-6 and EW-1. Next quarterly sampling event is scheduled for June 2018. - J. Kolleeny 05/09/18: I sent email to Justin Halpin of BEI: Justin, I reviewed March 2018 quarterly monitoring rpt for sites located across 3rd Ave in Brooklyn from each other. Rpt states that Berninger Envt'l will be requesting closure of spill 9506588 (@169 3rd Ave) in order to focus remedial efforts on spill 9607280 (@156-170 3rd Ave), and in meantime BEI will suspend sampling of some wells at 169 3rd Ave which have consistently shown little or no contam, such as wells MW-5, MW-6 & EW-1. I agree with suspending sampling of those wells, and you could even suspend sampling of wells MW-2 & MW-4 for now, as those wells also have had very little contam for at least past 4 quarters of sampling. These wells should be kept open and not abandoned, for collection of a final round of samples in support of spill closure. But I wanted to note that in March 2018, total VOCs in well MW-3 increased to 783 ug/L, up from just 21 ug/L in Dec. 2017. This is something rpt text should have made note of and discussed. (Rpt did state that VOCs increased in wells MW-3, EW-2 & EW-3, but increase in MW-3 was much more significant than increases in other wells and was deserving of some further mention or discussion.) In light of this increase, I m not sure spill 9506588 is ready for a closure petition just yet. Let s see what happens with well MW-3 in next round of GW sampling, scheduled for June 2018, to see if that increase was just a temporary fluctuation or if it may be an indication of an increasing trend for that well. - J. Kolleeny 10/02/18: Reviewed June 2018 quarterly GW monitoring rpt for this site and 156-170 3rd Ave, across street (sp9607280), by Berninger Envt'l dated 6/30/18 (in DecDocs). Well gauging & GW sampling in June 2018 showed no LNAPL in any of 11 wells gauged and GW flow to S along 3rd Ave. Sample results showed well MW-3 had 1,233 ug/L total VOCs (up from 783 ug/L in March 2018), well EW-2 had 19 ug/L tVOCs (down from 38 ug/L in March 2018), well EW-3 had 112 ug/L tVOCs (up from 19 ug/L in March 2018); well MW-1B, located across street at 156-170 3rd Ave site, had 11,814 ug/L tVOCs (up from 8,024 ug/L in March 2018); other wells were either ND or had very low VOC detections. Rpt notes that tVOCs well MW-3 have increased from 18 ug/L in June 2017 to 1,233 ug/L in June 2018, says this is most likely due to increase in water table elevation. Rpt Conclusions state that GW levels increased dramatically this quarter. Also state that D.O. levels were relatively low, and that 02 tanks were replaced in wells EW-2, EW-3 and EW-4. Recommendations state that BEI will continue to infuse O2 into emitter wells, BEI will be requesting closure of sp. 9506588 in order to focus efforts on sp. 9607280 across street, and BEI will suspend sampling of wells MW-2, MW-4, MW-5, MW-6 and EW-1 as per agreement with DEC. Next quarterly event is scheduled for Sept. 2018. - JK "

DEC Memo:	"DECPiper - AS per R Ketani directives, I reposnde dto site in evening. The site is a warehouse and no one was there at 5pm upon arrival. No signs of spillage. I got in cntact with caller, alex later and he informed me that soil borings revealed svoc's and report is being generated. He already spoke with DEC Austin who instructed Alex to call in spill. Report will besent th is week. DEC Piper spoke with Cosmos inc requiring additional investigation as subsurface investigation already conducted needed further investigation. Received message from Alexandra Gineli 212- 967-2753 10/17/13-Vought-Received call from and spoke to Paul Stewart (Advanced Cleanup Technologies Ph:516-840-8197) and Stewart inquiring about steps needed to work towards spill closure. Stewart and owner called and left message for Piper but have not received call back to date. DECPiper received limited phase II and closure rpeort. Based on findings and work to date, this spill is closed. See edocs if warranted. "
Remarks:	"1503 The caller advised dispatch he has spoken with DEC Rep. Austin. The Rep. advised the caller to report the spill and clean up will be conducted after DEC has inspected the area. The amount of the spill is unknown."

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D006
. Waste name: CADMIUM

FINDS:

Registry ID: 110004429075

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"05/21/2014: During a PBS inspection resulting from FDNY inspection at Petroleum Cleaners facility, petroleum product was found discharged to soil at several areas of the site, in the secondary containment vessel of Tank 005, and an indoor secondary containment area for the oil water separator processing section. Also found at the facility was a pile of contaminated soil from the removed USTs, though there is an existing open spill number associated with the removed tanks. (Moses Ajoku) 7/11/14 TJD File review. Multiple spills open at this location. Spill #1403412 & 1403303 have been closed and cross-referenced to the oldest open spill file at this address for oversight by a single DEC project manager (DeMeo). Primary spill # for this address is 1112454."

Site Description: LOCATION: The Site is located at 198 Douglass Street in Brooklyn, between Bond Street and the Gowanus Canal. SITE FEATURES: The property is 0.18 acres and features a one-story warehouse building which is currently used for the storage of art and antique goods and furniture. CURRENT USE/ZONING: The property is currently used for the storage of antique goods. It is zoned for manufacturing use. HISTORICAL USES: The Site has historically been used for a variety of industrial purposes. Prior to its current use, the Site was owned and operated by Paramount Plumbing (approx. 1995 to 1998) and O.Z. Electrical Manufacturing Company Inc. (approx. 1960 to 1995). O.Z. also formerly owned and operated on the adjacent property (196 Douglass) as well as three buildings to the west, across Bond Street (262 Bond Street). Earlier owners/operators include P.H. Hughes Lime, Brick and Lath Yard (approx. 1887 to 1900); a gravel/crushed stone yard (approx. 1900 to 1930); and the Knickerbockers Ice Company, which included a machine shop (1930?s). SITE GEOLOGY AND HYDROGEOLOGY: Fill material consisting of sand, silt, gravel, and construction/demolition debris has been encountered to approximately 10 feet below ground surface (fbgs). Beneath the fill material (10 to 36 fbgs) is a sequence of inter-bedded silt, clay, sand, and peat layers atop fine to coarse-grained sand to a depth of approximately 48 fbgs. Groundwater has been encountered at depths ranging from 1.5 fbgs to 9 fbgs, during various investigations. USEPA Superfund investigations in the area of the Gowanus Canal have found that shallow groundwater flows toward the canal at both low and high tide. Intermediate groundwater generally flows upward toward the canal. Based on water chemistry measurements in surface water and groundwater (collected during Superfund investigations of the Gowanus Canal), it was concluded that infiltration from the canal controls water quality in shallow wells adjacent to the canal, with decreasing influence with distance from the canal. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.
Env Problem: NATURE AND EXTENT OF CONTAMINATION: A Site Investigation performed in April/May 2012 confirmed that tetrachloroethene (PCE) previously detected in groundwater was limited and not indicative of a release of hazardous waste. GROUNDWATER: In 2006, PCE was detected in

FORMER O.Z. ELECTRICAL (Continued) **S108057803**

groundwater at a concentration of 1,600 parts per billion (ppb) and benzene at 14 ppb, from one grab groundwater sample collected from one boring. In the 2012 Site Investigation, groundwater was sampled from four groundwater monitoring wells. Groundwater samples were analyzed for volatile organic compounds (VOCs). Several VOCs were detected; however, the only contaminants detected at concentrations that exceed standards were isopropylbenzene (detected at 5.1 ppb compared to the standard of 5.0 ppb) and methyl tertiary butyl ether (MTBE) (detected at 10.7 ppb compared to the standard of 10 ppb). The standards cited for groundwater are the NYS Ambient Water Quality Standards and Guidance Values for Water Class GA from NYSDEC Technical & Operational Guidance Series (TOGS) 1.1.1. SOIL: The 2012 Site Investigation included soil sampling from 7 soil borings and analysis for VOCs. The only contaminant detected above standards was isopropylbenzene, detected at 3.91 parts per million (ppm) compared to the CP-51 Supplemental Soil Cleanup Objective for protection of groundwater of 2.3 ppm. A few VOCs were detected on site in the 2006 soil boring, but at very low concentrations. SOIL VAPOR: In soil vapor, trichloroethene (TCE) was detected in two samples at a maximum concentration of 200 micrograms per cubic meter (ug/m3); however TCE was not detected above reporting limits in concurrent indoor air samples. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.

Contact Name:	JEFFERY FLANNIGAN
DEC Memo:	"DEC Piper contacted Caller Jeff Flannigan. He will copy report and analytical and send to DEC. 9/8/06- DEC Piper reviewed subsurface investigation report. AS per report, investigaestigation was due to the presence of petroleum vaprs inside work area. 1 boring was completed. Groundwater was encountrered at 9 feet bgs. A water sample was collected at 34 feet which contained elevated levels of benzene, PCE and a variety of SVOCs were above standards. A soil sample was collected at 36 feet bgs which indicated trace levels of clorinated solvents. Indoor air samples revesaled elevated levels of petroleum and clorinated solvents were detected above standards. Due to the soil and gw samples not being collected at the gw interface, the concentrations observed where collected, and indoor air quality, additional investigation is warranted. Case referred to remediation. 9/20/06- DEC Piper . Spill transpferred to remediation as per Austin on 9/8/06. 11/13/06 - reviewed site assessment report, found PERC in GW. Need to contact consultant to get more delineation of the GW contamination. - KST 4/11/08 - This spill has been transferred to D. Kaplan. Since previous reports were missing the representative of the site was contacted and the subsurface investigation report was obtained from the environmental consultant. 5/7/08 - Met the

FORMER O.Z. ELECTRICAL (Continued) **S108057803**

environmental consultant (Djamel Lekmine, AMEC), architect Jeff Flannigan who was acting as representative of the owner (was in charge of construction at the time the spill was reported), and attorney for the owner at the site. The entire lot is covered with a building with slab on grade finished floor. The building serves as a storage facility for fine art. It was explained that additional investigation was necessary. 5/19/08 - Environmental consultant sent a proposed work plan for additional investigation which was very incomplete (see edocs). 5/27/08 - A letter was sent to the environmental consultant describing additional requirements for a subsurface investigation. 8/26/08 - Attorney for the owner has been trying to work out a site access agreement with the owner of the adjacent property (196 Douglass St). Representative for the owner of 196 indicated that they are unwilling to grant site access. 9/26/08 - After negotiations with the owner of 196 Douglass for site access proved unsuccessful, DEC attorney (John Urda) sent a letter to the owner siting statutory authority for site access for investigation work. See edocs. 5/11/09- The work was performed February 10th and 11th. The report has not yet been received. 6/18/10-Vought-Received inquiry from DEC Austin as to whether Site should be transferred to Vought as P-Site . Vought discussed with DEC O'Connell and spill reassigned from Kaplan to Vought and entered into P-Site Tracking Spreadsheet. 2/8/11-Vought-Spill transferred from DEC Vought to DEC Kaplan for further action. 6/10/11 - Transferred to hazardous waste program as potential hazardous waste site (P site 224152) "

Remarks: "THERE WAS SOIL SAMPLE TESTING AND GROUND WATER TESTING. THERE WAS DIFFENENT MATERIAL THAT WAS FOUND AT THE SITE. THERE ARE TRACES OF VOLITALE ORGANIC COMPOUND, TETRACHLOROETHENE,ETHYLBENZENE, XYLENE WAS FOUND IN SOIL SAMPLE. THE WATER SAMPLE HAD BENZINE, TETRACHLOROETHENE. THEY WERE DIGGING AT THIS SITE."

GAVE GENERAL DIRECTION OF REMEDIATION. SOILS POROUS, GW SHALLOW, DOWNGRADIENT RECEPTORS AND DELINEATION NOT DONE. 8/11/97 CALLED FOR JIM CONTE (SKAGGS WALSH), WHO SAID JOE MACCHIA JR. 11/21/2003 Reassigned from Rommel to Sun. See also Spill # 95-06588 11/24/2003-Sun- File Review and Update by Sun: On 11/24/2003, Sun of NYSDEC sent a letter to Joseph Macchia, Jr. requiring Northland to complete the work described in DEC's letter of November 18, 1997 before December 24, 2003. 08/25/06-Sun-This spill will be referred to the Legal Department and will be included in New Consent Order. (Sun) [Upon further review, DEC staff determined that this spill case was not included in the Consent Order with Joseph Macchia, but rather a spill case across the street from this site, spill 9506588 at 169 3rd Avenue, was included in that order; that spill case is being addressed under the Consent Order. - J. Kolleeny, 5/25/11] 11/13/06-Sun: Sun spoke to John Urda about referring this case to Legal. Joe Sun will submit a referral paper to Legal this week. (Sun) 06/14/07-Sun: Joe Sun prepared and completed a Case Initiation Form and referred to Legal on 06/14/07. (Sun) 07-29-08: Transferred from Sun to Tibbe. 5/27/09 This spill case transferred from M. Tibbe to J.A. Maisonave. - JAM 6/11/09 Reviewed this case file. Site Summary: This property is across the street from another gasoline station operated by Joseph Macchia, Jr. at address 169 Third Avenue, Brooklyn. This property was a service station operated by Joseph Macchia, Jr. A building was recently constructed on-site; however, there is no record of any remedial activities performed after the Subsurface Investigation performed in early 1997 by Ecosystems Strategies, Inc. According to their report, 14 petroleum storage tanks (12 550-gallon USTs, one 4,000-gallon UST and one 2,200-gallon UST) were known to be present at this site; however, they were not located during the investigation. The report states that there are elevated levels of VOCs in the on-site soils and groundwater as a result of the historic on-site storage, handling and dispensing of gasoline. Soil and groundwater samples were collected and results are summarized in that report. Further investigation is necessary. Based on this information, a Stipulation Agreement was sent to Northland Marketing Corp. at the address below: Joseph Macchia, Jr. Northland Marketing Corp. 556 Central Avenue Bethpage, NY 11714 The signed Stipulation Agreement is due back at the DEC Region 2 office by June 25, 2009. -JAM 7/20/09 Stipulation Agreement has not been returned. I called Mr. Joseph Macchia (516) 933-0700 today to inquire. He said he is reviewing the case because he sold the property. He requested a copy of the 1997 Subsurface Investigaiton Report and the 1996 Environmental Audit. I emailed him a copy of each report. - JAM 05/25/11: This spill case transferred from J. Maisonave to J. Kolleeny. After researching file, sent email (in eDocs) to Joseph Macchia (jmacchiamdi@aol.com): I am writing to inquire about status of this spill site. This site was being handled by Joseph Maisonave of our office, but Mr. Maisonave is currently on an extended leave of absence, and I am now handling this project. According to notes in our database (see attached spill rpt), a Stipulation Agreement was

FORMER GAS STATION (Continued) **S102402008**

sent to you in June 2009, but as of July 20, 2009, signed agreement had not been received by NYSDEC. At that time, DEC case manager Mr. Maisonave contacted you and you requested copies of 2 envt'l rpts concerning property; Mr. Maisonave emailed you rpts. I have no record of any further communication from you concerning this site since that time. I need to know if you are acknowledging responsibility for this spill case and will move forward with investigation and possible remediation of site. If I do not receive a positive response from you by June 3, 2011, I will recommend that our Office of General Counsel proceed with an enforcement action. Feel free to contact me if you have any questions. - J. Kolleeny 06/24/15: On 6/23/15, John Urda of Region 2 Office of General Counsel contacted me to ask about site status. I sent email to RP Joseph Macchia: Dear Mr. Macchia: Today I received an inquiry from our Office of General Counsel regarding status of this open spill case. Our records indicate that you are Responsible Party for this spill. According to notes in our Spills Database (please see attached spill rpt form), a Stipulation Agreement was sent to you for this site in June 2009. We never received back signed Agreement, and when DEC Case Manager at that time, Mr. Joseph Maisonave, contacted you to follow up on this, you asked that he send you two envt'l rpts which documented gasoline-related contamination atsite. Mr. Maisonave sent you rpts, but we received no further correspondence from you. In May 2011, I sent you an email outlining above sequence of events and asking that you send a response indicating your willingness to take responsibility for this spill case, perform site investigation and possibly remediation, as warranted by site conditions. I stated that if you did not respond, this case would be referred to our legal dept for initiation of an enforcement action. However, I did not receive any response from you. At this time, it is still necessary that a site investigation be performed to determine current site conditions. Please acknowledge your receipt of this email, and indicate your willingness to undertake necessary work at site. If we do not receive a response from you by June 26, 2015, our legal staff will proceed with enforcement. Received reply from Joseph Macchia: Jonathan, I acknowledge receipt of your email regarding 156-170 3rd Avenue, Brooklyn, NY. I will need some time to check record storage to see if we still have records for this property. I sent email reply: Joseph, According to our records, at time spill was reported property was owned by Baltic and Fourth Avenue Corp. Please complete your records review and let me know how you will proceed by July 10, 2015. - J. Kolleeny 08/17/16: On 8/16/16, reviewed Remedial Investigation Work Plan by Berninger Envt'l, dated 6/22/16 (in DecDocs). Work Plan proposes installing 4 wells around site perimeter, as site is completely covered by a building. Proposed well locations are as follows: 1 well in sidewalk along Baltic St to north of site, 2 wells in sidewalk along 3rd Ave to east of site, and 1 well in sidewalk along Butler St to south of site (there's another bldg. to west of site). I sent email to Walter Berninger: Walter, I m currently reviewing Remedial Investigation Work Plan for 156-170 3rd Avenue in Brooklyn, DEC Spill No. 9607280, and I have some comments. Work plan rpt should be revised to include a Background/Site History section, explaining how long site was operated as a gas station, when it ceased being a gas station, when current on-site building was constructed, etc. Rpt should also summarize past investigations performed at site, and perhaps you should modify number & locations of proposed borings/wells based on data from past investigations. I

FORMER GAS STATION (Continued) **S102402008**

am in possession of a 1996 Envt'l Audit rpt and a 1997 Subsurface Investigation/Well Install'n summary rpt, both prepared by Ecosystems Strategies of Poughkeepsie, NY. These rpts document presence of soil & GW impacts on site, as well as providing a GW flow direction. As mentioned, your work plan should summarize those findings. You should revise proposed investigation as appropriate based on past data, and work plan should include another site plan showing site as it was before current bldg was constructed (if possible, showing former tank, dispenser and fill port locations). Please let me know if you have access to those two Ecosystems Strategies rpts; if not, I can provide them to you. On 8/17/16, received reply from Berninger: Jon, I was not made aware of any previous site history or investigations. I forwarded your e-mail to my client and have been notified that he doesn t have any previous investig rpts. I would like to request those two Ecosystem rpts you mention and will work on getting other site history you mention below. Thanks for your help. I sent another email: Walter, I ve attached two rpts by Ecosystems Strategies. Can you find out any construction details for building which currently covers site? For instance, does it have a basement? Was a vapor barrier (or moisture barrier, if bldg has a basement that extends into GW) installed during construction? Was site excavated during redevelopment? If so, to what depth? Was any dewatering performed? Tanks encountered? If you have or can obtain any of this info, please include it in revised work plan, along with history of site s use as gas station (as mentioned in my previous email). Walter sent reply: Jon, We will do our best to determine answers to your questions and include in our plan. - J. Kolleeny 08/18/16: Received email from Walter Berninger of BEI: Jon, After forwarding your e-mail below and speaking with my client, I was made aware that this site was sold in Nov. 1985 As Is, and my client does not have any idea regarding any new buildings or basements, etc. We will make a site visit to see what information we can gather to respond to your questions. I sent reply: Walter, Thanks, I would appreciate that. I m concerned that if no remediation or excavation was performed before they put up new building, there could be an issue with petroleum vapor intrusion, esp. if building has a basement and/or if no vapor barrier was installed. If possible, please also let me know what building is being used for. Walter sent reply: Jon, At this stage I will try to see if we can get in touch with current owner and hope it s same as one sold to in 1985; may have to be through lawyers. We can do a good checkout of building but if we can t interview anyone who constructed building we may not be able to determine if a vapor barrier was installed. Let s first get some more info, perform a site visit, see if a basement exists and then adjust Investigation Work Plan. If we have to include sub-slab or indoor air testing we can. I sent reply: Okay, thanks. I don t want to rush to do indoor air sampling if it s not necessary. Hopefully soil removal was performed at time of redevelopment and a vapor barrier installed. You should go ahead & revise work plan with whatever info you have (including two rpts I sent), and work on obtaining construction details for building separately, so you can proceed with site investigation. Whatever info you find out about construction details could be put in investigation summary rpt, with a recommendation for sub-slab and/or indoor air sampling if you conclude that s necessary. - JK 09/16/16: Reviewed revised Remedial Investigation Work Plan by Berninger Envt'l, Inc. (BEI), dated 9/12/16 (in DecDocs). Revised RIWP includes site history/background section summarizing past investigations at site.

FORMER GAS STATION (Continued) **S102402008**

Rpt notes that details regarding construction of current on-site bldg. (e.g., any soil excavation during construction; presence of vapor barrier, etc.) are not yet available but BEI will continue to attempt to obtain this info. In light of GW flow direction determined to be to NW during 1997 investigation by EcoSystems Strategies, revised work plan proposes six borings, with 3 in sidewalk along Baltic St., 2 in sidewalk along 3rd Ave., and 1 in sidewalk along Butler St. (no borings are possible on site itself which is completely occupied by bldg). Soil samples will be collected from borings, & GW samples will be collected from temporary well pts installed in borings. Rpt states that BEI will implement work plan within two weeks of DEC approval, and will submit RIR within 30 days of receiving sample results from lab. I sent letter (in DecDocs) to RP Joseph Macchia, cc's to Seth Friedland (RP's atty), Vadim Brevdo (DEC) and John Urda (DEC atty) approving work plan, but noting that if soil impacts are found, addt'l borings may be needed to delineate soil impacts, and if GW impacts are found, enough permanent wells to delineate GW impacts and determine GW flow direction will need to be installed. - JK 06/12/17: Reviewed Remedial Investigation Rpt by Berninger Envt'l, dated 3/22/17 (in DecDocs). Rpt summarizes Feb. 2017 investigation in which 6 borings were drilled in sidewalks on 3 sides of site, which is covered by a building. Soil samples were collected and temporary wells were installed in borings to collect GW grab samples. Soil sample results showed significant petroleum impacts at one boring location, B-5, which had PID readings up to 2,700 ppm (interval 10-12.5 ft), and lab analysis showed 15,000 ug/kg total xylenes (SCO is 260 ug/kg), and 8,900 ug/kg of 1,2,4-trimethylbenzene (SCO is 3,600 ug/kg). GW sample results showed significant dissolved impacts at boring B-5 (sample GW-5), with 3,135.7 ug/L total VOCs including 380 ug/L benzene; and minor dissolved impacts at boring B-6 (sample GW-6), which had 191.1 ug/L tVOCs. Rpt concludes that compounds detected in soil & GW are mainly breakdown constituents of gasoline, so residual contam shows indications of degradation and will likely undergo natural attenuation over time; however, rpt does not request spill closure or propose any further actions. I sent letter (in DecDocs) to RP Joseph Macchia, cc's to Seth Friedlander (RP's atty), Justin Halpin & Walter Berninger of BEI, stating that contam levels at B-5/GW-5 warrant further monitoring and possibly remediation. Letter requires install'n of one permanent well at that location, which should be surveyed and gauged/sampled as part of quarterly monitoring program at spill site across street at 169 3rd Ave (spill no. 9506588), for which Macchia is also RP. Letter states that data for this well can be submitted as part of quarterly rpts for 169 3rd Ave.; also states that DEC reserves right to require more wells for delineation and/or to better confirm local GW flow direction. - JK 02/01/17: Reviewed Sept. 2017 & Dec. 2017 quarterly monitoring rpts for 169 3rd Ave, spill no. 9506588 (across street from this site) by Berninger Envt'l, dated 9/30/17 & 12/31/17 (in DecDocs for both spills). Well gauging data table, site plan/water table map, & GW data table in Sept. 2017 rpt indicate that new well MW-1B was installed in sidewalk in front of site building at former boring B-5 locatio, as requested (see entry above), but rpt text makes no mention of well install'n or sampling result. Rpt title does not indicate it is a combined rpt for 2 spill sites. Gauging & sampling of MW-1B on 9/18/17 showed it had no LNAPL, but had 8,733 ug/L total VOCs. Dec. 2017 rpt text states that well MW-1B experienced a good decrease in VOCs since previous

FORMER GAS STATION (Continued) **S102402008**

quarter. Gauging & sampling of MW-1B on 12/19/17 showed no LNAPL, and 7,547 ug/L tVOCs. Rpt makes no recommendation specific to this site/well. Again, rpt title does not indicate it's a combined rpt for 2 spill sites. I sent email to Justin Halpern of BEI, cc's to Walter Berninger of BEI & Joseph Macchia (RP), asking that future rpts make clear they are for both spill sites, and stating that impacts in MW-1B may require install'n of addt'l delineation wells & possibly remediation. - JK 04/17/18: Received email from Justin Halpin of Berninger Envt'l: Regarding 170 3rd ave, we are going to draft a delineation work plan in order to determine extent of contamination in area of current well, MW-1B. - J. Kolleeny 05/09/18: Reviewed quarterly monitoring rpt for March 2018 by Berninger Envt'l Inc. (BEI), dated 3/31/18 (in DecDocs). Rpt is for both 156-170 3rd Ave (sp 9607280) and 169 3rd Ave (sp 9506588) sites. Gauging & sampling of one on-site well MW-1B on 3/26/18 showed no LNAPL detected; sample result showed well MW-1B had 8,024 ug/L total VOCs (up from 7,547 ug/L in Dec. 2017). Rpt includes a well construction log for MW-1B. Rpt states that BEI will be requesting closure of spill 9506588 across street (169 3rd Ave) in order to focus remedial efforts on this site. Next quarterly event will be in June 2018. I sent email to Justin Halpin of BEI: Justin, I wanted to follow up on a comment you made in an email sent on April 17th, indicating that BEI would be preparing a work plan for delineation of GW impacts observed at well MW-1B at 156-170 3rd Avenue. I agree that addt'l delineation in that area is a good idea before proposing remedial actions to address impacts. Can you let me know status of that work plan, when I can expect to receive it? - JK 05/18/18: Received email reply from Justin Halpin of BEI: Jon, As per our last investigation at 170 there may be a small data gap (between GW-5 & GW-6), but based on GW flow we calculated and given situation down gradient (169 spill 9506588) would you object to us sampling or using data from MW-1 & MW-2 on 169 site in order to justify completion of RI at 170? If we could move forward toward treatment in MW-1B area without having to re-mobilize, pull permits, etc. and use our already installed down-gradient wells at 169 to zero out 170, that would help us direct costs toward clean-up. Just a thought, as we are willing to do whatever you think is best. - J. Kolleeny 05/21/18: On 5/18/18, I sent reply to Justin Halpin of BEI: Justin, problem is that wells at 169 3rd Ave only delineate GW impacts. Remedial investigation at 156-170 3rd Ave found petroleum impacts in soil above water table, from 5 ft below grade on downward (see attached boring log). A remedial proposal targeting only GW impacts, based on data you have, may be inadequate to clean up contam in well MW-1B, which is likely being fed by soil impacts. Soil impacts may only be localized to area of that well, or they might extend in either direction under sidewalk for some distance, or they could even extend underneath on-site building. I believe that earlier investigations at this site, performed before building was constructed and covered site, found petroleum impacts at some locations on property; these could be acting as source areas for GWimpacts in well MW-1B. Probably best thing to do would be to drill borings on either side of MW-1B in sidewalk, and to also drill an angled boring extending back under building, to delineate soil impacts to extent feasible (i.e., in 3 directions). Seeing as you re already trying to rein in costs for your client, I don t expect you ll want to do angled boring. But at very least, borings on either side of MW-1B (perhaps installing temporary well points to grab GW samples) would help determine how localized soil & GW impacts in

FORMER GAS STATION (Continued) **S102402008**

MW-1B are, and thus help you develop a remedial plan accordingly. Wells across 3rd Avenue are too far away to determine how localized impacts are (especially for soil!). This may seem like an unnecessary expense, but if you develop a remedial plan without a better idea of extent of impacts, there s a good chance that remedial efforts may not succeed and would not be money well spent. Spending more up front might save money down road. Please feel free to call to discuss. On 5/21/18, Justin sent reply: Jon, Agreed, we will develop a suppl'tl Remedial Investig Work Plan & send for your review & approval. - JK 06/13/18: Reviewed Supplemental Remedial Investigation Work Plan by Berninger Envt'l (BEI) dated 6/13/18 (in DecDocs). Work Plan proposes drilling 3 borings in sidewalk along 3rd Ave to delineate impacts found in former boring B-5/GW-5 (now permanent well MW-1B). Plan states that soil will be screened continuously and samples collected from highest PID reading interval, or if no PID readings, from deepest dry sample. Then temporary well points will be installed in borings to collect GW grab samples. Results will be presented to DEC in rpt of findings. I sent letter (in DecDocs) to RP Joseph Macchia, cc's to Walter Berninger, Justin Halpin & Kimberly Lotito of BEI approving work plan but commenting that if impacts are found in borings, DEC may require install'n of one or more permanent wells, and requiring that investigation results be used to help prepare a RAP to address subsurface impacts at site. - J. Kolleeny 09/17/18: Reviewed Supplemental Remedial Investigation Rpt by Berninger Envt'l (BEI) dated 7/16/18 (in DecDocs). In June 2018, a Geoprobe was used to advance 3 borings to a depth of 20 ft; borings were in sidewalk along 4th Avenue to north and south of existing well MW-1B. Soil samples were collected from all 3 borings; BEI tried to collect GW samples from all 3 borings, but only one (B-7) had sufficient water for sampling. Soil screening & sampling data showed a smear zone between 10-15 ft bgs; interval between 10-12 ft (just above water table) had PID reading of 1,491 ppm in B-7, 1,250 ppm in B-8, and 1,500 ppm in B-9. Soil samples from this interval had elevated levels of VOCs; e.g., sample from B-7 had 3,900 ug/kg of ethylbenzene, 18,000 ug/kg total xylenes, and 15,000 ug/kg of 1,2,4-trimethylbenzene; sample from B-9 had 4,700 ug/kg of ethylbenzene, 15,000 ug/kg of total xylenes, and 23,000 ug/kg of 1,2,4-trimethlybenzene. GW sample from B-7 had ~17,000 ug/L total VOCs. Rpt recommends installing permanent wells in all 3 borings (B-7, -8 & -9), and drilling an addt'l boring/well to south of B-8 for delineation. Findings will be used to evaluate remedial alternatives and develop a RAP. I sent letter (in DecDocs) approving this proposal, but also requiring a well at former boring B-6 location (for better triangulation and determination of GW flow direction) to Joseph Macchia (RP), cc's to Walter Berninger & Justin Halpin of BEI. - JK 10/02/18: Reviewed June 2018 quarterly GW monitoring rpt by Berninger Envt'l for this site and site across street at 169 3rd Ave (sp 9506588), dated 6/30/18 (in DecDocs). Gauging & sampling of on-site well MW-1B in June 2018 showed no LNAPL in well and GW flow to S along 3rd Ave; GW sample had 11,814 ug/L total VOCs (up from 8,024 ug/L in March 2018). [As noted in above entry, BEI will perform a supplemental investigation to delineate impacts in well MW-1B.] Rpt states that BEI will be petitioning for closure of sp 9506588 across street at 169 3rd Ave, in order to focus efforts on this site. Next quarterly GW monitoring event is scheduled for Sept. 2018. - J. Kolleeny "

Remarks: "lab samples came back with contaminated results"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 01/07/04 ALso refer to Spill #04-07082 9/27/04-Reassinged from Rommel to sun. 9/28/04 File Update by Sun: On 9/29/04, Joe Sun conducted a site visit. Sun spoke to Mark Turoff of Environmental System Group (Tel: 917-750-1483) about the site investigation he has recently performed. Per Turoff, his company had installed twelve soil temporary wells on 9/27/04 and had collected soil and groundwater samples from eleven wells except one which contained one foot of free phase product. He will send me the invstigation report after the laboratory report is complete. 10/7/04 Sun received an e-mail from

126 4TH AVENUE - MISC (Continued) **S118953804**

Lauren Gallagher, Project Manager from NYCDEP on 10/7/04 for this Little E Restricted site. She will fax to me a copy of Phase II testing and accompanying HASP which they approved on 9/8/04. 04/08/05-File Update by Sun: The Stipulation Agreement was signed by the owner and executed by the Department on 12/15/04. -On April 6, 2005, DEC received an Investigation Summary Report from owner's consultant, Advanced Site Restoration, LLC. Joe Sun called the owner (Paul Rigas)on 04/08/05, informing him that the Department disapproved the report, since it does not delineate the off-site contamination. A meeting is scheduled for April 19, 2005 at the site between the DEC and the owner to discuss the location of off-site wells. -WJS 04/25/05-File Update by Sun: On 5/25/05, Sun sent a letter to the property owner (George Rigas), informing him that the Department has reviewed and approved the Investigation Summary Report with the incorporation of the following items: 1.Install two (2) two-inch (minimum) off-site monitoring wells in sidewalk east of Butler Street between 3rd Avenue and 4th Avenue in Brooklyn, New York. The monitoring wells should be selected at locations down-gradient of the existing monitoring wells TMW-16 and TMW-17. The new wells will provide the additional off-site delineation of dissolved groundwater contamination plumes. Pursuant to the Stipulation Agreement signed and dated effective December 15, 2004, the Department requires a Remedial Action Plan (RAP) be submitted by June 24, 2005. THe Department requires that the RAP shall detail the work proposed to remediate all contaminated media (groundwater and soil) and provide a detailed descriptions of a vapor mitigation efforts used in the construction of the residence including the installation of vapor barriers and sub-foundation venting systems. (WJS) 06/29/05 File Update by Sun: On 06/29/05, Sun sent a letter to the property owner (George Rigas), informing him that the Department has reviewed and approved the Remedial Action Plan, prepared by Advanced Cleanup Technologies, Inc., with the incorporation of the following items: 1. The OMMP shall describe and tabulate the operation, maintenance and monitoring schedule (frequency) for system equipment and their performance, influent and effluent water sample, system influent and effluent air emission, all monitoring wells and soil vapor monitoring points. EPA Method TO-14A, not TO-02 as stated in Reference 1, shall be used to sample and analyze air stream before and after carbon treatment. 2. Soil Vapor Extraction System (SVES) Data sheet and Air Stripper Data Sheet shall be completed and submitted to the Department by November 15, 2005 for review. The Blank SVES and Air Stripper Data sheets are attached here for your reference. 3.Measurements of groundwater levels in all area are to be conducted monthly for the first three months, and then quarterly. Collection and analysis of groundwater and soil vapor samples shall be conducted monthly for all monitoring wells and soil vapor monitoring points. (Sun) 12/09/05-Sun: Sun received an email from Paul Stewart of ACT, Inc., informing the Department on the current status of the projec: The owner modified development plans for the property to include a full basement with elevator room and underground parking rather than a partial basement with elevator room only. The NYCDEP required modifications to the work plan approved by the NYSDEC to account for the full basement. The modified work plan was approved by the NYCDEP and includes a vapor barrier under the entire property and a more extensive subslab ventilation system. A supplemental soil and ground water investigation is currently being performed and should be completed by Friday. The existing cased wells

126 4TH AVENUE - MISC (Continued) **S118953804**

were surveyed and a flow direction to the west was calculated. The results of the supplemental investigation will be used to size and locate the soil vapor extraction and ground water recovery systems. (Sun) 01/11/06-Sun: Sun sent a letter to the property owner, Paul Bregianos of Arc Electrical and Mechanical, approving the revised Remedial Action Plan prepared by Advanced Cleanup Technologies, Inc. dated 01/04/06, as noted below: Soil Vapor Extraction System (SVES) data sheet and Air Stripper Data Sheet shall be completed and submitted to the Department by March 31, 2006 for review, (2)The owner must notify the Department of site status change from Closed-In Place to Closed-Removed for seven (7) 550-gallon gasoline underground storage tanks (USTs) within 30 days prior to sustantially modifying a facility. (Sun) 03/27/06-Sun received an email from Paul Stewart of ATC on 03/06/06 informing DEC that they are planning to issue to DEC a formal report on the extent of free product and dissolved gasoline in ground water beneath the site. It will also contain a summary of underground storage tank closure activities as requested in DEC's correspondence to the property owner. We should have the report to DEC by the end of this week. (Sun) 03/27/06-Sun sent an email to Paul Stewart of ATC stating that DEC is still waiting to receive a report from ATC on the extent of free product and dissolved gasoline in ground water beneath the siteand a summary of underground storage tank closure activities as requested in DEC's correspondence to the property owner. (Sun) 06/16/06-Sun: Paul Stewart of ACT (Consultant for RP) informed the Department that installation of the recovery well, monitoring wells and vapor monitoring points is complete. The horizontal ventilation screens and piping associated with the vapor extraction wells is also complete. Tomorrow,we will be overseeing installation of the vapor extraction wells. We will also be connecting those wells to piping leading to the location of the treatment system. Next week we will be installing the remaining sections of the 20 mil HDPE liner. The concrete foundation floor will be poured soon after that. Once the first floor parking garage has been completed, we will perform a ground water pump test and a pilot soil vapor extraction test to size a treatment system. Installation of the treatment system will depend upon the construction schedule and access to the alleyway where it will be located. We expect that will take place this fall. (Sun) 09/06/06-Sun: Sun received an email dated 09/04/06 from Paul Stewart of ACT (Consultant for RP)as follows: All wells and subsurface piping have been installed. We are waiting for completion of the first floor so we can install a pilot system and perform a pilot SVE and ground water pump test. I expect that should take place in October . (Sun) 12/13/06-Sun: Sun received an email from Paul Stewart on 10/30/06, stating taht All of the wells and piping for a pump and treat system, vapor extraction system and subslab depssurization system have been installed. He is currently waiting for completion of the first floor of the building so he can install a pilot system and perform a pilot SVE and ground water pump test. He spoke with Paul Bregianos who said the first floor would be completed after the steel was installed which should be this winter. (Sun) 03/23/07-Sun: On 03/23/07 Sun received the following email from Paul Stewart: We completed piping the soil vapor extraction and recovery well conduits to the western portion of the utility room and the concrete floor was installed. We are now awaiting installation of electric service to the utility room in order to perform a pilot SVE and pump test. I will notify you when the pilot tests are scheduled. (Sun) 10/19/07-Sun: On 10/18/07 Sun received the following email from

126 4TH AVENUE - MISC (Continued) **S118953804**

Paul Stewart of ACT for the status of this projec We performed a pilot test of the soil vapor extraction system and a pump test on the recovery well last week and plan to have a pilot test report issued next week. The full scale remedial system should be installed before Thanksgiving . (Sun) 12/18/07-Sun: Sun received the following email from Paul Stewart of ACT, A pump test performed on the recovery well indicated that ground water could not be recovered at a flow rate that could contain the ground water plume. Therefore, we will rely upon two 15 Hp regenerative blowers to remediate soil and ground water in the 6 SVE wells installed beneath the site. A 5.5 Hp regenerative blower for a sub-slab depressurization system is also being installed as a precaution to protect building occupants. The remedial system is being delivered this week and will be installed and put into operation the first week of January, 2008. I will forward a startup report to you and the NYCDEP once the remedial system has been rendered operational. (Sun) 2/25/08-Sun: Sun received the following email from Paul Stewart of ACT, the consultant for the RP, The remedial system has been completely installed and is ready for full scale operation. We are waiting for the owner to provide us with an active telephone line to permit unattended operation. The telephone line should be installed within 10 days at which time the remedial system will be turned on. A Startup Report and an Operation, Maintenance and Monitoring Plan will be forwarded to your attention in approximately 2 weeks. A Closure Report will also be submitted to the NYCDEP with a copy to you. (Sun) 3/12/08-Sun: Sun visited the site to witness the start-up of the remedial system. (Sun) 4/2/08-Sun; Sun received the Remedial System Operation, Maintenance and Monitoring Plan (OMMP) from Paul Stewart of ACT, Inc. (Phone # 631-293-4992). (Sun) 4/11/08: Sun sent the following email to Paul Stewart: Hi, Paul, While I was reviewing the Remedial System OMMP, submitted by you, dated April 1, 2008 for the above referenced site, I found the following documents are missing in the OMMP report: 1. Figure 1: Remedial System Layout 2. Figure 2: Treatment Room Equipment Layout 3. Table 1: Troubleshooting Guidance Table I also noticed that P&ID was not included in the OMMP. The P&ID is a very important document which shows all the equipment, and instrumentation and control. Please revise your OMMP to include P&ID. I have reviewed SVES Data Sheet and found one error on Item #12 (Contaminant). Based on 33 ft of Stack Height and 250 CFM of Air Flow Rate, the Permissible Air Output Concentration for Benzene is 0.02206 LBS/HR, NOT 0.00494 LBS/HR as indicated in your SVES Data Sheet. (Please note that 0.00494 LBS/HR is based on 15 ft of Stack Height). Please address the above comments and resubmit. (Sun) 4/22/08-Sun: Sun reviwed the Remedial System Operation, Maintenance and Monitoring Plan (OMMP), dated 3/31/08, submitted by RP's consultant, Advanced Cleanup Technologies, Inc. (ACT). The Department also reviewed the supplemental documents submitted by ACT on April 16, 2008, including Figure 1 through 3 and Table 1 which were missing in Reference 1 and a revised SVES Data Sheet indicating the correct Permissible Air Output Concentration for Benzene as 0.002206 LBS/HR. The Department approved the OMMP with the condition that a third Pressure gauge & sampling port be installed on inter-connection between two Vapor Carbon Filters. (Sun) 6/24/08-Sun: Sun received the following email from Paul Stewart of ACT, Operation, maintenance and monitoring of the remedial system is being performed on a monthly basis. A quarterly monitoring report will be prepared for submittal in August. (Sun) 8/1/2008 - Project reassigned to Feng. 1/21/2009 - Quarterly

126 4TH AVENUE - MISC (Continued) **S118953804**

Monitoring Report, 4/2008 - 7/2008, 10/3/2008, by ACT. The site is occupied by a ten-story residential apartment building. A remdial program was started 3/12/2008 consisting of an active SVE and treatment system and an active sub-slab depressurization system and treatment system. There are 3 vacuum probes VP-1 to VP-3 for monitoring sub-slab vacuum monthly and Groundwater monitoring wells MW-01 and MW-03 for quarterly monitoring, are located in the cellar floor. Additional monitoring well RW-01 is located in the first floor treatment room. A circuit breaker malfunctioned on the B-200 SVE blower causing it to remain off since 5/30/2008. The two SVE manifolds were joined together. Increased pressure in the B-100 carbon units required the B-100 SVE blower to be shut down unitl the problem could be resolved. Average DTW 11.71 feet. 4 wells were sampled on 4/28/2008. BTEX range 600 ug/L in MW-01 to 9,842 ug/L in MW-02. MTBE range from 23.1 ug/L in MW-01 to 229 ug/L in MW-02. (RJF) 1/26/2009 - Letter to Paul Bregianos (Arc Electrical and Mechanical). DEC requires 1) explanation of the reason why groundwater treatment is missing, 2)surrounding map, 3) delineation work plan for offsite. Investigation work plan include addressing the above comments by 3/16/2009. (RJF) 10/1/2009 - Site Status Report for 2/2009 to 7/2009, dated 9/2/2009, by Advanced Cleanup Technology. On July 16, 2009, a low flow pump test was performed on RW-01. Groundwater recharge is relatively fast. On July 22, 2009, the configuration of the SSD and SVE piping was modified by connecting the casing to RW-01 and the influent piping from the SSD system to the influent piping for SVE Blower B-100. The modified configuration was operated for a few days when high room temp required shut down of the B-100 blower. The ball valves for the SSD piping were re-directed to the 5.5 Hp B-300 blower which was turned on. The B-100 blower was turned off until ambient temp decrease this fall. DTW 13.53' in MW-02 to 14.05' in MW-01. DTW in RW-01 was 22.84'. Groundwater was sampled on 7/22/2009. BTEX range 177 ug/L in MW-01 to 7,200 ug/L in MW-03. MTBE range 15 ug/L in MW-01 to 76 ug/L in MW-03. Will continue monthly system operation, maintenance and monitoring and quarterly groundwater sampling. (RJF) 5/19/2010 - received inquiry regarding the two monitoring wells in front of the 355 Butler Street. The two wells were installed back in 5/2005, sampled once during installation, but no included in the quarterlys. 6/1/2010 - email to Paul Steward (ACT) for information on these two wells, and required site plan with all the wells, their monitoring data and contour map in the next quarterly. 11/4/10. Site Status Report was due in early September 2010. Breen 11/20/10. Sent e-mail to Paul Steward asking for status reports subsequent to 9-2-09. 06/28/2012 - V. Brevdo - Discussed project with Paul Stuart of ATC Environmental via telephone(Phone # 631-293-4992). Sent the following e-mail to Mr. Stuart: June 28, 2012 Dear Mr. Stuart: Thank you for discussing status of the project with me earlier today. It is my understanding that the project has undergone investigation, remediation and is currently in operations, maintenance and monitoring stage with groundwater monitoring ongoing. I also appreciate your thoughts regarding further course of action for the project. It is my understanding that you will be preparing a Project Status Update report and you intend to submit status update report to the Department for review within 30 days . You also agreed to e-mail me a synopsis /briefing describing main highlights of the project and its current status and accomplishments. We agreed that you and I will further evaluate whether current site conditions and remedial progress at this project may advance it into a spill closure status.

126 4TH AVENUE - MISC (Continued) **S118953804**

In evaluation of spill closure potential I would like you to be cognizant of the main criteria which we, in the Division of Environmental Remediation, Region 2 office are looking at when making a spill closure decision. These spill closure criteria are as follows: free product must be removed, grossly contaminated soil with visible staining must be removed, source of contamination must be removed, concentrations of contaminants in soil and groundwater are either at the levels of cleanup guidance values or higher but within acceptable range to DEC, no migration of contaminant off site occurs, remaining contamination is contained, no threat of exposure to vapors from remaining contamination exists, and site poses no further threat to human health and environment. We also use engineering controls such as vapor barriers and SSDS system where necessary. Please note that it is DEC's strong preference that SSDS system remain in operation and be maintained and functioning as an engineering control after spill case is closed . The system must be monitored and maintained in accordance with the procedures set forth in the future Spill Closure Report (when DEC agrees that spill closure is appropriate), including all system equipment such as piping, fans, vacuum gauge and low vacuum visual alarm. Furthermore, the Department strongly recommends the performance of an annual inspection of the system and requires notification of significant operational and maintenance related issues. I look forward to receiving a project synopsis via e-mail as well as Project Status Update report. Please note that I need one hard copy and one electronic PDF copy on CD of all the submissions (except e-mails). Please contact me at 718-482-4928 or via e-mail if you have questions regarding this matter. Respectfully, Vadim Brevdo 01/11/2013 - V. Brevdo Left telephone voice mail to Paul Stuart, requested a return call to discuss project's status. Paul Stuart returned call and said will submit report within a week. V. Brevdo 01/17/2013 - V. Brevdo E-mail from consultant, submitted spill closure request report dated January 17, 2013 with the following e-mail: Vadim, Attached please find an electronic copy of our report for the above-referenced property entitled Request for Spill Closure. Please contact me if you would like a CD or hard copy of our report or if you require further information concerning remedial activities at the subject property. Thank you for your assistance and cooperation in this matter. Regards, Paul P. Stewart, President Advanced Cleanup Technologies, Inc. 960 South Broadway, Suite 100 Hicksville, New York 11801 Phone: (516) 933-0655 x 12 Cell: (516) 840-8197 Fax: (516) 933-0659 Email: pauls@actenvirons.com 01/18/2013 - V. Brevdo Reviewed January 17, 2013 Spill Closure Report and spill closure request. The site consists of a ten-story residential apartment building surrounded by commercial and residential properties. The site was utilized as a gasoline service station from 1963 to 2000 which resulted in impacted soil and ground water beneath the site. Remedial activities have taken place at the site from 2005 through the current date. Petroleum storage facilities and impacted soil were removed from the site during construction of the existing building and below grade parking garage. Residual soil and ground water contamination have been remediated through the installation and operation of a pump and treat system, soil vapor extraction and sub-slab depressurization (SVE/SSD) system that has continually operated from March 2008 to date. Recent ground water quality data indicate that asymptotically low levels of petroleum constituents have been attained in ground water beneath the site. Advanced Cleanup Technologies, environmental engineering

126 4TH AVENUE - MISC (Continued) **S118953804**

consultant for the responsible party, submitted January 17, 2013 remediation report and requested closure of spill case. SSD component of the remedial system will remain in operation as an engineering control to ensure that there is no threat of exposure to vapors from the remaining residual contamination. The Department reviewed remediation report, including analytical data for the site, and concluded that closure of the spill case is appropriate based on the following: 1) Free-phase product has not been identified at the site since underground storage tanks were removed and petroleum impacted soil was excavated during construction of the existing building. 2) All underground storage tanks and petroleum-impacted soil were removed and properly disposed of during site development as indicated in ACT s March 31, 2008 Closure Report. 3) A review of historical ground water quality data demonstrates an asymptotic improvement in water quality beneath the site. 4) Air beneath building remains under negative pressure due to the active SSD system and as a result no migration of vapors from remaining contaminants into the building will occur. 5) Tthe site poses no further threat to human health and the environment. Spill is closed effective January 18, 2013. Spill Closure Letter sent to Paul Stuart of ACT with the following e-mail: January 17, 2013 Dear Mr. Stuart: The Department reviewed Spill Closure Report and request for spill closure dated January 17, 2013. Based on the review of the report, investigative and remedial activities completed to date, analytical data presented in the report, and Conclusions/Recommendations section of the Report, the Department agree that the closure of this spill case is appropriate at this time. Therefore, spill case is closed effective January 17, 2013. Spill closure letter is attached for your file. It is my understanding that the SSD system will remain in operation at the site as an engineering control to prevent possibility of exposure to potential vapors from remaining residual contamination beneath the site. If you have questions regarding this matter, please contact me. Respectfully, Vadim Brevdo "

FINDS:

Registry ID: 110004541684

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

PS 133K SCHOOL (Continued) **1014821030**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Program: BCP
Site Code: 507653
Acres: 0.36
HW Code: C224225
SWIS: 2401
Town: New York City
Record Added Date: 05/08/2015
Record Updated Date: 08/24/2018
Update By: JBSWARTO
Site Description: Location: The site is located in an urban area, in the Gowanus neighborhood of Brooklyn. The site is bound by a two-story residential building and an industrial lot to the north; a two-story industrial and commercial building to the east; Carroll Street to the south; and Bond Street to the west. Site Features: The approximately 0.36 acre site consists of a one-story building that includes a partial cellar, which houses an abandoned above ground storage tank (AST) in a concrete vault. Current Zoning/Use: The subject property is located in an M2-1 manufacturing district and is currently occupied by an office building and garage operated by a private car and limousine service. Historic Use: Past uses include a masonry materials, lath and lumber yard (1886 to 1922), a garage with possible auto servicing and gasoline storage (1925 to 1938), commercial delivery service (1969 to 1980), manufacturing (1981 to 1996), and a commercial car/livery service (appoximately 2002 to present). Site Geology and Hydrogeology: Subsurface strata at the site consists of fill material characterized by loose, brown, fine to coarse sand with some brick and concrete fragments, and trace coal ash. The fill layer extends to depths ranging from approximately 4 feet below ground surface (bgs) to 8.5 feet bgs and is intersected by layers of degraded concrete and brick at varying depths. The fill layer is underlain by native soil characterized by sands and silty sands. Bedrock is part of the Hartland Formation. Groundwater occurs at depths ranging from approximately 6 to 8.5 feet bgs.

335 BOND STREET (Continued) **S117936667**

Env Problem:	Soil, groundwater, and soil vapor has been impacted by chlorinated solvents, especially in the garage area. There is also the potential for impact to soil, groundwater, and soil vapor from an abandoned 1000 gallon above ground storage tank located in a vault in the basement and from gasoline storage tanks which were formerly located on the property.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D008
. Waste name: LEAD

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 08/06/2015
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: EPA

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: X001
. Waste name: WASTE OILS

. Waste code: X003
. Waste name: OTHER STATE REGULATED WASTES [i.e., DIESEL FUEL, GASOLINE AND HOME HEATING OIL]

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "11/30/2009 Sangesland spoke to Bob at ProTest. He said they were pulling a 4,000 gal tank from Bayside Fuel facility. Contamined soil found around the tank. 30 to 40 cubic yards of contaminated soil has already been removed. They will continue to excavate and will take end point samples. ***498 Sackett is a PBS facility with one 4,000 gal tank and two 275 gal tanks*** ***510 Sackett is also Bayside Fuel, but this is a MOSF facility managed by DEC Zielinski*** CSL letter sent to: Bayside Fuel Oil Depot 1776 Shore Parkway Brooklyn, NY 11214 12/01/09-Hiralkumar Patel. received message from Tom (at 3:31 PM on 11/30/09) from Protest. they removed 4,000 gal tank and water is getting into excavation. Tom requested site meeting. Tom Leddy Protest Ph. (631) 321-4670 (O) (631) 745-7944 (C) alternate address: 498-502 Sackett St PBS #: 2-017590. as per PBS record, site has one 4,000 gal gasoline UST and two 275 gal #2 oil ASTs. spill #: 0902825 for 510 Sackett Street. DEC Zielinski is a project manager. received a site map from DEC Zielinski's case file. as per site map, 4,000 gal tank on 498 is along property line towards 510. DEC Zielinski mentioned that no contamination found around MOSF tanks at 510, but contamination towards Sackett street. 10:23 AM:- spoke with Tom. tank was enclosed in concrete and no sign of leak found except surface contamination on top of the tank. as per Tom, concrete was 2 ft thick on sides and about 4 ft thick on top of the tank. concrete pad under tank is still in excavation. about 500 gal water pumped out from excavation. more water coming in. asked Tom to collect sidewall soil samples (one from each end and two from each side) and groundwater sample from excavation. also asked him to collect soil sample right underneath concrete pad, if possible.
12/14/09-Hiralkumar Patel. 10:24 AM:- received water sample result from Protest. two water samples collected from tank excavation concrete box. some VOC contamination found in sample (MTBE: 90 ppb, Toluene: 130 ppb). 12/15/09-Hiralkumar Patel. 10:12 AM:- spoke with Bob at Protest. Bob mentioned that 4,000 gal tank was sitting inside concrete box and had about 3 ft of sand between tank top and concrete pad on top. and that 3 ft sand only was contaminated possibly due to faulty line connection. no contamination found underneath tank. as per Bob, tank was passed tank only test in Jan-Feb. 2009. tank bottom was found at 14 ft depth. no soil/sand left in concrete box. as minor VOC contamination found in water sample and all contaminated soil removed from concrete box, allowed to backfill excavation as need access to use site. asked Bob to submit complete report.
12/23/09-Hiralkumar Patel. 9:24 AM:- received fax from Bob including endpoint sample result. four endpoint sidewall samples collected. no contamination found. 3:21 PM:- spoke with Bob. endpoint samples were taken at 4 ft depth in area above tank where contamination found. Bob will submit complete report once gets disposal manifests.
01/21/10-Hiralkumar Patel. 2:25 PM:- left message for Bob to submit report. 3:10 PM:- received email from Protest with closure report. based on available information, case closed. 1/19/11 - Austin - Received Con Ed report (originaly called in on 7/29/10 - #1004835) of contamination found in street in front of this address - requesting that Patel take a look at con Ed results to determine if this may be coming from this spill - this spill to reamin closed unless there is a direct link with whatwas found in street with this spill - end"
Remarks: "DURING REMOVAL OF 4,000 GAL UST, 30 TO 40 YARDS OF CONTAMINATED SOIL WAS REMOVED. CONTINUING TO CLEANUP"

Record Added Date:	05/08/2015
Record Updated Date:	03/20/2018
Update By:	BXANDERS
Site Description:	Location: The 473 President Street site is located in an urban area in Brooklyn, Kings County. It is located in the southern portion of Block 440 Lot 12. The Gowanus Canal is approximately 350 ft to the west of the site. Site is bounded by a shuffleboard club to the north, an e-waste recycler to the west, President Street to the south, and a casket company to the east. Site Features: The site is comprised of a 1 story warehouse that is fully utilized. Current Zoning and Land Use: The site is an active warehouse for a bicycle company, a furniture maker, and a showroom for a light designer. It is currently zoned for M1-2, commerical to light industrial. The nearest residential area is across President Street. Past Use of the Site: The site has an industrial history back to the 1880s. In 1886 to 1928, the site was a sash and door factory and later a trim and planing mill with machine shop and boilers. In 1938 the Coca-Cola Bottling Co was the operator with two gasoline USTs. In 1969 to the 1990s, the site was occupied by Dolin Metal Manufacturing Co. From 1993 to 2007, the building was occupied by manufacturing and storage. Currently the site is occupied by a furniture maker, a lighting designer, and a bicycle retailer. There is an open spill from a failed tank test which may have resulted in BTEX-contaminated soils on-site. The spill number is 9412605. Site Geology and Hydrogeology: The soils of the area consist of urban fill for the top 10 feet. The groundwater is approximately 10 foot below ground surface at the site. Based on the topography of the land, the local groundwater flows in a westerly direction, towards the Gowanus Canal.
Env Problem:	Soil was analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs)(only during the pre-application investigation), pesticides, and metals. Groundwater was analyzed for VOCs, SVOCs, pesticides, and metals. Based upon investigations conducted to date, the primary contaminants of concern for the site include TCE, BTEX

473 PRESIDENT STREET (Continued) **S121933761**

(Benzene, Toluene, Ethylbenzene, Xylene), naphthalene, Polycyclic Aromatic Hydrocarbons (PAHs - a class of SVOCs), Lead, Mercury, and Arsenic. Soil Soil borings were installed and samples collected as part of the remedial investigation. Concentrations exceeding the Commercial SCOs were found for PAHs, arsenic, lead, and mercury. Primarily the top 10 foot of material, known as historic fill, exceeds the SCOs for PAHs, lead, mercury, and arsenic. Spatially, the native materials were most contaminated in the northern corner near a suspected gasoline tank with trichloroethene (TCE) and BTEX. Groundwater TCE and its associated degradation products are found in groundwater on the northern half of the site moderately exceeding groundwater standards (5 ug/L) with a maximum concentration of 1300 ug/L. Fuel breakdown products (i.e. BTEX and naphthalene) were found in groundwater on the northern portion of the site at concentrations exceeding the standard near the suspected gasoline tank. Soil Vapor TCE, tetrachloroethene (PCE), and cis-1,2-dichloroethene (DCE), were detected in sub-slab soil vapor at significantly elevated concentrations.

Health Problem: People are not drinking the groundwater because the area is served by a public water supply that is not affected by this contamination. People will not come into contact with contaminated soil since the site is covered with a building and concrete unless they dig below the ground surface. Volatile organic compounds in the soil vapor may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Actions are recommended to address potential exposures via soil vapor intrusion on-site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site.

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 09/20/1998
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported

Environmental Interest/Information System

SEMPLE RIEGER CO (Continued) **1000347934**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Sangesland spoke to Brendan Moran at Laurel Envir. A phase 2 done on a site. Sanborne says a tank once was in this location. No tank was found, but they did find contamination. Property Owner: Jack Amir 718-240-2622 fax:718-240-2662 CSL sent to: Dynamite Decorators Attn: Jack Imir 1100 Linwood Ave Brooklyn, NY 11208 06/18/08-Vought-Received call from and spoke to Chaya Sofer (718-314-7750) who works for Jack Amir who was requesting report review. 06/27/08-Vought-Reviewed Limited Phase II Subsurface Investigation report dated 5/23/08 and received on 5/29/08 form Laurel Environmental Associates (Brendan Moran Ph:631-673-0612 Fax:631-427-5323). Laurel retained by First National Bank of Long Island. Site formerly used as contractors yard from 1888 top 1926, as a garage with two (550-gallon)gasoline USTs, part of site was former ink factory. Site currently used for storage of clothing products. Report also includes Phase ESA from Laurel Environmental dated 8/9/07 that states A steel inaccessible cover which may represent a fill port was noted in the western tenant space . Additionally a cut to grade concrete filled vent pipe and small area of patched concrete which may represent an inactive fill vent pipe and a fomrer dispenser, respectively, were also observed in close proximity to the Sanborn depicted UST. A fill port labeled GASOLINE was observed in the exterior sidewalk near the central tenant space overhead door . Two stick/fill ports were noted within the western tenant space storage area. Initial sampling plan included collection of three soil samples and one groundwater sample around SB-7 to be analyzed via 8260. Later investigation included eleven geoprobe locations. Groundwater at depth of 13' below grade and expected groundwater flow to the southwest. WESTERN TENANT SPACE- Investigation of two fill ports showed they were both connected to one single UST containing 3' of gasoline with bottom of tank at 5.5'bg. The capacity of the tank likely ranges between 550 gallons and 1,500 gallons . Six geoprobes performed around tanks. Field screening of samples collected from each boring location did not show evidence of petroleum or other contamination . A confirmatory sample was collected from ten(10) to fifteen(15) feet below grade. The sample was delivered to the laboratory via courier and placed on Hold pending further instruction from the client. Analysis of the sample was later approved by the client though the sample was no longer viable . Report recommends removal or abandonment in place of UST. Five soil borings performed around UST showed no field indications of soil contamination. CENTRAL TENANT SPACE-Gasoline fill port in sidewalk was investigated and was

COMMERCIAL PROPERTY (Continued) **S109062979**

decomissioned with concrete. Magnetic anomoly found in direction of fill piping. Soil sampling in the area of the anomaly was not conducted as a required NYCDOT sidewalk opening permit was not included in the scope of work . Geoprobe boring SB-7 was performed in area of magnetic anomaly and soil borings performed to depth of 15'bg. Soil analytical no longer viable due to retention time in lab. Three additional Geoprobe borings performed later around SB7 and soil samples were collected showing: 22,200ppb 1,2,4-trimethylbenzene(SB7A 3-5'bg), 7230ppb 1,3,5-trimethylbenzene(SB7A 3-5'bg), 1740ppb xylene(SB7A 3-5'bg). Groundwater sample was collected in area if SB7C and groundwater sample showed 2ppb MTBE(SB7C). Report recommends reinvestigation of sidewalk fill port by rover camera and/or sonde tracing to determine if connection to a UST exists. If necessary, obtain NYCDOT sidewalk opening permits to excavate piping and conduct sampling in the area of the nearby anamoly . EASTERN TENANT SPACE-Soil boring performed in area of historical UST and field screening showed no evidence of contamination. Report recommends no further investigation. DEC approves recommendations in Phase II pending inclusion of requirements: 1)future use of property? 2)Central tenant space-delineation of groundwater contamination at sample at SB7A, 3)Central Tenant Space -site assessment where anomaly was found as per 40CFR280. Vought sent letter with above requirements to prepared for address on Phase II: First National Bank of Long Island 10 Glen Head Road Glen Head, New York 11545 Vought called Brendan Moran (Laurel 631-673-0612) for future property use and to explain requirements and inquire as to future use of property. Vought spoke to Moran who was unsure of future use and would return call to DEC. Vought sent out letter to above address with cc to Moran. Address of Developer: Ms. Chaya Sofer A. Shamosh Realty 620 Degraw Street Brooklyn, NY 11217 Ph: 718-240-2622 Fax: 718-240-2662 07/21/08-Vought-Received call from and spoke to Chaya. She received 6/30 letter and she provided letter to Laurel Environmental. Vought approved tank removal adjacent to SB7A in lieu of investigation and discussed above requirements. 08/07/08-Vought-Received call from and spoke to Rocky Weneskus (PW Grosser -631-589-6353) who is working for Chaya Sofer. 6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin and Vought transfer to Section A. 10/1/10 - Raphael Ketani. The spill took place on 4/30/08 and involved the discovery of contaminated soil during an investigation. According to ACRIS, the property (block and lot 427/21) was sold in 12/1998 to Shamosh Realty, LLC, 620-628 Degraw Street, Brooklyn. By 2005, A. Shamosh Realty, LLC changed its address to 1454 East 14 Street, Brooklyn, NY, 11230. The E-docs and the paper file have the original CSL, the Laurel Environmental Associates Phase II, and Mr. Vought's Phase II review letter. There are no other spill cases for the property and no PBS registration. There are 3 tenants on the site. From the database notes, it appears that the part of the property occupied by the west tenant had a gasoline UST with product in it. The part of the property occupied by the central tenant needs the delineation of soil and groundwater contamination. There may be a UST. The area occupied by the eastern tenant does not have any environmental issues. I tried to contact Rocky Wenskus of PW Grosser (631) 589-6353, but I could only leave a message. Mr. Wenskus called me back. He said that PW Grosser did not win the bid for the work. So they had no involvement with the project. I sent a standard followup letter to Shamosh Realty and the First National Bank of Long Island requesting the remediation report. 12/3/10 - Raphael Ketani. As there

COMMERCIAL PROPERTY (Continued) **S109062979**

has been no response to the followup letter, I sent a STIP package to Chaya Sofer, A. Shamosh Realty, LLC, 1454 E. 14th Street, Brooklyn, NY 11230. A deadline was set at January 7, 2011 for the return of the signed STIP. 1/12/11 - Raphael Ketani. I tried to reach Ms. Sofer (718) 240-2622/cell (718-314-7750), but my call was picked up by an answering machine with a message stating that I had reached Dynamite Decorators. I left messages at both of Ms. Sofer's phone numbers and stated that the spill case will be forwarded to our legal division for action. I tried to contact Brendan Moran at (631) 673-0612 (Laurel Environmental Associates), but I could only leave a message. I checked the PBS database, but there was no registration case. 1/14/11 - Raphael Ketani. I spoke Mr. Moran (631) 673-0612/bmoran@laurelenv.com. He said that Laurel Environmental has had no contact with A. Shamosh Realty since they performed the work in 2008. He said that this was a bank deal. He had no other contact information, but he said that they were hard to reach. I tried once more to reach A. Shamosh Realty. I called up the (718) 240-2622 number and again reached Dynamite Decorators. This time, I asked for the property owner. I was passed to Suzanne who told me that the owner is Jack Imir at (212) 532-5005. She said that I can also reach him at the (718) 240-2622 number. She said that he has several businesses. However, right now, he is out of town. He will be back teusday. Next, I successfully contacted Ms. Sofer. She said that she used to be Mr. Imir's secretary. She said that she hasn't worked for him for several years. She gave me the same (212) number for contacting Mr. Imir. 1/19/11 - Raphael Ketani. I tried to contact Mr. Imir, but I reached his assistant (212) 532-5005 who didn't give his name. The assistant told me that Mr. Imir was out of town. I asked the assistant to contact him today and find out whether he was willing to sign the STIP. I added that if Mr. Imir doesn't sign the STIP, then the case will be forwarded to our Office of General Counsel for legal action. He said that he understood and would call Mr. Imir. The assistant told me that the company I was contacting was: ESTEX House Fashion, 284 5th Avenue, NY, NY. Mr. Imir never called the Department in order to discuss conducting a followup investigation or signing the Stipulation Agreement. Therefore, I submitted a Case Initiation Form to Randall Austin, Chief of the Spills Unit, for his signature. 1/20/11 - Raphael Ketani. Mr. Imir called me today. He said that his assistant had told him that the DEC was calling. So he wanted to know what the DEC was concerned about. I told him about the contaminated soil and groundwater that was found by Laurel Environmental. I added that the DEC had sent him a CSL, a followup letter, and a Stipulation Agreement for his signature. Mr. Imir said that he never received any of these documents. I asked him where he gets his mail. He said that I should mail letters to: A. Shamosh Realty, LLC, c/o Jack Imir, 1527 Ocean Parkway, Brklyn, 11230. He added that his FAX number is: (212) 532-1414. I asked Mr. Imir about his ownership of the property. He said that he bought the property sometime in 1999 or 2000. He said that he had applied for more money for his business in 2008 and that's when Laurel did an investigation on behalf of Sovereign Bank. However, he later decided against taking the money. Mr. Imir added that Laurel never told him that more work needed to be done. He said that he was hesitant to ask for more environmental investigating because he thought that Laurel was looking to make more money. I sent him a new STIP with a 30 day deadline and a green return card, as per John Urda of Legal. I also sent the STIP by FAX. 1/25/11 - Raphael Ketani. Vinny Lovari's wife

COMMERCIAL PROPERTY (Continued) **S109062979**

called to say that Mr. Imir had hired Island Tank (631) 662-9445 to do a soil and groundwater investigation and to take away the old fuel tank. I told Vinny's wife that soil borings were needed to determine, in general, whether there is soil contamination throughout the soil underneath the building. I asked her whether Vinny can install wells, also. She said that he can. Later, I received the green return card with Mr. Imir's signature. 1/26/11 - Raphael Ketani. Paul Stewart of Advanced Cleanup Technologies (516) 933-0655, ext 12 called and left a message. He wanted to get information regarding the site so that he can write a proposal and send it to Mr. Imir. I tried to return his call, but could only leave a message. 2/3/11 - Raphael Ketani. Vinny of Island Tank (631) 662-9445 called yesterday. He said that Island Tank was approved by Mr. Imir to do the work. Geoprobing will be done on 2/3/11 and they will hunt for the tank and the piping. Later, Chris of ABC Tank called. He wanted to know what will be needed to investigate the site. I told him that 15 borings would suffice for an initial investigation of the site, along with investigating the anomaly in the eastern section, the fill port in the central section and the tank and fill ports in the western section. He said that he will talk to Mr. Imir about the proposal and see whether he will get the job. 2/8/11 - Raphael Ketani. Vicki of Island Tank (Environmental) sent me 12 pictures of the fuel management system. I put them in the E-docs. 2/10/11 - Raphael Ketani. Chris from ABC Tank (718)272-2800 called. He said that he had spoken to Mr. Imir and that he was putting together a price for doing the investigative work. He said that he needed two more days to calculate the price and put together the contract. I told him that would be fine. Chris said that he expected to start the work next wednesday, 2/16/11. A little while later, Tom Gallinger (tgallinger@optonline.net) called. He said that he was working with Chris of ABC on the project. He wanted to know more about the site and what type of work was required. I read him the case notes describing what had been done in each section of the site. He requested the last investigation report that had been done for the site. I sent him the Laurel Phase II. 2/14/11 - Raphael Ketani. Mr. Imir called me today. He said he had sent the signed STIP via UPS. I told him that there were mistakes with the address and that UPS couldn't deliver the package. I added that they will send the STIP in the package back to him and to then put the STIP in a regular envelope and send it to the DEC. I told him that we will not penalize him for this problem. He said that he will resend the STIP once he gets it by regular mail. Mr. Imir added that he is also waiting for a proposal from each of the three companies he contacted. He said that he called these companies many times, but they are slow in getting back to him. I told him that the DEC is glad that he is moving forward with the project and to send me the proposal once he gets it. He said that he will keep me updated. 2/15/11 - Raphael Ketani. Alex Avracen of Cosmos Environmental Services Inc. called to find out what the DEC believes is needed to investigate the site. I told him what the site history was. He said that he had reviewed the Laurel Environmental Phase I and Phase II. He said that he will make a proposal to Mr. Imir. 2/17/11 - Raphael Ketani. I tried to contact Mr. Imir (212) 532-5005, ext 13/(718) 240-2622 regarding the submission of the STIP, but I could only leave messages. Mr. Imir called me back. He said that he still hasn't received the UPS package with the STIP with the original signature. He will find out where it is and give me a call back. Later, Mr. Imir left a message that he had the package and was putting it in the regular mail today, as I

COMMERCIAL PROPERTY (Continued) **S109062979**

requested. 2/23/11 - Raphael Ketani. Today I received the signed STIP package. I forwarded it up to our legal staff. 3/1/11 - Raphael Ketani. I received an e-mail from Lou Oliva, Regional Attorney, with a pdf file of the A. Shamosh Realty executed STIP. I sent a copy of the STIP to Mr. Imir. Later, Mr. Avracen (516) 374-7890 called me. He said that Mr. Imir had hired him. He will submit a proposal to the DEC on March 9. 3/25/11 - Raphael Ketani. I called up Mr. Avracen (516) 374-7890 and told him that the deadline for submitting the work plan had expired. Mr. Avracen said that he didn't realize that the expiration date was today. He asked that I give him until monday to submit the work plan. He said that it will contain all of the elements that we had discussed. I told Mr. Avracen that this would be alright, but no later. Otherwise, I will have to take action. He asked for May 2 as the deadline for submitting the investigation report. I asked him whether this was enough time to do the work, get the sample results and submit the report. Mr. Avracen said that it was. Later, I tried to contact Mr. Imir (212) 532-5005, ext 13/(718) 240-2622. However, I could only leave a message that the deadline for submitting the work plan had passed. 3/28/11 - Raphael Ketani. Mr. Avracen sent me a work plan by e-mail. I reviewed it and disapproved it. I disapproved it for the following reasons: 1) there were no borings in the back areas of each section; 2) the boring next to the fill port was for 4 feet, rather than digging until the most contaminated sample is found; 3) he was going to take composite samples where no contamination was found - this is not the proper sampling method; 4) a ground penetrating radar survey needed to be done for each section and any anomalies needed to be investigated and borings done if a UST is discovered Later, Mr. Imir called. He just found my message from 3/25/11 on his answering machine. He said that he will do whatever the DEC feels is necessary. He asked whether Mr. Avracen had sent the work plan. I told him that he had and I had disapproved it because it needed changes. I added that Mr. Avracen had been informed by e-mail about the changes. I also told Mr. Imir to talk to Mr. Avracen about the changes. Mr. Imir asked whether legal action was going to be taken by the DEC. I told him that we wont if we get the revised work plan very soon. 3/31/11 - Raphael Ketani. Mr. Avracen sent me the revised 3/25/11 work plan. It incorporated the above listed 4 items. I approved the work plan and e-mailed Mr. Avracen (516) 374-7890 to proceed as soon as possible. 5/3/11 - Raphael Ketani. I called up Mr. Avracen (516) 374-7890 and asked him where the investigation report was. He said that he had just received the signed contract and a check via overnight mail from Mr. Imir. He said that the envelope was mailed yesterday. Mr. Avracen said that the mark outs will be done this week and the work will start next week. I told Mr. Avracen to keep me informed regarding progress on the project. He said that he will. 6/7/11 - Raphael Ketani. I tried to contact Mr. Avracen (516) 374-7890 regarding progress at the site, but I could only leave a message. 6/10/11 - Raphael Ketani. I tried to contact Mr. Avracen (516) 374-7890 regarding progress at the site, but I could only leave a message. Mr. Avracen called me back. He said that he had done all of the drilling, and soil and groundwater sampling. He received the analytical results for the samples and they are low in concentration, except for one place under the sidewalk. He believes that there were gasoline overfills. There are two tanks. One has gasoline and one has fuel oil. Mr. Avracen will send the full report soon. 8/3/11 - Raphael Ketani. I tried to contact Mr. Avracen (516) 374-7890 regarding

COMMERCIAL PROPERTY (Continued) **S109062979**

progress at the site, but I could only leave a message. Mr. Avracen called me back. He said that Mr. Imir finally made the last payment for the work that was performed. So, the DEC will receive the investigation report sometime during this week or next week. 9/15/11 - Raphael Ketani. I tried to contact Mr. Avracen (516) 374-7890 regarding his sending the investigation report, but I could only leave a message. 9/16/11 - Raphael Ketani. I spoke to Mr. Avracen. He said that he had sent the report some time ago. I told him that we never received it. I added that sometimes the lab analytical report is too large to send with the rest of the investigation report. Mr. Avracen said that he will send the two items separately this morning. 9/19/11 - Raphael Ketani. Today I received the COSMOS Environmental Services 8/1/11 Investigation Report. I began my review. 9/22/11 - Raphael Ketani. I finished reviewing the COSMOS 8/1/11 report. Western section (hardware store): 3 soil borings performed in the vicinity of the gas UST, 1 boring performed in the rear of the store, 1 well installed; sample from B-10 near the gas UST had elevated target compound hits, B-9 sample had 2 SVOCs above TAGM standards Central section (fish market): 3 soil borings performed in the vicinity of the gas UST, 1 boring performed in the rear of the store, 1 boring at the remote fill in the sidewalk, inspected two 275 gal. ASTs with basement soil analysis; sample B-8 along the gas tank fill line had elevated VOC concentrations, but no contamination below the 1.5' to 2.5' sampling zone, B-7 had elevated concentrations of target compounds Eastern section (bar/club): 3 soil borings performed in the vicinity of the gas UST, 1 boring performed in the rear, 1 well installed in the northeast corner; samples from B-3 and B-4 had elevated concentrations A GPR survey was performed in the rear of the building, but no anomalies were found that would suggest the presence of a UST. Groundwater is at about 13 feet below grade and didn't have product on it, nor a sheen or elevated hits. The cellar floor is made of concrete with some patches. There were no odors, nor stains on the concrete. In the report, Mr. Avracen recommended doing the following: 1) abandon the 3,000 gal. UST in the courtyard of the western section and do 2 borings below the UST 2) the gas UST in front of the west section should be abandoned and soil samples should be collected below the tank 3) the gas UST in the central section and the surrounding soil should be removed and end point samples taken 4) contaminated soil should be excavated along the fill line and end point samples taken 5) perform a test pit at the fill port in front of the east section to see if there is a UST and if there is, then remove the tank and any contaminated soil and do end points Additionally, from the soil data that was presented in the report, I determined that soil excavation should take place at the locations of B-3 and B-7. The soil should also be removed from the location of boring 7A from the Laurel Environmental Associates Phase II report. I drafted a letter to Mr. Imir and Mr. Avracen approving the COSMOS 8/1/11 report and the recommendations contained therein. I added my own recommendations listed above. The draft letter was sent to Mr. Austin for his approval with a deadline of October 21, 2011 for the work to start. 9/23/11 - Raphael Ketani. The letter was approved by Mr. Austin and was sent out today. 10/12/11 - Raphael Ketani. Vinny Lovari (631) 662-9445 of Island Tank called and left a message yesterday. I returned his call today and left a message. Later, Mr. Lovari called. He said that Mr. Imir was hiring him to deal with the USTs, the fill line and to check and see whether the fill port in front of the east section is connected to a tank. I told him that if

COMMERCIAL PROPERTY (Continued) **S109062979**

there is contaminated soil below a tank, then the tank will have to be removed unless its removal would jeopardize the building's foundation. Mr. Lovari said that he understood. Mr. Imir called. He wanted to clarify what the DEC wanted done. I told him that the work that should take place was indicated in the DEC 9/23/11 letter. Mr. Imir said that he had the letter and he sent a copy to Mr. Lovari along with the COSMOS report. He added that he gave Mr. Lovari the tank work as this is his specialty. I told him that would be fine. 10/18/11 - Raphael Ketani. Mr. Imir called and requested an extension of the deadline for starting the UST abandonment and removal and additional work. He said that many holidays were coming up and that he needed to be out of the country for a short while, too. Mr. Imir added that he still hasn't decided whether COSMOS or Island Tank will do the work. I changed the deadline and gave him until 11/18/11 to start this phase of the work. 11/16/11 - Raphael Ketani. Danny Singh of Don Carlo Environmental (718) 857-3100 called. He said that Mr. Imir was going to sign a contract with Don Carlo for doing the work that was recommended in DEC's 9/23/11 letter. I told him that would be fine. 12/1/11 - Raphael Ketani. Today I reviewed the Don Carlo 11/16/11 Remedial Action Plan. The only comments I had were that the VOCs should be analyzed by method 8260, the CP-51 lists of VOCs and SVOCs should be used and that Don Carlo should see whether there is a UST below the sidewalk. I sent an e-mail approving the RAP with my comments. 12/13/11 - Raphael Ketani. Mr. Singh called today. Don Carlo has removed the two 275 gal. ASTs and the one 1,000 gal. gasoline UST. They did a GPR survey for any tanks or piping near the seafood store, but didn't find anything. The 1,000 gal. UST was in the area of the hardware store. They had removed the contaminated soil from the sides of the excavation, but then they dug down 11 feet to remove the rest of the contaminated soil. Mr. Singh said that the soil still smelled of gasoline, but that they were afraid to go deeper for fear of endangering the foundation. I told him that they should have been digging at a 45 degree angle away from the foundation and that the DEC never asks anyone to dig to the point of endangering a foundation, utilities or appurtenances. Mr. Singh said that his crew will take soil samples from the side of the hole, from under the vault and from the bottom and then backfill the hole. He said that two wells will be installed for soil treatment injections. I asked him whether there was a downgradient well in the area. He said that there is a well about 7 feet upstream. He added that on 12/20 and 12/21, they will have access to the lounge and will do a GPR survey to determine whether the 3,000 gal. UST is still there. 1/4/12 - Raphael Ketani. Mr. Imir (212) 532-5005 ext 13/(718) 240-2622 left me a message and I tried to contact him. However, I could only leave a message with his secretary. Mr. Imir called me back. He said that Mr. Avracen wanted to do soil treatment injections at the location of B-7 from his 8/1/11 COSMOS report. He said that the DEC had approved the work, but that he wasn't sure it was necessary as soil had been dug out down to 11 feet already. I told Mr. Imir that contamination had been left because it was not a good idea to dig out more soil next to the foundation. I looked at the data in the 8/1/11 report and told Mr. Imir that I would have to talk again to Mr. Avracen to see whether he had other soil data for this location. I added that if Mr. Avracen did take another soil sample after the excavation was completed, then this information may be helpful in determining whether soil treatment is necessary. I said that maybe it really wasn't. However, I couldn't promise him

COMMERCIAL PROPERTY (Continued) **S109062979**

anything. Mr. Imir said that he understood and that he will have Mr. Avracen call me tomorrow. Lastly, I asked who is doing the tank removal and abandonment work. He said that it was Don Carlo. 1/6/12 - Raphael Ketani. I spoke to Mr. Singh (718) 857-3100 regarding the possible soil treatment of the area around B-7. He said that Mr. Imir and him have been having disussions about this and have been going back and forth on the issue. I told Mr. Singh that the DEC had taken another look at the contamination levels at B-7 and had decided that soil treatment was not necessary. I told him that this decision was based on the facts that the contamination is in a very localized area, the soil had been dug out down to 11.5 feet by COSMOS, no more digging could take place because the location is next to the foundation, and because the analytical results were not high for a commercial site. Mr. Singh said that he understood. I told him that Don Carlo should continue to do the rest of the work that they plan to do and send the DEC a remediation report. We will look at the report and decide whether to close the spill case. With that, the conversation ended. I spoke to Mr. Imir (212) 532-5005 ext 13/(718) 240-2622 regarding the DEC's decision not to require soil treatment for the area of B-7. However, I told him that the rest of the remediation and tank removal work had to continue. Mr. Imir said that he understood and the conversation ended. 2/17/12 - Raphael Ketani. I received the January 2012 Don Carlo Tank Closure Report and began my review. 2/29/12 - Raphael Ketani. I finished my review of the Tank Closure Report. The descriptions of the locations of various parts of the site and the tanks are 180 degrees different from the descriptions in the Laurel Environmental and Cosmos Environmental reports. It appears that the north arrow in the Don Carlo site figure is pointed in exactly the opposite and wrong direction. A check of the Hagstrom Map seems to indicate that the Don Carlo figure is wrong. Nevertheless, I continued to work with the figure and compare it to the descriptions in the report. The ASTs and the 1,080 gal. UST in the hardware store (east section) were removed. Figure 1 shows that lots of contaminated soil was also removed. The excavation area may encompass the location of boring B-3 of the Cosmos investigation (see the September 23, 2011 DEC letter). A composited soil sample was taken at 3 feet bgs at the suspected pump island location and composited samples were taken from the sidewalls of the 1,080 gal. UST grave at 5 feet bgs. Two excavations were dug in the northwest corner of the seafood depot store (central section). Contaminated soil was removed in the vicinity of borings SB-7 and SB-7A of the Laurel Environmental investigation (see the September 23, 2011 DEC letter) and boring B-7 of the Cosmos investigation. The larger test pit was dug to 12 feet bgs and the smaller one was dug to 4 feet bgs. Samples were taken at 9 feet and 12 feet in the large pit and at 4 feet in the small pit. Three 550 gal. USTs under the lounge (western section) were cleaned out and abandoned in place. Two soil samples were collected from this area. One was a composite of the soil samples from the ends of each tank at 4 feet bgs (tank #004 under the lounge hallway; tanks #005 and #006 under the southeast quarter of the lounge itself. The other was from between tanks #005 and #006 at 6 feet bgs. A soil was sample was taken from the remote fill box location at 2 feet bgs and the last soil sample was taken from the vicinity of the oil water separator at 8 feet bgs. The oil water separator, itself, was cleaned of sludge and filled with cement. The soil end point results were, in general, almost entirely non-detect with only a small number of very low VOC and SVOC hits. However,

COMMERCIAL PROPERTY (Continued) **S109062979**

there were high SVOC exceedences for benzo series analytes and their combustion products. These results are interpreted to represent historical fill as the naphthalene results for the same samples were either non-detect or very low. Soil disposal manifests, tank removal and closure in place affidavits, forms indicating that the liquids from the tanks were disposed of, a copy of analytical report and a copy of a PBS registration application were enclosed in the report. The report was deficient as not enough soil samples were taken around the tanks under the lounge (#004 to #006). Overall, too many samples were composited. This gave an unclear picture regarding what soil conditions are under the site. It is also not clear whether all of the contaminated soil was removed from around the 1,080 gal. tank and the location of B-3. Additionally, Figure 1 is not to scale and this makes understanding where the borings were installed unclear. For this same reason, it is also not clear whether enough borings were installed in any of the sections of the site. Figure 1 also does not show the locations of the borings and wells that were previously installed, nor the location of the 3,000 gal. UST that was depicted in Figure 1 of the Cosmos Environmental report. Also, I could not find a current listing for the site in the PBS database. 3/1/12 - Raphael Ketani. I sent a letter to Mr. Imir and to Mr. Singh (718) 857-3100 disapproving the Tank Closure Report and explaining the deficiencies. Also, Mr. Imir was informed that the lack of a PBS registration for the site was a violation of 6NYCRR Part 612 and subject to penalties and fines. A deadline was set as March 30 for the submission of a work plan to perform more soil borings in the vicinities of tanks #004 to #006, and in the vicinity of the 1,080 gal. tank and B-3 excavation. 3/15/12 - Raphael Ketani. Mr. Imir (212) 532-5005 ext 13/(718) 240-2622 called me today regarding the results of the Don Carlo investigation and my letter dated 3/1/12. He explained that Don Carlo had lead him to believe that the remediation had been completed and no more work needed to be done. However, my 3/1/12 letter indicated that more work needed to be done. I told him that there was only one boring done in the area of tanks #005 and #006. So this was insufficient. He said that he was out of money and couldn't afford to have more work done. I told Mr. Imir that the DEC still didn't have a good idea of the subsurface soil conditions as the samples were composited. Mr. Imir asked whether the DEC could reduce the amount of requested work (soil borings). I looked at the Laurel Environmental plan and the results for borings SB-4 to SB-6 and told him that no borings would be required around tank #004. However, I said, three borings would be needed between the excavation pit for the former 1080 gal. tank and the location of COSMOS Environmental's boring B-3. In the end, Mr. Imir agreed to have 7 more borings done. He will contact Don Carlo and have them do the work. Lastly, the new PBS registration for the tanks at the site is #2-611758. 3/30/12 - Raphael Ketani. Mr. Imir's assistant called. She said that she was having trouble lining up a contractor to do the work reguested by DEC and that Mr. Imir was out of the country and wouldn't be back for about a month. She wanted an extension of the deadline to submit the work plan. I gave her until May 18 to submit the plan. A little while later, Mr. Avracen (516) 374-7890 of COSMOS Environmental called. He asked for clarification regarding what the DEC wanted in the way of investigative work. I told him about the need for the 7 borings. He said that he will get on this right away. 6/11/12 - Raphael Ketani. I spoke to Mr. Avracen (516) 374-7890 regarding the work plan. He said that he couldn't start the work

COMMERCIAL PROPERTY (Continued) **S109062979**

because he needed to review the Don Carlo Tank Closure Report first to see whether they pumped out the sludge from the twin tanks under the club area. He said that, from what he knew, Don Carlo had just sucked out what liquid they could through the 2 inch direct fill ports and then filled the tanks with sand. So the walls of the tanks may still be covered with sludge and the bottom, too. He said that it wouldn't pay to do borings around the tanks if they have to be opened up and removed. I told him to go ahead and review the report thoroughly and then submit a work plan. He said that he will. He will call me sometime during the week of June 18 to discuss a plan of action. 10/22/12 - Raphael Ketani. Mr. Avracen (516) 374-7890 called. He did more soil borings in the floor of the lounge and sent off the samples. Some borings were clean, but others had strong odors. He will get the results in two weeks. 4/15/13 - Raphael Ketani. As I hadn't received any reports or communication from Mr. Avracen in some time, I left him a voice message. I also sent him an e-mail stating that if the Department does not receive the reports by April 26, 2013, then we will take legal action as the deadlines in the Stipulation have not been met. I contacted Jack Imir (212) 532-5005 ext 13/(718) 240-2622 and asked him why the DEC hadn't received any reports or contact from Mr. Avracen. Mr. Imir said that he had paid him. He read to me an e-mail from 10/22/12 wherein Mr. Avracen had acknowledged receiving the payment he was due. Mr. Imir told me that he will e-mail Mr. Avracen demanding that the reports be sent. 4/17/13 - Raphael Ketani. Mr. Avracen called me back. He said that he did the soil borings in the lounge area, in the sidewalk in front of the lounge and in the vicinity of the 1,080 gal. tank and the location of B-3 in the east section of the property. All of the results came up clean, except the one for the outside boring next to the fill pipe for the twin USTs under the lounge. Mr. Avracen added that he didn't know whether the USTs under the lounge had been abandoned properly, but he will have to find this out. I asked Mr. Avracen when I would receive the investigation report. He said that he will send it this week, even though Mr. Imir owes him a little money. 5/13/13 - Raphael Ketani. I tried to contact Mr. Avracen (516) 374-7890 regarding the submission of the latest investigation report, but could only leave a message. I tried to contact Jack Imir (212) 532-5005 ext 13/(718) 240-2622 regarding the latest investigative work that was performed and the report for this work, but I could only leave a message. Mr. Imir called me back. He said that he had paid Mr. Avracen everything that he was owed. He added that Mr. Avracen told him on 5/10/13 that the report would be sent. I told Mr. Imir that, according to Mr. Avracen, the only issue was some contaminated soil outside at the fill port to the twin tanks. I added that I will set a new deadline of May 24, 2013 for receipt of the report. I again reviewed the January 2012 Don Carlo Tank Closure Report. Within the report, Don Carlo indicated that they had cleaned out the 3 USTs below the lounge and had abandoned them in place. They had also removed the 1,080 gal. UST and two nearby 275 gal. ASTs in the basement. Contaminated soil was found next to the fill pipe and box under the sidewalk that had served the twin 275 gal. USTs under the lounge area. The soil was removed down to 2 feet. 5/14/13 - Raphael Ketani. Mr. Avracen sent me an e-mail stating that he will send the report tomorrow. 6/6/13 - Raphael Ketani. Mr. Avracen sent the report yesterday and I began my review today of the 11/22/12 Remedial Investigation Report. As per my 3/15/12 conversation with Mr. Imir, 7 more borings were performed by Cosmos. According to the

COMMERCIAL PROPERTY (Continued) **S109062979**

report, the work started on 10/12/12. Three (3) borings were done in the east section of the property in the vicinity of Cosmos boring B-3 and the former location of the gas UST. Four (4) borings were done in the west section of the property in the area of the twin gas USTs. All borings were performed to 12.5' to 13' bgs. The soil samples for the east section did not have VOC exceedences of the CP-51 unrestricted residential standards, but there were SVOC exceedences. Initially, 3 attempts were made close to the wall of the building in the west section, but a concrete obstruction was hit at 18' to 24 below the floor. PID hits in the three holes were from 250 ppm to 325 ppm. The head space and interface soil samples of the other borings in the west section did not have elevated VOC concentrations. However, there were SVOC exceedences. The VOC results were almost entirely non-detect for all of the samples, except B-14.2. This sample had one exceedence for total xylenes of 2,000 ppb. All of the soil samples had many SVOC hits and exceedences for the benzo series of analytes and their combustion products. However, B-11.2 had a 33,000 ppb exceedence for naphthalene and much higher benzo series exceedences than the other samples. 6/7/13 - Raphael Ketani. I called up Mr. Avracen (516) 374-7890 regarding the confusing highlighting for boring sample B-11.2. He said that naphthalene and the benzo series should have been highlighted, not the RDL numbers. Having answered my questions, I approved the report. 7/3/13 - Raphael Ketani. The information in the spill case was presented to staff at the DEC. Based upon their review, it was determined that the residual contamination was not a threat to people or the environment. Therefore, the spill case was approved for closure effective today."

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006
Site name: PENSKE TRUCK LEASING CO LP
Classification: Not a generator, verified

Date form received by agency: 01/23/1996
Site name: PENSKE TRUCK LEASING CO LP
Classification: Not a generator, verified

. Waste code: NONE
. Waste name: None

Date form received by agency: 03/28/1995
Site name: PENSKE TRUCK LEASING CO LP
Classification: Conditionally Exempt Small Quantity Generator

. Waste code: D001

PENSKE TRUCK LEASING CO LP (Continued) **1000990241**

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D018
. Waste name: BENZENE

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

FINDS:

Registry ID: 110004512000

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with

MACKROYCE CONTRACTING CORP (Continued) **1005882844**

a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"03/17/03 REASSIGNED FROM ROMMEL TO VOUGHT. 8/5/03 Received email from A. Lapine, Delta. Delta proposing to install three off-site monitoring wells; one on the west-side sidewalk off of 4th Ave and the other two on the east-side sidewalk of Degraw. 12/3/03 Reassigned from Vought to Foley. Avg depth to groundwater: 19'bgs Flow generally southwest Total BTEX: ND-5541ppb (9/4/03) Total MTBE: 0.48-386,000ppb (9/4/03) 0.41', 0.66', 0.42, 0.38, 0.17' LNAPL detected in MW-2

BP AMOCO STATION #3887 (Continued) **S103036428**

(5/10/02, 8/8/02, 12/4/02, 3/26/03 and 9/4/03 respectively) 0.05', 0.37' and 0.29' LNAPL detected in MW-4 (8/8/02, 12/4/02, 3/26/03) Off-site delineation to start Q4 2003 with 3 monitoring wells. File review: Subsurface Hydrocarbon Assessment Report (Delta, 10/3/01) Report references Baltec 6/10/98 UST Closure Report for 14 USTs. Lab analysis of soil samples from excavation identified VOCs/SVOCs in excess of guidance values. 11/10-11/11/99 Delta advanced 12 soil borings between 7 to 20 ft. Lab analysis of soil samples identified between one and eight VOCs in excess of TAGM in 11 of 14 samples. Four of those were samples where methylene chloride was the only VOC identified(a common lab contaminant). 5/22-5/23/00 Delta installed three monitoring wells and collected soil samples for VOC analysis. BTEX ranged from 213ppb(MW-1, 10-12') to 106,370ppb (MW-1, 20-22'). MTBE ranged from 58.6ppb (MW-2, 20-22') to 313ppb (MW-1, 20-22'). Total VOCs ranged from 736ppb (MW-1, 10-12') to 415,493ppb(MW-1, 20-22'). 6/28/00 Gauged four tank wells and three monitoring wells. Groundwater samples were collected from three monitoring wells. Tank wells were dry. Total BTEX ranged from 53ppb(MW-3) to 2009ppb(MW-1). MTBE ranged from 7ppb(MW-3) to 1430ppb(MW-1). Total VOCs ranged from 126ppb(MW-3) to 6282ppb(MW-1). 4/2/01 & 4/26/01 Delta gauged 5 monitoring wells and 4 tank wells and collected samples. Total BTEX ranged from 141ppb(MW-3) to 11798ppb(MW-4). MTBE ranged from 17ppb(MW-3) to 7030ppb(MW-4). Total VOCs ranged from 191ppb(MW-3) to 19,702ppb(MW-4). 12/9/03 Received 2002 quarterly reports and second quarter 2003 report.(KMF) 4/2/04 Received Nov 2003 SHAR Addendum report (Delta, 3/31/04) for installation of three downgradient wells (MW-8, MW-9, MW-10) on other side of building. DTW 16.5'bgs. Installed to 24'bgs. No VOCs detected in soil samples. Need more recent monitoring reports. 8/9/04 3Q03 - BTEX from ND(MW-3) to 5541ppb (MW-6). MTBE from ND(MW-3) to 386,000ppb (MW-6). 0.17' LNAPL detected in MW-2. 8/9/04 4Q03 - BTEX from ND(MW-3 and MW-8) to 44,755ppb (MW-2). MTBE from ND(MW-3) to 63,500ppb (MW-6). 0.01' LNAPL detected in MW-2. 8/9/04 1Q04 - BTEX from ND(MW-3) to 14,823ppb (MW-2). MTBE from 0.79(MW-3) to 34,100ppb (MW-6). 8/9/04 2Q04 - BTEX from ND(MW-3, MW-8 and MW-9) to 4,797ppb (MW-4). MTBE from ND(MW-3) to 9,850ppb (MW-5). 0.07' LNAPL in MW-2. 4/27/05 Portfolio meeting-Source is dispensers. GW 16-20'bgs. Will verify if gw is perched. Indoor air model completed 2/05 which lead Delta to install cluster vapor well and run TO-3 analysis. Summa canister will be done since benzene MDL less than 80ug/m3. Reassess exposure. Soil gas survey to define LNAPL impacts. 6/1/05 Subsurface Hydrocarbon Assessment Report received for installation of MW-11 and MW-12, offsite. No BTEX/VOCs detected above RSCOs in soil. 8/1/05 3Q04 - No LNAPL present. DTW 16-20'bgs. BTEX from ND(MW-3,8,9) to 17040(MW-4). MTBE from ND(MW-3) to 38500ppb(MW-6). 6/28/05 4Q04- 0.02' LNAPL in MW-2. BTEX from ND(MW-3,9,11,12) to 13360ppb(MW-4). MTBE from ND(MW-3) to 21900ppb(MW-5). 8/2/05 Subsurface Hydrocarbon Assessment Report received for MW-13 and MW-14, offsite. No BTEX, MTBE or other VOCs in excess of RSCOs. Napthalene was detected in MW-13 above GWQS. 11/9/05: Reviewed the quarterly monitoring report dated October 7, 2005. Fourteen wells sampled on 2/15/05. No free product present. Max BTEX is 16390ppb in MW-4 and max MTBE is 22500ppb in MW5. BTEX and MTBE increased in MW-1 and MW-2. 11/25/05: Reviewed the quarterly report dated 11/3/05. Fourteen monitoring wells sampled on May 27, 2005. Max BTEX is 8190ppb (MW4) and max MTBE is 18200ppb (MW5). Fluctuating concentrations in some wells. 11/29/05 3Q05- DTW 15.45-20.81'bgs. No LNAPL present since 5/04. BTEX from

BP AMOCO STATION #3887 (Continued) **S103036428**

ND(MW-3,8,9,11,12,13,14) to 5847ppb(MW-4). MTBE from ND(MW-3) to 13900ppb(MW-5). 12/19/05 Received Subsurface Assessment Report dated 12/6/05 which documents installation of one cluster well(VCW-1) for vapor monitoring installed 4/4/05. DTW on 5/12/05 ranged from 15.51-20.08'bgs. GW movement varies in relation to topography, lithology, elevations of recharge and discharge areas and man-made influences but generally flows to the west-southwest. VCW-1 was advanced to 21'bgs(approx DTW). Soil samples collected at (17-18'bgs) and (20-21'bgs) showed total BTEX at ND and 220ppb respectively and MTBE at 596ppb and 789ppb respectively. Three vapor samples were collected (VCW-1A(17.5-18'bgs), VCW-1B(11.5-12'bgs), VCW-1C(5.5-6'bgs)) by Summa canister on 4/14/05 and 7/19/05. Total BTEX in VCW-1A was 20mg/m3. VCW-1B and VCW-1C were both ND. MTBE was detected in soil above RSCOs during installation. 3/3/06 Received 4Q05 report- Sampled 8 of 14 wells. DTW 13.35-20.25'bgs. No LNAPL. BTEX from ND(MW-3,8,11,12,13,14) to 17916ppb(MW-4). MTBE from ND(MW-3,8) to 298000ppb(MW-6). Additional on-site data to be collected to enhance site conceptual model for RAP preparation. 3/16/06 Met with BP and Delta. DTW 16-20'bgs. MTBE spike in MW-6 may be due to rise in watertable. Installed cluster vapor well downgradient of MW-5 & MW-6. Vapors only at interval right above watertable. 6/8/2006 - Feng - project reassigned to RJFeng. (RJF) 9/26/2006 - Feng - Quarterly Monitoring Report, 1Q2006, 7/26/2006, by Delta. Sampled on 2/15/2006. DTW 13.50' to 20.38' bg. Flows to south-southwest. No LNAPL. Total BTEX range from ND (MW-3, 8, 9, 11, 12, 13, and 14) to 12,850 ppb (MW-4). MTBE from ND (MW-3, 12) to 131,000 ppb (MW-6). (RJF) 9/28/2006 - Feng - Portfolio meeting with BP and Delta. Residual contaminant probably beneath the pump island area, but delineation can't be done under the pump island canopy due to the safety issue. Delta will continue to monitor and evaluate the site model and remedial alternatives. IRM of bioBarrier in downgradient to treat the groundwater before it migrate off site submitted next quarter. (RJF) 1/4/2007 - Feng - 2Q2006, 11/29/2006, by Delta. Groundwater sampled and gauged 6/6/2006, 14/14 monitoring wells. DTW 14.91' to 20.23' bg. Flows west. No LNAPL. MW-1, 5,664 ppb BTEX, 49.3 ppb MTBE. MW-2, 5,610.2 ppb BTEX, 311 ppb MTBE. MW-3, ND BTEX, less than 1 ppb MTBE. MW-4, 15,207 ppb BTEX, 82 ppb MTBE. MW-5, 3,074.2 ppb BTEX, 2,810 ppb MTBE. MW-6, 3,348 ppb BTEX, 133,000 ppb MTBE. MW-7, 38.2 ppb BTEX, 7,450 ppb MTBE. MW-8, ND. MW-9, ND. MW-10, 80.14 ppb BTEX, 127 ppb MTBE. MW-11, ND BTEX, 34.4 ppb MTBE. MW-12, ND BTEX, 4.8 ppb MTBE. MW-13, ND BTEX, 9.3 ppb MTBE. MW-14, ND BTEX, 4.8 ppb MTBE. (RJF) 6/12/2007 - Feng - 3Q2006, 1/29/2007. Groundwater sampled 8/28/2006. 14/14 monitoring wells were sampled. DTW 14.14' to 20.05' bg. Flows to southwest. No LNAPL. MW-1, 5,655 ppb BTEX, 42.9 ppb MTBE. MW-2, 5,658 ppb BTEX, 308 ppb MTBE. MW-3, ND. MW-4, 14,250 ppb BTEX, 121 ppb MTBE. MW-5, 3,237 ppb BTEX, 1,520 ppb MTBE. MW-6, 3,604 ppb BTEX, 109,000 ppb MTBE. MW-7, 152 ppb BTEX, 8,190 ppb MTBE. MW-10, 84 ppb BTEX, 174 ppb MTBE. MW-11, 20.7 ppb MTBE. MW-8, MW-9, MW-12, MW-13, and MW-14, ND. 6/13/2007 - Feng - 4Q2006, 3/6/2007. Groundwater sampled 11/27/2006. DTW 14.79' to 20.27' bg. Flows to west. No LNAPL. MW-1, 1,378 ppb BTEX, 118 ppb MTBE. MW-2, 3,040 ppb BTEX, 241 ppb MTBE. MW-3, ND. MW-4, 6,366 ppb BTEX, 145 ppb MTBE. MW-5, 3,201 ppb BTEX, 1,690 ppb MTBE. MW-6, 55.2 ppb BTEX, 791 ppb MTBE. MW-7, 18.8 ppb BTEX, 580 ppb MTBE. MW-8, 10.4 ppb MTBE. MW-9, ND. MW-10, 64.1 ppb BTEX, 193 ppb MTBE. MW-11, 12, 13, and 14, ND. (RJF) 7/24/2007 - Feng - 1Q2007, 5/4/2007. Groundwater sampled 2/17/2007. 12/14 monitoring wells were sampled. DTW 15.24' to 20.73'

BP AMOCO STATION #3887 (Continued) **S103036428**

bg. Flows to west. LNAPL in MW-2 (0.08'). MW-1, not accessible. MW-2, 0.08' LNAPL. MW-3, ND. MW-4, 3,643 ppb BTEX, 50.4 ppb MTBE. MW-5, 3,134 ppb BTEX, 5,580 ppb MTBE. MW-6, 58.8 ppb BTEX, 1,120 ppb MTBE. MW-7, 12.3 ppb BTEX, 1,120 ppb MTBE. MW-8, BTEX ND, 8.1 ppb MTBE. MW-9, BTEX ND, 1.3 ppb MTBE. MW-10, 53.4 ppb BTEX, 194 ppb MTBE. MW-11, BTEX ND, 6.7 ppb MTBE. MW-12, BTEX ND, 1.3 ppb MTBE. MW-13, BTEX ND, 3 ppb MTBE. MW-14, BTEX ND, 4.6 ppb MTBE. (RJF) 12/12/2007 - Feng - 2Q2007, 8/6/2007. Active Service Station. 14 monitoring wells were gauged 5/11/2007. DTW 14.66' to 20.19' bg. Flows to southwest. No LNAPL. 14 monitoring wells were sampled 5/11/2007. BTEX range Nd to 12,500 (MW-5). MTBE range ND to 12,500 ppb (MTBE). (RJF) 1/8/2008 - Feng - 3Q2007, 11/1/2007. Active Service station. The monitoring well network was gauged and sampled on 8/30/2007. 14 monitoring wells were gauged. DTW 14.58' to 19.94' bg. Flows to southwest. No LNAPL. 14 monitoring wells were sampled. BTEX range ND to 5,136 ppb (MW-4). MTBE range ND to 17,900 ppb (MW-5). (RJF) 2/13/2008 - Feng - 4Q2007, 1/4/2008. Active Service Station. The monitoring wells network was gauged and sampled on 11/21/2007. 14 wells were gauged. DTW 15.44' to 20.59' bg. Flows to southwest. No LNAPL. 13 wells were sampled. BTEX range ND to 8,479 ppb (MW-4). MTBE range ND to 22,800 ppb (MW-5). (RJF) 6/16/2008 - Feng - 1Q2008, 4/3/2008. Active service station. The monitoring wells network was gauged and sampled 2/25/2008. 9 monitoring wells were gauged and sampled. DTW 15.81' to 20.85' bg. Flows to southwest. No LNAPL. BTEX range ND to 2,500 ppb (MW-2). MTBE range ND to 20,000 ppb (MW-5). 10/29/2008 - 2Q2008, 8/11/2008, by Delta. Active service station. The monitoring well network was gauged and sampled 5/29/2008. 14 wells were gauged. No LNApL. DTW 15.33' to 20.75' bg. Flows to southwest. 14 wells were sampled. BTEX range ND to 2,956 ug/L (MW-4). MTBE range ND to 16,000 ug/L (MW-5). (RJF) 3/4/2009 - 3Q2008, 12/13/2008, by EnviroTrac. Active BP Service Station. The monitoring well network was gauged and sampled 7/29/2008. 14 wells were gauged. NO LNAPL. DTW 15.10' to 20.45' bg. Flows to southwest. 14 wells were sampled. Max benzene 1,200 ug/L (MW-5). Max BTEX 1,443 ug/L (MW-5). Max MTBE 72,000 ug/L (MW-6). 4Q2008, 1/29/2009, by EnviroTrac. Active BP Service Station. The monitoring well network was gauged and sampled on 11/17/2008. 14 wells were gauged. LNAPL in MW-2 (0.03'). DTW 14.53' to 20.24' bg. Flows to southwest. 14 wells were sampled. Max benzene 1,200 ug/L (MW-5). Max BTEX 3,024 ug/L (MW-4). Max MTBE 5,800 ug/L (MW-5). (RJF) 5/21/2009 - Reviewed the Investigation Work Plan, dated 3/31/2009, by Delta. Delta proposes to install 3 monitoring wells, but one of the proposed wells, MW-17 is contingent upon whether it is safe to install the well because the utilities over there. Work plan is approved. SHARA is due within 90 days, August 21, 2009. (RJF) 10/8/2009 - 2Q2009, 8/21/2009, by EnviroTrac. Active BP Service Station. The monitoring well network was gauged and sampled on 5/18/2009. 3 monitoring wells were installed in 6/2009. SHARA summarizing the well installation activities will be submitted under separate cover. 14 wells were gauged. LNAPL in MW-2 (0.04'). DTW 15.07' to 20.59' bg. Flows to west southwest. 13 wells were sampled. MW-2 was not sampled. Max benzene 1,100 ug/L (MW-4). Max BTEX 6,362 ug/L (MW-4). Max MTBE 2,400 ug/L (MW-5). (RJF) 10/16/2009 - Reviewed Subsurface Hydrocarbon Assessment Report Addendum, dated August 20, 2009, by Delta. On June 25, 2009, three monitoring wells MW-15, MW-16 and MW-17 were installed using a Geoprobe 6610 hollow stem auger and direct push. Final depth to 22 feet for MW-15, 23 feet for MW-16 and 21 feet for MW-17. 7 soil samples were collected. MW-15 (13-13.5'),

BP AMOCO STATION #3887 (Continued) **S103036428**

ND. MW-15 (15.5-16'), 217 ug/kg BTEX, 580 ug/kg VOCs. MW-15 (19.5-20'), 33,800 ug/kg BTEX, 57,340 ug/kg VOCs. MW-16 (9.5-10'), 150 ug/kg BTEX, 840 ug/kg VOCs. MW-16 (16.5-17'), BTEX ND, 860 ug/kg VOCs. MW-16 (19.5-20'), 160 ug/kg BTEX, 800 ug/kg VOCs. MW-17 (14.5-15'), ND. All the wells were guaged on 8/6/2009, DTW 14.78' (MW-13) to 20.26' (MW-5). MW-15, 19,010 ug/L BTEX, 24,029 ug/L VOCs. MW-16, 44 ug/L BTEX, 101 ug/L VOCs. MW-17, ND. Delta also proposes a pilot study for sulfate solution injection. 1,000 gallons of MgSO4 in concentration of 25,000 mg/L will be injected into MW-15 and monitor the rest of the monitoring wells. Comments on the pilot study to Delta. NO monitoring wells shall be used as application wells and do not use wells at the edge of the plume where also near the subway tunnel. Revised work plan within 30 days. (RJF) 10/30/2009 - Tibbe forwarded the MSDS of Megnesium Sulfate Heptahydrate to NYCT for review. 11/5/2009 - email from Jennifer Wuotinen of NYCT. Mark, Our Industrial Hygiene group does not see any issues with BP Amoco using this product. 11/5/2009 - 3Q2009, 10/30/2009, pdf, by EnviroTrac. Active BP Service station. The monitoring well network was gauged and sampled on August 6, 2009. the site was re-surveyed on August 19, 2009. 17 wells were gauged. NO LNAPL. DTW 14.78' to 20.26' bg. Flows to west southwest. 17 wells were sampled. Max benzene 820 ug/L (MW-5). Max BTEX 19,010 ug/L (MW-15). Max MTBE 1,600 ug/L (MW-5). (RJF) 2/2/2010 - approval of the sulfate pilot work plan is sent to BP. The report summarizing the pilot result will be in by 7/2010. (RJF) 6/8/2010 - 4Q2009, 2/5/2010, by EnviroTrac. Active BP service station. The monitoring well network was gauged and sampled on 11/23/2009. 17 wells were gauged. NO LNAPL. DTW 15.29 - 20.71' bg. Flows to west-southwest. 17 wells were sampled. Max benzene 1,400 ug/L (MW-4). Max BTEX 32,080 ug/L (MW-15). Max MTBE 1,600 ug/L (MW-5). 1Q2010, 4/19/2010, by EnviroTrac. The monitoring well network was gauged and sampled on 2/9/2010. 16 wells were gauged, MW-11 was not gauged due to an object stuck in the well. NO LNAPL. DTW 13.62 - 20.79' bg. Flows to west-southwest. 17 wells were sampled. Max benzene 460 ug/L (MW-5). Max BTEX 25,040 ug/L (MW-15). Max MTBE 1,200 ug/L (MW-5). 08/06/2010: This spill was temporarily (for 6 months) transferred to A. Doronova. - AD 08/09/2010: Received a pdf copy of the pilot test report. DL to eDocs. AD 10/14/2010: Received a pdf copy of the third quarter 2010 monitoring report. Dl the report to eDocs. AD 4/11/2011 - Spill transferred back to JFeng. 4/25/2011 - email from Chris Meyer of Anteagroup. Good Morning June Attached is the next monitoring report for the above-referenced project. Chris eDoc 1Q2011 report. JF 7/8/2011 - 1Q2011, 4/11/2011, by Anteagroup. The groundwater samples were collected on 2/14/2011. 15 wells were sampled. Max BTEX 17,450 ug/L (MW-15). Max MTBE 22,000 ug/L (MW-6). Flows to southwest. 10/27/2011 - 2Q2011, 9/1/2011, by Antea Group. The groundwater samples were collected on June 17, 2011. 16 wells were sampled. High BTEX and MTBE in multiple wells. MW-1, 1,630 ug/L BTEX, 58 ug/L MTBE. MW-2, 1,464 ug/L BTEX, 87 ug/L MTBE. MW-4, 4,920 ug/L BTEX, 160 ug/L MTBE. MW-5, 1,129 ug/L BTEX, 1,400 ug/L MTBE. MW-15, 19,150 ug/L BTEX, less than 5.0 ug/L MTBE. 7/6/2012 - 1Q2012, 4/27/2012, by Antea Group. The groundwater samples were collected on 2/14/2012. MW-1, 1,360 ug/L BTEX, 31 ug/L MTBE. BP AMOCO STATION #3887 (Continued) **S103036428**

5/24/2012. The next sampling will be in August 2012. MW-1, 233 BTEX, 14 MTBE. MW-2, 711 BTEX, 62 MTBE. MW-4, 2,968 BTEX, 72 MTBE. MW-5, 657 BTEX, 1,000 MTBE. MW-6, 18 BTEX, 21 MTBE. MW-7, 25.1 BTEX, 53 MTBE. MW-10, 43.9 BTEX, 42 MTBE. MW-15, 16,770 BTEX, less than 5.0 MTBE. 11/15/2012 - Reviewed the Work Plan Execution-30 Day Notification Letter and Bioremediation Application Program Work Plan Addendum, dated August 14, 2012. There will be 12 injection events, 1,000 gallon of sulfate solution at concentration of 25,000 mg/L will be injected into MW-1 and MW-5 in each event. Reviewed 3Q2012, dated 10/31/2012 and couldn't find the injection information. DEC was also copied on the letter to EPA for UIC notification. email to Chris Meyer of Antea Group Have you started the sulfate injection yet? I looked at the Notification Letter but I didn't find anything in the quarterly report. Please include all the information regarding the injection in the quarterly report, like what you did for some other injection sites, so I could know what you are doing. As I see, what you proposed is more of a gradually process. There will be 12 injection events, 1,000 gallon of sulfate solution will be injected into MW-1 and MW-5 in each event. Since this site is near the subway line, you may need to have MTA's permission before injecting the solution. Let me know. Well Abandonment Report, 11/9/2012. Abandoned monitoring well MW-11. 4/22/2013 - 4Q2012, 1/31/2013, by Antea Group. MW-1, 1,330 BTEX, 10 MTBE. MW-2, 761 BTEX, 74 MTBE. MW-4, 2,028 BTEX, 88 MTBE. MW-5, 1,398 BTEX, 1,300 MTBE. MW-6, 1,104 BTEX, 15,000 MTBE. MW-7, 68.2 BTEX, 64 MTBE. MW-15, 23,847 BTEX, less than 10 MTBE. 9/18/2012, sulfate injection into MW-1 and MW-15. 10/31/2013 - 1Q2013, 5/3/2013. The groundwater was sampled on 2/15/2013. MW-1, 2,040 BTEX. MW-2, 1,601 BTEX, 34 MTBE. MW-4, 4,619 BTEX, 130 MTBE. MW-5, 1,474 BTEX, 780 MTBE. MW-6, 1,532 BTEX, 12,000 MTBE. MW-7, 61.9 BTEX, 81 MTBE. MW-2, 1,466 BTEX, 7.9 MTBE. MW-4, 443.7 BTEX, 13 MTBE. MW-5, 234 BTEX, 140 MTBE. MW-6, 126.6 BTEX, 62 MTBE. MW-7, 13.6 BTEX, 50 MTBE. MW-10, 0.98 BTEX, 16 MTBE. MW-15, 4,812 BTEX. MW-16, 14 MTBE. 5/31/2017 - Feng - This spill is transferred from June Feng to Jeffrey Vought as per Jeffrey Vought. 8/2/17-Vought-Received phone call and email from Antea(Meyer) with respect to status of RAWP. Vought asked him to resend RAWP. Meyer sent email dated 7/11/17 with RAWP and email that As discussed. Aside from BP s motivations to push this forward, the property owner is also concerned with progress. Vought performed a preliminary review of the proposal and data and noted: a maximum residual BTEX concentration of around 4000ppb Total BTEX in MW-15 which was directly on the sidewalk adjacent to the R,N,D Subway Line; depth to groundwater is from 15-20'bg and depth of adjacent subway is much greater and groundwater contour maps do not reflect a flow direction towards the subway; a decrease in Total BTEX concentration in MW-15 since 2011; the proposal included approximately 9000-gallons of water with a total mass loading of 18,000 pounds; MTA approval is needed for the bio application work. Vought discussed site with RSE and then sent email to Antea(Meyer) with cc to BP Onufrak that Chris, When you get a chance please give me a call regarding this site. After further consideration, review of the data and discussion with Randy, I think the spill may warrant closure without the carbon injection and a confirmatory call to NYCT Transit to ensure no impact, but I know consistency is important to BP and I don t want to alter from the established course. Thanks! . Vought added RAWP to D2. 8/3/17-Vought-Received voicemail message from Meyer and Onufrak. Vought returned call and spoke to Meyer and he noted that neither Antea or ARCADIS had any objections to spill closure. Spill closure based on following: maximum residual BTEX concentration of around 4000ppb Total BTEX in MW-15 which was directly on the sidewalk adjacent to the R,N,D Subway Line; depth to groundwater is from 15-20'bg and depth of adjacent subway is much greater and groundwater contour maps do not reflect a flow direction towards the subway at MW-15 which is the remaining hotspot of groundwater contamination; a significant decrease in Total BTEX concentration in MW-15 where in 2011 at was 17,450ppb Total BTEX and now is around 5000ppb Total BTEX indicating that the remaining groundwater contamination is naturally attenuating; proposal included approximately 9000-gallons of water with a total mass loading of 18,000 pounds which may impair structure of adjacent NYCT subway which is a sensitive receptor; MTA review would be needed for the bio application work and would likely have concerns regarding the proposed injection next to their subway; no reported impacts to adjacent down-gradient NYCT subway considering 20 years since spill was opened and contamination was much worse during early spill history; spill is not a threat to the wider community as per DEC Central Office guidance; further soil and groundwater cleanup is not feasibly cost effective as per CP-51 Soil Cleanup Guidance. Vought sent email to NYCT Michael Mandac with cc to Meyer/Onufrak that Mike, I hope this email finds you well in your new position at NYCT Systems Safety. I am looking to close a BP Spill at the above address that has had a long investigation and cleanup history over

BP AMOCO STATION #3887 (Continued) **S103036428**

the past 20 years. The remaining residual groundwater contamination is in a well in the sidewalk at the gas station that is immediately adjacent to the R/N/D subway line along 4th Avenue and the Department recognizes that that residual groundwater contamination in the sidewalk will continue to naturally attenuate over time. Question for you before we close the spill: Do we have any reported petroleum issues in the subway adjacent to this address? Thanks! Vought received reply from Onufrak that Hi Jeff, We are not aware of any planned use change for this site. We are a tenant. Our landlord has not made us aware of any changes. 8/4/17-Vought-Received reply from NYCT Mandac that Hi Jeff,Thanks for the kinds words. I ll need a couple of days to get some answers from the different groups involved with the subway station itself and the subway lines. Vought sent reply with cc to Onufrak and Meyer that Mike, Thanks for looking into it and we look forward to your reply! Received reply from NYCT Mandac that Jeff, The different station and MOW engineering groups have both reported no petroleum issues along the D/N/R/W line and by the 4th Avenue station. NYCT has no objections to the DEC closing out this spill. Vought replied to NYCT Mandac with thanks and note that spill will be closed. Spill closed by Vought and closure letter sent to BP Onufrack with cc to Meyer and added to D2. "

Remarks: "UNKNOWN EXACT DATE OF THE SPILL.THEY GOT THE RESULTS BACK TODAY FROM GROUND SAMPLES TAKEN.SPILL HAS NOT BEEN CLEANED UP. SPILL REASSIGNED FROM O'DOWD TO ROMMEL. "

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"09/29/11-Henry Chen from DEP responded to this site. he said fisrt hours there was spill because the fire keept going on for many hours. The Fire Departemt washed out the spill to the sewer. He said the cause of the spill is being investigated by the Fire Marshal. Henry Chen xichen@dep.nyc.com 11/28/11-Zhune spoke to Kenny Silver the owner of Big City Auto Parts. He said there was no spill at this site. Fire was electrical fire. Fire started on second floor. The chemicals(motor oil, antifreeze, window wash, transmission fluid, car waxes, hand cleaners) were on first floor. The insurance company sold the chemicals. Fire affected second floor and the roof. 12/01/2011-Zhune visited the site spoke to Edward Mendez (General Contractor) from Daken Auto supply. he said floor on second floor was solid concrete floor. There are couple of drains inside on first floor conected to the sewer. spill closed. "
Remarks:	"Building on Fire at this time - Automotive Fluid mixed in with Fire Dept residue -"

Block #: 439 / Lot #: 1 alternate addresses: 300-344 Nevins Street, 484-504 Union Street, 403-423 Carroll Street PBS #: 2-344265. as per PBS record, the site had following tanks: - one 2,000 gal gasoline UST removed in May 2006 - one 2,000 gal diesel UST removed in May 2006 - one 4,000 gal gasoline UST installed in Dec. 1988 and removed in Oct. 2003 - one 4,000 gal diesel UST installed in Aug. 1993 and removed in Oct. 2003 - one 275 gal waste oil AST installed in Sep. 1993 and removed in Dec. 2012 - one 280 gal other oil UST closed-in-place in May 1993 other spills at site: 9207367, 9208840, 9314103, 9801467, 0306012 spill #: 9207367 was reported on 09/24/1992 due to findings of gasoline in well near 2,000 gal gasoline tank. case still open under remediation. DEC Kolleeny is project manager. as per notes dated 02/01/13, Envirotrac (contractor working for Verizon) proposes excavation of soil from vicinity of well MW-8, in sidewalk along Union Street. spill #: 9208840 was reported on 10/30/1992 due to 2 gal waste oil spill during testing of oil/water separator. case closed. spill #: 9314103 was reported on 03/02/1994 due to gasoline tank test failure. case closed and referred to spill # 9207367. spill #: 9801467 was reported on 05/04/1998 due to diesel spill from vehicle. case closed. spill #: 0306012 was reported on 09/06/2003 due to gasoline tank test failure. case closed and referred to spill # 9207367. as per NYC DOB permit dated 05/05/1993, NY Telephone installed one 4,000 gal diesel tank and one 275 gal waste oil tank. Nevins Street Holdings LLC. **property owner** c/o Property Markets Group 5 East 17th Street New York, NY 10003 11:30 AM:- left message for Tom. 11:40 AM:- received message from Tom. he will call back later. 3:25 PM:- received call from Tom. he mentioned that Verizon had lease on the property and now they are leaving the site. prior to departure, they conducted assessment and collected some samples. during assessment, they found SVOC contamination in area inside the vehicle maintenance shop. they suspect a former in-ground hydraulic lift as the source for this contamination. Tom mentioned that soil excavation will most probably begin on 03/04/13. Thomas H. Bosshard Environmental Specialist Verizon Global EH&S Compliance 501 North Ocean Avenue Patchogue, NY

VERIZON (Continued) **S113405253**

11772 Ph. (631) 654-7920 (O) (631) 901-8272 (C) Fax (631) 475-2217 email: thomas.bosshard@verizon.com case assigned to DEC Zhune for follow-up. 03/4/13-Zhune visited the site met Mr. Bosshard. The contractors were excavating the area of the concrete patch where boring GP-3 was installed and where they suspected the hydraulc lifts were located. As per Mr. Bosshard they did not find evidence of the hydraulic lifts, instead they found urban fill(brick, glass, ash and organics), They said due to the structure of the garage they will stop doing further excavation. They will backfill it. 6/17/13- Zhune received and reviewed the Request for Spill Closure Report sent by Verizon via email and dated 4/2/13. During a Phase II 7 soil borings were installed GP-1 through GP-7 and seven(7) soil samples were collected from the seven borings. The soil analyitcal results indicated no VOCs detected and SVOCs detected exceeding the NYSDEC CP-51 in all seven soil samples with the highest concentration dectected at GP-3. Boring GP-3 was installed within a concrete patch, presumed to be the location of a former hydraulic lift in the garage portion of the building. The area of the concrete patch where boring GP-3 had previously been installed was excavated. A toal of 17.75 tons of soil was excavated from the concrete patch area of the garage. The excavation measured approximately 11 feet long, 5 feet wide and 11 feet deep. Five post excavation samples were collected from each sidewall and bottom of the excavation. The soil analitycal results indicated no VOCs were detected in any of the post samples at concentrations excceding the standards. SVOCs were detected at concntratons exceeding the NYSDEC CP-51 at samples from North sidewall, East sidewall, West sidewall and South sidewall. Based on the detected SVOC's associated with urban fill which is prevalent throughout the New York City , incluiding downtown Brooklyn and the historical uses of the property as lumber and coal yards the spill is closed."

Remarks: "soil samples confirm loss near former site of lift, c/u pending"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN transfered from tang/sullivan to tibbe. see also 9314103 and 0306012 at the same location. 09/23/03 Transferred from Tibbe to Sun 10/01/03 Joe Sun of NYSDEC spoke to Jeff Bohlen of Envirotrac (Consultant to Verizon) regarding the removal of two (2)x4000 gallon FRP USTs, which are scheduled to be removed today, 10/01/03. J.Bohlen stated that they will take the end samples next Tuesday or Wednesday . He will call again to confirm the time and date for DEC people to be at the site to witness the soil sampling. 10/02/03- Sun- Faxed letter to John Quatrale of Verizon and Jeff Bohlen of EnviroTrac requesting the area to be excavated in conjunction with the tank removal activities currently progressing on site. Soil excavation will remove the source of the groundwater contamination, and accelerate the remediation of the spill site. Since source material exists under the sidewalk, an attached letter can be used to expedite the DOT permit acquisition. 10/03/2003-Sun-Spoke with John Quatrale of Verizon about excavation of contaminated soils at 318 Nevins Street. He stated that he agrees with DEC's recommendation to excavate the area on south side of Union Stret. Per DEC's request, Verizon will proceed to expedite the DOT permit acquisition immediately. We will meet next week at the site to further survey the facility when Envirotrac starts to take end samples. 10/7/2003-Sun & Vought visited the Verizon's site and met John Quatrale of Verizon and Jeff Bohlen of Envirotrac. At the time of our visit, one 4000 gallon gasoline FRP UST was already removed. Based on our discussion, Verizon will take one end sample for every twenty five (25) feet on each side wall and one ground water sample on the bottom of the tank. The extent of excavation will be based on the PID readings. The analysis of volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) will be performed using EPA Methods 8260 & 8270, respectively. Verizon will excavate another 4000 gallon fiberglass coated steel UST (diesel tank) on 10/9/2003. 1/5/06: Case reassigned to Andersen. Reviewed the quarterly report for April - June 2005. There is a strong decrease in contaminants by natural attentuation. Max BTEX 2,855 (MW8) and max MTBE 110 (MW 8 and 9). 1/12/06: Reviewed quarterly third 2005 quarterly report. Increase in contaminant concentration in the hotspot (MW-8 and MW12). Wait one more quarter and send and RAP required letter. Max BTEX 6,791 ppb (MW8) and max MTBE 145 ppb (MW8). 2/9/06: Reviewed fourth quarterly 2005 report. Fluctuating concentrations in MW-8. Max BTEX 3991 ppb and max MTBE 137 ppb. Sent RAP required letter. 4/6/06: RAP approved. Two closed-in-place 2,000 gallon tanks will be removed and soil excavated. 4/27/06: Meeting with Verizon, NYSDEC, and EnviroTrac. Two closed in place tanks will be removed. There is old fill material and concrete remnants of old buildings in the ground. This site is adjacent to the Gowanus Canal. 5/4/06: Access letter sent to envirotrac for MTA permit. 5/11/06: Received first quarterly 2006 report. Excavation and tank removal planned for 5/15/06. Max BTEX 4,348ppb (MW8), max MTBE 61 ppb. 8/25/06: One 2,000 gallon diesel and one 2,000 gallon gasoline previously abandoned USTs were removed in May 2006. Impacted soil was removed to limits of excavation (tieback wall of gowanus canal and retaining wall). A petroleum sheen was seen

VERIZON (Continued) **S103274088**

in water in excavation and 838 gallons of was were removed with a vacuum truck. Two endpoint samples collected, no VOC exceedances, some sVOC exceedances. Two monitoring wells were installed in the excavation (MW16 and MW17). Groundwater sampled on 6/15/06. Max BTEX 3,806 ppb in MW8, max MTBE 27ppb in MW17. Third quarter 2006 gw sampling scheduled for September. 11/27/06: Received July - September 2006 update report. Wells sampled on 9/11/06. Max BTEX 5,164 ppb in MW8. Fluctuating gw concentrations. This is the second sampling event since source removal. An RAP may be required after next sampling event. 2/22/07: Reviewed update report. Wells sampled on 12/15/06. Max BTEX 1,648 ppb (MW8), max MTBE 46 ppb (MW17). Local treatment of MW8 may be required if it does not naturally attenuate. 5/24/07: RAP required for groundwater treatment of MW8. Due 7/5/07. 7/6/07: Received RAP for MNA until the end of 2007. At that time, if the level of contamination warrants remedial action, the feasibility of chemical oxidation in the area of mw8 will be evaluated . 8/30/07: Reviewed update report. Wells sampled on 6/8/07. Max BTEX 833 ppb (MW8), max MTBE 120 ppb (MW17). MNA until fourth quarter 2007. 7/2/08 - Carlson: Reviewed January - March 2008 update report. Wells sampled on 3/26/08. Max BTEX 1,848 ppb (MW8). Report states a workplan will be submitted under a separate cover. Emailed Tom Bosshard - what is the expected workplan submittal date. 7/3/08 - Carlson: Received email from Tom Bosshard. RAP will be submitted by July 31, 2008. 8/6/08 - Carlson: Approved Remedial Work Plan for the use of Regenox. Regenox will be injected into four new injection wells in the sidewalk adjacent to wells MW8 and MW12. 8/7/08 - Carlson: Received email from John Quatrale: Labor negotiations are ongoing and the union is working without a contract since August 3, this may drag on for some time. That said, I am still trying to get the work done before the end of the month and will advise as to the actual scheduled date. 8/25/08 - Carlson: Received OMMP report dated 8/25/08. Injection well installation scheduled for 9/9/08. Received email from Tom Bosshard : Please note that baseline monitoring for parameters outlined in the OMMP will be conducted during the third quarter ground-water sampling event, which will be conducted during the week of September 8th. We expect to conduct the RegenOx injection in late September or October, prior to the fourth quarter ground-water sampling event scheduled for December. Reviewed April through June 2008 Update Report. Wells sampled on June 20, 2008. Depth to water 4 - 9 ft. Maximum BTEX concentration 12,370 ppb (MW8). 10/17/08 - Carlson: Reviewed July 2008 - September 2008 Update Report. Wells sampled on 9/7/08. Maximum BTEX concentration 720 ppb in MW12. Six injection wells installed and Regenox injected in September 2008. Monitoring wells MW8 and MW12 will be sampled in October 2008 to evaluate Regenox effectiveness. 3/5/09 - Carlson: Reviewed October - December 2008 Quarterly Report. Regenox injected in November. Spike in MW8 may be from dissolution resulting from Regenox. Regenox injection planned again in May 2009. 5/4/09 - Carlson: Reviewed update report. General decrease in contaminant concentrations. Another regenox injection planned in may 2009. 8/20/09 - Carlson: Reviewed April 2009 through June 2009 Update Report. A third injection event was performed in May 2009. BTEX,TVOCs are still high in MW8. 12/18/09 - Carlson: Reviewed update report. EFR planned on December 10 to recover contaminants desorbed by Regenox. 2/19/2010 - Carlson: Reviewed update report. EFR conducted in December 2009 prior to December sampling event. Impacted groundwater remains in MW8. Another EFR planned prior to March

VERIZON (Continued) **S103274088**

sampling event. 5/13/2010 - Carlson: Reviewed update report. EFR on 3/3/2010. Wells sampled on 3/30/2010. Low dissolved concentrations. Another EFR event planned prior to June sampling event. 8/27/2010 - Carlson: Reviewed April 2010 through June 2010 Update Report. EFR conducted from MW8. Spike in concentration in MW8. Quarterly EFR and groundwater sampling to continue. 11/9/2010 - Breen. July through September Update report received from Environtrac. EFR extraction at MW-8 on 9-7-10. Next event scheduled for December. 2/17/2011 - Breen. Paper copy of October-December 2010 Update rpt received from Environtrac. 08/08/11: This spill case transferred from G. Breen to J. Kolleeny. Reviewed Update Rpt for Jan. thru March 2011 by EnviroTrac, submitted on 5/9/11 (in eDocs). Rpt gives results of 3/29/11 GW sampling event. High levels of contam continue to persist in MW-8, which had 7,410 ug/L total VOCs (down from 13,031 ug/L in Dec. 2010). Off-site up-gradient well MW-11 had 343 ug/L tVOCs (up a little from 322 ug/L in Dec. 2010), and up-gradient on-site well MW-12 had 401 ug/L tVOCs, up from 320 ug/L in Dec. 2010; contam in both MW-11 and MW-12 is primarily benzene (320 ug/L benzene in MW-11; 400 ug/L in MW-12). Rpt states that EFR events will continue at MW-8 on regular basis, with next EFR event scheduled for June 2011, and GW sampling to be conducted 2 or 3 weeks after that. Spoke with Tom Bosshard of EnviroTrac, who mentioned they found an unknown monitoring well across Union St. from MW-8, and wondered if I knew who installed it and if it would be OK for them to sample it for addt'l up-gradient GW data. I could not find a nearby open spill case, but told Tom I see no reason not to sample well. I suggested that they should measure depth to bottom of well and determine screened interval to make sure well will provide reliable data. He said they would. Changed site priority ranking to P2, because site is in post-injection monitoring phase. - J. Kolleeny 03/16/12: On 3/13/12, got phone message from Gavin Zollo of EnviroTrac asking that I review proposal in Sept. - Dec. 2011 Update Rpt to remove a number of monitoring wells from quarterly sampling program. I reviewed EnviroTrac's Update Rpts for April-June 2011, July-Sept. 2011, and Oct.-Dec. 2011, submitted 8/9/11, 11/18/11, and 3/13/11, resp. (all in eDocs). Rpts show no impacts in wells proposed for removal from quarterly GW mon. program, but increasing total VOCs in well MW-8 and to lesser extent in off-site wells MW-11 and MW-18 (across Union St. from MW-8). For June 2011 sampling event, MW-8 had 11,381 ug/L total VOCs, MW-11 had 439 ug/L tVOCs (MW-18, referred to in rpt as unknown well, was not sampled, but rpt states that well will be inspected during Sept. 2011 event and if in satisfactory condition, will be sampled). In Sept. 2011, MW-8 had 12,671 ug/L tVOCs, MW-11 had 331 ug/L tVOCs, and MW-18 had 36 ug/L tVOCs. (Rpt notes that DEC conducted a spill search of area which did not reveal any open or closed spills that might explain presence of well MW-18; also says EnviroTrac requests that DEC conduct addt'l review of properties up-gradient of site to northeast of Verizon site to try to find reason this well was installed, and states that it appears that an off-site source is impacting Verizon's up-gradient monitoring well network.) For Dec. 2011 sampling event, MW-8 had 16,454 ug/L tVOCs, MW-11 had 423 ug/L tVOCs, and MW-18 had 343 ug/L tVOCs. Rpt recommends removing wells MW-3, MW-4, MW-6, MW-7, MW-10, MW-13, MW-15, MW-16 & MW-17 from quarterly GW sampling schedule; these wells would continue to be gauged for depth to water and presence of product on quarterly basis and would be sampled annually during September GW monitoring event. On 3/16/12, I sent email to Gavin

VERIZON (Continued) **S103274088**

Zollo of EnviroTrac: Gavin, I've looked over EnviroTrac's Update Rpt for Sept. thru Dec. 2011 for this spill site, dated 3/13/12, and want to send out email approving recommendations to eliminate most on-site wells from quarterly sampling program but to continue to gauge them quarterly and sample them annually. Can you please provide contact info for your client, including name, position, address and email address? Also, looking back over last three quarterly status rpts, I notice that total VOC concentrations in problematic well MW-8 have steadily increased, from about 11,000 ug/L to over 16,000 ug/L! This is in spite of EnviroTrac performing quarterly EFR events on well and recently adding air sparging at several nearby wells that were installed for chem ox injections. Do you have any thoughts as to what might be going on at well MW-8? If you're going to suggest an up-gradient off-site source, I'm sorry but I don't buy it. First, even tho EnviroTrac's rpts refer to MW-8 as an off-site well, I don't consider it to be off site, just because it's in sidewalk. It's in immediate vicinity of Verizon's USTs that are known to have leaked. Second, concentrations in wells across street, MW-18 and MW-11, are much lower, which argues against an off-site plume reaching MW-8 from an up-gradient source. Third, as concentrations in MW-8 have increased, moderate VOC levels in wells across street have also increased, suggesting to me that they are responding to whatever is going on at MW-8; possibly there is some tidal effect from nearby Gowanus Canal smearing contamination in MW-8 over toward MW-18 and MW-11. Anyway, please let me know your thoughts on this, and please provide contact info for someone at Verizon. Gavin wrote back: Jon, Please send all correspondence for any Region 2 Verizon facilities, including 318 Nevins Street, to Tom Bosshard. After a recent rearrangement of their envt'l group he is current Envt'l Manager for Verizon in NY area. His info is below: Thomas H. Bosshard, CPG Environmental Manager, Verizon Global EH&S Compliance 501 North Ocean Avenue, Patchogue, New York 11772 O: 631-654-7920, F: 631-475-2217, C: 631-901-8272 thomas.bosshard@verizon.com Jeff Bohlen, who is out in field today, and myself will review other points mentioned in your email and get back with you next week. Thank you for expediting your review of current rpt prior to our next sampling event. We appreciate your efforts. - J. Kolleeny 03/19/12: I sent email to Tom Bosshard of Verizon, cc to Gavin Zollo of EnviroTrac: Dear Mr. Bosshard: I have reviewed Update Rpt for Sept. thru Dec. 2011 pertaining to this spill site, prepared by EnviroTrac Envt'l Svcs and submitted on 3/13/12. Rpt presents results of GW sampling performed at site in Dec. 2011, as well as historical GW sampling data. Based on data, EnviroTrac recommends removing monitoring wells MW-3, MW-4, MW-6, MW-7, MW-10, MW-13, MW-15, MW-16 & MW-17 from quarterly GW sampling schedule; these wells would continue to be gauged for depth to water and presence of free product on quarterly basis and would be sampled annually during September GW monitoring event. This recommendation is approved. However, DEC notes that contaminant levels in well MW-8, located in sidewalk along Union Street and in vicinity of removed gasoline & diesel USTs, have steadily increased over last three sampling events, from ~11,000 ug/L total VOCs in June 2011 to over 16,000 ug/L total VOCs in Dec. 2011. This increase has occurred in spite of quarterly enhanced fluid recovery events being performed on this well, plus recent addition of air sparging using several nearby injection wells installed for application of chemical oxidant. DEC requests that EnviroTrac review available historical soil data from UST removal and from install'n of monitoring and injection wells to

VERIZON (Continued) **S103274088**

evaluate possibility that residual soil contamination in this area may be acting as an ongoing source of GW contamination. If contaminant levels in MW-8 continue to remain elevated, addt'l remedial actions may be required to address contamination. Please feel free to contact me if you have any questions. - J. Kolleeny 03/20/12: Received email response from Gavin Zollo of EnviroTrac, with cc's to Jeff Bohlen of EnviroTrac and Tom Bosshard of Verison Envt'l: John, Per your request, attached is hydrograph of MW-8 with notes of significant events. As you can see, water table elevation has increased over last few years by approx 2-3 ft. A rise in water table appears to correlate with higher BTEX concentrations and following injection of RegenOx, BTEX apparently desorbed from soil resulting in higher BTEX concentrations as compared to previous levels (this is common with RegenOx and tapers off with time). I suggest we continue with EFR/Air Sparging schedule and evaluate BTEX levels after 6 months (following 3rd quarter sampling in September). If you have any questions, please contact me. I wrote back, with same cc's: Gavin, Thanks for your comments and for hydrograph of well MW-8. It is very possible that rise in water table elevation and effects of RegenOx injections may explain increase in VOC concentrations in well MW-8. I agree with your suggestion that EnviroTrac continue with EFR/air sparging program and re-evaluate GW conditions after 3rd quarter 2012 sampling event. Email exchange is in eDocs, with hydrograph attached as last page. - J. Kolleeny 07/05/12: Reviewed Update Rpt - Jan. thru March 2012 by EnviroTrac, submitted with transmittal sheet dated 4/13/12 and received 4/16/12 (in eDocs). Rpt states that enhanced fluid recovery was performed on worst well, MW-8, on 3/16/12, recovering 1,536 gals of GW, and portable air sparge system was also used to enhance recovery of residual soil vapors in vicinity of MW-8 by injecting air into surrounding injection wells IW-1 thru IW-3; effluent air had PID readings up to 31 ppm. GW samples were collected on 3/30/12 from wells MW-8, MW-9, MW-11, MW-12 and MW-18. Well MW-8 had 11,344 ug/L total BTEX (down from 12,018 ug/L in December 2011) and 17,528 ug/L total VOCs (up from 16,454 ug/L in December 2011); MW-11 had 344.5 ug/L tVOCs (down from 423.2 ug/L in Dec. 2011), MW-12 had 200 ug/L tVOCs (down from 261.1 ug/L in Dec. 2011), and MW-18 (which rpt refers to as up-gradient) had 272.5 ug/L tVOCs (down from 343.4 ug/L in Dec. 2011). Well MW-18 seems to be cross-gradient to me, and contam there is likely due to tidal smearing from nearby Gowanus Canal. Rpt states that EFR events in conjunction with air sparging events will continue at MW-8 on quarterly basis, with next event scheduled for June 2012, followed by GW sampling 2-3 weeks later. - J. Kolleeny 09/14/12: Reviewed Update Rpt April-June 2012 by EnviroTrac, submitted with transmittal sheet dated 8/20/12 (in eDocs). GW sampling on 6/28/12 showed worst well, MW-8, had 10,487 ug/L total VOCs (down from 17,528 ug/L in March 2012); well MW-11 had 501 ug/L tVOCs (up from 345 ug/L in March 2012) and well MW-18 had 341 ug/L tVOCs (up from 273 ug/L in March 2012). Rpt states that quarterly EFR events will continue to be performed on MW-8 in conjunction with AS events at surrounding injection wells, with next event scheduled for Sept. 2012; 3rd quarter 2012 GW sampling event will be conducted 2 or 3 weeks after EFR/AS event. Also, received phone call from Mark Godick of AKRF (914-922-2356), consultant to property owner (Verizon is tenant), who is trying to get NYC to rezone property. They plan to develop property with a bldg in a year or so; bldg will likely cover former UST area (but not sidewalk where

VERIZON (Continued) **S103274088**

MW-8 is located), and they will likely be excavating soil, perhaps dewatering, and installing vapor barrier beneath bldg (GW too shallow for SSDS). They will be doing a RAP for NYCOER related to this. We discussed remedial options for Verizon and whether re-development could interfere with spill cleanup, and agreed that this is unlikely since main residual impacts appear to be in sidewalk along Union St., not in former UST area. Mark will be in touch in future. - JK 10/25/12: Met with Tom Bosshard of Verizon and Jeff Bohlen of EnviroTrac; Vadim Brevdo and Paul John of DEC also attended (sign-in sheet in eDocs). Verizon's lease expires at end of 2013, and they plan to close bldg by mid-December 2012. To expedite spill closure, they propose to excavate soil in sidewalk area around problem well MW-8 down to GW. I suggested they also apply oxidizing chemicals to GW in excavation; they agreed. They will prepare and submit work plan for excavation, separate from 3rd quarter monitoring rpt. - J. Kolleeny 12/04/12: Reviewed Update Rpt July 2012 through Sept. 2012 by EnviroTrac, submitted under transmittal letter dated 11/28/12 (in eDocs). Rpt summarizes performance of EFR on well MW-8, and presents results of Sept. 2012 GW sampling event. EFR was done on Sept. 8, 2012, recovering total of ~1,135 gals of GW. Results of GW sampling on Sept. 25, 2012 show MW-8 had 7,147 ug/L total VOCs, down from 10,487 ug/L in June 2012; MW-11 had 381 ug/L tVOCs, down from 501 ug/L in June 2012; MW-12 had 330 ug/L tVOCs, up from 230 ug/L in June 2012; MW-18 had 92 ug/L tVOCs, down from 341 ug/L in June 2012. Rpt states that remedial alternatives for area of MW-8 are currently being evaluated; in meantime, quarterly GW monitoring and EFR events will continue, with next round scheduled for December 2012. - J. Kolleeny 01/30/13: Reviewed Update Rpt Oct. thru Dec. 2012 by EnviroTrac, dated 1/23/13 (in eDocs). EFR was conducted on MW-8 on 12/11/12, with air sparging at nearby injection wells; during EFR with sparging, PID monitoring of effluent air stream at MW-8 gave readings up to 101 ppm. Vacuum measurements taken at nearby wells show no measurable vacuum influence; however, water levels in nearby wells decreased slightly, indicating creation of capture zone around MW-8. Total of 600 gals of water were recovered during 8-hr event. GW sampling on 12/28/12 showed significant decrease in VOCs in worst well MW-8, which had 2,690 ug/L total VOCs, down from 7,147 ug/L in Sept. 2012, and was 3rd consecutive quarterly decrease. Well MW-11 had 206 ug/L tVOCs (down from 381 ug/L in Sept. 2012) and well MW-12 had 331 ug/L tVOCs (~same as 330 ug/L in Sept. 2012). Rpt states that quarterly GW monitoring will continue, and that remedial plan to address area of MW-8 will be submitted under separate cover. - J. Kolleeny 02/01/13: Reviewed Addt'l Remedial Work Plan by EnviroTrac, dated 1/31/13 (in eDocs). Work Plan proposes excavation of soil from vicinity of persistently most-contaminated well MW-8, in sidewalk along Union St adjacent to site, and application of RegenOx"! and ORC Advanced to excavation. Existing on-site monitoring wells will be abandoned, and any wells destroyed during excavation will be replaced for post-excavation GW monitoring, which will be performed and reported on quarterly basis. Work plan includes a Community Air Monitoring Plan (after request by DEC). I sent letter (in eDocs) to Tom Bosshard of Verizon, cc to Jeff Bohlen of EnviroTrac, approving plan but asking that end-pt soil samples be collected from excavation sidewalls if feasible, to document soil conditions at excavation limits. - J. Kolleeny 08/07/13: Reviewed 4/29/13 Update Rpt Jan. thru March 2013 by EnviroTrac (in eDocs as Post-Excavation Status Rpt). Summarizes excavation of contam soil in sidewalk area along Union St.

VERIZON (Continued) **S103274088**

during Feb. 2013. Excavation done in two parts; from first area, two sidewall and one bottom end-pt soil samples were collected, results showed no significant residual impacts. In 2nd area, one bottome end-pt sample was collected (due to sheeting, no sidewalls could be collected); results again showed no significant residual impacts. Prior to backfilling, RegenOx and ORC Advanced were applied to both excavation areas. Well MW-8 (historically worst well) was destroyed during excavation but was reinstalled during backfilling. Total of 82.64 tons of soil were removed. After excavation, all on-site monitoring wells were properly abandoned (as previously approved by DEC). On March 29, 2013, off-site (i.e., sidewalk) wells MW-8, MW-9, MW-11, MW-12 and MW-18 were gauged and sampled. No free product detected. Results show MW-8 had 8,644 ug/L total VOCs, up from 2,690 ug/L in Dec. 2012; well MW-11 had 214.5 ug/L tVOCs, up from 206 ug/L in Dec. 2012. EnviroTrac states that increases are likely due to disturbance of subsurface by excavation and application of chem ox. Quarterly GW monitoring will continue, with next event to be in June 2013. - J. Kolleeny 12/04/13: Reviewed 8/27/13 Update Rpt April-June 2013 by EnviroTrac (in eDocs). Results of June 2013 GW sampling event show well MW-8 had 4,052 ug/L total VOCs (down from 8,644 ug/L in March 2013), well MW-12 had 220 ug/L tVOCs (same as in March 2013), well MW-18 had 81 ug/L tVOCs (up from 37 ug/L in March 2013). EnviroTrac attributes tVOCs decrease in MW-8 to excavation of contam soil source material and subsequent chem ox application, states that well network will continue to be sampled on quarterly basis, in Sept. and Dec. 2013. - JK 01/27/14: Reviewed 10/29/13 Update Rpt June-Sept. 2013 by EnviroTrac (in eDocs). Results of Sept. 2013 GW sampling event show well MW-8 had 4,378 ug/L total VOCs (up from 4,052 ug/L in June 2013), well MW-12 had 391 ug/L tVOCs (up from 220 ug/L in June 2013), well MW-18 had 9 ug/L tVOCs (down from 81 ug/L in June 2013). EnviroTrac notes that total BTEX in well MW-8 decreased from 1,983 ug/L in June 2013 to 1,814 ug/L in Sept. 2013, and attributes this to excavation of contaminated source material and subsequent chem ox/ORC application. Rpt states that well network will continued to be sampled quarterly, with Dec. 2013 event. - J. Kolleeny 02/18/14: Reviewed 1/15/14 Update Rpt Sept.-Dec. 2013 by EnviroTrac (in eDocs). Results of 12/24/13 GW sampling show well MW-8 had 11,332 ug/L total VOCs (up from 4,378 ug/L in Sept. 2013), well MW-11 had 155 ug/L tVOCs (up from 72 ug/L in Sept. 2013), well MW-12 had 280 ug/L tVOCs (down from 391 ug/L in Sept. 2013). Rpt states that rebounding of VOC concentrations in GW is common after chem ox / ORC applications and is likely cause of increase in VOCs in well MW-8. This seems somewhat dubious, as RegenOx & ORC Advanced were applied to open excavation (i.e., not injected) in Feb. 2013, and this was 4th GW sampling event since then. On 1/15/14, Gavin Zollo of EnviroTrac sent email noting that 4th Quarter 2013 rpt being sent summarizes 4th quarterly event since remedial actions, and requesting meeting to discuss future options. On 2/12/14, I did prelim review of rpt and emailed Gavin with suggested meeting date of 3/5/14; on 2/14/14, Gavin confirmed date was good for meeting. - J. Kolleeny 03/07/14: On 3/5/14, met with Tom Bosshard of Verizon and Jeff Bohlen of EnviroTrac to discuss site status and future course of action. DEC stated that spill cannot be closed yet in light of increased VOC concentrations in well MW-8; Verizon & EnviroTrac agreed, but noted that many remedial actions have been performed at site, including two UST removals with soil excavation, chem ox injections, vacuum-enhanced fluid recovery plus air sparging, and most-recent soil excavation in sidewalk area of

VERIZON (Continued) **S103274088**

MW-8 (well was replaced) plus application of chem ox to open excavation. I suggested further quarterly monitoring of well MW-8 only, with annual sampling of other wells; however, if results for MW-8 show decreasing trend before year is over, other wells should be sampled in support of spill closure. Verizon/EnviroTrac agreed with this suggestion. After meeting, on 3/6/14, Tom Bosshard sent email to document these discussions: Jon, Thank you to Vadim and yourself for your time in meeting with Jeff and myself yesterday to discuss spill case. As you know, Verizon NY has expended a great deal of effort in remediating this spill site, and is appreciative of DEC s continued guidance as we continue on path to spill closure. Most recently, remedial efforts included soil excavation and chemical oxidation application in area of off-site monitoring well MW-8 in Feb. 2013, followed by four quarters of GW monitoring and sampling through Dec. 2013 utilizing five off-site monitoring wells. As discussed and mutually agreed during yesterday s meeting, Verizon NY proposes to continue quarterly monitoring and sampling at monitoring well MW-8 in 2014 during months of March, June, September and December, and conducting annual monitoring and sampling at monitoring wells MW-9, 11, 12 and 18 during month of December 2014, at which time request for spill closure will again be considered. Results of quarterly monitoring and sampling at MW-8 will also be continually evaluated, and MW-9, 11, 12 and 18 may be monitored and sampled prior to December 2014 if a trend in quarterly dissolved concentrations at MW-8 supports a spill closure request. I sent email reply: Tom, Thanks for your email documenting our discussions from Wednesday's meeting and agreed-upon future course of action for this spill site. - J. Kolleeny 05/28/14: Reviewed Update Rpt January thru March 2014 by EnviroTrac, dated 4/25/14 (in DecDocs). Rpt presents results of GW sampling of well MW-8 on 3/20/14, showing well had 2,725 ug/L total VOCs, down from 11,332 ug/L in Dec. 2013. Rpt states that monitoring of MW-8 will continue, with next sampling event scheduled for June 2014. - J. Kolleeny 10/15/14: Reviewed Update Rpt April-June 2014 by EnviroTrac, dated 7/1/14 (in DecDocs). Rpt presents result of June 20, 2014 sampling of well MW-8, showing well had 3,248 ug/L total VOCs (up from 2,725 ug/L in March 2014). Rpt states that GW monitoring will continue, with next sampling event for MW-8 in Sept. 2014, and with annual sampling of all remaining wells (MW-8, MW-9, MW-11, MW-12 & MW-18) in Dec. 2014, at which time results will be re-evaluated for petitioning for spill closure. - J. Kolleeny 12/15/14: Reviewed Update Rpt July-Sept 2014 by EnviroTrac, dated 11/7/14 (in DecDocs). Sampling of well MW-8 in Sept 2014 showed 2,658 ug/L total VOCs (down from 3,248 ug/L in June 2014). Rpt states that wells MW-8, MW-9, MW-11 and MW-18 will be sampled in Dec. 2014 for annual GW sampling event. Rpt also states that well MW-12 (in Union St sidewalk to SE of MW-8) was found to have been destroyed, and that Verizon does not intend to replace well. Rpt states that results of post-remediation quarterly GW monitoring will continue to be summarized in quarterly reports and continually evaluated for request of spill closure. - JK 02/23/15: Reviewed Update Rpt Oct.-Dec. 2014 by EnviroTrac, dated 1/12/15 (in DecDocs). GW sampling on 12/19/14 showed well MW-8 had 7,260 ug/L total VOCs (up from 2,658 ug/L in Sept. 2014), well MW-9 had 4.3 ug/L tVOCs (had 4.8 ug/L tVOCs when last sampled in Dec. 2013), well MW-11 had 158.6 ug/L tVOCs (had 155.1 ug/L tVOCs when last sampled in Dec. 2013), well MW-12 had 282.4 ug/L tVOCs (had 280 ug/L when last sampled in Dec. 2013), well MW-18 had 7.9 ug/L tVOCs (had 3.2 ug/L tVOCs when last sampled in

VERIZON (Continued) **S103274088**

Dec. 2013). Rpt notes that construction activities in sidewalk along Union St. were noted during Sept. 2014 GW sampling event, and EnviroTrac speculates that such ground disturbance activities may have caused increase in VOCs in MW-8 this quarter, which was a departure from previous 3 quarters. EnviroTrac recommends another GW sampling event in March 2015 to evaluate request for spill closure. - JK 06/04/15: Reviewed Update Rpt & Request for Spill Closure, Jan. through March 2015 by EnviroTrac, dated 4/3/15 (in DecDocs). On 3/16/15, a GW sample was collected only from problem well MW-8, as I agreed to in discussions with EnviroTrac. Sample result showed well MW-8 had 1,158 ug/L total VOCs (down from 7,260 ug/L in Dec. 2014, an upward fluctuation or spike which EnviroTrac stated was likely attributable to construction activities in Union Street sidewalk near MW-8 in Fall 2014, possibly related to subsurface utilities). Well MW-8 had only 12 ug/L of benzene (down from 72 ug/L in Dec. 2014). Based on overall decreasing trend in VOC levels in MW-8, absence of significant impacts in other site-related wells, and substantial remedial efforts undertaken at site (including UST removals, soil excavations, application of oxygen-releasing material and chemical oxidant (to open excavations and via injections), performance of vac truck extraction events, EnviroTrac requests spill closure. I agree spill closure is appropriate based on remedial actions performed, relatively low residual contaminant levels, and decreasing trend in contaminant levels, which is likely to continue by natural attenuation processes. I closed spill case, sent spill closure letter (in DecDocs) to Thomas Bosshard of Verison, cc to Jeff Bohlen of EnviroTrac. - J. Kolleeny"

FINDS:

Registry ID: 110069704519

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006
Site name: DENTS OUT AUTO BODY LTD
Classification: Not a generator, verified

Date form received by agency: 05/10/1993
Site name: DENTS OUT AUTO BODY LTD
Classification: Conditionally Exempt Small Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS

VIDAN AUTO SALVAGE (Continued) **1003864459**

LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Classification: Conditionally Exempt Small Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: X001
. Waste name: WASTE OILS

. Waste code: X003
. Waste name: OTHER STATE REGULATED WASTES [i.e., DIESEL FUEL, GASOLINE AND HOME HEATING OIL]

Violation Status: No violations found

Registry ID: 110008082421

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Date form received by agency: 06/12/1992
Site name: CRUSADER CANDLE CO INC
Classification: Small Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D018
. Waste name: BENZENE

Environmental Interest/Information System

CRUSADER CANDLE CO INC (Continued) **1000694280**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Sangesland spoke to Mimi Raygorodetsky who is the project manager at Environmental Liability (212-581-8023). They performed a Phase 2 on the site for a potential purchaser. They found weathered petroleum in the well, Elevated PID readings from soil - History of Gasoline tanks & gasoline spill. No additional work will be done until the purchaser takes title. Mimi will forward the name/address for the current owner so a contaminated soil letter can be sent. 5/25/2005 - Contaminated soil letter sent to: Mr. Leopold Friedman c/o Friedknit Creations 131 West 33rd St., Suite 301 New York, NY 10001 07/27/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called to Sarah Lopez at (212)581-8023 and left message to call me back regarding information of spill. -QA 07/27/06: Ms. Mimi Raygorodetsky, Environmental consultation firm (212)581-8023, she called me back and said She talked to Client (purchaser) and they are going to cleanup the spill very soon. -QA 01/23/07: Called Ms. Mimi Raygorodetsky, Project Manager (Environmental Consultation firm) at (212)581-8023. She is on vacation up to 31, January 2007. Talked to her assistant Mr. Roman Grushka he said he will talk to the people who is working in this project and he will call me back. Called again to Environmental Liability Management, New York and talked to other Project Manager Ms. Nicole Gorelick and said this is a emergency Site has to be investigated impact to groundwater and to provide us with a copy of the phase 2 Site Assessment Report, prepare and submit a remedial action work plan describing how they clean up the site for DEC review and approval. Mr. Pzcimmermann, Principal, Environmental Liability Management called me and said he is trying to reach Environmental Attorney and Client as soon as possible. -QA 02/05/07: Ms. Mimi Raygorodetsky (Project Manager) called me and left message. This week she is going out of station next week on Monday February 12 she will discuss with me regarding spill. -QA 02/12/07: Ms. Mimi Raygorodetsky (Project Manager)called me and said about 6 to 12 month Department of City Planning will do the rezoning. After that construction will begin and same time remediation will be done.-QA 09/13/07: Called Ms. Mimi Raygorodetsky (Project Manager) and discuss about the present status of the spill. She said The Department of City Planning is still doing rezoning, as soon as she will come to know anything about the site. She will inform me. -QA 12/04/2007: This spill case was transferred to A. Doronova. AD No any reports were found in files for 363 Bond Street Site (spill # 0501697). This site and 400 Carroll Street site (spill # 0400867) were terminated without prejudice on 12/19/06 from BCP, where they were submitted as one project. The applicant did not reapplied later. AD 01/2008: These two site are currently under purchase contract, which is scheduled for summer 2008. I have spoken with an attorney - David Yudelson, who represents both an owner of the 400 Carroll Street site and a potential buyer for the two sites. According to him, the potential buyer will implement remediation of the both sites. AD 02/2008:I requested from

LOT 1,TAXBLOCK 452 (Continued) **S106967878**

Mr. Yudelson to submit all investigation reports for these sites and told him that we will schedule a meeting with all involved parties after I will review the reports. Yesterday, I received confirmation call from Mr. Yudelson that he sent requested reports to DEC. Received old reports. Downloaded them to eDocs. Will review. AD 10/03/2008: Spoke with D. Yudelson - attorney regarding situation with this site. he told that the owner wants to reapply for BCP project and that they applied for re-zoning, which will be decided in April, 2009. AD 10/15/2008: Received an email from Mr. Yudelson saying: Ainora - I am having a comprehensive report prepared by ELM for the Carroll Street/Bond Street sites which will show all existing data. I will forward it as soon as it is done. Dave AD 10/22/2008: Received an inquiry from Vadim Brevdo of DER regarding status of this spill. Inquiry came to Commissioner from City Councilman DeBlasio. Informed Vadim about situation with this case. Spoke with D. Yudelson. Env. Liability Management (ELM) preparing a summary report with conclusions and recommendations for remedial actions. Project manager - Mimi Raygorodetsky. AD 10/27/2008: Sent an email to D. Yudelson saying: Dear Mr. Yudelson, As per our previous phone conversation, please be advised that the Department requests to expedite the submission of the summary report for the above-referenced sites. The report should be submitted no later that November 14, 2008 and should include a remedial action plan. Feel free to contact me if you have any questions or comments. Sincerely, Ainura Doronova AD 11/13/2008: Called and left a message to D. Yudelson regarding the report submission. Later received an emails from him saying: Ainura- got your voicemail but I am in a meeting. ELM is working on the report since your request and we should have it very shortly. I will find out the exact date and I will respond to you. Dave and Ainura - The effort to compile and synthesize all the prior work is taking a little longer than expected to make it understandable. I believe we will deliver the summary report next weds. Please let me know if this presents a problem so that we can avoid having anyone work overnight or on the weekend!!! Postponed the report submission till November 21, 2008, but said that it is final. AD 11/21/2008: Called and left a message to D. Yudelson regarding the report submission. Later in the day received an email from M. Raygorodetzky saying: Ms. Doronova, On behalf of Dave Yudelson of Sive, Paget & Riesel and Toll Brooklyn, LP, please find attached an electronic copy of the Remedial Investigation Report an Conceptual Remedy for the Toll Brooklyn, LLC site in Brooklyn, NY. A hard copy (with a CD containing previous studies) will be delivered to your office via Federal Express on Monday. The site is comprised of three adjacent parcels of land that are subject to three active spill listings: 363 Bond Street (Spill # 05-01697) 365 Bond Street (Spill # 04-07393) 400 Carroll Street (Spill # 04-00876) We look forward to working with you to remediate this site. Regards, Mimi Raygorodetsky - Associate Tel: 212.962.4301 ext.311 - Fax: 212.962.4302 - Mobile: 917.952.9906 mraygorodetsky@elmofny.com DL the report to eDocs. Will review. AD 12/04/2008: Discussed this site with V. Brevdo and J. Kolleeny of DEC. The decision was - to consolidate this spill case with spill case No. 0400867 (400 Carroll Street) since they will be remediated as one project (Toll Brooklyn) and are adjacent sites. AD 10/29/2015: The soil source area has been remediated, but the Department will also determine if there is an off-site soil vapor issue. This spill will not be closed after the 363 Bond St./388 Carroll St. BCP site Certificate of Completion is executed.

LOT 1,TAXBLOCK 452 (Continued) **S106967878**

12/15/2008: This spill case is closed and referred to spill No. 0400867. AD 04/2010: This spill was reopened due to this site's listing as a part of Gowanus Cannal to EPA's Superfund Program. AD 04/29/2010: Received an e-mail from Mr. Yudelson (attorney for Toll Brooklyn, LP) saying: Ainura This email is to confirm that I have met with EPA and EPA indicated they will not be in a position to determine what, if any, remedial activities they will require at the Bond Street properties regarding the Superfund Site until the fall. I expect to meet with them again and will inform you if anything changes. Dave (917)295-6449 06/2010: Called and spoke with Mr. Yudelson. He told me that Toll Brooklyn is no longer interested in buying the site, after it was listed as a Superfund site. Mr. Yudelson gave me a contact info in EPA: Mr. Brian Carr, phone: (212)637-3170. AD 07/13/2010: Received an e-mail from Mr. Yudelson with requested info for the site owner: 363 Bond Street Corp. 363 Bond Street, Brooklyn, NY AD 07/28/2010: Called to Friedknit Creation Inc. - tenant at the 363 Bond Street and asked for a contact info for the owner of the site. Manager of the Friedknit doe not have this information. The owner of the Friedknit - Mr. Leopold Friedman is out of country. Left my contact info. AD 10/2010: Did not received any response. AD 11/04/2011: Looled on the Internet for info on this site. It is listed at an industrial property for sale. AD 01/06/2012: Called and spoke with D. Yudelson. He informed me that he is working for the potential buyer, who wants to buy all three properties, previously known as Tall Brooklyn Project and included three spill sites: # 0407393, # 0501697 and # 0400876. Mr. Yudelson said that the contract will be probably singed within next weeks. Mr. Graig Puerta is working with Mr. Yudelson and will be performing environmnetal services to the buyer. Mr. Yudelson will contact me, when contract will be finalazied. AD 08/22/2012: Received the following e-mail from D. Yudelson: Ainura - This project is under consideration and I represent the prospective purchaser, Lightstone Group. The attached is proposed additional delineation sampling with an objective of amending the RAP s for excavation like at 400 Carroll. I believe if this is a go work will start this winter. We are coordinating with EPA and NYC as well. I will keep you posted on the progress and let me know if you have questions. Dave From: David Yudelson Sent: Monday, July 23, 2012 10:19 AM To: Cole, Daniel (DanielCo@dep.nyc.gov) Cc: Steve Ciambruschini (sciambruschini@Langan.com); Christopher McMahon (cmcmahon@Langan.com) Subject: Need to schedule a meeting asap Dan Attached are compilations of all existing data and proposed sampling locations. Soil gas has been added on each site and additional delineation is proposed. There is also an approved DEC work plan for 400 which provides for excavation. I need to know if the additional sampling is adequate as we are doing it asap during due diligence. Dave DL the documents into eDocs. AD 10/22/2012: called and spoke with D. Yudelson regarding the site. he told me that investigation work plan will be submitted within one week for review. AD The site entered into BCP program (Albany). The site manager is John Grathwol. AD 12/5/13: Under BCP site code C224173, IRM Work Plan is 95% complete. Work Plan approval is anticipated in December 2013. Most of the spill contamination will be removed during this IRM. The 2014 Decision Document will address the remaining contamination. (Grathwol) 12/18/15: The Department approved the Final Engineering Report on 11/16/15. The Department will evaluate the quarterly groundwater monitoring reports to confirm that this spill can be

LOT 1,TAXBLOCK 452 (Continued) **S106967878**

closed. (Grathwol) 03/30/18: Per GW data (Napthalene from 63 ppm in RI to 19 ppb in Site Management - Langan), a off-site soil vapor sample result having no significant contamination and groundwater monitoring sample results illustrating the contingent treatment system does not need to operate due to the successful contamination recovery and source excavation IRMs, this spill was closed. (Grathwol) "

Remarks: "FOUND DURING ENVIRONMENTLA BORINGS OF THE SOIL. IT IS KNOWN THAT GROUNDWATER WAS CONTAMINATED AND THE PRODUCT IS WEATHERED PETROLEUM. IT WAS UNABLE TO DETERMINE WHAT KIND OF PETROLEUM THE PRODUCT WAS. STIE HAS HISTORY OF BURIED GASOLINE TANKS. HAS NOT BEEN CLEANED UP."

DEC Memo:	"T07/29/09 - LZ The Department has received a July 25, 2009, report, prepared by AKRF, Inc., concerning results soil and groundwater-sampling downgradient to the area of 14 removed underground storage tanks. Four soil samples and one groundwater sample were taken and analyzed. Tetrachloroethene was detected in two samples (3.2 ppb) and no VOCs were found in any sample. above TAGM 4046 limits. SVOCs were found in all samples, such as benzopyrene, chrysene, benzoanthracene in concentrations up to 12 ppm. In the groundwater sample, dibromochloromethane was discovered (1.3 ppb). an NFA letter was sent out. The spill case has been closed. 06/18/09 - LZ In her letter (eDocs) of June 15, 2009, Kathleen Brunner asserts that a investigation report will be submitted by July 17, 2009. 05/05/09 - LZ NYSDEC has reviewed the April 23, 2009, Spill Investigation Work Plan (SIWP), prepared by AKRF, Inc., to delineate the extent of petroleum contamination in the area of the 14 removed underground storage tanks. NYSDEC approved the SIWP, modified as follows: - Soil and groundwater samples must be tested for the presence of VOCs, SVOCs, and MTBE, and analytical results compared with TAGM 4046 Recommended Soil Cleanup Objectives. 03/12/09 - LZ According to e-mail John Urda forwarded to Leszek Zielinski, a Subsurface Investigation Work Plan and a Site Assessment Proposal must be submitted by April 26th. 12/12/08 - LZ A STIP R2-20081209-603

BAYSIDE FUEL OIL COMPANY (Continued) **S103574768**

(eDocs) was signed on 12/09/08. Its CAP requires the submission of a Subsurface Investigation Work Plan Proposal to delineate the extent of petroleum contamination in the area of 14 removed underground storage tanks and a Site Assessment Proposal in accordance with MOSF License # 2-1220, Special Conditions, Paragraph 4a. 09/18/08 - LZ Since BCP argreement was terminated, I sent a letter (eDocs) to the facility requesting the following: - within 45 days from the receipt of this letter, BFODC must submit to the Department a soil and groundwater investigation proposal to address petroleum contamination in the area of 14 removed underground storage tanks. - within 45 days from the receipt of this letter, BFODC must submit to the Department a site assessment proposal in accordance with MOSF License #2-1220, Special Conditions, Paragraph 4a. 08/13/08 - This site was admitted into the BCP (Site # C224080) on 5/12/05 when the BCA was signed. The applicant s consultant, AKRF, submitted a final approved Remedial Investigation Work Plan (RIWP) to NYSDEC on March 3, 2007. The Remedial Investigation was scheduled to be implemented within one week of RIWP approval. However, significant delays in implementing the RIWP along with changes in how the work was to be scheduled resulted in the disapproval of several draft submittals. The basis for the scheduling delays was largely the result of zoning issues. The project was unable to move forward until the present industrial zoning is changed to commercial/residential. As a result, the Department terminated the BCA, without prejudice, in a letter dated December 5, 2007. The applicants were offered the opportunity to reapply to the BCP once the zoning issues were resolved. The project was referred back to the Region 2 officed, in a memo dated August 13, 2008, to be pursued under the Spills program. Tom Gibbons 08/21/07 - Spoke with Tom Gibbons; he said that the department would determine soon wheteher the site is accepted into the Brownfield Cleanup Program; he would copy me on this. 07/05/07- Zielinski; the spill assigned to Leszek Zielinski The spill related to Spill #0208144 since 267 Bond Street is the address of the office and 285 Bond Street is the address of the service garage on this same property belonging to Bayside Fuel Oil Depot Company. Both the spills refer to contminated soil found outside those buildings; Spill #9810785 refers to contaminated soil in connection to removed USTs; Spill # 0208144 is about contaminated soil found at undetermined location on the site. 3/28-05 - Austin - Put under Lombardo’s name from Saccacio for transfer to Central Office for closure review 7/6/05 - Nathan - File review Report (3/2/99) approx. 120 yrds soil removed, 14x550 diesel or kerosene tanks removed. Soil and groundwater contamination remain. Report concludes additional sampling is required. 10/14/05 - Nathan - Sent file to Region as they requested (Jie Zhao)"

Remarks: "SUCTION LINE LEAK"

DEC Memo:	"need to send TTF letter no PBS for this address. 4/28/05. J.Krimgold reviewed a letter report submitted by Mercury Tank & Pump dated April 25, 2005. According to the report a 550 gal #2 oil tank failed the test due to disconnected pipe fittings on the top of the tank. The tank was empty at the time of test. Tank top was excavated,tank was cleaned up and filled with concrete slurry. Before this a hole was drilled through the bottom of the tank to obtain a soil sample. All analytes were found below TAGMs objectives. NFA letter. "
Remarks:	"Doing a tank test on an old heating tank that no one knew was there. No contamination found or evidence of a leak. Ullage failure... unsure of any removal of tank."

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Spiller Address:	225 3RD AVE
Spiller Company:	999
Contact Name:	DOLLY WILLIAMS
DEC Memo:	"2/20/07 - Raphael Ketani. I visited the site today. I met Dolly Williams ((718) 399-3508, the owner, and asked to see the spill. Her daughter took me to the truck yard next door. I saw snow that was covered with a light yellow green liquid. A little bit of the liquid was draining into a drain. I smelled oil, also. I went back upstairs and told Ms. Williams that she needed to get the spill cleaned up immediately as it was going down a drain. She said that she had been in contact with PTC, but they haven't done the cleanup. I called PTC and Big Anthony (Anthony Lara) said that they hadn't received a signed contract to do the cleanup. I explained this to Ms. Williams and she FAXed a signed contract to PTC. Mr. Lara said that they would be over today in the afternoon. 2/21/07 - Raphael Ketani. I spoke to Ray Lara of PTC (718) 624-4842 and he said that they took away 6 drums of contaminated snow. He said they cleaned an area of 20 feet by 25 feet and put down absorbent. 7/13/07 - Raphael Ketani. I tried to contact Mr. Lara, but could only get his assistant. She said that DEC hasn't received any paperwork because they haven't been paid for the work they did. I told his assistant that DEC will wait for the paperwork. 10/4/07 - Raphael Ketani. I tried to contact Mr. Lara, but he was out. So I spoke to the assistant. She said that A. Williams Construction still owes $3,000, but they did pay part of the bill in June. She said they have a reputation for being slow payers. I told

A. WILLIAMS CONSTRUCTION (Continued) **S108466119**

her DEC will wait. 11/29/07 - Raphael Ketani. I spoke to the operator/assistant at PTC. She said that Ms. Williams still owes thousands of dollars and so PTC can't release the paperwork. I called up Ms. Williams at (718) 923-9600 and told her the spill case is still open and will not be closed until we get the necessary paperwork stating that the release has been cleaned up. She said that she hasn't been working and had to borrow some money. She said that she had given PTC $1,000 more since October. I told her that PTC still isn't releasing anything. She said she will talk to them to try and get some paperwork sent to DEC. 12/7/07 - Raphael Ketani. Ms. Williams called to say that she just got back to work after being sick. 12/10/07 - Raphael Ketani. Ms. Williams called to say that she can't pay PTC the remainder of the money she owes (about $2500) because she doesn't have it. She asked that I contact Bob Lamirata of PTC to find out if he is willing to release the original paperwork for the cleanup so that the case can be closed. I contacted Mr. Lamirata and he said he would prefer to get all of the money before releasing the paperwork. I told him that would be fine. 12/11/07 - Raphael Ketani. I contacted Ms. Williams and told her that DEC will wait until PTC is completely paid and they send us the original paperwork. She said she should be able to pay off the bill by January 2008. I told her we will wait. 1/9/08 - Raphael Ketani. I spoke to Mr. Lamirata (718) 624-4842. He said that Ms. Williams still owes PTC a lot of money. I told him I will not close the case. 2/12/08 - Raphael Ketani. I spoke to Mr. Lamirata. He said that Ms. Williams still owes $1500. He said he doesn't understand why she doesn't have the money to pay PTC the balance as her company is just 2 blocks away and he sees her construction equipment leave the site everyday to do work. I told Mr. Lamirata that I will have to close the case because this was not a significant spill, it happened a long time ago, and it's sitting open in our database. Based upon the fact that the spill was successfully cleaned up, the lack of human contact with the discharge, and the long amount of time that has passed since the spill took place, I am closing the case. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 07/24/02. Phone/Petro Oil/J.Krimgold. Spill due to a broken hose on truck. Oil spilled onto the parking lot area. Some oil went to the drywells (not into the sewer catch basins). Surface and wells were cleaned up by Milro. However, Milro observed that more oily substance was coming into the well from subsurface and install absorbent pads. J. Krimgold contacted Williams Trucking (Sally Williams @ 718-923-9600) and informed about findings. Ms. Williams refused to accept responsibility and suggested that this should be discussed with Keith Williams. J. Krimgold requested that Mr. Williams call back DEC to discuss this matter. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang. 10/30/06 Reassigned from Tang to Sun. (JS/MS) 11/28/06 Sun sent letter to Dolly Williams (property owner) at 225 3rd Ave, on 11/27/06 requiring that the following be submitted to the NYSDEC by 12/27/06: To rectify this problem, a letter report asserting a cause of the release and summarizing the cleanup activities, observations, post-excavation sampling results (if necessary), and also including contaminated material disposal manifests or any other documentation (i.e. invoices, bills, etc.) of cleanup activities must be submitted to this office by December 27th, 2006, referencing the spill case number (see above) and the site address. (JS/MS) 03/19/07: Mrs. Williams is going to contact Milro who performed the environmental investigation at her property to see if they have the additional documentation regarding clean-up that she says has been performed. (JS/MS) 6/6/07: Called Petro Oil at 718.628.3349. They stated that they have no documentation regarding this property. 8/6/07: Called Williams Trucking again 718.923.9600. Dolly will be in the office this afternoon and will return call. (JS/MS) 9/5/07: MS contacted Dolly Williams to check on status. She has faxed a receipt from Petroleum Tank Cleaners who cleaned spill to show DEC that clean up has been performed. She has paid half of the bill and need time to pay the remainder. Her request for an extension has been granted. (JS/MS)

A. WILLIAMS CONSTRUCTION (Continued) **S108466119**

12/4/07: As per RK: 11/29/07 - Raphael Ketani. I spoke to the operator/assistant at PTC. She said that Ms. Williams still owes thousands of dollars and so PTC can't release the paperwork. I called up Ms. Williams at (718) 923-9600 and told her the spill case is still open and will not be closed until we get the necessary paperwork stating that the release has been cleaned up. She said that she hasn't been working and had to borrow some money. She said that she had given PTC $1,000 more since October. I told her that PTC still isn't releasing anything. She said she will talk to them to try and get some paperwork sent to DEC. 4/15/08: Called and left message with receptionist for Dolly Williams. (JS/MM) 4/16/08: No call, sending 2nd letter requesting clean up summary, or refer to Legal Affairs (JS/MM) 4/28/08: Sent subsurface investigation letter due June 13, 2008 or goes to Legal (JS/MM) 6/20/80: Phone calls have not been returned (JS/MM) 08/05/08: Transferred to Kolleeny/Mandac. - JK 10/27/08: Dolly Williams has not submitted any documentation from Milro regarding the cleanup. Bill for what materials was used is in files. A Williams Trucking is supposedly in financial trouble. Refer to OGC. (JK/MM) 12/15/08: Paper file contains two faxes from Dolly Williams: The first one sent on 8/14/08 to MM contains a fax Ms. Williams received from Milro containing 2 waste manifest tickets dated 7/24/02. One is for petroleum impacted soil, speedydry, and sediment and the other is for petroleum contaminated water. The second fax was a letter to MM on 8/25/08. The letter is from Ms. Williams and says, As per my conversation with you today we are hereby requesting additional time to submit the report on the above referenced spill. Because this is an old case for Milro they need additional time to research it. The manifest was forwarded to you last week and as per your ackknowledgement you did receive them by fax. No report has been submitted to date. (JK/KG) 12/16/08: Spoke with Dolly Williams to check on status of report. She said she would have to call Milro and PTC again and check to see if they had a report. She said last she spoke to them they needed some time to look through archives. I told her the report needs to include results of soil samples. If none were collected at the time of clean-up then she will have to have install a soil boring and collect samples. (JK/KG) 01/15/09: Tried to call D. Williams - no answer. (JK/KG) 01/20/09: Rec'd voice message from D. Williams on 01/16/09. She has been in contact with Milro and Petroleum Tank Cleaners and is still trying to get the reports from them. She will be on vacation and will call back on 1/22/09 to discuss the status of the reports. (JK/KG) 01/26/09: Spoke with Dolly and told her again that the report needs to have results of GW and soil samples. If Milro doesn't have the report she will need to perform a subsurface investigation. (JK/KG) 02/27/09: Left message for Dolly Williams. (JK/KG) 03/03/09: Rec'd voice message from Dolly on 2/27/09, she will call back with more information. (JK/KG) 03/11/09: Spoke to D. Williams, she has some reports/documents that she will send. (JK/KG) 03/12/09: D. Williams called me from Petroleum Tank Cleaners. Bob Lamirata of Petroleum Tank Cleaners requested copies of letters sent to D. Williams be faxed to him in order to see what DEC required to address this spill (fax 718-624-1856). Letters dated 11/27/06, 4/16/08, and 7/8/08 were faxed. Bob will call back on 3/16 or 3/17 with more information. (JK/KG) 03/18/09: Rec'd call from D. Williams, B. Lamirata is still working on case. (JK/KG) 03/24/09: Rec'd call from Mark of Petroleum Tank Cleaners. He will fax me a report today. He said he went to the site to evaluate the conditions. He stated that the concrete is 14

A. WILLIAMS CONSTRUCTION (Continued) **S108466119**

inches thick in the area the discharge ocurred. Soil samples were not collected. Report rec'd via fax; under review. (JK/KG) 03/30/09: Based on the amount spilled and time that has past since this spill occurred, it does not appear that soil and groundwater would still be affected/contaminated. Therfore, this spill case is being closed. (JK/KG)"

DEC Memo:	"02-06-12 - LZ The 01-25-12 semi-annual well gauging report (eDocs) and the 02-02-12 request for spill closure (eDocs) show that during two-year gauging of the five monitoring wells at the site no free

BAYSIDE FUEL OIL DEPOT CORP. (Continued) **S109826460**

product was detected except the March 2011 event (less than 0.01 foot in MW-4). Soil contamination was evaluated in the February 2010 revised Site Assessment Report and Remedial Action Plan. The spill case has been closed, and a spill closure letter sent to the facility owner. 04-28-11 - LZ The Annual Well Gauging Summary Report, dated March 18, 2011, prepared by AKRF, Inc. (eDocs) provides results of four quarterly rounds of well inspections. Five site monitoring wells were gauged for LNAPL; no LNAPL was observed in any of the wells in April, July, or October 2010. During both March gauging events, an immeasurable skim layer (less than 0.01 foot) of LNAPL was noted in MW-4. An oil-absorbent sock was placed across the water table in MW-4. AKRF will continue quarterly gauging in accordance with the Revised RAP. The next report to DEC will follow the March 2012 gauging. 09/29/10 - LZ The AKRF, Inc., report (eDocs), dated July 28. 2010, provides data from April and July gauging of monitoring wells. No free product was detected in any wells. Next report is due January 2011. 03/24/10 - LZ Reviewed the February 2010 revised Site Assessment Report (SAR) and Remedial Action Plan (RAP)(eDocs), prepared by AKRF, Inc. Approved the revised submittals and required that the gauging be performed for two years, and reports reflecting the results of it twice a year. NYSDEC may require that the site achieve more stringent SCOs than for industrial use if the site zoning is to be changed or development of the site is inevitable. 12/22/09 - LZ The November 5th revised RAP (eDocs) includes advancing of two additional borings and installation of two monitoring wells. Soil from these borings would be analyzed for the presence of VOCs ans SVOCs. On December 22th, AKRF performed two borings as provided in the revised RAP. A report summarizing December activities and soil analytical results will be submitted by January 31st. 10/23/09 - LZ I has reviewed the October 14, 2009, Remedial Action Plan (RAP), prepared by AKRF, Inc. The RAP proposes installation of a monitoring well in the area where significant contamination was discovered to monitor and remove encountered free-phase product. I disapproved the proposed RAP since it does not address adequately the visual and olfactory contamination detected in borings B-10, B-13, and B-14. A revised RAP should be submitted by November 27, 2009. 08/17/09 - LZ In her letter (eDocs) of June 15, 2009, Kathleen Brunner of AKRF asserts that a investigation report will be submitted by July 17, 2009. 08-11-9 - LZ DEC approved the site assessment report and in its August 11th letter (eDocs)required a remediation action plan be prepared and submitted by October 14, 2009. "

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

SWIS:	2401
Town:	New York City
Record Added Date:	05/08/2015
Record Updated Date:	09/26/2018
Update By:	JHOCONNE
Site Description:	Location: The site is located at 450 Union Street in the Gowanus neighborhood of Brooklyn, New York. The site is bounded by Union Street to the north, the Gowanus Canal to the east, Lot 3 (parking lot) to the south, and Bond Street to the west. The site is approximately 0.65 acres in size. Site Features: The site is currently improved with a one-story building and two storage sheds.

450 UNION STREET (Continued) **S117936660**

The exterior portion of the property contains an enclosed area for social events, a parking lot and driveway, and storage areas. A bulkhead consisting of a 12-foot high headwall supported by a timber cribbing separates the property from the Gowanus Canal. Current Use: The site is currently used as a private event space, an art gallery, and an outdoor restaurant. The site is located in an M2-1 manufacturing district. Historical Use: The site was historically occupied by coal and wood yard (1886-1928); granite works (1915); a die casting facility (electroplating) (1922); a garage (1918-1930); a fuel company, garage and office (1931); and a foundry (1930-2007). In addition, petroleum was stored at the site from 1938 through at least 2001. The site was also listed in the Resource Conservation and Recovery Act (RCRA Generators database as a large quantity generator and the NYSDEC PBS database for a gasoline underground storage tank. Geology and Hydrogeology: The site sits at an elevation of approximately 10 feet above mean sea level and slopes to the east towards the Gowanus Canal. The subsurface strata at the site consists of historic urban fill consisting of sand with varying amounts of gravel, silt, brick, coal, wood and concrete fragments. The historic fill layer extends to a depth of about 15 feet below grade surface and is underlain by clay and silt. The groundwater interface was at depths between 7 and 11 feet below grade surface. Groundwater beneath the site flows southeast toward the Gowanus Canal, which adjoins the site to the east.

Env Problem:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern are:benzo(a)pyrene,fluoranthene, benzo(k)fluoranthene, chrysene, ideno(1,2,3-cd)pyrene, naphthalene and Lead. Soil - with respect to VOCs, naphthalene was found at concentrations of 160 mg/kg to 4,300 mg/kg, with an RRUSCO of 100 mg/kg. For SVOCs, benzo(a)pyrene, at concentrations of 1.5 mg/kg to 95 mg/kg with an RRUSCO of 1 mg/kg; naphthalene, at concentrations of 27 mg/kg to 370 mg/kg with an RRUSCO of 100 mg/kg; fluoranthene, at concentrations of 110 mg/kg to 220 mg/kg with an RRUSCO of 100 mg/kg; benzo(k)fluoranthene, at concentrations of 1.2 mg/kg to 78 mg/kg with an RRUSCO of 3.9 mg/kg; chrysene, at concentrations of 1.2 mg/kg to 97 mg/kg with an RRUSCO of 3.9 mg/kg and ideno(1,2,3-cd)pyrene, at concentrations of 0.62 mg/kg to 38 mg/kg with an RRUSCO of 0.5 mg/kg. There were no pesticides detected above RRU SCOs in any of the soil samples. PCBs and total cyanide were not detected in soil samples at concentrations above 6 NYCRR Part 375 UU SCOs. Total lead concentrations detected above 6 NYCRR Part 375 UU (63 mg/kg) and/or RRU (400 mg/kg) SCOs ranged from 97 mg/kg at a depth of 4-6 feet to 1,300 mg/kg at a depth of 2-4 feet. TCLP lead concentrations detected above NYSDEC Title 40 of the Code of Federal Regulations (40 CFR) Part 261 Maximum Concentration of Contaminants for the Toxicity Characteristic for lead of 5 mg/L ranged from 6.5 mg/L in the 0.5-2 foot range to 8.6 mg/L in the 2-4 foot range. Data does not indicate any off-site impacts in soil related to this site. Groundwater - Coal tar impacts, evidenced by dense, non-aqueous phase liquid (DNAPL), staining, coal tar-like odors, and PID readings above background levels were encountered at depths ranging from 23 to 54 feet bgs along the eastern perimeter of the Site. One VOC, naphthalene, was detected at concentrations of 15 mg/L in and 70 mg/L which are above its TOGS Class GA SGVs of 10 mg/L. One or more of seven SVOCs were

450 UNION STREET (Continued) **S117936660**

detected in all groundwater monitoring wells, except one, at concentrations above their respective TOGS Class GA SGVs. They are: benzo(a)pyrene, at concentrations of 0.21 mg/L to 0.83 mg/L, with a TOGS Class GA SGV of 0.002 mg/L; benzo(b)fluoranthene, at concentrations of 0.28 mg/L to 1.1 mg/L, with a TOGS Class GA SGV of 0.002 mg/L; benzo(k)fluoranthene, at concentrations of 0.09 mg/L to 0.43 mg/L, with a TOGS Class GA SGV of 0.002 mg/L;chrysene, at concentrations of 0.2 mg/L to 0.96 mg/L, with a TOGS Class GA SGV of 0.002 mg/L;ideno(1,2,3-cd)pyrene, at concentrations of 0.11 mg/L to 0.42 mg/L, with a TOGS Class GA SGV of 0.002 mg/L and naphthalene, at concentrations of 11 mg/L to 19 mg/L, with a TOGS Class GA SGV of 10 mg/L. In total (unfiltered) groundwater samples, lead at concentrations of 27.3 mg/L to 298.5 mg/L,with a TOGS Class GA SGV of 25 mg/L and manganese at concentrations of 375.4 mg/L to 2,421 mg/L with a TOGS Class GA SGV of 300 mg/L were present. In dissolved metals (filtered) groundwater samples, manganese at concentrations of 325.8 mg/L to 1,745 mg/L with a TOGS Class GA SGV of 300 mg/L was found. PCBs and pesticides were not detected in groundwater samples. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor & Indoor Air - Twenty-eight VOCs, including petroleum-related and chlorinated VOCs, were detected in soil vapor samples. Total detected VOC concentrations ranged from 66.57 microgram per cubic meter (ug/m) to 2,841 ug/m . The detected PCE concentrations in indoor air are below the revised Air Guideline Value (AGV) of 30 ug/m provided in Table 3.1 of the NYSDOH 2006 Soil Vapor Intrusion Guidance document. No other compounds with AGVs were detected in indoor air. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Updated By:	LSZINOMA
Site Description:	Location: This site is made up of two adjacent parcels, one located at 388 Carroll Street and one located at 363 Bond Street in Brooklyn, NY. The eastern edge of the site borders the Gowanus Canal. Site Features: A portion of the site contained a one- and two-story light industrial building and another portion is improved with a two-story residential building. Four decommissioned above ground storage tanks

388 CARROLL STREET AND 363 BOND STREET (Continued) **S116041498**

(ranging from 5,000 to 10,000 gallon capacity) also existed on the property. All buildings and structures were demolished in 2014 to facilitate remediation of the site. The area of the two parcels that make up the site is approximately 1.293 acres. Current Zoning and Land Use: The site is currently vacant. The site is current zoned MX-11 which is a mixed use district that allows residential, commercial, and industrial uses. The site is bounded to the north by a City of New York EMS station, to the east by the Gowanus Canal, to the south an active redevelopment site, and to the west by a three-story mixed-use commercial and residential building and a six-story residential building. Past Use of the Site: Portions of this site have historically been used as paint manufacturer (1915), an oil terminal (1916 1950), and a warehouse (1950 1986). Other recorded uses of the site include an automobile storage and repair facility and a lumber company. Site Geology and Hydrogeology: The site is underlain by an approximately 6-to-17 foot thick layer of miscellaneous fill which is underlain by a clay layer. Groundwater was generally observed at depths ranging from five to eight feet below ground surface. Groundwater flow is generally to the east but is affected by the tidal influence from the Gowanus Canal.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluorathene in soil, and naphthalene, 1,2,4 trimethylbenzene, toluene, and xylene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Sampling indicates that the potential for soil vapor intrusion to occur needs to be evaluated off-site.

Site Description:	Location: This site is made up of two adjacent parcels, one located at 388 Carroll Street and one located at 363 Bond Street in Brooklyn, NY. The eastern edge of the site borders the Gowanus Canal. Site Features: A portion of the site contained a one- and two-story light industrial building and another portion is improved with a two-story residential building. Four decommissioned above ground storage tanks (ranging from 5,000 to 10,000 gallon capacity) also existed on the property. All buildings and structures were demolished in 2014 to facilitate remediation of the site. The area of the two parcels that make up the site is approximately 1.293 acres. Current Zoning and Land Use: The site is currently vacant. The site is current zoned MX-11 which is a mixed use district that allows residential, commercial, and industrial uses. The site is bounded to the north by a City of New York EMS station, to the east by the Gowanus Canal, to the south an active redevelopment site, and to the west by a three-story mixed-use commercial and residential building and a six-story residential building. Past Use of the Site: Portions of this site have historically been used as paint manufacturer (1915), an oil terminal (1916 1950), and a warehouse (1950 1986). Other recorded uses of the site include an automobile storage and repair facility and a lumber company. Site Geology and Hydrogeology: The site is underlain by an approximately 6-to-17 foot thick layer of miscellaneous fill which is underlain by a clay layer. Groundwater was generally observed at depths ranging from five to eight feet below ground surface. Groundwater flow is generally to the east but is affected by the tidal influence from the Gowanus Canal.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluorathene in soil, and naphthalene, 1,2,4 trimethylbenzene, toluene, and xylene in groundwater. Remedial

388 CARROLL STREET AND 363 BOND STREET (Continued) **S116041498**

	actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Sampling indicates that the potential for soil vapor intrusion to occur needs to be evaluated off-site.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluorathene in soil, and naphthalene, 1,2,4 trimethylbenzene, toluene, and xylene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Sampling indicates that the potential for soil vapor intrusion to occur needs to be evaluated off-site.

Site Code: 478612
Site Description: Location: This site is made up of two adjacent parcels, one located at 388 Carroll Street and one located at 363 Bond Street in Brooklyn, NY. The eastern edge of the site borders the Gowanus Canal. Site Features: A portion of the site contained a one- and two-story light industrial building and another portion is improved with a two-story residential building. Four decommissioned above ground storage tanks (ranging from 5,000 to 10,000 gallon capacity) also existed on the property. All buildings and structures were demolished in 2014 to facilitate remediation of the site. The area of the two parcels that make up the site is approximately 1.293 acres. Current Zoning and Land Use: The site is currently vacant. The site is current zoned MX-11 which is a mixed use district that allows residential,

388 CARROLL STREET AND 363 BOND STREET (Continued) **S116041498**

commercial, and industrial uses. The site is bounded to the north by a City of New York EMS station, to the east by the Gowanus Canal, to the south an active redevelopment site, and to the west by a three-story mixed-use commercial and residential building and a six-story residential building. Past Use of the Site: Portions of this site have historically been used as paint manufacturer (1915), an oil terminal (1916 1950), and a warehouse (1950 1986). Other recorded uses of the site include an automobile storage and repair facility and a lumber company. Site Geology and Hydrogeology: The site is underlain by an approximately 6-to-17 foot thick layer of miscellaneous fill which is underlain by a clay layer. Groundwater was generally observed at depths ranging from five to eight feet below ground surface. Groundwater flow is generally to the east but is affected by the tidal influence from the Gowanus Canal.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluorathene in soil, and naphthalene, 1,2,4 trimethylbenzene, toluene, and xylene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

The site is bounded to the north by a City of New York EMS station, to the east by the Gowanus Canal, to the south an active redevelopment site, and to the west by a three-story mixed-use commercial and residential building and a six-story residential building. Past Use of the Site: Portions of this site have historically been used as paint manufacturer (1915), an oil terminal (1916 1950), and a warehouse (1950 1986). Other recorded uses of the site include an automobile storage and repair facility and a lumber company. Site Geology and Hydrogeology: The site is underlain by an approximately 6-to-17 foot thick layer of miscellaneous fill which is underlain by a clay layer. Groundwater was generally observed at depths ranging from five to eight feet below ground surface. Groundwater flow is generally to the east but is affected by the tidal influence from the Gowanus Canal.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluorathene in soil, and naphthalene, 1,2,4 trimethylbenzene, toluene, and xylene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.
Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Sampling indicates that the potential for soil vapor intrusion to occur needs to be evaluated off-site.

Site Description:	Location: This site is made up of two adjacent parcels, one located at 388 Carroll Street and one located at 363 Bond Street in Brooklyn, NY. The eastern edge of the site borders the Gowanus Canal. Site Features: A portion of the site contained a one- and two-story light industrial building and another portion is improved with a two-story residential building. Four decommissioned above ground storage tanks (ranging from 5,000 to 10,000 gallon capacity) also existed on the property. All buildings and structures were demolished in 2014 to facilitate remediation of the site. The area of the two parcels that make up the site is approximately 1.293 acres. Current Zoning and Land Use: The site is currently vacant. The site is current zoned MX-11 which is a mixed use district that allows residential, commercial, and industrial uses. The site is bounded to the north by a City of New York EMS station, to the east by the Gowanus Canal, to the south an active redevelopment site, and to the west by a three-story mixed-use commercial and residential building and a six-story residential building. Past Use of the Site: Portions of this site have historically been used as paint manufacturer (1915), an oil terminal (1916 1950), and a warehouse (1950 1986). Other recorded uses of the site include an automobile storage and repair facility and a lumber company. Site Geology and Hydrogeology: The site is underlain by an approximately 6-to-17 foot thick layer of miscellaneous fill which is underlain by a clay layer. Groundwater was generally observed at depths ranging from five to eight feet below ground surface. Groundwater flow is generally to the east but is affected by the tidal influence from the Gowanus Canal.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluorathene in soil, and naphthalene, 1,2,4 trimethylbenzene, toluene, and xylene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Sampling indicates that the potential for soil vapor intrusion to occur needs to be evaluated off-site.

563 SACKETT STREET (Continued) **S118141136**

Update By: GWCROSS

Site Description: Location: The site is located at 563 Sackett Street in the Gowanus neighborhood of Brooklyn, Kings County, and is identified as Block 426 lot 44. The site is approximately 0.229 acres in size. Site Features: The site is developed with a large open shed, which is divided into two portions. A two-story structure consisting of stacked metal shipping containers is present at the northeast side of the site and is used for storage and office space by the site occupants. The remainder of the site consists of an unpaved yard that is used for general storage by the occupants. The majority of the eastern portion of the yard is covered with metal plates and the remainder of the yard consists primarily of exposed soil and gravel cover. Current Zoning and Land Use: The current zoning of the property is for commercial use. The eastern portion of the shed is occupied by Partner For You, a general commercial products (e.g., plastic bottles and aluminum cans) recycling facility, and the western portion of the shed is occupied by Brooklyn Truck & Equipment Repair, a vehicle and equipment repair operation. Historical Use: The site and surrounding area have been developed for residential, commercial and industrial uses since at least 1886. Historical site uses included Nolan Bro s Contractors (1904), a wagon builder (1915), a bottle storage facility (1938-1950), parking (1969 to 2007). Geology and Hydrogeology: The site lies at an average elevation of about 15 feet. The site is generally covered with paved roads, walkways and buildings. The built environment is generally underlain by fill material used for construction and development since the 1800's. The subsurface strata at the site consists of historic fill material characterized by loose silty sand with varying amounts of brick and concrete fragments, rubber, metal wire and coal fragments extending to depths ranging from about 10 to 20 feet below grade surface. The historic fill material was underlain by alluvial deposits consisting of poorly sorted sands with gravel and marsh deposits, referred to as meadow mat, which consists of interbedded sands, clays and silts. Depth of groundwater was measured at 13.84 feet below grade surface in a monitoring well located in the enter of 560 DeGraw Street and at 6.85 feet below grade surface in the southwestern corner of 560 DeGraw Street. The depth to groundwater was measured at 9 feet bgs within the former gasholder footprint. Groundwater elevation measurements recorded from monitoring wells across the former MGP site indicate that the shallow groundwater, on the east side of the Canal, generally flows westward toward the Gowanus Canal at high and low tide levels.

Env Problem: Nature and Extent of Contamination: The primary contaminants of concern at the site are Semi-Volatile Organic Compounds (SVOCs) and Metals. SVOCs include Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene and Chrysene. Metals include Arsenic, Barium, Cadmiun, Copper, Lead and Mercury. The Volatile Organic Compound (VOC) Benzene was detected in one groundwater well. Soil: Contamination including SVOC and Metals were observed throughout the historic fill layer that exists at the site. The fill layer is generally present from grade to depths of approximately twenty feet below grade. The SVOCs Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene and Chrysene were detected at maximum concentrations of 22.7; 14.7; 16.1 and 14.5 parts per million (ppm), respectively. Their respective unrestricted use soil cleanup objectives are 1, 1,0.8 and 1 ppm. The Metals Arsenic, Barium, Cadmiun, Copper, Lead and Mercury were detected at maximum

563 SACKETT STREET (Continued) **S118141136**

	concentrations of 36.4; 679; 34.3; 1,240; 1,840; and 1.57 ppm respectively. Their respective unrestricted use soil cleanup objectives are 13; 350; 2.5; 50; 63 and 0.18 ppm. Groundwater: Limited groundwater contamination was observed. The VOC, Benzene was detected in one on-site well at a concentration of 2.6 parts per billion (ppb). The ambient groundwater standard for Benzene is 1 ppb. The SVOC benzo(b)fluoranthene was detected in one well at 0.6 ppb, exceeding its ambient groundwater standard of 0.002 ppb. In addition, the Metals Manganese and Selenium were detected in groundwater at maximum concentrations of 1,000 and 13 ppb respectively. Their respective groundwater quality standards are 300 and 10 ppb. Soil and Sub-Slab Soil Vapor: Various petroleum related VOCs were detected in the soil vapor samples collected at the site. Tetrachloroethene was detected in a soil vapor sample at a concentration of 240 micrograms per cubic meter (ug/m^3). There is no standard for soil vapor concentrations. Special Resources Impacted or Threatened: None
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

was sold on 4/21/88 to Union Bond Realty, Ltd., c/o Joseph Giardina, 916 Washington Avenue, Westwood, NJ, 07675. There is no PBS registration. The only contact was James Rigney (718) 923-8003. There is no case file, nor any E-docs. I will make a site visit. 12/9/09 - Raphael Ketani. I made an unannounced site visit. The address 450 Union Street belongs to a green painted warehouse near the Gowanus Canal (see E-docs). The warehouse now appears to be an artist's workshop. There was no one home. I walked up the street to the Canal and found Bayside Fuel. However, I didn't find the apartment building. The only possible location for the apartment building may be a cinder block wall with a door which has no street number (see E-docs). The wall may have been part of a building, but the back of the building has collapsed (see E-docs). I did not see a sheen in the water next to Bayside Fuel. 12/11/09 - Raphael Ketani. I tried to contact Mr. Rigney, but the phone number belongs to someone else and they didn't answer. I will send a letter to Mr. Giardina requesting information about the spill. 12/14/09 - Raphael Ketani. The letter to Mr. Giardina went out today by regular mail and by certified mail with a return card. 12/17/09 - Raphael Ketani. I received a call today from Donna Giardina. She said that she had received my letter. However, her father doesn't own 450 Union Street. She said that this address is the long green building and the broken concrete building that is attached to it. She said that her father owns 316 and 318 Bond Street. I told her that the property databases that I had used had indicated that Joseph Giardina (201) 666-2031 owns 450 Union Street and that he bought it on 4/21/88. She said that the purchase date for the properties sounds right, but 450 Union is not his. She said that it belongs to a Jewish organization which owns the green building. They have parties, religious services and such there. She said that her father has received tickets from DOS and other fines for garbage left out infront of 450 Union, but this is not her property. She said that there have been other points of confusion and mistaken ownership by other City agencies. She said that their garbage is picked up on Bond Street. I told her that I will look into the matter and do more research. I checked the Property Shark listings for 316 Bond Street and 318 Bond Street. Union Bond Realty owns both sites. Both are apartment buildings. 446 and 450 Union Street are listed as alternate addresses for 316 Bond Street. I did see a street number of 446 Union Street for the Union Street side of the corner apartment building. However, 316 Bond Street is at the corner of Bond and Union and physically across from 450 Union. It is not clear how the two addresses can be listed together. Both are block 437 and lot 36 - with Bond Street dividing them. 318 Bond Street is block 437 and lot 37 with no alternate addresses. It may be that, at one time, the two Union Street numbers (446 and 450) were associated with 316 Bond Street. I checked Google Maps and the air photo shows 316 and 318 Bond Street to be across from the long green building at 450 Union. Google Maps also shows a vacant lot across Union Street from the 316 and 318 Bond with a few cars parked in side. It is unclear whether this used to be a tanker truck storage facility. Though, there is no indication of this. The spill report mentions an apartment building across from the Bayside Fuel facility, but this is not possible. As there is not enough information to determine where the site is, or used to be. Therefore, it is not possible to investigate this spill case. Therefore, I am closing the spill case. 12/29/09 - Raphael Ketani. The green return receipt card arrived today. It was signed by Joseph Giardina and dated 12/18/09. "

VACANT APARTMENT BUILDING (Continued) **S105057992**

Remarks: "CONTAMINATED SOIL FOUND AT LOCATION AFTER SOIL SAMPLES WERE TAKEN. PROPERTY ACROSS ST FROM LOCATION IS AN OIL DEPOT."

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Spiller Name:	MATT BOECKEL
Spiller Company:	COMMERIAL BUILDING

COMMERIAL BUILDING (Continued) **S107787097**

Spiller Address: 324-330 BUTLER STREET
Spiller Company: 001
Contact Name: MATT BOECKEL
DEC Memo: "Sangesland will send a CSL 4/24/06 - Raphael Ketani. Mr. Sangesland had been waiting for Matt Boeckel (bo-kell; (631) 767-0484, the potential buyer's representative, to call back with the name and phone number of the owner. However, he hasn't called. I tried to call Mr. Boeckel, but could only leave a voice mail message. 4/25/06 - Raphael Ketani. I tried calling Mr. Boeckel. He told me he is still trying to find out who the real owners are. I found 2 possible owners for the site and I will send CSLs to both of them: Royal Real Estate Co., 7024 18 Avenue, Brooklyn, NY, 11204 ((718) 236-7474???) Frank A. Puma, Puma Iron Works, 324 Butler Street, Brooklyn, NY, 11217 ((718) 643-1338???) 4/28/06 - Raphael Ketani. Mr. Boeckel called me back and said that the owners of the property are: Ari Dervich, 18 Leana Trading Co., 330 Butler Street, Brooklyn, NY, 11217, phone (718) 855-3388. I called up Mr. Dervich and he said that Royal Real Estate Co. is his company and he is the owner of the property. He said that the address is 324 Butler Street. I will send a new CSL to Mr. Dervich. 05/02/06-Vought-Received call from Mr Vincent Puma (917-599-6765). Vought called Puma and spoke to Puma. Borings were done at 330 Butler Avenue and Mr. Puma is owner of 326 and 324 Butler Street. As per Puma 324-330 used to be one building and now is two separate buildings (324/326 Butler and other building is 330 Butler). Contaminated soil was found at 330 Butler Street at Mr Puma is owner of building. 5/16/06 - Raphael Ketani. Mr. Dervich called me back to say he hired an environmental company to do the investigative work and that they will start July 1. When I asked him who the company is, he said he didn't recall the name of the company off the top of his head. I told him to have the company send me an official letter telling me what their plan of action is, and who the contact person is at the environmental company. He said he will do this. 5/25/06 - Raphael Ketani. I received a call from Mr. Dervich (718) 855-3388 on 5/24 and I returned his call. He said that the environmental company can't do the digging and cleanup work with the tenant in the warehouse. That the tenant MUST move. He said he spoke to the tenant, but he refuses to move. So he talked to his lawyer, and he said that he can get a court order to move the tenant, but it will take 6 months. I told Mr. Dervich to do whatever is necessary to move the tenant and to send me a letter explaining the situation in detail and requesting an extension for the start time for the cleanup. He said he will do this. 6/1/06 - Raphael Ketani. Mr. Dervich sent me a letter requesting an extension of the investigation and cleanup work deadline. He said he had to move tenants out of the building and would need 6 months to find them similar accomodations. He also added that the environmental company, Associated Environmental, said that they can't do their work with the tenants in place. 6/2/06 - Raphael Ketani. I will write a letter and grant him a 6 month extension. 6/29/06 - Raphael Ketani. Jean Deserbean (646) 327-5711 called today. He is the tenant at 330 Butler Street and runs a moving and storage business. He asked what was happening with the building. I told him that oil was found in the soil below the slab and that it has to be cleaned up. He asked when this will happen. I told him that Mr. Dervich asked me for a 6 month extension to get everything ready for the soil investigation and cleanup. I told him that everything has to be out of the building and the floor cleared of material in order for the soil to be dug up and removed. He said he understood and will

COMMERIAL BUILDING (Continued) **S107787097**

look for an alternate business site. He said he still had 26 months on his lease. 12/11/06 - Raphael Ketani. Matt of Associated Environmental called to say that his company pulled the tanks, took end point samples, and he will send me the results when he gets them. 12/13/06 - Raphael Ketani. I received a closure report for the site from Associated Environmental Services, Ltd. I reviewed the report and found it to be acceptable. Based upon the analytical results, manifests, and other documentation in the report, I am closing the spill case."

Remarks: "during soil testing readings came back high:"

Spiller Name:	PETER BURGER
Spiller Company:	NYC DOT
Spiller Address:	2 RECTOR STREET, 5TH FLOOR
Spiller Company:	999
Contact Name:	PETER BURGER
DEC Memo:	"09/06/07-Vought-Called Peter Burger and left message to return call to DEC with owners info. 10/22/07-Vought-Received call and spoke to Burger. During geotech boring on western approach near western bulkhead, soil VOCs found at depth of 30' including benzene (1400ppb, ethylbenzene 10,000ppb), napthalene (47000ppb). Groundwater at depth of 20' and soil contaminated below groundwater however no samples collected above groundwater as boring was geotech. STV is working

UNION STREET BRIDGE (Continued) **S108764295**

with ADT and soil cuttings were drummed. Overall project requires Basis of Design Report for Union Street Bridge to be submitted to NYC. If bulkeads are reconstructed then soil contamination will be addressed. Geotechnical boring was not completed. No adjacent USTs but coal tar facilities across canal to the east. DEC requires : 1)delineation of soil and groundwater. Bulk fueling facility 500' to the north that has above ground UST. No further work will be performed until DOT authorizes 40 hour crew to perform additional geotech borings which will include additional borings on eastern approach. Berger will send address for contaminated soil letter. 01/14/08-Vought-Current file review by Vought. Received email from Burger on 10/22/07 and mailing address is: Mr. Balram Chandiramani, P.E. Director - Moveable Bridges New York City Dept. of Transportation 2 Rector Street - 5th Floor New York, NY 10006 Attn: Mr. Frank K. Kodah, P.E. Project Manager Phone: (212) 788-1774 Vought called Burger (646-602-5850) for update prior to sending CSL with above requirements. Vought sent out CSL with two month due date and cc to EP Burger. Vought received call from Peter Burger and no site activity since we last spoke. Vought faxed copy of CSL to Burger Fax:(646)654-1861. 01/18/08-Vought-Received call from John Kurre (NYCDOT Division of Bridges-212-788-2083 fax:212-788-1848). John looking to discuss site. Bridge goes over Gowanus Canal and borings done for geotech to examine possible bridge replacement. Soil contamination in middle of street and no NYCDOT petroleum facilities nearby. Right next to Bridge is Bayside Fuel Depot which maybe possible source. Site plan will be submitted to DEC to examine proximity to Bayside Fuel Depot and their possible source attribution and hence responsibility for further investigation. 6/24/10 - Raphael Ketani. I received the spill case in early June. I tried to contact Peter Burger (646) 602-5850 of STV, but could only leave a message. I tried to contact Frank K. Kodah, P.E., Project Manager (212) 788-1774, but I reached the NYC Dept. of Health. I tried to contact John Kurre of the NYC DOT (212) 788-2083, but the number was out of service. I reviewed the NYC DOT 1/31/08 response letter to the DEC's 1/14/08 letter to Mr. Chandiramani of the NYC DOT. Mr. Kurre had explained that the DOT didn't have any oil storage facilities on site and didn't have any plans to do further soil borings. However, the Bayside Fuel Depot was next door. The STV report describing the one geotechnical boring, DN-B-01, was attached to the letter. I drafted a letter to Mr. Chandiramani requesting an update regarding plans for refurbishing the bridge. The letter was sent to Randall Austin, Chief of the Spills Unit, for his approval. The letter was approved and was sent out today. 7/1/10 - Raphael Ketani. The letter that I had sent to Mr. Chandiramani was received unopened. It was marked Forward Time Expired - Return to Sender. It is unknown what the problem was as, according to the 2008-2009 NYC Green Book, Mr. Chandiramani is still the director of the Movable Bridges section. I will send the letter again, but, this time, I will address it just to Mr. Chandiramani. 7/19/10 - Raphael Ketani. I received a letter today from Ajit Thakore, PE of the NYC DOT (212) 839-4108. He stated that the bridge reconstruction project is in the preliminary design phase. The plans will be submitted sometime in December 2010. 12/2/10 - Raphael Ketani. I spoke to Mr. Thakore. He said that the bridge refurbishment project has been delayed by 9 months due to budget issues. He said that he expects to receive the plans sometime during the middle of next year. 7/26/11 - Raphael Ketani. I tried to contact Mr. Thakore (212) 839-4108 regarding progress with the bridge refurbishment

UNION STREET BRIDGE (Continued) **S108764295**

project, but I could only leave a message. 7/27/11 - Raphael Ketani. Mr. Thakore called me back. He said that the plans for the bridge have changed substantially. Now, the NYC OMD wants the NYC DOT to replace the bridge using a fixed construction design, not a draw bridge. The project is being reviewed by DOT staff and new plans are being drawn up. The project has to be coordinated with the Gowanus Canal superfund cleanup project which is scheduled to be completed during 2016. The construction is scheduled to begin 2019, barring objections by stakeholders and the general public during the review process. 8/4/11 - Raphael Ketani. I spoke to Mr. Thakore (212) 839-4108. I asked him whether the replacement of the bridge will involve the driving of piles and the digging up of substantial amounts of soil. Mr. Thakore said that there will be a lot of digging in order to install concrete foundations for the bridge. He added that the west foundation will be right in the area of the boring. I asked Mr. Thakore whether he could send the DEC some preliminary plans. He said that he had a completed design report and that he will send it by e-mail. Mr. Thakore sent me a short informational document consisting of 4 pages. It wasn't a report, but rather a section of a report which described the state of the bridge, the impact to the community of closing the bridge and a little bit about the construction involved in replacing the bridge. Ajit Thakore, P.E., Movable Bridge Group, NYC DOT, 55 Water Street, 4th Floor, NY, NY, 10041 (athakore@dot.nyc.gov) 8/19/11 - Raphael Ketani. I am closing the spill case effective today. The basis for closing the case is listed below: 1) the oil spill did not come from the bridge itself as it does not contain product. 2) as a utility, the bridge falls under the utility exemption whereby they are not required to remove the contaminated soil, nor specifically do environmental remediation for an oil spill, except if a piece of construction machinery or a vehicle happened to leak oil at the work site. 3) they are going to install concrete foundations at both ends of the bridge. So any contaminated soil that is found in the vicinity of the geotechnical boring will be removed anyway. 4) Mr. Thakore has been informed that he must make a wetlands permit application to the NYS DEC before work starts and that he must contact the Division of Environmental Permits in order to make application. He has informed the Department that the NYC DOT will do so in 2015 or 2016. 5) The Division of Environmental Permits has been informed by the Spill Prevention and Response Bureau that the Union Street Bridge project will take place and that Mr. Thakore has been informed that the NYC DOT has to approach the Division of Environmental Permits in order to make a wetlands application. 6) John Cryan, Regional Permit administrator, has informed Randall Austin, Chief of the Spill Prevention and Response Unit, that staff from his unit will look for the application or contact from the NYC DOT when the time comes to make an application in 2015 or 2016. Later, Mr. Cryan sent me an e-mail that the NYC DOT sent in an application to replace the dolphins for the bridge, but not the whole bridge (applic. #2-6103-00757)."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed e2mis Notes: 7/10/00 1qt unknown oil on floor of manhole. 3 inactive drain exists in manhole. Sample returned <1ppm PCB. Adjacent sewer checked and found 4 pipe in the direction of manhole. There is product dripping onto floor. No free flowing water involved. 2gal product removed from structure. 7/11/00 Crews report completed washing out sewer lines to adjacent sewer 20' west of structure. Structure was double washed, drain is sealed. Only an ounce if oil (if any) came through drain. All liquids were contained and captured at base of drain pipe in sewer. Inside sewer was dirt and brick floor. No free flowing water in sewer. Double washed structure with slix. No liquid waste. Solids removed by vactor. No leaking equipment."
Remarks:	"in manhole #2583 - 1qu unk oil in manhole - samples taken and clean up pending results - cin ed #132296 - UPDATE 7/11@0225HRS MAY HAVE ENTERED A SEWER"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 01/23/2004-Sun-File Review by Sun: Site Status Update Report, Aprip 2003 through August 2003, by Geological Services Corp (GSC), dated 10/16/2003: Six (6) monitorin wells were gauged and sampled on July 17, 2003. A soil vaplr extraction well (SVE-1) was installed on July 30, 2003 and pilot test on SVE-1 was conducted on August 8, 2003. No LPH was detected. The groundwater depth ranged from 11.74 feet to 15.68 feet, and groundwater flow was in northwest direction. MW-2 has the maximum BTEX concentration of 11,400 ug/l and maimum MTBE concentration of 1,800 ug/l. Work performed during this period included repair and patch leak from wall in oil closet located in the subway, installation of three additional wells. A remedial action plan will be submitted by GSC based on the results of the pilot test. Per Hess' letter to DEC dated 10/28/2003, Hess is working with the New York City Transit Authority (NYCTA) to address an apparent hydrocarbon sheen in conjunction with groundwater seepage within a subsurface subway station utility closet. (Sun) 01/22/2004- Site visit by Joe Sun and Mark Tibbe on 1/22/2004. Inspection with Mike Matri of Hess and William Schaefer of GSC showed that some slight infiltration of groundwater continues where the urethane grout waterproofing did not adhere to the concrete. GSC has recommended a

HESS STATION #32530 (Continued) **S104276740**

second waterproofing event utilizing a hydraulic concrete product. The product is now waiting for NYCTA's approval. (Sun) SEE Also Spill Nos. 0104798/0201876. 05/05/04-File Update by Sun: On 05/05/04 Sun sent a letter to Hess requiring complete delineation of soil and groundwater contamination, submittal of an Investigation Summary report followed by a Remedial Action Plan. The Department set a deadline of May 28, 2004 for signing the Stipulation Agreement. (Sun) 06/06/05 File Update by Sun: On 06/06/05, Sun sent a letter to Hess' Project Manager, Mike Matri, informing him that the Department approves Hess proposed plan to take the opportunity of station renovation commencing in June, 2005 to install below ground environmental remediation infrastructure for future remediation of petroleum impacted soil and groundwater. Specifically, the Department approves the following planned installations at the station: 1.Installation of three additional SVE wells (PMW-8 through PMW-10). 2.Modification of existing 2-inch well FW-7 to include a 1-inch injection line which will be piped to the proposed remediation system location, The piping will potentially be used in the future for injection purposes (e.g., Biosolve, chemical oxidation and/or bioremediation). 3.Monitoring wells SVE-1, MW-2, and the three proposed SVE wells (PMW-8 through PMW-10) will have environmental piping installed from the wells to the proposed system location area. The Department requires a formal Remedial Action Plan (RAP) in conjunction with the station redevelopment activities be submitted by Hess during the third quarter of 2005. (Sun) 10/19/2005: Project reassigned from Sun to Andersen 10/19/2005: Reviewed hydrogeologic groundwater report dated 8/29/2005. Report indicated liquid phase hydrocarbons and BTEX concentrations of up to 19,520 ppb. Report indicated that informal proposed remedial action plan discussed in abovementioned 6/6/05 entry is delayed and possibly canceled. The report states Amerada Hess Corporation will either request an extension to submit the currently proposed Remedial Action Plan or to submit a revised Remedial Action Plan . The next triannual sampling event is scheduled for November 2005. Additionally, a Stip was sent out on 5/5/04, which was never signed due to Hess waiting for a Consent Order. 10/25/05: Mailed a failure to sign Stip letter. Stip signature due on 11/15/2005. 1/26/06: 1/25/06 meeting between Quantum, NYSDEC, and GSC/Kleinfelder. The site in under redevelopment. An RAP will be prepared. Delineation will be investigated on the other side of 4th avenue. 3/1/06: Signed stipulation agreement, effective date 2/23/06. Investigation plan due 4/24/06. 4/24/06: Reviewed the site status update report/investigation plan dated 4/21/06. Report indicates that additional delineation on the east side of 4th avenue is not feasible due to utilites. Max BTEX 28,587 ppb (SVE1) and max MTBE 1,710 ppb (MW2). Depth to water 10-15 ft. RAP due 6/22/06. 5/25/06: Pilot testing on 5/25/06 6/29/2006: Meeting with Hess, NYSDEC, Quantum, EnviroTrac and GSC on 6/28/2006. RAP in progress. Endpoint sampling will be submitted for spill bucket replacement excavation. 7/28/06: RAP submission deadline extended to 9/21/06. 8/9/06: Conference call with Hess, Quantum, and GSC/Kleinfelder. The ROI during SVE pilot testing was only 10 ft. A Hivac pilot test will be performed on 8/10/06 to try to increase the ROI. If it fails an extension will be required to perform additional testing prior to RAP submittal. 8/11/06: Received phone call from Gail Helfrick. A HVAC test was performed which did not result in a significant increase in the RIO. An RAP will be submitted on 9/21/06 as planned, but will require

HESS STATION #32530 (Continued) **S104276740**

additional sampling to improve the ROI. 8/15/06: See spill 06-02980. The RAP should include remediation for the soil contamination from spill 06-02980. 9/12/06: Received RAP. SVE proposed. Pilot testing was conducted on May 25, 2006 and August 10, 2006. Two existing wells (MW-3 and SVE-1), and six proposed wells (SVE-2 - SVE-7) wil be used as extraction points to be connected to a SVE remediation system. The ROI varies from 10 to 50 feet throughout the site. Soil samples will be collected during installation of the new SVE wells, as well as from a soil boring proposed adjacent to MW-6. During system startup operation and maintenance visits will be conducted daily for three days, followed by weekly for the first monthy, followed by monthly. Based on start-up testing, a determination will be made as to whether emission treatment is necessary. Contamination from spill 06-02980 addressed, spill 06-02980 closed and consolidated with 9605719. Numerous sensitive receptors: subway, utilities, basements, schools, Gowanus Canal. AS not proposed due to the proximity of the subway, which runs parrallel and adjacent to the site. RAP conditionally approved, with additional groundwater treatment required. 9/21/06: Received phone call from Gail Helfrick (Quantum) and Al Tonn (GSC-K) requesting that the RAP be approved without additional gw treatment. Confirmed that additional gw treatment is required for MW-2, SVE-1, and FW-8. 10/3/06: Received email from gail helfrick: This email is to confirm our conversation on Tuesday, September 26, 2006 regarding the Remedial Action Plan (RAP) for Hess Station # 32530 in Brooklyn, New York. In the RAP, Hess proposed the installation and operation of a Soil Vapor Extraction system at the site. The NYSDEC approved the proposal for SVE, and also requested groundwater remediation. Based on our conversations, it was agreed that Hess would install underground piping for groundwater treatment during the installation of the SVE system. It was further agreed that Hess would operate the SVE system for 1 full year, and during that year, Hess would 1) evaluate the performance of the SVE system on a monthly basis, 2) continue to monitor roundwater quality (March, July and November), and 3) submit progress reports to the NYSDEC (May, September and January). If after that 1 year period, the data demonstrates that groundwater remediation is necessary, alternative remedial technologies will evaluated and discussed with the NYSDEC. 10/4/06: Received update report dated 9/27/06. Groundwater samples collected on 7/27/06. BTEX 38,200 ppb (SVE1), mtbe 208 ppb (SVE1). SVE implementation required. 12/11/06: Sent email to Hess to followup on implementation schedule. 12/18/06: Received email from Hess: We still hope to be able to obtain the MTA permits needed to complete the subsurface intrusive work by January 10, 2007. Once these permits are obtained, we will provide the NYSDEC a schedule for system installation. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. SVE implementation in progress. 3/26/07: Reviewed update report. Wells sampled on 12/26/06. Max BTEX 30,720 ppb (SVE1). Max MTBE 1,000 ppb (MW2). SVE implementation in progress. 5/31/07: Reviewed site status report. Wells sampled on 3/16/07. Max BTEX 25,280 ppb (SVE1). Max MTBE 410 ppb (MW2). SVE installation in progress. 9/20/07: Reviewed site status report. Wells sampled in July 2007. LNAPL in MW 2 (0.03 ft).Max BTEX 30,370 ppb (SVE1). SVE startup planned for November 2007. Sent letter requiring RAP addendum for groundwater treatment (pipes for water removal are planned on being installed as a back-up plan). And increased sampling frequency to quarterly sampling. 5/14/08 - Carlson: Meeting on May 7th 2008 - Hess/Envirotrac will submit a RAP addendum. Reviewed First Quarterly

HESS STATION #32530 (Continued) **S104276740**

2008 Update Report. Wells sampled on 2/5/08. Max BTEX concentration 24,220 ppb (SVE1), max MTBE concentration 71 ppb (SVE1). MW-2 was dry. 8/7/08 - Carlson: Reviewed July 2008 Update Report. Wells sampled on 5/22/08. Maximum BTEX concentration 43,693 ppb (SVE1). Maximum MTBE concentration 554 ppb (MW2). RAP Addendum will be submitted under a separate cover. Emailed Hess/Envirotrac requiring submission of RAP Addendum by 9/8/08. Received email from Ed Russo stating that 9/8/08 deadline can probably be met. 9/8/08 - Carlson: The Department approved an extension until 10/1/08 to submit an RAP Addendum. 10/22/08 - Carlson: Meeting with Hess/Envirotrac. RAP Addendum will be submitted by 12/15/08. 11/20/08 - Carlson: Reviewed October 2008 Update Report. Wells sampled on 8/14/08. Maximum BTEX concentration 41,837 ppb (SVE1). RAP Addendum not received. Sent failure to comply letter. Start legal proceedings if RAP Addendum not submitted by 12/5/08. 12/23/08 - Carlson: Received Remedial Action Plan Addendum. Two SVE system, two wells strippers, and monthly dual phase extraction events proposed. Revised RAP Addendum required with following modifications: 1) removal of two wells from SVE system, 2) relocation of two of the proposed monitoring wells, 3) startup report must be submitted, 4) inclusion of more detailed information about the well strippers. 2/19/09 - Carlson: Received email from Ed Russo in response to 12/23/08 letter. Monthly O&M visits requiring monthly WS water effluent testing, monthly SVE air discharge testing by PID, and quarterly SVE air discharge testing by laboratory. Revised letter addendum required. 3/11/09 - Carlson: Reviewed update report dated January 2009. Wells gauged and sampled on 11/5/08. LNAPL at depth of 0.02 ft in MW2. Maximum BTEX concentration 12,672 ppb (SVE1). 3/18/09 - Carlson: Meeting with Hess/Envirotrac. Revised addendum due in April 2009. 5/7/09 - Carlson: Reviewed April 2009 Update Report. Revised addendum letter overdue. Emailed John Schenkewitz about overdue letter/report. 5/11/09 - Carlson: Received revised RAP Addendum letter. Issued approval letter. 5/28/09 - Carlson: Well installation scheduled for 6/22/09. 8/7/09 - Carlson: Reviewed update report. Monthly EFR IRM ongoing. What is status of RAP implementation? 8/19/09 - Carlson: Meeting with Hess. RAP addendum will be submitted to include air sparge on the eastern portion on the site. 10/21/09 - Carlson: Reviewed RAP addendum. Issued approval letter. SVE/AS will be installed, except in sidewalk (because of subway). SVE in sidewalk with HVAC events to treat impacted groundwater. 11/17/09 - Carlson: Reviewed update report. Monthly HVAC events from sidewalk wells ongoing. SVE/AS system installation in progress. 1/27/2010 - Carlson: Meeting with Hess. 2/5/2010 - Carlson: Reviewed update report. EFR conducted in September and October. SVE/AS installation not begun yet. 5/20/2010 - Carlson: Meeting with Hess. They are working with MTA because the property is adjacent to the subway. 5/27/2010 - Carlson: Reviewed April 2010 Update Report. Six AS wells and one MW installed. HVAC was not conducted this quarter. 7/22/2010 - Carlson: Reviewed wastewater UST closure report. Tank abandoned in place with concrete slurry. Endpoint samples collected from the east wall (clean) and north wall (trace VOCs/sVOCs detected). West wall/south wall were not accessible for sample collection. 8/13/2010 - Carlson: Reviewed July 2010 Update Report. EFR events ongoing. System construction pending NYCTA permits. 5/9/11 - Obligado - This spill transferred to Obligado as per Brevdo. I reviewed the 4Q10 update report. Free product (0.03 ft) was found in MW2. MAx BTEX 17674 ug/L in SVE1. They are still waiting for MTA permits. 8/30/11 - Obligado - I reviewed the 2Q11 update report. They

HESS STATION #32530 (Continued) **S104276740**

are still waiting on NYCTA permits. Max BTEX is 9800 ug/L. No product detected this quarter. 11/14/11 - Carlson: Reviewed October 2011 update report. System construction pending NYCTA permits. Monthly EFR ongoing. 3/13/2012 - The site has SVE/AS system operation pending on the NYCTA's permission. Spoke to the consultant who works for the property owner next door in the Union Street. Groundwater contamination was identified during their Phase 2 investigation. Advised to call in for a spill number and prove to DEC it is from Hess site as they believe. 8/23/2012 - 1Q2012, 4/30/2012, by EnviroTrac. The groundwater was sampled on 2/13/2012. DTW 9.98 to 15.70 feet. Flows to north. No LNAPL. The remediation system construction is pending permit approval by NYCTA. CW-9, 560.1 BTEX, 182 MTBE. MW-7, 7.52J BTEX, 22.8 MTBE. MW-2, 5,529 BTEX, 162 MTBE. FW-7, 24.5 BTEX, MTBE ND. SVE-1, 6,369 BTEX, 6.7J MTBE. FW-8, 270.2 BTEX, 1.3J MTBE. FW-9, 570.6 BTEX, 2.5 MTBE. 10/12/2012 - 2Q2012, 7/31/2012, by EnviroTrac. The groundwater was sampled on May 14, 2012. DTW 10.87 to 16.05. Flows to north. CW-9, 43 BTEX, 106 MTBE. MW-7, 0.44J BTEX, 19.7 MTBE. MW-2, 1,626.9 BTEX, 100 MTBE. FW-7, 67.4 BTEX, 0.24J MTBE. FW-9, 961.6 BTEX, 1.6J MTBE. FW-8, 224.9 BTEX, 1.8 MTBE. SVE-1, 3,746.3 BTEX, 8.0J MTBE. EFR on on MW-2 and SVE-1 on 3/14, 4/9, and 5/2/2012. 1/24/2013 - 3Q2012, 11/5/2012, by EnviroTrac. The groundwater was sampled on 8/31/2012. DTW 10.49 to 14.72 feet. Flows to north. NO LNAPL. CW-8, 26J BTEX, 0.77J MTBE. CW-9, 297.9 BTEX, 73 MTBE. MW-7, 95.3 BTEX, 4.4 MTBE. MW-2, 8,656 BTEX, 101 MTBE. FW-7, 291.2 BTEX, 0.25J MTBE. SVE-1, 6,205 BTEX, 2.7J MTBE. FW-9, 1,894.3 BTEX, 1.1J MTBE. FW-8, 587.6 BTEX, 1.4 MTBE. EFR on MW-2 and SVE-1 on 6/7, 7/16, and 8/22/2012. The next sampling will be in 11/2012. 9/24/2013 - 4Q2012, 1/31/2013, by EnviroTrac. The groundwater was sampled on 11/16/2012. On 9/24 and 11/13/2012, conducted EFR on MW-2 and SVE-1. DTW 7.80 to 15.49 feet. Flows to north. CW-9, 223.4 BTEX, 94.1 MTBE. MW-7, 38.04J BTEX, 18 MTBE. MW-2, 6,630.7 BTEX, 136 MTBE. FW-7, 179.7 BTEX, MTBE ND. SVE-1, 1,933 BTEX, 2.7 MTBE. DTW 10.25 to 15.46 feet. Flows to north. MW-2, 9,914 BTEX, 78.3 MTBE. MW-7, 47.7 BTEX, 12.1 MTBE. FW-7, 596.1 BTEX. SVE-1, 4,550 BTEX. FW-8, 339.7 BTEX. FW-9, 691.9 BTEX. 1/28/2016 - 4Q2015, 1/28/2016. 9/16, 10/9, 11/4/2015, EFR on SVE-1 and STREs on SVE-6/AS-1. 11/10/2015, gauged 13 and sampled 12 monitoring wells. NO LNAPL. DTW 9.51 to 15.94 feet. Flows to north. CW-9, 53.9 BTEX, 55.7 MTBE. MW-2, 2,189.5 BTEX, 34.6 MTBE. FW-9, 426.1 BTEX. SVE-1, 1,161.4 BTEX. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J. Vought. 3/30/16 - Raphael Ketani. This spill case has been assigned to me effective today. According to ACRIS, the block and lot are 434 and 35. The latest deed is dated 4/24/14. The property owner is HESS Retail Stores, LLC, 1 HESS Plaza, Woodbridge, NJ, 07095. The PBS record is #2-297666. The owner is Speedway #7835. Seven USTs were closed and removed from 6/1/92 to 8/1/96. Thirty seven USTs (mostly gasoline 550 gallon tanks) were closed in place on 12/1/79. There are 5 active 4000 gallon USTs - 4 gasoline and 1 diesel. These tanks were installed on 8/1/96. The contacts are as follows: Speedway/Hess contact: Matthew Butler, (732) 738-2924, MButler1@Speedway.com Consultants: Edward Russo (EnviroTrac), (631) 924-3001, EDR@EnviroTrac.com Joseph Rennie (EnviroTrac), (631) 924-3001, JoeR@EnviroTrac.com 4/26/16 - Raphael Ketani. Today I received the EnviroTrac 4/25/16 Quarterly Update Report. On 12/9/15, 1/28/16 and on 2/1/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 2/11/16 MW-2 to 6, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were gauged. MW-2 to 6, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were sampled on 2/11/16. Product was not measured in any of the wells. Groundwater was measured at 6.79' and 15.66' below grade and was determined to be flowing northerly. Total BTEX was 2968.1 ppb (856 ppb) at MW-2, non-detect at MW-3 to MW-6 and MW-8 and FW-7, 138.7 ppb (15 ppb benzene) at FW-8, 201.7 ppb (8 ppb benzene) at FW-9, 3.6 ppb at CW-8, 22.1 ppb (13.2 ppb benzene) at CW-9 and 450.3 ppb (12 ppb benzene) at SVE-1. 7/26/16 - Raphael Ketani. Today I received the EnviroTrac July 2016 Quarterly Update Report dated 7/26/16 for the period March to May 2016. On 3/1/16, 4/20/16 and on 5/6/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 5/13/16 MW-1 to 8, FW-7, CW-8, CW-9, SVE-1 and SVE-7 were gauged. MW-1 to 8, FW-7, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 5/13/16. Product was not measured in any of the wells. Groundwater was measured at 8.76' and 16.03' below grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1, 929.9 ppb (254 ppb) at MW-2, non-detect at MW-3 to MW-8, 143.8 ppb (non-detect benzene) at FW-7, non-detect at CW-8 and at CW-9, 427 ppb (62.9 ppb benzene) at SVE-1 and non-detect at SVE-7. 10/24/16 - Raphael Ketani. I reviewed the EnviroTrac August 2016 Quarterly Update Report dated 10/24/16 for the period June to August 2016. On 6/8/16, 7/13/16 and on 8/9/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 8/10/16 MW-1 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged. MW-1 to 8, FW-7 to FW-9, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 8/10/16. Product was not measured in any of the wells. Groundwater was measured at 9.09' and 15.67' below grade and was determined to be flowing northerly. Total BTEX was non-detect at

HESS STATION #32530 (Continued) **S104276740**

MW-1 and MW-4 to MW-8. MW-2 was 568.5 ppb (247 ppb benzene). FW-7 had 469.5 ppb (20.2 ppb benzene). FW-8 had 180.8 ppb (19.9 ppb benzene). FW-9 had 231.2 ppb (23 ppb benzene). CW-8 had 4.4 ppb. CW-9 had 2.3 ppb. SVE-1 had 373.8 ppb (15.9 ppb benzene). SVE-7 had 4.2 ppb BTEX. 12/19/16 - Raphael Ketani. Today I received an email as a c-c from Ryan Piper, Engineering Geologist I at DEC Region 2, concerning a new spill (#1608842)at the site. The spill concerned oil contaminated surface water flowing off of the site and onto the street in front due to a clogged drain at the northern end of the property. There was an odor complaint as a result. I sent an email to Mr. Fleming, the representative of Speedway, stating that they faced possible fines and legal action for violating the SPDES regulation, 6 NYCRR Part 750.1.3. I also stated that the subject northern drain must be cleaned out immediately and that Speedway must check the drains at its other stations and make sure they can receive precipitation. Mr. Ryan's original email to Mr. Fleming is as below: A neighbor complained about a diesel spill/ condition at the station that is affecting the surrounding neighborhood. I performed a site visit on Sunday Dec 18th in which I observed the condition. Apparently, there are a number of storm drains on the premises, particularly the drain on the north side of the property, that are clogged with sediment causing large puddles to run off into and down the street to a NYCDEP storm drain. Combined with poor housekeeping and minor spilling at the Diesel pump island on the North side of the property, this is causing a nuisance odor and adverse condition down the road. Therefore I am directing you to take the appropriate action to address this issue as follows. Control of Storm Water Emanating from 204-222 4th Ave, Brooklyn, NY: As per 6 NYCRR Part 750.1.3, The following discharges into the waters of the State are hereby prohibited, and no SPDES or other permit shall be issued authorizing any such discharge: (d) any discharge from a point source, which is in conflict with a plan or amendment thereto approved pursuant to section 208(b) of the Act and 40 CFR part 35 (see section 750-1.24 of this Part), or any other discharge not permitted by this Part, ECL Article 17, other rules and regulations adopted or applicable pursuant thereto or to the Act, or the provisions of an SPDES permit. During the site visit referenced above, evidence was observed of storm water flowing from 204-222 4th Ave, Brooklyn, NY to the street. As such the Department requires that the storm water from 204-222 4th Ave be directed to onsite drainage systems. Documentation of catch basin cleaning must be submitted to the Department no more than 1 month from the date of this email. Mr. Fleming responded back quickly by email stating that the problem will be immediately corrected. 1/19/17 - Raphael Ketani. Today I received an email from Mr. Russo [(631) 924-3001, EDR@EnviroTrac.com] regarding the plugged drains at the site (spill #1608842). The email had attachments consisting of a site plan showing the 6 catch basin locations, photos of the basins taken on 12/20/16 and photos of the basins taken on 1/17/17. Mr. Russo explained in his email that 3 of the catch basins were noted as not draining during EnviroTrac's 12/20/16 inspection. All of the catch basins were cleaned of debris and jetted for 70 feet by a Speedway contractor on 12/31/16. On 1/17/17, the site was inspected again. This time only CB-3 was not draining properly. Mr. Russo stated that this drain will be addressed again by Speedway's contractor. He stated that he will send the DEC an update regarding the re-establishment of drainage at CB-3. 2/2/17 - Raphael Ketani. I reviewed the EnviroTrac January 2017 Quarterly Update Report dated

HESS STATION #32530 (Continued) **S104276740**

1/31/17 for the period September to November 2016. On 9/2/16, 10/17/16 and on 11/8/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 11/23/16 MW-1 to 6, MW-8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged. MW-1 to 6, MW-8, FW-7, FW-9, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 11/23/16. Product was not measured in any of the wells. Groundwater was measured at 7.55' and 15.55' below grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1, 3 to 6, 8 and SVE-7. The samples for FW-9, CW-8, CW-9 and SVE-1 had 1 to 3 low hits. MW-2 was 1091.1 ppb (487 ppb benzene). FW-7 had 899.6 ppb (45.6 ppb benzene). 4/28/17 - Raphael Ketani. Today I received an email from Mr. Butler that he is leaving Speedway. He stated that John Engdahl [jjengdahl@speedway.com (732) 738-2923] will take over his duties. 5/2/17 - Raphael Ketani. I reviewed the EnviroTrac April 2017 Quarterly Update Report dated 4/28/17 for the period December to February 2017. On 12/7/16, 1/11/17 and on 2/2/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 2/7/17, MW-1 to 6, MW-8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product was not measured in any of the wells. Groundwater was measured at 7.57' and 15.48' below grade and was determined to be flowing northerly. BTEX was non-detect at MW-3 to 6, 8 and CW-9. The samples for MW-1, FW-7 to FW-9, CW-8 and SVE-7 had 1 to 4 low hits. MW-2 was 3876.1 ppb (991 ppb benzene). SVE-1 was 1329.4 ppb (38.3 ppb benzene). The PID effluent concentration a SVE-6/AS-1 was 665.3 ppm, 405.6 ppm and 290.8 ppm on 12/7/16, 1/11/17 and 2/2/17, respectively. I approved the report with a comment to Mr. Rennie asking him to explain the extremely high benzene concentration in the groundwater at MW-2. 8/1/17 - Raphael Ketani. I reviewed the EnviroTrac July 2017 Quarterly Update Report dated 7/28/17 for the period March to May 2017. On 3/7/17, 4/7/17 and on 5/3/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 5/30/17, MW-1 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.00' to 18.42' below grade and was determined to be flowing northerly. BTEX was non-detect or low at MW-1, 3 to 6, 8, FW-8, CW-8, CW-9 and SVE-7. MW-2 was 2699.1 ppb (563 ppb benzene). MW-7 was 110.6 ppb (90 ppb benzene). FW-7 was 252.5 ppb (non-detect for benzene). FW-9 was 81.1 ppb (30.8 ppb benzene). SVE-1 was 5475.7 ppb (48.7 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 324.1 ppm and 175.5 ppm on 3/7/17 and 4/7/17, respectively. 10/31/17 - Raphael Ketani. I reviewed the EnviroTrac October 2017 Quarterly Update Report dated 10/30/17 for the period June to August 2017. On 6/14/17, 7/12/17 and on 8/15/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 8/23/17, MW-1 to 3, 5 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.44' to 15.08' below grade and was determined to be flowing northerly. BTEX was non-detect or low at MW-1, 3 to 6, 8, FW-8, CW-8, CW-9 and SVE-7. MW-2 was 2269.9 ppb (481 ppb benzene). MW-7 was 129.5 ppb (115 ppb benzene). FW-7 was 122 ppb (non-detect for benzene). FW-9 was 126.3 ppb (48 ppb benzene). SVE-1 was 1558.1 ppb (83.1 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 95.3 ppm, 165.4 ppm and 131.2 ppm on 6/14/17, 7/12/17 and 8/15/17, respectively. EnviroTrac requested permission to abandon upgradient and side-gradient wells MW-1, 4, 5, 6, and SVE-7 based upon historical and current analytical

HESS STATION #32530 (Continued) **S104276740**

data results. I reviewed the data for these wells and determined that their abandonment would not impact the monitoring of the site. 1/31/18 - Raphael Ketani. I reviewed the EnviroTrac January 2018 Quarterly Update Report dated 1/31/18 for the period September to November 2017. On 9/14/17, 10/30/17 and on 11/6/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 11/21/17, MW-2, 3, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.25' to 15.64' below grade and was determined to be flowing northerly. Wells MW-1, 4 to 6 and SVE-7 were abandoned on 11/6/17. BTEX was non-detect or low at MW-3, 8, FW-7 to 9, CW-8 and CW-9. MW-2 was 3550.6 ppb (791 ppb benzene). MW-7 was not sampled. SVE-1 was 1126.5 ppb (69.5 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 408.1 ppm, 77.7 ppm and 360.9 ppm on 9/14/17, 10/30/17 and 11/6/17, respectively. 05/01/2018: This spill case was transferred to A. Doronova - AD. AD Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com DL the report to DDocs. Will review. AD 05/29/2018: Reviewed the report. It states that the spill case was reported when petroleum-impacted soil were encountered during underground storage tank (UST) upgrade activities in August 1996. This report covers monitoring period from December 2017 to February 2018. On December 11, 2017, January 16, and February 1, 2018 - EnviroTrac conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. On February 6, 2018 - the consultant gauged ten (10) and sampled eight (8) monitoring wells. On April 12, 2018 EnviroTrac sampled three (3) monitoring wells. Wells Gauged: MW-2, 3, 7, 8; FW-7, 8, 9; CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.68 feet- 18.58 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 355 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 30.6 ug/L (MW-2) BTEX: highest concentrations are in well MW-2 (900ppb) EnviroTrac will continue quarterly groundwater sampling, with the next sampling event scheduled for May 2018. An Update Report summarizing these activities will be submitted to NYSDEC in July 2018. Monthly EFR and STRE events to continue. AD 07/18/2018: Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 07/26/2018: Reviewed the report. This report covers monitoring period from March 2018 May 2018. On March 5, April 11, and May 3, 2018 - the consultant conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. - April 12, 2018 four (4) wells were gauged and three (3) monitoring wells were sampled. - May 8, 2018 nine (9) wells were gauged and eight (8) monitoring wells were sampled. Wells Gauged: MW-2, 3, 8; FW-7, 8, 9; CW-8, 9, and SVE-1. Wells Containing LPH (feet): None Groundwater Depth: 8.32 feet - 15.32 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 620 micrograms per liter (ug/L) (MW-2) Maximum MTBE

HESS STATION #32530 (Continued) **S104276740**

Concentration: 56.7 ug/L (MW-2) BTEX concentrations ranged in the site wells from ND in MW-3, MW-8, CW-9 to 2,600ppb in the most contaminated site well MW-2. Current Plans/Proposals: Continue quarterly groundwater sampling, with the next sampling event scheduled for August 2018. An Update Report summarizing these activities will be submitted to NYSDEC in October 2018. Continue monthly EFR and STRE events. AD"

Remarks: "removal of under ground tanks-poss soil contamination"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Prior spill number was 9605780 which said that the site was a demolition waste transfer station and a fuel storage area. The area was contaminated with petroleum soil & groundwater impacts. In approx 2001 two large residential condos were built on the site with an open spill number. The spill case was closed in early 2003 for no recent activity 4/26/2004 TradeWinds Environmental found a UST on site between 4,000 and 6,000 gal (#6 oil). The tank is being pumped out, but the tank is too close to the condo foundation to be removed safely. Steve Gordon would like to talk with the DEC rep about remediation options 6/23/04 Tipple spoke with Doug from Tradewinds site status requested// 6/24/04 tipple spoke with owner, S.Gordon formerly with Tradewinds and D. Yudelson esq. The owner is currently looking into entering into a Brownfields Cleanup. Will keep DEC updated// tanks removed were encased in concrete and photos were taken//Gordon stated that no soil contamination was observed adjacent to the tanks at the time of removal 06/20/06: This spill is

400 CARROLL ST (Continued) **S102401891**

transferred from Mr. Koon Tang to Q.Abidi. Called to Jan Belessimo, Trade Wynds Environmental at (800)282-8701 she said that she will talk to her Project Manager regarding spill and she will call me back. -QA 06/30/06: Contacted to Ms.Jan Bellessimo because she faxed me only waste manifest of the spill She will talk to her supervisor Mr. R.D.Baldwin to send a clean up confirmation letter to me. -QA 07/05/06: Called to Ms. Jane Bellessimo and reminded her to talk to her boss for cleanup confirmation letter. -QA 07/25/06: Contacted Jane, she said she will fax me today the closing confirmation letter. -QA 08/09/06: Called Ms. Jane Belessimo regarding spill closing confirmation letter and left message to call me back. -QA 09/12/06: Mr Argie Balgwin called me and said after talking to his attorney that he will send me a confirmation letter to close the spill. -QA 10/25/06: Called Mr. Argie Balgwin (516)779-7824 and left message to call me back regarding closing confirmation letter for the spill. -QA 11/16/06: Called Jan Belessimo about information of spill, she said that she will talk to her boss and call me. -QA 11/27/06: Called Jan Belessimo about information of spill and left message to call me back. -QA 12/14/06: Called Ms. Jan Belessimo regarding information of the spill. She said that she had already sent to me whatever waste manifest report Tradewinds Environmental has. Some other party worked for this spill. She gave attorney's name and phone number. Mr. David Yudelson (attorney) (212)421-2150. -QA 12/18/06: This spill is being handled by Department's of Brownfield Program (Central Office). I don,t need not to work on this spill. -QA 05/14/07: Called Mr. David Yudelson at (212)421-2150 to discuss the spill. He was not there, left message to call me back. -QA 05/18/07: Called Mr. David Yudelson (Attorney) at (212)421-2150 to discuss if this spill has been terminated from BCP program or not. He said, he will contact client and find out about it then he will call me back. -QA 12/04/2007: This spill case was transferred to A. Doronova. AD 02/08/2008: Called and left messages to A. Baldwin, D. Yedelson and spoke with Ms. Jan Belessimo of Trade-Wynds Env. regarding this site. She was not sure if their company is still involved with the site. She will call back later with some information. AD 03/03/2008: Spoke with J. Belessimo of Trade-Wynds Env., she told me that they no longer work for this site. Called and left a message to D. Yedelson. AD 03/04/2008: Received a call from D. Yedelson. He represents both property seller and potential buyer. Contract to be signed sometime in summer 2008. The buyer plans to redevelop the site. Neighbor property on 363 Bond Street which is currently under NYSDEC spill #0501697 is also in this contract but represented by other parties. Spoke with J. Kolleeny of DEC regarding this site. AD 03/13/2008: Spoke with D. Yedelson regarding a submission of all investigation reports and scheduling a meeting with all involved parties to discuss the site situation and remediation. Possible STIP. AD 03/20/2008: Received an email from John Grathwol from Albany. Local community group - FROGGs was concern about the site redevelopment and John scheduled a phone call for March 21, 2008 with FROGGs' representative to answer their questions. Sent an email to V. Brevdo of DEC with brief site status update, which was then forwarded to J. Grathwol. AD 03/25/2008: Left a message to D. Yedelson regarding reports submission. He returned my call later, said that all reports are ready and he will email them to me today or tomorrow. Informed him about concerns from local organization. Told him that after I finish to review reports we will schedule a meeting. AD 03/28/2008: Received old reports via email, downloaded them to eDocs. Will review. AD 10/03/2008: Spoke with D.

400 CARROLL ST (Continued) **S102401891**

Yudelson - attorney regarding situation with this site. He told that the owner wants to reapply for BCP project and that they applied for re-zoning, which will be decided in April, 2009. AD 10/15/2008: Received an email from Mr. Yudelson saying: Ainora - I am having a comprehensive report prepared by ELM for the Carroll Street/Bond Street sites which will show all existing data. I will forward it as soon as it is done. Dave AD 10/22/2008: Received an inquiry from Vadim Brevdo of DER regarding status of this spill. Inquiry came to Commissioner from City Councilman DeBlasio. Informed Vadim about situation with this case. Spoke with D. Yudelson. Env. Liability Management (ELM) preparing a summary report with conclusions and recommendations for remedial actions. Project manager - Mimi Raygorodetsky. AD 10/27/2008: Sent an email to D. Yudelson saying: Dear Mr. Yudelson, As per our previous phone conversation, please be advised that the Department requests to expedite the submission of the summary report for the above-referenced sites. The report should be submitted no later that November 14, 2008 and should include a remedial action plan. Feel free to contact me if you have any questions or comments. Sincerely, Ainura Doronova AD 11/13/2008: Called and left a message to D. Yudelson regarding the report submission. later received an email from him saying: Ainura- got your voicemail but I am in a meeting. ELM is working on the report since your request and we should have it very shortly. I will find out the exact date and I will respond to you. Dave and Ainura - The effort to compile and synthesize all the prior work is taking a little longer than expected to make it understandable. I believe we will deliver the summary report next weds. Please let me know if this presents a problem so that we can avoid having anyone work overnight or on the weekend!!! Postponed the report submission till November 21, 2008, but said that it is final. AD 11/21/2008: called and left a message to D. Yudelson regarding the report submission. Later in the day received an email from M. Raygorodetzky saying: Ms. Doronova, On behalf of Dave Yudelson of Sive, Paget & Riesel and Toll Brooklyn, LP, please find attached an electronic copy of the Remedial Investigation Report an Conceptual Remedy for the Toll Brooklyn, LLC site in Brooklyn, NY. A hard copy (with a CD containing previous studies) will be delivered to your office via Federal Express on Monday. The site is comprised of three adjacent parcels of land that are subject to three active spill listings: 363 Bond Street (Spill # 05-01697) 365 Bond Street (Spill # 04-07393) 400 Carroll Street (Spill # 04-00876) We look forward to working with you to remediate this site. Regards, Mimi Raygorodetsky - Associate Tel: 212.962.4301 ext.311 - Fax: 212.962.4302 - Mobile: 917.952.9906 mraygorodetsky@elmofny.com DL the report to eDocs. Will review. AD Reviewed the report. It includes conceptual RAP with proposal to excavate contaminated soil. AD 01/05/2009: Spoke with M. Raygorodetsky regarding submission of the actual RAP. She told me that their company does not have contract yet to perform the remediation. She will speak with the owner and then call back. AD 01/12/2009: Received an email from M. Raygorodetsky saying: Hello Ainura, We spoke last week about the timing of submission of a RAWP for the Toll Gowanus Site, which is subject to three spill numbers: 0501697, 0407393, and 0400876. I've spoken with the client, Toll Brooklyn, LLC and the environmental attorney, Dave Yudelson of Sive Paget & Riesel, PC about the timing of RAWP preparation. We will be finishing our draft of the RAWP this week and providing it to our client for review. We hope to have a RAWP for you the week of January

400 CARROLL ST (Continued) **S102401891**

19. Please let Dave Yudelson or me know if you have any comments or questions. Mimi Mimi Raygorodetsky - Associate Tel: 212.962.4301 ext.311 - Fax: 212.962.4302 - Mobile: 917.952.9906 02/09/2009: On January 26, 2009 received this email from M. Raygorodetsky saying: Hello Ainura, I wanted to let you know that we were slightly delayed in getting our RAWP submission to you last week. We are pulling together the final loose ends on the RAWP and hope to have something for you by the end of the week. I apologize for the delay. Thanks, Mimi Raygorodetsky Received RAP by Env. Liability Management. DL to eDocs. Will review. AD Reviewed the RAP.It proposes excavation of the hot spots in the vicinity of the well MW-5 and soil boring SB-1 down 2 feet into the water table. Excavation in these areas will advance laterally in all directions until no further evidence of free product remains. ELM also proposes to implement in-place soil stabilization or chemical oxidation in areas where elevated concentrations of BTEX and SVOCs are present. According to a Phase II Site Investigation report for 400 Carroll Street, 3 1,500-gallon UST were removed from the site in 2004. No UST closure report was submitted to DEC. Location of the former UST area is not depicted at the site's plan. AD 03/17/2009: Called and left a message to M. Raygorodetsky (MR) of ELM. AD 03/20/2009: Called and had a conference call with MR and D. Yudelson (attorney) regarding the submitted RAP. Asked them, if there are any residential buildings in the vicinity of the site. Some of them are one block away from the subject property. Also, requested to submit a Figure 5 from the RAP with locations of the 3 former 1,500-gallon USTs, which were removed in 2004. Number of injection points for the oxidation will be given later in an addendum to the RAP, if this approach will be selected. GPS to identify any other USTs will be implemented after buildings on the site will be demolished. Will discussed this site with J. Kolleeny. AD 03/25/2009: Discussed the RAP with J. Kolleeny. He indicated a contaminated area which should be included in remediation. Asked him about proposed soil stabilization method. Will wait for the submission of the requested information. AD 04/08/2009: Called and left a message to D. Yudelson. Spoke with him later. Requested to submit all UST closure reports for all applicable parts of the project. Also asked if any remedial actions are planned for area of soil boring SB-3 on 363 Bond Street, which indicated high petroleum contamination. AD 04/27/2009: Called and left a message to D. Yudelson. Requested to expedite the submission of the data. Spoke with him later. AD 04/29/2009: Received an e-mail from D. Yudelson saying: Ainura, I know that you asked for information on the tank removal, a registration correct and information about remedial response for sb3. Did I miss anything? I want to send a letter in respectfully requesting more time (a few weeks) to gather the information because the Superfund listing proposal for the site has all team members tied up and the project may die if we don't focus on that. Dave David S. Yudelson Partner Sive, Paget & Riesel P.C. 460 Park Avenue New York, NY 10022 917 295 6449 Sent him a reply, stating all information, which should be submitted to us. AD 05/13/2009: Received a letter from D. Yudelson with a request to postpone data submission till June 15, 2009. Approved the request. AD 06/18/2009: Called and spoke with D. Yudelson regarding the requested data submission. He told me that they have prepared the report and will send it with today's mail. AD 06/19/2009: Received an e-mail from Basil Borisov of ELM saying: Ms. Doronova, Attached is the Addendum to the Remedial Action Plan for the 363-365 Bond Street and 400 Carroll Street properties in

400 CARROLL ST (Continued) **S102401891**

Brooklyn, NY. A hard copy of the Addendum is being sent to your offices by FedEx. If you have any questions or concerns, please don't hesitate to contact us or David Yudelson at Sive Paget & Riesel. Sincerely, BASIL BORISOV - Project Manager Tel 212.962.4301 ext 304 - Fax 212.962.4302 - Cell 646.895.2943 DL pdf copy to eDocs. AD 06/23/2009: Received hard copy of the Addendum to the RAP. Will review. AD 06/24/2009: Reviewed the Addendum to the RAP.It proposes remediation in the vicinity of hot spot SB-3 as was requested by DEC. The addendum also includes a plan of 400 Carroll Street with locations of former USTs field. While no formal end-point sampling was performed as part of UTSs removal, ELM had subsequently installed one soil boring SB-9, one monitoring well MW-1 and one test pit TP-5 in the former USTs area as part of the Phase II ESI. Excavation in these areas will advance laterally in all directions until no further evidence of free product remains. ELM submitted more detailed explanation of in-place soil stabilization method, which was proposed for areas where elevated concentrations of BTEX and SVOCs are present. A bench-scale mixing study will be performed to select site-specific stabilization mix. Discussed the plan with J. Kolleeny of DER and possibility of excavation in the area of SB-3. Called and spoke with Jim Harrington - Chief Technology Section of Division of Environmental Remediation, Albany regarding application of soil stabilization method in NYS. Changed site priority from P0 to P1. AD 06/25/2009: Sent to Mr. Harrington the Addendum to the RAP via e-mail for review. AD 07/02/2009: Met with Mr. Harrington to discuss the feasibility of application of the soil stabilization method for this particular site. His opinion was that the site is a good candidate for the soil stabilization. A work plan for bench-scale mixing study should be submitted to DEC for review and approval. AD 07/22/2009: Called and spoke with David Yudelson (attorney) regarding excavation of SB-3 area and a work plan for bench-scale mix study. He agreed to make these changes and asked for an e-mail request from DEC. He also mentioned that soil stabilization methods was approved by MGP of DEC (Albany) for Nyack MGP Site. Will send him e-mail. AD 07/23/2009: Sent the e-mail to D. Yudelson with the following remarks to the Addendum to RAWP: - A work plan for bench-scale mix study should be submitted to DEC for its review and approval; - An excavation should be proposed for the area in the vicinity of SB-3 instead of in-situ remediation. Also, asked to provide me with information on the MGP site, where the soil stabilization method was approved by DEC. AD 09/02/2009: Called and left a message to D. Yudelson regarding submission of bench-scale mix study WP. AD 09/03/2009: Received an e-mail from Mr. Yudelson which states that ELM is working on the work plan. AD 09/22/2009: Received an e-mail from Mr. Yudelson that he had received the work plan from ELM and now is in a process of reviewing it. The WP will be submitted to DEC shortly. AD 10/15/2009: Received an e-mail from D. Yudelson with attached work plan for bench-scale mixing study. Dl to eDocs. Will review. AD 11/06/2009: Reviewed the work plan for bench-scale study. Discussed the work plan with Jim Harrington of DER Albany. Mr. Harrington made a few comments to the submitted work plan. The necessary changes to the proposed work plan will be required from the consultant before the work plan approval. AD 11/10/2009: Called and left a message to Mr. Yudelsom regarding the work plan modifications. AD 01/20/2010: Called and spoke with D. Yudelson regarding the revised work plan for bench-scale mixing study. Requested to expedite the submission of the plan. He will contact ELM and get back to us. AD 01/28/2010: Received an e-copy of

400 CARROLL ST (Continued) **S102401891**

the revised work plan. DL to edocs. Will review. AD 02/02/2010: Reviewed the revised bench-scale mixing study work plan for the Toll Brooklyn Site, and it seems that all the requested changes were made. AD 02/03/2010: Forwarded the work plan to Jim Harrington. AD 02/04/2010: Discussed the revised plan with J. Harrington and J. Kolleeny. Issued an approval letter to Mr. Yudelson. DL copy to eDocs. AD 03/2010: This site was recently listed as Superfund as a part of Govanus Channel. 04/27/2010: Called and spoke with D. Yudelson regarding the site status. He told that EPA will perform some sampling at the site to study if the site is contributing to the Govanus Channel contamination, and the results will be ready in early fall. Asked him to send me an e-mail summarizing site status. AD 04/29/2010: Received an e-mail from Mr. Yudelson (attorney for Toll Brothers) saying: Ainura This email is to confirm that I have met with EPA and EPA indicated they will not be in a position to determine what, if any, remedial activities they will require at the Bond Street properties regarding the Superfund Site until the fall. I expect to meet with them again and will inform you if anything changes. Dave (917)295-6449 AD 06/2010: Called and spoke with Mr. Yudelson. He told me that Toll Brothers is no longer interested in buying the site, after it was listed as a Superfund site. Mr. Yudelson gave me a contact info in EPA: Mr. Brian Carr, phone: (212)637-3170. AD 06/23/2010: Received a phone call from Mr. Brian Carr of EPA, phone: (212)637-3170. He told me that they performed some sampling at the site. He gave a contact info for the owner of the 400 Carrol Street site: Mr. David Levkowitz, phone: (917)838-2270. Discussed the site with J. Kolleeny and Vadim Brevdo of DEC. AD 07/2010: Called and spoke with Mr. Yudelson regarding the site cleanup plans. AD 07/26/2010: Called and spoke with Mr. Levkowitz. He asked to contact his attorney - Mr. Yudelson. Called and left a message to D. Yudelson. AD 07/28/2010: Received a call from D. Yudelson. He told me that he is discussing the remedial option for the site with Mr. Levkowitz, and they considering to perform an excavation of the contaminates soil instead of the previously proposed soil stabilization. He is going to meet with Mr. Phillips - owner of 363 Bond Street site regarding the site cleanup and will contact us later with the results. Told him that a stipulation agreement should be signed by the site owners. AD 12/03/2010: Received an e-mail from D. Yudelson saying: Ainura, Brian Happy holidays! Attached please find a proposed remedial action plan for the 400 Carroll Street property. It provide for excavating and offiste disposal of the petroleum contaminated soil. Lets schedule a meeting or call to discuss this and scheduling issues. Dave DL pdf copy of the RAP. Will review. AD 12/23/2010: Reviewed the RAP. Although soil stabilization was initially proposed, and approved by DEC, now the consultant proposes excavation and disposal of soils in the hot spot areas, that were previously intended for soil stabilization, as more appropriate alternative. PWGC is proposing that soils in the three hot spot areas be excavated to a depth of approximately seven feet below grade. Since the project site is located on the Gowanus Canal, they will install soil erosion and sediment controls prior to excavation activities. They note that this RAP is intended to address petroleum impacted soils in order to obtain closure of the NYSDEC Spill File. They will not address historic fill material containing elevated concentrations of SVOCs and metals. AD 01/2011: Called and spoke with David regarding a meeting to discuss the proposed RAP with him and EPA. He said that

400 CARROLL ST (Continued) **S102401891**

the meeting will be scheduled after EPA will review the work plan. AD 04/20/2011: Called and left a message to D. Yudelson regarding the meeting. AD 04/26/2011: Did not receive any response. Called again and left a message. AD 05/10/2011: Called and spoke with David Yudelson regarding the meeting. Told him to schedule it after June 20th, when I will return from vacation. AD 06/30/2011: Called and left a message to David. AD 07/01/2011: Received a phone call from Mr. Yudelson. He said that he had a meeting with EPA last week. Requested why I was not informed about this meeting. Mr. Yudelson said that this meeting was regarding EPA's requirements to a proposed RAP. Required him to send me a summary e-mail. AD 07/07/2011: Received an e-mail from David saying: Ainura This email confirms our telephone conversation that we have been working with EPA and the owner is prepared to implement the RAP we had previously submitted to you. The work would be undertaken in the fall. Please confirm the RAP, which provides for excavation and offsite disposal is approved . Dave Since this RAP was submitted to DEC in December of 2010 to require Mr. Yudelson to resubmit the work plan with a current date. Discussed with J. Kolleeny the proposed RAP. Post-excavation end-point soil samples from the bottom of the excavation should be collected. Called and left a message to Mr. Yudelson regarding submission of RAP with a current date. AD 07/19/2011: Received the requested RAP. Sent an approval letter to Mr. Yudelson. DL pdf copy of the letter to eDocs. AD 10/14/2011: Sent an e-mail to D. Yudelson requesting site status update info. AD 11/30/2011: Called and spoke with D. Yudelson regarding site status update. He told me that they are waiting for excavation permit from DOB to start remediation. he will inform me before start of field work. AD 01/2012: Called and spoke with D. Yudelson regarding RAP implementation at the site. AD 04/25/2012: Sent an e-mail to D. Yudelson with a request for site status update. AD 04/27/2012: Received an e-mail from Mr. Yudelson with a request for a site discussion over the phone for Monday, April 30, 2012. Responded to him that I will be off on Monday, and sudgested Tuesday. AD 05/02/2012: Called and spoke with Mr. Yudelson. He informed me that all three parsels are now under contract for purchase by Lightstone Group, which plans to redevelop the sites as rental properties. Revised work plan for 363 Bond Street and 365 Bond Street will be submitted to DEC for review and approval. Asked Mr. Yudelson to send me a summary e-mail. AD 05/10/2012: Received the following e-mail from D. Yudelson: Ainura In response to your request, this is a status report on 400 Carroll Street. The owner has executed a contract of sale to sell the property to an entity that is also seeking to purchase the two other properties that constitute the former Toll Bros development project (363 and 365 Bond). It is expected that remedial work will begin in the fall. Let me know if you need any additional information. Dave 11/13/2012: Received the following e-mail from D. Yudelson: Ainura Attached is a remedial investigation work plan for the three sites to better delineate the hotspots fpr preparation of an excavation based RAP. Please let me know if this is acceptable. Thanks Dave Looked at the work plan. The size of it is about 130 MGB. called and left a message to Dave with request to decrease the size of the submitted work plan, and to submit a hard copy of the work plan as well. AD 11/16/2012: Received a short PDF version of the report (only work plan included). Spoke with D. Yudelson. Hard copy is in the mail. AD 11/20/2012: Received a hard copy of the work plan. Will review. AD 12/04/2012: Attended a meeting with City OER regarding the proposed work plan. OER involved

400 CARROLL ST (Continued) **S102401891**

bacause the site has E designation. OER wants to add few more soil borings and one more well. Discussed the site. Will review OER requests to the submitted work plan. Sent an e-mail to D. Yudelson with a request to submit data tables with a bigger font size. AD 12/06/2012: Reviewed the work plan. It proposes to advance 18 soil boring with collection of soil samples, 3 groundwater monitoring wells and a total of 20 shallow and 10 deeper soil gas sampling. There are few discrepancies in numbers of soil boring samples and soil gas samples on pages 34, 35, 36 and 37. Also the proposed soil sampling interals are questionable. Called and spoke with D. Yudelson regarding number of question which arised during the work plan review. Later sent the following e-mail with all questions and requirement to D. Yudelson: Dave: In regards to the submitted investigation work plan, I need answers on the following questions: 1. Total number of site-related wells; 2. Were all soil and groundwater samples analyzed for the full list of compounds; 3. Why there are discrepancies in the number of soil samples from the proposed soil borings and in the number of soil vapor samples in the work plan (pgs: 34, 35, 36, 37); 4. Why Langan proposing to sample the same locations they already sampled for the part 1 of Due Diligence; 5. What will be the sampling intervals for the 18 proposed soil borings, and why; Also I would like to mention that all summary tables with analytical data in the next reports from Langan should include a row with TVOCs and TSVOCs data, and the data should be in part per billion. Thank you, Sincerely, Ainura Doronova Spoke with D. Yudelson again, requested to revise the work plan, correct all typos, include the revised site map with new location for soil borings and wells suggested by OER and to submit it to DEC for review. Received some correspondence from Cavy Chu of OER regarding the project. Told her about DEC requirements. She will fax the site map with the revised locations for soil borings and monitoring wells to D. Yudelson tomorrow. Discussed all changes with J. Kolleeny of DEC. AD 12/07/2012: Received an e-mail from D. Yudelson saying: Ainura and Cavy Please see the attached Text, Table and Figure revisions which incorporate the comments that both of you have made. Additionally Ainura, I have addressed your comments below. Cavy, your comments were addressed as we spoke and I did add a couple QA/QC samples to the program. Please call with any questions that you may have and thank you very much for your review of this workplan. Regards Christopher McMahon Project Geologist Direct: 201.398.4535 Mobile: 201.218.2339 Langan Engineering & Environmental Services Cc: Chu, Cavy Subject: Bond Street Sites Dave: In regards to the submitted investigation work plan, I need answers on the following questions: 1. Total number of site-related wells; Including the wells proposed as part of this workplan, there are 8 wells on the 365 Bond Street site; 7 wells on the 363 Bond Street property and 2 wells on the 400 Carroll Street property. 2. Were all soil and groundwater samples analyzed for the full list of compounds; The majority of the samples collected were analyzed for the full list of compounds; however, the list of compounds was restricted on some of the samples due to being AOC specific. A summary of all of the sampling, including the compounds analyzed is provided in Table 1. 3. Why there are discrepancies in the number of soil samples from the proposed soil borings and in the number of soil vapor samples in the work plan (pgs: 34, 35, 36, 37); Addressed in the text. 4. Why Langan proposing to sample the same locations they already sampled for the part 1 of Due Diligence; Co-located boring locations will be installed to

400 CARROLL ST (Continued) **S102401891**

sample depth intervals that were not included in the Due Diligence investigation. 5. What will be the sampling intervals for the 18 proposed soil borings, and why; This information is provided in the text as well as in Table 10. All discrepancies have been revised. Also I would like to mention that all summary tables with analytical data in the next reports from Langan should include a row with TVOCs and TSVOCs data, and the data should be in part per billion. Looked at the revised work plan. Langan proposes advancement of 19 soil borings, five out which will be finished as a groundwater monitoring wells. There are again discrepancies in number of the soil and soil vapor samples on pages 33 to 37 in the revised work plan. Called and spoke with Cavy Chu of OER. She said that her requirements regarding number of soil vapor samples were not addressed, and that the proposed soil vapor sampling intervals and number of the proposed soil vapors are confusing. Called and spoke with D. Yudelson few times regarding the revised work plan. Requested to address OER requirements, to omit repetitions in the work plan on the pages 33 to 37, to correct typos, and to clarify soil sampling intervals. AD 01/23/2013: Received a hard copy of the revised RIWP. Will review. AD 01/25/2013: Reviewed the revised RIWP. DEC and OER requirements were addressed in this work plan. The revised RIWP proposes a supplemental investigation involving the drilling of 19 soil borings with collection of soil samples, the installation of five permanent groundwater monitoring wells followed by collection of groundwater samples, and the collection of 30 soil vapor samples. An investigation summary report with conclusions and recommendations for further actions will be prepared and submitted to DEC. Later in the day I was copied on the following e-mail from Chu cavy of OER: Hi, Chris. OER has reviewed the latest version of the Final RIWP and has no more comments on the document. Please note that you will need DEC approval to move the work plan forward. Thanks, Cavy Cavy Chu, PE Assistant Director. OER AD 01/29/2013: Discussed the final version of the RIWP with J. Kolleeny of DEC. issued an approval letter to D. Yudelson. DL pdf copy of the letter to eDocs. AD The site entered into BCP program (Albany). The site manager is John Grathwol. AD 4/17/18: This project should have been linked to BCP Project #224174 in 2013, but will be linked today. The remedial action activities specified BCP RAWP remediated the weathered petroleum contamination at this site. The Remedial Action was completed in November 2015. Spill closed. - J. Grathwol"

Remarks: "Were excavating on the property and found a tank in the ground that know one knew was there. The vent was missing on the tank causing the spill. Pumped the tank so far and have not yet removed the tank due to weather. removed 3000 gal of straight product so far."

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

OSHA ESTABLISHMENT

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FERRARA BROS., LLC - HOYT STREET (Continued) **1011937453**

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Delivery today to Monties Resturant in Brooklyn. Bottom of the tank has a pinhole leak PTC ((718) 624-4842; Anthony P. Lara) has been called and is at the site now pumping out the tank. 11/7/2005 Sangesland confirmed that PTC completed a surface cleanup of the site. PTC submitted a proposal to replace the tank. Unknown what the condition under the slab floor is. Hold open until the full basement area is checked or until subsurface has been checked. 12/8/05 - Raphael Ketani. I spoke to Anthony P. Lara of PTC. He said that PTC cleaned up the spilled oil and pumped out the two leaking 275 gal. tanks under the stairs. He gave an estimate to Frank Perone, the owner ((718)745-3576/(917) 805-6048), regarding what it would cost to remove the 2 tanks, replace them with one new 275 gal. tank, and do the below floor investigation. Mr. Perone told him he would get someone else. When I talked to Mr. Perone, he said that his brother had contacted Ferrantino Fuel ((718) 832-6700) for the below floor investigation. He said he would call me back regarding the extent of the oil spill investigation. I will send a contaminated soil letter to Mr. Perone at 1427 Bay Ridge Parkway, Brklyn., 11228-2212. 12/9/05 - Raphael Ketani. I called Ferrantino Fuel and spoke to one of the supervisors there. He said Ferrantino didn't do a below floor investigation and he had no information if one was ever planned. Mr. Joseph Orechio (one of the owners; (718) 745-3576) called me to say

RESTURANT/RESIDENCE (Continued) **S107416639**

that PTC had cleaned up the spilled oil in the tank vault under the street. He said the vault walls are cobble stone with a cement floor. He said only about 2 gals. was spilled. Mr. Orechio said that he switched his oil company to Blue Diamond. I told him that a soil investigation still needs to be done. He said he would get someone to do it. Anthony Lara of PTC called me back. He said that Mr. Orechio told him to do the soil investigation. Mr. Lara said that he will do 5 borings. One at each corner and one in the middle. He will take end point samples and send me the analyticals. Mr. Lara doesn't know whether there are any cracks in the vault floor, but he said about 20 gals. had leaked from the tanks. 12/9/05 Ketani sent a do work letter 12/20/05 - Raphael Ketani. Anthony of PTC called me to say that Mr. Orechio declined his services for the soil investigation. I called up Mr. Orechio, but could only leave a voice mail message. 12/22/05 - Raphael Ketani. Mr. Issac Mungra of A. L. Eastmond & Son (718)378-7000 called to say that his company may be doing the soil investigation at the site. He will let me know if he gets the job, but first he has to inspect the tank vault. 12/28/05 - Raphael Ketani. I spoke to Mr. Mungra in person at another site. He told me that he plans to do one soil boring at each end of the tank and take soil samples at the bottom of the sump on the other side of the wall. I told him this would be sufficient for now. 6/21/06 - Raphael Ketani. Today I received a FAX from Isaac of Eastmond with a floor plan for the 3 borings that were taken, the analytical results for the soil samples, and a detailed description of what type of work was performed. The analytical results showed no contamination was present in the soil and the concrete floor was described as solid with no indications of cracks or crevices. Isaac also called me to say that the 2 tanks were replaced with new ones. Based upon the above documentation, I am closing the spill case."

Remarks: "clean up is in process."

DEC Memo:	"Sangesland spoke to Marc Califano at Galli Engineering. The building was just purchased and the new owner wanted some work done in the basement. Soil borings were taken through the basement floor and groundwater was found with a sheen on it. They believe there is a 500 gal UST under the floor. This will be investigated in the next couple of days. CSL was sent out to Mr. Mario Procida (owner) 7/14/06 - Raphael Ketani. I tried calling Mr. Procida (718) 299-7000 and Marc Califano of Galli Engineering (631) 271-9292, but could only leave messages. There is a PBS case #2-602516 showing an active 3000 gal. tank with #2 oil. Mr. Califano called me back. He said that the GPR anomalie turned out to be a very old brick and mortar cesspool with feces and oil on the water, not a tank. He took a sample and sent it off to a lab for analysis. Once he gets the results back, he will know what to do with the water and oil. He said there is an AST and they will pressure test it. Presently, there are 6 boilers in this commercial building. Some work and some don't. Mr. Califano will send me a RAP. 7/17/06 - Raphael Ketani. I returned Mr. Procida's call (646) 201-0489, but could only leave a voice mail message describing what Mr. Califano and I talked about last friday, 7/14. 7/31/06 - Raphael Ketani. I received a call from Nick Pressly of Pressly & Associates, Inc. (607) 264-9521. He said that he is the environmental consultant for Mr. Procida. He said that Galli Engineering was

PROCIDA REALTY (Continued) **S107782960**

working for Mr. Greco, the partner, but Mr. Procida is taking the lead. The company address is: 721 County Highway 54, Cherry Valley, NY, 13320. He mentioned that the building is slated for demolition and the soil is scheduled to be removed in 3 years. He asked whether DEC can wait 3 years for cleanup of the site in order to coordinate the 2 projects. I told him that the Spills Unit can't wait so long and that DEC wants a quick cleanup of the site. He mentioned that there is a 550 gal. UST that is filled with sand at the site, aside from the AST. I told him that soil borings will have to be done around the UST and analytical results sent to the DEC. He said he already had the results and will send them to me. I told him that the AST has to be tested, and if it passes, then I will just need the passing tank test report. If it fails, I told him, then I will need soil sampling around this tank, too. I told him that the water in the cesspool will need to be tested and that all of the information should be in an RAP. Mr. Pressly told me that he will put together an RAP and send it to me. 8/8/06 - Raphael Ketani. I tried calling Mr. Pressly, but could only leave a voice mail. 8/10/06 - Raphael Ketani. Mr. Pressly called me and said that he will send me the documents I need tomorrow. He said the RAP will follow next week. 8/16/06 - Raphael Ketani. I received the Phase I and Phase II Environmental Site Assessment reports yesterday. They were produced by Galli Engineering and were dated 1/5/06 and 4/18/06, respectively. The Phase II report indicates that there are no VOC exceedences for the 6 soil samples, but each soil sample has 7 SVOC exceedences, on average, of TAGM RSCOs. The SVOC exceedences are high for SB-5 and very high for SB-6, but the reason for this is not apparent from the soil descriptions in the report, nor from the soil core pictures. The groundwater results for BW-1 had 4 VOC exceedences and 3 SVOC exceedences, but they were not much above TAGM. 8/17/06 - Raphael Ketani. Mr. Pressly called to find out what DEC wanted in an RAP. I told him that I didn't see the need for soil digging based on the VOC and SVOC results alone. I told him that though the SVOCs were high to very high from SB-5 and SB-6, these were combustion products. Also, I told him that the groundwater contamination was not high enough to justify pumping it. Mr. Pressly added that there are a lot of old pipes in the boiler room which no one knows what they lead to or whether there is any free product in them. Additionally, he said that his contractor has already found oil in a pit he dug. I told Mr. Pressly that for these reasons there should be further investigation. He agreed and said that these items will be in the RAP. 8/28/06 - Raphael Ketani. I reviewed the 8/17/06 RAP from Pressly and Associates, Inc. I found it to be satisfactory. However, there was no mention of sampling the liquid in the cesspool. I will send a response letter requesting that sampling be done. 9/29/06 - Raphael Ketani. Mr. Pressly tried to call me. I returned his call (607) 264-9521, but could only leave a voice mail. Mr. Pressly called me back and filled me in on what has been taking place. The progress was: removed 4 layers of laid brick soaked with oil in the center of the area where they're working cesspool was 7' deep, pumped it out and cut and sealed a pipe that was feeding storm water found water 2' below floor tank test was done - vent pipe failed, will repair and retest - if fails, will do boring water and oil keep seeping in - already removed 18 drums full tested 2'X2' test pits around center area - no oil was a sheen on water in test pits - pumped center area and they dried up no idea where oil from - adjacent property? or when bricks laid? if tank found tight after repair, will dig 3 more feet

PROCIDA REALTY (Continued) **S107782960**

down in center, total of 8 feet, and put in 6 well hit old bricks wall and found everything all black - old coal chute? water could be coming through a path via bricks or structures - don't know will put boring next to tank even if found tight center hole stayed dry for several days, then seeping started with oil and water building uses only gas I suggested to Mr. Pressly to sample oil and water separately and send off to lab for fingerprinting to determine whether water is from water main (high chlorides) and whether oil is #6 from adjacent building using #6. He agreed to do this. I also told him that the solution may be to periodically pump out the water collecting in the well (8' deep pit) until is just water. He said he will think about this as $60,000 has already been spent on the project. 10/25/06 - Raphael Ketani. Mr. Pressly called with an update: boiler room was remediated - filled 20 drums with an oil/water mix dug 7 test pits in the floor under floor was 7 layers of brick enlarged central hole in room to 20 feet to collect more oil dug down 4 feet below water table to facilitate collecting more oil tested the 2400 gal. tank with #2 fuel oil in the next room - pipes from tank to boiler failed badly - couldn't hold any pressure did boring next to tank - had 16 of oil in hole will pump out tank, remove tank and excavate soil as much as possible will submit proposal to Procida for tank emptying, removal, soil excavation and further remediation contractor has to leave to start another job on Rikers Island - I told Mr. Pressly that would be alright as long as things keep moving. He said he will send me an interim report for the work that has already been done. Mr. Pressly said that work will resume in January. 3/9/07 - Raphael Ketani. I tried calling Mr. Pressly (607) 264-9521, but could only leave a voice message. 3/12/07 - Raphael Ketani. Mr. Pressly returned my phone call today. He said that the tank had been cleaned out and will be removed soon. He said that all of the oil contaminated soil and material will be removed. His company was finally paid for all of the work and so the interim report will be sent soon. 4/10/07 - Raphael Ketani. I received the Interim Remediation Report dated 4/4/07 and received by DEC on 4/6/07. The report contained a log for the days that work was done, hand drawn plans for the boiler room at several different stages of boiler and equipment removal and site investigation, color pictures of what was found, analytical results, and a bill from Environmental Closures for all of the debris that was removed. The soil analytical results were for TH-1 to TH-3, and TH-8. TH-2 was completely non-detect, and TH-3 and TH-8 had several hits each, but these were well below the RSCO limits. TH-1 had 6 VOC hits and 2 SVOC hits, but they were all below the RSCOs. 7/25/07 - Raphael Ketani. I tried to call Mr. Pressly (607) 264-9521, but could only leave a message. From my 10/25/06 notes, it was stated by Mr. Pressly that the work will resume in January. 9/28/07 - Raphael Ketani. The tank that was removed is still listed as in service. I received a call from Cristine Beaver of Dvirka & Bardilucci Consulting Engineers (516) 364-9890, ext 3056. She said her company is the consulting company for the NYC School Construction Authority and the SCA is thinking of buying the building. She wanted to know the status of the site. She said that she had some records and reports at her office, but it was very confusing. I explained to her what was going on. She said the oil tank has been cleaned out, but it is still there. I called up Mr. Pressly and he said that nothing has happened because he hasn't been involved in the project for a while. I asked him about the cesspool. He said that it wasn't a cesspool, but merely a depression. I asked

PROCIDA REALTY (Continued) **S107782960**

him about the oil in the holes. He said that it has been removed. He added that only the oil below the leaking tank wasn't removed. He suggested that the owners were looking for a remediation contractor and that I call Ryan Tunstall (718) 299-7000, ext 216 directly. I tried to reach Mr. Tunstall, but could only leave a message. 10/17/07 - Raphael Ketani. I tried to reach Mr. Tunstall, but could only leave a message. I gave him one week to return my call, or else DEC will start to initiate some type of action. I checked the PBS registration. The 3,000 gal. tank is still listed as in service. The following items need to take place: 1) PBS revision to show the tank as removed 2) removal of oil below the former tank location with end point samples 3) removal of oil and contaminated soil and debris that may be remaining at site 10/22/07 - Raphael Ketani. I spoke with Mr. Procida and Sarah Williams (project manager for the development of the site). Mr. Procida asked that DEC hold off 1 year before requiring the removal of the contaminated soil that was below the tank. He said this was because there may be extensive contamination and it would be easier to get it when the building is down (he wants to convert the property to apartment housing). I told him that DEC wont wait so long for the property to be remediated. I told him that the tank has to be registered as removed, the contaminated soil has to be removed and end-points taken. He said that he will get Mr. Pressly to come back and do soil sampling where the tank used to be. If the contamination is not extensive and deep, then he will have it removed very soon. He asked that I give him some time to have the sampling done, the analytical results returned and a determination made as to what will happen. I told him that will be alright. I also told him that any open wells should be checked for more returning oil. He said this will be done. Mr. Pressly (607)264-9521 called me back. He said that Mr. Procida contacted him to do the work of investigating the soil that was under the tank. He said he will put together the proposal to Mr. Procida and that, hopefully, he will be able to start soon. 11/6/07 - Raphael Ketani. I tried to contact Mr. Pressly, but could only leave a message. The tank is still listed as in service. Mr. Pressly called me back. He said that Sarah Williams, the company's attorney, called him and asked for his work proposal. He said that he will correct the PBS and submit his proposal by sometime next week. 11/7/07 - Raphael Ketani. Mr. Pressly (607) 264-9521 called to say that geoprobing will begin at the site on 11/16/07. I received a letter from Sarah Williams, Esq., of 505 Carroll Street Development Group, LLC. Attached to the letter was a copy of tank removal/abandonment affidavit from A.L. Eastmond. 11/15/07 - Raphael Ketani. Mr. Pressly called to say that he filled out the PBS form and was sending it in with a check. 11/20/07 - Raphael Ketani. Mr. Pressly called with an update. He said he put in a boring near the door to the boiler room. He did borings south of the first one and found oil at two locations in the soil at 33' and 63' away, but not further from the first boring at 114' away. Then he did boring PB-5 and found oil. There was oil at 30' from PB-5, but not at 130' away. The water table is at 3' to 5' below the basement floor. Mr. Pressly said that it's a big, old oil spill - a huge spill - and that the best way to clean it up would be to dig it up after the building is torn down. He said he thought that because of the high water table, the foundation was constraining the oil contamination. I asked him how long will it be before the building is demolished. He said 12 to 18 months. I told him Spills can't wait that long. He said he will talk to the owners of the site and see

PROCIDA REALTY (Continued) **S107782960**

what their plans are. 12/3/07 - Raphael Ketani. I checked the PBS registration. It still shows the tank as active. 12/14/07 - Raphael Ketani. Today I received a letter report dated 12/11/07 from Pressly & Associates regarding a soil investigation of the site. I reviewed the report. The soil analyticals were below TAGM, with the exception of total xylenes for SB-1. SB-2 was a composite sample. SB-3 was never tested for. SB-4 was broken in transport. 12/17/07 - Raphael Ketani. I tried to contact Mr. Pressly about the report, but could only leave a message. 12/18/07 - Raphael Ketani. I spoke to Mr. Pressly and asked him about the sampling that was performed. He said that SB-3 looked a lot like PB-2 in the soil cores. So he didn't send off a sample for SB-3. I asked him why he did a composite of SB-2 and SB-5. He said that both soil cores looked equally contaminated. I told Mr. Pressly that, in the future, a sample should be sent off from each boring that is done whether or not they look the same during a visual inspection. I told him this is how DEC wants the sampling done. He said he will do this in the future. I told Mr. Pressly that DEC wants the oil to be remediated now, not in 2009. I told him his company can either arrange to have it dug out or do soil treatment. He said that soil treatment would be the preferred method as there are rows of shelves with large heavy fabric rolls in the building. The site is an active fabric warehouse and the rolls can't be moved anywhere. I told him this is fine and to send a remediation plan for DEC approval. He said he will. I sent a letter to Sarah Williams, Esq. explaining that soil remediation has to take place now, not in 2009, and that the tank has to be listed as closed and removed. 12/24/07 - Raphael Ketani. I received a copy of the PBS registration form for the 3000 gal. tank. In an attached letter to me, Ms. Williams stated that the signed form went to Albany PBS. 1/2/08 - Raphael Ketani. I received a FAXed copy of a letter Ms. Williams had sent to Albany DER for registering the tank as removed, along with a change in ownership for the site. This is a response letter to DER returning the PBS application as incomplete. Her original PBS application was returned as it was missing ownership information, the federal tax I.D., the date of tank removal and documentation. 1/8/08 - Raphael Ketani. Mr. Pressly (607) 264-9521 called regarding how many soil samples to take after the soil treatment solution has been injected. He said that he is using RegenOx. The company supplying the chemical told him it takes only 3 weeks to break down the oil. I told him that the longer the chemical is allowed to react, the lower the contamination concentrations will be. He said he will do 6 treatment confirmation borings. I told him that sounded fine. 1/11/08 - Raphael Ketani. Today I received a short cover letter with a copy of the corrected PBS registration attached showing that the 3000 gal. tank is listed as closed and removed. 1/15/08 - Raphael Ketani. I spoke to Mr. Pressly today. He told me that the owner gave the go-ahead to do the RegenOx injecting. The owner wants to move things along quickly. So it will happen very soon. He intends to do 1 round of groundwater sampling shortly after the RegenOx is injected. Mr. Pressly also sent me the RAP for the RegenOx injections. The only comment I had was that he should test the soil samples via methods 8260 and 8270, not STARS. 1/24/08 - Raphael Ketani. Mr. Pressly e-mailed me today that soil excavation will start the week of 2/4 (weather contingent). RegenOx will be added to the excavated soil at this time. On 2/28, drilling will begin and so will RegenOx injections. 2/4/08 - Raphael Ketani. I received an e-mail from Mr. Pressly stating that the excavation of

PROCIDA REALTY (Continued) **S107782960**

the contaminated soil will take place through to the end of the week. Also, he stated that drilling and injection of the solution will take place from 2/25 to 3/7/08. 2/29/08 - Raphael Ketani. Mr. Pressly called to state that solution injection has been taking place all this week and will continue into next week. 3/27/08 - Raphael Ketani. Nick Canonico of NOVA Consulting (718) 343-4440 called to inquire about the site. He said that he was hired by a potential buyer and that he is trying to find out as much as he can about it. I let him know a few of the details regarding the contaminated soil and groundwater. 3/28/08 - Raphael Ketani. Mr. Pressly (607) 264-9521 called me. He said that they will take 6 soil samples during the first week of April to see how well the oil was broken down. He mentioned that they did the first injections at the perimeter of the oil pool in the subsurface and then worked inwards. The injection holes were 10 feet apart. Fifteen thousand gallons of solution were used. When they got to the location of the source, the oil started coming out of the drill holes. However, he said it was not enough to collect. He will start the 6 borings on April 1, 2008. I told him I will be there to see the work at 10AM on April 1. 4/1/08 - Raphael Ketani. I made the scheduled site visit and met Nick Pressly of Pressly & Associates, Inc., and Nick Canonico of NOVA Consulting (cell (516) 244-4069). Mr. Pressly showed me a map he had drawn showing about 80 solution injection points and some refusal points. He showed me around the two level wharehouse that stores rolls of fabric. I could see the white caps of the injection wells. He showed me the area where the tank used to be. There was crystallized RegenOx at this site. He showed me where the soil had been excavated in the boiler room. The work was taking place on the lower level. Mr. Pressly explained that the geoprobe company was coming to do confirmatory soil borings to see how well the RegenOx dissolved the oil. The drilling company arrived and did one boring for Mr. Pressly and I. There were broken up pieces of the concrete floor and about 6 inches of sandy, gravelly soil. The soil was wet and oil stained. The oil odors were strong. Mr. Pressly stated that he will have the crew do about a dozen or so confirmatory borings. I asked him why he was doing the borings after about 4 weeks from the date of injection. He said that RegenOx recommended sampling after 3 or 4 weeks. They told him that the solution looses effectiveness after that time. He said he planned on another round of treatment if the rest of the confirmatory samples looked as bad as this first one. We planned out a few more confirmatory boring locations and after that I left. Mr. Pressly sent me an e-mail later in the day. He stated that the boring he did just outside the lower level garage door entrance was free of product. 4/28/08 - Raphael Ketani. Mr. Pressly called to say that the second round of treatment solution injections took place last friday, 4/25/08. He said that he double dosed the worst areas - next to the tank pit and next to the elevators. The injection process was successful. 5/21/08 - Raphael Ketani. Mr. Pressly sent me an e-mail that the confirmatory soil sampling round for the second round of treatment solution injections will start on 5/27/08. He also asked for an approval letter for the 1/14/08 RAP that DEC said was approved via an e-mail. I sent the approval letter today. 5/27/08 - Raphael Ketani. Mr. Canonico called to ask what would close the spill case for DEC. I told him that the soil end point results and the groundwater results would have to be about at the TAGM limits or below. He said that Mr. Pressly is taking the end point samples today. 5/30/08 - Raphael Ketani. Mr. Pressly sent an e-mail today

PROCIDA REALTY (Continued) **S107782960**

requesting confirmation that DEC wanted groundwater samples to be taken. I responded back that we did want new groundwater samples taken in the worst areas as the last set of groundwater data is from 2006. I told him that data is old and we need to see what the present levels of contamination are in order to have a basis that there is no threat from the groundwater. I also checked the PBS registration (#2-602516). It shows the tank as closed and removed. 6/25/08 - Raphael Ketani. I received an e-mail from Mr. Pressly regarding remediation progress at the site. The e-mail stated that on 5/27/08, two soil samples from the eastern side of the plume exceeded TAGM limits. They vacuumed out free product from the eastern wells that are in the vicinity of the former tank location and did a third round of RegenOx injections. The free product didn't return during the week. Mr. Pressly recommended doing another round of confirmatory soil borings within the eastern plume and groundwater sampling. I concurred in my response e-mail that DEC approves the additional sampling. I spoke to Mr. Pressly (607) 264-9521. He said that they will go back on 7/17/08 to collect new soil samples and groundwater samples. 7/14/08 - Raphael Ketani. Mr. Pressly called today. He said that it's been a month since the third round of treatment solution injections took place. So they will do confirmatory soil sampling in the former tank on friday. He said that they had injected 5000 gal. of solution and they believe the contamination is below TAGM now. 7/23/08 - Raphael Ketani. Yesterday Mr. Pressly sent me the analytical results for the third treatment round confirmatory soil samples and one groundwater sample. I reviewed the results. The groundwater sample from Well #64 had hits in the hundreds of ppb for 8 VOCs and 1500 ppb of 2-methylnaphthalene, with 2 other SVOCs in the hundreds of ppb. Samples T-1 and T-2 had results that were below TAGM. Sample T-3 had 4 VOC hits up to 30,000 ppb, and a 2-methylnaphthalene hit of 115,000 ppb. I sent Mr. Pressly a letter stating that more water should be removed from well #64 and that another treatment is necessary for the soil at T-3. 8/1/08 - Raphael Ketani. David Sweeney of PDS Carroll Street, LLC called me up (718) 768-6726. He said that his company just bought the property. He said that they buy commercial/industrial properties and preserve the structures without developing them. He said that his company is in contact with Mr. Pressley and they are pursuing the cleanup of the site, as per DEC's instructions. 8/27/08 - Raphael Ketani. Today I received the 8/25/08 Remedial Action Plan which was produced by Pressly & Associates and submitted by Sarah Williams, counsel for Procida Realty. The plan gave a history of the installation of the solution injections wells and the levels of soil contamination that were found after each round of treatment. The report concluded by stating that a fourth round of soil treatment will be conducted within the former tank area, and that confirmation soil and water samples will be taken after the fourth round. Also, the other injection wells that were installed outside the tank area will be abandoned. The report contained manifests for soil that was removed and soil and groundwater analytical results reports for the tank grave sampling, sampling after each treatment round, and a sample of the groundwater. 10/20/08 - Raphael Ketani. I received the analytical report for the groundwater at well #64 and the soil at T-3 (now called S-1). The groundwater had 4 VOC hits in the double digits (up to 97 ppb) and 4 SVOC hits up to 440 ppb of phenanthrene. The only SVOC of significance was naphthalene at 200 ppb. Sample S-1 had 11 combined hits of VOCs and SVOCs. The only exceedences were total

PROCIDA REALTY (Continued) **S107782960**

xylenes at 1680 ppb. 2-methylnaphthalene was at 11000 ppb, but the RSCO limit is 36,400 ppb. I spoke to Mr. Pressly (607) 264-9521 about the results. I told him that the DEC didn't see the need to do additional work at the site based upon the latest soil and groundwater analyticals. I told him that DEC is closing the spill case. He said that he will send a closer report. I told him that DEC will review it when it is received and E-doc it, but that we are not holding up the closing of the spill case as we feel there is enough information to do a closure right now. He said that he will send the report soon. Based upon all of the sets of analytical results submitted by Pressly & Associates, and the closed PBS case, I am closing the spill case."

. Waste name: 2,4-DIMETHYLPHENOL

Date form received by agency: 07/25/1980
Site name: PATTERSON CHEMICAL CO INC
Classification: Not a generator, verified

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

PATTERSON CHEMICAL CO INC (Continued) **1000403436**

NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

FINDS:

Registry ID: 110004387814

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Code: 332623
Site Description: Location: The property is an approximately 2.5 acre site located in a commercial/industrial area of Brooklyn at 153 2nd Street a/k/a 322 3rd Avenue. The Gowanus Canal is located adjacent to the site to the northwest. Site Features: A 24,200 square foot, three story vacant structure occupies the eastern portion of the site. The building has a basement floor that is a 13 foot thick concrete slab that extends below the water table. The remainder of the site is covered by the final site cover system. Current Zoning and Land Use: The site is currently inactive and is zoned as a manufacturing district (M2-1) by the City of New York. The property uses surrounding the site are primarily light industrial, with a small concentration of residential use. The closest residential properties are located approximately 300 feet to the northeast of the site near the intersection of 3rd Avenue and Carroll Street. The site is bordered to the north by a 60 foot wide filled-in canal (former 1st Street Basin), which is to be restored as part of the Gowanus Canal NPL site remedy. To the east is a storage facility, a Verizon truck depot is located south of the site, and the Gowanus Canal, which is approximately 100 feet wide, lies directly west of the site. Past Use of the Site: Sanborn maps dating back to 1886 indicate that the site was occupied by Nassau Sulfur Works and Smith and Shaw Mattress Materials and Paper Stock. In 1904, the property was transferred to the Brooklyn Rapid Transit R.R. Power Plant. Under their ownership, it appears that coal was delivered by water and transported beneath the site via coal tunnel. In 1938, the property was turned over to the Williamsburg Power Plant Corporation and used as a central power station. The property was transferred to the New York City Transit System in 1950, where it was used as an electrical sub-station and switching yard until 1996. Site Geology and Hydrogeology: The site is underlain by urban fill, generally to a depth of about 8 feet, but reportedly ranging to depths up to 24 feet in some areas. Below the fill is a layer of organic silt indicative of a historic wetland. The depth to groundwater ranges from about 7 feet to 20 feet with groundwater movement generally to the northwest toward the Gowanus Canal.
Env Problem: Prior to Remediation: The primary contaminant of concern is polychlorinated biphenyls (PCBs). The PCBs do not appear to be contributing to off site environmental impacts that require additional investigation or remedial action. The contaminants found in each media sampled (soil, groundwater and soil vapor) are summarized below: Soil: Only one post excavation sample (44 ppm PCBs) exceeded the 10 ppm remedial cleanup objective specified in the Decision Document. The levels of PCB contamination are high under the existing on site building, but the groundwater remedy (LNAPL

GOWANUS VILLAGE I (Continued) **S121933912**

collection system) will prevent its migration. Groundwater: PCB contaminated LNAPL exists under the existing on site building. The groundwater extraction well system will prevent LNAPL migration. Monitoring the groundwater monitoring well network will illustrate the remedy is protective of public health and the environment. Soil Vapor: The most significant detection was for tetrachloroethene (perchloroethene or PCE) detected at concentrations up to 1,260 ug/m3 along 2nd Street. Soil Vapor Intrusion evaluations is to be performed for on-site buildings before occupancy is permitted. Post Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCB compounds in soil, and PCB-containing oil atop the groundwater table. Remedial action resulted in attainment of the site specific cleanup objectives throughout the parcel, with all soil below two feet in depth containing less than 10 ppm PCB. The site is now covered with a cover system allowing for restricted residential use. Remaining contamination in soil, groundwater, and soil vapor, if any, is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 332623
Site Description: Location: The property is an approximately 2.5 acre site located in a commercial/industrial area of Brooklyn at 153 2nd Street a/k/a 322 3rd Avenue. The Gowanus Canal is located adjacent to the site to the northwest. Site Features: A 24,200 square foot, three story vacant structure occupies the eastern portion of the site. The building has a basement floor that is a 13 foot thick concrete slab that extends below the water table. The remainder of the site is covered by the final site cover system. Current Zoning and Land Use: The site is currently inactive and is zoned as a manufacturing district (M2-1) by the City of New York. The property uses surrounding the site are primarily light industrial, with a small concentration of residential use. The closest residential properties are located approximately 300 feet to the northeast of the site near the intersection of 3rd Avenue and Carroll Street. The site is bordered to the north by a 60 foot

GOWANUS VILLAGE I (Continued) **S121933912**

wide filled-in canal (former 1st Street Basin), which is to be restored as part of the Gowanus Canal NPL site remedy. To the east is a storage facility, a Verizon truck depot is located south of the site, and the Gowanus Canal, which is approximately 100 feet wide, lies directly west of the site. Past Use of the Site: Sanborn maps dating back to 1886 indicate that the site was occupied by Nassau Sulfur Works and Smith and Shaw Mattress Materials and Paper Stock. In 1904, the property was transferred to the Brooklyn Rapid Transit R.R. Power Plant. Under their ownership, it appears that coal was delivered by water and transported beneath the site via coal tunnel. In 1938, the property was turned over to the Williamsburg Power Plant Corporation and used as a central power station. The property was transferred to the New York City Transit System in 1950, where it was used as an electrical sub-station and switching yard until 1996. Site Geology and Hydrogeology: The site is underlain by urban fill, generally to a depth of about 8 feet, but reportedly ranging to depths up to 24 feet in some areas. Below the fill is a layer of organic silt indicative of a historic wetland. The depth to groundwater ranges from about 7 feet to 20 feet with groundwater movement generally to the northwest toward the Gowanus Canal.

Env Problem: Prior to Remediation: The primary contaminant of concern is polychlorinated biphenyls (PCBs). The PCBs do not appear to be contributing to off site environmental impacts that require additional investigation or remedial action. The contaminants found in each media sampled (soil, groundwater and soil vapor) are summarized below: Soil: Only one post excavation sample (44 ppm PCBs) exceeded the 10 ppm remedial cleanup objective specified in the Decision Document. The levels of PCB contamination are high under the existing on site building, but the groundwater remedy (LNAPL collection system) will prevent its migration. Groundwater: PCB contaminated LNAPL exists under the existing on site building. The groundwater extraction well system will prevent LNAPL migration. Monitoring the groundwater monitoring well network will illustrate the remedy is protective of public health and the environment. Soil Vapor: The most significant detection was for tetrachloroethene (perchloroethene or PCE) detected at concentrations up to 1,260 ug/m3 along 2nd Street. Soil Vapor Intrusion evaluations is to be performed for on-site buildings before occupancy is permitted. Post Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCB compounds in soil, and PCB-containing oil atop the groundwater table. Remedial action resulted in attainment of the site specific cleanup objectives throughout the parcel, with all soil below two feet in depth containing less than 10 ppm PCB. The site is now covered with a cover system allowing for restricted residential use. Remaining contamination in soil, groundwater, and soil vapor, if any, is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.
