Site Description: Location: The property is an approximately 2.5 acre site located in a commercial/industrial area of Brooklyn at 153 2nd Street a/k/a 322 3rd Avenue. The Gowanus Canal is located adjacent to the site to the northwest. Site Features: A 24,200 square foot, three story vacant structure occupies the eastern portion of the site. The building has a basement floor that is a 13 foot thick concrete slab that extends below the water table. The remainder of the site is covered by the final site cover system. Current Zoning and Land Use: The site is currently inactive and is zoned as a manufacturing district (M2-1) by the City of New York. The property uses surrounding the site are primarily light industrial, with a small concentration of residential use. The closest residential properties are located approximately 300 feet to the northeast of the site near the intersection of 3rd Avenue and Carroll Street. The site is bordered to the north by a 60 foot wide filled-in canal (former 1st Street Basin), which is to be restored as part of the Gowanus Canal NPL site remedy. To the east is a storage facility, a Verizon truck depot is located south of the site, and the Gowanus Canal, which is approximately 100 feet wide, lies directly west of the site. Past Use of the Site: Sanborn maps dating back to 1886 indicate that the site was occupied by Nassau Sulfur Works and Smith and Shaw Mattress Materials and Paper Stock. In 1904, the property was transferred to the Brooklyn Rapid Transit R.R. Power Plant. Under their ownership, it appears that coal was delivered by water and transported beneath the site via coal tunnel. In 1938, the property was turned over to the Williamsburg Power Plant Corporation and used as a central power station. The property was transferred to the New York City Transit System in 1950, where it was used as an electrical sub-station and switching yard until 1996. Site Geology and Hydrogeology: The site is underlain by urban fill, generally to a depth of about 8 feet, but reportedly ranging to depths up to 24 feet in some areas. Below the fill is a layer of organic silt indicative of a historic wetland. The depth to groundwater ranges from about 7 feet to 20 feet with groundwater movement generally to the northwest toward the Gowanus Canal.
Env Problem: Prior to Remediation: The primary contaminant of concern is polychlorinated biphenyls (PCBs). The PCBs do not appear to be contributing to off site environmental impacts that require additional investigation or remedial action. The contaminants found in each media sampled (soil, groundwater and soil vapor) are summarized below: Soil: Only one post excavation sample (44 ppm PCBs) exceeded the 10 ppm remedial cleanup objective specified in the Decision Document. The levels of PCB contamination are high under the

GOWANUS VILLAGE I (Continued) **S121933912**

existing on site building, but the groundwater remedy (LNAPL collection system) will prevent its migration. Groundwater: PCB contaminated LNAPL exists under the existing on site building. The groundwater extraction well system will prevent LNAPL migration. Monitoring the groundwater monitoring well network will illustrate the remedy is protective of public health and the environment. Soil Vapor: The most significant detection was for tetrachloroethene (perchloroethene or PCE) detected at concentrations up to 1,260 ug/m3 along 2nd Street. Soil Vapor Intrusion evaluations is to be performed for on-site buildings before occupancy is permitted. Post Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCB compounds in soil, and PCB-containing oil atop the groundwater table. Remedial action resulted in attainment of the site specific cleanup objectives throughout the parcel, with all soil below two feet in depth containing less than 10 ppm PCB. The site is now covered with a cover system allowing for restricted residential use. Remaining contamination in soil, groundwater, and soil vapor, if any, is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description:	Location: The site is located in an urban area, on the southeast corner of Hoyt Street and 4th Street in the Carroll Gardens neighborhood of Brooklyn. The site is bound by 4th Street to the north, Hoyt Street to the west, muti-story industrial buildings to

Actual:
19 ft.

425 HOYT STREET (Continued) **S117936666**

the east and Ferrara Brothers Brooklyn Concrete Plant to the south. Site Features: The site is developed with a one-story garage/warehouse building and two two-story commercial warehouse buildings with a partial basement. Current Zoning/Use: The site is zoned M3-1 (Manufacturing) and is currently an unoccupied warehouse. Historic Use: Past uses include a marble company, a feather holding and separating operation, manufacuring and storage of plumbing supplies, and automobile repair. Site Geology and Hydrogeology: Historic fill extends from below the surface cover to depths ranging from 11 to 15 feet below ground level, generally coinciding with the depth of the groundwater table. The fill is described as brown sand with wood and brick. A layer of native organic-clay lies below the fill. Bedrock is of the Middle Ordovician to Lower Cambrian Hartland Formation, which consists of fine-grained quartz-feldspar granulite.

Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Site Description:	Location: The 10.3-acre Carroll Gardens/Public Place property is located on the bank of the Gowanus Canal in Brooklyn. It is bounded by Smith Street, 5th Street and Huntington Street. Surrounding land uses range from industrial to residential.The nearest residential structure is located directly across 5th St. from the site. Site Features: The site is comprised of three parcels. Two (I and II) are

K - CITIZENS MGP - CARROLL GARDENS (Continued) **S109059144**

owned by the City of New York, and are currently the home of a concrete batch plant. Parcel III is the site of a recently demolished warehouse, and is currently vacant. A fourth parcel was part of the original MGP plant, but is not included in the Brownfield site and is being managed separately. This privately owned parcel currently houses a trucking company, and is subject to a consent order with National Grid. Current Zoning and Land Use: The site is zoned M3-1. The parcels owned by NYC are planned for a mixture of residential and commercial space, with provisions for public access to the banks of the canal. Past Uses of the Site: The site was used as a manufactured gas plant(MGP) for approximately 100 years. Operable Units: The site has been divided into 2 OUs. OU1 consists of the site itself, including all 4 parcels. OU2 consists of off site impacted areas. Site Geology and Hydrogeology: The site is underlain by a deep sand deposit, which has enabled the coal tar released from the former MGP to migrate both vertically and horizontally. Two other MGPs are also located nearby, and it is not always possible to tell where the tar plume from one site ends and the next begins. The BCA was executed in February 2009, with National Grid, the City of New York and the private property owner as Applicants. Remedy selection has been completed. This remedy will be designed and constructed under the BCP. The remedy includes the excavation of subsurface MGP structures and the top 8 feet of soils across the site; with installation of a barrier wall along the side of the canal, to cut off tar migration at depths beyond the practicable limits of excavation. Tar recovery wells will also be installed where determined necessary, during the design. Remedial Design is underway. Implementation of the remedy has been delayed by access issues. An off-site Remedial Investigation/Alternatives Analysis (RI/AA), which is OU2 of the site, is required. The RI/AA will determine the nature and extent of the off-site contamination and identify an appropriate remedy as part of the BCP project.

Env Problem:
The site is heavily contaminated with MGP residuals, including coal tar and petroleum products. The principal contaminant is coal tar, which is present as a non-aqueous phase liquid (NAPL) throughout the portion of the site that borders the canal. Contaminants are impacting the soil, groundwater and soil gas. Contamination is present to depths of at least 120 feet below grade, and has been observed migrating off-site at depth. The nearest environmental receptor is the Gowanus Canal, where significant discharges of coal tar can be seen during low tide periods. Active coal tar seeps are found in two locations along the canal; under extreme low tide conditions, these seeps can cover a several hundred-foot reach of the canal with slicks and sheens. The canal is used as a recreational resource by kayakers and canoers. Based on the heavy contamination at the site, NYSDEC has determined that the site poses a significant threat to human health and the environment.

Health Problem:
The site is secured with a chain-link fence to minimize trespassing and all contaminated material is at least 10 feet below ground thus preventing contact by potential trespassers. The area is served by public water so contact with contaminated groundwater migrating off-site is not expected. However, contaminated material from the site has been identified in the Gowanus Canal next to the site. People using the canal adjacent to the site for recreational purposes such as swimming and boating may come into direct contact with chemical contaminants. People should avoid any activity that would result in swallowing or accidentally ingesting canal water.

DEC Memo:	"R.Piper responded this spill (Secondary Off-hour). 12/19/16- DEC Piper emailed Scott Fleming of Speedway to have drains cleaned. 1/19/17- DEC Piper received notification from Envirotrac that: EnviroTrac, Speedway s environmental consultant, inspected the subject property and the on-site drains on December 20, 2016 (see attachments for inspection photos and site plan). EnviroTrac did notice that three (3) out of the six (6) on-site drains were clogged or not draining to capacity causing an overflow situation. During EnviroTrac s field observations it was noticed that CB-1 was not draining as was evident by the drain being submerged under water and ice, CB-4 contained sediment that was frozen solid, and CB-6 also had sediment within. As a result of a drainage issue at this site, Speedway s maintenance division procured a sub-contractor to clean out debris from each drain and sewer jet seventy (70) feet of clogged lines. This work was conducted on December 31, 2016. In order to confirm the cleanout of these drains, EnviroTrac dispatched a technician on Tuesday, January 17, 2017 and noticed that one (1) drain out of the six (6) was still not draining to capacity and had some overflow. This drain (CB-3) is located behind the station kiosk. EnviroTrac notified Speedway s maintenance division of this issue related to CB-3 on Tuesday, January 17, 2017. Speedway s maintenance division will be dispatching a contractor to clean this affected drain. 3/3/17- DEC Piper received notification from Envirotrac that Speedway s maintenance division dispatched a contractor to clean catch basin (CB-3) on February 1, 2017. The cleanout procedure that was utilized consisted of sewer jetting the outflow pipe and as a result, no waste was generated. Based on work to date, this spill is closed."
Remarks:	"caller stated that drains are over following in to drains"

petroleum odor and high PID reading in some of their boring. He sent some soil samples for analysis. Told him to send DEC the report with analytical data when it is available. 12/28/11-HRAHMED-Sent a CSL to with the requirement of soil and groundwater deleneation to : Georgeb J. Macchia ASTI Holding Group 556 Central Ave Bethpage, NY 11714 csl re sent to 155 3rd Street LLC 155 3rd Street Brooklyn, NY 11231 Attn: Alphonse Lembo. Correct address of the spill is 155 3rd street, Brooklyn. 04/19/12 The site is developed with a paved parking lot, a one story office building and a partially paved storage area. The property is currently being used as storage for construction materials. The eastern edge of the property borders the Gowanus Canal. LNAPL was identified during a phase II ESA in 2011. Several VOCs were detected in soil samples, but all were below DEC guidelines. LNAPL was not identified in the monitoring wells. Ground water sample was collected from MW-6, where LNAPL was observed in soil historically. VOCs were below DEC AWQS. Based upon the findings of the further investigation, LNAPL was identified in a small area, 20 x10 x 5 along the southeastern corner of the property. LNAPL appears to be bound in the soil,(source?) is not impacting the ground water of the site. As per RAP, LNAPL in soil will be removed by excavation. Soil will be removed to one ft below the water table at approx 6 ft bgs. Ground water sample will be collected after completion of excavation.RAP approved via email.(sr) 06/20/12 Email from Derek wrote: Sharif, I just wanted to let you know that we have received approval from Clean Earth to dispose of the material generated from the Remedial Action. The contractor will be loading out the material on Thursday and backfilling the excavation. Upon receipt of final manifest from the facility, I will forward you over the Remedial Action Completion Report. Sincerely, ~Derek Derek Ersbak Project Hydrogeologist P.W. Grosser Consulting 630 Johnson Avenue, Suite 7 Bohemia, NY 11716 (sr) 08/06/12 PW Grosser and their sub contractor PAL Environmental performed remedial activities from May 23 through June 7. LNAPL was not observed during the remedial efforts.A total of 15.45 tons of contaminated material was disposed from the site.Following the completion of the excavation, a ground water sample was collected to document the effectiveness of the remediation.Ground water analytical data was compared with TOGS 1.1.1 and VOCs/SVOCs were not above the limit.The excavation was backfilled with gravel, and then with clean overburden material that was stockpiles on site.NFA required.Case closed.(sr) "

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

SPEEDWAY 7835 (Continued) **1000263763**

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Update By:	brwolose
Site Description:	This is a new BCP application and pertains to the Gowanus Village I, LLC-420 Carroll Street located at 420 Carroll Street, Brooklyn, Kings County. This site is approximately .92 acres in size. Current use of this site is commercial and future use of this site will be residential. Suspected contaminants at this site are chlorinated solvents, pesticides, SVOCs and PCBs. These contaminants are impacting the soil and groundwater. This BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility in conjunction with the Department of Health. 8/30/06: the BCP Application was denied.
Env Problem:	Information submitted with the BCP application and additional information submitted regarding the environmental conditions at the

GOWANUS VILLAGE I, LLC - 420 CARROLL STREET (Continued) **S102145301**

site were reviewed. It was determined that due to lack of known contamination and the unlikely potential for contamination would not complicate the redevelopment of the site, the application was denied.

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

COMMERCIAL BUILDING (Continued) **S108130792**

Spiller Company: COMMERCIAL BUILDING
Spiller Address: 14 WHITWELL PLACE
Spiller Company: 999
Contact Name: CHARLIE DEVITO
DEC Memo: "Need to send CSL to Property Owner: Charlie Devito Brooklyn Real Estate Mgt Corp. 88 Ninth Street Brooklyn, NY 11215 10/04/06-Vought-Daytime runner. Vought sent soil contamination letter with one month due date to above address. Vought called Boeckel for more information and left message to return call prior to sending letter. 8/3/07 - Austin - Transferred from Vought to Ketani for further review and action - end 9/25/07 - Raphael Ketani. I found 2 unsigned copies of an October 2, 2006 CSL letter in the record. There is also an October 26, 2006 Phase II Subsurface Investigation Report from Associated Environmental Services, Ltd. (631) 234-4280. There is no PBS record. I reviewed the Phase II Report. Borings B-1 and B-2 were tanken on either side of a suspected UST at 20-20A Whitewell Place. Boring B-3 was taken on the east (street) side of a suspected UST at 14 Whitewell Place. Only groundwater samples were collected. These were from B-2 and B-3. Groundwater sample B-2 was completely non-dectect. Groundwater sample B-3 had 2 hits that were 3 times the TAGM limit, several hits that were just above the TAGM limit and the rest non-detect. 9/26/07 - Raphael Ketani. I spoke to Matt Boeckel of Associated Environmental. He said that after the project was done, Mr. Devito didn't pursue any further activities. I asked Mr. Boeckel why only groundwater samples were taken. He said that Mr. Devito didn't want to spend any more money investigating the site. I looked up the owners of the property using Property Shark and ACRIS. I found several addresses for the owners of 20 Whitwell Place (block and lot 00454/0025). The owner is Whitwell Place Realty Corp. at either 20 Whitwell Place, Brooklyn or 335 Chelsea Road, Staten Island. There was another Brooklyn address at 88 9th Street, Brooklyn, 11215. The 9th Street address is the latest one. I looked up the owners of the property at 14 Whitwell Place (block and lot 00454/0022). ACRIS listed Frozen Music Incorp., 10 Whitwell Pl., Brklyn., and Property Shark listed C.W. Grinnell, 325 E. 41 Street, Ste 501, NY, 10017. As the 14 Whitwell Place site had the indications of contamination, I will pursue the remediation of this location only. I sent a CSL to both addresses for the owners. 10/2/07 - I received a call today from Daniel Wax regarding the CSL. He said that DEC had the wrong property and that no borings were done on his site. He said that Frozen Music Incorporated and Ms. Grinnell owned 10 Whitwell Place, but this is not where the boring occurred. He said that the NYC Property database and ACRIS listed Ms. Grinnell and his company as the owner of 14 Whitwell, but this has been a mistake that he has not been able to correct. He asked what he should do. I asked him who owned 14 Whitwell. He said he didn't know. I told him that I will look into the matter. I tried to contact Mathew Boeckel of Associated Environmental, but could only leave a message. 10/3/07 - Raphael Ketani. I made an unannounced site visit. The site is a red painted 3 story building. It contains offices for a book company, a lobster company, and some other business on the ground floor. I met Roger Coy, a tenant who rents an office on an upper floor of the building. He called up the owner of the property, Charlie Devito (914) 482-5520 (Ninth Street Storage). I spoke to Mr. Devito and explained that Associated Environmental Services had done a boring on the property which had discovered contaminated soil next to an anomaly that was never defined. He said that he was aware of the investigation. He

COMMERCIAL BUILDING (Continued) **S108130792**

said that he thought the anomaly was a tank that had never been removed. I told him that a larger investigation was necessary to delineate the contamination and that the tank has to be either closed in place or removed. I told him he had to hire an environmental company and start the work. He said he will do this and he will contact me later in the week. Mr. Devito's company is Ninth Street Self Storage, 88 9th Street, Brooklyn, 11231, (718) 788-0880. A CSL was sent out today to Mr. Devito. 12/3/07 - Raphael Ketani. I tried to contact Mr. Devito, but could only leave a message with his secretary. 12/12/07 - Raphael Ketani. I tried to contact Mr. Devito, but could only leave a message with the secretary. I told her that if DEC doesn't hear from him towards the end of regular business hours, then we will send a warning letter. Mr. Devito called me back. He said that he had lost the letter and that is why nothing has taken place to date. I FAXed him (718) 788-3233 the 10/3/07 letter. He said that he will give it to Associated Environmental. 12/27/07 - Raphael Ketani. Bill Locke of Trade Winds Environmental (631) 289-5500 called. He said he was putting together a proposal for Mr. Devito. He said there is an inactive 550 tank buried behind a brick wall under the back half of the property. Then there are two active 275 gal. tanks in the half basement in the front part of the property. He said that he will abandon or pull all three tanks. He said he will do at least 6 soil borings to investigate the fill port, fill line and tanks. 1/3/08 - Raphael Ketani. I tried to reach Mr. Locke, but could only leave a message. 1/7/08 - Raphael Ketani. Mr. Locke called back. He said that he plans to start the investigation at the site today. 1/10/08 - Raphael Ketani. I spoke to Doug Schrimpf (cell (516) 779-7822) of Trade Winds. He is the project manager and contact. His crew removed 2 ASTs in the basement. The tanks were in good condition and not leaking. The old fuel line to the old UST was rotten and leaking and 2 drums of contaminated soil were removed. More soil will be removed. They will expose the line in its entirety to see if it leaked in other locations. Borings will be done through the bottom of the old UST after it is cleaned out. I will meet Mr. Schrimpf tomorrow at the site. 1/11/08 - Raphael Ketani. I made the site visit at about 12:30PM. I met Carol, the head of the work crew. I took 3 pictures. He showed me the 1,000 gal. tank that had been cut open. It looked very clean inside and was odor free. He showed me the fuel pipes that his crew was following and trying to expose. He said he wasn't sure where they will lead him, but he was hoping that, somewhere, they will contact to the 1,000 gal. tank which wasn't completely exposed yet. After my overview of the situation, I left the site. Later, I spoke to Mr. Schrimpf. I told him that it looked like his crew was doing a good job. I also told him that since there was a 1000 gal. tank and two 275 gallon tanks, this puts the site over the 1100 gal. ceiling for total capacity. I told him that all 3 tanks need to be registered. He said he will do this and he will keep me informed of the progress. 1/15/08 - Raphael Ketani. I spoke to Mr. Schrimpf today. He said that his crew exposed the rest of the fuel and return line, but found no contamination. So they filled the 1000 gallon tank with sand and abandoned it in place. They also filled the old fill port in the basement with cement. He said he that three soil samples were taken below the bottom of the tank and he will attempt a boring in the sidewalk to see whether there is any contamination. 4/2/08 - Raphael Ketani. I spoke to Mr. Schrimpf (cell (516) 779-7822). He said Mr. Locke is the one I should be speaking to regarding the report. He said he will talk to Mr. Locke and get

COMMERCIAL BUILDING (Continued) **S108130792**

everything out to me. 8/18/08 - Raphael Ketani. I spoke to Mr. Locke. He said that Mr. Devito, the owner, owes him thousands of dollars. So he can't release the report. He said Mr. Devito is paying him in drips and drabs. The case is being prepared for transfer due to a case realignment within the unit. The case manager needs to send Mr. Devito a warning letter stating that he is in violation of the NAV Law and the regulations because DEC has no documentation that the spill is cleaned up. 9/19/08 - Raphael Ketani. Mr. Schrimpf called me. He asked whether I had ever received the remediation report. I told him no. He asked why. I told him that from the case notes describing my conversations with Mr. Locke, the report wasn't going to be released until Mr. Devito payed Trade Winds in full for the work. He said he will put the report together, but he will let Mr. Devito know that it wont be sent until payment is received. 2/27/09 - Raphael Ketani. Mark Pasco of Analytical Testing Labs (a consulting firm) (908) 241-5040 called to find out the status of the site. He represented a bank involved with a potential purchaser. I told him that I was no longer the case manager and to talk to Veronica Zhune. However, I also told him that Trade Winds is out of business and that DEC never received the investigation-remediation report. He said that he will talk to Ms. Zhune. 2/27/09- Melissa DiBella 718-482-4984 from whitwell Place Realty Corp. faxed the report. The report included: 1. A cover letter to the report. 2. Afidavit 3. Two manifest for waste disposal and oil disposal 4. Chain of custody Endpoint soil Samples Results 5.Site Map. The letter states: Trade-Winds Environmental Restoration Inc. was contracted by property owner to remove (2)275 gallon AST containing fuel oil and abandon or remove(1) 550 gallon UST containing fuel oil. Subsurface sampling was conducting by property owners previuos Environmental Contractor and a NYSDEC Spill number 0606675 was assigned to property. On January 7th, 2008 Trade-Winds Environmental removed, cut and cleaned (2)275 gallon AST that contained fuel oil and disposed of them at a permitted disposal facility. In addition Trade-Winds project team excavated and exposed (1)550 gallon UST that contained fuel oil. During the process of exposing (1) 550 gallon tank Trade-Wind encountered fuel oil contaminated soil around tank. All oil impacted soils were excavated and placed in 55 gallon drums and the total of 7 drums were generated. Trade-winds project team then cut an opening into tank and entered tank and decontaminated tank interior. Tank excavation and decontaminated tank was left open for NYSDEC inspection. Based on inspection NYSDEC case manager required to collect samples from beneath tank and samples from tank excavation. Three holes were cut in bottom of tank (East, Middle, West) and soil samples were collect at each location. In addition 3 samples were taken from tank excavation for a total of 6 samples. Soil samples were analyzed for methods 8260 and 8270 and forwarded to NYSDE case manger for review. On January 15th ,2008 completed the abandoment of the 550 gallon fuel oil tank was filled to 100% capacity with masonry sand and excavation and new concrete slab were completed. The analytical results identified VOC's and SVOC's below the minimun detection limit for samples #2(Tank Middel and #3(Tank west). Sample #1 Tank East results identified VOC's below the minimun detection limit but some SVOC's (Benzo-b-fluoroanthene, Benzo-k-fluoroanthene, Benzo-1-pyrene, Indeno (1.2.3,-c,d)Pyrene and Dibenzo-a,h anthracene) were exceding the NYCSDEC Recomended Soil Cleanup Objectives (RSCOs). The analytical results identified VOC's and VOC's below the minimun detection limit for samples #4(Excavation middle), #5(East Excavation). Sample

COMMERCIAL BUILDING (Continued) **S108130792**

#6(Tank top)results showed VOC's below the minimun detection. Some SVOC's (Phenanthrene, Anthracene, Fluoranthene, Benzo-a-anthracene, Chrysene, Pyrene, Benzo-b-fluoroanthene, Benzo-k-fluoroanthene, Benzo-a-pyreneIndeno (1.2.3,-c,d)Pyrene, Dibenzo-a,h anthracene and benzo-g,hy,i perylene) were exceding the NYCDEC Recomended Soil Cleanup Objectives (RSCOs). 03/16/09-Zhune called Doug Schrimf from trade-winds to find out about SOV's contamination in sample #6. As per Doug all oil impacted soil were excavated and removed. Spill Closed. "

Remarks: "voc's above standards:"

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

DEC Memo:	"8/8/2014 - Feng - Duty Desk. Spoke to Ryan Manderbach of Langan (212-479-5582, rmanderbach@langan.com). They were doing a Phase II for the potential buyer. The property is currently used by Verizon for parking lot. No developmet plan yet. Petroleum impacts were encountered at the central portion of the site. All soil borings were

OUTSIDE (Continued) **S117269241**

installed inside the boundary of the property. The soil borings were extended to 20 feet. Soil show PID reading greater than 700 ppm and heavy odor. Lab results show PAH and BTEX in soil samples and groundwater collected from the most downgradient soil borings show significant impacts. There is a spill, spill 94-02981 which was open due to tank problem, closed in 2000. Langan suspected the new spill is related to this old spill. GPR survey found suspicious tank, possible a waste water tank, and possible some tanks are left behind, but has not confirmed yet. He cannot disclose the potential buyer's contact information. He said DEC may need to deal with the current owner to get the Phase II report. In addition to the petroleum impact, MGP impacts are also found at this site. Langan installed 6 additional soil borings for the geotechnical reason in the vicinity of Gowanus Canal. There soil borings were extended to 100 feet. At 55 feet, appeared-to-be MGP waste impacts were encountered, i.e. oil drops, heavy odors. But NO visible NAPL. No MGP source at the site, suspect there are offsite sources. an email was sent to Central Office G. Cross for further guidance. 2/27/2015 - Feng - Email from DEC attorney Jessica Albin I am reviewing a Brownfield Cleanup Program application for 175-225 Third Street, Brooklyn, and saw that there is an open spill at this site for you which you are the DEC lead. I was able to review your notes in the DER database but am unable to access the spill report. Please email me (or let me know where to access) the spill report and any other documents relevant to this site. Also, please let me know the status of this spill. Thank you. Jessica Jessica Steinberg Albin - Assistant Attorney NYS Department of Environmental Conservation, Region 2 47-40 21st Street, Long Island City, NY 11101-5407 T: (718) 482-3103 F: (718) 482-4962 jessica.albin@dec.ny.gov www.dec.ny.gov 2/27/2015 - Feng - Responded to Jessica's email Jessica, The notes in the DEC Remark is everything we have for this one. Since this site contaminated with MGP impacts and we figured it wouldn t in Region 2 for long. We have emailed to Central Office for further guidance regarding who will be the appropriate project manager to handle this one, but we haven t heard anything from Central Office yet. So if the site enters the state BCP, then we can re-assign this spill to the BCP PM or close it? email from Jessica Albin June Thank you very much for the update. We are still in the process of reviewing whether it will be accepted into the BCP, but I will keep you posted. I don t know whether an open spill gets reassigned if a site is accepted into the BCP, but that would make sense since it would have to be cleaned-up as part of the program. Jessica email from Dana Mecomber Usually when a site with a spill enters the BCP we keep the spill open but re-assign it to the BCP project manager. The spill would be closed when the BCP site is re-classified to C . June assuming the site gets into the BCP you can put me as the PM I ll let you know when that happens. Also worth pointing out that the open spill was reported based on observations made during the recent Phase II ESA. There is an older, closed spill due to leaking tanks, the impacts from which may not have completely been addressed. I believe the observed MGP impacts are just one of many issues on this site. Dana Mecomber, P.E., MPA Environmental Engineer, Division of Environmental Remediation 8/28/2015 - Feng - confirmed with Dana Mecomber. The spill is assigned to her as the site has entered into the BCP program C224209."

Program:	BCP
Site Code:	504582
Acres:	3.2
HW Code:	C224209
SWIS:	2401
Town:	New York City
Record Added Date:	02/12/2015
Record Updated Date:	05/22/2018
Update By:	JHOCONNE
Site Description:	Location: The site is located at 175-225 3rd Street in the Gowanus neighborhood of Brooklyn, Kings County. The site is approximately 3.2 acres in size. Site Features: The site is currently operated by Verizon as an operations, maintenance and admin facility which includes a vehicle maintenance garage, a service vehicle parking area, a work center, roll-off containers for equipment storage, a steel shed, and administrative offices. Current Zoning: The site is located in an M2-1 manufacturing district. The M2 districts occupy the middle ground between light and heavy industrial areas; however, based on the requirements listed in the City of NY Department of City Planning Zoning Resolution, Article IV: Manufacturing District Regulations (10/19/2013) certain types of retail and office spaces are permitted in M2 Districts. Historic Use: Historial use of the

175-225 3RD STREET (Continued) **S117535357**

site includes a coal and stone yeard with wagon painting (1886 to 1904), blacksmith (1904), a transit facility with iron coal conveyor transecting the site from east to west (1915 to 1938), an automobile wrecking facility (1934 to 1950), a filling station with gasoline tanks (1950 to 1977), and automobile repair facilities with hydraulic lifts, drums, and waste oil storage (1950 to present). Site Geology and Hydrogeology: The site sits at an elevation of approximately 10 feet above mean sea level. The topography of the site is generally level, and the surrounding area slopes gently toward the northwest. The subsurface consists of historic urban fill characterized by brown silty sand with gravel, concrete, wood, brick, stone and debris extending to varying depths of 5 to 10 feet below grade. The fill layer was underlain by silt and silty sands. Groundwater is present beneath the site at 2.5 to 9.3 feet below surface grade.

Env Problem:

Nature and Extent of Contamination: The site is contaminated with volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals from a history of light industrial activity including use of petroleum and hazardous materials, the presence of historic fill, and potential impacts from off-site sources. Petroleum-related impacts appear to be limited to the western portion of the site, near releases from historic underground storage tanks (USTs) based on existing information. A full Remedial Investigation is required to confirm the nature and extent of contamination. Soil The primary contaminants of concern in soil are SVOCs and metals, which exceed the soil cleanup objectives (SCOs) for commercial use. SVOCs are present primarily on the western portion of the site from depths of 2 to 10 feet below surface grade. Petroleum impacts were also observed in this area and depth range. SVOCs that exceed the SCOs for commercial use include: acenaphthene as high as 1,530 parts per million (ppm) compared to the SCO of 500 ppm; acenaphthylene as high as 1,490 ppm compared to the SCO of 500 ppm; anthracene as high as 842 ppm compared to the SCO of 500 ppm; benzo(a)anthracene as high as 274 ppm compared to the SCO of 5.6 ppm; benzo(a)pyrene as high as 153 ppm compared to the SCO of 1 ppm; benzo(k)fluoranthene as high as 99.7 ppm compared to the SCO of 56 ppm; chrysene as high as 352 ppm compared to the SCO of 56 ppm; diben(a,h)anthracene as high as 1.79 ppm compared to the SCO of 0.56 ppm; fluoranthene as high as 1,370 ppm compared to the SCO of 500 ppm; fluorene as high as 1,480 ppm compared to the SCO of 500 ppm; naphthalene as high as 14,700 ppm compared to the SCO of 500 ppm; phenanthrene as high as 3,720 ppm compared to the SCO of 500 ppm; and pyrene as high as 2,050 ppm compared to the SCO of 500 ppm. VOCs detected in the soil exceed the unrestricted use SCOs but are below the SCOs for commercial use, and include: 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, n-propylbenzene, toluene, and xylenes. Metals detected in soil at concentrations that exceed the commercial use SCOs include: arsenic as high as 81.7 ppm compared to the SCO of 16 ppm; barium as high as 9,100 ppm compared to the SCO of 400 ppm; cadmium as high as 885 ppm compared to the SCO of 9.3 ppm; copper as high as 3,210 ppm compared to the SCO of 270 ppm; lead as high as 7,190 ppm compared to the SCO of 1,000 ppm; mercury as high as 26.4 ppm compared to the SCO of 2.8 ppm; and zinc as high as 18,400 ppm compared to the SCO of 10,000 ppm. Two samples of lead exceeded the RCRA hazardous waste regulatory limit, as determined by Toxic Characteristic Leachate Procedure (TCLP) analysis. Two TCLP samples had concentrations of 7.57 ppm and 25.7 ppm compared to the RCRA standard of 5 ppm. Groundwater The primary contaminants of concern in

175-225 3RD STREET (Continued) **S117535357**

groundwater are VOCs and SVOCs. VOCs in groundwater that exceed the Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards and Guidance Values for groundwater Class GA (source of drinking water) include: 1,2,4-trimethylbenzene as high as 71 parts per billion (ppb); 1,3,5-trimethylbenzene as high as 140 ppb; ethylbenzene as high as 770 ppb; n-propylbenzene as high as 26 ppb; toluene as high as 190 ppb; and total xylenes as high as 630 ppb, all of which have a TOGS standard of 5 ppb. Benzene was detected at 24 ppb compared to the TOGS standard of 1 ppb. SVOCs in groundwater that exceed the TOGS standard of 0.002 ppb include: benzo(a)anthracene as high as 0.49 ppb; benzo(a)pyrene as high as 1.03 ppb; benzo(b)fluoranthene as high as 0.26 ppb; benzo(k)fluoranthene as high as 0.32 ppb; and chrysene as high as 0.38 ppb. Naphthalene was detected as high as 7,070 ppb compared to the TOGS standard of 10 ppb. Bis(2-ethylhexyl)phthalate was also detected in groundwater at a concentration of 159 ppb compared to the TOGS standard of 5 ppb. Dissolved metals in groundwater were not detected at significant concentrations. Soil vapor One sub-slab soil vapor sample was collected from beneath the slab of the auto repair garage and identified tetrachloroethylene (PCE) at 510 micrograms per cubic meter (g/m3) and trichloroethylene (TCE) at 33 g/m3. TCE was also detected in two other soil vapor samples (not sub-slab) at a maximum of 300 g/m3. Other petroleum-related VOCs were also detected in soil vapor samples at elevated concentrations.

Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

DEC Memo:	"2/9/05. J.Krimgold spoke to Linda Show. Phase 2 was done in preparation to enter in the State BCP. Robert Edwards is a DEC contact person (518-402-9767). 3/30/07 - Austin - Trasferred to Patel for further review - end 06/15/07-Hiralkumar Patel. went to site on 06/14/07. its an abandoned building. as per worker from neighbour, site had icecream factory. from property tax record, property owner: Gowanus Village I LLC 34 4th Avenue Brooklyn, NY 11217-1927 from NYS corporation and business entity database: Gowanus Village I LLC c/o Richard D. Marans, Esq. 29 Broadway, Suite # 2400 New York, NY 10006 from ACRIS database: Gowanus Village I LLC 700 Pacific Street Brooklyn, NY 11217 09/04/07-Hiralkumar Patel. spoke with Ms. Shaw,

430 CARROLL STREET (Continued) **S106704100**

who reported spill. she mentioned that investigation was done as part of BCP program application. but application was rejected. Ms. Shaw will contact owner at Gowanus Village I LLC and someone will call from owner's/management office. Gowanus Village I, LLC ownes three following lots under one project: a. 420 Carroll Street (Block #: 453, lot #: 1). alt. address: 434-440 Carroll STreet b. 430 Carroll Street (Block #: 453, lot #: 21). alt. address: 404-418 & 420-428 Carroll street c. 153 2nd street (Block #: 967, Lot #: 1). alt. address: 322 3 ave found two BCP cases under name of Gowanus Village I LLC: - C224118 (for 420 Carroll Street site) - C224099 (for 430 Carroll Street and 153 2nd street site) BCP application C224118 was rejected on 08/30/06 with following reason: 1. site's known industrial and manufacturing history doesn't indicate that there was a sufficient disposal of contamination that would or may complicate the redevelopment of site; BCP application C224099 was approved, but was terminated as owner never replied back. found following investigation reports from BCP application file C224118: 1. Phase I, dated Feb. 16, 1999 - for 420 Carroll Street 2. Phase II, dated Mar. 19, 1999 - for 420 Carroll Street 3. Phase I, dated Dec. 31, 2004 - for 420 Carroll Street 4. limited Phase II (adjacent properties), dated Mar. 1, 2005 - for 430 Carroll street and 153 2nd street 5. subsurface investigation, dated Jun 28, 2005 - 420 & 430 carroll street left message for Sara Mirski (718-398-3200) at Boymelgreen developers, who applied for BCP program.
********** phase II was done at 420 Carroll street site in 1999. abstract of Phase I and II reports: - three industrial buildings on-site: a two story and a three story industrial building on the front of the property and a single story warehouse behind the front buildings - during phase I, found 9 sealed floor drains in front buildings - review of sanborn maps indicated presence of a gasoline UST in parking lot - one 275 gal aboveground chemical storage tank noticed on the third floor of the front building, two 275 ASTs noticed inside boiler room and one 2000 gal AST noticed on the main floor of building - groundwater flow beneath the site is in a generally westerly direction as obtained from maps - prior to 1995, area of single story building was vacant and formerly utilized as a junk automobile storage area <---------- - two areas of concern were identified during Phase I; gasoline UST located in the parking area east of buildings and floor drains located in two story building on east side of the property <---------- - two soil borings were completed around tank location, borings were advanced from grade to water table - no PID readings were detected above background level and no soil samples were selected for analysis <---------- - one groundwater sample was collected from each borings - three floor drains (FD-1, FD-2 and FD-3) were identified in the two story building on east side of the property - drain for FD-1 discharges directly to subsurface soil. soil below drain were dry - drain for FD-2 was clogged with sludge, approx. one ft of sludge was removed and found pipe extending downward, discharge point could not be determined, sediments removed from drain was black and oily and had a strong pungent odor. sludge sample was collected - drain for FD-3 was connected to municipal sewar system - samples collected from drain 1 & 2 - found contamination in sludge sample from FD-2 (Xylene: 7300 ppb, 1,2,4-Trimethylbenzene: 24,000 ppb)
********** Limited Phase II was done at 430 Carroll street and 153 2nd Street sites. abstract of limited Phase II done in 2005: - Hydrotech did investigation - carroll street parcel

430 CARROLL STREET (Continued) **S106704100**

is occupied by a Mister Softee-brand commercial icecream business and consists of a 1 story brick building with no basement - elevation of site is approx. 10-15 ft above sea level - regional groundwater flow beneath the site is toward the west, in the direction of Gowanus canal and Upper New York Bay <---------- - GPR survey was performed and no significant anamolies were noted - six soil probes were installed, three (HTE-2, HTE-3 and HTE-5) were installed on 2nd street parcel and three (HTE-6, HTE-7 and HTE-8) were installed in carroll street parcel (430 carroll st) - HTE-6 was installed at the area of concerned identified as a 275 gal waste oil AST and staining in the southwest portion of the parcel (430 carroll st) - HTE-7 was installed at the area of concerned identified as a 275 gal fuel oil AST in the eastern portion of the parcel (430 carroll st) - HTE-8 was installed in a former floor drain within the footprint of the building - max. PID (3,675 ppm) was measured at 2 to 4 ft at boring HTE-6 (at waste oil tank location) - sump pit was observed approx. 3 to 5 ft south of waste oil tank in southwest portion of carroll street parcel - petroleum staining was noted in the sump pit, on the waste oil tank and on the asphalt in the vicinity of both structures - due to the interior conditions of the sump pit, depth of pipe inside sump pit could not be determined - found contaminated sludge in sump pit - two groundwater probes (HTE-4: one in 2nd street parcel and HTE-6: one in carroll street parcel) were installed and one well (HTE-1: in 2nd street parcel) was sampled - groundwater probe HTE-6 was installed at the location of the waste oil tank and sump pit - depth to groundwater beneath the carroll street parcel was measured to 15 ft bg and beneath the 2nd street parcel was measured at 17 ft bg <---------- - no petroleum sheen or separate phase product was noted during sampling of any groundwater probe or well - found heavy SVOC contamination at HTE-2, HTE-3, HTE-5 (at 2nd street parcel with maximum at HTE-3), HTE-6 and HTE-7 (at carroll street parcel with maximum at HTE-7) - found VOC contamination at HTE-5 and HTE-8 - found groundwater contaminated at HTE-1 (at 2nd street parcel) - found heavy groundwater contamination at HTE-6 (at carroll street parcel and close to waste oil tank and sump pit) soil analyticals from 2nd street parcel:
----------HTE-2----------HTE-3----------HTE-5------

300----------1,100
Benzo(a)pyrene----------3,500----------9,
300----------61 groundwater analyticals from
carroll street parcel: ----------HTE-6
Acetone----------1,500 Toluene----------630
Ethylbenzene----------12,000 Xylene----------12,000 PID
readings for HTE-6: 3162 ppm at 0-2 ft, 3675 ppm at 2-4 ft and 3175
ppm at 4-6 ft and found refusal at 6 ft
********** subsurface investigation was
done in June 2005 at 420 and 430 Carroll Street sites. abstract of
subsuface investigation report: - during investigation installed
three soil borings (GB-1/S, GB-2/S and GB-6/S: all on 420 carroll
street), four monitoring wells (GB-1, GB-2 and GB-3 on 420 carroll
street and GB-4 on 430 carroll street) and five soil-gas probes
(SG-1, SG-2 and SG-3 on 420 carroll street, SG-4 and SG-6 on 430
carroll street) - soil probes were sampled from ground surface to
depths ranging from 8 to 12 ft bg - olfactory evidence of petroleum
constituents and low level of organic vapors ranging from 10 to 50
ppm were encountered in soil samples obtained from GB-6/S (on 420
carroll street) - soil vapor samples were collected 2 inches below
concrete slab in SG-1 through SG-4 and 4 ft below the surface at SG-6
<---------- - few SVOC compounds found above limit in soil sample
from GB-1/S at 6-8 ft bg - no VOC contamination found in any soil or
groundwater samples - no contamination found in soil gas samples
summary of above reports: - no PID readings found in two borings
around suspected location of gasoline UST at 420 carroll street site
- soil from only two sides of gasoline UST was screened - found
contaminated sludge in floor drain 2 at 420 carroll street site -
found SVOC contamination in soil sample (HTE-3) at 153 2nd street
site - found chlorinated compounds in soil sample (HTE-5) at 153 2nd
street site - found chlorinated compounds in groundwater sample
(HTE-1) at 153 2nd street site - found SVOC contamination in soil
samples (HTE-6, HTE-7 and HTE-8) at 430 Carroll street site - found
Xylene contamination in soil sample (HTE-8) at 430 Carroll street
site - found heavy VOC contamination in groundwater sample (HTE-6) at
430 Carroll street site - HTE-6 sample was taken in area of
aboveground waste oil tank and sump pit at 430 Carroll street site.
09/14/07-Hiralkumar Patel. left message for Mr. Mirski (BCP
applicant), for owner's information. 09/17/07-Hiralkumar Patel.
received email from Ms. Shaw stating that property is for sell.
09/26/07-Hiralkumar Patel. sent email to Ms. Shaw requiring property
owner's information. 09/28/07-Hiralkumar Patel. received property
owner's information from Ms. Shaw. property owner: Gowanus Village I

430 CARROLL STREET (Continued) **S106704100**

LLC. Attn.: Sara Mirski Boymelgreen developers 752 Pacific Street, 6th Floor Brooklyn, NY 11238 Ph. (718) 398-3200 Ext. 201 Fax (718) 398-3222 email: sara@boymelgreendevelopers.com Linda Shaw Knauf Shaw LLP Ph. (585) 546-8430 Fax (585) 546-4324 email: lshaw@nyenvlaw.com 10/01/07-Hiralkumar Patel. spoke with Ms. Mirski to confirm property owner's information. she mentioned that site 153 2nd Street (aka: 332 3rd Ave.; Gowanus Village I Power Plant site) is included under current active brownfield cleanup program. spoke with Ms. Shaw (Ms. Mirski's attorney) regarding current active BCP file. she mentioned that 153 2nd Street site is currently under BCP #: C224099. but this BCP file only includes site at 153 2nd Street. it doens't include site at 430 Carroll Street. need further investigation for sites 420 & 430 Carroll STreet. 10/02/07-Hiralkumar Patel. left message for Mr. Edwards in DEC central office as he is listed as project manager. received email from Mr. Edwards confirming that site at 153 2nd street is currently under active Brownfield program. other two sites were dropped. 10/05/07-Hiralkumar Patel. sent letter to Ms. Mirski requiring soil and groundwater delineation, site specific groundwater flow direction, submission of PBS application (as had 2000 gal AST, 275 gal AST and unknown size gasoline UST at 420 caroll street and a waste oil tank at 430 carroll street), endpoint soil samples, surrounding area site map and RAP based on investigation results. also asked for installation of vapor barrier and SSDS, if site development occurs. letter emailed to Mr. Mirski and Ms. Shaw. 10/22/07-Hiralkumar Patel. received email from Jason Hayes. spoke with Jason at Langan. he asked about extension of deadline. explained Jason that the department requires delineation work started while they are dealing with BCP program to include sites. asked Jason to submit a work plan including scaled site map. aksed him to include locations of all tanks and previous borings (soil/groundwater/soil-gas) on same map. Jason J. Hayes Langan Engineering & Environmental Services Ph. (212) 479-5427 (O) (917) 859-4908 (C) Fax (212) 479-5444 email: jahayes@Langan.com 11/07/07-Hiralkumar Patel. spoke with Mr. Hayes. he just finished work plan and will email it. 11/13/07-Hiralkumar Patel. received email from Mr. Hayes with proposed work plan. abstract: - eight soil borings will be advanced to water table based on previous sampling locations during previous studies, add three more sampling points than proposed. sent updated sampling plan to Mr. Hayes in email. asked Mr. Hayes to submit modified plan with added sampling points on site map. 11/26/07-Hiralkumar Patel. spoke with Mr. Hayes. asked him to submit modified site map. 12/04/07-Hiralkumar Patel. received modified site plan with added sampling points. sent email to Mr. Hayes asking submission of investigation report by Jan. 15, 2008. 01/31/08-Hiralkumar Patel. left message for Mr. Hayes. 02/15/08-Hiralkumar Patel. received call from Mr. Hayes. after submitting proposals, he never received call from owner and he hasn't performed any work at the site. spoke with Ms. Mirski. she mentioned that under Gowanus LLC., they transferred their interest to Mr. Katan and now Mr. Katan is property owner/manager. Ms. Mirski asked to contact Mr. Katan. Isaac Katan Gowanus Village I LLC. 592 Pacific Street, Brooklyn, NY 11217 Ph. (718) 855-7444 (O) (917) 742-7444 (C) email: tj@katangroup.com spoke with Mr. Katan. he mentioned that they hired Hydrotech for required work and just signed contract. asked Mr. Katan to submit work plan by Feb. 26, 2008 and investigation report by March 31, 2008. Mr. Katan will talk to Mark Robins in Hydrotech and ask him to call. sent email to Mr. Katan with such requirements.

430 CARROLL STREET (Continued) **S106704100**

Hydrotech Mark Robbins Ph. (631) 462-5866 (O) email: mrobbins@hydrotechenvironmental.com 02/20/08-Hiralkumar Patel. left message for Mr. Robins at Hydrotech. 02/26/08-Hiralkumar Patel. received call from Ms. Saha, project manager at Hydrotech. will submit work plan. Yash Saha Hydro Tech Environmental, Corp. Ph. (718) 636-0800 Fax (718) 636-0900 email: ysaha@hydrotechenvironmental.com 02/27/08-Hiralkumar Patel. received work plan from Hydrotech. abstract: - eight borings will be installed - four borings wil be convereted into permanent groundwater monitoring wells - borings will be installed to an anticipated depth of approx. 12 ft, refusal or groundwater table - two soil samples will be collected from each soil probe; deepest dry soil sample and sample with the highest PID - groundwater samples will be collected from soil boring, if contamination hit groundwater proposed boring locations are not in area where containation found during earlier studies. 02/28/08-Hiralkuamar Patel. sent site map with changes in proposed boring/well locations. asked Ms. Saha to submit revised work plan with modified map. spoke with Ms. Saha. she mentioned that they are planning to stick with 8 borings proposal from Langan. based on previous investigation reports, remove few boring locations from proposed plan. asked Ms. Saha to analyze groundwater for chlorinated compounds also as found some chlorinated compounds in previous study. also asked to trace end of floor drains at 420 Carroll street and to take soil/groundwater sample where floor drain ends (as found contaminated sludge in floor drain # 2). mentioned to Ms. Saha that proposed permanent well at location MW-4 is not necessary, but the department definitely requires soil and groundwater sample at boring SP#4 (at new location as shown in map) as it is downgradient from sump pit area (based on regional groundwater flow direction which is towards the west). sent another email to Ms. Saha with change in proposed boring/well locations. remove some proposed location, move some proposed locations and add some locations. asked to submit revised work plan by end of March 3, 2008. received revised work plan with following changes: - will install eight soil probes and one groundwater probe - if groundwater sample from probe found contaminated then covert boring to permanent well - will trace end of drains and will take soil samples at end of drains 02/29/08-Hiralkumar Patel. sent email to Ms. Saha and Mr. Katan, with work plan approval. asked to submit investigation report by April 4th, 2008. 03/20/08-Hiralkumar Patel. received call from Ms. Saha. they tried to install monitoring well near sump, but due to heavy rain they could not install. they will try next week. asked to extend deadline for report submission. approved Ms. Saha's request and asked to submit report by April, 14, 2008. 04/14/08-Hiralkumar Patel. received call from Ms. Saha. they finished investigation work except for one monitoring well at sump location. Ms. Saha mentioned that sump is filled with water and owner is waiting for tenant to empty that sump. asked Ms. Saha to contact owner regarding installation of well and submission of complete investigation report by next week. left message for Mr. Katan. 04/25/08-Hiralkumar Patel. received email from Ms. Saha. they have scheduled well installation next week and planning to submit complete report by May 10, 2008. sent email to Ms. Saha approving her request for deadline extension. 05/08/08-Hiralkumar Patel. received email from Ms. Saha. she will submit complete report by May 22nd, 2008. 07/01/08-Hiralkumar Patel. received investigation report from Hydrotech. abstract: - total of eight soil probes (SP-1 through SP-8) were installed - borings SP-1

430 CARROLL STREET (Continued) **S106704100**

through SP-4 were installed in 420 Carroll Street - boring SP-4 was installed in the vicinity of the inactive floor drain in the northeastern portion of the warehouse; end of this floor drain was traced and found to end at the city sewer line; due to proximity of the drain pipes to the main sewer line and building structures, no soil sample could be obtained from drain end (floor drain where found contaminated sludge during previous investigation) <---------- - soil probes SP-5 to SP-8 were installed at 430 carroll street - soil probe SP-8 was installed in the vicinity of the sump pit, located in the southwestern corner of the parking lot (where high VOC contamination found in groundwater, previous HTE-6 boring) <--------- - inactive floor drain indentified in the northern portion of the building during previous investigations could not be accessed due to debris, concrete rubble and a trailer in the vicinity - all soil probes were installed until clean soil or groundwater was encountered - soil probes SP-1, SP-2 and SP-7 were installed to a depth of 8 ft at which groundwater was encountered; soil probes SP-3, SP-4 and SP-8 were installed to a depth of 10 ft bg at which groundwater was encountered; soil probes SP-5 and SP-6 were installed to a depth of 12 and 13 ft respectively at which groundwater was encountered <-------- - no PID values found during soil probes - two deepest dry soil samples collected for analysis - one groundwater probe (GP-3) and three permanent 2-inch monitoring wells (MW-1, MW-6 and MW-8) were installed - MW-1 was installed to depth of 11 ft bg, MW-6 was installed to depth of 25 ft bg and MW-8 was installed to a depth of approx. 18 ft bg - no free product observed in any wells - wells and groundwater probes were sampled on following day - groundwater flow direction beneath the site is towards the West (map shows in northwest direction) <--------- - 16 soil (two from each borings) and 4 groundwater samples submitted for analysis - found SVOC contamination in all samples, but found high contamination in samples from borings SP-1 (at 2-4 ft), SP-3 (at 8-10 ft; highest) and SP-6 (at 6-8 ft) - highest SVOC contamination found in sample from 8-10 ft from soil probe SP-3 ----------SP-3 (at 8-10 ft bg)----------limit
Naphthalene----------35,000----------13,000
Phenanthrene----------130,000----------50,000
Benzo(a)anthracene----------7,100----------224
Chrysene----------28,000----------400
Benzo(b)fluoranthene----------41,000----------1,100
Benzo(k)fluoranthene----------31,000----------1,100
Benzo(a)pyrene----------1,400----------61 - found Naphthalene contamination in groundwater samples from wells MW-6 (290 ppb) and MW-8 (179 ppb) <---------- summary of all avilable reports: - abandoned gasoline tank at 420 Carroll street - found contaminated sludge in floor drain #2 in 420 Carroll street during investigation in 1999 - found SVOC contamination in samples HTE-6, HTE-7 and HTE-8 during investigation in 2005 - found VOC contamination in groundwater from boring HTE-6, which was taken near waste oil AST location, in 2005 - found SVOC contamination in samples during recent investigation in 2008 - as per boring logs, found fill material in all boring logs - during recent investigation in 2008, found groundwater flowing towards the West (map shows in northwest direction) - based on recent groundwater flow direction, wells MW-6 and MW-8 are located at upgradient edge of the site, where Naphthalene contamination found - well MW-1 is located at downgradient edge of the site and no contamination found in this

430 CARROLL STREET (Continued) **S106704100**

well; MW-1 is also downgradient from previous waste oil tank/sump pit location where high VOC contamination found in groundwater in 2005 07/02/08-Hiralkumar Patel. discussed with DEC Austin. based on previous and current investigation reports and based on location of the site (in industrial area), Austin asked to close the case. case closed. sent NFA to Mr. Katan. letter emailed to Mr. Katan and Yash. **see edocs on brownfield case #: C224118 for previous reports. reports included in BCP application.**"

Remarks: "Phase 2 on the site found to areas with free- product (petrolium). Floor drain contamination and did a subsurface boring near an above ground tank found contam. there also.. Historical spill."

Site Description:	Location: The site is located at 365 Bond Street, Brooklyn, Kings County. The site is south of the intersection of Bond Street and First Street. It is bounded to the northeast by First Street, to the southeast by the Gowanus Canal, to the southwest by Second Street and to the northwest by Bond Street. Site Features: The site is 2.066 acres in area. The former vacant lot is currently being re-developed with a 12-story mixed use commercial and residential building. Current Zoning and Land Use(s): The site is zoned as M1-4/R7-2, a Special Mixed Use District comprised of light industrial, commercial and community facility (residential) uses. The site is bounded to the north by 1st Street across which is located a BCP site, to the east by the Gowanus Canal, to the south by 2nd Street across which are located three-story residential buildings and one- and two-story commercial facilities, and to the west by Bond Street across which are located three-story mixed-use commercial and residential buildings. Past Use of the Site: Past uses of the site include oil terminal (1886 through 1939); a building materials warehouse (1886 through 1915); a lumber company (1939); a paper products warehouse (1950); an electric wire and cable company (1969); and a warehouse (1977 through 1986). Other recorded uses of the site include an automobile storage and repair facility, and a dry cleaning facility. The previous owner performed the Phase I and the Phase II Environmental Site Assessments in 2004. Site Geology and Hydrogeology: The site is underlain by an approximately 5.5- to 13-foot thick layer of miscellaneous fill material that is underlain by a 5- to 8-foot thick continuous clay confining layer. Groundwater is approximately 2.5 to 10 feet below ground surface (bgs). Due to the site's proximity to the Canal, groundwater flow is tidally influenced but generally flows to east/northeast. The clay confining unit is located approximately 9 feet to 10 feet bgs and separates the shallow aquifer from the lower groundwater unit.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, arsenic, lead, barium, mercury, xylene, trichloroethene (TCE), propylbenzene, tetrachloroethylene (PCE), benzene, phenol, n-propylbenzene, isopropyl benzene in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil is being managed under a Site Management Plan. Groundwater contamination is nominal and will improve since the removal of contaminated soil is completed.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 478842
Site Description: Location: The site is located at 365 Bond Street, Brooklyn, Kings County. The site is south of the intersection of Bond Street and First Street. It is bounded to the northeast by First Street, to the southeast by the Gowanus Canal, to the southwest by Second Street and to the northwest by Bond Street. Site Features: The site is 2.066 acres in area. The former vacant lot is currently being re-developed with a 12-story mixed use commercial and residential building. Current Zoning and Land Use(s): The site is zoned as M1-4/R7-2, a Special Mixed Use District comprised of light industrial, commercial and community facility (residential) uses. The site is bounded to the north by 1st Street across which is located a BCP site, to the east by the Gowanus Canal, to the south by 2nd Street across which are located three-story residential buildings and one- and two-story commercial facilities, and to the west by Bond Street across which are located three-story mixed-use commercial and residential buildings. Past Use of the Site: Past uses of the site include oil terminal (1886 through 1939); a building materials warehouse (1886 through 1915); a lumber company (1939); a paper products warehouse (1950); an electric wire and cable company (1969); and a warehouse (1977 through 1986). Other recorded uses of the site include an automobile storage and repair facility, and a dry cleaning facility. The previous owner performed the Phase I and the Phase II Environmental Site Assessments in 2004. Site Geology and Hydrogeology: The site is underlain by an approximately 5.5- to 13-foot thick layer of miscellaneous fill material that is underlain by a 5- to 8-foot thick continuous clay confining layer. Groundwater

365 BOND STREET (Continued) **S106720972**

	is approximately 2.5 to 10 feet below ground surface (bgs). Due to the site's proximity to the Canal, groundwater flow is tidally influenced but generally flows to east/northeast. The clay confining unit is located approximately 9 feet to 10 feet bgs and separates the shallow aquifer from the lower groundwater unit.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, arsenic, lead, barium, mercury, xylene, trichloroethene (TCE), propylbenzene, tetrachloroethylene (PCE), benzene, phenol, n-propylbenzene, isopropyl benzene in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil is being managed under a Site Management Plan. Groundwater contamination is nominal and will improve since the removal of contaminated soil is completed.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 478842
Site Description: Location: The site is located at 365 Bond Street, Brooklyn, Kings County. The site is south of the intersection of Bond Street and First Street. It is bounded to the northeast by First Street, to the southeast by the Gowanus Canal, to the southwest by Second Street and to the northwest by Bond Street. Site Features: The site is 2.066 acres in area. The former vacant lot is currently being re-developed

365 BOND STREET (Continued) **S106720972**

with a 12-story mixed use commercial and residential building. Current Zoning and Land Use(s): The site is zoned as M1-4/R7-2, a Special Mixed Use District comprised of light industrial, commercial and community facility (residential) uses. The site is bounded to the north by 1st Street across which is located a BCP site, to the east by the Gowanus Canal, to the south by 2nd Street across which are located three-story residential buildings and one- and two-story commercial facilities, and to the west by Bond Street across which are located three-story mixed-use commercial and residential buildings. Past Use of the Site: Past uses of the site include oil terminal (1886 through 1939); a building materials warehouse (1886 through 1915); a lumber company (1939); a paper products warehouse (1950); an electric wire and cable company (1969); and a warehouse (1977 through 1986). Other recorded uses of the site include an automobile storage and repair facility, and a dry cleaning facility. The previous owner performed the Phase I and the Phase II Environmental Site Assessments in 2004. Site Geology and Hydrogeology: The site is underlain by an approximately 5.5- to 13-foot thick layer of miscellaneous fill material that is underlain by a 5- to 8-foot thick continuous clay confining layer. Groundwater is approximately 2.5 to 10 feet below ground surface (bgs). Due to the site's proximity to the Canal, groundwater flow is tidally influenced but generally flows to east/northeast. The clay confining unit is located approximately 9 feet to 10 feet bgs and separates the shallow aquifer from the lower groundwater unit.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, arsenic, lead, barium, mercury, xylene, trichloroethene (TCE), propylbenzene, tetrachloroethylene (PCE), benzene, phenol, n-propylbenzene, isopropyl benzene in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil is being managed under a Site Management Plan. Groundwater contamination is nominal and will improve since the removal of contaminated soil is completed.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

DEC Memo:	"CSL has been sent to: Joseph Fillips P.O.Box 451 New York, NY 10028-0018 YK. 10/18/04. Paul Casowitz (212-421-2150)an attorney for Mr. J. Fillips called and informed that he is a contact person for this case. And a formal letter in response to our CSL will be sent soon. Y.K. 08/30/05: I attempted to return Paul Casowitz's phone call. His message stated that his client would be filing a brownfields application to handle all the environmental concerns. I will check on this. Steve Scharf Pcasowitz@sprlaw.com Paul Casowitz Sive Paget & Riesel, P.C. 460 Park Avenue New York, NY 10022 AKRF Inc. (Ally, King, Rosen and Fleming) will be consultant submitting application. Toll Brothers Inc., is buying the property. description: Phillips Bros is a trust, the purchase money is going mostly into escrow until the environmetnal issues are resolved. site is on the erie basin of the Gowonus canal. There was some free product identivied in the due diligance environmental sampling. Sampling was done by Petroleum Tank cleaners (718)624-4842. S. Scharf 09/07/05 Sent the following e-mail to Paul Casowitz 2/28/06- I am following up on 365 Bond Street. You were going to get back to me with regard to the open spill, spill No. 0407393, on the property and whether your client was going to file a Brownfields application. thanks Steven M. Scharf, P.E. Reply: Steven, My client is the owner--Toll Bros is the contract vendee, they may have closed on title, I am not sure. Toll Brothers filed the BCP application for the site. I am away on vacation from 3/1-8--let me know if you have an application from Toll Bros. Of course in real estate, one never knows the name---special purpose entities being the rule. The BCP group should be able to advise you by the site location.- Paul Casowitz-Sive Paget & Riesel, P.C., 460 Park Avenue New York, NY 10022 03/02/06: Copy of E-mail to Paul Casowitz: Paul, What I'm being told is that, under the NYS Navigation Law (Article 12), the owner at the time (your client) of

365 BOND STREET (Continued) **S106720972**

the reported spill is responsible for remediation of the discharge. thanks, Steven M. Scharf, P.E. greater than greater than greater than Paul Casowitz 3/2/2006 9:44:11 AM greater than greater than greater than Steve, Good---I assume any issues re the spill will be addressed to the applicant. Paul: pcasowitz@sprlaw.com From: Steven Scharf [mailto:sxscharf@gw.dec.state.ny.us] Sent: Thu 3/2/2006 9:33 AM To: Paul Casowitz Subject: RE: 365 Bond Street, Brooklyn, Spill no 0407393 Paul, FYI, A BCP application, App. No. C224116, was processed on 6/7/05. Thanks: Steven Scharf, P.E. NYSDEC refer to John Grathwol. Working on brownfield. S. scharf Previously assigned to S. Scharf and J. Grathwol in Albany office. 10/11/06 - Austin - Reassigned from Central Office staff to Piper, for follow up and closure - end Due to rezoning issues. the applicant withdrew the BCP application in December 2006. 12/08/2008: This spill case was transferred to A. Doronova. AD From now on the progress on this case should be tracked under spill case No.0400876. Toll Brothers is potential buyer who will redevelop the site. AD 04/2010: This site was listed as a part of Gowanus Cannal to EPA's Superfund Program. AD 04/29/2010: Received an e-mail from Mr. Yudelson (attorney for Toll Brothers) saying: Ainura This email is to confirm that I have met with EPA and EPA indicated they will not be in a position to determine what, if any, remedial activities they will require at the Bond Street properties regarding the Superfund Site until the fall. I expect to meet with them again and will inform you if anything changes. Dave (917)295-6449 06/2010: Called and spoke with Mr. Yudelson. He told me that Toll Brothers is no longer interested in buying the site, after it was listed as a Superfund site. Mr. Yudelson gave me a contact info in EPA: Mr. Brian Carr, phone: (212)637-3170. AD 07/26/2010: Called and left a message to D. Yudelson. AD 07/28/2010: Called and left a message to Mr. P. Casowitz - attorney for Mr. Joseph Phillips. Later received a call from D. Yudelson. He told me that the site is owned by Mr. Phillips and Citibank. The site is currently for sale, and Mr. Yudelson is representing a potential buyer. He is going to meet with Mr. Phillips regarding the site cleanup and will contact us later with the results. AD 08/04/2010: Called and spoke with Mr. Yudelson. He gave me a contact info of Mr. Niel Dorman (212)753-7500 - attorney for Mr. Phillips. Will call him. AD 12/2/11 - Austin - Received call from Craig (917-952-8216), an independent consultatnt, who wished to know who the DEC project manager was for this spill report. I provided him DEC Doronova's name and phone #. He indicated that he was working with Dave Yudelson on this site, onbehalf of a new buyer (who, according to Craig, was a different buyer than was prevously involved with Mr. Yudelson). - end 12/02/2011: Received a messade from Craig Puerta, phone: 917-952-8216. Called and spoke with him regarding site remediation. Mr. Puerta said that they plan to do remedial excavation instead of soil stabilization as per old approved work plan. Requested him to submit revised work plan for review. AD 01/06/2012: Called and spoke with Mr. Puerta. He told me that his company did not signed the contract yet with the potential buyer, so they are waiting for buyer's decision. Called and spoke with D. Yudelson. He informed me that he is working for the potential buyer, who wants to buy all three properties, previously known as Tall Brooklyn Project and included three spill sites: # 0407393, # 0501697 and # 0400876. Mr. Yudelson said that the contract will be probably singed within next weeks. Mr. Graig Puerta is working with Mr. Yudelson and will be performing environmnetal services to the buyer. Mr. Yudelson will contact me, when contract will be finalazied. AD

365 BOND STREET (Continued) **S106720972**

08/22/2012: Received the following e-mail from D. Yudelson: Ainura - This project is under consideration and I represent the prospective purchaser, Lightstone Group. The attached is proposed additional delineation sampling with an objective of amending the RAP s for excavation like at 400 Carroll. I believe if this is a go work will start this winter. We are coordinating with EPA and NYC as well. I will keep you posted on the progress and let me know if you have questions. Dave From: David Yudelson Sent: Monday, July 23, 2012 10:19 AM To: Cole, Daniel (DanielCo@dep.nyc.gov) Cc: Steve Ciambruschini (sciambruschini@Langan.com); Christopher McMahon (cmcmahon@Langan.com) Subject: Need to schedule a meeting asap Dan Attached are compilations of all existing data and proposed sampling locations. Soil gas has been added on each site and additional delineation is proposed. There is also an approved DEC work plan for 400 which provides for excavation. I need to know if the additional sampling is adequate as we are doing it asap during due diligence. Dave DL documents into eDocs. AD 10/22/2012: Called and spoke with D. Yudelson. He said that they planning to start additional investigation soon, and that a work plan for such investigation will be submitted in one week. AD This site entered into BCP agreement and is managed by Albany. Site's PM is John Grathwol. 12/5/13: Under BCP site code C224174, IRM Work Plan is approved to be release for public comment. Citizen Participation Plan is under Department review. A public availability session will be held during the public comment period. It is anticipated that the spill contamination will be removed during this IRM. The 2014 Decision Document will address the remaining, if any, contamination. (Grathwol) 11/6/15: Department approved Final Engineering Report and executed the Certificate of Completion for the site owner. Spill closed."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	TANK 2
Tank Id:	252167

Equipment Records:

J00 - Dispenser - None
C01 - Pipe Location - Aboveground
G01 - Tank Secondary Containment - Diking (Aboveground)
L02 - Piping Leak Detection - Interstitial - Manual Monitoring
E01 - Piping Secondary Containment - Diking (AG only)
I05 - Overfill - Vent Whistle

ENTERPRISE TRANSPORT (Continued) **A100393077**

A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
K01 - Spill Prevention - Catch Basin
F00 - Pipe External Protection - None
H02 - Tank Leak Detection - Interstitial - Manual Monitoring

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Temporarily Out of Service
Pipe Model:	Not reported
Install Date:	05/01/2013
Capacity Gallons:	275
Tightness Test Method:	NN

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 11/15/2005: Lead transferred to Joe White as part of the Spill Initiative Project. 12/08/2005: Joe White spoke sith James Merlo, the NYC Schools spill coordinator, who will be sending the closeoout report for this spill. 1/9/2006: Mr Merlo indicated that this property is not managed by the NYC Division of School Facilities but is privately owned. 1/23/2006: Joe White sent a letter to school superintendent requesting additional information. A copy of this letter is on eDocs files system for our records. 1/27/2006: Joe White

PUBLIC SCHOOL (Continued) **S106469867**

received a call from the school maintennce, Vinnie Peters (718-923-1650) who indicated that they had no records for the spill and the contact number for the Berger firm that did the work did not work. However, Vinnie indicated that there is no obvious problem currently at the site and no work is ongoing at present to address any problem and they are not aware of any problem. This spill was addressed in the past and work concluded. Joe White will follow up to see if we can get something from the Berger firm to document closure. 11/16/06 - Austin - Reassigned to Rahman for followup/review - end 11/19/09 Letter was sent to(asking pertinent documents) P.S. 372, The Children s School 512 Carroll Street Brooklyn, NY 11215 Attn: Lorraine Boyhan(sr) 12/14/09 Rec'd letter requesting extension of report submittal.Letter is from Wingate,Kearney & Cullen,LLP.(sr) 04/5/10 Rec'd email from Katie Coon.She is with Wingate,Kearney & Cullen.She has requested the copy of the Phase II report to the tenant.Once she receives the report, she will forward it to DEC.(sr) 5/30/14 - Austin - Spill transferred from Rahman to Mahat for followup - end 11/5/14: Mahat e/c : An email was sent out to Mr. Munendra Sharma inquiring recent data/report on the spill case. 10/6/2016: Rashad Spill will be reassigned to DEC Omar from DEC Mahat. 11/2/2016: Rashad 512 Carroll Street has alternate addresses of 512-522 Carroll Street and 2-34 Denton Place. No additional spills found, PBS#2-346667 found for site there is a 5000 gallon #2fuel oil UST converted to non regulated use. Various letters found in D2. 11/8/2016: Rashad Sent email to Ms. Guterman: I was previously reassigned a spill from 512 Carroll Street in Brooklyn for P.S 372. I have found a Phase 1 for this site prepared by Louis Berger and I am looking for the Phase 2 report, as well as any documentation stating if further work was completed. Any additional information on this site would be much appreciated so that I may close out this older spill. Thank you. Review of paper documents yielded Phase 1 and Phase 2 reports, they have been uploaded to D2. Brief Review of Phase 1 is as follows: The complex will be comprised of three buildings, the church, the school building, and the recreational center. The site consists of a two story brick building with a basement and has been used for educational and recreational purposes since being built in the 1920s. To the east of the site is a car wash and auto repair facility. Also a Con Ed facility is located adjacent to the south of the site. The mail school and church use a 5000 gallon #2fuel oil UST. One 10,000 gallon AST is located in the main building. Review of Phase 2 is as follows: The investigation consists of three temporary well points, three soils borings along the perimeter, and 2 borings in the basement. Groundwater was encountered in soil borings from 14-18ftbg. SB-04 (3-4ft): No VOCs or SVOCs were detected in soil sample. SB-05 (0-3ft): No VOCs were detected, SVOCs were detected slightly above standards in soil. SB-01 Water Sample: Benzene-229ppb, toluene-1570ppb, ethylbenzene-853ppb, xylene-1020ppb, 1,2,4 trimethylbenzene-337ppb, naphthalene-3930ppb. SB-02 Water Sample: Benzene-8.65ppb, Naphthalene-393ppb. SB-03 Water Sample: Benzene-21.9ppb, toluene-61.3ppb, Ethylbenzene-67.7ppb, Naphthalene-921ppb Sheen and odor were observed in all three groundwater wells. The report concludes that there is petroleum contamination in soil and groundwater, however the source could not be determined. They recommend construct a vapor barrier to prevent migration of VOCs from soil gas into basement . 11/18/2016: Rashad Received email from Lee Guterman yesterday: In response to your request, we have pulled the attached information from our project

PUBLIC SCHOOL (Continued) **S106469867**

files. These documents include a Phase II Environmental Site Investigation report for the site, an IAQ Report, and a letter regarding suitability for occupancy of the building basement. Our records indicate that this information was shared with the property owner back in 2004. We would recommend that you reach out directly to the landlord if you have any further questions, since he would be better positioned to address any work that may have been done after our involvement. Three files were attached to email. Files need to be reviewed. 11/17/17 - Obligado - spill transferred to Obligado from Omar as per Austin 1/17/2017 Austin This spill report is being transferred from Rashad Omar to Andre Obligado end. 12/19/2017 - Austin - Project transferred from Andre Obligado to Rick Lin - end"

Remarks: "LAB RESULTS BACK , 5 BORINGS, OBTAINED ELEVATED READINGS TYPE OF CHEMICALS FOUND IN SOIL, SEMIVOLATILES; IN GROUND WATER HAD VOC'S MAINLY DEALING WITH BTECHS ALSO SOME SEMIVOLATILES IN GROUNDWATER"

GOWANUS CANAL (Continued) **S119029086**

case closed."

Remarks: "The following information was received through the DEC website "Report an Environmental Violation Online" or sent directly by the complainant to an OPP dispatch mailbox: Who Did It: Farrara Brothers Building Materials. It is a concrete mixing and distribution plant located at 435 Hoyt St, Brooklyn, NY 11231 What Occurred: A hose leading from the concrete plant to the Gowanus Canal has been pouring brown liquid into the canal, concealed by a gravel barge moored next to the plant. The surface of the water is foaming slightly, and a particulate plume is extending away from the plant in all directions. Photographs available. When Did It Occur: First seen 12/29/2016 at 3PM, ongoing as of this writing 4:30PM on the same day. County: New York Municipality: Brooklyn Location Or Address: 435 Hoyt St, Brooklyn, NY 11231 How Did It Occur: Additional Details: I have photos of the silt plume and of the hose leading from the plant to the water. Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Site Description: Location: The property is an approximately 2.5 acre site located in a commercial/industrial area of Brooklyn at 153 2nd Street a/k/a 322 3rd Avenue. The Gowanus Canal is located adjacent to the site to the northwest. Site Features: A 24,200 square foot, three story vacant structure occupies the eastern portion of the site. The building has a basement floor that is a 13 foot thick concrete slab that extends below the water table. The remainder of the site is covered by the final site cover system. Current Zoning and Land Use: The site is currently inactive and is zoned as a manufacturing district (M2-1) by the City of New York. The property uses surrounding the site are primarily light industrial, with a small concentration of residential use. The closest residential properties are located approximately 300 feet to the northeast of the site near the intersection of 3rd Avenue and Carroll Street. The site is bordered to the north by a 60 foot wide filled-in canal (former 1st Street Basin), which is to be restored as part of the Gowanus Canal NPL site remedy. To the east is a storage facility, a Verizon truck depot is located south of the site, and the Gowanus Canal, which is approximately 100 feet wide, lies directly west of the site. Past Use of the Site: Sanborn maps dating back to 1886 indicate that the site was occupied by Nassau Sulfur Works and Smith and Shaw Mattress Materials and Paper Stock. In 1904, the property was transferred to the Brooklyn Rapid Transit R.R. Power Plant. Under their ownership, it appears that coal was delivered by water and transported beneath the site via coal tunnel. In 1938, the property was turned over to the Williamsburg Power Plant Corporation and used as a central power station. The property was transferred to the New York City Transit System in 1950, where it was used as an electrical sub-station and switching yard until 1996. Site Geology and Hydrogeology: The site is underlain by urban fill, generally to a depth of about 8 feet, but reportedly ranging to depths up to 24 feet in some areas. Below the fill is a layer of organic silt indicative of a historic wetland. The depth to groundwater ranges from about 7 feet to 20 feet with groundwater movement generally to the northwest toward the Gowanus Canal.
Env Problem: Prior to Remediation: The primary contaminant of concern is polychlorinated biphenyls (PCBs). The PCBs do not appear to be contributing to off site environmental impacts that require additional investigation or remedial action. The contaminants found in each media sampled (soil, groundwater and soil vapor) are

GOWANUS VILLAGE I (Continued) **S113401969**

summarized below: Soil: Only one post excavation sample (44 ppm PCBs) exceeded the 10 ppm remedial cleanup objective specified in the Decision Document. The levels of PCB contamination are high under the existing on site building, but the groundwater remedy (LNAPL collection system) will prevent its migration. Groundwater: PCB contaminated LNAPL exists under the existing on site building. The groundwater extraction well system will prevent LNAPL migration. Monitoring the groundwater monitoring well network will illustrate the remedy is protective of public health and the environment. Soil Vapor: The most significant detection was for tetrachloroethene (perchloroethene or PCE) detected at concentrations up to 1,260 ug/m3 along 2nd Street. Soil Vapor Intrusion evaluations is to be performed for on-site buildings before occupancy is permitted. Post Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCB compounds in soil, and PCB-containing oil atop the groundwater table. Remedial action resulted in attainment of the site specific cleanup objectives throughout the parcel, with all soil below two feet in depth containing less than 10 ppm PCB. The site is now covered with a cover system allowing for restricted residential use. Remaining contamination in soil, groundwater, and soil vapor, if any, is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Record Updated Date:	01/16/2018
Update By:	JXGRECO
Site Description:	Location: The property is an approximately 2.5 acre site located in a commercial/industrial area of Brooklyn at 153 2nd Street a/k/a 322 3rd Avenue. The Gowanus Canal is located adjacent to the site to the northwest. Site Features: A 24,200 square foot, three story vacant structure occupies the eastern portion of the site. The building has a basement floor that is a 13 foot thick concrete slab that extends below the water table. The remainder of the site is covered by the final site cover system. Current Zoning and Land Use: The site is currently inactive and is zoned as a manufacturing district (M2-1) by the City of New York. The property uses surrounding the site are primarily light industrial, with a small concentration of residential use. The closest residential properties are located approximately 300 feet to the northeast of the site near the intersection of 3rd Avenue and Carroll Street. The site is bordered to the north by a 60 foot wide filled-in canal (former 1st Street Basin), which is to be restored as part of the Gowanus Canal NPL site remedy. To the east is a storage facility, a Verizon truck depot is located south of the site, and the Gowanus Canal, which is approximately 100 feet wide, lies directly west of the site. Past Use of the Site: Sanborn maps dating back to 1886 indicate that the site was occupied by Nassau Sulfur Works and Smith and Shaw Mattress Materials and Paper Stock. In 1904, the property was transferred to the Brooklyn Rapid Transit R.R. Power Plant. Under their ownership, it appears that coal was delivered by water and transported beneath the site via coal tunnel. In 1938, the property was turned over to the Williamsburg Power Plant Corporation and used as a central power station. The property was transferred to the New York City Transit System in 1950, where it was

GOWANUS VILLAGE I (Continued) **S113401969**

	used as an electrical sub-station and switching yard until 1996. Site Geology and Hydrogeology: The site is underlain by urban fill, generally to a depth of about 8 feet, but reportedly ranging to depths up to 24 feet in some areas. Below the fill is a layer of organic silt indicative of a historic wetland. The depth to groundwater ranges from about 7 feet to 20 feet with groundwater movement generally to the northwest toward the Gowanus Canal.
Env Problem:	Prior to Remediation: The primary contaminant of concern is polychlorinated biphenyls (PCBs). The PCBs do not appear to be contributing to off site environmental impacts that require additional investigation or remedial action. The contaminants found in each media sampled (soil, groundwater and soil vapor) are summarized below: Soil: Only one post excavation sample (44 ppm PCBs) exceeded the 10 ppm remedial cleanup objective specified in the Decision Document. The levels of PCB contamination are high under the existing on site building, but the groundwater remedy (LNAPL collection system) will prevent its migration. Groundwater: PCB contaminated LNAPL exists under the existing on site building. The groundwater extraction well system will prevent LNAPL migration. Monitoring the groundwater monitoring well network will illustrate the remedy is protective of public health and the environment. Soil Vapor: The most significant detection was for tetrachloroethene (perchloroethene or PCE) detected at concentrations up to 1,260 ug/m3 along 2nd Street. Soil Vapor Intrusion evaluations is to be performed for on-site buildings before occupancy is permitted. Post Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCB compounds in soil, and PCB-containing oil atop the groundwater table. Remedial action resulted in attainment of the site specific cleanup objectives throughout the parcel, with all soil below two feet in depth containing less than 10 ppm PCB. The site is now covered with a cover system allowing for restricted residential use. Remaining contamination in soil, groundwater, and soil vapor, if any, is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 12/9/03 MT////TRANSFERRED FROM TIPPLE TO ROMMEL 5/30/2006 - Mike - Could not find a phone number for the site. From property shark will be sending a letter to the notice address. 7/26/06 - Mike - No response came from letter, still unable to find contact numbers for the property. 10/2/09 - Austin - Spill transferred from Albany staff to Ketani, for further investigation - end 10/8/09 - Raphael Ketani. Presently, there are no E-docs. The spill was reported on 9/4/01 as gasoline contaminated soil. The site is a one story warehouse. According to Property Shark, the prime address is 110 3rd Street. Alternate addresses are: 110-112 3rd Street and 106-108 3rd Street. The block and lot are 465 and 29. The property was built in 1931. The deed was transfered on 11/15/01 from Alfonso Figiolia to Gradler NY LLC, 18 Bergen Street, Brooklyn, 11201 and then to NYC Industrial Developement Agency, 110 William Street, Manhattan, 10038 on the same day. ACRIS has the date of multiple transfer as 1/30/02. There is no PBS registration. There is one document in the case file. It is the Preliminary Design for Application of Bioremediation and the Site Assessment Protocol and Design Remediation Work Plan dated 11/11/01 and produced by New York Petroleum & Drilling Corp. A previous investigation had revealed the presence of VOCs and SVOCs. The report states that there may be a leaking UST on site. During

WAREHOUSE (Continued) **S105142002**

this investigation, six borings were performed to 12 feet within the building footprint and the parking area. Groundwater samples weren't taken. The water table is at 3 to 12 feet below grade and the site elevation is 5 to 15 feet (placing the water table at sea level). The Gowanus Canal is 1,000 to the southeast. Twelve borings were planned for the latter investigation. The total depth of the borings was planned for 16 feet below grade. Both soil and groundwater samples would be taken. Bioremediation would be used to remove the residual soil oil contamination. I tried calling NYPDC at (800) 958-1941, but this number was no longer in service. I checked the New York Corporation database and found out that the company had been dissolved effective 7/29/09. I tried to find the NYC Industrial Developement Agency, but there was no such listing in the phone books or the internet. 12/9/09 - Raphael Ketani. I made an unannounced site visit. The actual location of 106 3rd Street was not clear. The street numbers on one side of the street in this part of Brooklyn are not coordinated with the street numbers on the other side. In other words, 99 3rd Street may be opposite 106 3rd Street. I entered a copier supply company building, TGI Inc. (see E-docs). This looked like a very new building. The outside was clean and the inside looked fresh. I met Steve Adler, the owner of the company (718) 237-0060, ext 1104. We went outside to look at the various lots and to try and figure out where 106 3rd Street could be. Mr. Adler explained that when he first bought his current property, the City sent him bills for several different addresses. He said he paid the bills, but he wasn't sure whether he owned these other properties. He added that the matter wasn't cleared up until after two years. He said that his company is at 116-120 3rd Street. He said that he owns this lot and that it was designated lot 33 after he bought the property. He said that it was split off from lot 29. He said that he joined a special development group called the NYC Industrial Development Agency. Mr. Adler added that he owns the building, but they own the deed to the land. He said that he currently owns several other buildings on 4th Street. I asked him whether part of his property is 106 3rd Street. Mr. Adler said that the addresses change every 20 feet. I asked him whether the fenced property next to the warehouse at 92 3rd Street is 106 3rd Street. He said that it could not be. He suggested that the property is at least part of the unpaved parking area that he leases partly and owns partly (see E-docs). I asked him whether the enclosed paved parking area is his property (see E-docs). He said that it definitely is, but the address is 116 3rd Street. We discussed the matter back and forth, but didn't come to a conclusion as to where 106 3rd Street was. I told him that I will do more research and try to figure this out. Mr. Adler said that he is going on vacation, but he will be back on January 22, 2010. He told me he will look in a book he has which contains documents regarding the property he originally purchased before selling it to the Industrial Development Agency. He added that there was an old warehouse on the site of his company, but it was torn down. He said that a pipe was discovered below ground, but it wasn't an oil pipe or a gas pipe. He also said that the name New York Petroleum and Drilling Company sounded familiar. He said that there was an environmental investigation, but no tank was found. Mr. Adler finished by saying he will look for a soil boring report in his book of documents and let me know whether he finds anything. I thanked him and the visit ended. 12/11/09 - Raphael Ketani. I did some more research via Property Shark and ACRIS. I discovered that the lot containing 106 3rd Street comprises

WAREHOUSE (Continued) **S105142002**

both the unpaved parking area and the enclosed paved parking area. I will send a letter to the Industrial Developement Agency requesting a site investigation. 12/14/09 - Raphael Ketani. The letter to the NYC Industrial Development Agency went out today by regular mail. 12/30/09 - Raphael Ketani. A conference call took place between Krista Halpin, Assistant Vice President for Compliance, of NYC IDA (212) 312-3828, Austin George (intern for NYC IDA), and myself. The issue discussed was the letter that I had sent and who has liability for investigating and cleaning up the spill. Ms. Halpin stated that IDA is not responsible if the original investigation took place before the deed was transfered to IDA. Mr. George stated that the deed was transfered during November 2001 and the that the spill was reported on 9/4/01. Ms. Halpin stated that, therefore, IDA is not responsible and that Mr. Adler is. Ms. Halpin added that IDA only holds a nominal ownership of the deed for tax purposes and benefits to the leasee, Mr. Adler. I told her that IDA is listed as the sole deed holder in ACRIS. She said that Mr. Adler is responsible. I told her that I will send a letter to Mr. Adler. I asked her what his company is called. She said it's T & G Industries, 120 3rd Street, Brooklyn, 11231. I sent the letter to Mr. Adler by regular mail and by certified mail. 1/4/10 - Raphael Ketani. The green return card was received today with a signature belonging to Beth(?). Mr. Adler (cell (917) 548-6336) left me a message that he would like to discuss the spill with me. However, he is out until January 22. So he asked that I call him back on this date. 1/6/10 - Raphael Ketani. Mr. Alder called me today. He said that he received DEC's 12/30/09 letter. He reminded me that he was still on vacation and would be so until 1/22/10. He asked for an extension regarding the deadline in the letter. I gave him until 2/21/10 to start the soil investigation. Later, Ms. Halpin called to confirm the contents of my conversation with Mr. Adler. I explained that he had until 2/21/10 to either produce documentation regarding the results of the subsurface investigation, or to conduct a new investigation. She asked that the NYC IDA be kept in the loop. 1/25/10 - Raphael Ketani. I spoke to Mr. Adler and reminded him that the DEC was still expecting him to either submit the old subsurface investigation report or to commence a new investigation. He said that he will get back to me later this week to let me know what he plans to do. 1/27/10 - Raphael Ketani. Ms. Halpin called to ask whether DEC gave Mr. Adler a one month extension for starting a subsurface investigation. I told her that we did and that he has until 2/21/10 to either find documentation from the previous and send it to DEC, or to start a new investigation. 2/4/10 - Raphael Ketani. The appointment for today took place as scheduled. I met Mr. Adler. He showed me a Phase I report, a Phase II report, a proposal for bioremediation, and other documentation pertaining to the original environmental evaluation of the site. I explained to him what the soil analytical results meant. He made copies of the documents for DEC. Then I left the site. I reviewed the Phase I report, the Phase II report, the Preliminary Design for Application of Bioremediation plan, the Site Assessment Protocol and Design Remediation Work Plan, and an unnamed report dated 10/7/01. The subject area comprised a vacant lot and an adjacent brick building at 106-110 3rd Street. The areal extent of the property is 80 feet by 80 feet (Preliminary Design for Application of Bioremediation plan). According to the documentation that I reviewed, a UST was suspected to be present under the building, but was never found. According to the Phase I report, the building was used as a garage and a car

WAREHOUSE (Continued) **S105142002**

repair shop. The vacant lot had been used as a junk yard for a number of years. A total of six soil borings were conducted in the vacant lot and the building next door. According to the soil analytical results in the Phase II report, there were few exceedences of the latest TAGM 4046 soil RSCO limits. These exceedences were among the benzo series analytes and a couple of their associated combustion products. There were no VOC hits from the soil samples collected on 8/8/01. The second set of three borings were conducted on 9/12/01 and soil samples were collected. The SVOC results for B-1 were a little higher than those for the B-1 soil sample taken on 8/8/01. There were also 11 VOC hits for these the second set of soil samples. However, the hits were very low. The Preliminary Design for Application of Bioremediation plan contained a diagram that showed the groundwater flow to be to the west. Boring B-5 was depicted in the diagram, but this is the only instance where the boring appears in any of the documents. The Site Assessment Protocol and Design Remediation Work Plan states that 12 borings will be performed. However, there is no additional documentation that indicates these borings were ever done. The collection of documents does not provide any further information that would be helpful regarding understanding the subsurface conditions. From my review, it appears that a groundwater sample was never taken, even though the drilling company was able to reach the water table. The water table is believed to be at the same elevation as the Gowanus Canal which is 1,000 feet to the southeast. Soil treatment was proposed, but there is no documentation indicating that it ever took place. Lastly, it is not known where the 6 borings were physically situated within the boundaries of the property comprising 106-110 3rd Street. Only six (6) soil borings were performed, but the area being investigated was relatively small with no known history of USTs, though one UST was originally suspected to be present. The small number of borings was probably the minimum necessary to get a fair idea about any contamination in the subsurface. Also, Mr. Adler had stated during my initial site visit on 12/9/09 that the pipe that was discovered below ground was not an oil pipe. The soil analyticals were almost entirely below TAGM and the exceedences were not deemed significant enough to warrant another investigation. About 9 years have passed since the spill was discovered. Natural attentuation has probably reduced the contaminant concentrations further since both the original vacant lot and the site which is now a vacant lot (but which used to contain a building) have been subjected to precipitation and soil water percolation. I have determined that the investigations that were performed have reasonably proven that there is no threat to people or the environment. Therefore, I am closing the spill case."

Remarks: "contaminated soil results"

RS ORIGINAL SPILL AT THIS SITE ASIGNED TO DEMEO... SEE SPILL # 0106619 11/17/03 TJD Consolidation of open spills at site. Spill 0106619 closed and cross referenced to Spill 0106920. 12/9/03 TJD Spill reassigned Demeo >>> Rommel. 6/28/04-Vought-Received call from Billy Masonette (New York Petroleum and Drilling 646-523-1646) and according to Billy all onsite USTs were for fuel oil despite PBS registration showing gasoline USTs. Vought returned call and he will recommend site assessment for gasoline. Results of fuel oil and gasoline will be submitted. Masonette will call back DEC by 7/2/04 with further action. 9/8/04-Vought-Spoke to Masonette and fuel oil USTs and contaminated

64-66 4TH STREET (Continued) **S105135174**

soil were removed from site. Masonette stated that gasoline UST was abandoned in place. Vought required submission of soil samples taken from at least 10' below tank inert on all four sides of tank. Vought stated soil samples may also be required from pump island and remote fill location. One groundwater sample will be required from tank location. 7/21/05-Vought-Received Tank Closure Report (Phase II) from Earth Scan (Billy Masonette). Vought forwarded report to Valerie Moore (DEC Albany) project manager via interoffice mail. 09/07/05: Change of DEC contact. Eaton/Albany reviews the file. There are two documents in the Phase II report. The first document for 66th 4th Street indicates that ONE 550 gallon UST and 20 yards of contaminated soil were removed from the property, near the Front Driveway. The liquid contents of the tank were pumped out, the tank was removed and cut up for disposal, fill lines and pumps were discontinued and removed. TWO hydraulic lift pistons were also excavated and removed from the back of the storage area. End point soil samples were collected and analyzed for VOCs and SVOCs. No levels above recommended soil cleanup objectives were found. Information on the size and type of tank correlates with initial entry in DEC remarks and confirms 550 gallon tank. The second document for 64th 4th Street indicates that 5 soil samples and one groundwater sample were collected from the southeast corner of the property. The report indicates there are or were USTs in the southeast corner of this property. The borings were advanced by geoprobe, soil samples collected from 8 to 12 feet were analyzed for VOCs and SVOCs. Water was encountered at around 15 feet, one sample collected and analyzed for VOCs and SVOCs. No levels above recommended soil cleanup objectives were found, and no levels of contamination were found in the groundwater. 09/12/05: Requested boring logs, GPR information, and copy of Phase I report from Billy Maysonet. DE 10/11/05: Reports received: July 2, 2001 Phase I, GPR report, Tank concrete slurry in place affidavit, and boring logs. 10/17/05: The USTs in the southeast corner of the property are 4 1080 tanks (3 gas, 1 diesel). The tanks were closed in place in June of 2000. The tanks were filled with concrete slurry, four 2 vents were removed and 3 dispensers were removed. This information supplements the second document found in the Phase II, confirms the location and the tank closure. DE 11/14/05: Information submitted indicates that the concerns identified have been investigated, the tanks closed, and contaminated soil removed. Spill closed."

Remarks: "SOIL SAMPLES SHOW CONTAMINATION AT SITE. THERE WERE UNDERGROUND GASOLINE TANKS AT ONE TIME. IT IS SUSPECTED THAT THE FUEL OIL CAME FROM THE GOWANAS CANAL. ADDITIONAL SOIL AND GROUNDWATER TESTING TO FOLLOW."

Site Description:	This site was formerly owned by the Brooklyn Union Gas Company, which operated a coal gasification plant. It is believed that products from previous operations may have been disposed at this site. The site is currently vacant and located in a mixed industrial/residential area. Single family homes and a concrete product manufacturing plant are adjacent to the site. At one time, residential housing was proposed for construction at this location. The lot is littered with debris piles, cinder blocks, old lumber and at least fourteen 55-gallon drums embedded in concrete. The NYSDEC has received the final Phase II site investigation report, but is awaiting the analytical results of the sampling of the 55 gallon drums disposed on site. These drums were sampled separately in December 1990. Analytical data for the 3 drums sampled in 1990 revealed that the waste present in the drums originated from a petroleum hydrocarbon source and is not classified as hazardous waste.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed E2MIS notes: Clean Ventures was dumping in Brooklyn Flush Facility and had dumped 10 gallons #6 fuel oil. Immediately shut down facility. There was no discharge to city sewer. Mobilizing personnel to do clean up. Currently, investigation underway as to where the oil came from. The structures cleaned were TMs or vaults - non-hazardous waste. 3 samples taken PCB, oil ID and flashpoint. 1 sample rear of truck. 1 solid sample from pits from solid debris area. Found sewer discharge area clean. No contaminated product has entered the treatment plant. Update 5/11/00, 2230 hrs - Clean Ventures has arrived on location. Clean up crew on wasy. Update 5/11/00, 2255 hrs - Clean Ventures driver indicated that he started off the day with a clean vehicle and as per his non-haz paperwork he cleaned the following 4 structures in Yonkers before dumping at 3rd Avenue Yard: 1 - tm5509 - Sawmill River Rd. n/o Delaware Ave. 2 - vs282 - Nepperhaw Ave. 3 - tm4085 - 937 Sawmill River Rd n/o Odell Ave. 4 - v4607 - Nepperhaw Ave. s/o Tompkins Ave. Update 5/12/00, 0335 hrs - Clean Ventures removed 12 of water and any visible signs of oily debris and cleaned side walls of all settling pits. They are now in the process of setting up to remove solid debris from dumping pit. 2 of the 5 samples being analyzed at Chem Lab for oil ID have been identified as a light fuel oil such as home heating oil. Update

THIRD AV YARD (Continued) **S104652697**

Remarks: 5/12/00, 0730 hrs - Clean up completed by vendor (Clean Ventures). Solid debris will be disposed as hazardous for lead and asbestos. Update 5/12/00 - PCB results all <1 ppm Flashpoint all >140 deg F" "contractor(clean ventures) working for con ed & dumped 10 gal of #6 fuel oil into the flush pit from one of their trucks - clean up pending clean up crew - no ref # yet "

FLUSHPIT 3RD AVE YARD (Continued) **S104880303**

Contact Name: STEVEN ROMERO
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL DEC Investigator Notes: Sam Arakhan spoke to Ed Radtke at 4:15pm. Second sample was collected and sent to CHem Lab for re-analysis. Results expected tonight. Original sample was a composite taken from drying bin prior to disposal. This load has been segregated on-site awaiting confirmatory samples. Referred to DSHM-Sam Arakhan for follow-up 11/9/00. e2MIS Notes: Routine soil sample taken on 11/7/00 from drying bin at 3rd Ave Flush Pit came back as 18,000ppm PCB. At this time source unknown and amount unknown. Contained to drying bin. R. Saladino notified the following: Bill Wallace(ERT), M. Saladino (EH&S), Ed Radtke(EH&S), G. Pennecke(EH&S) and E. Dessen(Law Dept.). E2MIS report turned in by R. Saladino at request of Bill Wallace. Flush pit has been closed. Due to high PCB count, Chem Lab will resample solids and retest. Update 1440: B. Cohen of EH&S requested that Chem Lab take 20 grab samples of soil in drying bin. Update 11/8/00 1900hrs: Chem Lab took 20 samples from drying bin. Drying bin area was isolated where suspected high PCB's are. Advised EPA and DEC of situation and plans. E. Radtke advised us to wait for all results prior to disposal and cleanup. Update 11/9/00 1615hrs: LSN 00-10624-Results 8048ppm (the reported PCB result is the average of four sample analysis). Cleanup to be performed as >500ppm PCB. Steve Ferrone secured TSDF and rolloffs for waste. Grid maps were made of contaminated areas. Chem lab technician took 25 pre-wipe samples of dumping pad. Dumping pad area and backhoe were covered with tarpaulin. DEC Sam Arakhan inspected site and reviewed our action plan. Sam would like to be present when we drum the first four feet of debris which is suspect for the high PCB concentration. Present were the following:Ed Radtke, G. Pennecke, R. James, R. Saladino, C. Fernandez, V. Devillez. Cleanup will commence tomorrow pending weather conditions. Barry Cohen provided a sampling/disposal plan. This plan was faxed to Sam Arakhan. Update 11/10/00 1930hrs: Drummed first four feet of debris pile. This was a total of 16 drums. All drums were individually tested. Drums were labeled and marked pending analysis. DEC Sam Arakhan visited site during drumming operation. Sam instructed us that the drums could remain on-site at Flush Facility pending results for proper disposal. Four 20 yard lined dumpsters were loaded with the balance of debris from the drying bin area. 3 of the dumpsters were placed adjacent to the north garage. 1 was placed inside the north garage. All dumpsters were properly labeled and caution tape was placed around the area. Chem Lab took all required samples from each dumpster. Results have been received for the wipes which were taken of the dumping pad. All 25 wipes passed. Update 11/11/00: Chem Lab results have been posted for solid debris from dumpster #20015, LSN 00-10792, all six samples are non-hazardous for PCBs. Update 11/11/00: 2 additional dumpsters were loaded with solids from the west dumping pad. The dumpsters were labeled and placed inside the north garage. Teh drying bin area was double washed with detergent and rinsed, using a pressure washer and Bio Gen cleaner. Twenty-one post-wipe samples of the drying bin area were taken by chem lab. Dumping pads and facility backhoe(91202) were double washed and rinsed. All liquids were removed as hazardous for PCBs by tanker from Clean Harbors, manifest NYG1703439. The liquids were being shipped to Spring Grove Resource Recovery, Cincinnati, OH 45232. Nine post-wipe samples were taken of backhoe. All work areas have been covered with plastic or tarpaulins pending the wipe results. The facility remains closed pending results and direction

DEC Memo:	"10/09/12-Hydroteck sent the site assessment report dated June 29/2012. Reviewed the report a total of four soil probes were installed during the investigation. SP-6 were installed on northeast portion of the property, SP-7 were install on the southeast portion of the property, SP-8 were installed on the central portion of the property, SP-9 were installed on the west central portion of the property. The soil analitycal results indicated that no VOCs were detected at a concetration exeeding the CP-51 Table 3 Soil Cleanup Levels. The following SVOCs were detected at concentrations exceeding the CP-51 Table 3 Soil Cleanup Levels: Benzo(a) anthracene,was detected in samples SP-6 at(4-6')(53000 ug/kg), (8-10')(6650 ug/kg), SP-7 (0-2')(74600 ug/kg), (10-12') (3710 ug/kg) and Sp-9 (12-14') (8620 ug/kg), Benzo (a) pyrene in samples SP-6(4-6') (43400ug/kg), (8-10') (6020ug/kg), Sp-7 (0-2') (622000)ug/kg, (10-12') (3620ug/kg) and SP-9 (12-14') (8110 ug/kg). Benzo(b)Fluoranthene in samples SP-6 (4-6') (34600 ug/kg), (8-10')(4610 ug/kg), Sp-8 (0-2')(43600 ug/kg), (10-12')(3030 ug/kg)and SP-9 (12-14') (7440 ug/kg). Benzo(b) Fluoranthene in samples SP-6 4-6')(40100 ug/kg), (8-10')(6230 ug/kg), SP-7 (0-2')(55000 ug/kg) (10-12')(2750 ug/kg) and Sp-9 (12-14')(6920 ug/kg). Chrysene in samples Sp-6 (4-6')(48500 ug/kg)(8-10')(6230 ug/kg),SP-7 (0-2')(69300 ug/kg)(10-12')(3200 ug/kg)and Sp-9(12-14')(9380 ug/kg). Dibenzo(a)anthracene in samples Sp-6 (4-6')(5070ug/kg), (8-10')(241 ug/kg), Sp-7 (0-2')(10000ug/kg)(10-12')(552 ug/kg)) and SP-9 (12-14')(1110 ug/kg). Fluotranthene in samples Sp-6 (4-6')(115000 ug/kg), (8-10')(1860 ug/kg)and Sp-7 (0-2')(179000 ug/kg) (10-12')(6090 ug/kg) Indeno(1,2,3,c-d)Sp-6 (4-6') (18500 ug/kg), Sp-7 (0-2')(29300 ug/kg)) (10-12') (1120 ug/kg) and Sp-9 (12-14')(2540 ug/kg). Four(4) Monitoring Wells were installed. The groundwater flow beneath the site is toward West. Groundwater depth is at 11 feet. The groundwater analytical results indicated VOC 1,2,4 Trimethylbenzene 9.4 ug/L, 1,3,5 Trimethylbenzene 9.1 ug/l, Benzene 4.1 ug/L, Ethylbenzene 5 ug/L, Isopropylbenzene 7.8 ug/L n-propylbenzene 13 ug/L, Naphthalene 12 ug/L exceeding the Groundwater standard in MW-2. The following SVOCs 2,4,5 trichlorophenol, 2,4,6 Trichlorophenol, 2 Chlorophenol, 2- Nitrophenol, 4-Chloro-3-Methylphenol, 4 Nitrophenol, Benzo (a) Anthracene, Benzo(a) Pyrene, Benzo(b)Fluoranthene, Benzo (K)Fluoranthene, Bis (2-Choroethyl) ether, Chrysene, Hexachlorobenzene, and Phenol are present in MW-1, MW-2, MW-3 and MW-4 at concentrations exceeding the Groundwater Quality Standard. Bis(2-ethylhexyl)phathalate was detec at a concentration of 421 ug/L

PRIVATE DWELLING (Continued) **S112226289**

exceeding the Groundwater Quality Standard in water sample from MW-2. Methylphenol was detect at a concentration of 1.18 ug/L exceeding the Groundwater Quality Standard in the water sample from MW-4. 03/29/13- Received the Limited Phase II dated February 7, 2013 and submitted by Hydro Tech Environmental. The limited Phase II performed the collection of duplicate samples (Sp-1 to Sp-9) to verified the concetrations of SVOCs. The 4 soil probe were reinstalled and sampling. "

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: "refer to the old spill at the same location, 89-01904"
Remarks: "We received the following email complaint(I will have her contact her building code enforcement officer for the foundation issues): Hello, There is an open construction site at 267 Fourth Avenue in Brooklyn, NY. The site is full of water and now has begun to stink with an oil and gasoline smell. My apartment is next door to the site and I believe this is a real health concern as well as a water issue for the foundation of my building. Could you please check this problem out and contact the owner to clean it up. Thank you. Cynthia Simonoff 270 Fifth Street Brooklyn, NY 11215 718-369-2102"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL From DEC # 9608854 file: 11/21/96: KATZ SPOKE WITH CHERYL PAYNE, CON ED - FREE PRODUCT FOUND IN WELL. TIGHTNESS TEST DONE ON TANK & PIPING AND FOUND TO BE TIGHT. UNKNOWN SOURCE OF PRODUCT - POSSIBLY OVERFILLS. 2000 GALLON GASOLINE & 2000 GALLON DIESEL UNDER CONCRETE MAT. NOT AWARE OF ANY PROBLEMS WITH DISPENSERS. (GHK) 2/10/97: Con Ed submits pre-closure assessment for north and south tank areas (north UST area contains 1 x 2,500 gallon gasoline and 1 x 2,500 gallon diesel tank; south UST area contains 1 x 4,000 gallon gasoline and 1 x 4,000 gallon diesel tank). Results of soil and groundwater sampling indicate both areas have been impacted by releases from the tanks and/or piping. Con Ed proposes to conduct site investigation. (GHK) 9/30/98, 12:31 PM: Voice message from Ann Ip (Con Ed Remediation) - digging around 2,500 gal diesel UST (north UST area) - found contaminated soil. Estimated 15 cu yds soil. (CAE)

THIRD AVE YARD - SERVICE CENTER (Continued) **S121987815**

10/8/98: Spoke with Tom Lasker (Con Ed Const Mgmt) - 2500 gal tanks are not out yet. He doesn't anticipate that excavation will be ready for inspection til next Tuesday. Jim Seisfeld is handling the project for Ann Ip while she is away. (CAE) 10/21/98: Excavation for removal of 2500 gallon tanks (north area) - excavation about 15 feet deep, 20' x 30'. No apparent visible contamination. No odor. Will do 5 composites (5:1) on side walls, 5 grabs. (CAE) 11/2/98: Tank pulls - Con Ed Construction Mgmt. has excavated as deep as they need to go to put in new tanks. Inspected soil from bottom of excavation - strong petroleum odor. Jar test - sheen on water. Dug down with bucket into bottom of excavation - groundwater about 1.5 to 2 feet below bottom. Told Con Ed to excavate to that depth on entire excavation. Will tanke 4 grab, 4 composite samples for VOCs, SVOCs - 3 walls and bottom. Already did some sampling when tank was originally pulled (5 grab, 5 composite) but present excavation extends beyond original so have to do more samples. (CAE) 11/12/03: e-mail from Ray Fitzpatrick (Con Ed Remediation) indicating that 2 x 4000 gallon tanks (south UST area) are to be removed on Nov. 19 (tentative schedule). 6/20/00: Meeting w/ Angel Chang (Con Ed Remediation) - Con Ed was told of possible off-site contamination at Mendon Truck Leasing site (located south of Third Ave Yard). Ground water analytical data provided by Mark Tibbe (DEC project manager) indicates contamination in two of their upgradient wells - gw contour map shows Con Ed's south UST area is immediately upgradient (across the street) from these wells. Con Ed is to submit draft work plan for additional investigation around both north and south UST areas. (JHO) 7/24/00: Con Ed submits Tank Closure Report documenting results of post-excavation soil samples, and a Site Investigation Work Plan (SIWP). Proposal includes 6 soil borings/4 monitoring wells for the north UST area, and 10 soil borings/7 monitoring wells for the south UST area. 9/11/00: Comment letter to Con Ed on SIWP - requests addition of one well upgradient of the north UST area; clarifies soil sampling protocol; clarifies lab analytical methods. (KMF) 11/22/00: response form Con Ed satisfactorily responds to comments. 11/27/00: SIWP approved. (KMF) 12/13/00: Field work commences. 1/18/01: Free product found in well MW-4N in north UST area. This is the well immediately north (upgradient) of the tanks. Approximately 1 inch of product was noted. Absorbent sock installed to recover product. (KMF) 6/1/01: Site Characterization Report submitted. Results indicate elevated concentrations of BTEX and MTBE in soils and groundwater for both tank areas, and intermittent free product in north UST area (well MW-4N). 2/13/03: comment letter to Con Ed - recommends monthly gauging to continue, and include VEFR event; requests installation of 2 add'l borings/wells northeast and west of north UST area (work plan required); requests submittal of historic groundwater analytical data. (KMF) 3/6/03: VEFR event postponed - waste characterization results for groundwater has benzene concentration of 3.7 ppm (cannot be accepted at Astoria waste treatment facility - must arrange for subcontractor. (KMF) 3/7/03: Clarified with M. Gonzalez that quarterly sampling to be conducted on all wells. Also, monthly monitoring on all wells. (KMF) 3/17/03: Response letter from Con Ed addresses comments in 2/13/03 letter. 4/21/03: Work Plan for installation of 3 additional wells at the north UST area. Plan prepared by First Environment. 6/25/03: comment letter to Con Ed - clarifies sampling and analytical protocols; and requests revisions to QAPP. (KMF) 10/9/03: Response letter from Con Ed satisfactorily addresses comments in 6/25/03 comment letter. (JHO) 10/14/03: Work

THIRD AVE YARD - SERVICE CENTER (Continued) **S121987815**

plan approved. (JHO) 12/16/03: Meeting with M. Gonzalez - VEFR requested by K. Foley in March 2003 was done. Con Ed only implemented quarterly sampling at this location in 2003 - three quarters done so far (4Q this week). Dissolved-phase contamination found in both north and south tank areas. Free product only noted in one well (MW-4N, north tanks). Three new wells are to be installed by First Environment in January. Following meeting, e-mail sent to M. Conzalez requesting lead be added to list of analytes for future quarterly sampling events. (JHO) 11/05/09: Mulitple documents had been received over interim period including RAWP, GW monitoring reports and subsequent IRM WP. RAWP was not implemented. Free product identified in one well in south UST area in September 2009. RP's consultant proposed additional delineation investigation of south UST area with VEFR and IRM for injection of ORC to address GW comtamination remaining in north UST area. Discussed project with RP's consultant and a revised IRM WP will be submitted. (JOC) 5/23/12: Draft remedial selection/remedial action work plan submitted 2/28/12. Document reviewed and letter with comments sent 3/19/12. Letter response and revised work plan received on 5/4/12. (JOC) 6/8/12: Reviewed 5/4/12 response from Con Edison and AECOM and sent comments via email 5/25/12; met today with Con Edison and AECOM to discuss those comments. As agreed today, Con Edison will put together a letter which documents the changes; based on some anticipated logistical issues at the facility, the pre-design work will be separated out with the objective of getting it completed within the next 3 weeks, so the focus of the letter should be to document changes to the pre-design work; the revisions to the RAWP can come later based on the pre-design work. Overall we had reached agreement on all the issues. (JOC) 9/6/12 - received email 9/4/12 from AECOM for Con Edison which was text as received at 6/8/12 meeting; attached to email was revised pre-design investigation summary, revised sample table, revised figure. Under review. (JOC) 9/28/12 - sent letter conditionally approving pre-design investigation as a separate effort from the remedial action 9/14; per discussion with Con Edison 9/24, their consultant is waiting for purchase order finalization through from Con Edison before they will start the work; Con Edison is working on getting the changes into their new PO system and will advise of updated schedule when available (JOC) 10/23/12 - received email from Con Edison: greater than greater than greater than Gonzalez, Mariela 10/23/2012 9:29 AM greater than greater than greater than Joe, preparation field activities for the drilling work are in progress. AECOM and GEOD mobilized on October 17 to start with a geophysical survey and then to commence with utility clearance which will continue thru the end of this week. (1)Aztec, a subcontractor for AECOM, is pre-clearing the soil boring locations using a Safex unit and hand tools dig; and (2) day lightening (by test pits) of marked out utilities with GEOD surveying location and depths. Below a brief chronology of activities completed thru October 22nd. Wednesday October 17, 2012: Geod was on site to perform GPR of the excavation. A sketch was created for field use. A map will be completed in a couple weeks. Thursday October, 18, 2012: Geod was on site to continue with the topographical survey. Allstate a subcontractor of Geod cleared 3 locations of asphalt. Friday October 19, 2012: Geod and AECOM were on site. Allstate was scheduled to be on site at 730 with a vac truck but failed to show up. It was raining and there was a good deal of traffic. At 11AM Allstate was still en route and the day was called. Allstate will not be allowed on site to

THIRD AVE YARD - SERVICE CENTER (Continued) **S121987815**

complete the work. Monday October 22, 2012: Aztech Pre cleared down to 5 feet D1 and D6. 3 locations were started for day lighting, to uncover gas lines and electrical lines. Geod pinpointed the depth of the gas lines. Con Ed electrical Operations crew on site to assist determining which lines are active or dead. Called Con Edison PM to discuss/confirm. Pre-clearing should be finished this week; drilling should start next week. They will keep me posted on the schedule if any changes. (JOC) 11/09/12 - PDI activities were completed on October 26th. No impledіments were identified to implementing the investigation as approved. Field progress updates in edocs. (JOC) 5/3/13 - Investigation continued to attempt to delineate the soil contamination around the south UST area, but is not completed. Notably one area (to the northwest of the UST area) had contamination with a different profile than observed in the UST area and may not be related to UST operations. Reviewed the report and sent comments/items for discussion to Con Edison via email 4/10/13; meeting was scheduled for 4/24 but was cancelled by Con Edison. (JOC) 7/14/16 - Con Edison proceeded with additional investigation at the 3rd Avenue Yard on their own, primarily related to the findings initially reported as spill 1008213, without Department input and provided a report on those efforts in January 2016. Department staff met with Con Edison on May 10, 2016 and July 8, 2016 to discuss Con Edison's 3rd Avenue Yard overall and how to move forward with a comprehensive approach. Anticipate feedback from Con Edison shortly. (JOC) 11/18/2016 Austin This spill report is being transferred from Joe O Connell to Jennifer Kann - end. 06/05/17: J.Kann - as per Jeff spill reassigned to Kumar. 6/8/17 - Haggerty: Closed/consolidated under Site C224245. Further investigation and remediation will be conducted under the BCP."

DEC Memo:	"201193. see eDocs 5/21/12 - requested Con Edison's PM for other open spills at 3rd Avenue Yard to track down information on this spill to determine where exactly it was and whether it affected any of the other areas being investigated via email 3/5/12. Con Ed PM tracked down some information, and we met at the location of Bay #1, inside the Stores Bldg during field work activities for Spill 1008213 on

FIVE GALLONS OF OIL IN SOIL (Continued) **S108058550**

4/3/12. Con Ed personnel at the location had no specific information about the spill, but described that there is a large pit in the floor in the bay. It was covered by steel plates which were tach welded together. These personnel described that the pit was rather deep. At the time of the inspection, the Bay was being used for storage, which they described was the case for a long time. They suspected that in the past there may have been vehicle repairs made in the bay. The bay has two large overhead garage doors. The bay is at the north end of the Stores bldg, so it is distant from any of the other areas of concern ongoing at the 3rd Avenue Yard. Figure added to edocs showing the location. Con Ed has been unable to track down any further information about the incident or any resolution. Con Edison will need to investigate. (JOC) 11/18/2016 Austin This spill report is being transferred from Joe O Connell to Jennifer Kann - end. 06/05/17: J.Kann - as per Jeff spill reassigned to Kumar. 6/8/17 - Haggerty: Closed/consolidated under Site C224245. Further investigation and remediation will be conducted under the BCP."

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

EPA Region: 02
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/02/2001
Site name: TM439
Classification: Not a generator, verified

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF

MAACO AUTO PAINTING & BODYWORKS INC (Continued) **1000457406**

ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 09/20/1998
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: EPA

FINDS:

Registry ID: 110008043900

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"3/20/2006 An investigation was performed at adjacent property 269-271 4th Avenue Brooklyn by Hydro Tech Environmental (spill# 0501021). Marvin Kramer & Associates sumbitted a report on February 1, 2006, which stated that the property 269-271 4th Avenue was investigated by Hydro Tech Env and it is located downgradient from a possible source. The report also stated that the property adjacent to the investigated property on the north is presently occupied by Mc Donald and was formerly a gas station. After a consultation with Koon Tang (DEC) spill #05517680 was opened and Spill#0501021 was closed. AZ 3/22/2006 A contaminated soil letter was sent by certified mail to David Oil Corporation 3333 New Hyde Park Road, NY, 11042 AZ 3/28/2006 Contacted Kevin Kleaka (Impact Environmental 631-269-8800). The owner received DEC letter and will hire Impact Environmental to perform the investigation. The owner's phone number is 516-365-8700. (Henry Albert - President). I requested a submittal of site investigation plan and site background information. They will submit a plan by Apil 7, 2006. AZ 4/18/2006 Reviewed and discussed with Kevin Kleaka submitted Investigation Plan. Twelve 550 gal gasoline tanks, one 550 gal fuel oil and one 550 waste oil tanks were historically operated at the site (275 Fourth Avenue-281 Fourth Avenue)since 1967. Former gasoline tanks were probably located in the southwest corner at the intersection of 1st Street and 4th Avenue. Tanks were removed in September 1990. I made several changes to the Work Plan: at least 2 diameter wells should be installed, if no samples with PID readings are encountered, a sample at water-soil interface should be taken, plume should be fully delineated, test borings should be advanced at the former pump islands, 5 wells should be installed. The plan with these corrections was approved. AZ 6/12/2006 Contacted Kevin Kleaka. They will conduct the field work next week. The client worked out access agreement with Mc Donald's. The work will be done during the middle of the night. AZ 10/24/2006 I contacted Kevin Kleaka (Impact Environmental @631-269-8800). They sent the report to DEC last night. GW contamination was found. AZ 11/14/2006 Report dated October 24, 2006, was submitted to DEC. The report found dissolved gw contamination up to 5,624 ppb. The plume is not fully delineated. The analytical results for VOC concentrations should be expressed in total VOCs. Impact Environmental did not establish groundwater flow

MC DONALD'S (Continued) **S107658364**

direction, although based on the presented data, gw flow direction appears to be to the north-east. Location of the former tanks were not shown on the plan. Groundwater contour map was not included in the report. I left a message for Kevin Kleaka (Impact Environmental @631-269-8800). AZ 11/15/2006 I contacted Kevin Kleaka (Impact Environmental @631-269-8800). We discussed the site. Impact Environmental will install an additional well in the vicinity of MW-3 on 1st Street sidewalk (southern side of the street) depending on the utilities. Suggested ORC seems to be a reasonable remedy for the existing contamination. Remedial Action will be submitted to DEC. AZ 2/26/2007 Reviewed Corrective Action Plan submitted by Impact Environmental on December 26, 2006. Dissolved VOC were found in groundwater. MW-3 had 5,677 ppb of total VOC.Impact Environmental suggested implementing ORC injection. DEC concurred. A letter with the plan approval was sent to Impact Environmental. AZ 7/17/2007 Contacted Kevin Kleaka (Impact Environmental @631-269-8800). They started the injections on July 5, 2007. Due to the Mc Donald's complains they had to change their work hours. They will finish injection on July 30th. They will submit the report by the end of August. AZ 2/25/2008 Called Mr. Wenqinq Fang (Impact Environmental @631-269-8800) and discussed the site. MW-2 contained approximately 415 ppb of total VOCs (October 2007). ORC injection was performed in July 2007 - one round. I requested that Impact Environmental submit to DEC the following: Total calculated VOCs and SVOCs concentrations, individual contaminant concentrations should be compared to NYS DEC Guidance Values, a plume map should be submitted (block diagrams with total VOC/SVOC concentrations), gw flow direction should be shown on the plan and recommendations for the site should provided. An amendment to the report dated October 29, 2007, should be submitted to DEC by mid March. They will send us an electronic copy of the report. AZ 3/3/2008 I contacted the owner Henry Alpert. His mailing address is: David Oil Corp. 333 New Hyde Park Rd. New Hyde Park, NY 11042 Suite# 201. I reiterated DEC's requests. They will submit the modified report by the end of the week. AZ 6-2-2008 Reviewed quarterly monitoring report dated March 11, 2008 by Impact Environmental. Samples obtained from MW-1, 2,3 and MW-5 detected concentrations of gasoline related compounds above NYSDEC ambient water quality standards. A decline in contaminant concentrations after ORC injection was observed. Groundwater monitoring will be continued. I left a message for Kevin Kleaka @631-269-8800 and requested an electronic copy of the report. AZ 9-4-2008 Reviewed quarterly monitoring report (first quarter of 2008) dated May 6, 2008, by Impact Environmental. In July 2007 ORC was injected through 11 injection points. 510 LBS of ORC mixed to a 70% slurry was injected at the site. Upon completion of ORC injection groundwater monitoring is performed. Groundwater samples acquired from MW-1, MW-2, MW-3 and MW-5 showed elevated concentrations of gasoline related VOCs (up to 378 ppb of total VOCs). Monitoring data showed a decline in contaminant concentrations, indicating that ORC has enhanced biodegradation. Impact Environmental will continue groundwater monitoring. AZ 11-04-2008 Reviewed and discussed with Kevin Kleaka(Impact Environmental) Quarterly Monitoring Report for the 2nd Quarter 2008 and ORC Injection Proposals dated September 4, 2008. Injection plan did not propose injection points near MW-1 and MW-2, the most contaminated wells (529 and 630 ppb of total VOC). I asked for injection plan modification. I also requested that downgradient wells be installed north of MW-1 and MW-2, utilities and

MC DONALD'S (Continued) **S107658364**

structures allowing. AZ 11-10-2008 Called Wenqinq Fang (Impact Environmental tel. #631-269-8800) and conveyed my comments regarding the site. He stated that there is a building (auto repair shop) situated north of the former gas station which prevents installation of the downgradient wells. I requested submittal of a sketch made to scale which would show locations of the surrounding structures and the sidewalk. An explanation why the downgradient wells could not be installed should be submitted to DEC. AZ 12-04-2008 An email was sent to W. Feng (Imact Environmental): I have reviewed and discussed with you and Kevin Kleaka Quarterly Monitoring Report for the 2nd Quarter 2008 and ORC Injection Proposals dated September 4, 2008, for the above site. Submitted Injection Plan did not propose injection points near MW-1 and MW-2, the most contaminated wells (529 ppb and 630 ppb of total VOC concentrations). The Department requests injection plan modification. Downgradient wells should be installed north of MW-1 and MW-2, utilities and structures allowing. Also, a site sketch to scale showing locations of the surrounding structures and the sidewalk should be submitted to DEC. AZ 3-29-2009 Additional Remediation WP was received on 3-10-2009. The site was formerly utilized as a gas station. In July 2007 application of ORC was conducted on the site as part of the bio-remediation strategy. By June 2008, according to the consultant, significant reduction in contaminants' levels has been observed. Despite the performed remedial actions, some dissolved VOC contamination remains at the site. Additonal ORC injections via 13 injection points were proposed. According to the consultant, gw flow direction is towards north. The adjacent downgradient property has a building that occupied the entire property, and so does the property next to it. The nearest possible location for a downgradient well would be on the sidewalk of Carrol St., which 100 ft. away from the site. According to the consultant, given the low concentration of the contaminants, downgradient well 100 ft away might not be useful. AZ 4-1-2009 An e-mail was sent to Impact Env./V. Brevdo: I have received and reviewed Additional Remediation Work Plan dated 3-10-2009. The above site was formerly utilized as a gas station. In July 2007 application of ORC was conducted on the site as part of the bio-remediation strategy. Despite the performed remedial actions, some dissolved VOC contamination remains at the site. Additional ORC injections via 13 injection points are proposed. The Additional Remediation Work Plan is approved. Total VOC concentrations should be calculated and presented in tables and shown on the Geochemical Results plate. If the contamination persists, downgradient monitoring wells should be installed on the sidewalk of Carroll Street. AZ' 3-25-2010 Reviewed Quarterly Monitoring Report (1st Quarter 2010) for this site. Impact Env. states that in 2 rounds of ORC about 900 lbs of ORC has been injected at this site. Impact states that more than 90% of the groundwater contamination has been remediated by enhanced bio degradation. However, residual groundwater contamination is present at the site (up to about 300 ppb of total VOC). MW-1 exhibited 97.1 ppb of benzine on 2/24/2010. I contacted Wenqinq Fang of Impact and requested historical information on VOC contamination (total VOC concentrations) correlated with ORC injection dates. Also, information regarding soil contamination will be submitted to DEC. AZ 4-15-10 Received tank closure report and Total VOCs table and e-doc'ed. An e-mail was sent to Wenqinq Fang: I received the attached files. Thanks. But you were supposed to send also soil plume information: tables with total VOCs and SVOCs and a plume map. This

MC DONALD'S (Continued) **S107658364**

info has not been included. I checked the numbers. Individual contaminant concentrations in gw are relatively high so it's premature to work on the Exposure Assessment for the spill closure. AZ 6-24-2010 Reviewed Quarterly Monitoring Report (2nd Quarter 2010) for this site by Impact Env. I contacted Wenqinq Fang of Impact and requested that a plume map be submitted to DEC with total VOC concentrations for each well sampled. Also, report was wrongly dated. Analysis of the last monitoring and sampling round should be done. The date of the sampling should be indicated. The moniroing report should be resubmitted with the changes. Also, information regarding soil contamination will be submitted to DEC. AZ 6-3-2010 Received modified 2nd Quarter Report from Wenqinq Fang (e-file). AZ 8-19-2010 Contacted Wenqing Fang. They requested reduction of frequency of sampling to semi-annual and remove MW-4 and MW-6. Total VOCs concentrations increased in four wells. Therefore, quarterly sampling be continued. MW-4 and MW-6 are upgradient wells with no detections since October 2007 and could be removed from the monitoring schedule. AZ 8-19-2010 An e-mail was sent to Wenqing Fang/V.Brevdo: I have reviewed revised monitoring report for the above site. You requested reduction of sampling frequency to semi-annual from quarterly. This request is denied due to increase in VOCs concentrations. Wells MW-4 and MW-6 could be removed from the monitoring schedule since no detections were recorded since October 2007. AZ 10-28-2010 Received and reviewed 3rd Quarter monitoring report. Total VOC concentrations in MW--528 ppb, MW-2 726 ppb. No further ORC injections are planned. AZ 3-31-2011 An e-mail was sent to Wenqing Fang and V. Brevdo: Dear Wenqinq, I have reviewed a quarterly sampling report for the above site submitted on March 24, 2011. Total VOCs ranged from 115 ppb to 340 ppb. The concentrations decreased in all wells except MW-3, where total VOC concentrations increased. Impact Environmental recommended reduction in monitoring schedule from quarterly to semi-annual. This recommendation is approved. Monitoring and sampling should be performed semi-annually (twice a year). AZ 11-29-2011 Reviewed Quarterly Monitoring Report and Exposure Assessment for this site. The VOCs numbers dropped in the last monitoring event 9/24/2011. However, there are exceedances of the groundwater standards. The last monitoring event results are generally significantly lower than in the previous monitoring rounds. I contacted Wenqing Fang and asked to have two more rounds of sampling. Also, I sent an email to Wenqing asking to submit e-copies of the above documents. 12-5-2011 Impact emailed me e-copies which were uploaded. AZ 9-5-2012 I reviewed Revised Exposure Assessment report dated May 31, 2012. I contacted Kevin Kleaka of Impact Environmental and discussed the site with him. The submitted report did not contain a CD with the PDF file. The latest monitoring data from 4/6/12 was no reflected in the groundwater plume map, however, this monitoring event was tabulated in table 2. The data in the tables does not corresspond with the data in the figures. Not all existing monitoring wells were sampled (MW-4 and MW-6 were not sampled). MW-1 contains 140 ppb of benzene. There is a hot spot at the location of monitoring well MW-1 and soil boring SP-1. Boring SP-1 exhibited a total VOC in soil of 46,371 ppb. Kevin Kleaka will review technical details of the report and will get back to me. He will send a CD with the PDF copy of report. AZ 9-14-2012 E-copy of exposure assessment was downloaded into e-docs. AZ 12-20-2012 Contacted Michael Bluight (Impact Env. Project Manager)631-269-8800 Ext.118. I updated Michael on the state of the spill. He will review the reports and will get back to me. AZ

MC DONALD'S (Continued) **S107658364**

4-1-2013 Discussed the site with Michael Bluight. Two downgradient wells at the edge of of the plume (MW-1 and MW-2) showed exceedances of gw standards. This exceedance might be indicative of a downgradient plume migration. Michael Bluight will submit details of the tank excavation and soil investigation to DEC. Boring SP-1 exhibited total VOC in soil of 46371 ppb. AZ 4-17-2013 Received a revised semi-annual QMR report from Impact. Discussed the site with V. Brevdo and Michael Bluight. According to Tyree tank closure report (1990). About 14 tanks were excavated. The samples taken from the bottom excavation revealed total BTEX concentrations of 238,858 ppb and 131,718 ppb respectively. Total TPH concentrations were 1,1545 ppm and 68 ppm. AZ 10-7-2013 Received a semi-annual monitoring report from Impact Environmental. The report was dated August 14, 2013 and received on September 17, 2013. According to the report a soil probe was advanced and no exceedances of the standards were observed. The following e-mail was sent to Kevin Kleaka: Dear Kevin, I have reviewed a Request for Spill Closure dated August 14, 2013, and received on September 17, 2013. This spill is associated with a former gasoline filling and automobile service station. Fourteen Underground Storage Tanks (USTs) were removed in 1990 and eight USTs were removed in 1994. Approximately 218 tons of contaminated soil was removed. The results of the performed investigation indicated the presence of volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) in subsurface soil and groundwater above the applicable guidance criteria. In 2007 and 2009 Oxygen Releasing Compound (ORC) application was conducted on the site to enhance bio-remediation. In June 2013, Impact Environmental performed a Supplemental Subsurface Investigation at the site. The investigation consisted of advancement of a soil probe SP-1 and collecting groundwater samples. The laboratory analysis of the soil sample did not detect any VOCs above the standards. Analysis of the groundwater samples detected VOC concentrations slightly above the standards. Based on the above information, Impact Environmental requested that spill#0551768 be closed. Based on the documentation provided to date, the New York State Department of Environmental Conservation (the Department) has closed the spill case number 0551768. All wells associated with this project should be closed according to the Department's Groundwater Monitoring Well Decommissioning Procedures. All wells should gaged for the presence of free product before closure. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts must be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent

MC DONALD'S (Continued) **S107658364**

file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alexander Zhitomirsky "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL APPENDIX B SITE NO. 57. 08-08-06: See also 9203835. MCT 12/6/12 - Site Investigation Work Plan prepared by Langan Engineering & Environmental Services dated January 2010 discusses eight spills as part of the Appendix B site 57. The spills were all along 4th Avenue in Brooklyn, from roughly Pacific Street south to 6th Street. The spills all involve releases from feeders that run along top of the subway that runs along 4th Avenue. Two of the eight spills have open spill numbers, 8303206 and 8404005. Spill 9203835, which had affected the Pacific Street subway station, was administratively closed and referred to these two open spills. A letter with comments on the SIWP was sent on November 14th. (JOC) 6/27/14 - Letter dated June 4, 2014 from Langan for Con Edison in response to SIWP comment letter. Most

4TH AVE/GARFIELD ST (Continued) **S103483429**

of the responses were acceptable. A few points need some additional clarification. For this spill, the available information does not specifically identify the feeders involved in the release, and Langan responded that there were other feeders at the location, but said the feeders running along 4th Avenue were presumed to be the source. Letter was sent 6/24 in which clarification on that point was requested. Also requested inclusion of additional language to arrange with the Department for selection of final investigation locations based on utility markouts, for prompt notification to the Department when a field modification is needed and for evaluation of migration along utilities; requested clarification on what was included as requirement to not work inside tolerance zone for subsurface utilities; requested clarification on sample analysis; and requested clarification on who would make the determination in the field for conforming to the expected MTA/NYCT permit stipulations for working over/near the subway structure. (JOC) 8/5/14 - met with Con Edison PM 8/4 - expect to have subway information from MTA and response to comments this quarter. (JOC) 2/25/16 - responses to comments were received March 2015 along with revised SIWP; Con Edison project manager is now Mariela Gonzalez; sent response letter today to Ms. Gonzalez with comments on the responses/SIWP from Langan. (JOC) 10/26/2016 - V. Brevdo Due to Project Manager Joe O'Connell's promotion to the DMM, and per discussions between Chiefs of Spill Prevention and Response and Remediation Section B, this spill case is re-assigned to Remediation Section B. VB 06/27/2017 - V. Brevdo Con Edison Appendix B Sites Spill Site No. 57, 4th Ave/ Garfield Pl./ 6th Street, Brooklyn (Spill Nos. 8303206, 8404005, 9203835) On June 23, 2017, Con Edison submitted for the Department s review and concurrence/approval the Con Edison s response letter to Department s February 25, 2016 comments regarding the Site Investigation Work Plan (SIWP) for Site 57 dated March 2015, as amended by a March 23, 2015 letter. The Department s February 25, 2016 comments on the SIWP were pertinent to spills historical records, locations and sources of the releases, determination of the boundaries of investigation around release locations and contaminant migration pathways, identification of dielectric fluid containing equipment, diameter of feeder lines and associated pressure pipes, locations of the proposed investigations/boring locations in relation to the NYCT subway stations (Union and Bergen Streets, Brooklyn), soil sampling intervals, rationale for installation of permanent or temporary monitoring wells, scope of chemical analysis for collected samples, and MTA s concurrence with the final sampling locations around the subway stations. The Department completed review of the Con Edison s June 23, 2017 response letter containing responses to the Department s 14 comments. The Department determined that all Con Edison s responses are acceptable, however, 5 responses suggest further revisions to the SIWP. The Department communicated with Con Edison on June 27, 2017 advising that their responses to Department s February 25, 2016 comments on SIWP are acceptable and requested submission of either the revised SIWP or a separate amendment to the SIWP containing suggested revisions. VB 08/14/2017 - V. Brevdo On August 14, 2017, Con Edison informed the Department that they intend to resubmit the revised Site Investigation Work Plan shortly. VB 08/17/2017 - V. Brevdo Con Edison Appendix B Site No. 57, 4th Ave/ Garfield Pl./ 6th Street, Brooklyn (Spill Nos. 8303206 & 8404005) On June 23, 2017, Con Edison submitted for the Department s review and concurrence/approval the Con Edison s response letter to Department s

4TH AVE/GARFIELD ST (Continued) **S103483429**

February 25, 2016 comments regarding the Site Investigation Work Plan (SIWP) for Site 57 dated March 2015, as amended by a March 23, 2015 letter. The Department s February 25, 2016 comments on the SIWP were pertinent to spills historical records, locations and sources of the releases, determination of the boundaries of investigation around release locations and contaminant migration pathways, identification of dielectric fluid containing equipment, diameter of feeder lines and associated pressure pipes, locations of the proposed investigations/boring locations in relation to the NYCT subway stations (Union and Bergen Streets, Brooklyn), soil sampling intervals, rationale for installation of permanent or temporary monitoring wells, scope of chemical analysis for collected samples, and MTA s concurrence with the final sampling locations around the subway stations. The Department completed review of the Con Edison s June 23, 2017 response letter containing responses to the Department s 14 comments. The Department determined that all Con Edison s responses were acceptable, however, 5 responses suggested further revisions to the SIWP. The Department communicated with Con Edison on June 27, 2017 advising that their responses to Department s February 25, 2016 comments on SIWP were acceptable and requested submission of either the revised SIWP or a separate amendment to the SIWP containing suggested revisions. Con Edison informed the Department on June 27, 2017 that they would revise SIWP and submit revised document to the Department for review and approval. On August 11, 2017, Con Edison submitted to the Department for review and approval the Final SIWP, dated August 2017, transmittal letter dated August 11, 2017. The scope of investigation activities specified in the Final SIWP include the following tasks: Completion of approximately 56 primary borings and collection of 112 soil samples and completion of contingent borings and soil sampling, as necessary, to delineate the horizontal and vertical extent of dielectric fluids impact areas; The installation of up to 8 monitoring wells, after assessing MTA underground structures and field confirmation of utilities, to assess potential impacts to ground water and potential migration pathways to surface water receptors; and, Preparation of a Site Investigation Report, that will include a site history summary, description of site conditions and the site investigation activities, scaled site maps, tabulated analytical data, soil boring and well construction logs, laboratory analytical reports, and discussions of the findings. Groundwater data including monitoring well locations, ground water flow maps, and ground water analytical data will also be included. The complete Field Sampling Plan (FSP), Quality Assurance Project Plan (QAPP), and Health and Safety Plan (HASP) are provided in Appendices B, C, and D, of the Final SIWP, respectively. Based on Project Schedule, the Site Investigation Report (SIR) will be submitted to the Department within 13 months following Department s approval of the Final SIWP. The Department completed review of the document and approved Final SIWP on August 17, 2017. VB 10/03/2018 - V. Brevdo Con Edison Appendix B Site No. 57, 4th Ave/ Garfield Pl./ 6th Street, Brooklyn (Spill Nos. 8303206 & 8404005) Spill Site No. 57 consists of eight separate releases that occurred on 4th Avenue between 6th Street and Pacific Street, Brooklyn. On August 11, 2017, Con Edison submitted to the Department for review and approval the Final SIWP, dated August 2017, transmittal letter dated August 11, 2017. The scope of investigation activities specified in the Final SIWP include the following tasks: Completion of approximately 56 primary borings and collection of 112 soil samples and completion of

4TH AVE/GARFIELD ST (Continued) **S103483429**

contingent borings and soil sampling, as necessary, to delineate the horizontal and vertical extent of dielectric fluid impact areas; The installation of up to 8 monitoring wells, after assessing MTA underground structures and field confirmation of utilities, to assess potential impacts to ground water and potential migration pathways to surface water receptors; and, Preparation of a Site Investigation Report, that will include a site history summary, description of site conditions and the site investigation activities, scaled site maps, tabulated analytical data, soil boring and well construction logs, laboratory analytical reports, and discussions of the findings. Groundwater data including monitoring well locations, ground water flow maps, and ground water analytical data will also be included. The complete Field Sampling Plan (FSP), Quality Assurance Project Plan (QAPP), and Health and Safety Plan (HASP) are provided in Appendices B, C, and D, of the Final SIWP, respectively. The Department completed review of the document and approved Final SIWP on August 17, 2017. On October 3, 2018, Con Edison informed the Department that based on the physical features of the subway tunnel along 4th Avenue at Site 57, Con Edison needs to modify the proposed scope of work for the upcoming investigation. The August 2017 Final Site Investigation Work Plan for the Site proposed the use of a drill rig to extend borings to the water table at 28 of the proposed locations if they were determined to lie outside the footprint of the subway tunnel. Based on Con Edison s review of the NYCTA subway tunnel drawings, the subway tunnel and ancillary structures lie beneath the entire width of the roadway, prohibiting the use of a drill rig for the site investigation. Con Edison has submitted a package to NYCTA requesting approval to perform all 56 of the proposed boring locations using hand auguring to depths of 6 and 7 feet below grade. Since the feeders being investigated for this Site are situated approximately 3 feet bgs, the proposed borings will extend several feet below the depth of the lines, while remaining at least two feet above the roof of the subway tunnel. The subway tunnel roof generally lies between 8 and 12 feet below road surface at the investigation locations. Con Edison are currently awaiting NYCTA approval to proceed with the field investigation, and are tentatively planning to start the work in late November/early December 2018. Once Con Edison receive a response from NYCTA, they will provide the Department with a firm start date of site investigation. The Department advised Con Edison on October 3, 2018, that given the scope/nature of the proposed investigation and physical settings of the site and the subway tunnel, the Department concurs with the use of hand auguring to depths of 6 and 7 feet below grade in lieu of the drilling rig. The Department s concurrence is contingent on the NYCTA s approval to perform aforementioned borings. VB "

DEC Memo: "HydroTech did the investigation for a potential purchaser, Mr Pratt According to Property Shark Records, Owner of both lots #269 and #271 4th Ave is: Dimitrios Batistatos, 1137 63rd St, Brooklyn 11219 - Contaminated Soil Letter sent to him.- SS 5/10/05 - Mr. John Spenako called. He represent the owner who claims that the contamination is coming from the next door neighbor at 275 4th Ave., a former gas station, PBS #2-241849, and is now a McDonald. I asked Mr. Spenako to send in the site investogation report by HydroTech. The Site assessment was done as a due diligent for a pending property sale. - KST 5/12/05 - Received a letter from Mr. John Mike Spanakos who is representing the property owner. Case assigned to ALex Zhitomirsky. - KST 6/1/05 Spoke with John Spanakos and requested to send to the Department a legible copy of Hydro Tech report. A copy in the file is not legible. AZ 6/23/2005 Department received a copy of Hydro Tech Report regarding subsurface investigation at 269-271 4 Ave Brooklyn. I contacted John Spanacos (Spanacos and Spanacos 718-833-6900) and informed him that thE submitted copy is not fully legible. Also, the

FORMER GAS STATION (Continued) **S106868437**

report does not contain a site plan where borings, wells and direction of gw flow are shown. They should resubmit this report in legible form and include all missing info. AZ 7/12/2005 Reviewed the Subsurface Investigation dated March 18, 2005, and submitted by Hydro Tech Environmental, Inc. on July 5, 2005. A letter was issued to the owner (Mr.Batistatos). The letter required the following: 1. Delineation of soil and groundwater contamination - a subsurface investigation to adequately characterize site hydrogeology and to better delineate the full extent of petroleum contamination to soil and groundwater both on-site and off-site must be performed. The investigation at a minimum must include installation of four wells including wells near SP-2 and SP-3. In addition, one well should be installed on the 4th Avenue sidewalk at the south end of the property and one well should be installed north of SP-5 at the northern edge of the property. Wells should be installed, at these locations, as permitted by subsurface utilities and surrounding structures. Groundwater flow direction should be determined to help establish the source of contamination. The soil should be screened continuously with a PID. The deepest dry soil sample and the sample with the highest PID reading in each boring/well should be sent for EPA Method 8021/8270 analyses and the results should be sent to the Department. A water sample should be obtained at each well location and submitted for EPA Method 8021/8270 analyses. MTBE must be included on all soil and groundwater analyses. A report summarizing the findings of the subsurface investigation, including boring logs, well installation logs, sample analyticals, site plan, conclusions and recommendations, must be submitted to the Department. Upon completion of the investigation, the owner/consultant should evaluate the data to determine the source of contamination. 2. Site History including: previous site usage; current and historical petroleum storage including tank removals and abandonments; sizes of tanks removed/abandoned and types of product stored; number of tanks; spill numbers; Petroleum Bulk Storage (PBS) Registration including PBS Number(s).AZ 7-25-2005 Telephone conversation with Ted Yen (Don Carlo Env. Services 718-857-3100). Mr.Yen called to clarify DEC request. He will be collecting all necessary information and prepare a report for the site owner Mr. Batistatos. AZ 1/17/2006 Left a message for Ted Yen (Don Carlo Env.). Investigation is pending. AZ 1/19/2006 I contacted John Spanacos (attorney for the client). He stated that the consultants were paid 1/2 half and supposed to start investigation. He will follow up with the inquiry. AZ 3/20/2006 A report was submitted by Marvin Kramer & Associates (516-742-2800) and issued by Hydro Tech Environmental (718-636-0800). The report stated that the inestigated property is located downgradient from the property adjacent to it on the north and presently occupied by MC Donalds's which was formerly a gas station. A major clean up work was performed at Mc Donald's property according to Marvin Kramer. The report documented that 269-271 4th Avenue is located downgradient from the possible source of contamination. This spill report was closed and a new spill report #0551768 was opened as per Koon Tang (NYSDEC) instructions. AZ "

Remarks: "FOUND CONTAMINATED SOIL IN GROUNDWATER: MR. PRATT IS PROSPECTIVE BUYER OF PROPERTY:"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed e2mis Notes: 6/2/00 Transformer removed from vault was sitting in a containment pan and leaked 4oz cable oil from cable ends. 4oz went into containment pan. There is 40gal of rain water in pan also. Will put tarp over transformer and pan to protect from any other rain water. 6/5/00 Oil sample for this incident was lost. Took new sample and returned 422ppm PCB. Drained 3-55gal drums of water and oil from transformer pan. Put contaminated pump in barrel #4 for future use. Re-tarp transformer and pan. 6/6/00 Pan double washed with bio-gen 760 and oil absorb. Waste placed into barrels and disposed by Stores as 422ppm waste."
Remarks:	"transformer that was removed from a vault and placed on a containment pad started to leak - has not been cleaned up as of yet"

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

BROWNFIELDS:

Program:	BCP
Site Code:	533255
Acres:	6.77
HW Code:	C224245
SWIS:	2401
Town:	New York City
Record Added Date:	10/05/2016
Record Updated Date:	04/13/2017
Update By:	SXDEWES
Site Description:	Location: The proposed BCP site is the Con Edison Third Avenue Yard Service Center (the Property), located in an urban area in Brooklyn, New York. The Property occupies a city block (approximately 6.77 acres) and is bounded to the north by 1st Street, to the south by 3rd Street, to the west by 3rd Avenue, and to the east by 4th Avenue.

THIRD AVENUE YARD (Continued) **S120706183**

Current Site Features: The Property is entirely covered by contiguous impervious surfaces consisting of buildings, asphalt pavement, concrete sidewalks and pads and is fenced with gated and secure access points located on 3rd and 1st Streets. Seven functional areas occupy the majority of the Property: Stores Building (used for storage of equipment, material and supplies; approximately 28,800 square feet sited in northeast corner of the Property along 3rd Avenue and 1st Street); Operations and Transportation Building and New Facility Building (offices and a vehicle repair garage; approximately 68,430 square feet sited across the southeastern portion of the Property; the New Facility Building along the eastern-most portion of the Property is constructed on an area that was formerly known as the Employee Parking Lot); Pole/Cable Reel Storage Area (open paved area of approximately 22,080 square feet; sited southeast of the Stores building); Flush Truck Facility (used to receive and treat flush-truck wastes; approximately 8,000 square feet sited in the southeast corner of the Property near the intersection of 4th Avenue and 3rd Street); South UST Area (contains two 2,500 gallon USTs containing gasoline and diesel fuel; sited within the south central portion of the parking lot); Former North UST Area (previously contained gasoline and diesel USTs); Paved Parking Lot (asphalt paved remainder of the Property comprising the center of the Property, and a new parking area added in 2011 in the southwest corner of the Property when buildings were demolished and in which 15 dry wells were installed (the Demolition Area). Current Zoning and Land Use: The Property is zoned M1-2(commercial/industrial). Con Edison currently uses the Property as a utility service center. Operations include indoor storage, pole/cable reel storage, operation of fleet fuel dispensing, auto repair garage, parking of fleet and staff vehicles, administrative offices, and flush truck area. The surrounding area is mostly commercial/light industrial. Past Use of the Site: Prior to the mid-19th century the Property was contained under/within a pond. During the 1850 s to 1860 s the Property (and the pond) was backfilled. The Property was thereafter the location of a baseball park until approximately 1918, when the ball park grandstands were converted into warehouse space. Between 1918 and the time the Property was acquired by Brooklyn Edison Company, Inc. (predecessor to the current owner) in 1925 the Property was used mainly by warehousing and trucking interests. After being acquired by Brooklyn Edison, the Property has been used as an electric utility work-out location. From at least 1933 to 1964, a portion of the Property fronting Fourth Avenue also housed gasoline service stations leased to third-party operators. Site Geology and Hydrogeology: The subsurface soil includes three primary lithologies that include urban fill, the naturally-occurring marsh deposits and underlying sands and silt. The urban fill is continuous across the Property, extends from ground surface to 20 to 30 feet below ground surface (ft bgs) and consists of sand and silt, gravel, cobbles, concrete, brick, slag, cinders, coal fragments, glass, wood, shells, and metal. The greatest thickness of fill was encountered in the vicinity of the central portion of the Property where a former pond (known as Denton s Mill Pond) existed. Historical records indicate that the land on which the Property is located was created by largescale backfilling in the 1850s and 1860s. In addition, various other historical backfilling events have been identified at the Property. It appears that the source of MGP-related coal tar residue in the soil is attributable to

THIRD AVENUE YARD (Continued) **S120706183**

	fill imported by a third party since no MGP-related activities were conducted at the Property. Beneath the fill and on top of the silt-clay layer are discrete lenses of more coarse grained sand and gravel. Underlying fill at the Property is naturally-occurring deposits, which consist primarily of silt, clay and peat. The presence of shell and plant fragments suggests that these are tidal marsh deposits. Due to the inherent reduced-permeability of these lithologies they act to retard vertical migration to the underlying sand and silt. The soil beneath the marsh deposits consist of sand and silt. The shallow water table occurs in the fill layer beneath the Property at depths ranging from 7 -12 ft bgs. Depth to groundwater measured in the deep wells ranged from 15 to 17 ft bgs. The groundwater in the shallow water table aquifer (overburden) flows toward the west-northwest. Shallow groundwater flows towards the west-southwest. Overall groundwater flow at the Property is to the west. Groundwater flow in the deeper aquifer unit also flows towards the west.
Env Problem:	The majority of the contamination encountered during previous investigations at the site consist of petroleum-related compounds however polychlorinated biphenyls (PCBs) were detected in shallow soil. Subsurface Soil: Several semi-volatile organic compounds (SVOCs) were detected above industrial soil cleanup objectives (SCOs). For example, naphthalene was detected at 6,500 ppm compared to an industrial SCO of 1,000 ppm Surface Soil: PCBs was detected up to 430 ppm compared to an industrial SCO of 25 ppm. Groundwater: Petroleum dissolved-phase contamination was detected above Ambient Water Quality Standards and Guidance Values. For example, naphthalene was detected at 20,000 parts per billion (ppb) compared to a guidance value of 10 ppb. Free-phase oil or light non-aqueous phase liquid (LNAPL) was encountered floating of the water table in the northeastern corner of the site where gasoline and diesel underground storage tanks were previously located.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

FINDS:

Registry ID: 110001593339

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the

MAACO AUTO PAINTING -296 4TH AVE (Continued) **1006042115**

estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "11/17/11 - changed Lead DEC from Feroze to O'Connell per discussion between Hussein and Austin. (JOC) 4/18/12 - telecon with Con Edison (Gonzalez) and First Environment (Farrell); discussed investigation work in process, proposed additional sampling points and DEC's prior comments on them. Geophysical is planned for Weds 4/25/12 on the southeast side of the fence (SE of MW-4) so the delineation may continue in that direction. No laboratory results back yet. Will be proceeding with points S-9 and S-11 via sonic drill rig. MW-3 was not installed yet; will decide on its location based on field results from boring S-21. Will move S-24 to other side of fence, add addtional points. Will add additional point between S-7 and S-24 on NW of fence. FE will provide updated drawings to show proposed locations as discussed. (JOC) 4/26/12 - updated drawing with proposed locations received 4/20/12; sent comments on 4/20: I looked at the figure you provided. I just noticed that the DW labeled borings are mostly not shown, and most of them showed little impact. Based on the figures from FE's Nov. 2011 report, it looks like DW-2 is about where proposed S-25 is. Please check this; if it is right there, S-25 should not be needed. One other item to check; the location shown for TW-1 in the figures in the Nov. 2011 report is much further up into the corner of structure labeled shed . Please confirm that the location shown for TW-1 on these recent figures is accurate. I attached the figure you sent me, and I added a bubble around the area that seems to have generally shown impacts to this point. I changed the file name to try to avoid confusion. I drew the bubble extending to the other side of the fence from MW-4 based on its relatively high field indicators of contamination. Note that the locations of S-24 and S-26 would not zero it out even if they show no impacts. It might be best to wait for Naeva to do their work next week, see if they find anything worth looking at, and if there's nothing of interest to have a point more on an extension of that line of SB-1 to MW-4. If you are working on an assumption that there is some area of impact there on the other side of the fence from MW-4 please advise, and we can work with that assumption. Has the plan for S-9 changed since TP-8 went to the extent that it did? Also, as we discussed on Wednesday I understood S-11 was going to be moved to the location of TP-4. Please confirm. I have no comments on the locations for S-21, S-22, S-23, S-28. I appreciate your adding S-27, but please advise on the location of TW-1 as above. If TW-1 was further up in the corner as shown in earlier figures, I might rather have S-27 where TW-1 is shown here. Can FE provide a little more info characterizing the impacts noted in TP-8, and summaries for the surrounding points (S-10, TP-6, S-16) to make sure we're all comfortable on the delineation on that side? I'm concerned over the described vertical extent of impacts there (7 to 12') which is larger than noted in most other locations. - responses from FE and Con Ed on 4/23/12: they advised that TW-1 is where shown on recent drawings; DW-2 was closer to location of proposed s-28; they will install S-9 next to TP-8; - held telecon among Con Ed and FE on 4/23/12 to discuss the comments/responses; included that locations east of the fence (SE of MW-4 should be decided after geophys completed); revised figure sent by FE based on telecon received 4/23/12; approved on 4/24/12. Geophys

3RD AVE YARD (Continued) **S121981973**

and pre-clearing completed on 4/25/12. Went to site on 4/26: from field observations S-27 was clean, rest on east side showed impact, locations SE of fence (s-24 and S-26 showed impact (S26 showed relatively more than S24, but both were less than MW-4); S-9 showed impact similar to TP-8; S-25 showed impact. Driller de-mobilized. Agreed that at this point it would be best to get the lab data together, get the boring logs completed, and then get together to discuss what additional delination is needed. (JOC) 5/21/12 - met at site with Con Edison (Mariela Gonzalez and Nick Borgia) and First Environment (Meghan Farrell); Con Edison presented data summary tables for VOCs and SVOCs in soil samples and a figure showing the totals; based on this data, additional delineation needed on north and northeast of area of concern; paced off MW-3 as 6 feet from the building and S-27 as 7 feet from the building, so there is not much open space left to work with; there is ample space on the east side and on the other side of the fence which separates this area from the parking lot (this area had already been assessed by Naeva via geophysics and found nothing inside the storm line running along the end of the last row of parking spaces against the fence; they are still waiting on the chromatogram from TestAmerica, and the results of Meta's forensic fingerprint work; the surveyor was onsite today but could not conduct the well elevation surveying due to the weather (thunder/lightning in area) but expects it should be done by the end of the week. Among the items requested from Con Edison were to pull together information on the storm systems within the yard; to go through the data to see what sampling points might be able to be parsed out as exceedances due to fill rather than from the product/plume identified; to overlay the Sanborn maps over the site figure with the data points; to try to get more info from Con Edison CM regarding the depths of the foundations across the site from the former buildings (some had basements); to put together cross sections which show the borings/data. When all of the above is pulled together, we will reconvene to determine what additional delineation is needed. While at the site, we walked around the demo/dry well area; it had been very heavily raining earlier in the morning. Even though the area is covered with blue stone, there are areas of standing water. There are at least five storm drains in the area which are connected together and were taking on from from the surface; this system also takes storm water from the roof of the building labeled on site drawings as shed . These all seem to discharge to dry wells that had been installed in an area just at the south end of the area of concern (basically, within the area of the earlier sampling points DW-1, DW-5 and DW-8. We discussed how this large inflow of storm water to the subsurface will have an effect on the groundwater flow. I paced off MW-7 being ~20 feet south(measured along a line parallel to 3rd Avenue) of the north roof line of the building across 3rd Avenue, and the southwestern-most dry well being ~42 feet north of MW-7 along a line parallel to 3rd Avenue(it is east of MW-7 as well as north). (JOC) 9/28/12 received 9/21 email from Con Edison's consultant: greater than greater than greater than Daniel D. Lattanzi 9/21/2012 4:00 PM greater than greater than greater than Joe, I hope all is well. Con Edison and First Environment are prepared to continue the remedial investigation (RI) activities at the above referenced site. As such, First Environment is proposing to submit a letter report to the NYSDEC. This letter report will summarize the RI activities completed to date at the Site, and provide a scope-of-work to delineate the extent of contamination in

3RD AVE YARD (Continued) **S121981973**

soil and groundwater. Since First Environment is only proposing additional soil borings and monitoring wells, these tasks remain consistent with the previously approved November 2011 Remedial Investigation Work Plan. Once the remedial investigation is complete (i.e., extent of contamination is identified), First Environment will submit a complete Remedial Investigation Report/Remedial Action Work Plan to the NYSDEC. The report will summarize all remedial investigation activities conducted at the Site, and will provide a site-specific remedial strategy to address residual soil and groundwater contamination. In order to effectively proceed, please confirm that this approach is acceptable --------- responded as below: greater than greater than greater than Joseph O'Connell 9/24/2012 8:27 AM greater than greater than greater than Hi Dan and Mariela, I looked back through my files/notes on this. I think what I was expecting at this point based on the last meeting among Mariela, Meghan and myself was cross-sections, a revised plan-view figure and an attempt to differentiate fill-derived SVOCs. I don't think I need a report other than what you feel you might need to explain any figures or SVOCs. If you think you have some other/new information to discuss that's fine too, but I don't think there's a need to put together a summary type report at this point. I think we can continue as we had been, and propose new delineation borings/wells on a figure, and we'll discuss/agree on it before implementation. ---------- received response same day that they will proceed as requested (JOC) 11/13/12 - received email response from First Environment with figures and tables, and proposed additional investigation locations - under review (JOC) 12/7/12 - Revised figures sent from First Environment on 11/28 responding to my email of 11/14 responding to the above; telecon with them and Con Edison on 11/29; additional soil borings added as discussed, understood that specific locations may be slightly modified based on clearing and investigation findings; discussed that gw flow direction as shown was inconsistent with what had been the case in the past, requested additional rounds of elevation monitoring, to be observant of rainfall at site to see effects on gw flow direction from dry wells; work may proceed as shown, may be asking for additional gw monitoring downgradient of well MW-3 based on established flow direction (JOC) 12/14/12 - received updated proposed site boring location figure on 12/11 based on geophysical work; some proposed locations were moved further north and east than they had been due to subsurface utilities; I requested that the utilities identified by the geophysical work be added to the drawing; received revised updated figure 12/13 with the utilities shown and additional revision to some of the boring/well locations. OK to proceed. Clearing activities ongoing. Planned schedule is to start boring work week of 12/17. (JOC) 1/30/13 - received updated summary information about the last round of step out borings; in short, the area of contamination has not yet been completely delineated. Agreed with Con Edison PM that before considering what additional investigation might be appropriate, Con Edison will have their consultant do some additional groundwater elevation monitoring to better understand flow direction and will put together a summary report for the investigation conducted to date for the entire area. (JOC) 2/15/13 - received email from FE; wanted to confirm that report can come by email. I called him (D. Lattanzi, FE); agreed he will try to send the summary report via email, if it is too large and does not go through, he will send an CD that night, which should be by 2/19. I added that I might ask

3RD AVE YARD (Continued) **S121981973**

for figures in print if I find them too detailed/complicated to review in pdf format. (JOC) 5/3/13 - reviewed the summary report and sent comments/items for discussion to Con Edison via email 4/10/13; meeting was scheduled for 4/24 but was cancelled by Con Edison. (JOC) 7/8/13 - had received confirmation from Con Edison that they would be proceeding with expanding the investigation scope to a larger area; received notice from member of the public about 55 gallon drums at the 3rd Avenue Yard facility, which upon discussion were described as being stored within the fenced area on the property near the corner of 3rd Avenue and 3rd Street. Spoke with Con Edison PM; the drums from pre-/clearing and/or investigation activities around the perimiter are being brought into the yard for storage in that area of the yard. (JOC) 2/27/14 - discussed with Con Edison PM Gonzalez 2/26. Consultant was sampling additional groundwater wells around sidewalk, that report with all the information was then going to be prepared for all the investigation completed. (JOC) 3/30/16 - received report on investigation completed by Con Edison in January 2016; report describes site history which shows all of the site was marshland associated with the historic Gowanus Creek and the majority of the site was the location of a former mill pond; it is believed that the property was filled at some point in the late 1800s to approximately its current grade; large area of this fill material is contaminated with what was identified through laboratory analysis (Meta Environmental) that the PAH distributions in most of the samples were similar to each other and to tar reference samples in META s archive from the carbureted water gas process , while the NAPL sample from well MW-4 contained a tar-like material similar to that found in the soil samples and also contained a substantial petroleum-derived component that appeared to be weathered gasoline or a similar material; one sample (MW-C10D 33-35'bg) contained a pyrogenic PAH pattern more similar to combustion-derived sources and coal carbonization source; PAH impacted soils were encountered between 7.5 and 17 ft bgs in the Demo Area with the greatest total PAH concentration of 18,358 mg/Kg detected in S-38 from 10- to 10.5 ft bgs in the central/western portion of the site; Subsurface soil PAH impacts in the area west of the southern end of the Operations and Transportation Building were encountered between 9 and 29 ft bgs with the greatest total PAH concentration of 14,590 mg/Kg detected in D12 from 12 to 13 ft bgs. PAH impacted soil was encountered between 16 and 20 ft bgs in the South UST Area with the greatest total PAH concentration of 2,500 mg/Kg detected in SB D1 at 16 ft bgs. In addition, separate work as part of parking area re-paving identified PCBs in shallow soils (see spill 1502673) up to 431 mg/kg in one sample and 10 mg/l TCLP lead in one composite sample. The site conditions are being discussed internally within DEC to determine a course of action. (JOC) 7/14/16 - Department staff met with Con Edison on May 10, 2016 and July 8, 2016 to discuss Con Edison's 3rd Avenue Yard overall and how to move forward with a comprehensive approach. Anticipate feedback from Con Edison shortly. (JOC) 11/18/2016 Austin This spill report is being transferred from Joe O Connell to Jennifer Kann - end. 06/05/17: J.Kann - as per Jeff spill reassigned to Kumar. 6/8/17 - Haggerty: Closed/consolidated under Site C224245. Further investigation and remediation will be conducted under the BCP."

Remarks: "Test pit shows 1 part per million PCB in soil. Clean up pending"

DEC Memo:	"5/9/16: Mahat EMIS : 245161 [crossed referenced] EMIS Remark: Adrian F Davis (06217) reported that as he delivered a 55 gallon drum to the parking area in the 3rd Ave Yard he discovered approximately 1 qt of hydraulic fluid had spilled on the asphalt and some had entered to storm drain. cleanup is in progress. Based on the EMIS report, the spill case is assigned to Con Ed Unassigned. 3/28/17 TJD File review. Final EMIS #245161/2 submitted in support of closure request, as per report: Location: 3rd Ave Stores 222 FIRST STREET Initial

CON ED 3RD AVE STATION (Continued) **S118638446**

Observation: Adrian F Davis (06217) reported that as he delivered a 55 gallon drum to the parking area in the 3rd Ave Yard he discovered approximately 1 qt of hydraulic fluid had spilled on the asphalt and some had entered to storm drain. Cleanup is in progress. Cause: Equipment Malfunction - Aged equipment Resolution: 2/7/2017 1:48 PM Operating Supervisor K. Smith 04409 reported spill was cleaned within two hours on 5/9/2016. Site was inspected at the time and no material made it to any storm drains. Site was cleaned using speedi dry and absorbent material which was placed in a non haz 55 gallon drum of oily debris at the 3rd Avenue Yard. Based upon the documentation provided, the reported environmental condition has been appropriately remediated in accordance with applicable regulations. No further action is required. Spill closed."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY / ARAKHAN 7/25/02 Met with M. Sicherman and Sam Arakhan to discuss the high PCB readings in the employee parking lot. She explained that this spill was called in and was thought to be gasoline. We discussed combining the UST and PCB investigations. (KMF) 9/5/02 Phonecall from Maureen Sicherman. So far, they cannot locate 14 tanks. Suggested Con Ed submit proposal to do a site investigation. (KMF) 9/16/02 Phone converstaion with M. Sicherman. Submitting letter on how they're going to locate tanks. Not going to try GPR because they've tried this in the area before and were unsuccessful. Going to dig 5'deep trenches and test pits based on information from property records and Sanborne maps. These records indicate tanks were removed in 1964 (they disappear from map to map). QAPP/Workplan being rewritten. (KMF) 9/25/02 Received UST Investigation proposal from M. Gonzalez. (KMF) 10/9/02 Phone conversation with M. Sicherman. Include diesel as contaminant and PCBs. Use Fuel oil contaminated soil TAGM 4046. Will send letter confirming conversation. (KMF) 10/9/02 Relayed Sam Arakhan's comments to M. Sicherman. Requested site map and MW-2 location. (KMF) 10/10/02 Spoke with M. Sicherman. Will address comments when she receives a letter. (KMF) 10/10/02 Sent out letter in response to scope of work. (KMF) 11/4/02 Received QAPP for the Groundwater Investigation and Remedial Action Plan for PCBs and unknown USTs in the employee parking lot dated May 28, 2002 (revised November 1, 2002). 11/21/02 Yesterday afternoon found wall of tank while trenching. Appear to be heating oil tanks (maybe 250gal). Clean Harbors uncovered another tank while looking for port to first tank. Excavation is 40'X20'. Asked about 30day requirement to notify DEC to close the tanks.

THIRD AVENUE YARD (Continued) **U001832241**

Replied that this did not apply in this case. Also directed her to arrange to register the tanks. (KMF) 11/21/02 Update: Removed 3 drums of oily sludge from tanks. Will fully characterize and analyze for PCBs. Regular turnaround for rolloff waste characterization of soils and sludge. Appendix B Category B deliverables will cause them to store rolloff for about a month. 11/25/02 Construction management was proceeding this morning and saw two tanks ad adjacent two tanks. Four tanks altogether. Appear to be 550gal. Will sample liquid and determine flash point and product. (KMF) 11/25/02 Update: UST-II area (where they had shifted the soil within the excavation) was expanded another 5' north and uncovered top of tanks. Found mostly water inside. Took samples and saw some sludge at bottom. 12/11/02 Update: PCB confirmatory sampling results are not yet available. All potentially impacted soil from around lube tanks had been excavated and samples collected from soil. Also reported as hazardous for lead. Will be disposed of as such. At the south area, gas tanks liquids were treated as hazardous for benzene. (KMF) 12/17/02 Mariela Gonzalez informed me that an additional 6 tanks were located and were full of water. Will sample for oil ID, PCBs and RCRA. Soil is stained under the other 4 tanks. Concrete anchoring slab was broken out (approx 4 thick) and contamination was found. Waiting to see if water in excavation percolates. Will inspect graves tomorrow afternoon if possible. (KMF) 12/19/02 Met with M. Gonzalez and Chad of Jacques Whitford. Met to discuss results of preliminary samples. She will send a summary of results with an updated map of tank areas. Mariela is concerned about levels of metals and requested that DEC negotiate cleanup levels and amounts of soil to be removed. Sidewalk on east side of UST-II area mat be undermined. One high PCB hit (26ppm) on south side of PCB-II area. Mariela is concerned about how much soil will need to be removed from this area. Will research test pit data and determine extent of contamination in this area if possible. UST-I area - no tanks were found initially. Found two lube oil tanks when trench was extended. Additionally 6 tanks located north of UST-I area. Samples have been taken from the tanks. (KMF) 1/05/04 Arakhan PCB cleanup and removal of old USTs have been completed. ConEd (Maria Gonzalez) will submit report shortly. Subsequent to completion of PCB remediation, elevated concentrations of BTEX/gasoline detected in monitoring wells. Additional investigation and remediation efforts conducted. (JHO) 4/22/04: Con Edison submits UST Closure Summary Report for 14 tanks uncovered during excavation and removal of PCB contamianted soil associated with the employee parking lot. The report documents post-excavation soil sampling resultsfor PCBs, VOCs and SVOCs. 5/27/04: E-mail from Con Ed (M. Gonzalez) transmitting results of May 2004 groundwater sampling event. To summarize, there are low to moderate conentrations of BTEX compounds in groundwater which exceed standards. For example, benzene = 22 ppb max, toluene = 15 ppb max, ethylbenzene = 140 ppb max, xylene = 170 ppb max. See eDocs for results. (JHO) 6/7/04: revised groundwater contour map submitted by Con ed. See eDocs. (JHO) 6/8/04: e-mail to Con Ed Mariela Gonzalez: This is the third different groundwater contour/flow direction that I have seen for this site. I guess the addition of the wells around the north UST area helped get a better handle on it. I reviewed the groundwater analytical data for both the employee parking lot and the Service Center tanks [NOTE - see spill no. 9808009 for Service Center spill - JHO]. I think we are dealing with two distinct plumes, based on the following observations: 1. I don't see any MTBE associated with the employee parking lot plume. If

THIRD AVENUE YARD (Continued) **U001832241**

this was, in fact, the leading edge of the plume from the Service Center, I would expect to see MTBE in addition to the BTEX. 2. The presence of lead in the employee parking lot soils also leads me to believe this is a plume of older gasoline (leaded gas, no MTBE). How long before the new building is to be constructed on the employee parking lot? My suggestion would be to use ORC on this plume (hopefully we can do this now before construction begins) and install two wells each in the sidewalk adjacent to MW-1 and MW-3. (JHO) 6/10/04: E-mail update from M. Gonzalez: I'm glad you had the chance to catch up with this site. It is my understanding that construction activities at this site may begin in early August or September. [NOTE: Con Ed is planning on constructing a new office building on the former employee parking lot area.- JHO] Regarding ORC application at this site, I believe that because of the aggressive remediation at this site (more than 9,000 tons of soil removed and all 14 USTs removed) and the current levels of VOCs in GW -range between 11 ppb (Benzene) to 160 ppb (Xylenes), it wouldn't be necessary. It seems like the plume is stable and mainly around the MW1. I know that we have a short window of opportunity to do it and with the ORC treatment being able to get a faster remediation conditions to achieve a NFA, rather than waiting and monitoring GW for much longer time. So, I'm open to discuss. Perhaps, we could perform one ORC application but limited to the North Area (around MW1), since the middle and south areas (where MW2 and MW3) are clean. The approximate cost of ORC application for the north area is $30-40 K. Regarding installation of additional MWs, we need to further evaluate the number and the location required because heavy presence of all kind of underground utilities between the property and the Fourth Ave. Within the property say, by the north-east corner (about 60-65 feet north of MW1) is a possibility. MW1 and MW 3 will be preserved. I'll be calling you to discuss. (JHO) 6/25/04: e-mail from M. Gonzalez proposing ORC injection for wells at parking lot, as follows: Jane, here attached the GW flow contour for the 3rd Ave Yard (combining the MWs at the Service Center and the parking Lot). Also, FE [First Environment]used Regenesis calculation web tool to determine the optimal grid size and ORC material required for a limited ORC injection to address VOCs exceedances in the MW#1. I provided FE the end-point soil results for the North excavation area. John plotted the soil VOC results in the proposed ORC injection site Plan. (Note: I took a second look to those end-point soil VOCs concentration, and they are below the TAGM Recommended Cleanup objective to protect GW, Also to note that excavation at the north area went down to 10-11 feet, in contrast to the south or TP15 area which were excavated as deep as 14 feet.) I would like to schedule the ORC application at the Parking Lot ASAP. See eDocs for e-mail and attachments. (JHO) 7/9/04: E-mail to Con Ed Gonzalez approving ORC proposal: I reviewed the info you e-mailed me on June 25 and agree with the ORC proposal with one change: I'd like FE to install one new monitoring well in the sidewalk downgradient of the ORC injection area. I know you told me that well MW-1 will be spared from the construction activities, but I'd still like to have a monitoring point that is outside of the immediate injection zone. (JHO) 7/23/04: e-mail from Con Ed Gonzalez: This note to update you with our plans regarding the ORC project at the 3rd Ave yard Parking Lot. * Monday, July 26: A field walk among Remediation, CM, the consultant and subcontractor is scheduled at 9 AM. We will be reviewing the scope of work and selecting the injection points. Also we will be reviewing utility drawings and the

THIRD AVENUE YARD (Continued) **U001832241**

code 753 markups so that we can select a location for the requested sentinel MW. *The ORC implementation will commence on July 30th. *Pending on MW location, if for example is to be done outside the site property (on the sidewalk), a street permit will have be secured, at this time we don't know, or at which sidewalk the MW will be installed, therefore, upon Monday field walk, I'll update you regarding proposed schedule to install this MW. (JHO) 7/26/04: site visit with Con ed (Mariela Gonzalez, Vinny Desiderio and Ulrick Samuel) and First Environment (John Engdahl). 2 additional wells will be installed to the northeast and southeast of existing well MW-1 in the former parking lot area. Both proposed wells are within property/fence line.(JHO) 7/26/07: e-mail from Con Ed Gonzalez: As we discussed, I'm attaching GW data from the original three MWs installed at the parking Lot. These wells were destroyed during soil excavation. Also attached is GW data (three rounds of data) for the existing MW#3 (at the south area). I only summarized VOCs since SVOC are either ND or below GW standards. And to document, below I typed some of the clarifications regarding the scope of work: - Two MWs (could be 2 diameter) to be installed at about 5' south and north of the ORC injection borders. The wells to be located the closest possible toward the property fence at 4th Ave, but inside the parking lot property. - At these two MW locations, soil sampling is not anticipated since wells are being drilled on clean sand from 0 to 10'. If soil below 10' shows any evidence of contamination (odor, color or high PID readings) then a soil sample above the GW elevation should be collected. - The MW #1 and #2 will be extended out [NOTE: converted to stick up wells - JHO] so that the MWs are not covered during paving/site surface restoration activities. E-mailed response to Gonzalez: The concentrations in groundwater from the one round of sampling of the original wells in the south tank area indicates no detectable VOCs. These wells were closer to the tanks (the ostensible source of the contamination). The concentrations in new MW-3 seem to be fairly consistent, and are low. You can stick to the original plan - i.e., ORC for the north tank area. The south area will be capped with the new building, preventing any further rainwater infiltration. I would recommend that well MW-3 be sampled on the same frequency as the north area wells in order to track any remaining contaminant concerns. NOTE ADDED 9/11/07 BY JHO - there were 14 x 550-gallon gasoline USTs located in the northern area, which is the source of the contamination. (JHO) 7/28/04: NFA letter for PCBs in soil issued to Con Edison. (SKA) 9/24/04: E-mail from M. Gonzalez transmitting lab results for soil and groundwater collected during installation of additional monitoring wells. High concentrations of gasoline constituents were noted in soil along fence line, where no soil was previously excavated. The original excavation for the PCB contamianted soil encountered a number of 550-gallon gasoline USTs, which were excavated and removed. However, in an effort to prevent the fence along the site perimeter from collapsing, excavation was halted before reaching clean end-points. The two new wells (MW-4 and MW-5) were installed in the native material. Concentrations in soil in the native material range from ND for benzene to 1416 ppm for xylenes. Groundwater collected from wells MW-1, MW-3, MW-4 and MW-5 show moderate to high conentrations of dissolved BTEX (highest benzene = 1730 ppb, toluene = 7070 ppb, ethylbenzene = 3170 ppb, xylene = 16,600 ppb). These are the concentrations following ORC injection, which was completed on July 31, 2004. 10/5/04: Con Ed submits report on September 2004 monitoring well installation and

THIRD AVENUE YARD (Continued) **U001832241**

groundwater sampling event. 8/6/07: e-mail from John Engdahl (First Environment) transmitting conceptual proposal for surfactant injection to enhance product recovery efforts: Attached please find our memo summarizing the recent investigation activities and the proposed investigation (soil gas) and remediation (VEFR w/ surfactant injection) for the 3rd Avenue Employee Parking Lot. Your expedited review of the document would be greatly appreciated, particularly the soil gas sampling portion. We followed the NYS DOH guidance document, however the guidance document does not specifically address our situation (i.e., near slab samples for VI assessment purposes, unconfined surface cover, etc.). We developed our scope based on our experience and knowledge from other sites and other guidance documents, including the NJDEP, EPA, ITRC, and API. We have schedule the GeoProbe for this Thursday, August 9, 2007. See eDocs for memo. (JHO) 8/9/07: e-mail response to First Environment (Engdahl): As we discussed on the phone this morning, NYSDOH has reviewed the soil vapor sampling plan and finds it acceptable. You will not need to run the SIM method, since the TO-15 detection limits should be sufficient. Please make sure to tell the lab what contaminants you are specifically interested in (i.e., BTEX). As for the proposal for surfactant flushing, please send a hard copy of the memo with the revised figure to: Jim Harrington NYSDEC - Bureau of Technical Support 625 Broadway Albany, NY 12233-7020 Please send me a hard copy of the revised figure, and e-mail me a PDF version as well. NOTE: memo saved in eDocs contains both original and revised site plan. (JHO) 8/22/07: Spoke with Jim Harrington, DER Technical Support - he has assigned this to Kevin Carpenter, who will review the proposal and provide comments. (JHO) 1/31/14 - Remedial action work plan recieved from consultant recommended surfactant injection to address LNAPL which has been recurring in site wells. Sent comments/questions reply via email. (JOC) 2/27/14 - discussed with Con Edison PM Gonzalez 2/26. She would be check with consultant for response to my questions/comments. (JOC) 6/2/15 - received email from consultant 5/22/15 that they conducted a round of groundwater sampling in March 2015 and based on their findings they would like to discuss modifying their prior proposal, which had been for surfactant injection. Latest round did not see LNAPL in any wells, while dissolved VOC contaminants remain: in 8 wells sampled, 2 had low VOC concentrations, 2 had concentrations about 1 ppm (0.7 and 1.1) and 4 had concentrations in excess of 5 ppm (6.4, 7, 20 and 26 ppm) for CP-51 VOC list contaminants. The 5/22 email includes that an in-situ bio-augmentation program will most likely be the preferred approach, but that updated conditions and other site specifics must be first evaluated, and included that they would like to discuss the matter. Responded by email on 5/22 that I would be available to discuss it and provided some dates to do so. Awaiting response from consultant/Con Edison. (JOC) 7/14/16 had conference call 6/15/15 with Con Ed (Gonzalez), First Environment (Lattanzi) went through that the prior excavation work stayed within the property line and with the continued elevated dissolved concentrations that there remained a need for further work under the sidewalk, bringing up again that the old property drawing shows the old fill lines for the former gasoline station on the sidewalk along the curb; Mr. Lattanzi talked about the difficulty of work with the utilities under the sidewalk (e.g., sewer and subway ductwork) and the adjacent subway under 4th Avenue; the conversation ended with Ms. Gonzalez advising that FE s contract was ending very shortly, that Con Ed would be working on transitioning

THIRD AVENUE YARD (Continued) **U001832241**

the project over to their other consultant AECOM. Department staff met with Con Edison on May 10, 2016 and July 8, 2016 to discuss Con Edison's 3rd Avenue Yard overall and how to move forward with a comprehensive approach. Anticipate feedback from Con Edison shortly.(JOC) 11/18/2016 Austin This spill report is being transferred from Joe O Connell to Jennifer Kann - end. 06/05/17: J.Kann - as per Jeff spill reassigned to Kumar. 6/8/17 - Haggerty: Closed/consolidated under Site C224245. Further investigation and remediation will be conducted under the BCP."

Remarks: "HISTORICAL SPILL FOUND DURING SOME TEST BORINGS. NO SEWERS OR WATERWAYS. NO SMOKE OR FIRE. NO PRIVATE PROPERTY AFFECTED. CON EDISON REFERENCE NUMBER NOT AVAILABLE AT THIS TIME."

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

DEC Memo: "11/22/2011 - being directed to open a new spill for the offsite product issue associated with former BP 13397 at 363 4th Ave (spill 89-01904). 11/23/2011 - sent letter notifying petroleum contamination at 270 Fifth Street and required investigation. Response is required within 15 days in receipt of the letter. Letter was sent to: 270 Fifth Street Corp. 270 Fifth Street Brooklyn, NY 11215 BPC Management 84 Livingston Street Brooklyn, NY 11201 12/6/2011 - received email from Michael Marino, a lawyer who represent the Co-Op building. eDoc. 12/13/2011 - letter to Michael Marino in response to his email dated 12/6/2011. eDoc. required investigation work plan by 1/2012. 5/2/12 - Raphael Ketani. A new spill exists for this same site: #1200737. Arnie Fleming of Fleming Lee Shue called. He is the consultant for the developer of the neighboring site to the west (363 4th Avenue; #8901904). He said that he was at the co-op site yesterday and the contractors had emptied and cleaned out the tank. Because of this, the oil seepage onto 363 4th Avenue had stopped. The tank on the co-op property was a 1,000 gals. and was 2 feet away from the border between the two properties. No piping was found associated with the tank. Mr. Fleming said that he was dewatering his client's property and no oil was flowing in. However, he told Mr. Yu of Yu & Associates that he should start digging out the contaminated soil around the tank as he will stop dewatering and then Yu & Associates will have do their own dewatering in order to remove the contaminated soil. Mr. Yu said that he was waiting for the co-op board to meet in order to give him a decision regarding whether he can proceed with the remediation work. Mr. Yu also state that an oil sample was sent off for fingerprinting. So everyone is waiting for the results. Mr. Fleming said that he emphasized to Mr. Yu that he should take advantage of the present dewatering because it will save him some money. 5/3/12 - Raphael Ketani. This spill case and the spill case for #1200737 involve the same spill at the same site. I discussed this with Randall Austin, Chief of the Spills Unit, and told him that June Feng of my unit was already handling the spill since November 2011. I told him that the later spill should be closed and consolidated with the earlier one. Mr. Austin agreed. I am closing case #1200737 effective today as it involves the same site and the same spill. I will handle spill #1110410 as part of my caseload as it is adjacent to another spill case I am handling, which is situated adjacent to the west on 4th Avenue, and because the oil from this site is impacting the 4th Avenue site. 5/8/12 - Raphael Ketani. I tried to contact Andrew Leung of Yu & Associates (201) 791-0075, ext 105 regarding remediation work at the site, but I could only leave a message. 5/9/12 - Raphael Ketani. I spoke to Mr. Leung about the spill on his site. I told him about the dewatering and water table lowering that was going on at the neighboring property and how this was an opportune time to dig out the contamination. I told him that he should let the co-op board know that they should act now in order to save money during the remediation. Otherwise, they will have to do the dewatering on their own and this will incur additional costs. Mr. Leung said that he was aware of the situation and he will try to get them to act quickly. He

CONDOMINIUM (Continued) **S111456504**

said that he has filed a FOIL request for information regarding the neighboring site. I told him not to wait to receive this information in order to start the dig out as he will loose time. He said that he is already in the process of getting the work started. I told him that I will give the co-op some time to start the work, but the contamination is in the ground and it is affecting the environment now. So the DEC is concerned and wants things to move forward. Mr. Leung said that he understood. He added that Martin Weaver is president of the co-op board and he can be reached at (347) 351-6570. 5/11/12 - Raphael Ketani. Mr. Leung (201) 791-0075 called me today. He said that he had spoken to the co-op board and Mr. Weaver and had tried to impress upon them the urgency of getting the tank pulled and the contaminated soil dug up. He said that they will go ahead with the work. I told Mr. Leung that sounded like good news, but I said I will call Mr. Weaver myself to let him know that the work has to start. I tried to contact Mr. Weaver, but I could only leave a message that the DEC was concerned that no work was taking place regarding the spill and that the co-op was presently in violation of Section 173 and Section 176 of Article 12 of the Navigation Law and may face legal action as a result. Later, Mr. Weaver called me. I explained to him that the DEC was concerned that no remediation work had taken place in the 6 months since the spill was called in. He said that he wasn't aware of when the spill had been called in, but the work will start next week. He went on to say that the co-op wasn't familiar with how to go about doing a cleanup. They had to find an engineer and a cleanup company. So that's why everything is taking so long. I told Mr. Weaver that as long as the work starts next week, then the DEC will simply wait for Mr. Yu to submit the remediation report sometime in the near future. Mr. Weaver assurred me that the work will start next week. 5/15/12 - Raphael Ketani. Vanessa Meer of Yu & Associates (201) 791-0075 called today. She said that Yu & Associates applied for the work permit to the NYC DOB. They hope to get the permits this week and begin the remediation work monday or teusday of next week. 5/25/12 - Raphael Ketani. Mr. Leung (201) 791-0075/cell (201) 310-2501 called and left a message that the UST will be pulled on 5/30/12 and then the soil excavation will start. 5/30/12 - Raphael Ketani. Ms. Meer called and left a message that a car was blocking the entrance to the parking lot and so they couldn't get their equipment to the UST location. They will try going another way. 6/4/12 - Raphael Ketani. Mr. Leung left a message that the 1,080 gal. UST had been removed. The soil excavation will start tomorrow. 6/5/12 - Raphael Ketani. I spoke to Mr. Leung today. I reminded him that Yu & Associates has to follow the contamination and remove all of it. Then they have to take end point samples. He said that he was aware of this and that it will be done. 6/7/12 - Raphael Ketani. I received a call from Jay Solomon (212) 661-9400, the attorney for the family that had been moved out of apartment 1G at 270 5th Street. He said that when the foundation was laid at the construction site next door, lots of oil vapors entered the apartment and the parents and two kids had to be moved into a hotel temporarily. However, he added that the foundation work has been finished. I told Mr. Solomon to contact the company responsible for the air monitoring and have them do a followup indoor air inspection just to be sure everything is alright. He said that the vapors had come from the construction site. I told him that the vapors would more likely come from the 1,080 gal. UST site because there is lots of contaminated soil there and this location is much closer to

CONDOMINIUM (Continued) **S111456504**

apartment 1G. Mr. Solomon didn't comment on this. I added that once the tank is removed, the contamination in the soil is exposed and the oil will vaporize. In any event, I said, it would be good to have a followup indoor air survey done of the apartment. I told him that Fleming Lee Shue was the consultant in charge of setting up the air monitoring and he should contact them. With that, the conversation ended. I tried to contact Arnie Fleming of Fleming Lee Shue (212) 675-3225, the company that had arranged for the air monitoring at the construction site, but I could only leave a message. Mr. Helseth from Fleming Lee Shue called in response to my message. He said that Mr. Fleming was out today, but he will take care of anything that's an issue. I explained that Mr. Solomon had called and wanted a vapor survey performed in his client's apartment. Mr. Helseth said that this will be done. I added that a vapor survey should also be done in the hallway outside the apartment, outside the building itself and next to the excavation area for the 1,080 UST. Mr. Helseth said that this will be done. Later, Mr. Fleming called. We discussed the issue of doing a PID survey in the Shepherd's apartment. I told him that the DEC also wanted a survey inside the building's hallway, just outside the apartment, just outside the apartment in order to get the ambient air concentrations, then next to the UST removal site and finally next to the border of the two concerned properties (condo and excavation site). Mr. Fleming said that he will talk to his client about this. Some time later, Mr. Fleming left a phone message that all parties had agreed to do the vapor surveying. The co-op board was being contacted and it was hoped that the surveying will take place tomorrow, 6/8/12. Mr. Fleming stated that he will keep me posted. 6/8/12 - Raphael Ketani. Dave Yudelson of Sive Paget & Riesel (917) 295-6449 called. He said that the co-op had called him and wanted him to get involved in the project. Mr. Yudelson asked for a site history and the current status. I gave him the information. I also told him that the present source of the vapors was probably the open UST grave. He said that he will go down to the site and see what the situation is and, if they retain him, get the project moving and resolve the spill. Mr. Fleming (212) 675-3225 called me regarding doing the vapor testing inside the apartment and outside at the UST excavation location. Mr. Fleming told me that the lawyer told him not to enter the property and that Yu & Associates will do the work. I told Mr. Fleming that it didn't matter who was going to do the testing, just that the DEC gets the data. Later, I contacted Mr. Leung (201) 791-0075/cell (201) 310-2501 and explained that I wanted Yu & Associates to do the vapor survey. Mr. Leung said that more than one resident had been complaining about vapors from the BP site a while ago. I asked him whether they still were complaining. He said No. Mr. Leung added that nothing is happening right now as he was told the DEC wanted to take a look at the soil delineation results first before more excavating takes place. I told him that was not true. I told him that the DEC wants Yu & Associates to move as quickly as possible to excavate the contaminated soil, then submit the end point results once all of the soil is removed, and then go forward with installing groundwater wells. Mr. Leung said that he thought this was what the DEC wanted. So he will mobilize his crew. 6/12/12 - Raphael Ketani. Ms. Meer (201) 791-0075 called and said that the soil excavation will start on 6/14/12. I asked her about doing the vapor sensing in Mr. Shepherd's apartment. She said that this will also be done when they can set up a date with Mr. Shepherd. Ms. Meer asked whether the 1,080 gal. UST needed to be registered as

CONDOMINIUM (Continued) **S111456504**

it was the only tank on the property. She added that the building is on gas. I told her that she didn't need to register the tank. 6/14/12 - Raphael Ketani. Mr. Fleming left me a message today. He said that one of his workers did a PID survey of the neighborhood. The only vapor detections were about 8 ppm just across the property fence with 270 5th Street. The detections were at the location of the open tank grave. Mr. Fleming added that the tank is sitting on the ground and hasn't been removed and the tank grave is uncovered. His worker was not able to do a PID survey of the Shepherd's apartment as he was not allowed access. 6/14/12 - Raphael Ketai. Mr. Leung left a message that the excavation was starting. 6/15/12 - Raphael Ketani. Mr. Leung (201) 310-2501 left a message that the first area of excavation had been completed and backfilled. They are now moving on to the next excavation area. He added that there was a seep coming into the excavation from the 363 4th Avenue site. 6/18/12 - Raphael Ketani. Dave Yudelson (917) 295-6449 of Sive Paget & Risel called and left messages stating that he wanted to talk to me about the site. He didn't state what he wanted to talk about. I left a message that soil end point samples needed to be taken. Later, Ms. Meer called me stating that the first area for excavation had been completed, the north end closest to the building. They are now backfilling this specific area and are moving forward with excavating the south area. I told Ms. Meer that the DEC will need a report containing end point results (sides and bottom), manifests for soil disposal and tank disposal, a map showing the location of the tank grave and the excavation area and the results of the PID survey in the Shepherd's apartment. Ms. Meer responded that they could not get into the Shepherd's apartment, but the PID results were zero both in the hallway outside the apartment and outside the building. Towards the end of the work day, Mr. Yudelson called. He stated that he had received my voice message that the DEC wanted soil end points taken as proof of the completeness of the excavating. He added that the DEC would get manifests for all of the material that is removed. 6/25/12 - Raphael Ketani. Mr. Yudelson (917) 295-6449 called to give me an update regarding the remediation. He said that 800 gals. of oil had been recovered from the tank. Also, he said that after the tank was removed, amber oil was seen to be flowing from 2 places into the tank grave from the east sidewall. The flow seemed to be continuing as if it was from a spigot and was situated about 4 feet above the bottom of the tank grave. Mr. Yudelson asked whether there were spills at the other brownstone buildings next to the condo. I told him that I wasn't aware of any, but he should find out the addresses of these buildings and I can look them up and see whether there are other incidents. With this, the conversation ended. 7/12/12 - Raphael Ketani. Mr. Yudelson called. He said that he will send the tank closure report. Endpoint samples will be taken in the excavation area. 8/2/12 - Raphael Ketani. Waqas (wa-kas) Saeed of Yu & Associates (201) 791-0075 called. He said that he was responding to the letter sent by Veronica Zhune (the previous case manager) to Mr. Weaver (the property owner) in which a letter report was requested. I told Mr. Saeed that he should be working through Mr. Yudelson, the co-op's lawyer rather than talking directly to me. I told him to make sure that Mr. Yudelson knows what we are discussing. Mr. Saeed said he will inform Mr. Yudelson. Mr. Saeed added that there is a seep in the wall of the tank grave and he and Mr. Leung wanted to know what the DEC would like them to do about it. I told him that the seep is 4 feet above the bottom of the tank grave and probably represents a

CONDOMINIUM (Continued) **S111456504**

pipe that used to enter the top of the tank and which had a little oil in it. I told him to get a crew together and uncover the pipe and follow it and any contamination until it is cleaned up. Mr. Saeed said he understood. I added that the additional remediation work should be included in any report to the DEC. 8/22/12 - Raphael Ketani. I called Mr. Saeed (201) 791-0075. He said that they were putting together the tank closure report. He said that Mr. Yan Zahu (zoo) is the primary responsible person regarding the project. I spoke to Mr. Zahu about progress at the site. He said that the tank and the contaminated soil had been removed and that the excavation had been backfilled. Mr. Zahu added that there were two seeps above the former top of the UST that had been removed. He said that they were from a neighboring building, not the site. Lastly, he told me that they were working on the remediation report and were about to give it to the co-op and Mr. Yudelson. I told him to send the report as soon as possible. Later, I sent an e-mail to Mr. Yudelson (917) 295-6449 asking him to review the remediation report and send it to me. I also asked him for clarification regarding the seeps and to make sure that there are maps and diagrams showing me in detail what the nature and location are of the seeps. 10/15/12 - Raphael Ketani. I tried to contact Mr. Zahu regarding the status of the closure report, but I could only leave a voice message. 1/4/2013 - Raphael Ketani. Ms. Meer of Yu & Associates called to say that they were just paid by the client. So they will be getting the remediation information from the contractor very soon. Once they have the information, they will forward it to the lawyer for the condo. Once he has approved the report, then it will be sent to the DEC. 1/25/13 - Raphael Ketani. As there has been no communication in some time, nor the submission of a remediation report by Yu and Associates, I sent an e-mail to Mr. Leung (aleung@yu-associates.com), Vanessa Meer (vmeer@yu-associates.com), Mr. Yudelson and Mr. Michael Marino (mjmlitigate@aol.com) requesting the remediation report by February 15, 2013. Later, Mr. Yudelson sent me an e-mail stating that he would make sure the DEC receives the remediation report. 2/13/13 - Raphael Ketani. Today I received the Yu & Associates Closure Report dated 2/4/13. The report indicated that the site is adjacent to the east of the Former BP Gas Station site (#8901904). A GPR survey of the site took place on 4/25/12. The UST was found to be under the south parking lot which is entered from 6th Street. The tank was uncovered and was found to be in a concrete vault. The bottom of the UST was determined to be 6 feet below grade. Groundwater was found at between 10 to 12 feet below grade. A hole was drilled in the UST and thick, black oil was found inside the tank. About 630 gals. of combined oil and water was pumped out of the tank on 4/24/12. It rained days later and so 500 gals. of oily water was pumped out later on. The liquids were sent to Clean Water of New York. From 5/30/12 to 5/31/12, the tank was emptied, cleaned and pulled out. Many holes were found in the tank. The tank size was 1,080 gallons. Some piping that was attached to the tank was also pulled out. Two small seeps were seen in the sidewalls of the pit above the former UST mid height. The tank area was overexcavated to the point that one side encountered a footing for the building that the tank used to serve. No visible signs of contamination were seen afterwards in the pit. From 6/14/12 to 6/26/12, 320 tons of contaminated soil was shipped to the Perry Fill Site, and Soil Safe, Inc. - Bridgeport, CT. Five soil borings were done adjacent to the west side of the UST from just south of the tank to just north of the tank. These borings were B-1 to B-5. The

CONDOMINIUM (Continued) **S111456504**

most contaminated soil sample came from the 6 to 8 foot interval of B-2 (near the north end of the UST). The sample had 16 ppm of 1,2,4-trimethylbenzene, 1.2 ppm of ethylbenzene and 8 ppm of total xylenes. No VOCs were detected in borings B-3 and B-5 (all of the analytical results were ND). The VOC hits and SVOC hits in a sample from B-4 were from ND to below CP-51 standards. Groundwater was encountered at B-1 (near the south end of the UST) at 11.1 feet bgs. The sample from B-1 had 18 ppb of 1,2,4-trimethylbenzene and 11 ppb of 1,3,5-trimethylbenzene. Otherwise, the VOC hits were from ND to below TOGS 1.1.1. The SVOC hits were mostly ND. After the excavating was finished, 8 end point samples were taken, 3 of which were in the area of the bottom of the former tank vault. Most of the end points were taken from 6 to 8.5 feet bgs. However, BT-3 was taken directly below the former position of the UST at 12 feet bgs. The analytical results for all of the soil samples were mostly ND, with 2 VOC hits each in the samples from SE-2 and SE-3 which were slightly above the CP-51 standards. The SVOC hits were almost entirely below the CP-51 standards. A groundwater grab sample was taken with a geoprobe on 6/18/12 at location BTW-1. It had up to 88 ppb of 1,2,4-trimethylbenzene with a total of 6 VOC hits that were above TOGS 1.1.1. However, 9 of the other VOC hits were either just above or below TOGS. There were 7 SVOC hits that were a little above TOGS with 9 hits that were below TOGS or ND. I found the Closure Report to be acceptable and determined that there was very little residual contamination left in the soil or the groundwater. No further remedial work was necessary. 3/1/13 - Raphael Ketani. Based upon the data and other information in the case file, I have determined that any remaining contamination is not a threat to people or the environment. Therefore, I have closed the spill case and I have sent a Spill Closure Letter."

Contact Name:	BPC MANGING AGENT RICK MANERO
DEC Memo:	"04/23/12- Zhune called Martin Weaver from Construction Site(347)689-2666. Could not get him left a message. 04/23/12- Zhune spoke to Martin. He said that they live next to a construction project. His parking lot adjoins the mayor part of the construction site. The construction site is doing excavation and becouse of the rain, part of his parking lot collapsed. They called the construction company to address this problem. In this process they found petroleum product coming to their property. They believe there is a tank under the parking lot. Martin hired an environmental company (Yu Associates). As per Martin they never used this tank. They use natural gas. Enviromental company in process to remove tank. Yanu Zhu from Environmental Company 201-791-0075 Vanessa Meer from Yu Associate. 04/24/12- Vanessa Meer from Yu Associate called to say that Dan Carlo is pumping the oil in the tank that was found under the parking lot. 04/25/12- Vanessa Meer sent the following email on 4/25/12. YU & Associates, Inc. has provided emergency response services for 270 5th Street Corp. and arranged for Don Carlo Environmental Services, Inc. to pump out the tank yesterday. Today they came to the site to perform a ground penetrating radar survey to reveal the orientation of the tank for proper planning for the decommissioning effort. We will continue to keep you informed of site activities. 04/27/12-CSL Letter sent to owner (Mr. Martin Weaver) of property at 270 fifth street. Martin Weaver 270 Fifth Street Corp. 270 Fifth Street Brooklyn, NY 11215 5/1/12- Andrew Leung from Yu associate called. He said the source (oil) has been already removed from the tank. They collected a sample for fingerprinting. They are waiting for the analitycal results. Once they receive it they are

CONDOMINIUM (Continued) **S111456504**

going to remove the tank and the soil contaminated. Andrew also commented that the construction site is doing excavation and generating strong smell. Andrew Leung Cell: 201-310-2501 office: 201-791-075 Ext.105 5/2/12 - Raphael Ketani. Another spill exists for this same site: #1110410. Arnie Fleming of Fleming Lee Shue called. He is the consultant for the developer of the neighboring site to the west (363 4th Avenue; #8901904). He said that he was at the co-op site yesterday and the contractors had emptied and cleaned out the tank. Because of this, the oil seepage onto 363 4th Avenue had stopped. The tank on the co-op property was a 1,000 gals. and was 2 feet away from the border between the two properties. No piping was found associated with the tank. Mr. Fleming said that he was dewatering his client's property and no oil was flowing in. However, he told Mr. Yu of Yu & Associates that he should start digging out the contaminated soil around the tank as he will stop dewatering and then Yu & Associates will have do their own dewatering in order to remove the contaminated soil. Mr. Yu said that he was waiting for the co-op board to meet in order to give him a decision regarding whether he can proceed with the remediation work. Mr. Yu also stated that an oil sample was sent off for fingerprinting. So everyone is waiting for the results. Mr. Fleming said that he emphasized to Mr. Yu that he should take advantage of the present dewatering because it will save him some money. 5/3/12 - Raphael Ketani. This spill case and the spill case for #1110410 involve the same spill at the same site. I discussed this with Randall Austin, Chief of the Spills Unit, and told him that June Feng of my unit was already handling the spill since November 2011. I told him that the later spill should be closed and consolidated with the earlier one. Mr. Austin agreed. From this day forward, Ms. Feng will be the project manager for this spill incident and I am closing case #1200737 effective today."

Remarks: "Property has an old tank below ground on site (20yrs), it has a petrolium product still in it. Working with yu and associates to rectify the situation. There is film on the rainwater puddle. Property is next to a construction site where pile driving is on going."

DEC Memo:	"Cross Ref Spill 8901904 (long term BP gas station spill - same property different address) 04/07/10-Hiralkumar Patel. 2:00 PM:- visited site. found pooled water inside lot, but no oil sheen/product observed on water. no petroleum odors noticed during site visit. noticed some minor sewer odors near catch basins at the intersection of 4th ave and 6th street. case closed. pics on e-docs. see spill # 8901904 also. 06/09/10-Hiralkumar Patel. 9:00 AM:- visited site again as received another odor complaint. no petroleum odor noticed in area. site was completely dry. spoke with lady living in neighbourhood. she mentioned that odors are high during hot weather. see pics on e-docs."
Remarks:	"We received the following email complaint:(please advise me @ (518)408-5850 if you would like me to advise DLE, also I will advise the complainant that the housekeeping issue is not a matter for the DEC) I wanted to file a complaint about the abandoned construction site at 267 6th St, Brooklyn, NY. We live in the building next door, at 343 4th Ave., and have personally seen what looks like an oil

ABANDONED BUILDING (Continued) **S109581773**

slick in pools of dirty water for the past 12 months (or more). It looks like a breeding ground for disease and rats. In addition, the contaminated ground cannot be healthy for those living in the area. We have a 1 year old daughter and don't want her exposed to contaminated ground or oil/petroleum fumes (which enter our apartment when we have our windows open, since our apartment overlooks the abandoned site). Could you please let me know what is being done about the site, as the pollution is impacting quality of life in the area? Thank you for your attention to this matter, Yashmin Fernandes and Antonio Castro"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL APPENDIX B SITE NO. 57. 08-08-06: See also 9203835. MCT 12/6/12 - Site Investigation Work Plan prepared by Langan Engineering & Environmental Services dated January 2010 discusses eight spills as part of the Appendix B site 57. The spills were all along 4th Avenue in Brooklyn, from roughly Pacific Street south to 6th Street. The spills all involve releases from feeders that run along top of the subway that runs along 4th Avenue. Two of the eight spills have open spill numbers, 8303206 and 8404005. Spill 9203835, which had affected the Pacific Street subway station, was administratively closed and referred to these two open spills. A letter with comments on the SIWP was sent on November 14th. (JOC) 6/27/14 - Letter dated June 4, 2014 from Langan for Con Edison in response to SIWP comment letter. Most of the responses were acceptable. A few points need some additional clarification. Letter was sent 6/24 which requested inclusion of additional language to arrange with the Department for selection of final investigation locations based on utility markouts, for prompt notification to the Department when a field modification is needed and for evaluation of migration along utilities; requested clarification on what was included as requirement to not work inside tolerance zone for subsurface utilities; requested clarification on sample analysis; and requested clarification on who would make the determination in the field for conforming to the expected MTA/NYCT permit stipulations for working over/near the subway structure. (JOC) 8/5/14 - met with Con Edison PM 8/4 - expect to have subway information from MTA and response to comments this quarter. (JOC) 2/25/16 - responses to comments were received March 2015 along with revised SIWP; Con Edison project manager is now Mariela Gonzalez; sent response letter today to Ms. Gonzalez with comments on the responses/SIWP from Langan. (JOC) 10/26/2016 - V. Brevdo Due to Project Manager Joe O'Connell's promotion to the DMM, and per discussions between Chiefs of Spill Prevention and Response and Remediation Section B, this spill case is re-assigned to Remediation Section B. VB 06/27/2017 - V. Brevdo Con Edison Appendix B Sites Spill Site No. 57, 4th Ave/ Garfield Pl./ 6th Street, Brooklyn (Spill Nos. 8303206, 8404005, 9203835) On June 23, 2017, Con Edison submitted for the Department s review and concurrence/approval the Con Edison s response letter to Department s February 25, 2016 comments regarding the Site Investigation Work Plan (SIWP) for Site

4TH AVE/6TH ST (Continued) **S103483418**

57 dated March 2015, as amended by a March 23, 2015 letter. The Department s February 25, 2016 comments on the SIWP were pertinent to spills historical records, locations and sources of the releases, determination of the boundaries of investigation around release locations and contaminant migration pathways, identification of dielectric fluid containing equipment, diameter of feeder lines and associated pressure pipes, locations of the proposed investigations/boring locations in relation to the NYCT subway stations (Union and Bergen Streets, Brooklyn), soil sampling intervals, rationale for installation of permanent or temporary monitoring wells, scope of chemical analysis for collected samples, and MTA s concurrence with the final sampling locations around the subway stations. The Department completed review of the Con Edison s June 23, 2017 response letter containing responses to the Department s 14 comments. The Department determined that all Con Edison s responses are acceptable, however, 5 responses suggest further revisions to the SIWP. The Department communicated with Con Edison on June 27, 2017 advising that their responses to Department s February 25, 2016 comments on SIWP are acceptable and requested submission of either the revised SIWP or a separate amendment to the SIWP containing suggested revisions. VB 08/14/2017 - V. Brevdo On August 14, 2017, Con Edison informed the Department that they intend to resubmit the revised Site Investigation Work Plan shortly. VB 08/17/2017 - V. Brevdo Con Edison Appendix B Site No. 57, 4th Ave/ Garfield Pl./ 6th Street, Brooklyn (Spill Nos. 8303206 & 8404005) On June 23, 2017, Con Edison submitted for the Department s review and concurrence/approval the Con Edison s response letter to Department s February 25, 2016 comments regarding the Site Investigation Work Plan (SIWP) for Site 57 dated March 2015, as amended by a March 23, 2015 letter. The Department s February 25, 2016 comments on the SIWP were pertinent to spills historical records, locations and sources of the releases, determination of the boundaries of investigation around release locations and contaminant migration pathways, identification of dielectric fluid containing equipment, diameter of feeder lines and associated pressure pipes, locations of the proposed investigations/boring locations in relation to the NYCT subway stations (Union and Bergen Streets, Brooklyn), soil sampling intervals, rationale for installation of permanent or temporary monitoring wells, scope of chemical analysis for collected samples, and MTA s concurrence with the final sampling locations around the subway stations. The Department completed review of the Con Edison s June 23, 2017 response letter containing responses to the Department s 14 comments. The Department determined that all Con Edison s responses were acceptable, however, 5 responses suggested further revisions to the SIWP. The Department communicated with Con Edison on June 27, 2017 advising that their responses to Department s February 25, 2016 comments on SIWP were acceptable and requested submission of either the revised SIWP or a separate amendment to the SIWP containing suggested revisions. Con Edison informed the Department on June 27, 2017 that they would revise SIWP and submit revised document to the Department for review and approval. On August 11, 2017, Con Edison submitted to the Department for review and approval the Final SIWP, dated August 2017, transmittal letter dated August 11, 2017. The scope of investigation activities specified in the Final SIWP include the following tasks: Completion of approximately 56 primary borings and collection of 112 soil samples and completion of contingent borings and soil sampling, as necessary, to delineate the

4TH AVE/6TH ST (Continued) **S103483418**

horizontal and vertical extent of dielectric fluids impact areas; The installation of up to 8 monitoring wells, after assessing MTA underground structures and field confirmation of utilities, to assess potential impacts to ground water and potential migration pathways to surface water receptors; and, Preparation of a Site Investigation Report, that will include a site history summary, description of site conditions and the site investigation activities, scaled site maps, tabulated analytical data, soil boring and well construction logs, laboratory analytical reports, and discussions of the findings. Groundwater data including monitoring well locations, ground water flow maps, and ground water analytical data will also be included. The complete Field Sampling Plan (FSP), Quality Assurance Project Plan (QAPP), and Health and Safety Plan (HASP) are provided in Appendices B, C, and D, of the Final SIWP, respectively. Based on Project Schedule, the Site Investigation Report (SIR) will be submitted to the Department within 13 months following Department s approval of the Final SIWP. The Department completed review of the document and approved Final SIWP on August 17, 2017. VB 10/03/2018 - V. Brevdo Con Edison Appendix B Site No. 57, 4th Ave/ Garfield Pl./ 6th Street, Brooklyn (Spill Nos. 8303206 & 8404005) Spill Site No. 57 consists of eight separate releases that occurred on 4th Avenue between 6th Street and Pacific Street, Brooklyn. On August 11, 2017, Con Edison submitted to the Department for review and approval the Final SIWP, dated August 2017, transmittal letter dated August 11, 2017. The scope of investigation activities specified in the Final SIWP include the following tasks: Completion of approximately 56 primary borings and collection of 112 soil samples and completion of contingent borings and soil sampling, as necessary, to delineate the horizontal and vertical extent of dielectric fluid impact areas; The installation of up to 8 monitoring wells, after assessing MTA underground structures and field confirmation of utilities, to assess potential impacts to ground water and potential migration pathways to surface water receptors; and, Preparation of a Site Investigation Report, that will include a site history summary, description of site conditions and the site investigation activities, scaled site maps, tabulated analytical data, soil boring and well construction logs, laboratory analytical reports, and discussions of the findings. Groundwater data including monitoring well locations, ground water flow maps, and ground water analytical data will also be included. The complete Field Sampling Plan (FSP), Quality Assurance Project Plan (QAPP), and Health and Safety Plan (HASP) are provided in Appendices B, C, and D, of the Final SIWP, respectively. The Department completed review of the document and approved Final SIWP on August 17, 2017. On October 3, 2018, Con Edison informed the Department that based on the physical features of the subway tunnel along 4th Avenue at Site 57, Con Edison needs to modify the proposed scope of work for the upcoming investigation. The August 2017 Final Site Investigation Work Plan for the Site proposed the use of a drill rig to extend borings to the water table at 28 of the proposed locations if they were determined to lie outside the footprint of the subway tunnel. Based on Con Edison s review of the NYCTA subway tunnel drawings, the subway tunnel and ancillary structures lie beneath the entire width of the roadway, prohibiting the use of a drill rig for the site investigation. Con Edison has submitted a package to NYCTA requesting approval to perform all 56 of the proposed boring locations using hand auguring to depths of 6 and 7 feet below grade. Since the feeders being investigated for this Site

4TH AVE/6TH ST (Continued) **S103483418**

are situated approximately 3 feet bgs, the proposed borings will extend several feet below the depth of the lines, while remaining at least two feet above the roof of the subway tunnel. The subway tunnel roof generally lies between 8 and 12 feet below road surface at the investigation locations. Con Edison are currently awaiting NYCTA approval to proceed with the field investigation, and are tentatively planning to start the work in late November/early December 2018. Once Con Edison receive a response from NYCTA, they will provide the Department with a firm start date of site investigation. The Department advised Con Edison on October 3, 2018, that given the scope/nature of the proposed investigation and physical settings of the site and the subway tunnel, the Department concurs with the use of hand auguring to depths of 6 and 7 feet below grade in lieu of the drilling rig. The Department s concurrence is contingent on the NYCTA s approval to perform aforementioned borings. VB "

Remarks: "Reported by Con Ed as required under Consent Order."

DEC Memo:	"Contaminated Soil Letter sent to owner: Mr. Dominic Tonacchio TL Investors Corp. 343 4th Ave Brooklyn, NY 11215 07/27/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called Kevin Kleaka at (Impact Environmental),(631)269-8800 Extn. 25 and left message tocall me back. -QA 07/27/06: Mr. Kevin Kleaka called me back and said that he knows up to phase 2 he will e-mail me the report.-QA 09/13/06: Called Mr. Kevin Kleaka and left message to call me back. -QA 03/19/07: Reviewed Phase II report (Limited Subsurface Investi gation Report). Soil and Groundwater both are contaminated. Sent Investigation needed letter to owner Mr. Tonachio. Work plan for additional Investigation to delineation of soil and groundwater. Establish three permanent monitoring wells. wells should be surveyed to find out the direction of flow of groundwater. -QA 09/12/07: Called Mr. Kevin Kleaka (Impact Environmental) to discuss regarding spill. He said that he doesn't know the information regarding owner of the spill. he gave site contact name Mr. Sylvestor Sichenzie (718)680-0400. I called Mr. Sylvestor he was not there. I left message to call me back. -QA 6/25/08: Reassigned from Vadim Brevdo to Kartik Chanda. (Chanda) 7/31/08: Chanda has reviewed the spill related documents and sent a reminder letter to RP, requiring that an investigation work plan be submitted to DEC by 8/21/08 for review and approval. (see eDocs) 09/21/2012 - V. Brevdo Vadim, Please forward correspondence in the active NYSDEC spill number file mentioned above so I can review for its association with closed NYSDEC spill number 0509762. Thanks, Paul P. Stewart, President Advanced Cleanup Technologies, Inc. 960 South Broadway, Suite 100 Hicksville, New York 11801 Phone: (516) 933-0655 x 12 Cell: (516) 840-8197 Fax: (516) 933-0659 Email: pauls@actenvirons.com 09/21/2012 - V. Brevdo Paul, Attached to this e-mail are letters sent by DEC staff in 2007 and 2008 requiring environmental investigation of the property. If you have credible reason to believe that the contamination referred to in these letters have been addressed/remediated under the spill number 0509762, please provide synopsis of the remedy implemented at this

CONSTRUCTION SITE (Continued) **S106968231**

property, explanation of how implemented remedy addressed contamination reported in the spill 0502332, as well as rationale for closing the latter spill. From our telephone conversation I understand that these two spills is at the same property and both of them have been addressed via remediation implemented for spill 0509762. If so, I need supporting information /synopsis to be able to close spill 0502332. Respectfully, Vadim Brevdo 09/25/2012 - V. Brevdo e-mail from Paul Stuart of ACT: Good afternoon Vadim. As requested, I have enclosed documents indicating that open spill 0502332 was reported on May 27, 2005 following completion of a Phase II Environmental Site Assessment by Impact Environmental on May 13, 2005. The spill was then remediated by Trade-Winds Environmental through February 13, 2006 including the excavation and disposal of 37.24 tons of impacted soil and the installation and sampling of two monitoring wells as per instructions from Raphael Ketani. Plans for a vapor barrier and sub-slab depressuration system were then submitted to Mr. Ketani on March 9, 2006 by PW Grosser Conulting, Inc. and approved by Mr. Ketani the same day by closure of spill 0509762. That spill was reported on November 15, 2005, which was subsequent to the intiation of remedial activities pursuant to spill 0502332. I think you will agree that spill numbers 0502332 and 0509762 refer to the same property and the same contamination that was remediated and closed under spill 0509762. If that is the case, please close spill number 0502332 at your earliest convenience. Your expeditious review of the above would be greatly appreciated. Please contact me if you have any questions concerning the above. Regards, Paul P. Stewart Advanced Cleanup Technologies, Inc. 09/27/2012 - V. Brevdo Contamination associated with this spill was remediated under spill 0509762. Spills 0502332 and 0509762 should have been consolidated into one spill case. Based on review of information provided by Paul Steawrt of ACR on 9/25/2012 and review of file for closed spill 0509762 V. Brevdo decided to close Spill 0502332. All environmental concerns have been addressed via remediation of Spill No. 0509762. V. Brevdo discussed decision to close spill 0502332 with Raphael Ketani, project manager for Spill No 0509762, on September 27, 2012. Raphael had no objections against closing spill 0502332. Spill is closed effective September 25, 2012. V. Brevdo 09/27/2012 - V. Brevdo September 27, 2012 Dear Mr. Stuart, I have reviewed documents you submitted on September 25, 2012 regarding spill cases 0502332 and 0509762. I also reviewed file information for spill 0509762. The aforementioned review has resulted in the following determination by the Department: Contamination associated with spill 0502332 was investigated and remediated under spill 0509762. All environmental concerns that existed at the site have been addressed via remediation of Spill No. 0509762. I have discussed this matter with Mr. Raphael Ketani, project manager for Spill No 0509762, on September 27, 2012. Please be advised that Spill 0502332 is closed effective September 25, 2012. Please contact me if you have any questions regarding this matter. Respectfully, Vadim Brevdo 09/27/2012 - V. Brevdo Dear Mr. Stuart: Followup. When I stated in my previous e-mail that all environmental concerns that existed at the site have been addressed via remediation of Spill No. 0509762, the meaning of this statement is that all environmental concerns related to petroleum spill have been addressed via remediation of Spill No. 0509762. Respectfully, Vadim "

Remarks: "UNDERGROUND AND ITS A HISTORIC SPILL. CONTAMINATION OF THE SOIL."

DEC Memo:	"need to send CSL 12/8/05 - Raphael Ketani. I called Dominic Tonacchio of T&L Investors ((718) 399-3800), 615 Baltic St., Brklyn., 11215, regarding the site. He said that the site had been completely dug out and clean end point samples taken. He added that the footings have already gone into the ground and that there is nothing left to excavate. I asked him who did the phase 2. He said it was Mike Baldwin of Trade Winds Environmental. I called Mr. Baldwin, but could only leave a message at (516) 779-5234 (cell). I will send a contaminated soil letter. 12/14/05 - Raphael Ketani. Mr. Baldwin ((631) 435-8900) gave me a call on 12/12 and said that 40 cu. yds. of contaminated soil had been removed. I spoke to Mr. Baldwin again. He said that the contamination started at 6 feet below grade. They dug

CONSTRUCTION SITE (Continued) **S106968231**

down 17 feet. He said that they can't go any further without endangering the support for a building next door. I told him he could stop and take soil samples and send me the results. He said he would. 12/29/05 - Raphael Ketani. Mr. Baldwin said that he is no longer the project manager, but that they are working on getting clean end point samples. He said someone would call me back next week. 1/5/06 - Raphael Ketani. I called Mike Baldwin regarding remediation progress. He said that they took end point samples. He said they followed the contaminated soil down to the water table (22' below grade). Mr. Baldwin commented that when soil is excavated it has a strong odor. PID readings are 122ppm or higher. He said the property is 198'X 51'. I told him to put in 2 wells and take samples. He said he would. He said the property will have condos built on it. Lastly, he said Artie Baldwin (his dad) is the case manager. 1/24/06 - Raphael Ketani. I hadn't received the analytical data for the water samples that were supposed to be taken at the site. I left a voice mail message for Artie Baldwin to call me back regarding the analytical results. 1/25/06 - Raphael Ketani. Artie Baldwin called me back ((516) 779-7824 cell) and said that 2 wells will be installed this monday. Then, later, they will take the water samples. 2/13/06 - Raphael Ketani. Paul Stewart of Advanced Cleanup Technologies ((631) 293-4992, ext 12) called regarding what more DEC needed in order to close the case. He said that Trade Winds had removed all of the soil they could at the site. He said that Trade Winds installed the wells and backfilled the pit. I told him I hadn't received soil sample results. Mr. Stewart added that water is at about 13 feet and that Trade Winds had dug into the water table. I told him to send me water sample results instead. 2/14/06 - Raphael Ketani. Artie Baldwin of Trade Winds called. He said he will samples the wells tomorrow. 2/23/06 - Raphael Ketani. I received the groundwater analytical results via a 2/17 FAX. SVOCs were non-detect or just above TAGM for both wells. VOCs were non-detect for well #1, except for 3 benzene type analytes: 38 to 57 ppb. VOCs were non-detect for well #2, except for 7 benzene and xylene type analytes: 40 to 213 ppb. I contacted Artie Baldwin and told him to do 1 round of vacuuming, let the wells sit for a week, then slowly resample and send me the results. He said he would. 3/1/06 - Raphael Ketani. I received the analytical results for the succeeding round of groundwater samples taken 2/27/06 via FAX from Artie Baldwin. As before, the SVOCs are all non-detect for well 2 with just a few analytes at 16 ppb for well 1. VOCs in well 1 were 32 to 63 ppb for 3 benzene species and the other VOCs were non-detect. VOCs in well 2 were 10 to 84 ppb for 4 benzene species, toluene, and 2 xylene species, and the other VOCs were non-detect. I asked Mr. Baldwin whether there were any commercial sites that might be affecting this property in the subsurface. He said there is a former gas station next door to the north and another across the street. I looked up the spill database and found AMOCO S/S #13397 at 363 Fourth Avenue. This site is actively being managed by Keri of DER and has spill number #8901904. There are 4 in service gas tanks, 1 gas tank out of service, and 15 other tanks which have been converted to Micro Conversion. Soil contamination is present in the subsurface. PBS # 2-401455. 3/6/06 - Raphael Ketani. I received a call from Paul Stewart of Advanced Cleanup Technologies ((631) 293-4992, ext. 12). He asked what could be done with the open spill case as the bank is asking questions because they don't know where to go from here. I told Mr. Stewart that the VOC concentrations weren't high, but they were elevated. I added that since they plan to build a condominium on

CONSTRUCTION SITE (Continued) **S106968231**

the site, then the public needs protection from any vapors. He said that they will install a vapor barrier and a passive venting system that can become an active venting system. I told him that sounded like a good solution, but that I would have to receive a plan or diagram for this system that is acceptable to the DEC before I will close the case. He said he will send me such a plan. 3/9/06 - Raphael Ketani. I received a two page plan with cover letter from Drew Dillingham, P.E. of P.W. Grosser Consulting Inc. The plans were for a vapor barrier and vapor venting system. Based upon the previous documentation, the analytical results and the vapor management engineering plans, I am closing the spill case. I will send a no further action letter."

DEC Memo:	"3/14/03 REASSIGNED FROM SULLIVAN TO VOUGHT. 10/27/03 Also see spill # 0307900. 11/25/03 Reassigned from Vought to Foley. 11/25/03 Received Delta Dispenser Upgrade Report dated 11/10/03 on 11/17/03. Lab analysis of post-ex soil samples collected from beneath four dispensers identified VOC concentrations in excess of TAGM 4046 soil cleanup objectives in three dispenser locations (D-1, D-2, D-3). Delta will delineate the soil impacts beneath the product dispensers. 4/19/04 Received SHAR. On 3/17/04, four borings were advanced by Geoprobe in the vicinity of the dispensers. DTW 13-20'bgs. Nine soil samples were collected at the depth interval exhibiting the highest PID reading or immediately above the water table. SB-1 (3.5-4.5'), SB-1 (17-18'), SB-2(19-20'), SB-3(2.5-3.5'), SB-3 (12-13'), SB-4(2.5-3.5'), SB-4(7-8'), SB-4(12-13'). Analysis by 8260 showed hits for VOCs above cleanup levels in five of nine soil samples in all four borings. Total BTEX conc ranged from ND (SB-1, 3.5-4.5' and SB-2, 3.5-4.5') to 1,076,900ppb in SB-4(12-13'). The four borings were converted to 1 temporary wells. Four groundwater samples were collected and analyzed for VOCs. DTW 18-24'bgs. MWs were advanced to 23-26'bgs. Temporary wells were removed. No LNAPL was detected. Total BTEX ranged from 3,732ppb (MW-1) to 45,380ppb(MW-4). Total VOC range from 17,061ppb(MW-2) to 69,062ppb(MW-1). MTBE ranged from 9,050ppb(MW-4) to 64,600ppb(MW-1). 12/21/04 4Q04 report received(samples collected 11/23/04). BTEX ranged from 38ppb(MW-5) to 38810ppb(MW-4). MTBE ranged from 33ppb(MW-5) to 174000ppb(MW-1). DTW approx 12-15'bgs. 6/28/04 Investigation report received. On 4/23/04, one 1 well(MW-3) was installed through existing soil boring SB-3 and one 2 well(MW-4) was installed through previously advanced soil boring SB-4. Wells were advanced to 25.5 and 26.5' respectively. GW was encountered at 17.15'bgs in MW-3 and 17'bgs in MW-4. No soil samples collected due to previous investigation. On 5/24/04, three 2 wells (MW-1, MW-2, MW-5) were installed to 24', 20', and 20' respectively. GW encountered at 11.7' and 16.8'bgs. Four soil samples were collected. Hits for VOCs in SB-5/MW-2(10-11'), SB-5/MW-2(12-13'). On 5/28/04, five GW samples were collected. GW was identified at 11'-14.5'bgs. Flow was interpreted as NW. BTEX ranged from 74ppb(MW-5) to 45550ppb(MW-4). MTBE from 19ppb(MW-5) to 192000ppb(MW-1). 9/30/04 3Q04 monitoring report received. BTEX from 57ppb(MW-5) to 39150ppb(MW-4). MTBE from 17ppb(MW-5) to 164000ppb(MW-1). DTW 11-14'bgs. Need to delineate downgradient and sidegradient. 3/10/05 Received 1Q05 monitoring report. BTEX ranged from 65ppb(MW-5) to 38730ppb(MW-4). MTBE from 12ppb(MW-5) to 204000ppb(MW-1). 3/15/05 Issued sidewalk permit letter to install three MWs along the west sidewalk of 4th Ave. 3/15/05 Stip issued. Due 4/29/05. 4/21/05 Received stip signed by C. Wein on 4/19/05. 4/27/05 Portfolio meeting- Vadose and saturated soil impacts at northern border and SW portion of property. PS #51 300' NW. Impacts across street(total BTEX 100ppb). Service station and taxi stand on

KAM SERVICE CENTER INC (Continued) **1000556241**

Sanborns for property across street. 4/28/05 Stip executed by T. Kunkel. An Investigation Summary report is due 6/27/05. RAP due 8/26/05. 6/13/05 Received subsurface hydrocarbon assessment report dated 6/7/05. MW-6,7,8 installed off-site. Soil results show impacts at MW-7(11-12'bgs & 15-16'bgs). Adjacent to U-Haul and Taxi Stand with garage. Total BTEX in GW was 1ppb(MW-6), 272ppb(MW-7) and ND(MW-8). MTBE concentrations were 2ppb(MW-6), 3ppb(MW-7) and 13ppb(MW-8). 6/24/05 Received Investigation summary report dated 6/22/05. On-site vadose zone soil impacts in and around dispensers are from historical release. Elevated MTBE concentrations in MW-1 and MW-2 may be related to more recent release. This is also supported by analysis of BTEX ratios. Off-site soil and GW impacts were detected across 4th Ave at MW-7 and MW-8, which appear to be from U-Haul or taxi stand(impacts as shallow as 11'bgs). 9/6/05 Received well installation report documenting installation of EW-1, MW-9 and MW-10. MPE pilot conducted 8/16/05. Pilot test feasibility report to be submitted. 12/30/05 Received 3Q05 monitoring report. DTW 11.37-14.90'bgs. BTEX ranged from ND(MW-8) to 50320ppb(MW-4). MTBE ranged from 5.1ppb(MW-6) to 170000ppb(MW-1). 2/23/06 Received letter from Delta requesting extension to stip and summarizing MPE pilot test results which was conducted in 8/05. Since 8/05, Delta has tried to identify an appropriate remedial alternative to address site impacts within the vadose, smear and saturated zones on-site. On 11/4/05, Delta sampled on and off-site wells for geochemical parameters and stable carbon isotope ratio analysis. Delta is currently reviewing the results as they relate to the potential use of aerobic stimulation(sparging). Request extension to submit RAP by 5/14/06. 3/9/06 4Q05- DTW 11.96-14.63'bgs. BTEX ranged from ND(MW-8) to 44200ppb(MW-4). MTBE ranged from 1ppb(MW-8) to 81900ppb(MW-10). 3/16/06 Met with BP and Delta. MW-6,7,8 installed in 4/05. Pilot for MPE completed in 8/05 which determined it is not an option. Geochemical sampling completed 10/05 which showed no degradation. DTW 11.5-14.5'bgs. Very high MTBE concentrations. Sensitive receptors include utility vaults along 4th Ave. Delta was planning to submit biosparge proposal. Vic Kremesec, BP, requested Delta look into something more agressive. 5/9/06 Received feasibility pilot testing and analysis report for Multi-Phase Extraction and a Remedial Action Plan. 6/8/2006 - Feng - project reassigned to RJFeng. (RJF) 7/28/2006 - Feng - Quarterly Monitoring Report, 1Q2006, 6/6/2006, submitted by Delta. As of sampling on 3/6/2006, groundwater flows to northwest at the depth of 10.89' to 15.17' bg. 11 monitoring wells. W-1, 9,350 ppb BTEX (3,410 ppb B, 1,050 ppb T, 1,480 ppb E, 3,410 ppb X), 21,100 ppb MTBE. W-2, 2,840 ppb BTEX (1,170 ppb B, 163 ppb T, 811 ppb E, 696 ppb X), 3,330 ppb MTBE. W-3, 20,990 ppb BTEX (3,070 ppb B, 6,800 ppb T, 2,120 ppb E, 9,000 ppb X), 10,400 ppb MTBE. W-4, 38,920 ppb BTEX (4,400 ppb B, 17,300 ppb T, 3,220 ppb E, 14,000 ppb X), 33,500 ppb MTBE. W-5, 35.4 ppb BTEX, 4.6 ppb MTBE. W-6, 1.42 ppb BTEX, 4.6 ppb MTBE. W-7, 677 ppb BTEX (22.8 ppb B, 8.9 ppb T, 304 ppb E, 341 ppb X), 8.1 ppb MTBE. W-8, ND. W-9, 16,780 ppb BTEX (2,180 ppb B, 1,890 ppb T, 2,210 ppb E, 10,500 ppb X), 14,200 ppb MTBE. W-10, 17,760 ppb BTEX (3,810 ppb B, 3,180 ppb T, 2,890 ppb E, 7,880 ppb X), 44,900 ppb MTBE. EW-1, 12,180 ppb BTEX (2,110 ppb B, 1,780 ppb T, 1,940 ppb E, 6,350 ppb X), 8,260 ppb MTBE. (RJF) 8/1/2006 - Feng - Remedial Action Plan, 5/8/2006, submitted by Delta Environmental. Delta proposed MultiPhase Extraction System to be installed to address FP, soil vapor and gw contamination. Delta conducted pilot test twice. The 1st time it was concluded that The results of this MPE pilot event

KAM SERVICE CENTER INC (Continued) **1000556241**

conflicted with the expected response from the site's lithology . During the 2nd pilot test, 5 air samples collected at specific intervals to quantify specific vapor VOC concentration being removed. The recovery rates are 0.19 lb/hr BTEX, 0.091 lbs/hr MTBE, 4.89 lbs/hr TPH. For the groundwater drawdown reading, W-9 at 0.28' which located 5 feet away from EW-1. Delta explained that The limited groundwater drawdown ROI from extraction well EW-1 is likely due to the more transmissive subsurface soils which allow more significant groundwater recharge into the cone of depression generated by MPE operation at the extraction well EW-1 . The system components included 4 extraction wells, phase separator, liquid ring pump, system control panel, for vapor and liquid treatment are being designed. System flow chart is provided. By running the MPE, there is better hydraulic control and source removal. RAP is approved conditionally: 1) add the air exhaust in the system flow chart. 2) reinstall the MW-1, MW-3 and MW-4 due to their screen interval starts at the water table or below the water table. 3) Investigate the impact to the subway tunnel right next to the station (N, R and F trains run along 4th Ave). (RJF) 8/2/2006 - Feng - Approval of MPE letter sent to BP and cc to Delta. (RJF) 9/26/2006 - Feng - Quarterly Monitoring Report, 2Q2006, 9/7/2006, by Delta. Sampled and monitored on 6/19/2006. DTW 10.60' to 14.42' bg, flows to northwest. 10 of 11 monitoring wells were sampled. MW-2 was not accessible. MW-1, 8,012 ppb BTEX, 28,200 ppb MTBE. MW-3, 16,430 ppb BTEX, 8,540 ppb MTBE. MW-4, 37,250 ppb BTEX, 32,400 ppb MTBE. MW-5, 59.1 ppb BTEX, 5.4 ppb MTBE. MW-6, 0.25 ppb BTEX, 2.8 ppb MTBE. MW-7, 569 ppb BTEX, 6.1 ppb MTBE. MW-8, BTEX ND, 0.71 ppb MTBE. MW-9, 10,688 ppb BTEX, 4,620 ppb MTBE. MW-10, 21,300 ppb BTEX, 63,500 ppb MTBE. EW-1, 8,055 ppb BTEX, 5,250 ppb MTBE. (RJF) 9/28/2006 - Feng - Portfolio meeting with BP and Delta. Plan changed for this site. On 8/2006, Delta had the plan in place for redevelopment and construction of high rise building. There will be multi-story basement, USTs will be pulled and additional soil will be removed. Construction schedule will be confirmed and remedial plan will start from the groundwater quality after tanks removal. (RJF) 3/6/3007 - Feng - 3Q2006, 12/21/2006. Groundwater sampled and gauged 9/13/2006. 11 monitoring wells were sampled. DTW 10.68' to 14.36' bg. Flows northwest. LNAPL in MW-9 (0.12'). MW-1, 9,350 ppb BTEX, 21,100 ppb MTBE. MW-2, 2,840 ppb BTEX, 3,330 ppb MTBE. MW-3, 20,990 ppb BTEX, 10,400 ppb MTBE. MW-4, 38,920 ppb BTEX, 33,500 ppb MTBE. MW-5, 35.4 ppb BTEX, 4.6 ppb MTBE. MW-6, 1.42 ppb BTEX, 4.6 ppb MTBE. MW-7, 677 ppb BTEX, 8.1 ppb MTBE. MW-8, ND. MW-9, 16,780 ppb BTEX, 14,200 ppb MTBE. MW-10, 17,760 ppb BTEX, 44,900 ppb MTBE. EW-1, 12,180 ppb BTEX, 8,260 ppb MTBE. Email Delta for status on tank pull, site development and RAP. (RJF) 3/6/3007 - Feng - Updates from D. Greffenius (Delta), the USTs, piping, and dispenser removals will begin on Monday, March 12, 2007. Alvin Petroleum is the contractor. 3/6/2007 - Feng - email from D. Taylor (Delta), USTs will be removed and endpoint samples will be taken and Closure report will be submitted. Delta are currently in touch with the site owner who hasn t yet provided the development schedule. (RJF) 7/24/2007 - Feng - 4Q2006, 4/30/2007. Groundwater sampled 12/7/2006. All 11 monitoring wells were sampled. DTW 10.42' to 14.17' bg. Flows to northwest. No LNAPL. MW-1, 7,750 ppb BTEX, 9,800 ppb MTBE. MW-2, 2,754 ppb BTEX, 1,340 ppb MTBE. MW-3, 10,370 ppb BTEX, 5,350 ppb MTBE. MW-4, 31,030 ppb BTEX, 14,300 ppb MTBE. MW-5, 47.7 ppb BTEX, 4.4 ppb MTBE. MW-6, 1.94 ppb BTEX, 4 ppb MTBE. MW-7, 650 ppb BTEX, 4.7 ppb MTBE. MW-8, BTEX ND, less than 1 ppb MTBE. MW-9,

KAM SERVICE CENTER INC (Continued) **1000556241**

9,510 ppb BTEX, 3,630 ppb MTBE. MW-10, 17,180 ppb BTEX, 15,900 ppb MTBE. EW-1, 9,850 ppb BTEX, 3,640 ppb MTBE. (RJF) 7/27/2007 - Feng - 1Q2007, 5/7/2007. Groundwater sampled 3/7/2007. 9/11 monitoring wells were sampled. DTW 11.51' to 14.6' bg. Flows to north-northwest. No LNAPL. MW-1, 6,936 ppb BTEX, 4,930 ppb MTBE. MW-2, 2,820 ppb BTEX, 632 ppb MTBE. MW-3, not accessible. MW-4, 40,800 ppb BTEX, 34,800 ppb MTBE. MW-5, well not located. MW-6, ND. MW-7, 468 ppb BTEX, 3.1 ppb MTBE. MW-8, ND. MW-9, 9,160 ppb BTEX, 2,230 ppb MTBE. MW-10, 24,490 ppb BTEX, 7,960 ppb MTBE. EW-1, 10,430 ppb BTEX, 2,460 ppb MTBE. (RJF) 7/31/2007 - Feng - Underground Storage Tank Excavation Assessment Report, 4/26/2007, by Delta. Between 3/12/2007 and 3/15/2007, 4 (4,000-gallon) double-walled steel gasoline USTs and 1 (4,000-gallon) double walled steel abandoned UST from a single tank cavity on the central portion of the site were excavated. The abandoned UST was filled with concrete slurry. Upon excavation, the tanks were observed to be in good condition with no visible holes or areas of pitting. Between 3/16/2007 to 3/20/2007, 4 pump island dispensers and the associated product piping were excavated and removed. On 3/12/2007, 1 hydraulic lift was removed. 25 over-excavation soil samples were collected. High contamination detected in soil samples. For USTs excavation, the total BTEX range from ND (SW-17) to 1,796,700 ug/kg in SW-5 (9'), the total VOCs ranged from 205 ug/kg in SW-14 (9') to 2,828,170 ug/kg in SW-5 (9'). For the pump islands and piping excavation, total BTEX concentration ranged from ND in B-13 (12-12.5') to 327,700 ug/kg in B-2 (12-12.5'), the total VOCs concentration ranged from ND in B-3 to 659,890 ug/kg in B2 (12-12.5'). For the hydraulic lift excavation, no SVOCs exceedance. Groundwater encountered at a depth of 13' bg. 1 groundwater sample was taken from MW-4, 40,800 ppb ug/L BTEX, 34,800 ug/L MTBE. On 3/28-29/2007, 795.24 tons of soil was generated during the over excavation activities. The soil was transported an disposed at the Clean Earth of Philadelphia (CEP). The excavations were backfilled with the Certified Clean Fill. 8/1/2007 - Feng - Letter to Kevin Endriss (BP) requiring RAP and the construction details. Due 10/1/2007. (RJF) 10/10/2007 - Feng - Portfolio meeting with BP and Delta. Potentially developing the site. Tanks closure done and soil over-excavated. Drill at the side near the subway to inspect for impact on the subway tunnel. The new development may need to excavate down to 30 feet bg. Development schedule is unknown at this point. Delta will submit a work plan for proposing MPE events on 2 wells for short term remediation. (RJF) 12/10/2007 - Feng - Call from potential buyer and inquired about the site status. DEC stated the requirement of gw and soil remediation, plus the soil vapor mitigation. Buying is in process. (RJF) 1/11/2008 - Feng - Reviewed various documents submitted by HydroTech. 1) Phase I Environmental Site Assessment Report, dated 10/12/2007. Some Recognized Environmental Concerns were identified: the E Designation listing of the site for HAZMAT; historical utilization of the site as an auto repair facility and a gasoline station; presence of an open NYSDEC spill at the site; presence of elevated levels of VOCs in the soil and groundwater at the site at concentrations exceeding regulatory standards; inconsistent PBS information. 2) Investigation Work Plan, dated 11/27/2007. Investigation were proposed to be conducted in addressing the E Designation. HydroTech proposed GPR Survey to scan for any subsurface anomalies such as unknown tanks; to install 12 soil borings and 2 soil samples will be taken from each soil boring; and 3 groundwater probes will be installed for groundwater sampling. Site

KAM SERVICE CENTER INC (Continued) **1000556241**

plan with proposed soil boring location is provided. 3) Site Investigation Report, dated 12/20/2007. The GPR Survey did not identify any significant anomalies. Gasoline contaminated soil is present in the shallow soil in the northern and northwestern portions of the site. The gasoline contamination extends vertically to the deeper depths of the soil and horizontally to the northwestern boundary and western portion of the site. Soil samples collected from HTE-SP-2, 662,600 ppb VOCs at 2'-4', 934,900 ppb VOCs at 10'-12'. Groundwater was encountered at 12 feet bg and flows to northwest. The compounds detected in the groundwater plume are mainly gasoline compounds, range ND to 79,300 ug/L. 4) Remedial Action Plan, 12/14/2007. HydroTech proposed to have 1) soil excavation, down to 12'; 2) installation vapor barrier and sub-slab venting system; 3) RAP for groundwater will be submitted to NYSDEC. 5) Floor Plans for the new building. The new building will be occupied the whole site. Called Yash Saha (HydroTech). The excavation will cover the whole site and down to 12'-14', no dewatering is planned. DEC required the vapor barrier and sub-slab venting system design, groundwater remediation. HydorTech will submit a RAP including the soil excavation, groundwater remediation, and soil vapor mitigation shortly. (RJF) 2/7/2008 - Feng - Reviewed the Revised RAP, 1/31/2008, by HydroTech. HydroTech proposed: 1) soil excavation; 2) installation of vapor barrier and sub-slab venting system; 3) RegenOx and ORC injections for groundwater remediation. Reveiwed also the 3Q2007 quarterly report. During the tank excavation activities in 3/2007, monitoring wells MW-1, MW-5, MW-9 and EW-1 were destroyed. 7/11 wells were sampled. BTEX range 73 ppb (MW-6) to 15,260 ppb (MW-4). MTBE range 18 ppb (MW-6) to 47,200 ppb (MW-4). Emailed HydroTech the comments and questions. (RJF) 2/15/2008 - Feng - Stipulation Agreement to Katan Group. Due back 3/7/2008. (RJF) 2/27/2008 - Feng - Received signed Stipulation Agreement. Sent for RD's signature. (RJF) 3/3/2008 - Feng - Reviewed the Revised RAP, 2/13/2008, by HydroTech. Addressed the comments provided on 2/7/2008. Approval letter to Katan Group and cc to HydroTech. DEC require the vapor barrier to be extended vertically to the surface grade through the foundation walls and more RegenOx injection points to be installed. Revised the vapor barrier design and the injection diagram will be submitted within 10 days. (RJF) 3/7/2008 - Feng - Spoke to D. Greffenius (Delta). BP will also oversee the remediation progress occuring onsite. An addendum letter/plan will be submitted for post-excavation sampling, dewatering plan in case dewatering is needed, and monitoring plan after the construction. BP will still continue to comply with the Stipulation between BP and DEC. (RJF) 3/13/2008 - Feng - Stipulation Agreement executed 2/28/2008. (RJF) 4/17/2008 - Feng - Email to HydroTech regarding the notification of chemox injection to EPA UIC program. HydroTech contacted EPA and it may take 30 days to have EPA review the details of the injections. Letter for offsite soil vapor point to HydroTech. 4/18/2008 - Feng - Call from HydroTech (Yash). HydroTech will inject the ORC while installing the soil vapor points. ORC will be injected at the sidewalk across the 4th Ave and some onsite injection points. (RJF) 4/24/2008 - Feng - email from Yash Saha (HydroTech). HydroTech has finished the onsite ORC injection and the soil gas implants offsite. (RJF) 5/1/2008 - Feng - Site visit. Met with Carlos Quinonez from HydroTech. The tech team was late. The work will be rescheduled. 5/2/2008 - Feng - Site visit and met with Yash Saha. Started RegenOx injection using GeoProbe. The intended injection points were marked. It will be drilled down to 25 feet and

KAM SERVICE CENTER INC (Continued) **1000556241**

the RegenOx will be injected into the 25 feet to 16 feet. Planned to finish 10 point today. Offsite soil vapor sampling also ongoing. According to Yash, there will be some dewatering activities along with the development. Dewatering water will need to be treated. Met with D. Greffenius (Delta) in DEC office. Received the IRAP. (RJF) 5/9/2008 - Feng - cc-d the EPA Underground Injection Control section's letter to Katan group for authorization to inject RegenOx and ORC. (RJF) 6/12/2008 - Feng - Called from Yash (HydroTech). All the RegenOx injections are completed at this time. They started the site excavation on 6/4/2008, so far at 8 feet bg, and had some foundation pillars installed. The elevator shaft part has not worked on yet. At this time, no work on site, but may excavate deeper later on. DEC still requires groundwater samples to confirm the effectiveness of the RegenOx, taken gw samples from the previous baseline sampling points. 6/16/2008 - Feng - 4Q2008, 3/18/2008, by Delta. The monitoring well network was gauged and sampled on 1/17/2008. 7 wells. DTW 11.01' to 14.88' bg. Flows to northwest. BTEX range ND to 18,500 ppb (MW-10). MTBE range ND to 21,000 ppb (MW-4). 6/18/2008 - Feng - Portfolio meeting with BP and Delta. In 6/2008, soil removal is about 4,600 tons. Delta is submitting the final version of IRAP. The exhaust blowers planned for building's lower parking levels will control vapors. No sub slab venting system might be installed since the basement is so close to water table. Conference call with BP/Delta, Katan/HydroTech will be scheduled. (RJF) 7/28/2008 - Conference call with Delta (D. Greffenius and G. Hinshalwood) and HydroTech (Rachel). Delta and HydroTech will be sending the brief summary of the site status. (RJF) 9/17/2008 - Vapor complaint from the resident across the street. DEC has contacted and required the developer (Perry Soskin from Katan Group) and the RP (BP) to immediately mitigate the vapor by today. Mr. Soskin from Katan Group and David Greffenius from Delta called back. Delta and EnviroTrac will be onsite and lay the plastic sheeting on the area today. They will there around 4:30pm. Tomorrow they will cover with a few loads of fills and more plastic sheeting on top of the fills if necessary. Called the resident David Simonoff and informed him that the responsible party will be onsite start taking of the odor today and DEC will continue to monitor the situation. (RJF) 9/17/2008 - Site visit and met with Delta and EnviroTrac. The north portion of property near the 5th Street is filled with water, half foot to one foot deep. Delta and EnviroTrac lay the plastic sheeting on the waterly area with some product, next to 4th Ave and east portion. A vac truck will be mobilized tomorrow morning and remove the water before the backfills. (RJF) 10/16/2008 - Letter to Katan Group and BP requiring the developer/RP to submit a Revised RAP which include monitoring wells installation around the property to access the current and during construction groundwater condition, dewatering plan, post construction remediation plan if necessary, and post construction groundwater monitoring plan. Revised RAP due 11/17/2008. The Department notifies the city agencies, DOB, DEP, and DOH on the site status and its intended development. (RJF) 10/29/2008 - 1Q2008, 7/25/2008, by Delta. Vacant. The monitoring well network was gauged and sampled on 3/6/2008. During tank excavation activities in 3/2007, MW-1, MW-5, MW-9, and EW-1 were destroyed. Due to construction onsite during first quarter 2008, all onsite wells are covered with soil and gravel and are suspected to be destroyed. 3 were were gauged (offsite wells). No LNAPL. DTW 14.04' to 14.78' bg. Flows to northwest. 3 were sampled. BTEX range ND to 407 ug/L (MW-7). MTBE range ND to 2.8 ug/L

KAM SERVICE CENTER INC (Continued) **1000556241**

(MW-6). 2Q2008, 9/29/2008, by Delta. Vacant. The monitoring wells were gauged and sampled 6/30/2008. 3 offsite wells were gauged. No LNApL. DTW 13.48' to 14.12' bg. flows to northwest. 3 wells were sampled. BTEX range ND to 486 ug/L (MW-7). MTBE range ND to 1.9 ug/L (MW-6). (RJF) 11/10/2008 - Vapor complaint received from resident adjacent to the site. Visited the site, no access because the site was locked. Walked around the site and did not observe odor. No PID reading. Water retained in the open excavation again. (RJF) 11/10/2008 - Email to Bill Bogdon approving the 60 days extension for RAP. (RJF) 11/12/2008 - Delta and EnviroTrac were onsite to mitigate the vapor. A vac truck was mobilized and vac out the product in the property line area and water. Delta and EnviroTrac will then cover the area with product and rest of the water. They will come back tomorrow to see if water level rise again. Soil backfill may be done if necessary. (RJF) 12/10/2008 - Email from David Greffenius (Delta) Please note that Delta and EnviroTrac, on behalf of Atlantic Richfield, will be transporting additional backfill to the 363 4th Avenue, Brooklyn site this Friday, December 12, 2008, in order to fill-in the remaining standing (ground) water at this site for the purpose of preventing another vapor complaint by the residents in this neighborhood. Our plan will be identical to our last effort: we will cover the standing water with plastic (where it is safe to do so), and then cover the plastic/water with between 4 and 6 loads of recycled concrete aggregate (RCA) backfill. 12/17/2008 - Spoke with David Greffenius (Delta). The excavation where been with water is backfilled. The product seems coming back again. Might need to investigate the adjacent parking lot. (RJF) 12/18/2008 - Visited the site and met with David Greffenius. The site is backfilled in most of the area with water. Some water is still retained near the back apartment building. No product was seen this time. David will stop by regularly to check if there is any recharge of the product. SanBorn maps may be reviewed for the parking lot next door. (RJF) 1/20/2009 - Met with Domenick Tonacchia (Tona Development), Bill Bogdon (Tona Development), Kevin Kleaka (Impact Environmental), and phone conference with David Greffenius (Delta). There will no dewatering. The building will be covered the entire site with cellar, no subcellar. There will be changes for the new building since they are trying to avoid dewatering process. DEC required an investigation work plan for both onsite and offsite by 2/2009. (RJF) 3/20/2009 - Reviewed Investigation Work Plan, dated 3/3/2009, by Delta. Delta proposes to install 7 monitoring wells at the sidewalks around the perimeter of the site. Work to be scheduled and RI report to be due within 90 days, 6/19/2009. Work Plan is approved. Letter to BP and cc to Delta. (RJF) 3/23/2009 - Reviewed the Investigation Work Plan, dated 2/2009, by Leggette, Brashears & Graham, Inc (LBG). LBG proposes to install 4 monitoring wells onsite within the perimeter. Comments to LBG and Tona Development via email. see comments in eDoc. (RJF) 3/24/2009 - Reviewed LBG's responses to the comments on the IWP, uploaded in eDocs. Additional comments on the responses were sent to LBG and Tona Development, in eDocs. (RJF) 4/3/2009 - Reviewed the Updated IWP, via email on 3/25/2009, by LBG. Previous comments are addressed. Work plan to be approved. Letter to Tona Development and LBG. 4/3/2009 - Conference call with BP, Delta, Tona Development and LBG. The offsite wells installation will be started within 2 weeks. The onstie will be within 1 week. Tona Development will advance some test pits to verify the real water table and will notify BP 2 days in advace so BP could send a field technician to the site.

KAM SERVICE CENTER INC (Continued) **1000556241**

Changes to the development plan will be made, the basement slab will be above water table. DEC require the RAP should include the vapor barrier and SSDS. Stipulation agreement will be sent to Tona Development. (RJF) 4/6/2009 - Stipulation Agreement to 267 Sixth Street, LLC. eDocs. (RJF) 4/28/2009 - Conference call with Tona Development and Delta. The onsite wells are installed and the report will be sent to DEC and Delta. Sewer line is identified beneath the sidewalk. A Con Ed oil line is also identified between the sidewalk and the site and might be extented into the site. Hand clearance will be made during the installation of the offsite wells. The test pits were advanced down to 9-10 feet below current grade, and found groundwater at 5 feet in one of them. Construction excavation will be above/at water table. Tona will be moving the soil around this week to make the ramp for the machines entrance. A plan to suppress the possible odor shall be in place before the excavation. And soil shall be tested for disposal and this enable the soil to be disposed immediated when being generated. Delta will review the Tona's recent investigation report to come up the IRAP, remedy to be proposed depend on the current site condition, soil and groundwater residual. Next updates call will be held upon the submission of IRAP. (RJF) 7/7/2009 - Reviewed Subsurface Investigation Report, dated 5/13/2009, by Leggette, Brashears & Graham, Inc. On April 9, 2009, the groundwater monitoring wells were installed onsite. Soil samples were collected continuously through the boring from the excavation grade to approximately 15 feet below the excavation grade. The final boring depth is approximately 20 feet below the historical grade of the site. The wells were surveyed. DTW 4.54' to 10.55'. no product was encountered, but film was observed. Soil samples run for VOCs and SVOCs. VOCs and SVOCs exceedances were detected, unit in ug/kg. MW-21, 10-15 feet, 920 benzene, 770 toluene, 30,000 ethylbenzene, 22,700 xylenes. MW-22, 5-10 feet, 6,200 benzene, 100,000 toluene,, 120,000 ethylbenzene, 400,000 xylene, 1,100 MTBE. MW-25, 10-15 feet, 1,500 benzene, 11,000 toluene, 43,000 ethylbenzene, 183,000 xylene. Groundwater samples were run for VOCs and SVOCs. Exceedances were detected, unit in ug/L. MW-21, 360 benzene, 300 toluene, 1,300 ethylbenzene, 1,480 xylene, 610 MTBE. MW-22, 230 benzene, 3,700 toluene, 2,300 ethylbenzene, 7,900 xylene, 28 MTBE. MW-25, 1,200 benzene, 620 toluene, 3,500 ethylbenzene, 6,200 xylene, 1,100 MTBE. And SVOCs were also detected in these wells. Compared to the historical soil and groundwater concentration levels, data show down trend for most of the wells. The data gained from this investigation will be used in preparing of the IRAP. Email BP and Delta for the status of the IRAP. (RJF) 7/14/2009 - Conference call with Tona Development, BP and Delta. Delta is putting together the LBG's report data and the new building plan, the IRAP will be submitted next week. Delta is also going through the MTA permitting process to have the wells installed at the sidewalk along 4th Ave. There are probably 3-4 feet of soil to be removed, no dewatering. Film = sheet in LBG's report. DEC required there are shall be wells being able to monitor the effectiveness of Delta's proposed remedy. BP will gauge and sample the onsite wells after the perimeter wells are in. (RJF) 1/4/2010 - Reviewed Work Plan for Offsite Monitoring Wells Abandonment, dated October 12, 2009, by Delta. Delta will abandon the three monitoring wells across 4th Ave, MW-6, MW-7 and MW-8. (RJF) 1/12/2010 - Reviewed Subsurface Hydrocarbon Assessment Report Addendum, dated October 29, 2009, by Delta. On June 19, 2009, EnviroTrac, on behalf of Atlantic Richfield and under the direction

KAM SERVICE CENTER INC (Continued) **1000556241**

of Delta, installed one permanent two-inch monitoring well (MW-13) at the northeast sidewalk of 6th Street using Geoprobe 6610 hollow-stem auger drill rig with direct push, macro-core sampling capability. MW-13 was drilled to 18 feet and groundwater was encountered at 12 feet. 2 soil samples were collected. MW-13 (11.5-12'), VOCs ND. MW-13 (19.5-20'), VOCs ND. On September 21, 2009, MW-13 as well as the monitoring wells onsite MW-20, MW-21, MW-22, MW-23, MW-24 and MW-15 were gauged and sampled. DTW 6.31' to 12.63' bg. NO LNAPL. unit in ug/L. MW-13, ND. MW-20, 7.6 benzene, 26 MTBE, 6 isopropylbenzene, 9.4 n-propylbenzene, 61 total VOCs. MW-21, 350 benzene, 290 toluene, 1,250 ethylbenzene, 860 xylene, 2,750 BTEX, 430 MTBE, 34 n-butylbenzene, 18 sec-butylbenzene, 87 isopropylbenzene, 10 p-isopropylbenzene, 520 naphthalene, 240 n-propylbenzene, 590 1,2,4-trimethylbenzene, 140 1,3,5-trimethylbenzene, 4,819 total VOCs. MW-22, 140 benzene, 810 toluene, 1,450 ethylbenzene, 420 xylene, 2,820 BTEX, 76 MTBE, 11 n-butylbenzene, 32 isopropylbenzene, 7.1 p-isopropylbenzene, 260 naphthalene, 60 n-propylbenzene, 250 1,2,4-trimethylbenzene, 100 1,3,5-trimethylbenzene, 3,621 total VOCs. MW-23, ND. MW-24, 21 MTBE, 27 total VOCs. MW-25, 1,100 benzene, 440 toluene, 2,790 ethylbenzene, 2,600 xylene, 6,930 BTEX, 390 MTBE, 25 n-butylbenzene, 15J sec-butylbenzene, 170 isopropylbenzene, 14J p-isopropylbenzene, 280 naphthalene, 300 n-propylbenzene, 830 1,2,4-trimethylbenzene, 400 1,3,5-trimethylbenzene, 9,354 total VOCs. Off-site Monitoring Well Abandonment Report, dated December 30, 2009, by Delta. On October 21, 2009, EnviroTrac, on behalf of Atlantic Richfield, abandoned offsite wells MW-6, MW-7 and MW-8 by 1) removing the bolt-down cover and riser cap from each well; 2) tremmie-filling each well screen and riser pipe with Portland cement/bentonite slurry from the bottom of the well to 5 feet bg using a grout pump; and 3) filling the top 5 feet of riser pipe and the flush-mount cover of the each well with Portland cement to the groundwater surface. (RJF) 3/10/2010 - Neil Steven (646-542-4312) from Law Enforcement Region 2 called. Odor complaint from the residents. He went to the site yesterday, there was strong odor and dark product. Email to Nick Onufrak (BP), Bill Bogdon (Tona Development) and David Greffenius (Delta). Bill and Nick, DEC received a odor complaint from the nearby residents for this site. Our ECO went to the site yesterday and he said there was strong odor and dark product was witnessed. You MUST send someone out there TODAY, to take pictures, sample the product, remove the product and mitigate the odor. If nobody is there today, we will send contractor out tomorrow and bill everybody. Called and spoke with Nick Onufrak. He will call EnviroTrac and see what they can do, and give us an update by the end of today. Call Domenick (Tona Construction), he will send out someone to check out. Forwarded him the email since Bill is no longer with Tona. (RJF) 3/10/2010 - email from Gordon Hinshalwood (Delta). We investigated SS 13397 today in response to your email below. Some soil staining was identified in the rear area of the site, but free-phase NAPL was not identified on the standing water in the excavation, nor were hydrocarbon odors identified. We plan on delivering a frac tank to the property tomorrow afternoon and pumping the standing water out of the excavation (the volume of water is reportedly too large for a vac truck to handle). We will store the water in the tank on-site until we can arrange for it's proper disposal. We also intend to backfill the excavation to prevent further water accumulation on-site, which will likely happen on Friday, or early on next week. 3/11/2010 - closed the spill 09-12838 opened for receiving the odor complain from

KAM SERVICE CENTER INC (Continued) **1000556241**

Cynthia Simonoff and refer to spill 89-01904. Called Ms. Simonoff and told her that BP will be there this afternoon to vac the water out and will do some backfill by Friday. (RJF) 3/11/2010 - NYCDEP called and claimed there was odor and product onsite. DEC Tibbe visited the site and met Dave Greffenius (Delta) and EnviroTrac. There was a petroleum odor but it was not significant. There was some floating product and sheen on the water in the excavation, and there was stained soil most of the way around the excavation, at water level. Delta was directed to sample the oil and excavate the stained soil. DEC also required addressing any floating product, if there is any, during the monthly gauging event. DEC emailed to Delta and required the submital of RAP to address the soil and groundwater, regardless of the potential development, because the schedule is unknown. Draft prposal or a review of alternatives by 3/2010. (RJF) 3/17/2010 - email from Nick Onufrak (BP). They will be onsite to pump out more water and backfill some of the excavation Wednesday and Thursday. Domenick (Tona Development) is aware of the work. DEC responded to the Yvonne Schmitz's inquiry. (RJF) 4/7/2010 - received complaint and spill 1000269 was opened. DEC Spill staff visited the site. The responder did not detect any petroleum odors and from his vantage point outside the fence, could not see floating product, but he did see standing water in the excavation. DEC email to BP and Tona Development requiring that the issue of standing water in the excavation must be rectified in order to prevent future impacts to the area residents as well as reduce and/or eliminate future complaints. The only way could be pumping out the water and completely fill the excavation to grade. DEC requires arrangements to complete this task immediately. Email from David Greffenius and attached with LNAPL Forensic Analysis Letter Report. Based on the fingerprinting forensic analysis of the sample collected from the top of the standing water, the floating oil was determined to be a relatively fresh diesel/fuel oil product probably released within the last two years. Based on BP's underground storage tank (UST) registration records, no diesel or fuel oil USTs were registered at the subject site from 1990 forward. 4/8/2010 - email from David Greffenius. EnviroTrac will begin water pumping opeartion tomorrow and site backfilling is scheduled for next week. 4/9/2010 - Letter from BP committing to address the odor complaint issue in a timely fashion and the spill remediation. 4/12/2010 - letter to NYC DOB, DOH, DEP notifying the open excavation issue at the site. 4/13/2010 - email from David Greffenius. Additional water pumping and removal, and site backfilling activities are scheduled to begin on Thursday, April 15. They are planning to bring in 1,000-1,500 yards of additional backfill material to the site (1,500-2,500 tons) over a 2-3 days period. checked spill 97-05330 at 278 6th Street. No investigation has been done at this site. PBS record 2-603857 at 383-393 4th Ave 278 6th Street show one 550-gallon kerosene (#1 fuel oil), one 275-gallon #2 fuel oil, one 4,000-gallon diesel, and one 4,000-gallon gasoline were removed in 3/2008. But no tanks closure report in file. 4/14/2010 - DEC Zhune called the owner of 278 6th Street. The property is sold already and he will call the consultant who did the closure to send the report in. 6/8/2010 - DEC responds to the Dailey News inquiry. Documentation of the backfill of the excavation including 3 photos taken after the backfill on 4/19/2010 were received from Delta. As seen from the photos, the backfill is up to the street level, and the monitoring wells are still in place. 6/9/2010 - DEC inspected the site around 9am and took some photos. No

KAM SERVICE CENTER INC (Continued) **1000556241**

petroleum odors noticed. NO sign of contaminated soil was found. 4Q2009, 3/2/2010, by EnviroTrac. Currently a vacant lot. The monitoring well network was gauged and sampled on 12/28/2009. Due to site flooding several wells were inaccessible during the 12/2009 event (MW-21, MW-22, MW-23, MW-24 were under water) and were subsequently gauged and sampled on 1/22/2010. 6 wells were gauged. No LNAPL. DTW 3.76 - 12.82 (below existing grade?). Flows to northwest. historic flows to south. 6 wells were sampled. MW-24 was under water, not sampled. Max benzene 490 ug/L (MW-25). Max BTEX 2,820 ug/L (MW-25). Max MTBE 120 ug/L (MW-25). 1Q2010, 5/17/2010, by EnviroTrac. The monitoring well newtork was gauged and monitored on 3/25/2010. 7 wells were gauged. NO LNAPL. DTW 2.19 - 10.23' (below existing grade?). Flows to northwest. 7 wells were sampled. Max benzene 9.1 ug/L (MW-22). Max BTEX 248.6 ug/L (MW-21). Max MTBE 10 ug/L (MW-24). 7/20/2010 - Reviewed Remediation Work Plan for Chemical Oxidation Solution Pilot Application, dated July 12, 2010, by Delta. During the week of June 21, 2010, Delta installed 6 soil borings in the portion near the 4th Ave. SB-8 (12-13'), 1,302,600 ug/kg total VOCs. SB-8 (20-21'), 12,568 total VOCs. SB-9 (8-10'), 1,884 total VOCs. SB-9 (19-20'), 525 VOCs. SB-10 (7.5-10'), 828,240 VOCs. SB-10 (15-16'), 217 total VOCs. MW-14 (11-12'), 167,549 total VOCs. MW-14 (17-18'), 15,788 total VOCs. MW-15 (7.5-10'), 318,470 total VOCs. MW-15 (14-15'), 15,908 total VOCs. 3 soil borings turned into MW-14, MW-15 and MW-16. soil sample was not recovered and therefore no sample was collected for MW-16. Delta proposes to inject iron activated sodium persulfate and a pilot will be conducted first. 2 application wells AW-1 and AW-2 will be installed in the northwest portion of the site. The application wells will be installed to 15 feet bg with 10 feet 4-inch diameter screen. 500 gallon of sodium persulfate/EDTA-chelated Fe(II) solution (0.50 kg/gal/0.01 kg/gal EDTA-Fe(II) as Fe) will be added into the two application wells. Surrounding wells MW-15, MW-16 and MW-22 will be monitored. Pre-application sampling will be included BTEX/MTBE, sulfate, DO, pH, ORP, and alkalinity. Sampling will be also conducted the day of the application, following day, and weekly for 2 weeks. Anticipated the pilot to be conducted the final week of 7/2010. ChemOx pilot work plan is approved. Report due 8/2010. 10/26/10 The site is temporarily reassigned to Alex Zhitomirsky as per V. Brevdo and M. Tibbe. I went to the site today. There is some standing water and some residential garbage at the site. I could not smell any odor. An e-mail with my findings was sent to V. Brevdo and M. Tibbe. AZ 4/11/2011 - Spill transferred back to JFeng. 6/24/2011 - On June 24, 2011, DEC reviewed the work plan proposing full scale ChemOx injection. Then DEC was also notified by the developer that they have financing coming into place and plan again to develop the site. A conference call was held on June 28th with BP, its consultant, and the property developer. The developer is planning to construct a building with a full basement that will cover the entire footprint of the property; with the basement only to a depth at which dewatering will not be needed. As such, BP will need to change plans the developer agreed to provide us with their construction drawings, and BP agreed to provide a work plan for a focused investigation to determine whether they could over-excavate to remove remaining impacts; we also spoke about the need for continued gw monitoring which would likely need to include wells in the basement. 8/1/2011 - Reviewed Soil Investigation Work Plan, dated 7/14/2011, by Antea Group. 8 soil borings were proposed in order to identify remaining soil contamination. Comments: the drilling should

KAM SERVICE CENTER INC (Continued) **1000556241**

be beyond the historical contamination depth until hitting clean soil; sewer information in the sidewalk of 4th Ave; the 1997 misfiled oil burner replacement Block 987 Lot 11, but address 363 4th Ave; and if this site is a e-designated site under NYC DEP. 8/9/2011 - meeting with BP and Antea Group. Discussed the submitted IWP. DEC required the drilling down to the clean depth in order to vertically profile of the soil and identify remaining soil contamination. Revised IWP will be submitted. 9/9/2011 - reviewed additional revision of the IWP submitted via email by Antea Group on 9/5/2011. reduced PID reading is defined as immeasurable reading. So soil samples from the water table interface, highest PID reading, reduced PID reading, and 3 feet below reduced PID reading will be taken. 9/9/2011 - approved IWP for installing 8 soil borings to assess the current soil condition. Report due 12/2011. 10/27/2011 - 2Q2011, 9/7/2011, by Antea Group. The groundwater samples were collected on June 6, 2011. 10 wells were sampled. NO LNAPL. BTEX concentration increased from the last quarterly sampling results. MW-14, 36,320 ug/L BTEX, less than 25 ug/L MTBE. MW-15, 8,230 ug/L BTEX, less than 5.0 ug/L MTBE. MW-21, 1,060 ug/L BTEX, 97 ug/L MTBE. MW-25, 195 ug/L BTEX, 21 ug/L MTBE. 11/22/11 - Raphael Ketani. Arnie Fleming of Fleming-Lee-Shue (212) 675-3225 called me today about the case. He said that FLS is the consultant for the new developer. The site has an E designation. He said that BP is moving slowly on remediating the site. However, the site was excavated and oil flowed out from the east wall. Mr. Fleming stated that there is a yard area that belongs to the condominium building next door and that this would be a good place to do the investigation. However, the condominium has not been cooperative about letting BP’s crew on the neighboring property. I told Mr. Fleming to send DEC the contact information for the condominium and we will pursue aquiring access for an investigation on their property. He said that he will. 11/22/2011 - As per Ketani, spill 11-10410 was generated for the offsite issue. 11/23/2011 - sent via email to Naftali Group LLC the stipulation agreement along with corrective action plan. As per DEC Ketani, sent letter notifying petroleum contamination at 270 Fifth Street and required investigation. Response is required within 15 days in receipt of the letter. Letter was sent to: 270 Fifth Street Corp. 270 Fifth Street Brooklyn, NY 11215 BPC Management 84 Livingston Street Brooklyn, NY 11201 11/29/2011 - Reviewed Investigation Summary Report, dated October 28, 2011, by Antea Group. 6 soil borings were installed in the central portion and western portion along 4th Ave of the site. The borings were advanced to 20 to 30 feet bgs where a peat layer was encountered. Very high total VOCs and SVOCs were detected in various location. For total VOCs in soil samples ug/kg, SB-26 (7.5-9) 54,300, (15-16) dark NAPL stain 17,801, (20-21), 30.2. SB-29 (10-11) 155,380, (13.75-14.25) odd staining 236,111, (27-28) 26.19. SB-30 (7.25-8.25) staining 251,429, (22.33-22.66) stain with product 18,287, (25-26.33) 23,781. SB-31 (3.5-4) 108,609, (9-10) odor sheen on acetate 1,017,620, (29-30) 8,217. SB-32 (3.5-4) 2,990, (10-15)17,024, (20-22) 334.7. For SVOCs, SB-26 (15-16) 1,907,400. SB-30 (22.33-22.66) 1,653,800. Antea concluded that soil contamination were identifed in the central area of the site and along western border by 4th Ave. Varied depth 3.5 to greater than 20’ and soil staining showed visible evidence of a heavier than gasoline grade of hydrocarbon in some location. Excavation alone may not be possible to remediate. Will propose vapor barrier and SSDS and development of a post construction remediation strategy to address the impacts. 11/30/2011 - letter to

KAM SERVICE CENTER INC (Continued) **1000556241**

BP and requiring a RAWP to be submitted by 1/2012. DEC require the contaminated soil to be excavated, install hydraulic barrier to prevent site recontamination by the seeping oil, and vapor barrier + SSDS for the future building. The letter which was sent to the apartment building was attached as per DEC Paul John's request. 12/9/11 - Raphael Ketani. Today there was a conference call with Arnie Fleming of Fleming Lee Shue, Hassan Hussein, head of the Hazardous Materials Unit, June Feng, project manager, and myself. Mr. Fleming commented about the oil seep that was coming in from the east side of the property. I told him that the DEC wanted BP to excavate down about 16 feet at each location that showed excessive contamination (above CP-51 standards). Mr. Fleming said that BP had made a determination that these locations were too deep to excavate. Wells would be put in the sidewalk. Mr. Fleming also stated that he had bad experiences with installing wells through a vapor barrier. Once you open the wells to sample them, then the vapors come out and the VOCs are suddenly high in the building. He added that his client, the latest developer, was willing to install a 150 foot long curtain to prevent the oil from seeping onto the property. They would excavate to 10 feet below grade, the foundation level, and drive sheeting along the east border. He suggested ordering a STIP for his client to hold him as responsible for installing the 150 foot long curtain wall. He said that he believed that chemical oxidation can work. The soil is sandy. He can use pressure pulse technology to treat the contamination. Mr. Fleming went on to describe how this technology works and the benefits. After this, the conference ended. 12/15/11 - Raphael Ketani. Today I received a response letter from Mr. Onufrak of Atlantic Richfield Company (ARCO). In the letter, Mr. Onufrak states that he is responding to DEC's 11/30/11 letter requesting a RAWP describing the excavation of the contaminated soil and the construction of a barrier in order to prevent the oil from the neighboring condo building from migrating onto the subject former BP property. Mr. Onufrak writes that ARCO disagrees with taking any responsibility for any off site oil that is migrating onto the property. However, he also wrote that the site owner, 267 Sixth Street LLC, is willing to pay for the barrier. ARCO will submit a RAWP for only excavating the contaminated soil at the site. 12/16/11 - Raphael Ketani. I sent a response letter stating that ARCO should submit a RAWP just for the excavation. However, I added that the containment and cleanup of the off site oil should be worked out between 267 Sixth Street LLC, 267 Development LLC and the owners of the neighboring condo building (270 5th Street). responsible party: ARCO (BP #13397) owner of site: 267 Sixth Street LLC developer: 267 Development LLC neighbor: 270 5th Street (condo) 12/27/11 - Raphael Ketani. Kevin McGuinness (developer's consultant) (212) 675-3225 called. He said that the developer and BP have reached an agreement regarding the retaining wall for holding back the oil on the east side of the property. BP will submit a work plan for only the west side excavation and the developer will submit a work plan for only the retaining wall construction. This was being done because the developer is under a short time constraint whereby he has to start work by a certain date. I told Mr. McGuinness that the submission of two work plans was fine. Mr. McGuiness responded that the DEC should receive the wall work plan by January 9, 2012. I asked him who was the owner of the site. He said that it was still BP. 1/5/12 - Raphael Ketani. I received the 1/4/12 Hydraulic Barrier RAP from Flemng Lee Shue for preventing the seepage of oil onto the site from the

KAM SERVICE CENTER INC (Continued) **1000556241**

property to the east. I found the RAP to be acceptable for installing the steel sheet piling wall. I sent a letter to Mr. McGuinness stating this and an e-mail. I also had received the 1/3/12 Remedial Action Plan - Chemical Oxidation from the Antea Group. The basis of the plan was to use chemical oxidation and soil vapor intrusion to remove the contamination from the soil and the groundwater. Within the plan, there were diagrams showing the installation of piping for accessing the wells remotely after the site is developed and a building is constructed. The idea was that remediation would continue after site development. This I did not believe was a good plan. The reason being that if the treatment methods didn't perform as expected, then there would be no other options for the remediation, except natural attenuation. From the 9/28/-29/11 sample data in the work plan, the locations of concern for the soil contamination were SB-26 and SB-29 to SB-32. SB-26 = 7.5'-9' 54,300 ppb total VOCs; 15'-16' 17,801 ppb total VOCs and 1,907,400 ppb total SVOCs SB-29 = 10'-11' 155,380 ppb total VOCs; 13.75'-14.25' 236,111 ppb total VOCs SB-30 = 7.25'-8.25' 251,429 ppb total VOCs; 22.33'-22.56' 18,287 ppb total VOCs and 1,653,800 ppb total SVOCs; 25'-26.33' 23,781 ppb total VOCs SB-31 = 1.5'-4' 108,609 ppb total VOCs; 9'-10' 1,017,620 ppb total VOCs; 29.65'-30' 8,217 ppb total VOCs SB-32 = 10'15' 17,024 ppb total VOCs The locations of concern for the groundwater contamination were MW-14 (3/10/11 NAPL; 9/6/11 34,880 ppb total VOCs) and MW-15 (9/6/11 3,022 ppb total VOCs). I sent a letter approving the 1/3/12 RAP - Chemical Oxidation for conducting the work before the property construction. I disapproved the installation of the remote conduit piping before the building construction. In the letter, I also let the Antea Group know that they have to come up with an alternative method of remediation in the event that the treatment methods fail to achieve a level of remediation that is at or below the standards. 1/10/12 - Raphael Ketani. I sent an addendum letter to my 1/9/12 letter regarding the Chemical Oxidation RAP. In this letter, I stated that Atlantic Richfield has to delineate the off site groundwater contamination, as depicted in the last diagram in the 1/3/12 Chemical Oxidation RAP. The diagram shows a hot spot of 16,385 ppb of total BTEX that abuts the fencing on the northwest side (4th Avenue). In the letter, I added that if the chemical treatments don't reduce the soil and groundwater contamination to or below the CP-51 standards, then they should consider excavation. Mr. Fleming (212) 675-3225 called in the morning. He tried to convince me to let the building be constructed first and have the piping for the solution treatment wells installed at the same time before the remediation takes place. I told him that my experience has shown me that this method doesn't usually work. I added that if the treatment solutions don't work, then everyone is stuck with high contamination below the new building. Mr. Fleming said that the developer is under a deadline to start the construction or else he will loose the money. I told Mr. Fleming that the idea of treating the soil and groundwater after the construction was unacceptable. Later in the morning Mr. Fleming called again. He said that the sheet piles could be made to go down more than 10 feet. He also stated that they could excavate the site generally down to 14 feet with no problems, excavate some small hot spots to 16 feet, and, if necessary, then drive the piling deeper and excavate further down. I told him this sounded alright. Mr. Fleming closed the conversation by stating that he will have a conference call with his client and Atlantic Richfield in a few minutes to discuss the plan. 1/19/12 - Raphael Ketani. Mr. Fleming (212)

KAM SERVICE CENTER INC (Continued) **1000556241**

675-3225 called today. We had a 30 minute phone conversation regarding the site. He argued for having DEC give a verbal approval to allow the construction company to put in piles and excavate generally to 10 feet down. He said that, at that point, they would dig out the contaminated soil in places down to 13 feet (this was 3 feet shallower than he had told me before). Then BP would inject lots of treatment solution into the soil in order to break down the contamination. After this, access piping would be installed for possible future injections and groundwater monitoring. Then the building would be built. I told Mr. Fleming that with the building constructed, you can't take confirmatory soil samples in order to see whether the treatment solutions did the job of reducing the contamination. Mr. Fleming stated that we would know whether the contamination has been sufficiently reduced by monitoring the groundwater. If the groundwater concentrations are low, then the treatments are being successful. He added that more treatments would be able to take place if needed. I told Mr. Fleming that all of the hot spots should be dug out. That's the best way to deal with this. Mr. Fleming said that the edge of the property is right up against an 8 foot NYC sewer main and this main is between the site and the subway. I told Mr. Fleming that he had never stated this before. He said that he found this out yesterday when the owner sent him the building drawings. I asked him how deep this sewer was. He said that being 8 feet, it's one of Brooklyn's main sewers. So it must be at least 15 below grade. Mr. Fleming added that he had spoken to the NYC OER and had asked them what would satisfy their requirements for remediation of the site. He said that they told him Whatever DEC wants. I told Mr. Fleming that this was not an answer and that we always want the contamination cleaned up first. Mr. Fleming said that his client was willing to wait several months for the injected solutions to do their work and then build. However, if this is going to drag on for a year or two, then his client will just walk away from the project. I told Mr. Fleming to send the DEC a letter describing what he is proposing with lots of pictures, diagrams and drawings showing the sewer and I will take a look at his proposal. However, I stated, I will not promise him anything over the phone. He said that this didn't sound good, but he will send me the plan.
1/20/12 - Raphael Ketani. Mr. Fleming (212) 675-3225 called me today. He said that he had spoken to his client and had worked out a plan whereby treatment solution injection and confirmatory soil sampling would be possible even with the foundation in place. I asked him how he would accomplish this. He said that 12 inch access ports would be built into the foundation so that drilling can take place in order to inject treatment solutions and take confirmatory samples. Then I asked him how additional treatment solution injections would take place. Mr. Fleming stated that special wells would be installed into the sidewalk that would have very long risers which would curve under the foundation and go into the water table. I told him to send me plans showing the access ports, the 8 foot sewer and the groundwater sampling wells. Mr. Fleming said that he will. Later in the day, Mr. Fleming sent me the plans (4/2/09 foundation plan and 1/29/12 groundwater well sampling plan). 1/23/12 - Raphael Ketani. I reviewed the plans and my notes from my conversations with Mr. Fleming on 1/19/12 and 1/20/12 and before. I sent Mr. Onufrak of ARCO, Mr. Hinshalwood of Antea and Mr. McGuinness of Fleming Lee Shue a letter approving the plan to construct the 12 inch diameter access ports and the groundwater monitoring wells with the very long risers. I stated

KAM SERVICE CENTER INC (Continued) **1000556241**

in the letter that they should try to dig out as much of the contamination as is possible before embarking on the foundation construction. I included copies of the boring and well locations for every boring and well that had elevated VOCs and SVOCs since the project had begun. I also included copies of the DEC 1/9/12 letter warning of possible damage to the subway tunnel walls if the they use sodium persulfate, and that they should include a work schedule for each step of the access port and well construction, and foundation construction. 1/30/12 - Raphael Ketani. Dan Cole of the NYC Office of Environmental Remediation (212) 341-0964 called regarding the site. He said that he wanted to have the owner install a much thicker vapor barrier that would be impervious to product, also. I asked him how thick a barrier. He said 20 MILS. I told him to send a letter to the owners with a c-c to me (after the owners agree to this) stating that the barrier will be 20 MILS. Mr. Cole said that he will. I received an e-mail from Mr. Cole as a c-c. The e-mail was sent to Toni Finger of Kramer Levin (presumeably the developer's lawyer). It stated that the OER needed several things in order to close out its review for the site: notarized affidavit from the buyer stating that the previously issued DOB job number will be used for development of the project; information about how the 20 MIL vapor barrier will be installed; a signed and stamped letter from Karl Fischer summarizing the full project description. Upon receipt of the above information, the OER will issue a Notice of No Objection. 2/1/12 - Raphael Ketani. On 1/31/12 and 2/1/12, the Naftali 1/31/12 OER Notice to Proceed, the Witek 1/30/12 Affidavit, the KFA Architects 1/30/12 Affidavit and the 1/1/12 Grace Letter were sent to Mr. Cole. On 1/31/12, Mr. Cole sent a Notice of No Objection to Mr. Finger for DOB Job No. NB-310071294. 2/21/12 - Raphael Ketani. Peter Helseth of Fleming-Lee Shue sent an e-mail containing a document describing the use of steel sheet piling in combination with a sealant. This barrier system would be used to prevent oil from seeping onto the site. I responded back by stating that it was the responsibility of the consultant and the developer to make sure that the barrier is appropriate and efficaceous. 2/24/12 - Raphael Ketani. Today, I received a letter from Gordon Hinshalwood, PhD. of Antea Group. In the letter Dr. Hinshalwood stated that the 1/3/12 Remedial Action Plan - Chemical Oxidation was being implemented. Excavation will take place generally to 13 feet below grade, and deeper where it is feasible to remove more contaminated soil. The additional soil impacts and the historical groundwater impacts were expected to be addressed by the actions described in the Remedial Action Plan. In addition, redevelopment is scheduled for 2/20/12. Once the basement level excavation is complete, then the ISCO application wells, associated piping and monitoring wells will be installed within 30 days. Also, during this time, the SSDS, vapor barrier and soil sampling access ports will be installed. Redevelopment will be completed in 12 to 24 months. After this time, the soil sampling ports will be sealed and the ability to evaluate the treatments will be very limited. The remedial activities schedule was included in the letter. The first round of solution applications will take place within 14 days of installing the wells. Three additional rounds of solution application are indicated (if this many will be necessary to treat the contamination). Post application soil and groundwater sampling will take place one month after each application. So Dr. Hinshalwood expects the entire remediation process to take no more than 12 months following the initial phase of construction. 2/27/12 - Raphael Ketani. I sent an e-mail to Dr.

KAM SERVICE CENTER INC (Continued) **1000556241**

Hinshalwood again warning him about the use of sodium persulfate near a subway structure and to contact the NYCT about its use at the site. I also again asked for the soil descriptions and calculations that were used to determine how much treatment solution would be necessary to remediate the contamination. I contacted the NYCT about the intended use of sodium persulfate by Antea Group, but I could only leave a message. Later, Dr. Hinshalwood called me in response to my e-mail. He said that Antea had contacted the NYCT regarding the proposed treatment solution injections and they are in the process for getting a permit to do the injections. Also, we discussed what type of information the DEC wanted in order to understand whether the solution injections will proceed as planned. Dr. Hinshalwood will send an addendum letter with the information. 3/1/12 - Raphael Ketani. Peter Helseth, P.E. of Fleming-Lee Shue sent me an e-mail with an attachment showing an alternative product for use as a hydraulic barrier. 3/2/12 - Raphael Ketani. Dr. Hinshalwood sent me an e-mail today. He stated that Clean Earth of Carteret, NJ will be the destination for the contaminated soil that will be excavated. No soil will leave the site until he has an acceptance letter from Clean Earth. 3/12/12 - Raphael Ketani. Dr. Hinshalwood sent me the Addendum to Proposed Schedule for Implementation of Remedial Action Plan dated 3/12/12 and produced by Antea Group. In the RAP, Dr. Hinshalwood explained that a a permit application to use sodium persulfate was submitted to the NYCT on 2/22/12. Boring logs and Rockware software were used to create cross sections of the site. The soils are predominantly sand and silty sand with peat in the central portion of the site. Soil porosity varies from 25% to 30%. Permeability is from 10-2 to 10-4 darcys, but is highly variable. Cross sectional diagrams were provided which depicted the lateral distribution of the sand, silty sand and peat in the subsurface. He also explained that a pilot test was conducted in the northwest corner of the property in the vicinity of MW-15 and MW-16. The treatment solution was injected into the 4' to 14' interval. It was found that AW-2 would only accept 150 gals. of solution over the course of a day. While AW-1 would accpet up to 280 gals. of solution per day. Dr. Hinshalwood stated that, given the limited reagent volume to be used, it will not affect the subway. The volumes to be used per injection well will likely be 150 to 300 gals. per day. The solution density will be no more than 0.5 kg/gal. The total mass to be injected will be 2500 gals. for this round. This means that each injection well will receive about 75 gals. I responded back to Dr. Hinshalwood by e-mail that the DEC had accepted the RAP without comment, but that no work should proceed until the NYCT sends the permit for using the solution. Also, I stated in the e-mail that the DEC should receive a copy of this permit. 3/23/12 - Raphael Ketani. I called up Mr. Fleming (212) 675-3225 today. He said that the removal of the fill material will start April 1. The contaminated fill has been delineated. It will be disposed of. Test piles have been done for the foundation. The foundation plan calls for 14 or 16 soil sampling ports in the foundation floor. The barrier sheeting has been ordered. Fleming-Lee Shue will have someone on site everyday for air monitoring and construction - it is an OER requirement. 4/10/12 - Raphael Ketani. Mr. Fleming (212) 675-3225 called today. He said that they had wanted to drive the steel sheet piling between the neighboring condo building and the site. However, they found out that the building had already been damaged from vibrations caused by the previous demolition and excavation work to remove the old gas station. The

KAM SERVICE CENTER INC (Continued) **1000556241**

condo building was built in 1911 and can't take any vibrations. The NYC Dept of Buildings has required that seismometers be placed next to the building in order to measure the vibrations. If there are significant vibrations, then all work will have to stop. Mr. Fleming said that this would make it impossible to install the steel sheeting as originally planned. However, he had an alternative method in mind. As the water table is about 20 feet down, he told me that after they have removed the cover soil down to 10 feet below grade, the construction company can dig a trench that extends 10 feet deeper along the property boundary with the condo property. Once this trench is constructed they will hand install, not drive, steel sheeting such that they will have a wall that is 20 feet high. The base of the steel wall will be below the water table and will be keyed into the future building foundation. The wall will be deep enough to stop the migration of the oil from the condo property which is appearing at 10 to 13 feet below grade. I told Mr. Fleming that this would be fine and to send me a new work plan. Mr. Fleming said that they are anxious to start the work and the DEC will receive the plan very soon. 4/25/12 - Raphael Ketani. Mr. Fleming (212) 675-3225 called to say that a UST was discovered below the neighboring condo property (spill #1110410 and #1200737). The contractors for Mr. Fleming were installing the required sheeting when they found free product running into the site from the neighbor's soil. They also saw that the neighbor's parking lot was sinking a couple of inches. They looked at the parking lot east of the building and found an old fill pipe. They stuck a rebar down the pipe and came up with 2 feet of oil. The condo was contacted and they hired YU Associates to do a GPR survey. One 550 gal. tank was found. The tank was emptied and cleaned out and the oil stopped seeping onto the site. The tank will be removed. Mr. Fleming asked whether DEC would allow 267 Sixth Street LLC (alternate address for 363 4th Avenue) to not put in the steel sheeting - as it was intended to prevent oil from seeping onto the site. I told him that since the oil is not moving onto the site, there is no need for the sheeting and it can be left out of the development of the site. I asked Mr. Fleming whether the condo was going to dig out the contamination. Mr. Fleming said that they were talking about it, but they weren't moving. I told Mr. Fleming to suggest to Mr. Naftali that he let his contractor do the excavation and back bill the condo. Mr. Fleming said that this was presently being discussed as he already has his equipment and trucks on site. After this, the conversation ended. 5/2/12 - Raphael Ketani. Arnie Fleming of Fleming Lee Shue called. He is the consultant for the developer of the neighboring site to the west (363 4th Avenue; #8901904). He said that he was at the co-op site yesterday and the contractors had emptied and cleaned out the tank. Because of this, the oil seepage onto 363 4th Avenue had stopped. The tank on the co-op property was a 1,000 gals. and was 2 feet away from the border between the two properties. No piping was found associated with the tank. Mr. Fleming said that he was dewatering his client's property and no oil was flowing in. However, he told Mr. Yu of Yu & Associates that he should start digging out the contaminated soil around the tank as he will stop dewatering and then Yu & Associates will have do their own dewatering in order to remove the contaminated soil. Mr. Yu said that he was waiting for the co-op board to meet in order to give him a decision regarding whether he can proceed with the remediation work. Mr. Yu also state that an oil sample was sent off for fingerprinting. So everyone is waiting for the results. Mr. Fleming said that he

KAM SERVICE CENTER INC (Continued) **1000556241**

emphasized to Mr. Yu that he should take advantage of the present dewatering because it will save him some money. Also, I sent an e-mail to Mr. Fleming stating that the steel sheeting didn't need to be installed as no oil was seeping onto the property and because the only purpose for installing the sheeting was to prevent the seepage. Later today, Rodney Rivera from the Regional Direction office of Region 2 came to the DER floor. He said that there had been a dust and petroleum odor complaint by someone from the co-op next door to Channel 11 News. Mr. Rivera was trying to find out what was happening at the site. I spoke to him and told him that this was the first time that I had been told there were dust and odor problems at the site. I also explained that excavation work was supposed to take place as part of the remediation of the site. However, I also told Mr. Rivera that the UST under the co-op property had just been cleaned out and had leaked oil into the ground. So this may also be a source of odors. Next, I spoke to one of the supervisors in the Spills Unit and he ordered a person in his unit to go and investigate the complaint. Next, I contacted Mr. Fleming (212) 675-3225. He said that he is aware that there are odors, but there isn't a significant problem with the dust. However, they are usually mild. However, there are instances of strong odors when they dig in the site to put the pile caps for the foundation. These odors usually affect a resident in the first floor of the co-op as his apartment is right next to the digging. Mr. Fleming also stated that this person's apartment is 5 feet from the newly discovered UST which was just cleaned out. So there will be odors when the soil is dug out in this location. A consultant from PAL Environmental is walking around the site with a PID meter and checking the odor levels. The first floor apartment was investigated for odors, but they are mild. I told Mr. Fleming that he will have to come up with a solution to the odor problem in order to alleviate the issue for this resident. Mr. Fleming said that he will send the DEC a plan in writing, but they will first try sealing the person's windows with plastic and caulk so that there are no air leaks. Maybe this will solve the problem. I asked Mr. Fleming what he and his crew are doing about the odors. Mr. Fleming said that the odors only happen with the initial dig into a location and then they quickly dissipate. However, he is using biosolve (a masking agent). Also, Fleming Lee Shue is now starting to dig out the hot spots. I asked Mr. Fleming to keep me informed. He said that he will. The Spill investigator contacted DER from the site and reported back that presently there were no odors. 5/7/12 - Raphael Ketani. Vanessa Meer of Yu & Associates (201) 791-0075, 116 called today and left a message. I tried to return her call, but could only leave a responding message. 5/8/12 - Raphael Ketani. I spoke to Mr. Fleming (212) 675-3225 today. I told him that there had been another odor complaint and the EPA was now involved. He said that the neighbor who had been complaining was moved into a hotel across the street from his apartment building. I told him that was fine and I asked who had arranged this. He said that it was the contractor. I asked Mr. Fleming to find out the name of the person who was affected by the odors. Mr. Fleming said that he will. Mr. Fleming added that the odors are of gasoline, not fuel oil. So everytime they dig, some odors appear. He said that he has a guy walking around the site with a PID meter and checking that there are no exceedences of the 10 ppm standard. However, if there are, then the work stops to let the odors disipate. An odor suppressing material was put down, but it's not very effective. Mr. Fleming added that the NYC DOB came by and

KAM SERVICE CENTER INC (Continued) **1000556241**

stopped the work. There's a stop work order. He doesn't know why this happened, but they usually don't get involved in odor complaints. On another note, Mr. Fleming said that they are presently dewatering the site and the water table has been depressed 3 feet. So, if the contractors from Yu & Associates want to, now is the time to dig out the soil contamination. I told Mr. Fleming that the co-op may not be ready to remediate the spill. 5/9/12 - Raphael Ketani. I spoke to Ryan Piper, EG I of the Region Spills Unit, about the latest odor incident. He said that the odor incident was called into the Spills Hotline by the NYC DEP. The incident was assigned spill number 1200916. Mr. Piper told me that he went to the site, but didn't find any odors. I told him that the citizen who had been complaining about odors in his apartment had been moved to a hotel. I asked him whether he knew the name of the citizen. Mr. Piper said that he didn't. However, he said that the spill case had been closed and referred back to this one. Tona Construction and Management, 615 Baltic Street, Brooklyn, 11217 is the construction company. The contact is Michael Izzo, General Superintendent, at (718) 399-3800/cell (718) 825-9309. 5/11/12 - Raphael Ketani. Steve Sangesland, Duty Desk Officer for the Region 2 Spills Unit, gave me a note that Matt Law (718) 593-9028 had tried to contact someone at the DEC regarding odors from the former BP station. I spoke to Mr. Law at length about the site, about the nature of the contamination (that is was just gasoline) and about the procedures for monitoring and managing the vapors and odors. He said that he was concerned that something else had contaminated the site, other than gasoline. I asked him whether he was the resident who had been moved to the hotel. Mr. Law said that he was not and that he lives on the other side of the building from the site. He stated that he was glad that the DEC was aware of the situation and that the contractors were managing the odors. I explained that they are working to get rid of the contamination as fast as possible in order to alleviate the odors and that the building that will be built will have a vapor barrier and a passive vapor venting system. So this building will be safe to live in. With that, Mr. Law thanked me for all of the information and the conversation ended. 5/18/12 - Raphael Ketani. I received a copy of a letter today by e-mail from Antea Group. The letter was dated 5/16/12 and was sent by Antea Group in response to comments by the NYCT regarding the use of sodium persulfate to treat the contamination and the extent of the contamination. I reviewed the letter. From its contents, I determined that Antea Group had adequately responded to the NYCT's comments and concerns. 5/30/12 - Raphael Ketani. I received an e-mail today from Peter Helseth of Fleming Lee Shue. He stated that most of the foundation elements have been constructed on the site and the area for the foundation walls has been capped with clean stone. There is no more exposed soil, nor excavating taking place. So air monitoring has been stopped. 6/7/12 - Raphael Ketani. I received a call from Jay Solomon (212) 661-9400, the attorney for the Shepherd family that had been moved out of apartment 1G at 270 5th Street. He said that when the foundation was laid at the construction site next door, lots of oil vapors entered the apartment and the parents and two kids had to be moved into a hotel temporarily. However, he added that the foundation work has been finished. I told Mr. Solomon to contact the company responsible for the air monitoring and have them do a followup indoor air inspection just to be sure everything is alright. He said that the vapors had come from the construction site. I told him that the vapors would more likely come

KAM SERVICE CENTER INC (Continued) **1000556241**

from the 1,080 gal. UST site because there is lots of contaminated soil there and this location is much closer to apartment 1G. Mr. Solomon didn't comment on this. I added that once the tank is removed, the contamination in the soil is exposed and the oil will vaporize. In any event, I said, it would be good to have a followup indoor air survey done of the apartment. I told him that Fleming Lee Shue was the consultant in charge of setting up the air monitoring and he should contact them. With that, the conversation ended. I tried to contact Mr. Fleming (212) 675-3225 regarding the attorney's request for another indoor air inspection, but I could only leave a message. Mr. Helseth from Fleming Lee Shue called in response to my message. He said that Mr. Fleming was out today, but he will take care of anything that's an issue. I explained that Mr. Solomon had called and wanted a vapor survey performed in his client's apartment. Mr. Helseth said that this will be done. I added that a vapor survey should also be done in the hallway outside the apartment, outside the building itself and next to the excavation area for the 1,080 UST. Mr. Helseth said that this will be done. Later, Mr. Fleming called. We discussed the issue of doing a PID survey in the Shepherd's apartment. I told him that the DEC also wanted a survey inside the building's hallway, just outside the apartment, just outside the apartment in order to get the ambient air concentrations, then next to the UST removal site and finally next to the border of the two concerned properties (condo and excavation site). Mr. Fleming said that he will talk to his client about this. Some time later, Mr. Fleming left a phone message that all parties had agreed to do the vapor surveying. The co-op board was being contacted and it was hoped that the surveying will take place tomorrow, 6/8/12. Mr. Fleming stated that he will keep me posted. 6/8/12 - Raphael Ketani. Mr. Fleming (212) 675-3225 called me regarding doing the vapor testing inside apartment 1G at the co-op and outside at the UST excavation location. Mr. Fleming told me that the lawyer told him not to enter the property and that Yu & Associates will do the work. I told Mr. Fleming that it didn't matter who was going to do the testing, just that the DEC gets the data. Later, I contacted Mr. Leung (201) 791-0075/cell (201) 310-2501 and explained that I wanted Yu & Associates to do the vapor survey. Mr. Leung said that more than one resident had been complaining about vapors from the BP site a while ago. I asked him whether they still were complaining. He said No. Mr. Leung added that nothing is happening right now as he was told the DEC wanted to take a look at the soil delineation results first before more excavating takes place. I told him that was not true. I told him that the DEC wants Yu & Associates to move as quickly as possible to excavate the contaminated soil, then submit the end point results once all of the soil is removed, and then go forward with installing groundwater wells. Mr. Leung said that he thought this was what the DEC wanted. So he will mobilize his crew. 6/14/12 - Raphael Ketani. Mr. Fleming left me a message today. He said that one of his workers did a PID survey of the neighborhood. The only vapor detections were about 8 ppm just across the property fence with 270 5th Street. The detections were at the location of the open tank grave. Mr. Fleming added that the tank is sitting on the ground and hasn't been removed and the tank grave is uncovered. His worker was not able to do a PID survey of the Shepherd's apartment as he was not allowed access. 6/18/12 - Raphael Ketani. Mr. Fleming (212) 675-3225 called me regarding doing the neighborhood vapor survey. He said that the only detections were at the location of the tank removal next

KAM SERVICE CENTER INC (Continued) **1000556241**

door. However, there is another construction site to the south across the street and they are doing dewatering. There is a 20,000 gal. Baker Tank for storing the recovered water on site before disposal. Mr. Fleming didn't know what the site used to be. He did state that the groundwater level always was a little lower than expected on the southern side of the site. Now he understands why. Lastly, he said that the developer is going to pour the concrete floor very soon. However, BP and Antea Group have not done the first round of treatment solution injections. By way of the timing for letting the treatment solutions do their work, they will miss the opportunity to do a second round of treatment (if necessary) if BP and Antea don't move quickly. Mr. Fleming said that he will keep me informed. I tried to conact Mr. Onufrak (410) 825-8213 regarding having the first round of treatment injections performed. However, I could only leave a message. Next, I contacted Dr. Hinshalwood at Antea (914) 495-9950. I told him that the developer was going to install the floor for the new building very soon and that BP and Antea should do the solution injections very soon. Otherwise, they may not have the opportunity to do them. Dr. Hinshalwood said that Antea has been in touch with the developer on a daily basis in order to know when there is a pause in the construction and they can do the injections. He said that the injections will take place in wells that will be installed at two depths throughout the site - as had been agreed upon. I told Dr. Hinshalwood that was correct, but Mr. Fleming had lead me to believe that doing the injections wood not be possible as the floor would be completed. Dr. Hinshalwood said that they would bore through the floor to install the needed wells. He added that he was not the project manager anymore. He said that the new project manager is Tim Fisher (914) 495-9935. He said that he will have Mr. Fisher call me regarding the project and the solution injecting. I told him that would be fine. As an alternate, Dr. Hinshalwood said, I could also talk to Chris Meyer (914) 495-9937, the portfolio manager, about the project. With this, the conversation ended. 6/19/12 - Raphael Ketani. Chris Meyer of Antea Group sent me the following e-mail: As a follow-up to the conversation you had yesterday with Gordon Hinshalwood, I thought this update was appropriate. I realize it s been a little while since we discussed this project. In accordance with the RAP that was approved by the NYSDEC on March 15th, last Friday (June 15), we completed the installation of the ISCO application wells and ground water monitoring wells along the western property boundary. Installation of the sub slab depressurization piping and soil vapor barrier was also completed last Friday by the developer. Per the email approval you provided to the developer on May 2, the steel sheeting was not installed by the developer. Yesterday (June 18), the developer poured the concrete slab for the building. Today, we are collecting baseline readings from the newly installed monitoring wells present along the western property boundary, as requested by the Transit Authority (TA). At this time we are in the process of coordinating the first ISCO application. We do not have a definitive schedule of when the first application will occur, but we expect it will be in July. 6/25/12 - Raphael Ketani. Mr. Meyer sent me an e-mail stating that the first ISCO is scheduled for thursday, 6/28/12. 7/9/12 - Raphael Ketani. Mr. Fleming (212) 675-3225 called to say that the first injections took place about a week ago. 8/16/12 - Raphael Ketani. Mr. Fleming sent me an e-mail stating that BP installed the groundwater treatment injection pipes and performed the first injection about two weeks ago. However, they

KAM SERVICE CENTER INC (Continued) **1000556241**

were not keeping him in the loop. The building is progressing and is well above grade. 8/22/12 - Raphael Ketani. I responded to Mr. Fleming's last e-mail and stated that there was a meeting with staff from BP yesterday. They had indicated that the building construction is moving forward and that 3 rounds of injections had already taken place. They were concerned that groundwater injection and confirmatory soil sampling access could be lost as the construction was moving so quickly that the access portals will be closed soon. I added that the groundwater samples to be taken after the treatment injections must be at or close to GA standards. If they are not, then more treatment will have to take place. If the foundation portals are closed up before the groundwater is sufficiently remediated, then the DEC will contact the NYC DOB and the NYC OER and tell them to hold off on issuing the Certificate of Occupancy. Mr. Fleming called me. He said that the soil confirmation access ports will remain open until next summer. The holes will be closed only just before the owner goes for his Certificate of Occupancy. 10/15/12 - Raphael Ketani. I tried to contact Tim Fisher (914) 495-9935 and Chris Meyer (914) 495-9937 of Antea Group, and Nick Onufrak (410) 825-8213 of BP regarding progress at the site and whether confirmatory soil borings had been taken and whether groundwater samples had been taken. However, I could only leave voice messages. Mr. Meyer called me back. The last injection was completed. All 8 applications have been completed. The sodium persulfate solutions and EDTA chelated iron are in the ground. On October 22, Antea is going out to do groundwater and soil confirmatory sampling. 10/18/12 - Raphael Ketani. Mr. Meyer called. He said that due to the crane still being in place for constructing the building, the sampling date has been pushed back to October 24. 10/22/12 - Raphael Ketani. Mr. Meyer (914) 495-9937 called. He said that the soil and groundwater confirmatory sampling has been pushed back to November 5, 2012. The sampling will take 5 to 6 days. 11/12/12 - Raphael Ketani. Mr. Fisher left me the following e-mail message today: Today we are beginning the process of collecting confirmation soil and grab ground water samples from below the building slab at former BP station 13397 to determine if impacts remain following the completion of ISCO applications. We expect site activities to last through this Thursday. 1/9/2013 - Raphael Ketani. A conference call took place today between Nick Onufrak of BP-ARCO(410) 825-8213, Chris Meyer (914) 495-9937 and Gordon Hinshalwood (914) 495-9950 of Antea Group and myself. The subjects of the call were the groundwater and soil sample results and the Certificate of Occupancy for the building. Mr. Onufrak stated that they had received the soil and groundwater results after 8 rounds of solution injections had taken place. The results were not good. There wasn't much improvement. They wanted to know whether this would affect the ability of the building's owner to get the Certificate of Occupancy. I told him that the poor results will. I added that you can't have a building sitting over a pool of oil. The vapors will travel up the footings and into the concrete walls of the basement - bypassing the vapor barrier - and then into the building. Mr. Meyer stated that the building will have a vapor barrier and a passive venting system. I told everyone that another way to reduce the contamination has to be found. I added that I had another case with the same problem and they can't get a permanent C of O as they have oil seeping under the property. Their contamination was known, but the owner built his building anyway. I also said that the DEC would have to contact the NYC OER and they would let the NYC DOB know that

KAM SERVICE CENTER INC (Continued) **1000556241**

someone has built on top of contamination that still exists. I asked whether the groundwater could be extracted. Mr. Meyer said that the wells can't pass a pump down the pipe. I asked whether just pushing a hose down each well would suffice. Mr. Onufrak and Mr. Meyer said that they will have to consider what can be done. They will send the DEC the report with the analytical results. Later, I talked to Dan Cole of the NYC OER and passed the above case notes to him via e-mail. He responded back by e-mail. 1/10/13 - Raphael Ketani. I responded to Mr. Cole's 1/9/13 e-mail (see the e-docs). I stated in the e-mail that a meeting needed to be held with all parties in order to make everyone aware of the continuing existence of the oil and contamination below the site. We would also have to discuss what can be done to resolve this problem. 1/24/13 - Raphael Ketani. The meeting took place as planned. In attendance were representatives from the owner's consulting company, the lawyer for the owner, BP, BP's consultants, BP's lawyer, Dan Cole from the NYC OER and myself. I brought up the issue that despite the numerous rounds of solution injections, the Department was informed that the contamination was still about as concentrated as before. I stated that an alternative means of remediation needed to be found and employed. Mr. Hinshalwood stated that only a 5% solution was used for the rounds of injections. As the site is next to the subway tunnel, this was the strength limit of the solution that the MTA would approve. I told Mr. Hinshalwood that this explained why the contamination hadn't been broken down. I again insisted that a remediation method be found to reduce or remove the soil contamination. I also stated that there was product on the water table. Mr. Onufrak and Mr. Meyer stated that they will start using a vacuum truck to collect the product from one well where they have seen free oil. I told them to submit a work plan and I gave them 30 days from today to do so. Mr. Onufrak said that this was enough time. Mr. Onufrak stated that two wells were destroyed during the building construction. I told him that the re-installation of the wells must be part of the work plan. I asked them when I will receive the soil confirmatory sampling data report. Mr. Meyer said that it was still going through internal review, but the DEC should receive it soon. The meeting ended with an agreement to present an alternative means of remediation. 2/1/13 - Raphael Ketani. Mr. Meyer (914) 495-9937 sent me an e-mail stating that a site visit was made on January 30 to see whether it was possible to position a vacuum truck near some of the wells in order to collect the groundwater. A location was found where the vacuum truck could park. So the first vacuum event will take place the week of February 11. Stingers will be used to collect groundwater from the observation wells. 2/7/13 - Raphael Ketani. Mr. Meyer sent me the following e-mail: The first VEFR event is scheduled to take place on Wednesday, February 13th. Six consecutive weekly VEFR events are planned. 2/15/13 - Raphael Ketani. I received the following e-mail from Mr. Meyer: The first VEFR event took place this past Wednesday, February 13th. The next VEFR event is scheduled for Wednesday, February 20th to gain additional information. We will also be submitting a VEFR work plan to you next week. I ve also attached the report we ve prepared to summarize a number of activities that were implemented as proposed in the Remedial Action Plan Chemical Oxidation, dated January 3, 2012, the Proposed Schedule for Implementation of Remedial Action Plan addendum, dated February 22, 2012, and the Addendum to Proposed Schedule for Implementation of Remedial Action Plan, dated March 12, 2012. As such, the post-application sampling results we discussed

KAM SERVICE CENTER INC (Continued) **1000556241**

during our meeting in January, are also presented. 2/19/13 - Raphael Ketani. I finished my review of the Antea Group 2/13/13 Remedial Action Summary Report. From 4/11/12 to 5/25/12, 7386 tons of contaminated soil were excavated and taken to Clean Earth of Carteret, NJ. Between 4/26/12 and 6/19/12, 75,297 gals. of groundwater accumulated on site and this was taken to Lorco Petroleum Services in Elizabeth, NJ as non-hazardous waste. The SSDS system was installed prior to construction of the foundation. It consisted of 4 inch schedule 40 PVC piping with 0.020 slots benaeath the concrete basement slab. The piping was laid down in a layer of 3/4 inch crushed stone that is 4 feet thick with 3 risers extending through the slab, which will be extended to the roof. A Grace Preprufe 300R and 160R/Bithuthene 4000 vapor barrier was installed. Eight (8) soil borings were performed from 5/24/12 to 6/12/12. These borings were turned into wells OW-1A to OW-4A and OW-1B to OW-4B. The borings were started at the excavation floor, which was 10 feet bgs. OW-1A to OW-4A were drilled to 30 feet bgs. OW-1B to OW-4B were drilled to 20 feet bgs. The wells were installed along the western boundary of the property which is along 4th Avenue in order to monitor the sodium persulfate concentrations and the groundwater. During the same time interval, 16 soil borings were performed and were turned into wells for the purpose of injecting the treatment solutions. These wells were AW-1A to AW-8A and AW-1B to AW-8B. The borings started at the excavation floor. AW-1A were finished at 16 to 19 feet bgs and AW-1B to AW-8B were finished at 24 to 28 feet bgs. Each well was connected with a 2 inch diameter PVC hose. AW-1 (A,B) to AW-4 (A,B) and AW-7(A,B) were used to treat the soil and the groundwater under the western portion of the site. AW-3 (A,B), AW-6 (A,B) and AW-8 (A,B) were installed to treat the soil and groundwater under the central portion of the site. AW-5 (A,B) were installed in order to treat the soil and groundwater under the southwestern portion of the site. Soil samples were only taken from the deep B series of borings due to the proximity to the shallow A series of borings. No soil samples were taken from AW-1B or AW-7B. The analytical results showed exceedences at AW-2B to AW-4B, AW-6B, AW-8B, OW-1B to OW-4B. On 2/21/12 (dated as 2/21/13 in the report), groundwater samples were collected from MW-13, MW-15, MW-16, MW-20, MW-22 and MW-24. The VOC results for MW-13 were all non-detect. Those for MW-15 were extremely high. MW-16 had VOC results from just a little above the TOGS standards to below the standards. The results for MW-20 were all a little above the standards. MW-22 had 2 high VOC hits with the rest being low to moderate hits. MW-24 had hits from below to 3 a little above the standards. Pre-injection groundwater samples were taken on 6/19/12 from OW-1A to OW-4A and OW-1B to OW-4B. Each of the samples had exceedences for almost all of the TOGS 1.1.1 standards. All of the samples, except for OW-4B, had very high exceedences for total xylenes and ethylbenzene. OW-1A, OW-2A, OW-1B and OW-2B had very high exceedences for 1,2,4-trimethylbenzene. OW-2A, OW-2B, OW-3A and OW-3B had very high benzene exceedences. OW-1A, OW-2A, OW-2B, OW-3A and OW-3B had very high toluene exceedences. OW-1A, OW-1B, OW-2A and OW-2B had very high naphthalene and 1,3,5-trimethylbenzene exceedences. OW-1A, OW-1B and OW-2A had very high n-propylbenzene exceedences. Eight applications were performed from 6/28/12 to 9/20/12. The sodium persulfate solutions were applied over several rounds at a concentration of 50,000 mg/l for each individual injection. This concentration was required by the NYCT as they were concerned that stronger concentrations would affect the subway tunnel

KAM SERVICE CENTER INC (Continued) **1000556241**

bordering the property under 4th Avenue. About 12,800 gals. of 50,000 mg/l solution was injected with ferrous iron as an activation chemical. Staff at Antea Group calculated that an injected concentration of 130,000 mg/l would degrade to 5,000 mg/l at the property boundary, which would further degrade to 15 mg/l at the tunnel. Post injection, 6 borings were performed from 11/12/12 to 11/14/12 to 26.5 to 38.5 feet bgs. These were SB-33 to SB-38. A seventh boring, SB-39, hit refusal at 17 feet bgs and SB-40 hit a void below ground and could not be completed. The analytical results for the soil samples from the 6 borings all had exceedences. SB-33 had extremely high VOC exceedences and many SVOC exceedences. SB-34 was tested only for VOCs and had high hits. The SB-35 results were a little above standards to non-detect. SB-36 had low to high VOCs and SVOCs exceedences. SB-37 had low VOC hits, but extremely high SVOC exceedences. SB-38 had extremely high VOC hits and low to moderate SVOC exceedences. The median soil contamination total concentrations increased after the injections from 12,330 ppb total VOCs to 22,869 ppb. The mean total soil SVOC concentrations decreased from 14,691 ppb to 3914 ppb. Groundwater samples were taken from 11/12/12 to 11/14/12. SB-33 had many very high VOCs, and SVOC exceedences. SB-34 and SB-35 had high to very high VOCs. The water sample from SB-36 had 5 high VOCs and many high SVOC hits. SB-37 had high to very high VOC hits and low to high SVOC hits. SB-38 had many very high VOCs and also SVOC exceedences. Later, groundwater was sampled on 1/8/13 from OW-1A, OW-1B to OW-4A, OW-4B. The groundwater samples from OW-1B, OW-2A, OW-2B and OW-3B had many very high VOC hits and SVOCs which were mostly non-detect to low hits below TOGS with a few low exceedences. The sample from OW-4A had VOC hits from below the standards to 4 very high exceedences. OW-4B had VOC hits from below the standards to several moderate exceedences. I approved the data in the report as it gave a reasonable picture of the degree of soil and groundwater contamination below the site. However, it will remain to be seen how effective the VEFR events are in reducing the groundwater contamination. 2/21/13 - Raphael Ketani. I sent Mr. Hinshalwood (914) 495-9950, Mr. Meyer (914) 495-9937 and Mr. Onufrak (410) 825-8213 an e-mail stating that the DEC wanted groundwater to be sampled from the MW, AW and OW series of wells. Mr. Hinshalwood (914) 495-9950 responded back by e-mail stating that the MW series of wells were destroyed by the foundation construction, except for MW-13 which will be used to monitor the groundwater when the construction ends. Also, he stated that the AW series of wells were not accessible and wells OW-1A and OW-1B had been destroyed, but will be reinstalled. So only 9 wells will be available for monitoring. The OW series are all along 4th Avenue. MW-13 is along 6th Street along the southern border of the property. 2/25/13 - Raphael Ketani. I received the 2/22/13 Antea Group Vacuum Enhanced Fluid Recovery Work Plan. The purpose of the plan is to extract NAPL and contaminated groundwater. VEFR events will take place weekly. Wells OW-1A to OW-3A will be used for VEFRing. Stinger devices will be used in the wells to collect the total liquids. Vacuuming using a vacuum truck will be undertaken for a single well. During the vacuuming event, the radius of influence (ROI) will be determined. Vacuuming will be conducted for 2 hours at each observation well. At the end of each VEFR event, product and groundwater levels will be gauged. The volume of NAPL and groundwater collected will be measured and recorded. The vacuum will be measured every 30 minutes. Vapor concentrations will be measured every 15 minutes using a PID meter. Before any future solution injection

KAM SERVICE CENTER INC (Continued) **1000556241**

applications are performed, it will be determined whether the ROI extends under the western border of the property. Data from the ROI and the VEFR events will be used to determine whether more extraction wells are needed. 2/26/13 - Raphael Ketani. I found the Vacuum Enhanced Fluid Recovery Work Plan to be acceptable with the comment that the product and groundwater gauging must take place before the VEFR or vacuum events take place. I added that monthly progress update reports must be submitted to the DEC by the third week of the month following the VEFR and vacuum events and gauging. The progress reports must include the NAPL and groundwater elevations, the amount of product recovered and the groundwater flow map. I also added that quarterly groundwater analytical reports must be submitted no later than 30 days following the date of sample collection. The sampling must be for the expanded lists of VOCs and SVOCs. I drafted a letter for the review of Mr. Hussein with the above approval and requirements. Mr. Hussein approved the letter and it was sent out. 3/1/13 - Raphael Ketani. Mr. Meyer (914) 495-9937 sent me the below e-mail today: Three vacuum enhanced fluid recovery events were conducted at former service station 13397 on February 13th, February 20th, and February 27th, 2013. The objective of these events was to recover any NAPL that may have been present (as was evident from a sampling event in one of the observation wells along Fourth Avenue in January), and to explore the potential for ground water recovery using this technology on the existing wells (OW-1 through 3), which are located under the newly-constructed building with remote access ports for sampling located in the sidewalk as proposed in the approved Vacuum Enhanced Fluid Recovery Work Plan dated February 22, 2013. Ground water samples were collected from Observation Wells OW-1A, OW-1B, OW-2B and OW-3B on February 27th and will be compared to the baseline ground water samples collected from the observation wells in January 2013 (before the VEFR events) to see if there is any significant change in VOC concentrations. Monitoring well MW-13 is located beneath some temporary infrastructure that is being used as part of the building construction. As such, it could not be sampled. To date, minimal water (115 gallons) and no measurable NAPL was recovered during the three extraction events, indicating that the practical application of this technology for hydraulic control is limited. Additionally, no significant vacuum influence was observed in surrounding wells during any of the extraction events, and vapor recovery was minimal as well, indicating that insufficient air flow was induced to mobilize significant vapor mass. Given these results, it is unlikely that this remedial approach will recover significant contaminant mass from the subsurface. At this point, no additional extraction events are planned, pending a review of the results of the ground water samples that were collected. Per your approval letter, we will be providing a more formal summary of these results in the third week of March. As I mentioned in my email on 2/21/13, efforts are also underway for Naftali to replace the two sidewalk wells that were destroyed during their construction activities (OW-1 and OW-3A).

---------- I responded by e-mail stating that the Atlantic Richfield Company and Antea Group had to find a way of recovering the contaminated groundwater, even if this meant installing larger diameter wells or more wells. 3/6/13 - Raphael Ketani. Mr. Meyer sent me the contact information for the person at the MTA who approved the sodium persulfate treatment plan. This person is Rajen Udeshi (646) 252-3673. 3/7/13 - Raphael Ketani. I

KAM SERVICE CENTER INC (Continued) **1000556241**

spoke Mr. Udeshi. He said that he didn't do the analysis to determine that a 5% solution was required. He added that he is a Principal Engineer and a structural engineer. However, he is only involved in coordinating the treatment solution application process. Mr. Udeshi told me that Emil Dul (dool), Principal Engineer, MTA Environmental Group, at (646) 252-2405 is the person who calculated what the treatment solution concentration should be. I spoke to Mr. Dul. Mr. Dul said that whenever a treatment project is proposed within 200 feet of an MTA tunnel or such, then the Six Agency rule comes into play. He said that the six agencies include the Fire Department, the NYC DOB and a few others. The rule is administered by the NYC DOB. The engineer or architectural drawings need the approval of the six agencies. He said that some time ago, a meeting took place between the consultants from Antea Group and staff from the MTA to discuss the proposed sodium persulfate treatment plan. Mr. Dul added that the MTA was concerned that the treatment solution not leave the site - in other words, be completely used up - so that the subway tunnel would not be affected. Mr. Dul said that once they had all of the information, then they considered the treatment plan, which included drawings showing the locations of the injections points. Staff from the MTA went over the calculations for obtaining the solution mixture that Antea Group wanted to use and what the expected concentration would be at the property boundary. However, Mr. Dul said, he was not sure of all of the details regarding what had transpired. So he wanted to call me back with the rest of his staff to discuss the matter. I told him that would be fine, but that I still wanted to know who in MTA had decided that a 5% solution was the correct concentration. Mr. Dul responded that Antea Group had proposed this in order to make sure the solution would be used up and to prevent its escape from the site. With that, the conversation ended. Later, Mr. Dul called me back and started a conference call with Derrick Braithwaite and Mary Kong, engineers from the MTA. Mr. Dul lead the conversation. He said that the MTA met with Antea Group on 3/27/12. They discussed the proposed treatment plan. On 5/16/12, the MTA sent Antea Group a letter with many questions regarding the injection plan. Antea Group later responded back. Mr. Dul was emphatic that the MTA never asked Antea Group why they were going to use a 5% solution. He added that they never challenged what Antea Group was proposing. The MTA's only concern was that the treatment solutions not contact the subway tunnel. Ms. Kong stated that they wanted sentinel wells installed (which Antea Group did). Antea Group told them that they modeled the injections and had confidence in the model. Mr. Braithwaite said that he went to the site twice to witness the injections. Mr. Dul stated that the MTA simply doesn't want anything getting near the concrete. As long as the groundwater is non-detect for persulfate, then they are happy. He added that the MTA doesn't approve the outside consultant's plans. They only accept them. With that, the conversation ended. 3/12/13 - Raphael Ketani. Mr. Meyer (consultant to BP) sent me an e-mail stating that wells OW-4A and OW-4B will be replaced today. 3/29/13 - Raphael Ketani. Mr. Meyer sent me the 3/22/13 Antea Group Progress Update Report. VEFR events took place on 2/13, 2/20 and 2/27. The wells used were OW-1A, OW-2A and OW-3A. OW-4A was not used as it had been destroyed. No NAPL was recovered during any of the events. Vapor concentrations in the wells were typically less than 100 ppm during each of the VEFR events. Groundwater was sampled on 2/27 and 3/7 from OW-1A, OW-1B, OW-2B and OW-3B. BTEX was very high in all of the samples and was up to 9840

KAM SERVICE CENTER INC (Continued) **1000556241**

ppb. Total VOCs ranged up to 11,321 ppb. The SVOCs were only slightly elevated. On 3/12/13, OW-4A-R and OW-4B-R were installed. 5/9/13 - Raphael Ketani. I spoke to Mr. Meyer (914) 495-9937 today regarding progress at the site. He said that Mr. Naftali, the owner, had replaced two wells that his construction crew had damaged. Presently, Antea is working on a work plan to install 6 new wells for groundwater monitoring and product/groundwater recovery. He said that these new wells will be straight instead of curved and so they will be able to do VEFRing. All of the wells will be installed along 4th Avenue. From the excavation along the sidewalk which took place in the past, Antea now knows where the utilities are. So they will be able to hand clear past the utilities and install the wells. Mr. Meyer said that he had the draft work plan on his desk. The final plan will be sent to the DEC soon. 6/24/13 - Raphael Ketani. I reviewed the 6/20/13 Well Installation Work Plan Notification. Antea Group plans to install up to 11 wells. Five of the wells will be installed in the existing 12 inch diameter sampling ports in the basement, SB-33 to SB-37. Three additional dual nested well clusters are also proposed along 4th Avenue. Each cluster will have a shallow screen from 5 to 20 bgs and a deep screen from 20 to 30 feet bgs. The wells will be 4 inches in diameter. The work is scheduled to start in late July. I approved the work plan with one comment. This regarded the nested pairs of wells that will be installed along 4th Avenue. The figure enclosed in this document shows that the wells in each pair will be closely spaced laterally. The Department is concerned that this arrangement will allow for groundwater cross communication between each well. The construction must be modified in order to prevent this from happening. 8/6/13 - Raphael Ketani. As per the order of Paul John, Environmental Engineer IV/Regional Re/mediation Engineer, this BP spill case is being transferred to Jeff Vought in Region 2 Spills. Mr. Vought will be the new case manager effective today. 1/11/16-Vought-Spill being managed by DEC Feng for approximately past three years. Vought as her supervisor sent email to Chris Meyer that Chris, I hope your holidays were good. As you know we had discussed having a teleconference with DEC Central Office Bureau of Technical Services (BTS) to discuss the possible closure of the two above referenced BP sites. As noted in the email chain below to Arcadis, we are waiting for additional data on their site which will take about two weeks and this data is crucial in the closure discussion of their Site with Central Office. I would respectfully request that we hold on the scheduling the 363 4th Avenue site discussion with BTS until we receive the data on 1303 Webster so that we may discuss both sites at once. This would not only be easier from a scheduling perspective, but also in that it would enable both Arcadis and Antea to learn from each other s sites in the possible closure of their own respective portfolios while ensuring consistency across all BP sites. Let us know your thoughts. 1/29/16-Vought-After further consideration, spill at 1303 Webster closed as product no longer present and plume is contained. Vought called and spoke with DEC Central Office BTS Kevin Hale and discussed this site. Vought noted that the site was characterized by: product that appeared occasionally in one monitoring well; dissolved groundwater concentrations up to 25,00ppb that were contained to one well; presence of a NYCT subway tunnel immediately adjacent to the dissolved contamination resulting in plume containment due to constant dewatering associated with the tunnel; no reports in past 15-20 years of impacts to the tunnel from the spill, development of

KAM SERVICE CENTER INC (Continued) **1000556241**

former BP gas station with a building that encompasses entire site; installation of a SSDS and vapor barrier in new development preventing any possible impact to building occupants; repeated performance of sulfate injections and VEFR by BP and demonstration of infeasibility as per CP-51 to further reduce groundwater concentrations; and inability to further remediate possible source soils under development due to inability to penetrate vapor barrier as part of occupant protection. Feng to close spill as per Vought and Hale with standard soil contamination clause in spill closure letter approved by RSE. 2/4/2016 - As per J. Vought K. Hale on 1/29/2016, the spill is closed based on J. Vought's notes on 1/29/2016 in DEC Remark. Spill is closed. Spill closure letter to BP/Antea. "

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Actual:
27 ft.

U-HAUL (Continued) **S102672726**

5/25/05-Vought-Received from Michael Morris (ATC 212-353-8280x345) regarding status of report review. Vought returned call and requested another copy of report be sent. New groundwater data will be collected and sent. 6/7/05-Vought-File review by Vought: Letter from American Hi-Tech (Trish Merwin)-12/15/94. American Hi-Tech has attmepted to remove two 4000 gallon and one 4000 diesel underground storage tanks from the above referenced facility. However, these tanks are encased in three feet of concrete and removal is not possible . AHT would like to abandon these tanks. Revised and Final Site Assessment Work Plan (Dames & Moore)-7/8/94. Three (4000-gallon) USTs onsite. ...the tank incoluated with the tracer gas detected in the soil gas was filled with water and not petroleum product at the time of testing. On this basis, it appears that one of the USTs may have failed the recent integrity testing . if a tank test failure is confirmed then a site assessment as desribed below will be conducted . Site assessment will include soil borings at former tankfield and at pump island. Focused Subsurface Site Investigation (ATC Associates)-2/20/01. Three 4000-gallon gasoline/diesel USTs were abandoned at the Site in 1996. Two 550-gallon gasoline USTs were removed from the Site in 1996; and three 5000-gallon fuel oil USTs were abandoned in 1998. Fifteen soil borings were performed at the site. ...ATC concludes that the former presence of gasoline and/or diesel USTs has adversely affected the subsurface soil and groundwater quality at the site and that further investigation is recommended . ATC recommends that additional soil borings and groundwater monitoring wells be installed tat the Site to further delineate soil and groundwater conditions . In 1995 approximately 49.25 tons of impacted soil was removed from the Site. Sixteen soil samples and six groundwater samples were collected. Soil analyticals show 20200ppb 1,2,4-trimethylbenzene(B1 11.5-12.5'bg), 3950ppb xylene(B2 12-13'bg), 908ppb benzene(B7 6-7'bg), 15800ppb ethylbenzene(B7 6-7'bg), 141000ppb 1,2,4-trimethylbenzene(B7 6-7'bg), 305ppb benzene(B8 11.5-12.5'bg), 78.4ppb benzene(B9 11-12'bg), 177ppb MTBE(B9 11-12'bg), 135ppb benzene(B10 10-11'bg), 75ppb benzene(B12 6.5-7.5'bg), 64ppb benzene(B13 12.5-13.5'bg). Analyticals also show high SVOCs at B6 19-20'bg such as 126000ppb flouranthene, 156000ppb phenanthrene, 38400ppb benzo(b)fluoranthene. Boring logs for B6 show coal fragments, cinders and ash in layers . Groundwater analyticals show 193ppb MTBE(UHP 1W), 38ppb MTBE(UHP 8W). Groundwater Investigation (ATC Associates)-6/3/02. Installation of six monitoring wells. The lack of contamination in the upgradient sample from MW4 along with the calculated groundwater flow direction indicated that the former gas station locations both onsite and offsite at the intersection of Fourth Avenue and Sixth Street have not contributed to the groundwater contamination at this Site . No active USTs onsite. Therefore steady state equilibrium has been reached between the contamination present in the soil and groundwater resulting in attenuation of the contamination by the mechanism of sorption, degradation and dilution . ATC request No Further Action. Groundwater at depth of 15-17' below grade and flow to the north. Groundwater analyticals show 7.4ppb 1,2,4-trimethylbenzene(MW1), 109ppb MTBE(MW1), 10ppb MTBE(MW2), 5ppb ethylbenzene(MW5), 15ppb xylene(MW5), 30ppb MTBE(MW5), 19ppb MTBE(MW6). Limited Groundwater Investigation(ATC Associates)-6/2/05. ...ATC personnel attempted to collect groundwater samples from six onsite groundwater monitoring wells; however, ATC could only locate five of the wells . Groundwater at depth of 15 feet below grade and flow to the north. Report

U-HAUL (Continued) **S102672726**

recommends No Further Action. Groundwater analyticals show 140ppb benzene(MW3), 12ppb ethylbenzene(MW3) and 12ppb MTBE(MW4). 6/7/05-Vought-Called Michael Morris and required that 1)he provided suspected source of groundwater contamination in MW3 2)continue quarterly monitoring of groundwater 3)submit surrounding area site plan. Vought sent letter stating same. 9/26/05- Obligado - FILE TRANFERRED FROM VOUGHT TO OBLIGADO 10/20/05 - Obligado - Received phone call from Michael Morris. Requesting status of closure report review. Told him had not been reviewed yet but would look at it in near future. 10/28/05 - Obligado - Review Limited Remedial Investigation Report. Gasoline service station 363 4th avenue east of site across 4th Ave with open spill number 9606963. further, although sensitive receptors, including the Gowanas Canal, residential development, schools, et.c, were observed in the area, none of these receptors are suspected to be impacted as a results of the limited impacted groundwater at the Site. Ground water analyticals from 5 wells: 118 ppb benzene (mw3), 7.58 ppb ethylbenzene (mw3), 10.5 ppb MTBE (MW5). NFA rejected. Require 1) continued quarterly groundwater monitoring, and include MW6 in monitoring network. 2) Include Gowanus Canal on Surrounding Area Site plan. Call Michael Moore, inform him of above requirements. 3/13/06 - Obligado - Review report from ATC, dated January 23, 2006. Subway line approximately 30 to 40 ft bgs and upgradient, ATC doesn't suspect any impact to subway line. Ground water sampled on 11/18/05 and 1/4/06. On 11/18/05, the only BTEX compound is xylene at 5.98 ppb in MW2 and MTBE is 27.7 ppb at MW3. MW-6 not sampled. On 1/4/06, no BTEX compounds were detected in anywells, MTBE was detected at MW3, MW4, MW5, and MW6, with max at MW6 of 353 ppb. Conclusions: - No odor, sheen, or floating product was observed, and no sensitive receptors appear to be impacted by the groundwater beneath the site. BTEX concentrations have decreased to non-detect. Request no further action. Discussed site with J.Sun on 3/10/06. Agree to grant no further action. "

Remarks: "SOIL DISOCVERED IN TANK PULLS -TANKS ARE VAULTED IN CONCRETE. JACOB KRIMGOLD WAS AT SITE ."

DEC Memo:	"Sangesland spoke to Alex at AKRF. AKRF was hired by a potential purchaser to do a Phase 2 on this property. Building was once a hospital maintenance building that had a gasoline fueling station for ambulances. Hospital shut down these tanks MANY years ago, and now uses the building as office space. AKRF did soil borings that showed gasoline contamination in the soil around the tanks. Hospital property manager is: Alfonso Figliolia, 50 21st Street, Brooklyn, NY 11232 - 718-965-6000 11/17/11-Zhune spoke to Axel Schwendt from AKRS Environmental. He said his client(Storage Deluxe Company) bought this property. They did Phase I and Phase II and found soil and groundwater contamination in the tank area. They are going to put a new buiding to be use as coomercial storage. They are going to excavate the hole area to groundwater table. The building is going to have a basement. Currently used of the site is a Dialysis Center. "

Date form received by agency: 06/09/1986
Site name: MAACO AUTO PAINTING & BODYWORKS INC
Classification: Small Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Spiller Name:	FRANCIS ONAGA
Spiller Company:	PARKSIDE SERVICE CENTER
Spiller Address:	340 4TH AVENUE
Spiller Company:	999
Contact Name:	FRANCIS ONAGA
DEC Memo:	"Sangesland called Francis Onaga and left a voice message asking for the name/address/contact info for the property owner of 240 Flood Ave, Brooklyn. A CSL letter needs to be sent. 7/19/07 - Raphael Ketani. The contact person is Francis Onaga of CES Environmental at (732) 257-9955. I tried to call her, but could only leave a message. I tried to find the address 240 Flood Avenue in Brooklyn through Property Shark, the NYC Property Database and other resources, but Flood Avenue didn't come up anywhere. I will wait for Ms. Onaga to call back. 7/23/07 - Raphael Ketani. I tried to reach Ms. Onaga, but could only leave a message. I did an Internet Search for CES Environmental and found several companies that have CES in their name. I sent e-mails to each of them. However, some didn't respond and the ones that did said they didn't have anyone by the name of Francis Onaga. 7/26/07 - Raphael Ketani. Ms. Onaga didn't call back. I left another message. 8/13/07 - Raphael Ketani. Susan Sarch, Esq., (914) 682-7800, ext 30, of Zarin & Steinmetz called and left a message on 8/10/07 regarding the Parkside Service Center. I tried to return her call, but could only leave a message. Ms. Sarch returned my call. She said that she represented a potential buyer and that she had the permission of the owner to do the investigation. She asked for a meeting, but I told her to first send a site investigation plan. She said she thought there was an old investigation report for

PARKSIDE SERVICE CENTER (Continued) **S108762756**

the site. I told her to send DEC a copy. In the meantime, I said, have the consultants put together a plan. She said she will have them do it. I asked her what the correct address of the site was. She said it is 340 4th Avenue, Brooklyn. 10/2/07 - Raphael Ketani. I tried to contact Ms. Sarch, but could only leave a message. There is no PBS registration for the site. The owner is Parkside Service Center, Inc., 340 4th Avenue, Brklyn., NY, 11215. I sent a CSL. 10/23/07 - Raphael Ketani. Ms. Sarch tried to call me earlier today. I tried to return her phone call, but could only leave a message. Ms. Sarch called me back. She said that the present owner of the site and her client, the prospective buyer, are negotiating the contract for the sale of the property and the contract for the environmental consultant who will be hired to do the investigation. I reminded Ms. Sarch that the tanks that had existed on site, and any that are found to still be present on site, must be registered with the DEC. She said she was writing this down as part of a laundry list of things that need to be done. She said that the environmental investigation will tentatively take place in November. 11/28/07 - Raphael Ketani. I contacted Ms. Sarch (914) 682-7800, ext 30. She said that the prospective buyer is close to hiring an environmental company to do the investigation. She said that as soon as she knows who it is, then DEC will be notified. 12/6/07 - Raphael Ketani. Dawn Vought of C.A. Rich Consultants (516) 576-8844 called. She said she represented a potential buyer and wanted to know what needed to be done at the site to bring it into environmental compliance. She said the tanks will all be removed and soil borings and groundwater wells will be installed. I told her the tanks needed to be cleaned out and abandonded properly and registered with DEC, soil samples and groundwater samples needed to be submitted to a laboratory, and DEC needed to get all of the analytical data. She said she understood and will relay this information to her client. 1/9/07 - Raphael Ketani. I tried to contact Ms. Sarch, but could only leave a voice mail. 1/10/07 - Raphael Ketani. Ms. Sarch returned my call and left a message. She stated that C.A. Rich Consultants will do the remediation. Right now, they are in the process of doing the testing (boring and sampling). Asbestos abatement is taking place and demolition. 4/8/08 - Raphael Ketani. I contacted Ms. Vought. She said that Con Ed has been slow regarding issuing permits and disconnecting utilities. However, her demolition contractor expects to have the necessary permits within a week in order to start the work. She said that all of the contractors are lined up. The PBS registration is being worked on and she has been in contact with Nick Lombardo of Region 2 PBS. 4/22/08 - Raphael Ketani. Ms. Vought sent me an e-mail stating that the tank pull will be on 4/30/08. The process will take place for a week. 4/30/08 - Raphael Ketani. Ms. Vought told me that the tank pulling started today. After the tanks are pulled, field screening with a PID meter will take place and point samples will be taken. I checked the PBS database. The site has a registration. It is #2-347353. There are 12 tanks closed in place. All had gasoline. One was 4,000 gals. and the rest were 550 gals. 5/1/08 - Raphael Ketani. Ms. Vought pulled the tanks and found oil in the tank grave. She called in a new spill. It was assigned number 0801262. I am closing the later spill case and combining it with this older one. 5/2/08 - Raphael Ketani. I spoke to Ms. Vought regarding the site investigation. She said that they discovered that the tanks were not abandoned properly. Only the fill ports were filled with cement. However, the tanks had a little liquid inside and free product. She

PARKSIDE SERVICE CENTER (Continued) **S108762756**

added that they are working in a different area of the site and they have discovered 4 more tanks that no one knew about, aside from the 14 that were known to be in one area. I told her the associated PBS case lists only 12 tanks. She said that there should have been 2 more on the list - a 550 gal. waste oil tank and a #2 fuel oil 550 gal. tank. I told her these tanks are not in the database and will have to be added. She said that once all the tanks are discovered, then a revised PBS form will be submitted. Ms. Vought mentioned that when they removed the #2 fuel oil tank, they found floating product and they vacuumed it up. Then more product and liquid entered the tank grave and they vacuumed this up, too. She said that they are watching the hole for more liquid. I told her that it sounds like there is extensive groundwater contamination. She agree and said that a full investigation will take place. I told her that the groundwater contamination and flow will have to be determined on and off site. She said that they will do this. I asked her to keep DEC informed as to what is taking place. She said she will. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The case manager needs to make followup calls to check on the progress of the investigation and remediation. The DEC needs to receive the investigation/remediation report and the revised PBS registration. 05/209/09- Zhune spoke to Ms. Vought. She said a year ago they got a work stopped from MTA becouse a subway extention is closed by where they were doing excavation. Since this time no work was done at this site. She also said the owner is running on some financial issues. 10/06/09- Zhune spoke to Ms. Vought. She said the owner put us a hold since June /08 She gave me the following information; Office 31 West 3th st. Suite 506 New york, NY 10001 Owner: Joseph Zafarani 212- 221-5331 Fax # 212-221-5345 Tried to contact Mr. Zafarani. Office said he will be back next week any day after 3:00pm. 08/31/10-Zhune. John Bogdenki 293- 630-1406 called. He said owner requested to do a soil and grondwater investigation of the site. 02/2/12-Zhune called Ms Vought. Estela from C.A Rich Consultants said that Ms. Vought is no longer with Rich Consultant. She is going to find out who is managing this case and she will call back with the information. Mr. Charles Rich from Rcich Consultant called back and let me know that they stopped work at this site becouse they did not get paid. They did not complete the remediation. They removed all the tanks and probably half of the soil contaminated and no groundwater innvestigation. 02/2/12- Zhune called the owner Mr. Joseph Zafarani. Mr. Zafarani said that he hired BL company to do the remediation. The contact person is John Bogdanski(203-630-1406 Ext. 4256. Tried to contact John. I left a message. 02/27/12- John Bogdanski called to say that they are going to send the RAP in two weeks. 01/02/2011- BL Company sent the RemediaL Investigation Work Plan dated 01/05/2011. 01/2012- BLCompany sent the RemediaL Investigation Report dated 01/2012. 1.- 10 soil borings were installed across the project site and 24 soil samples were collected from the soil borings' 2.- Four Monitoring wells were installed to establish groundwater flow direction and groundwater samples were collected from the wells. 3.- Nine soil vapor were installed throughout the site and nine soil vapors were collected -Soil. ----- The soil analytical results indicated no VOCS and inorganic compounds detected at concentrations that exceed the limit. SVOCs were detected at concentrations that exceeded the limit in sample B-3(18'-19')(Benzo (a) anthracene 1.05mg/kg), sample B-5(5.5'-6.5')(Benzo (a) anthracene 28.4 mg/kg, benzo (a) pyrene 62.8

PARKSIDE SERVICE CENTER (Continued) **S108762756**

mg/kg, benzo (b) fluoranthene 39.3 mg/kg, Indeno (1,2,3-cd pyrene), sample B-6(9'-10')(Acenaphthene 970 mg/kg, Anthracene 539 mg/kg, fluoranthene 589 mg/kg, Fluorene 463 mg/kg, naphthslene 4880 mg/kg, Phenanthrene 1470 mg/kg, pyrene 935 mg/kg. Sample B-6)9'-10')contained evidence of non-aquous phase liquid (NAPL). --Groundwater. ---------- The groundwater analytical results indicated VOCs and SVOCs exceeded the limit in sample MW-1(1,2,4 trimethylbenzene 420 ug/l,Ethylbenzene 580 ug/l, p&m-xylenes 1500 ug/l, Acenaphthene 51.2 ug/lt, Sample MW-2 (1,2,4 trimethylbenzene 530 ug/l, Ethylbenzene 470 ug/l, o-xylene 720 ug/l, p-&m xylenes 1800 mg/lt, toluene 1100 ug/l, Xylenes total 2600 mg/l), sample MW-3 (1,2,4 trimethylbenzene 9.5 ug/lt), sample MW-4(1,2,4 trimethylbenzene 46 ug/lt, 1,3,5 trimethylbenzene 34 ug/lt, benzene 150 ug lt, Ethylbenzene 57 ug/lt, Isopropylbenzene 13 ug/lt, N-propylbenzene 9.1 ug lt, p-&m xylenes 48 ug/lt, Isopropyltoluene 11 ug/lt, toluene 14 ug/lt, Xylenes total 55 ug/lt). -SOIL VAPOR. ---------- Nine VOCS were detected in soil vapor samples at concentrations above the limit including 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 2-butanone, acetone, benzzene, methylene chloride, n-hexane,toluene and trichloroethylene(TCE). 4/10/12-Sent a review letter with following requirements: 1.-Delineation of Soil and Groundwater Contamination, installation of three downgradient wells along south side of 3rd Street. 2.- Installation of soil boring at all remote fill port. 3.-Submission of development plan for the site 4.- Submission of vapor and Moisture Mitigation techniques to be used in the site development. 04/03/12- Mr. Zafarani called, He want to have a meeting to disscuss the DEC-letter sent to him on 4/10/12. 04/05/12-Zhune called Mr. Zafarani could not speak to him, left a message with his secretary that the Department have no problem to meet him but first he has to send the Remedial Action Plan. 04/07/12-Zhune called MR. Zafarani. Her secretary said that she spoke to him in reference to the Remedial Action Plan. She said Mr Bodanski from BL company is in the process to send the RAP. 4/10/12- In response to RIR 01/05/2011. DEC-Requiremnts on letter dated March 02, 2011 1. Delineation of soil and GW incluiding installation of three downgradient wells along south side of 3rd street. 2.Installation of soil borings at all remote fill port 3.Subnmission of development plan for the site 4.Submission of vapor and moisture mitigation techniques to be used in the site development. 07/10/12- Hydro Tech Environmental sent the subsurface investigsation report dated 07/19/12 Three soil probes and three monitoring wells were installed. Soil probes SP-1 and SP-2 were installed along the sidewalk between the property and 3rd street. oil probes SP-3 was installed along the sidewalk between the property and 4th avenue. Probes SP-1, SP-2 and Sp-3 were converted to monitorind wells Mw-5,MW-6 andMW-7 respectively. The soil analytical results identified (6) VOCs (1,2,4 trimethylbenzene, 1,3,5 trimethylbenzene 100mg/kg, ethylbenzene, n-propylbenzene 19 mg/kg, naphthalene 35 mg/kg, xylene total 33 mg/kg) at concentrations exceeding the limits in SP-3. The groundwater analitycal results indicates VOCs (1,2,4 trimethylbenzene 6.7 ug/l, benzene 6.6 ug/l)exceedimg the limits in MW-6, and VOCs (1,2,4 trimethylbenzene 1000 ug/l, 1,3,5 trimethylbenzene 540ug/l, ethylbenzene 770 ug/l, n-propylbenzene 200 ug/l, n-butylbenzene 82 ug/l, naphthalene 490 ug/l, p&m xylenes 740 ug/l, Xylene total 740 ug/l and p-isopropyltoluene 60ug/l at concntration exceedimg the limits in MW-7. 07/18/12-In response to the Subsurfaace Investigation Report. DEC-requirements on letter dated 07/19/12 1.Submission of

PARKSIDE SERVICE CENTER (Continued) **S108762756**

Remedial Action Plan to remediate contamination at SP-3 /MW-7 2.Subnmission of development plan for the site 3.Submission of vapor and moisture mitigation techniques to be usedinthe ite development 08/20/12- Hydro Tech Environmental sent the Remedial Action Plan dated 07/19/12 The RAP proposed: 1. Analysis of groundwater samples for common aquifer parameters in order to establish a brechmark of aquifer characteristics and to evaluate the success of the remedial program. 2. Groundwater contamination will be treated via bioremedial solutions. 3. Implementation of a groundwater-monitoring program. 4. Installation of a vapor barrier and active depressurization system beneath the foundation of new development. 08/21/12- DEC reviewed the RAP and sent a letter dated August 27,2012 with the following requirements: 1. Plans for SSDS to be reviewed by the NYCDOH. 2. Injections upgradient of source areas. 3. Delineation of soil and groundwater contamination via installation of two down-gradient monitoring wells from MW-7 4. Sensitive receptor/ surrounding area Hyfro Tech Environmental sent a Remedial Action Plan dated August 23/12. 12/6/12-Zhune reviewed site status due to recent extreme workload on other spill sites associated with Hurricane Sandy. 3/18/13- Paul sent the following email to Micheal Hughed from NYSDOH. Michael Please use the web link below to upload the remedial investigations and remedial action work plan including a vapor barrier and SSDS design specifications prepared for the above referenced spill site. We appreciate if you can provide your approval of the proposed vapor barrier and SSDS design and specs. I appreciate your expedited response on this matter as construction at this site is scheduled very soon and was delayed after we were informed that we need NYSDOH approval of the SSDS system. 3/18/13-Michael Hughes from NYSDOH sent the following email. The workplan looks fine. DOH has no comments. 06/19/13- Paul Matli from Hydroteck called to notify concern about strong odor from excavation. At 2:oo pm jeff Vought, Veronica Zhune and Paul Matli had a conference call. Jeff required to Paul to subbmit the following: 1. Comunity Air Monitroing Plan Camp. 2. Star air monitoring tomorow 6/20/13 in the morning. 06/19/13- Zhune visited the site met Paul and the contractor. Michael explained that as the excavation was getting close to the area where the tanks were located the gasline odors were really strong. He also said that the soil removed for placement of concrete footing and grade beams will be used to level the excavation. 06/20/13-Paul emailed the following: documents: -Community Air Monitoring Plan (CAMP) -Plan of past trenching exercise to characterize the soil. -Waste characterization data for a 6-grab composite sample collected from six grids across the site to 4 feet in anticipation of mixed missing from excavating and moving of soil for footing foundations to 4 feet. 01/28/14- Endpoint samples not collected. however no longer required as per Vought due to known soil conamination previuosly documented, instalation of SSDS, and relatively clean downgradient groundwater. 3/5/14-Paul sent the revised Vapor Barrier and Active SSD System Design Plan dated 3/5/14. 3/11/14-Paul sent the following email to Michael Hughes from NYSDOH. Michael attached please find a revised vapor barrier and active sub-slab depressurization system prepared for above spill site. You have reviewed and approved this plan before and the recent version includes a section for operation and maintenance 3/19/14-Michael Hughes from NYSDOH sent the following email. I have no comments on the workplan. The O&M appears consistent with the approach outlined in our guidance. Spill Closaed with active SSDS. "

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

PBS #: 2-404926. as per PBS record, the site has one 5,000 gal #2 oil AST in contact with soil. PBS registration expired on 10/15/2007. 9:56 AM:- spoke with Eric Sutphen at Approved Oil, who hired PTC to conduct system test. Eric mentioned that the oil tank was cleaned out last week as part of fuel grade conversion from #6 to #2 oil. after cleaning, they filled up the tank with #2 oil and then decided to conduct a tightness test. the tank system failed in dry portion and PTC believed a leak in vent pipe. PTC will do vent repair and retesting. asked Eric to provide propert owner's contact info. he will call back. Approved Oil Eric Sutphen Ph. (718) 238-1050 (O) (347) 909-0994 (C) Fax (718) 621-8107 email: erics@approvedoil.com as per NYC ACRIS record, the property was sold to Prime Properties of New York Inc. in April 2007. but as per discussion with person at real estate office (718-748-0870), whose number is listed as property owner in last NYC DOB permit in 2012, subject property was sold to new entity six months ago and they don't have contact information. 300-304 10th Street FT LLC. **property owner** c/o Silverstone Property Group **management company** 825 Third Avenue, 37th Floor New York, NY 10022 Attn.: Jason Nunez **property manager** PH. (646) 786-8000 Ext. 7819 email:

TTF (Continued) **S117364491**

service@silverstonepg.com 11:00 AM:- sent TTF letter, including PBS application, to Mr. Nunez. letter emailed to Mr. Nunez and Eric. case assigned to DEC Mahat (off-hour secondary). 11/12/14: Mahat t/c: DEC Mahat received a call from Isreal (Milleneum Tank) inquiring what needed to be address in closing report. A closure report will provided to the Department by EOB 11/14/14. 11/13/14: Mahat A spill closure letter is supplied to the Department. Based on the picture, TT result and repair : No further investifation is required as no resources were impacted. Hence, the spill case will be closed in the Database . "

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"9/14/05 - James Romeo of DDC called and asked for a project manager to manage the case. He is going to contact the Fire Dept. and initiate a site investigation. KST 11/06/08: Sent email to Afsar Samani of NYCDDC, cc to Fatemeh Ashkan of DDC: I came across an open spill case at this site that is not being addressed. Spill report (attached) indicates that James Romeo of DDC asked Koon Tang to assign it to a DEC case manager, but I guess it never was. Product spilled is unknown. I checked our lists of DDC Consent Order sites, and according to information submitted by DDC (or their consultants), this site was never investigated because it only had ASTs ; however, attached PBS Facility Information Report indicates that a 275-gallon gasoline UST was closed in place at site in 1996. Is this something that DDC can handle? Can spill be assigned to Greyhawk/Roux to follow up on? Please let me know. - J. Kolleeny 03/07/11: This spill case transferred from K. Tang to J. Kolleeny. - JK 06/20/11: Reviewed Site Specific Investigation Plan by LiRo, dated June 2011 (in eDocs). Plan proposes install'n of 2 monitoring wells in sidewalk, one near former coal chute and former diesel AST and other near current diesel fill port, with soil & GW sampling, to evaluate potential subsurface petroleum impacts related to former diesel AST, current diesel fill port, and possibly old 275-gal gasoline UST (former location unknown). Earlier investigations had found some impacts to soil & GW; some soil was excavated in basement in area of former diesel AST to depth of 5 ft, but not to depth of all impacts identified (tho impacts >5 ft bgs did not exceed TAGM 4046). I sent email (in eDocs) approving plan to Afsar Samani of DDC, cc to Fatemeh Ashkan of DDC and Steve Frank of LiRo. - J. Kolleeny 04/23/12: Reviewed ISRP & Spill Closure Request dated 3/9/12 by LiRo (in eDocs). Rpt presents results of soil & GW samples from one well installed near former coal shute (LMW-02); well proposed near current diesel fill port (LMW-03) could not be installed at proposed location due to presence of fencing foundation of adjacent property owner and could not be

ENGINE CO. 239 FDNY -DDC (Continued) **S104509850**

relocated further to north or NE due to numerous subsurface utilities. Results of two soil samples and one GW sample from LMW-02 showed no VOCs or SVOCs detected. Rpt points out that although proposed well LMW-03 could not be installed near diesel dispenser as planned, LiRo confirmed that fill piping is in a vault and not in contact with soil, and no evidence of leakage was observed in fill port vault. LiRo recommends spill closure. Based on information provided, I closed spill and sent closure letter (in eDocs) to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC and Stephen Frank of LiRo. - J. Kolleeny "

Remarks: "Strong petrolium odor found during soil boring for GeoTech caller believes the material is coming from an underground tank somewhere in the immediate area. No clean up at this time."

Spiller Name: WALTER ROBERTS
Spiller Company: NYC-DEPT OF HOUSING PRES.
Spiller Address: 100 GOLD STREET
Spiller Company: 001
Contact Name: MATT BOECKEL
DEC Memo: "5/19/06 - Obligado - Spill transferred to Obligado as per Koon Tang. 5/16/06 received letter from John Gearrity at HPD with attached Investigation Workplan and UST Closure Report. Tank closure Report, submitted by LiRo-Kassner, Inc., dated November 2004 - Tank closure was initiated as a result of UST encountered during previous test pitting in April 2004. 7 550 USTs excavated. USTS were found to have 3500 gallons of gasoline/water mixture. 353 tons of soil removed. Excavation termination controlled by site constraints. Site is 45-50 ft above sea level. Ground water anticipated at 30 ft bgs. GW not enountered during excavation. PID readings from 100 to 700 ppb in sidewalls after excavation. Soil endpoint samples showed max of 97800 ppb total VOCs in B2 including 6700 ethylbenzene, 2300 toluene, 48000 xylene, 33000 1,2,4 trimethlybenzene, 4000 n propylbenzene. 20,000 ppb xylene in SW2 and 10,800 ppb xylene in SW5. All endpoints had xylenes above standard. 354 tons of soil removed. Bottom of excavation at B1 and B2 (north side of excavation) is 9 ft, B3 bottom (south side) is 17 ft bgs. Subsurface Investigation Workplan, submitted by General Consolidated Industries, In. (GCI) (800-842-5073), prepared for HPD. Proposes 16 test pits (10ftx12ftx3ft)parallel to 4th avenue and a minimum of 3 4 diameter PVC ground water monitoring wells. Anticipated gw at 30 ft bgs. 6/5/06 - Obligado - Sent email to Joh Gearrity approving workplan with condition that soil samples be collected by split spoon sampling from 15-17', 20-22', and 25' continuos to gw table. Soil sample with highest PID reading and from gw interface should be collected for laboratory analysis. 9/5/06 - Obligado - Called John Gearrity to inquire about status of investigation. 9/6/06 - Obligado - Voice mail from Gohn Gearrity. During investigation, refusal was hit at ~30 ft bgs. He will keep me updated. 1/10/07 - Obligado - Called John Gearrity. Left message to call DEC for update. 6/27/07 - Obligado - Called John Gearrity to get status of Investigation Report. Left message to call back DEC. Also sent email to john. 6/28/07 - Obligado - Received email from John Gaerrity. He said he thought the consultant had sent me the report. He will forward a copy to me. 7/5/07 - Obligado - Spoke with Jacob Krimgold who received a call from a concerned citizen who though haz waste was being stored on site. It is probably the drum of drill cuttings from the investigation. I called Jon Gearrity to ask if those had been disposed of. Left message to call back the DEC. 8/28/07 - Obligado - Received voice mail from John Gearrity on 8/8/07. Called him back. Left message to call back the DEC. 10/9/07 - Obligado - Investigation Summary report received by the Department. 11/2/07 - Obligado - Called GCI industries because the conclusions and recommendations portion of the report was missing. 11/6/07 - Obligado - Begin to review Subsurface Investigation Report, submitted by GCI, received by the Department on October 9, 2007. Sixteen test pits were dug down to 16 ft bgs. 1 soil sample was collected from each test pit. 3 ground water wells were installed using geoprobe Depths to ground water between 48 and 55 ft below grade. Ground water flow is to west-southwest towards 4th ave. Soil results found elevated VOCs, mostly ethylbenzene and xyleness in TP14, TP17, and TP18. BTEX in soil range from ND to over 80,000 ug/m3 in TP18. SVOCs over limits in

VACANT LOT (Continued) **S106382890**

TP13 (benzo(a)pyrene = 193 ug/m3) and TP16 (benzo(a)pyrene = 715 ug/m3 and chrysene = 1119 ug/m3). BTEX in ground water range from 2.14 ug/L in MW3 to 2513 ug/L in MW1. I will wait for recommendations section of the report to be submitted before commenting. 12/13/07 - Obligado - I still haven't received the conclusions and recommendations. I called John Gearitty to request that section of the document again. 1/11/08- Obligado - Called CGI again to request recommendations and conclusions section. Jill said she would email me the text portion of the report. I received the text pdf. The report recommends that for soils that contaminated soils will be excated down to 12 ft bgs during development. The report contends that ground water impacts are minor and ground water should be monitored and a RAWP for enhanced bioremediation should be submitted. I called John Gearitty again to discuss the site. 5/2/08 - Obligado - REviwed RAP. Proposes excavation and ground water monitoring. Vapor barrier and subslab system will be installed. Send RAWP approval letter. 5/18/10 - Obligado - I called and emailed John Gearity to get an update on remedial activities at this site. 8/28/13 - Obligado - I emailed John Gearrity again to inquire about remedial status. John responded that they project is moving forward and they expect the loan to close in September and start work soon after. 2/6/14 - Obligado - I got an email from HPD stating that the property sale closed so the remediation should proceed. 6/5/14 - Obligado - Jill Guerra at GCI 631-851-1600 ext 206. Starting the remediation work soon. Mr. Smythe called as well. He will email me a schedule for the work. 6/13/14 - Obligado - I received a all from Mr. Smythe. They started removing clean backfill. They expect to start excavating contaminated soil Monday and Tuesday and collecting endpoint samples. 6/16/14 - Obligado - I met Tom Smythe on site to see endpoint sample collection. They excavated to 15 ft bgs along the south and southwest portion of the property. Sidwalls had impacts at the 15 ft depth, however, they could not excavate further due to structural concerns. They plan to continue excavating tomorrow to extend the excavation to the north in the vicinity of TP 18. 1/10/17 - Obligado - I contacted Tom Smythe to inquire about the status of the Remediation Completion Report. I left a message to call back the DEC. 10/27/17 - Obligado - I spoke to Tom Smythe. He will submit the Remedial Excavation Report. He will propose collecting groundwater samples from temp well to document improvement in groundwater quality to close out the spill. 12/19/2017 - Austin - Project transferred from Andre Obligado to Rick Lin - end"

Remarks: "DURING EXCAVATION THIS COMPANY FOUND FOUR ABANDONED UNDERGROUND TANKS WITH A GAS/WATER MIXTURE IN THEM. THE SOIL AROUND THE TANKS WAS FOUND TO BE CONTAMINATED. THE IMPACTED SOIL HAS BEEN STOCKPILED AND COVERED AND IS AWAITING REMOVAL ON SITE. PROPERTY OWNER FOR THIS SITE IS THE CITY OF NEW YORK DEPT OF HOUSEING PRESERVATION. THEY ARE LOCATED AT 100 GOLD STREET, NEW YORK, NY MR WALTER ROBERTS IS THE CONTACT NAME AT 212-863-8482 "

Site Code:	517274
Acres:	Not reported
HW Code:	C224189A
SWIS:	2401
Town:	New York City
Record Added Date:	11/23/2015
Record Updated Date:	01/05/2018
Update By:	MJKOMORO
Site Description:	The following description is for the associated BCP site: Site Location: The Former Strauss Auto site is located in an urban area at 521-539 4th Avenue in the Park Slope neighborhood of Brooklyn. The 18,200 square foot property is bounded by 14th Street to the north, 4th Avenue to the west, and 15th Street to the south. Multi-family residences are located to the east and an elementary school (PS 124) sits directly across 14th Street to the north. A subway line runs down 4th Avenue, a major commercial thoroughfare. Site Features: The site is currently vacant. A 14,640 square foot one-story automotive garage and attached sales building with partial basement previously occupied the site. The building included a vehicle service area, retail and stock areas, and administrative offices. An asphalt and concrete-paved parking lot was located on the western side of the property. The building was vacant from approximately June 2012 onward

FORMER STRAUSS AUTO - OFF-SITE (Continued) **S118372392**

and was demolished in December 2014. The site is at an elevation of about 55 feet above sea level, and the site and the surrounding area slope toward the Gowanus Canal, which is approximately 2,500 feet northwest of the site. Current Zoning and Land Use: The site is zoned R8A residential with a C2-4 commercial overlay. Past Use of the Site: The site originally had two churches on it. Building records indicate the most recent structures were completed in 1944 with additions and/or alterations completed in 1946 and 1947. Automotive sales operations took place there since at least 1944. Automotive service operations started sometime between 1951 and 1965. Records indicate the most recent owner of the property, Strauss Auto Center, occupied the site from at least 1983 until 2012. Various underground storage tanks, sumps, floor drains, and pits are present from when the site was used for automotive service operations, and the site was listed as a generator of tetrachloroethene waste from 1995 to 2002. Site Geology and Hydrogeology: Soil beneath the site consists of historic fill material, including predominately fine to coarse sand with varied amounts of brick fragments, gravel, milled and crushed asphalt, and ash. The fill extends to depths of up to 11 feet below ground surface. Historic fill is underlain primarily by glacial till, which in turn is underlain by a thick clay layer found at depths ranging between 40 and 60 feet below ground level. Bedrock was not encountered during investigations of the site, but the depth to bedrock in the vicinity of the site is reportedly 200 feet below ground level. The depth to groundwater across the site ranged from 31.5 to 37.7 feet and the groundwater flows to the north-northwest.

Env Problem:	Based on the work done for the on-site portion of this site, the potential exists for off-site contaminated groundwater and soil vapor, although the extent of this, if any, is not known at this time. It is entirely possible that the off-site contamination may be affected or addressed by the remediation occurring on-site.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Spiller Name:	MELISSA
Spiller Company:	EARTH STRUCTURES
Spiller Address:	535 4TH AVE
Spiller Company:	999
Contact Name:	MELISSA NG
DEC Memo:	"8/11/2015 - Feng - Duty Desk. Talked to Melissa Ng of Langan (212-479-5490). This is a construction site under BCP C224189. The tank was discovered and removed. A hole was found in the tank, maybe in the bottom. Soil contamination was found. Spill is assigned to Larry Alden, the BCP PM. 3/31/16 - M.Komoroske. Spill closed. Being addressed in the BCP. During tank removal activities on August 25, 2015, about 20 gallons of the oil/water mixture spilled onto underlying soil. Petroleum-impacted soil was excavated and disposed at the Clean Waters of New York facility in Staten Island, New York, as detailed in the Final Engineering Report for the Former Strauss

SOIL (Continued) **S118142018**

Classification: Large Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D008
. Waste name: LEAD

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

R & S STRAUSS (Continued) **1000132799**

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Code:	493274
Acres:	0.418
HW Code:	C224189
SWIS:	2401
Town:	New York City
Record Added Date:	04/02/2014
Record Updated Date:	12/13/2017
Update By:	MJKOMORO
Site Description:	Site Location: The Former Strauss Auto site is located in an urban area at 521-539 4th Avenue in the Park Slope neighborhood of Brooklyn. The 18,200 square foot property is bounded by 14th Street to the north, 4th Avenue to the west, and 15th Street to the south. Multi-family residences are located to the east and an elementary school (PS 124) sits directly across 14th Street to the north. A subway line runs down 4th Avenue, a major commercial thoroughfare. Site Features: A 14,640 square foot one-story automotive garage and attached sales building with partial basement previously occupied the site. The building included a vehicle service area, retail and stock areas, and administrative offices. An asphalt and concrete-paved parking lot was located on the western side of the property. The building was vacant from approximately June 2012 onward and was demolished in December 2014. The site is at an elevation of about 55 feet above sea level, and the site and the surrounding area slope toward the Gowanus Canal, which is approximately 2,500 feet northwest of the site. Current Zoning and Land Use: The site is zoned R8A residential with a C2-4 commercial overlay. Past Use of the Site: The site originally had two churches on it. Building records indicate the most recent structures were completed in 1944 with additions and/or alterations completed in 1946 and 1947. Automotive sales operations took place there since at least 1944. Automotive service operations started sometime between 1951 and 1965. Records indicate the most recent owner of the property, Strauss Auto Center, occupied the site from at least 1983 until 2012. Various underground storage tanks, sumps, floor drains, and pits were present when the site was used for automotive service operations, and the site was listed as a generator of tetrachloroethene waste from 1995 to 2002. Site Geology and Hydrogeology: Soil beneath the site consisted of historic fill material, including predominately fine to coarse sand with varied amounts of brick fragments, gravel, milled and crushed asphalt, and ash. The fill extended to depths of up to 11 feet below ground surface. Historic fill was underlain primarily by glacial till, which in turn is underlain by a thick clay layer found at depths ranging between 40 and 60 feet below ground level. Bedrock was not encountered during investigations of the site, but the depth to bedrock in the vicinity of the site is reportedly 200 feet below ground level. The depth to groundwater across the site ranged from 31.5 to 37.7 feet and the groundwater flows to the north-northwest.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PAHs, lead, copper, mercury, and zinc in a layer of historic fill beneath the site. PCE and its associated degradation products

FORMER STRAUSS AUTO (Continued) **S116550040**

	were found in groundwater. PCE and trichloroethylene were found in sub-slab soil vapor samples. Remedial actions have successfully achieved soil cleanup objectives for Unrestricted use. Remaining contamination in the groundwater is being managed under a Site Management Plan, and the new building will be evaluated for soil vapor intrusion. The evaluation will include a provision to implement actions to address exposures related to soil vapor intrusion, if necessary.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

DEC Memo:	"e2mis no. 154643: 25 gallons transformer oil on floor of VS5767. States unit is defective and fault is inside of unit. Clean up will proceed as 50-499. Historical records indicate 5 ppm as of Feb. 1997. 1925 hrs. Clean Harbors and env. ops crews on location along with UG. UG OS S. Rojas checked unit and found below min. 8/2/04 2211HRS LAB

VS5767 (Continued) **S106697913**

RESULT RETURNED 4PPM LSN-04-06053-001 UPDATE 8/3/04 07:15 HRS V. DINEEN #41974 BQE REPORTS THE UNIT HAS BEEN DRAINED. THE TAG INDICATES UNIT HOLDS 255 GAL AND 150 GAL WAS DRAINED, 105 GAL WAS SPILLED. UPDATE 8-03-04 07:55HRS T. FERNANDEZ REPORTS, FOUND CEMENT SUMP BROKEN UP AND WILL CLEANOUT AND RECEMENT. AT THIS TIME CAN NOT DETERMINE IF THERE IS ANY OIL IN SUMP. 8/3/04 = 14:15 = Env. Ops> Supv. C.Fernandez reports that after Networks crew removed unit from structure a Clean Harbors tanker sucked up all free flowing oil. The crew then removed all debris from the structure using a vactor. Cleaned out cracked cemented sump, found no oil and recemented. Structure was double washed with BioGen 760 and all liquids were removed by Clean Harbors tanker. One drum of oily cable, sticks, rack arms and rusted transformer legs were brought back to 3 Av yard under one trip rule. Removed tag # 42337 and Networks crew installed new unit. Job completed."

Remarks: "a transformer is involved, historicall ppm's is 5 of Feb of 1997.50-499 clean up."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Used oil transporter:	No

. Waste code:	D001
. Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE

GOWANUS CANAL SUPERFUND SITE (Continued) **1019909580**

FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D005
. Waste name: BARIUM

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D009
. Waste name: MERCURY

. Waste code: D018
. Waste name: BENZENE

. Waste code: D026
. Waste name: CRESOL

. Waste code: B007
. Waste name: B007

Violation Status: No violations found

property owner. The owner is planing to redevelop the site and is willing to take steps necessary to close the spill case. However, they would like a letter or a phone call for directions. The owner's info: Attn. Mark Yonger M&N Development Corp. 65 Taaffe Place Brooklyn, NY 11205 (718)403-0900 The consultant info: Attn. Billy Maysonet Brothers Environmental 610 Underhill Avenue Bronx, NY 10473 877-839-6009 End JK. 09/26/06 this case was transfer from Albany to Region 2. 10/2/06-Zhune called Rosma develpoment spoke to Joe Weiss. He told me that ken Mikkelson is no longer working for this company. He asked me to sent the stipulation letter copy to: Rosma Devepolment 199 Lee Ave Apt # 287 Brooklyn, NY 11211 Att: Joe Weiss 10/2/06-Zhune called Dyber. He doesn't have estipulation letter in his recods. 10/2/06. A copy of Stipulation letter signed was sent to Joe Weiss above address. 08/22/09- Zhune spoke to Dennis Goldstein from Ferrantino & Co. He need ccpies of stipulation and spill report. I said I will fax them. 04/14/10- Zhune spoke to Mike Taylor (Service Manager) from Ferrantino & CO 718-832-6700. He said Ferrantino sold the propety in 2005. The tanks were closed and soil invetigation was performed. The new owner knocked down the biulding. He plan to do something else. Mike will contact the company that closure the tanks and he will call back. 05/28/10-Zhune called Mike Taylor for three weeks in a road. Everytime that I spoke to him he said I will call you back with name of company and he never called back. 05/28/10-The Petroleum Bulk Storage facility report show four tanks closed in 2008. 001 550 gal. Kerosene 002 275 #2 heating oil 003 4000 Diesel 004 4000 Gasoline 08/01/2011- Fenley & Nicol Environmental sent the subsurface investigation report, dated June 10,2011. The result of GPR survey did not revealed anomalies consistent with the presence of UST sytem. Apparently the UST system and pump island have been removed in August 2007 during demolition of structure On March 21 to 28, 2011 F&N installed thirteen(13) soil probes, three temporary wells and three monitoring wells. The analitycal soil results indicates one VOCs (1,2,4 Trimethylbenzene 6000 ug/kg in sample Sp-10(10-15') detected above the NYSDEC Soil Cleanup Guidance values and some SVOCS detected below the NYSDEC Soil Cleanup Guidance value. The groundwater results indicates that TW-2 had Isopropyltoluene and sec-Buthylbenzene exceedence of 10 ug/lt and 74 ug/lt respectively. TW-3 had secbulthylbenzene exceedence of 32 ug/lt. MW-2 had no exceedence and no VOCs were detected in monitoring wells MW-1 and MW-3. Groundwater flow direction was found to be southwesterly direction. Spill Closed. . "

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Town:	New York City
Record Added Date:	06/30/2005
Record Updated Date:	09/04/2008
Update By:	DMMOLOUG
Site Description:	Remediation of the site is proposed under the Brownfield Cleanup Program. The Toll Brooklyn, LP site is located in Kings County, NY and is comprised of three separate parcels, which were investigated separately between 1997 and 2005. The parcels include 363 Bond Street (Tax Block 452, Lot 1), 365 Bond Street (Tax Block 458, Lot 1) and 400 Carroll Street (Tax Block 452, Lot 15). The specific addresses listed in the BCP Application are: 64-98 1st Street; 82-107 1st Street; 119-145 2nd Street; 357-379 Bond Street; and 400-402 Carroll Street. Residential use is proposed for the Toll Brooklyn, LP site. Due to rezoning issues, the applicant withdrew their BCP application without prejudice in December 2006.
Env Problem:	Despite the termination of this project, there is an ongoing spill investigation at this site. Spill #04-07393 was referred to the DEC Region 2 spills office in Long Island City, Queens County.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description:	Location: The Whole Foods site is located in the vicinity of the intersection of 3rd Street and 3rd Avenue in Kings County, NY. Site Features: The site consists of approximately 2.101-acres. The site is fenced and is bordered on the south by 4th Street Basin (Gowanus Canal), on the north by 3rd Street, on the west by privately owned real property, and on the east by 3rd Avenue. Current Zoning/Uses: The property is zoned as medium manufacturing in a commercial area. The site is currently owned by 190-220 Third Street Store, LLC and is vacant. The surrounding parcels are currently used for a combination of mixed light industrial, commercial and residential. The closest residential area is believed to be on 4th Avenue. Historical Uses: The subject site formerly consisted of several interconnected buildings and an open rear area that bordered the Gowanus Canal. The buildings prior uses that appear to have led to possible contamination include a coal yard, oil company, and junkyard and auto repair business. All buildings have been demolished. Site Geology and Hydrogeology: The Site is underlain by urban fill that varies in

190-220 THIRD STREET STORE LLC (Continued) **1015747246**

thickness from approximately 5 feet to 25 feet. The urban fill is underlain by an organic layer composed of varying proportions of silt and clay that varied in thickness from approximately 10 feet to 25 feet. The top of the organic layer likely represents the original surface of the Site, prior to filling in the late 1800s. The organic layer is underlain by a mixture of fine to coarse sands with increasing percentages of gravel and coarser sands with depth (coarsening downward sequence). Exploration borings were advanced to a total depth of approximately 77 feet below grade. The bedrock surface was not encountered in any of the test borings. Shallow groundwater is present in the overburden fill material beneath the Site. Groundwater is tidally influenced, but generally flows toward the 4th Street Basin in both high and low tide conditions. The groundwater level within the overburden aquifer ranges from an elevation of approximately 3 feet at the northwest boundary of the site to an elevation of approximately 8 feet in the southeast boundary of the site.

Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were associated with historic fill material, including semi-volatile organic compounds (specifically PAHs) and metals. Residual contamination at site will be managed in accordance with the Site Management Plan to ensure compliance with all the institutional/engineer controls required by the environmental easement.
Health Problem:	Since some contaminated soils remain at the site below clean backfill, people will not come in contact with contaminated soils unless they dig below the surface. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants of concern due to vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Code: 333299
Site Description: Location: The Whole Foods site is located in the vicinity of the intersection of 3rd Street and 3rd Avenue in Kings County, NY. Site Features: The site consists of approximately 2.101-acres. The site is fenced and is bordered on the south by 4th Street Basin (Gowanus Canal), on the north by 3rd Street, on the west by privately owned real property, and on the east by 3rd Avenue. Current Zoning/Uses: The property is zoned as medium manufacturing in a commercial area. The site is currently owned by 190-220 Third Street Store, LLC and is vacant. The surrounding parcels are currently used for a combination of mixed light industrial, commercial and residential. The closest residential area is believed to be on 4th Avenue. Historical Uses: The subject site formerly consisted of several interconnected buildings and an open rear area that bordered the Gowanus Canal. The

190-220 THIRD STREET STORE LLC (Continued) **1015747246**

buildings prior uses that appear to have led to possible contamination include a coal yard, oil company, and junkyard and auto repair business. All buildings have been demolished. Site Geology and Hydrogeology: The Site is underlain by urban fill that varies in thickness from approximately 5 feet to 25 feet. The urban fill is underlain by an organic layer composed of varying proportions of silt and clay that varied in thickness from approximately 10 feet to 25 feet. The top of the organic layer likely represents the original surface of the Site, prior to filling in the late 1800s. The organic layer is underlain by a mixture of fine to coarse sands with increasing percentages of gravel and coarser sands with depth (coarsening downward sequence). Exploration borings were advanced to a total depth of approximately 77 feet below grade. The bedrock surface was not encountered in any of the test borings. Shallow groundwater is present in the overburden fill material beneath the Site. Groundwater is tidally influenced, but generally flows toward the 4th Street Basin in both high and low tide conditions. The groundwater level within the overburden aquifer ranges from an elevation of approximately 3 feet at the northwest boundary of the site to an elevation of approximately 8 feet in the southeast boundary of the site.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were associated with historic fill material, including semi-volatile organic compounds (specifically PAHs) and metals. Residual contamination at site will be managed in accordance with the Site Management Plan to ensure compliance with all the institutional/engineer controls required by the environmental easement.

Health Problem: Since some contaminated soils remain at the site below clean backfill, people will not come in contact with contaminated soils unless they dig below the surface. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants of concern due to vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Description: Location: The Whole Foods site is located in the vicinity of the intersection of 3rd Street and 3rd Avenue in Kings County, NY. Site Features: The site consists of approximately 2.101-acres. The site is fenced and is bordered on the south by 4th Street Basin (Gowanus Canal), on the north by 3rd Street, on the west by privately owned real property, and on the east by 3rd Avenue. Current Zoning/Uses: The property is zoned as medium manufacturing in a commercial area. The site is currently owned by 190-220 Third Street Store, LLC and is vacant. The surrounding parcels are currently used for a combination

190-220 THIRD STREET STORE LLC (Continued) **1015747246**

of mixed light industrial, commercial and residential. The closest residential area is believed to be on 4th Avenue. Historical Uses: The subject site formerly consisted of several interconnected buildings and an open rear area that bordered the Gowanus Canal. The buildings prior uses that appear to have led to possible contamination include a coal yard, oil company, and junkyard and auto repair business. All buildings have been demolished. Site Geology and Hydrogeology: The Site is underlain by urban fill that varies in thickness from approximately 5 feet to 25 feet. The urban fill is underlain by an organic layer composed of varying proportions of silt and clay that varied in thickness from approximately 10 feet to 25 feet. The top of the organic layer likely represents the original surface of the Site, prior to filling in the late 1800s. The organic layer is underlain by a mixture of fine to coarse sands with increasing percentages of gravel and coarser sands with depth (coarsening downward sequence). Exploration borings were advanced to a total depth of approximately 77 feet below grade. The bedrock surface was not encountered in any of the test borings. Shallow groundwater is present in the overburden fill material beneath the Site. Groundwater is tidally influenced, but generally flows toward the 4th Street Basin in both high and low tide conditions. The groundwater level within the overburden aquifer ranges from an elevation of approximately 3 feet at the northwest boundary of the site to an elevation of approximately 8 feet in the southeast boundary of the site.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were associated with historic fill material, including semi-volatile organic compounds (specifically PAHs) and metals. Residual contamination at site will be managed in accordance with the Site Management Plan to ensure compliance with all the institutional/engineer controls required by the environmental easement.

Health Problem: Since some contaminated soils remain at the site below clean backfill, people will not come in contact with contaminated soils unless they dig below the surface. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants of concern due to vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D035

DEC Memo:	"Caller believes there is oil several feet below her basement floor from a historical tank in the basement of #611 Warren St. Need to investigate both basements. 8/7/7- DECP iper responded to site and met with owners and neoigbor. While doing a test pit, they came across an unknown oil which entered the excation along with gw. Piper inspected oil and it was observed to be an old diesel #2 fuel oil with no dye in it. The neigbor had evidence of a tank though the piping indicated that it was above ground in the basment directly adjacent to the test pit. They will contact htere insurace companies as this is a third party spill. IT may be dealt with by opening excavation again and using adsorbent pads until the oil dissipates. There are only slight odors up close and no VOC;s detected. It is old oil. The owners of both properties have been there less than 10 years. They started using dye in heating oil prior ot that. 11/107- Piper reviewed closure request. The observed oil was removed and the well was monitored for reoocurance. This was a historic spill and removal has been to extent possible. This spill is closed . See e-docs if warranted."
Remarks:	"CALLER SAYS THAT SHE IS RENOVATING HER HOME AND SHE DUG A HOLE AND IT FILLED UP WITH A DARK SUBSTANCE AND SHE THINKS IT IS OIL , MAYBE FROM NIEGHBOR: NO OFFICIAL TESTING HAS BEEN DONE:"

DEC Memo:	"04/24/10- Zhune spoke to Christina's husband. He said. Spill amount is approximately 4 ounces they had a 200 years barometer that fell and broke in the basement. He did some of the cleanup and put the beads in a zipplock bag. he called the Fire Depatment. They cleaned the spill and put mercury in ziplock. The Fire Department left the place when readings level was 3. F.D. asked owner to ventilate the basement. Miller Environmental will come tomorrrow to pick up the ziplock bags. 04/26/10- Zhune spoke to Christina Horner. She said Miller Environmental came they did extra mercury vaccum. They tested the house and the basement for mercury levels and they said it was ok. They disposed anything that it was contaminated and removed the waste. They will come back in two days to double check. DEP also tested the house. The test went a little bit up int he basemnt but it was 0 in the rest of the house. As per Christina no one occupied the basement. "
Remarks:	"broke thermometer - majority of cleanup done - need assistance on further cleanup"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ Con Ed e2mis no 141-425 notes: 2/19/2002 10:00 HRS. A. VELEZ #56583, INSPECTOR WITH CONSTRUCTION MANAGEMENT, REPORTS AT 09:40 HRS. FOUND A SHEEN OF UNKNOWN OIL ON APPROX. 100 GAL. WATER IN THE A TEST PIT (DUG FOR A TRANSFORMER INSTALLATION). LOCATION IS W/S 122 ST, 125' S/O 30 AVE (ON WALK). Updated 2/20/02 @13:15 - Chem Lab took water and soil samples from the above site on 2/19/02. Jane

TEST PIT (Continued) **S106001230**

Remarks:	O'connel from DEC contacted Bharat Mukhi of Construction Management and asked to have an update once the sample results are received. Updated 2/27/02 @ 10:15 - Test results indicate no contamination either in water or soil sample. Lab seq. no. 02-01449-001 and 02-01449-006. PCB resutls in water and soil is < 1 PPM. (Lab seq. No.02-01447). A voice messase was left with DEC (Jane O'connel) to infrom these results. After confirming with DEC this incident will be closed. Update - 3/4/02 - Bharat Mukhi reports that incident should be closed as per the DEC. No action required on Con Edison's part." Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Address:	111 3RD STREET
Spiller Company:	001
Contact Name:	HYDRO TECH
DEC Memo:	"Vought was daytime runner on Dec 5th. 1/16/07-Vought-Received and reviewed Remedial Action Plan from HydroTech Environmental (Eva Jakubowska 718-636-0800) dated 12/28/06. HydroTech was retained by Bright City Development LLC. Site is developed with two story warehouse used to store plumbing and construction materials and the second floor is used as an office. Site was formerly occupied by a chemical manufacturing company for 15 to 20 years... . Elevated SVOC performed by GAC Environmental in June 2006 showed elevated levels of SVOCs. GAC determined that the SVOCs had no source and they are associated with fill material . Soil excavation will be performed once existing building is demolished. Remedial Action Plan includes the collection of 15 endpoint samples as per NYSEC Spots #14 guidelines analyzed for 8260/8270. Final excavation report will be submitted to DEC. Vought sent letter approving of RAP with endpoint sample collection. Vought spoke to Jakubowska and site is going to be redeveloped as residential property. Soil analyticals showed large PAH exceedences and 339ppb MTBE(SP3 5'bg) and 463ppb MTBE(SP3 20'bg). Vought called Vought sent letter requiring: 1)installation of vapor barrier. Vought will fax copy of letter to HydroTech at 718-636-0900 once email of owners address received from Jakubowska. 1/18/06-Vought-Received email from Jakubowska that site contact address is: Louis ZS Vitanza & Sons LLC 111 3rd Street, Brooklyn, NY 01/19/07-Vought-Sent out letter with requirements and one month due date to above address. 4/16/07-Vought-Received call from John Raine (On The Level Enterprises 212-233-5450) who is in process of purchasing property. Raine said site is not little E designated. Site may be excavated to roughly 6' below grade. Raine will demolish buildings and start excavation in this area and submit endpoint samples results in RAP. 12/7/07-Vought-Received call from PW Grosser Zeb Youngman (631-589-6353 fax:631-589-6705). Youngman is being retained by Hudson Companies (Alan Hajtler 212-777-9500) and PW Grosser will be following Hydrotechs remediation plan and begin excavation and collect endpoints. Will oversee installation of vapor barrier. Vapor barrier only required at present due to SVOCs. Zeb Youngman will send in letter updating progress. 04/22/08-Vought-Received copy of Long Island Well Permit Application for construction dewatering from Griffen Dewatering -New England Inc -908-851-2100 addressed to DEC Steven Watts. Construction will be new row houses. One groundwater sample shows no VOC detections. Vought called Alan Hajtler for update on spill requirements and left message of oustanding requirements and to return call to DEC. Vought will not approve dewatering plan until workplan is received and reviewed for collection of endpoint samples and installation of a vapor barrier. Vought received call from Hatjler and he will have PW Grosser send in

FORMER CHEMICAL MANUFACTURING CO. (Continued) **S108296533**

letter with scope of work including collection of endpoint samples and installation of vapor barrier. Vought also had meeting with DEC Austin and DEC Nagi which resulted in approval for dewatering system coming from Water Unit and not from Spills Unit.
04/25/08-Vought-Received call from PW Grosser (Zeb Youngman) and DEC Vought already received and approved RAP including collection of endpoint samples and installation of vapor barrier.
05/20/08-Vought-Received call from and spoke to Zeb Youngman and spill from historic fill contamination which is across entire site. Phase II submitted to DEC only for one of five lots. Endpoint samples will be collected at 5' depth. 550 fuel oil tank that was emptied was also found and samples will be collected for analysis. One sample per lot due to SVOCS most likely of urban fill nature and vapor barriers will be installed or other vapor mitigation efforts.
1/13/09-Vought-Received call from and spoke to Zeb Youngman and RAP was prepared for lot 40. New information received that numerous additional lots will be used for construction. Left portion of property is historic fill which has been removed and endpoint samples were collected. Soil on east side is petroleum impacted and soil is being excavated. Site being redeveloped from condo. No construction at petroleum impacted soil. All contaminated soil will be removed from the site down to groundwater at 10'bg. No dewatering will occur. Due to development of site and petroleum contamination DEC will receive Addendum to RAP within two weeks. Vought also discussed fact that development must not proceed until a RAP is approved by the Department. 05/12/09-Vought-Received call from and spoke to PW Grosser Youngman and spill closure report will be submitted to DEC. All contamination has been removed as per endpoint and vapor barrier will be installed. Groundwater is clean as well as per Grosser.
06/16/09-Vought-Reviewed UST/Spill Closure Report dated May 2009 and received on 5/15/09 from PW Grosser. Report documents removal of three (550-gallon) fuel oil USTs and removal of petroleum impacted soils. Property formerly contained a four story residential/commercial building. Building is being constucted and four story residential townhouse buildings with basements are in the process of being constructed . The subject site previously consisted of four separate tax lots and was later divided into eight separate tax lots. A Phase II ESA was performed within the boundaries of old Lot 44 by GAC environmental in June 2006 . Construction/remediation began on the site in May 2008. WESTERN PORTION-Fill material to a depth of 5'bg. No evidence of petroleum impact or a specific contaminant source was identified... Four endpoint samples collected at a depth of 5'bg.Soil endpoint analyticals show no TAGM 4046 VOC Soil Cleanup Objective exceedences and some PAH exceedences attributable to historic fill material. EASTERN PORTION-Three (550-gallon) fuel oil USTs were discovered and USTs were empty. Following the removal of the USTs, soils in their vicinity contained visual and olfactory evidence of petroleum impact . Mr. Vought suggested that a Remedial Action Plan Addendum be prepared since RAP prepared by HydroTech did not address USTs or petroleum impacted soils . RAP Addendum was submitted to DEC on 1/15/09. A total of 1548.8 tons of impacted soil was removed. Petroleum impacted soils were excavated to approximately two feet beneath the groundwater table, which exists at approximately eight feet below sidewalk grade. Fifteen endpoint soil samples and two bottom groundwater endpoint samples were collected and analysis showed only one minor PAH exceedence. A Preprufe 300 vapor/moisture barrier was installed

FORMER CHEMICAL MANUFACTURING CO. (Continued) **S108296533**

beneath the entire foundation of the building. Report recommends No Further Action. 06/16/09-Vought-Called and spoke to PW Grosser Youngman (cell:516-807-6896) and notified him that DEC Vought never reviewed nor approved of RAP Addendum dated 1/15/09. Yougman stated that numerous messages were left with Vought and no reply was received. Vought stated that RAP was never approved and had to be submitted and that in future due to high caseload that supervision should be contacted if DEC Project Manager does not respond. Youngman to send in RAP Addendum to DEC. 07/07/09-Vought-Received copy of RAP Addendum on 6/22/09 from PW Grosser dated 1/15/09. Site consisted previously of four separate tax lots. Site formerly occupied by chemical manufacturing company. Construction of residential apartment building with full basement. Two (550-gallon) and one (1800-gallon) UST found in lot 41 and petroleum impacted soil in lots 40 and 41. Tanks removed from site. RAP includes excavation of impacted soil to clean soil and or groundwater and collection of endpoint samples and installation of a Preprufe 300 waterproofing barrier which will cover the entire footprint of the building . Due to overexcavation of site, collection of clean endpoint samples and installation of vapor moisture barrier, spill closed and NFA with cc to PW Grosser sent to: Hudson Third, LLC 826 Broadway - 11th floor New York, NY 10003 07/07/08-Vought-Scanned and Edoc'd file. Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name:	TRINTEL, GARY
DEC Memo:	"10/20/14 10:48 - Obligado - Called Mr. Trintel. 914-272-5404. Left message to call back the DEC. 11:53 - tried Mr. Trintel again, no answer. I spoke to Sean at DEP HAZMat desk. He said according to their database, this is a third party complaint in which a caller reported a citizen pouring gasoline into the tree bed after filling his remote control car. 10/22/14 - Obligado - I was finally able to speak to Mr. Trintel. He said he reported the incident because his neighbor dumped gasoline in the tree bed in front of his apartment. The neighbor uses the gasoline to power is remote control car, after filling his car, he presumably dumped the rest in the tree bed. While there were odors at the time of the incident, now there were no additional odors as the spill area. He was not able to give contact information for the spiller. I asked him to let the Department know if it happened again. 11/20/14 - Obligado - This spill closed due to seemingly small spill amount and no confirmed RP."
Remarks:	"dep received notification of spill - clean up pending"

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found
