APPENDIX C
HAZARDOUS MATERIALS

Chemical Inventory List

Table 1
Chemical Inventory List

Chemical	CAS # (W/W)
Acetic Acid	64197
Acetic Acid, Glacial	64197
Acetone	67641
Acetonitrile	75058
Acetonitrile	75058
Ammonium Acetate	631618
Ammonium Chloride	12125029
Ammonium Hydroxide	1336216
Ammonium Sulfate	7783202
1-Butanol	71363
Carbon Tetrachloride	56235
Carbon Tetrachloride	56235
Chloramphenicol	56757
Chloroform	67663
Chloroform	67663
N,N- Dimethyl Fluoride	68122
N,N- Dimethyl Fluoride	68122
Diethanolamine	111422
Butylhydroxytoluene	128370
Ethyl Alcohol, Anhydrous	64175
Ethyl Alcohol, Anhydrous	64175
Ethylene Diamine	107153
EDTA, Ethylenediaminetetraacetic Acid	60004
EDTA, Ethylenediaminetetraacetic Acid	60004
Formaldehyde	50000
Formaldehyde	50000
Formaldehyde	50000
Hydrochloric Acid	7647010
2-Propanol	67630
2-Propanol	67630
Maleic Acid	110167
Methanol	67561
Methanol	67561
2-Methylbutane	78784
Nitric Acid	7697372
Oxalic Acid	144627
Paraformaldehyde	30525894
Paraformaldehyde, 4% in PBS	30525894
Phosphoric Acid	7664382
Piperazine	110850
Reagent Alcohol	64175
Silver Nitrate, 10%	7761888
Silver Nitrate	7761888
Sodium Borate, Decahydrate	1303964
Sodium Hydroxide	1310732
Sodium Phosphate, Dibasic	7558794
Sodium Phosphate, Tribasic	10101890
Sodium Trinitride (Sodium Azide)	26628228
Sulfuric Acid	7664939
Trichloroacetic Acid	76039
Trifluoroacetic Acid	76051

Table 1 (cont'd)
Chemical Inventory List

Chemical	CAS # (W/W)
Trypan Blue (0.4%)	72571
Xylene	1330207
Photographic Developer (Working Strength)	
Water	7732-18-5 (85-95%)
Sodium Metabisuflite	7681-57-4 (<3%)
Hydroquinone	123-31-9 (<2%)
Potassium Hydroxide	1310-58-3 (<2%)
Photographic Fixer (Working Strength)	
Water	7732-18-5 (90-95%)
Ammonium Thiosulfate	7783-18-8 (8-12%)
Sodium Sulfite	7757-83-7 (<2%)
Aluminum Sulfate	10043-01-3 (<2%)
Photographic Developer Concentrate – Part 1	
Water	7732-18-5 (60-70%)
Sodium Metabisulfite	7681-57-4 (5-10%)
Hydroquinone	123-31-9 (5-10%)
Potassium Hydroxide	1310-58-3 (2-6%)
Sodium metaborates	12179-04-3 (2-6%)
Photographic Developer Concentrate – Part 2	
Water	7732-18-5 (60-75%)
Gluteraldehyde Bis-bisulfite	7420-89-5 (20-40%)
Photographic Fixer Concentrate – Part 2	
Water	7732-18-5 (70-80%)
Aluminum sulfate	10043-01-3 (20-30%)
Photographic Fixer Concentrate – Part 1	
Water	7732-18-5 (40-50%)
Ammonium Thiosulfate	7783-18-8 (40-50%)
Sodium Sulfite	7757-83-7 (5-10%)
Acetic Acid	64-19-7 (5-10%)
Fanstastik Scrubbing Bubbles All-Purpose Cleaner	
Sodium Hypochlorite	7681-52-9 (1-5%)
Sodium Carbonate	497-19-8 (1-5%)
Sodium Hydroxide	1310-73-2 (1-5%)
Lauryl Dimethyl Amine Oxide	1643-20-5 (1-5%)
Spectral Calibration Plate with VIC Dye (for ViiA7 PCR)	Not Hazardous
Spectral Calibration Plate with TAMRA Dye (for ViiA7 PCR)	
Glycerol	56-81-5 (7-13%)
Sodium Azide	26628-22-8 (<0.1%)
Spectral Calibration Plate with SYBR Green Dye (for ViiA7 PCR)	
Glycerol	56-81-5 (7-13%)
Sodium Azide	26628-22-8 (<0.1%)
Dimethyl Sulfoxide	67-68-5 (3-7%)
Spectral Calibration Plate with ROX Dye (for ViiA7 PCR)	
Glycerol	56-81-5 (7-13%)
Sodium Azide	26628-22-8 (<0.1%)
Spectral Calibration Plate with NED Dye (for ViiA7 PCR)	
Glycerol	56-81-5 (7-13%)
Sodium Azide	26628-22-8 (<0.1%)
Spectral Calibration Plate with FAM Dye (for ViiA7 PCR)	Not Hazardous
Spectral Calibration Region of Interest (for ViiA7 PCR)	
Glycerol	56-81-5 (7-13%)
Sodium Azide	26628-22-8 (<0.1%)
Normalization Plates with FAM/ROX and VIC/ROX (for ViiA7 PCR)	

Table 1 (cont'd)
Chemical Inventory List

Chemical	CAS # (W/W)
Glycerol	56-81-5 (7-13%)
Sodium azide	26628-22-8 (<0.1%)
EcoScint-O	
Phenyl Xylyl Ethane (PXE)	6196-95-8 (99-100%)
EcoScint-H	
Phenyl Xylyl Ethane (PXE)	6196-95-8 (70-80%)
Butyl Dioxitol	112-34-5 (<10%)
Linear Alkyl Phenyl Ethoxylates	9016-45-9 (20-30%)
EcoScint-A	
Phenyl Xylyl Ethane (PXE)	6196-95-8 (55-70%)
Methanol	67-56-1 (1-3%)
Linear Alkyl Phenyl Ethoxylates	9016-45-9 (30-40%)
EcoScint-O (sample)	
Phenyl Xylyl Ethane (PXE)	6196-95-8 (99-100%)
Ultima Gold	
Alkylphenol Polyglycolether	9016-45-9 (10-20%)
2-Ethylhexyl Phosphate Diethanolamine Salt	73070-48-1 (10-20%)
Sodium Dioctyl Suphosuccinate	577-11-7 (<2.5%)
Triethyl Phosphate	78-40-0 (<2.5%)
BetaPlate Scint	
Diisopropyl Naphthalene Isomers	38640-62-9 (80-100%)
Methanol	67-56-1 (<2.5%)
RadiacWash	
Ethylenedinitrilo Tetraacetic Acid Tetrasodium Salt	64-02-8 (5.7%)
Diisobutylphenoxyethoxyethyl Dimethylbenzylammonium Chloride	121-54-0 (.01%)
Citric Acide	77-92-9 (2.9%)
Octylphenol Ethoxylate	9036-19-5 (6%)
AlcarePlus	
Ethyl Alcohol	64-17-5 (30-60%)
1,1-Difluoroethane	75-37-6 (1-5%)
Isobutane	75-28-5 (1-5%)
Gunk Liquid Wrench Super Penetrant	
Carbon Dioxide	124-38-9 (<3%)
Ultra Grade 19 Oil	
Severely Hydrotreated Paraffinic Oil and Additives	Not Hazardous
Sodium Hydroxide	1310732
Sodium Hydroxide	1310732
Ammonium Chloride	12125029
EDTA	60004
Advia Perox 1	50000
Advia Perox 2	111466
ADVIA® autoRETIC	NA
ADVIA® Defoamer	Mix of: 31566311; 55965849
ADVIA® Hematology EZ Kleen / EZ Wash	111900
ADVIA® OPTIpoint	NA
ADVIA® Perox Sheath	NA
ADVIA® SETpoint Calibrator	1405103 (0.04%)
ADVIA® Sheath/Rinse	55965-84-9 (0.003%)
ADVIA® TESTpoint Hematology Control High	1405103 (0.04%)
ADVIA® TESTpoint Hematology Control Low	1405103 (0.04%)
ADVIA® TESTpoint Hematology Control Normal	1405103 (0.04%)
ADVIA® TESTpoint Reticulocyte Control High	1405103 (0.04%)
ADVIA® TESTpoint Reticulocyte Control Low	1405103 (0.04%)

Table 1 (cont'd)
Chemical Inventory List

Chemical	CAS # (W/W)
Ethyl Alcohol	64175
Isopropyl Alcohol	67630 (70%)
Clorox (8.25% Sodium Hypochlorite)	
Buffer Saturated Phenol	108952
Amplify Solution	
(-)-Arabinose	
2-Methyl-2-Butanol	
Acetic Acid	64197
Acetone	67641
Acetonitrile	75058
Acrylamide	79061
Alcohol (Ethyl)	64175
Aluminum Chloride	7446700
Arginine	
Boric Acid	
Bradford Reagent	
Caisein	
Chloroform	67663
Coomassie Blue in 30% Methanol/10% Acetic Acid	
D-Arabinose	
Dextan Sulfate	
Dextrose	
Dimethyl Sulfoxide (DMSO)	
DL-Dithiothreitol Solution (DTT)	
Ethylenediamine Tetra Acetic Acid Salt	
Methanol	
Formaldehyde 37% W/W	50000
Formamide	75127
Gel Plate Cleaning Solution	
Glycerin	
Guanidine	
Hemoglobin from Bovine	
Hemoglobin from Human	
Hydrochloric Acid	7647010
Hydrogen Peroxide	
Imidazole	
Iodoacetic Acid	
Isopropyl Alcohol	67630
L-Glutathione Oxidized	
L-Glutathione Reduced	
N-Lauroylsarcosine	
Maltose	
Maleic Acid	
Magnesium Cloride Hexahydrate	
Methanol	67561
Ni.NTA Resin in 24% Ethanol	
Paraformaldehyde	
Phenol:Chloroform: Isoamyl Alcohol (25:24:1,v\v)	
Phenol	
Polyethylene Glycol	P-3515
Potassium Chloride	
Potassium Phosphate	
Potassium Hexa Cyanoferrate Trihydrate	

Table 1 (cont'd)
Chemical Inventory List

Chemical	CAS # (W/W)
Ponceau Stain in 5% Acetic Acid	
Sodium Acetate	
Sodium Azide	26628228
Sodium Dodecyl Sulfate (SDS)	
Sodium Dodecyl Sulfate (SDS) 10%	
Sodium Hydroxide, 30%	1310732
Sodium Phosphate, Dibasic	7558794
Sodium Phosphate, Monobasic	
Sodium Phosphate, 10x Solution	
Sodium Flouride	1333831
Sorbitol	
Sypro Ruby Protein Gel Stain	
Triton-X100	
Triton-X114	
Trizol Reagent	
Tween-20	
Urea	
Isoflurane	26675467
Albumin, Bovine Serum	9048-46-8
10x Ammonium Chloride Lysing Reagent	420301
Ammonium Bicarbonate	1066337
Ammonium Chloride	12125029
Crystal Violet	548-62-9
Dextran	9004-54-0
Di-Sodium Hydrogen Phosphate Dihydrate	10028-24-7
Dulbecco's Phosphate Buffer Saline	
EDTA, 0.5M	60004
Ethyl Alcohol	64175
Isopropanol	67-63-0
Methylene Blue Solution	5285-16
Potassium Chloride	7447-40-7
Potassium Phosphate, Monobasic	7778-77-0
Sodium Chloride	7647-14-5
Sodium Chloride Solution, 0.85%	50817-5GA
Sodium Citrate Dihydrate	6132 04 3
Trizol (Phenol 30-60%, Guanidine Isothiocyanate 10-30%)	108-95-2, 593-84-0
Trypan Blue Solution (0.4%)	T8154, RNBB8457
Ficoll-Paque	17-1440-03
CryoStor	210102
Sodium Chloride Solution, 0.9%	
ZAP-OGLOBIN II Lytic Reageant (Contained Ammonium Salt 55.2 g/L, Potassium Cyanide 3.3 g/L, Sodium Nitrite 1.1 g/L, Sodium Nitroferricyanide 1.1 g/L, Cetyldimethylethylammonium Bromide 1-5%, Ethoxylated Nonylphenol<3%)	
Tetracycline	64-75-5
Ampicillin Sodium Salt	69-52-3
Penicillin-Streptomycin-Glutamine	
TMB	54827-17-7
TMB	54827-17-7
Mitomycin C	50-07-7
Mitomycin C	50-07-7
5-(N-Ethyl-N-isopropyl) Amiloride	1154-25-2
Hygromycin B	

Table 1 (cont'd)
Chemical Inventory List

Chemical	CAS # (W/W)
Amiloride Hydrochloride Hydrate	2016-88-8
Robenidine Hydrochloride	25875-50-7
Albumin, Bovine	9048-46-8
Bovine Serum Albumin	9048-46-8
Hexadimethrine Bromide	28728-55-4
L-Glutathione Reduced	70-18-8
Ampicillin Sodium Salt	69-52-3
Kanamycin Sulfate	25389-94-0
Phenol-chloroform – Isoamyl Alcohol Mixture	136112-00-0
30% Acrylamide/Bis Solution	
Chloramphenicol	56-75-7
Ammonium Persulfate	7727-54-0
Sodium Phosphate Dibasic Anhydrous	7558-79-4
Sodium Phosphate Dibasic Heptahydrate	7782-85-6
Ethyl Alcohol	64-17-5
Ethyl Alcohol	64-17-5
Methanol	67-56-1
Sulfuric Acid	7664-93-9
Acetic Acid Glacial	64-19-7
Acetonitrile	75-05-8
2-Propanol	67-63-0
Sodium Chloride	7647-14-5
Peptone	73049-73-7
Yeast Extract	8013-01-2
D(+)-Sucrose	57-50-1
D-(+)- Glucose	50-99-7
D-(+)- Glucose	50-99-7
Sodium Hydroxide Pellets	1310-73-2
Dimethyl Sulfoxide	67-68-5
Dimethyl Sulfoxide	67-68-5
Dimethyl Sulfoxide	67-68-5
Sodium Chloride Solution	
Zinc Sulfate Heptahydrate	7446-20-0
Ammonium Sulfate	7783-20-2
MES	4432-31-9
Methyl α-D-mannopyranoside	617-04-9
Trifluroacetic Acid	76-05-1
Nonidet P 40 Substitute	9016-45-9
Fyrite ,CO2 7%	
Saponin	8047-15-2
Sodium Azide	26628-22-8
Tris Buffered Saline	
Citric Acid and Silver Citrate	
Tert-Butanol	75-65-0
TEMED	110-18-9
Polyethylene Glycol	25322-68-3
LB Broth	
LB Agar	
LB Broth with Agar	
Glycine	56-40-6
Ammonium Chloride	12125-02-9
Glycyrrhizic Acid Ammonium Salt from Licorice	50531-10
Ethidium Bromide	1239-45-8

Table 1 (cont'd)
Chemical Inventory List

Chemical	CAS # (W/W)
Ethidium Bromide Solution	1239-45-8
2-Mercaptoethanol	60-24-2
2-Mercaptoethanol	60-24-2
D-Glucose	50-99-7
2-Deoxy-D-Glucose Grade II	154-17-6
Methyl sulfoxide	67-68-5
HydroTech Anti Foam Agent	68308-54-3
DEAE-Dextran Hydrochloride	
Sodium Bicarbonate	144-55-8
D-Glucose	50-99-7
Trizma Hydrochloride	1185-53-1
Sodium Cyanoborohydride	25895-60-7
Sodium Iodide Solution	7681-82-5
Guanidine Hydrochloride	50-01-1
8-Anilino-1-Naphthalenesulfonic Acid	82-76-8
Bio-Gel P100 Gel	25034-58-6
Chlorpheniramine Maleate Salt	113-92-8
Chloramphenicol	56-75-7
Menadione	58-27-5
Chlorhexidine	55-56-1
Carbonate-Bicarbonate Buffer	
Triton X-100	9002-93-1
Triton X-100 10% Solution	9002-93-1
Ponceau S Solution	6226-79-5
Glycerol	56-81-5

Re: **New York Blood Center**
Block 1421, p/o Lot 21 and Block 1441, Lots 40 and 7501
CEQR # 21DCP080M

Dear Ms. Antelmi:

The New York City Department of Environmental Protection, Bureau of Sustainability (DEP) has reviewed the September 2019 Environmental Assessment Statement, the September 2019 Phase I Environmental Site Assessment (Phase I), the September 2019 Phase II Subsurface Investigation Sampling Protocol (Phase II Work Plan) and the September 2019 Health and Safety Plan (HASP) prepared by AKRF Inc., on behalf of the New York Blood Center Inc., (applicant) for the above referenced project located between 1st Avenue and 2nd Avenue in the Lenox Hill neighborhood of Manhattan Community District 8. It is our understanding that the applicant is seeking:

1. A zoning map amendment from the New York City Department of City Planning (DCP) to rezone the project site (Block 1441, Lot 40) from a R8B zoning district to a C2-7 zoning district, as well as to rezone the remainder of the project area (Block 1421, p/o Lot 21 and Block 1441, Lot 7501), from a C1-9 zoning district to a C2-8 zoning district;
2. A zoning text amendment to Appendix F of the Zoning Resolution (ZR) to designate the project site as a Mandatory Inclusionary Housing Area;
3. A zoning text amendment to Section 74-48 of the ZR to allow, by special permit, an increase in commercial floor area ratio in C2-7 districts for medical laboratories and associated offices, and modifications to the applicable supplementary use, bulk and signage regulations;
4. A special permit pursuant to Section 74-48 of the ZR to permit flexibility of use and bulk not otherwise allowed by the proposed underlying zoning.

The proposed actions would facilitate the redevelopment of applicant-owned Block 1441, Lot 40 (Development Site) with a new 16-story, 596,200 gross square feet (gsf), commercial and community facility building. The Development Site is currently developed with the three-story New York Blood Center building, while the remainder of the project area, not controlled by the applicant (Block 1421, p/o Lot 21 and Block 1441, Lot 7501), is currently developed with two multi-story residential and commercial buildings. It should also be noted that given the existing size and use of the two buildings on the non-applicant owned sites, neither site is considered a projected or potential development site and are therefore not proposed for development.

The September 2019 Phase I report revealed that historical on-site and surrounding area land-uses consists of residential and commercial uses including the New York Blood Center, a high school, a public library, a public park, dry cleaners, a florist and greenhouses, a coal yard, a railway machinery shop, contractors yard, a dormitory, a deli, a nail shop, a car service with repair shops, a machine shop, a carpet cleaning facility, an undertaker, a church as well as several residential buildings. Regulatory databases such as the New York State Department of Environmental Conservation (NYSDEC) SPILLS, Leaking Underground Storage Tanks, Leaking Storage Tanks (LTANKS), Resource Conservation and Recovery Act Generators, and Petroleum Bulk Storage (PBS) identified several sites in close proximity to the project site. The database reported 679 LTANKS/SPILLS within a 1/2-mile radius of the project site and 87 PBS sites within a 1/8-mile radius of the project site. Based on the age of the building that currently occupies the project site asbestos containing materials, lead based paint and polychlorinated biphenyls (PCBs) could be present in the structure.

The September 2019 Phase II Work Plan proposes to install five soil borings to a depth of 20 feet below grade surface (bgs), three temporary groundwater monitoring wells and three soil vapor probes at the project site. Two soil samples will be collected from each boring. Soil samples selected for laboratory analysis will be biased towards any intervals containing urban fill material or evidence of contamination (e.g., staining, odors, elevated photoionization detector readings). Absent any such signs, one sample will be collected from the 0-2 feet bgs interval and the second sample will be collected from immediately above the groundwater interface or at the bottom of the boring if groundwater is not encountered. Ten soil samples and three groundwater samples will be collected and analyzed for volatile organic compounds (VOCs) by United States Environmental Protection Agency (EPA) Method 8260, semi-volatile organic compounds (SVOCs) via EPA Method 8270, pesticides via EPA Method 8081, PCBs via EPA Method 8082 and Target Analyte List metals (filtered and unfiltered for groundwater samples). Three soil vapor samples will also be collected and analyzed for VOCs via EPA Method TO-15.

Based upon our review of the submitted documentation, we have the following comments and recommendations to DCP:

Phase II Work Plan

- DCP should instruct the applicant that two soil samples (surface and subsurface) should be collected from each test boring, and the samples should be focused on any sections exhibiting evidence of contamination based on field screening. One surface soil sample should be collected from the upper two feet of soil (typically the 0-2 feet bgs interval) and one subsurface soil sample should be collected between 2 feet bgs and the maximum proposed excavation depth (based on visual/olfactory evidence of impacts and/or elevated soil screening readings obtained using accepted field instruments). If no evidence or elevated readings are noted during borehole advancement, the subsurface soil sample (second sample from each boring) should be collected from the two foot interval below the proposed maximum excavation depth(s) and/or the groundwater interface (whichever is encountered first).

- DCP should inform the applicant that a minimum of three (3) additional soil borings, a minimum of three (3) additional soil vapor probes and a minimum of one (1) additional temporary groundwater monitoring well should be installed on the subject property. Since the proposed project would cover the entire lot, sampling locations should also be located within the existing on-site structure.

- DCP should instruct the applicant that the soil vapor samples should be collected at a depth comparable to the expected depth of foundation footings.

- DCP should instruct the applicant that the proposed soil, groundwater and soil vapor sampling locations should be individually labeled on Figure 2, Proposed Boring Locations (e.g. SB-1, GW-1, SV-1, etc.).

HASP

- DCP should instruct the applicant that as a standard requirement, the HASP should include VOCs, SVOCs, pesticides, PCBs, and heavy metals (specifically arsenic, lead, and mercury) as potential chemicals of concern. All associated information fact sheets or safety data sheets for these potential chemicals of concern should be included.

DCP should instruct the applicant that a revised Phase II Work Plan and HASP should be submitted for DEP review and approval prior to the start of any fieldwork. Future correspondence and submittals related to this project should include the following CEQR # **21DCP080M**. If you have any questions, you may contact Ms. Cassandra Scantlebury at (718) 595-6756.

Sincerely,

Wei Yu

Re: Phase I Environmental Site Assessment
New York Blood Center – Manhattan, New York
AKRF Project Number: 190131

Dear Dr. Hillyer:

AKRF, Inc. is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced Property. This report includes the findings of a reconnaissance of the Property, an evaluation of readily available historical information and selected environmental databases and electronic records. AKRF, Inc. met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 unless noted otherwise in Section 8.0: "Limitations and Data Gaps".

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely,
AKRF, Inc.

Neoma Chefalo, MPH
Senior Environmental Professional

Michelle Lapin, P.E.
Senior Vice President

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by New York Blood Center (NYBC) to perform a Phase I Environmental Site Assessment (ESA) of 310 East 67th Street (the "Property"), as shown on Figure 1, and also identified as Block 1441, Lot 40. At the time of the reconnaissance, the Property included a three-story medical research building (including a basement) and blood donation center. The surrounding area was primarily mixed-use commercial and residential, with some institutional and healthcare uses. The Property building was constructed in 1930 and originally used as a trade school prior to being occupied by NYBC in 1964.

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC, Controlled REC and *De Minimis* Condition.

A summary of the assessment findings is presented below:

Recognized Environmental Conditions

- The Property (310 East 67th Street) was identified in the regulatory databases as a Small Quantity Generator (SQG) of hazardous wastes typically associated with medical facilities, including: barium, formaldehyde, xylene, chromium, cyanide, cadmium, spent non-halogenated solvents, corrosive wastes, ignitable wastes, pharmaceutical wastes, formaldehyde, silver, mercury, chloroform, arsenic, sodium azide and pyridine between circa 1987 and 2014. Historic and current chemical handling associated with these uses including on-site laboratories and maintenance activities could have affected subsurface conditions at the Property.
- Regulatory records did not indicate any current ASTs, however, a 2,000-gallon diesel aboveground storage tank (AST) was located in a tank room in the basement of the building that is associated with an emergency generator system. No obvious leaks or breeches were noted in connection with the tank. Oil burner applications dated 1950, 1972 and 1973 and fuel oil installation approvals were noted dated 1964 and 1976 in electronic Building Department files, indicating historical petroleum bulk storage at the facility. Undocumented releases from current or former tanks could have affected environmental conditions beneath the Property.
- Historical land use maps, site reconnaissance findings, and city directories identified nearby industrial and automotive uses between circa 1892 and 2007, including: two drycleaners on the eastern portion of the Property block; a railway machinery shop and contractors yards on the west-adjacent block; two dry cleaners on the northwest-adjacent block; a cab service facility on the southwest-adjacent block; a carpet cleaning works and a drycleaner on the southeast-adjacent block; and an auto sales and service garage immediately west of the Property. The regulatory database information indicated a closed spill of dielectric fluid associated with a transformer vault and adjacent areas immediately north of the Property building and two nearby petroleum bulk storage (PBS) facilities.

Other environmental concerns

- Bio-hazardous and laboratory wastes were stored in designated areas and removed as needed by private haulers. Several containers (ranging in size from approximately 5 to 55 gallons) of maintenance-related chemicals (i.e., water treatment chemicals and glycol) and petroleum (i.e., gear lubricants and hydraulic oil) were observed within designated basement-level mechanical areas. A portable emergency generator

was located in an interior courtyard on the northeastern portion of the basement that contained a small integral diesel supply tank; several 55-gallon drums of diesel were stored in this area with no material releases observed.

- Based on the age of the buildings, electrical equipment, caulking, hydraulic equipment and lighting fixtures may include polychlorinated biphenyls (PCB) or mercury-containing components. No obvious leaks were observed in connection with observed equipment or the lighting fixtures.
- Suspect asbestos-containing materials (ACM) were observed during the reconnaissance and included: wallboard, vinyl and ceramic floor tiles and associated mastics, joint compound, tile grout and adhesive, suspended ceiling tiles, pipe insulation, duct insulation, electrical panels, fire doors, caulks, putties, brick and block mortar, and roofing materials. Suspect ACM were noted to be in generally good to fair condition.
- Based on the age of the building, lead-based paint may be present on indoor and outdoor surfaces. Painted surfaces were observed to be in generally good to fair condition, with some damaged paint noted in mechanical areas.
- Buried demolition debris from historic on-site structures (which may include ACM, LBP, and/or USTs) and/or historic fill material may be present beneath the Property.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by New York Blood Center (NYBC) to perform a Phase I Environmental Site Assessment (ESA) of 310 East 67th Street (the Property), as shown on Figure 1, and also identified as Block 1441, Lot 40. At the time of the reconnaissance, the Property included a three-story medical research building (including a basement) and blood donation center. The surrounding area was primarily mixed-use commercial and residential, with some institutional and healthcare uses. The Property building was constructed in 1930 and originally used as a trade school prior to being occupied by NYBC in 1964.

The scope of services for this assessment was in conformance with ASTM Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice)*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Property (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; stressed vegetation, leaks, odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor, and/or groundwater) within, from, and onto the Property.
- The reconnaissance of the Property included observation of any readily visible suspect asbestos-containing materials (ACMs) and potential lead-based paint. However, no samples were collected or analyzed, and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical fire insurance maps, topographic maps, and aerial photographs for the Property and nearby properties were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Site and properties within the ASTM-specified radii: National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF) the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.
- The following state regulatory databases were reviewed to determine the regulatory status of the Property, adjacent properties, and properties within a predetermined study area; the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Sites; and Historic Utility Sites.
- Local agency reviews including NYC Fire Department records (obtained as part of the database search), online Buildings and Finance Departments records, and Environmental Quality Review (CEQR) E Designation Sites were conducted for the Property only.

2.0 PHYSICAL SITE DESCRIPTION

Visual assessment of the Property and adjacent areas was performed on August 13, 2019 by Ms. Neoma Chefalo of AKRF. Mr. Kenneth Schoenfelder, Director of Facilities Management for NYBC, provided access for AKRF and answered pertinent questions. The weather was overcast and approximately 80 °F, and the visibility good. The Property was inspected for stained surfaces, storage tanks, drums, leaking pipes, transformers, suspect asbestos-containing materials (ACMs), suspect lead-containing paint, distressed vegetation, and any other evidence of hazardous material usage and storage on-site. Photographs documenting the site inspection are included in Appendix A.

2.1 General Site Conditions

The Property included a three-story medical research building (with a basement) and blood donation center constructed of: masonry and brick; interior finishes included ceramic tile, gypsum board, plaster and concrete block walls; concrete, ceramic and vinyl floor-tiled floors; and gypsum board and suspended ceiling tiles. The building was heated by high-pressure steam provided by ConEdison. Cooling systems included a combination of window-mounted air conditioners, packaged HVAC units and chilling towers. The Property building was serviced by traction elevators.

The basement contained an employee parking garage, mechanical rooms including chiller equipment, water piping, steam piping and electrical equipment, carpentry and electrical shop areas, locker rooms, freezer/refrigeration rooms, janitorial storage areas, an autoclave room, a radioactive waste storage room, biohazardous waste storage areas, an acid neutralization tank room (for neutralizing acid wastes from laboratories within the building), a purchasing office and conference rooms. A 2,000-gallon steel diesel Aboveground Storage Tank (AST), located in a tank room in the northern portion of the basement, is used to fuel an adjacent emergency generator system; no obvious leaks or spills were noted in connection with the tank and generator equipment. The associated fill and vent piping for the AST were noted on the exterior of the northern side of the building, with no staining observed. A portable emergency generator was located in an asphalt-paved basement-level courtyard and parking area on the northeastern portion of the building that contained a small integral diesel supply tank (less than 100 gallons); several 55-gallon drums of diesel were stored in the courtyard for the mobile generator, with no leakage observed. A liquid nitrogen tank was located in an asphalt-paved courtyard was located on the southwestern portion of the building at basement level. Medical wastes were deposited in disposal receptacles throughout the building, which were collected by building personnel and placed in the designated storage areas in the basement for removal by private haulers. Hazardous wastes produced in laboratories were stored in designated receptacles and removed as needed by a private hauler. Several containers (ranging in size from approximately 5 to 55 gallons) of maintenance-related chemicals (i.e., water treatment chemicals and glycol) and petroleum (i.e., gear lubricants and hydraulic oil) were observed within designated basement-level mechanical areas. The observed containers were generally neatly stored and no significant staining or evidence of a material release was noted. Floor drains were noted in the mechanical areas and parking garage in the basement, with no staining or odors noted (some were noted to have standing water with no sheens noted). No evidence of a material release was noted in the basement.

The first floor contained laboratories, a reception area, an auditorium, offices, financial services offices, meeting rooms, a library, research areas, clinical areas, blood services and donor rooms. Entrances to the employee parking garage and a loading berth for the shipping/receiving department were located on the southeastern portion of the building along East 66th Street. The main entrance to the building was located on the northern portion of the building along East 67th Street. The

second and third floors contained offices, research laboratories including animal research areas and a clean room on the third floor (the clean room and portions of the research areas were not accessible). Portions of the third floor were undergoing renovation for new laboratory space (not accessible). Penthouse mechanical equipment included elevator machinery and air handling equipment and additional air handling units were mounted to the roof on steel dunnage. Built-up roofing materials appeared to be in fair condition.

2.2 Topography and Hydrogeology

Topography at the Property was relatively level. Based on the U.S. Geological Survey, Central Park, NY Quadrangle (2013) map, the Property is approximately 45 feet above the National Geodetic Vertical Datum of 1988 (an approximation of mean sea level).

Groundwater is anticipated to be approximately 15 to 25 feet below grade based on nearby subsurface investigations included in the regulatory database and is assumed to flow in an easterly to southeasterly direction toward the East River, located approximately 500 feet away. However, actual groundwater flow can be affected by many factors including the adjacent subway tunnels beneath Second Avenue, underground utilities, and other factors beyond the scope of this study. Groundwater in Manhattan is not used as a source of drinking water.

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

During the reconnaissance, no evidence of USTs were observed on the Property. No records of USTs were identified for the Property in regulatory databases, computerized NYSDEC records, or computerized FDNY records provided by Toxics Targeting, Inc. in the regulatory database search.

Off-site USTs are discussed in Section 5.2.2.

2.3.2 Aboveground Storage Tanks (ASTs)

Regulatory records did not indicate any current ASTs, however, an approximately 2,000-gallon diesel AST was located in a tank room in the basement of the building associated with an emergency generator system. No obvious leaks or breeches were noted in connection with the visible portions of the tank. The associated fill and vent piping were noted on the exterior of the northern side of the building with no staining observed. A portable emergency generator was located in an interior courtyard on the northeastern portion of the basement that contained a small integral diesel supply tank (less than 100 gallons); no associated staining was observed. Based on the capacity of on-site petroleum storage, all on-site petroleum storage tanks should be registered with New York State Department of Environmental Conservation (NYSDEC) and maintained in accordance with Petroleum Bulk Storage (PBS) requirements.

Off-site ASTs are discussed in Section 5.2.2.

2.4 Polychlorinated Biphenyls (PCBs) and Mercury

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Based on the age of the building, electrical equipment, caulk, hydraulic equipment, and lighting fixtures, switches and thermostats may include PCB- or mercury-containing components. No obvious leaks or odors were noted in connection with observed equipment or the lighting fixtures.

2.5 Lead-Based Paint

Lead-based paint was generally not used inside residential buildings after 1977 nationwide. After 1977, its use inside commercial structures was also restricted and its use elsewhere became less common, but lead-based paint may still sometimes be used outdoors. Lead-based paint can present a hazard, particularly to children, especially when it is in poor condition.

Based on the age of the building, lead-based paint may be present on and within the Property structure. Painted surfaces were observed to be in generally good to fair condition, with some damaged paint noted within mechanical/utility spaces. Any renovation activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—Lead Exposure in Construction).

2.6 Utilities

Consolidated Edison (ConEd) provided electricity, steam and natural gas to the Property and surrounding area. The Property was connected to the New York City municipal water and sanitary/storm sewer systems.

2.7 Waste Management and Chemical Handling

Private haulers removed solid waste from the Property, including chemical/laboratory wastes, biohazardous/medical wastes, and universal wastes. The Property was identified in the regulatory databases as a Small Quantity Generator (SQG) of hazardous wastes typically associated with medical facilities, including: barium, formaldehyde, xylene, chromium, cyanide, cadmium, spent non-halogenated solvents, corrosive wastes, ignitable wastes, pharmaceutical wastes, formaldehyde, silver, mercury, chloroform, arsenic, sodium azide and pyridine between approximately 1987 and 2014. Historic and current chemical handling associated with these uses including on-site laboratories, maintenance activities could have affected subsurface conditions at the Property.

2.8 Radon

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. It can concentrate in buildings, entering through cracks and other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithologic conditions.

The New York State Department of Health (NYSDOH) maintains a database of radon test results on a local and county level. According to NYSDOH, 119 radon tests were conducted in Manhattan in October 2018. The average basement radon level was found to be 2.05 picoCuries per liter (pCi/L), below the USEPA recommended action level of 4.0 pCi/L.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and other products. Materials containing more than one percent asbestos are

considered asbestos-containing materials (ACM). ACM are classified as either friable (i.e., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

Suspect ACM were observed during the reconnaissance and included: wallboard assemblies, vinyl floor tiles and associated mastic, joint compound, tile grout and adhesive, suspended ceiling tiles, pipe insulation, duct insulation, electrical panels, fire doors, caulks, putties, brick and block mortar, and roofing materials. Suspect ACM were noted to be in good to fair condition. ACM may also be present in other locations not readily accessible during the reconnaissance. This reconnaissance did not constitute and cannot substitute for an asbestos survey, which includes comprehensive inspection and material sampling with laboratory testing.

Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by a NYS-certified asbestos inspector to determine if the project will disturb ACM. Any such ACM (and any other ACM subsequently identified) must be removed prior to the renovation or demolition.

4.0 ADJACENT LAND USE

The Property was abutted: to the north by East 67th Street, followed by a public high school and a playground and public park; to the east by residential buildings and a public library; to the south by East 66th Street, followed by mixed-use commercial/retail and residential buildings; and to the west by a mixed-use residential building with street-level retail uses. Two dry cleaners were noted on the eastern portion of the Property block that appeared to be drop-off dry cleaning facilities (it was unclear whether actual dry cleaning activities were formerly conducted at these facilities, as they were not listed as a generators of hazardous waste in the regulatory database information).

5.0 PROPERTY HISTORY AND RECORDS REVIEW

5.1 Prior Ownership and Usage

5.1.1 Historical Land Use maps

Historical insurance maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage, or disposal on or near the Property. Specifically, Sanborn Fire Insurance Maps from 1892, 1907, 1951, 1976, 1979, 1980, 1982, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004, and 2005 were reviewed.

1892

The Property comprised undeveloped land.

The Property block included stores and dwellings west of the Property along Second Avenue; the remainder of the block was vacant. The north-adjacent block contained a florist with greenhouses and sparse dwellings. The south-adjacent block contained a coal yard, stores and dwellings. Industrial uses, including a railway machinery shop and contractors yards, were noted to the west across Second Avenue.

1907

The Property contained dwellings on the northern portion fronting East 67th Street and vacant land on the southern portion.

The Property was abutted to the east by a public library and residential structures, with additional dwellings (some with stores) on the eastern portion of the Property block. A

trade school dormitory was located immediately west of the Property along East 67th Street. Denser residential development was shown on blocks west and northwest of the Property. A cab service facility with repair shops, machine shops and a sub-station occupied the southwest-adjacent block. The southeast-adjacent block contained stores, dwellings, a contractors yard and a carpet cleaning works.

1951

The Property building was show in its current configuration, labeled as the NY Trade School with a construction date of 1930.

An undertaker was noted on the eastern portion of the Property block. The north-adjacent block was occupied by a girls High School and a playground. A church complex was noted on the east-adjacent block along First Avenue. Vacant land was noted on the south-adjacent block along Second Avenue in place of residential structures noted on prior maps. A large apartment building with stores along Second Avenue occupied the southwest-adjacent block (formerly a cab facility in 1907).

1976

The Property building was relabeled as the NY Blood Center.

A mixed-use commercial/residential building with auto sales and a parking garage was constructed immediately west of the Property and additional mid-rise residential structures replaced dwellings and stores noted on prior maps on the eastern portion of the Property block. A commercial plaza with banks, a movie theater and furniture store was noted on the western portion of the south-adjacent block. A dry cleaner was noted on the southeast-adjacent block along First Avenue. Additional mid- and high-rise mixed use retail/residential structures were developed on blocks north and northwest across Second Avenue, in place of low-rise dwellings and storefronts noted on earlier maps.

1979 – 1988

The Property and surrounding area appeared similar to the 1976 Sanborn map.

1991 – 1996

The Property appeared similar to the 1988 Sanborn map.

The dry cleaner on the southeast-adjacent block noted on prior maps was no longer depicted.

2001 – 2005

The Property and surrounding area appeared similar to the 1996 Sanborn map.

In summary, historical Sanborn maps indicated that the Property was vacant land since at least 1892 and contained dwellings on the northern portion by 1907. The current Property building was constructed in 1930, initially used as a Trade School, and later occupied by NYBC by the 1976 Sanborn map.

The surrounding neighborhood was primarily mixed-use, with some industrial and automotive uses noted between 1892 and 2007, including: a railway machinery shop and contractors yards to the west across Second Avenue; a cab service facility with repair shops, machine shops and a sub-station on the southwest-adjacent block; a carpet cleaning works and a drycleaner on the southeast-adjacent block; and auto sales and a parking garage immediately west of the Property.

5.1.2 Property Tax Files and Zoning Records

Based on NYC Department of City Planning's Primary Land Use Tax Output (PLUTO) information provided by Toxics Targeting, Inc. of Ithaca, New York, the Property is zoned as R8-B (Residential). The Department of Finance Building Classification is I1-Hospitals & Health.

5.1.3 Recorded Land Title Records

Copies of title records were not provided to AKRF for review. Copies of title records were not provided to AKRF for review. A review of computerized New York City Automated City Register Information System (ACRIS) records, which included records of financial transactions involving the Property, identified no environmental liens or use restrictions for the Property.

5.1.4 Local Street Directories

A review of historical city directories was conducted. The following table (Table 1) presents descriptions and interpretations from the historical city directory review:

Table 1
Historical City Directories

Year	Comments
1920	**Property:** Residential **Surrounding Properties:** Residential; Commercial; auto Supplies
1931	**Property:** Residential **Surrounding Properties:** Residential; Commercial
1938	**Property:** Trade School **Surrounding Properties:** Residential; Commercial
1950	**Property:** Trade School **Surrounding Properties:** Residential; Commercial; La Marne Cleaners and Dyers (1285 Second Avenue/northwest-adjacent block); Orion Laundry & Cleaners (1293 Second Avenue/northwest-adjacent block)
1963	**Property:** Trade School **Surrounding Properties:** Residential; Commercial; 301 East 66th Garage Corp. (West-adjacent to Property); Cole Leather Cleaners, Bowman Cleaners (1287 Second Avenue/northwest-adjacent block)
1973	**Property:** NYBC **Surrounding Properties:** Residential; Commercial; The Tourist Auto Service, Martin Motor Sales (1270 Second Avenue/west-adjacent to Property)
1978	**Property:** NYBC; New York New Jersey Regional Transplant Program **Surrounding Properties:** Residential; Commercial
1983	**Property:** NYBC **Surrounding Properties:** Residential; Commercial; IZZ Auto Repair (318 East 66th Street/south-adjacent block)
1998	**Property:** NYBC **Surrounding Properties:** Residential; Commercial
2000	**Property:** NYBC **Surrounding Properties:** Residential; Commercial; Carlton Tower Cleaners (1275 Second Avenue/west-adjacent block)

Year	Comments
2006	**Property:** NYBC **Surrounding Properties:** Residential; Commercial; Top quality Cleaners (348 East 66th Street/Property block)
2014	**Property:** NYBC **Surrounding Properties:** Residential; Commercial; Top quality Cleaners (348 East 66th Street/Property block)

A review of historic city directories indicated that the Property historically included residential uses that were replaced by a Trade School by 1938 and subsequently by NYBC, as noted in the 1973 through 2014 directories. A copy of the City Directory report is provided in Appendix C. The following nearby industrial facilities were identified:

- La Marne Cleaners and Dyers (1285 Second Avenue/northwest-adjacent block) and Orion Laundry & Cleaners (1293 Second Avenue/northwest-adjacent block) in the 1950 directory;
- 301 East 66th Garage Corp. (west-adjacent to Property) in the 1963 directory;
- Cole Leather Cleaners and Bowman Cleaners (1287 Second Avenue/northwest-adjacent block) in the 1963 directory;
- The Tourist Auto Service, Martin Motor Sales (1270 Second Avenue/west-adjacent to Property) in the 1973 directory;
- IZZ Auto Repair (318 East 66th Street/south-adjacent block) in the 1983 directory; and
- Top quality Cleaners (348 East 66th Street/Property block) on the 2006 and 2014 directories.

Such uses have some potential to have affected subsurface conditions at the Property.

5.2 Regulatory Review

The regulatory database report, provided in Appendix D, was obtained from Toxics Targeting, Inc. of Ithaca, New York. It includes summaries of the databases searched, their radii around the Property, and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13 outlined standards.

5.2.1 Federal

The federal databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the USEPA Civil Enforcement Docket; and the Air Discharge Facilities (ADF). The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

National Priority List (NPL)

The NPL is the USEPA's list of sites that probably require remedial action under the Superfund Program. Nearby NPL sites can sometimes pose a risk of stigmatizing surrounding properties and thus impacting property values.

No NPL sites were identified within a one-mile radius of the Property.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of sites which the USEPA has investigated, or plans to investigate, pursuant to the Superfund Act of 1980 (CERCLA). As such, some of these sites may ultimately present concerns and others may not (but could still pose a perceived concern). Former CERCLIS sites that have been granted the status of No Further Remedial Action Planned (NFRAP) are also included in this database.

No CERCLIS sites were identified within a ½-mile of the Property.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

The Property was not listed on the ERNS database.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

No TRIS sites were identified within a ⅛-mile radius of the Property.

Permit Compliance System of Toxic Wastewater Discharge (WWD)

This database includes certain sites which discharge wastewater containing potentially hazardous chemicals.

No WWD facilities were reported within ⅛-mile of the Property.

United States Environmental Protection Agency Civil Enforcement Docket

This database tracks civil judiciary cases filed on behalf of the USEPA by the Department of Justice.

No facilities were listed in USEPA's Civil Enforcement Docket within ⅛-mile of the Property.

Air Discharge Facilities (ADF) Index

This federal database includes information on certain air emission sources.

Three ADF facilities were identified within a ⅛-mile radius of the Property. Based on the listing details, distances, and/or inferred groundwater flow direction, these listings are not likely to have affected the Property subsurface.

5.2.2 State

The state records reviewed included listings of hazardous material spills; Resource Conservation and Recovery Act (RCRA) Notifiers; Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); State Hazardous Substance Waste Disposal Sites (SHSWDS); Major Oil Storage Facilities (MOSF); Brownfield Sites; Historic Utility Sites; Environmental Restoration Program (ERP) sites; Voluntary Cleanup Program (VCP) sites and Brownfield Cleanup Program (BCP) sites.

New York SPILLS Database

This database includes releases reported to the NYSDEC, including tank test failures (for USTs only) and tank failures.

A total of 679 spills were reported within a ½-mile radius of the Property, including 13 active-status spills and 666 closed-status spills. Of these, the following indicated potential environmental concerns based on distance/direction and/or listing details:

- A spill associated with a transformer vault located at 304 East 67th Street (apparently within the sidewalk immediately north of the Property building) was reported in October 2003 due to apparent dielectric oil released on top of the transformer and onto the surrounding sidewalk surface and a nearby tree plot. The file notes indicted that corrective actions were initiated, including the removal of affected soil from the tree pit and the transformer was drained and cleaned and subsequently replaced. The spill was closed in June 2005.

Based on listing details, including nature of the spills, distance from the Property, and/or inferred groundwater flow direction, this spill and the remaining listed spills would not be expected to have significantly affected subsurface conditions at the Property. Details from all spills are included in Appendix D.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

This database lists sites that have filed notification forms regarding hazardous waste activity, including: treatment, storage and disposal facilities (TSDs); small-quantity (SQG) and large-quantity generators (LQG); and transporters regulated under RCRA. The discussion below includes any CORRACTS listings of facilities that are subject to corrective action under RCRA.

One CORRACTS site was listed within a one-mile radius of the Property, however, given its distance and the intervening East River, it is not expected to represent an environmental concern. Two TSD facilities were listed within a ½-mile radius of the Property and 220 Generators/Transporters (including the Property) were reported within a ⅛-mile radius of the Property. The Property was listed with the following information:

- The Property (310 East 67th Street) was identified in the regulatory databases as a Small Quantity Generator (SQG) of hazardous wastes typically associated with medical facilities, including: barium, formaldehyde, xylene, chromium, cyanide, cadmium, spent non-halogenated solvents, corrosive wastes, ignitable wastes, pharmaceutical wastes, formaldehyde, silver, mercury, chloroform, arsenic, sodium azide and pyridine between approximately 1987 and 2014. No violations were reported.

Based on their locations or listing details (i.e., waste type), the remaining RCRA facilities, are not anticipated to affect environmental conditions at the Property.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

No CBS facilities are listed within a ⅛-mile radius of the Property.

Solid Waste Facilities (SWF)

This database includes certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

One Solid Waste Facility was identified within a ½-mile radius of the Property. Based on its distance from the Property and listing details, the facility would not be expected to have affected the Property subsurface.

Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

An approximately 2,000-gallon diesel AST was located in a tank room in the basement of the building associated with an emergency generator system; the AST was not listed in PBS records and does not appear to be registered with NYSDEC. The tank should be registered with the NYSDEC Region 2 PBS Unit, as facilities containing bulk storage tanks with more than a 1,100-gallon capacity are required to be registered. Eighty-seven PBS facilities were identified within a ⅛-mile radius of the Property. Details for the nearest off-site listings are provided in Table 2:

Table 2
Petroleum Bulk Storage Facility Data

Location	Capacity (gallons)	Product Stored	Install Date	Status	Approximate Distance/Direction from Site
NYPL 328 East 67th Street	2,500 (N/L)	N/L	N/L	N/L	East-adjacent
321 East 66th Street Facility ID: 2-612403	5,000 AST	No. 4 Fuel Oil	1972	In Service	East-adjacent
333 East 66th Street Facility ID: 2-600586	10,000 UST 10,000 AST	No. 4 Fuel Oil	1965 2006	Closed-In-Place In-Service	200 feet East

Table notes: N/L-Not Listed; UST-Underground Storage Tank; AST-Aboveground Storage Tank

Based on listing details, distance from the Property, and/or inferred groundwater flow direction, the remaining listed PBS facilities would not be expected to have significantly affected the Property. Details of the additional PBS facilities located within ¼ mile of the Property are included in Appendix D.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

Seven State Inactive Hazardous Waste Disposal Sites were reported within a one-mile radius of the subject property. Given their distances from the Property and/or inferred cross/downgradient groundwater locations, these facilities are not anticipated to have affected subsurface conditions beneath the Property.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks certain sites that were not listed on SHWS, but may still require investigation and/or cleanup.

No SHSWDS facilities were identified within a ½-mile radius of the Property.

Major Oil Storage Facilities (MOSF) Database

These facilities have petroleum storage of 400,000 gallons or more.

No Major Oil Storage Facilities were reported within a ½-mile radius of the Property.

Historic Utility Facilities

This is an inventory of selected power generating facilities, manufactured gas plants and storage facilities, utility maintenance yards and other gas and electric utility sites identified in various historical documents, maps and annual reports from 1898 to 1950.

No Historic Utility Facilities were listed within ⅛-mile of the Property.

Environmental Restoration Program

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

No ERP sites were identified within a ½-mile radius of the Property.

Voluntary Cleanup Program/Brownfield Cleanup Program

The Voluntary Cleanup Program (VCP) is a NYSDEC program for investigation and remediation of (generally) privately-owned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present. The Brownfield Cleanup Program (BCP) program is the successor to the Voluntary Cleanup Program. Again, some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Three VCP and one BCP sites were identified within ½-mile of the Property. Based on distances from the Property and/or inferred groundwater flow locations, these listings are not anticipated to affect the Property subsurface.

New York City (E) Designation Site Listing

A New York City (E) designation for a property requires that the owner conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the New York City Office of Environmental Remediation (NYCOER) before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements).

The Property was not assigned E-designations, per the database information.

5.2.3 Local Agency File Review

Records available online from the New York City Fire, Buildings and Finance Departments were viewed for the Property (Appendix C). The Fire Department records were obtained by Toxics Targeting, Inc. as part of the regulatory database search

(Appendix D). Since the records typically address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials, e.g., petroleum tank installation applications and permits, and records indicating prior uses.

Fire Department (FDNY)

The computerized FDNY Tanks database was provided by Toxics Targeting regarding past or current motor vehicle fuel and heating oil tank listings within a ⅛-mile radius of the Property. No tank information was provided for the Property in the FDNY Tanks database.

Buildings Department (DOB)

Computerized Buildings Department records for the Property tax lot identified the following:

- A 1930 Certificate of Occupancy (C of O) for a three-story building with a basement, occupied by a trade school.
- A 1964 Temporary C of O (TCO) for a three-story building with a basement , occupied by: a trade school with a blood bank and boiler room in the basement; an auditorium, laboratories and administrative areas on the first floor; and lecture rooms and trade school shops on the upper floors. A fuel oil approval was identified on the certificate.
- A 1976 C of O for a three-story building with a basement, occupied by: offices, mechanical space, parking spaces, freezer rooms, laboratories and a liquid nitrogen storage tank in the basement; an auditorium, blood banks, laboratories and administrative areas on the first floor; and laboratories, research rooms, cold rooms and administrative areas on the upper floors.
- Oil burner applications dated 1950, 1972 and 1973.

Department of Finance

Electronic property transaction records for the Property Block and Lot were reviewed from the New York City Department of Finance Office Automated City Register Information System (ACRIS). No relevant files were identified.

New York City Department of Environmental Protection (NYCDEP)

AKRF sent a Freedom of Information Law (FOIL) request to the NYCDEP September 4, 2019 pertaining to environmental records. As of the date of this report, NYCDEP has not responded to the records request. If issues of potential concern are noted upon receipt of this information, an addendum to this report will be created to discuss relevant findings.

5.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable; and useful, accurate and complete in light of the objective of the records review. These records include:

- Local brownfields lists
- Local lists of landfill/solid waste disposal sites
- Local lists of hazardous waste/contaminated Sites

- Local lists of registered tanks
- Local land records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Fire Department
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

In addition to the Local Agency File Review, AKRF sent a FOIL request to the New York State Department of Environmental Conservation (NYSDEC) Region 2 on September 4, 2019 for the Property to determine whether pertinent environmental records for the Property could be obtained for further review. As of the date of this report, NYSDEC has not responded to the records request. If issues of potential concern are noted upon receipt of this information, an addendum to this report will be created to discuss relevant findings.

In AKRF's judgment, no such additional local records meeting the ASTM criteria are pertinent for the Property.

6.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that the client provide any pertinent information regarding the Property, specifically:

- The reason for performing the Phase I ESA;
- Whether they were aware of any pertinent current or historic activities at or near the Property, including but not limited to: hazardous substances or petroleum, waste management practices, filling or disposal drains, septic/sewer systems, and potable and non-potable wells;
- Owner and occupant information and whether they were aware of any previous Phase I ESAs or other potentially pertinent reports, plans or information;
- Whether any *environmental liens* or *activity and land use limitations* are in place or filed or recorded against the Property or whether there was pending, threatened, ongoing or past violations, litigation or enforcement action relevant to hazardous substances or petroleum products;
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of the chemicals used by this type of business);
- Whether the (anticipated) purchase price reflects that the Property is or could be contaminated; and
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property including current/past uses of the Property and adjacent properties.

The Phase I ESA was conducted to provide preliminary environmental information as part of due diligence for the proposed renovation/redevelopment of the Property buildings. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report.

7.0 PREVIOUS STUDIES

No previous studies were provided.

8.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- Certain restricted areas within the building, including patient/donor rooms, clean rooms, infectious and radioactive waste areas, sterilization areas, areas undergoing renovation and private offices were not accessible for inspection.
- Surface features and/or staining may have been obscured by cars that were parked on exterior portions of the Property.
- Interviews and user provided information were limited to those discussed in Section 6.0. To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- The Property area history was not conducted in five-year intervals. However, sufficient information about the history of the site and surrounding area could be obtained from the available historical Sanborn and topographic maps, Buildings Department records, and interviews, and this data gap is not likely to alter the conclusions of this report.
- Agency file reviews for the Property and adjacent properties consisted of a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 5.2). AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.

9.0 FINDINGS

A summary of the assessment findings is presented below:

Recognized Environmental Conditions

- The Property (310 East 67th Street) was identified in the regulatory databases as a Small Quantity Generator (SQG) of hazardous wastes typically associated with medical facilities, including: barium, formaldehyde, xylene, chromium, cyanide, cadmium, spent non-halogenated solvents, corrosive wastes, ignitable wastes, pharmaceutical wastes, formaldehyde, silver, mercury, chloroform, arsenic, sodium azide and pyridine between circa 1987 and 2014. Historic and current chemical handling associated with these uses including on-site laboratories and maintenance activities could have affected subsurface conditions at the Property.
- Regulatory records did not indicate any current ASTs, however, a2,000-gallon diesel aboveground storage tank (AST) was located in a tank room in the basement of the building that is associated with an emergency generator system. No obvious leaks or breeches were noted in connection with the tank. Oil burner applications dated 1950, 1972 and 1973 and fuel oil installation approvals were noted dated 1964 and 1976 in electronic Building Department files, indicating historical petroleum bulk storage at the facility. Undocumented releases from current or former tanks could have affected environmental conditions beneath the Property.
- Historical land use maps, site reconnaissance findings, and city directories identified nearby industrial and automotive uses between circa 1892 and 2007, including: two drycleaners on the eastern portion of the Property block; a railway machinery shop and contractors yards on the west-adjacent block; two dry cleaners on the northwest-adjacent block; a cab service facility on the southwest-adjacent block; a carpet cleaning works and a drycleaner on the southeast-adjacent block; and an auto sales and service garage immediately west of the Property. The regulatory database information indicated a closed spill of dielectric fluid associated with a transformer vault and adjacent areas immediately north of the Property building and two nearby petroleum bulk storage (PBS) facilities.

Other environmental concerns

- Bio-hazardous and laboratory wastes were stored in designated areas and removed as needed by private haulers. Several containers (ranging in size from approximately 5 to 55 gallons) of maintenance-related chemicals (i.e., water treatment chemicals and glycol) and petroleum (i.e., gear lubricants and hydraulic oil) were observed within designated basement-level mechanical areas. A portable emergency generator was located in an interior courtyard on the northeastern portion of the basement that contained a small integral diesel supply tank; several 55-gallon drums of diesel were stored in this area with no material releases observed.
- Based on the age of the buildings, electrical equipment, caulking, hydraulic equipment and lighting fixtures may include polychlorinated biphenyls (PCB) or mercury-containing components. No obvious leaks were observed in connection with observed equipment or the lighting fixtures.
- Suspect asbestos-containing materials (ACM) were observed during the reconnaissance and included: wallboard, vinyl and ceramic floor tiles and associated mastics, joint compound, tile grout and adhesive, suspended ceiling tiles, pipe insulation, duct insulation, electrical panels, fire doors, caulks, putties, brick and block mortar, and roofing materials. Suspect ACM were noted to be in generally good to fair condition.

- Based on the age of the building, lead-based paint may be present on indoor and outdoor surfaces. Painted surfaces were observed to be in generally good to fair condition, with some damaged paint noted in mechanical areas.
- Buried demolition debris from historic on-site structures (which may include ACM, LBP, and/or USTs) and/or historic fill material may be present beneath the Property.

10.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Neoma Chefalo, MPH
Senior Environmental Professional

Michelle Lapin, P.E.
Senior Vice President

11.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice.*

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the property and the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than NYBC and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AKRF, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
