Caller Remarks:

spill to black top and concrete

DEC Investigator Remarks:

EMIS# 243128

10/16/2015 − Feng − Duty Desk. Talked to Paul Walsh of ERT (212−580−8383). It is 3 oz of unknown oil mixed with water in the tank room where it is unable to get into in 2 hours. It is near Tank #4, but it is not from the tank. They did sample for Oil ID and PCBs. Once the result comes back, then the cleanup will be in place. Assigned the spill to Con Ed Unassigned.

3/9/17 − Austin − Spill was discovered when Con Ed was repairing an anchor bolt on a #6 FO tank − Lab analysis found that oil resembled lube oil not # 6 − Con Ed contained and cleaned up the spill, and completed the bolt repair − See document files for further information − Spill closed − end

Caller Remarks:

DOES HAVE THE POTENTIAL OF REACHING A WATER WAY NRC WAS NOTIFIED; NOT YET CLEANED AND NO REF # AT THIS TIME;

DEC Investigator Remarks:

10/20/08 − See eDocs for Con Ed report detailing cleanup and closure. 8/21/2008 Sangesland spoke to Con Ed ERTS Desk − #6 oil droplets found inside tunnel − remediationwork was being done. Former intake tunnel for a condensor at the generation station. 1500 ft long between generation station and East River. Tunnel had been plugged and taken out of service several years ago. Water in tunnel was stagnent. Divers were in the tunnel doing drilling work near the bedrock when they discovered the oil drips. Ken's Marine was called and put out booms on the East River near the plugged end of the tunnel. Tunnel is secure and now they are trying to figure out the source of the oil.

08/22/08 I spoke with Gwen Keeble of ConEd, she said they identified the oil as weathered cable oil , mostly in sediment.They cleaned out the contaminated sediment and water last night and now awaiting the PCB analysis result.(sr)

11/20/08 − Austin − Spoke with Joe O'Connell, who is handling 0607574, et. al. This spill may be related to the aforementioned

spill reports, which may related to an open remediation project assacoated with the three spill reports listed above. $/18/08 entry in EMIS states emis # is open until clean up is done in kero area.Also need to determine if additional investigation is needed by DEC. #0713073 assigned to Joe O'Connell for determination on this − end

11/18/2016 ˇ Austin ˇ This spill report is being transferred from Joe O´Connell to Jennifer Kann − end.

06/06/17: J.Kann − As per Vought, spill assigned to Kumar.

06/09/17−Hiralkumar Patel. the subject spill case was reported due to findings of 4 gal of unknown oil in package boiler east side trench. as per emis note dated 04/18/2008, Allstate vacuumed out and power washed trenches East and North of PB fuel oil moat. they also dug out by the east remanants of old manhole and dug out by East wall.

case closed based on nature of spill (oil found in trench in basement), site location (power generating station) and review of available information.

Report says this was boring 8A in basement of T−11 east of Desup storage tank. Work is for future York substation. Samples being analyzed.

8/15/07: Spoke with Kerri−Ann Southwell, EH&S Manager for E74th St station. While drilling structural boring B−9, approximately 12 ft south of B−8, evidence of petroleum odors was detected in weathered bedrock core. The core section was from 5'2 to 7'6 . Petroleum odors not detected throughout entire core, just small section that was broken apart. Structural borings are being advanced in anticipation of construction of the York Ave Substation at the facility. See also spill no. 0705588. (JHO)

8/17/07: e−mail from Kerri Southwell with lab results indicating lube oil. See eDocs. (JHO)

9/13/07: closed − use 0705588 to track. (JHO)

207587

DEC Investigator Remarks:

207587 and 207590. see eDocs

8/15/07: Spoke with Kerri−Ann Southwell, EH&S Manager for E74th St station. While drilling structural boring B−8 encountered weathered #6 oil at 3'4 down to a depth of 9' and continuing. Structural borings are being advanced in anticipation of construction of the York Ave Substation at the facility. See also spill no. 0705593. (JHO)

8/17/07: e−mail from Con Ed (Southwell): Below are the lab results from borehole #8A, DEC Spill # 0705593 (emis # 207590), which indicate presence of lube oil. Please note that this boring was continued and no further evidence of petroleum contamination was detected. In that boring location depth to bedrock started at approximately 2 ft bg and continued to approximately 9 ft 7 inches bg (where boring was terminated). See eDocs for lab results. (JHO)

8/17/07: second e−mail from Con Ed (Southwell): I just updated emis 207590 (Spill # 0705593) for 74th St with the following, please let me know if you have any questions. While drilling B−9, approximately 12 ft South of B−8, evidence of petroleum odors was detected in weathered bedrock core. The core section was from 5 ft 2 inches to 7 ft 6 inches. Petroleum odors not detected throughout entire core, just a small section that was broken apart. (JHO)

8/20/07: e−mail to Con Ed (Southwell): Please clarify: boring 8A, also called boring 9 in the emis report (emis no 207590, DEC no. 0705593) went to what depth? No further contamination was noted in 8A beyond 9' (so thickness of contaminated layer was from about 5'2 to 7'6 '?). Was there any visual evidence of contamination in this boring, or just petroleum odor ?

In boring 8 (emis no. 207587, DEC no. 0705588) went to what depth? Was there any further oil contamination (weathered #6 oil) below the 9 foot depth? Was a sample collected from this boring for oil ID? (JHO)

8/22/07: e−mail from Con Ed (Southwell): Below I try to explain in more detail the 3 boring locations were we got hits for evidence of petroleum contamination. I'm in the process of updating the emis reports, which will be forwarded to you. Plus, I will forward the lab results from our borings.

EMIS 207587 (DEC # 0705588) and EMIS 207590 (DEC # 0705593) While doing structural borings for the future York Substation, evidence of petroleum contamination and/or petroleum odors were detected in three(3) separate boring locations. (See details below). All three borings were in relatively close proximity to one another and all under the T−11 area of the plant. Lab analysis (see Lab sequence numbers 07−07501, 07−07502, 07−07541) also indicates the petroleum to be a type of lubricating oil.

Con Ed requests emis 207590 (DEC # 0705593), be closed out and cross referenced to emis 207587 (DEC # 0705588).

B−8 Petroleum contamination encountered at 3 ft 4 inches until approximately 9ft, where boring was terminated. (All sand, no bedrock − substance black weathered #6 oil like) Lab results (LSN 07−07541, to be a heavy lube oil, like gear oil).

B−8A Evidence of shallow petroleum contamination encountered at approx. 9 inches, no further contamination encountered. Bedrock in this boring encountered at approx 2 ft below slab and extended to approx. 9 ft 7 inches, where borehole was terminated. (LSN 07−07501 no PCBs, and LSN 07−07502 lube oil).

B−9 evidence of petroleum odors encountered in weathered bedrock from approximately 5 ft 2 inches to 7 ft 6 inches. Borehole was terminated at 12 ft 6 inches with no further evidence of petroleum contamination or odors. See eDocs for lab results. (JHO)

8/23/07: e−mail from Con Ed (Southwell): For your convenience I've update the 2 emis reports (see attached) and now emis 207590 is ready to submit for DEC approval. Please take a look and let me know if you would like for me to add anything additional. Again, we would like to close out and consolidate emis 207590 to the original emis 207587, because all borings were done in relatively close proximity to each other and lube oil (heavy and light) was the contaminant detected. See eDocs for 2 reports. (JHO)

8/27/07: e−mail from Con Ed (Southwell): This past Saturday, 3 core holes were drilled to 18 inches below the slab in the kerosene impacted area, west of the tank room. These core holes are done first and then the drill rig goes back to these areas and drills to approximately 10 ft into the bedrock. In three areas kerosene odors were detected. These are in relative area of Langan's GP5N, GP5N1 and GP5N5. See spill no. 0607574 for further details regarding this area. (JHO)

8/31/07: e−mail from Con Ed (Southwell): more kerosene odors were detected in B−1 approximately 2 ft below slab. We believe this location to be very close to Langan's GP5N6 hole and in the impacted area. See sp 0607574. (JHO)

9/5/07: sent e−mail to Con Ed (Southwell) requesting drawing of boring locations. (JHO)

9/9/07: e−mail reply from Con Ed (Southwell): as soon as we receive the as−built drawings from our contractor, I'll forward that along to you. (JHO)

9/10/07: e−mail to Con Ed (Southwell): What is the time frame for the as−built? Was the boring work undertaken without a drawing showing proposed locations? (JHO)

9/13/07: Spill number 0705593 has been closed and sp 0705588 will be used to track all investigation and remediation related to geotech borings. (JHO)

9/18/07: sent second e−mail to Con Ed (Southwell) requesting drawing of boring locations. (JHO)

9/18/07: e−mail reply from Con Ed (Southwell): Our contractor will be returning late this week or early next week to complete his survey of the boring locations. I will get an ETA on completion of the drawing this afternoon. The borings were completed off of a drawing that showed proposed locations which were adjusted in the field to meet existing conditions.

I responded as follows: In the meantime can you mark up a copy of the drawing that Langan prepared for the kero tank area and show the approximate locations of the new borings? (JHO)

9/26/07: response from Con Ed (Southwell): Attached is Langan's map, where I hand written in the approximate locations where kerosene was detected during the structural borings in the basement. This map doesn't include the locations under T−11, because Construction is still waiting on as−builts from their vendor. See eDocs for sketch. (JHO)

see spills 0713073, 0712848 and 0607574.

7/9/13 − received updated emis report 7/1/13, sent request for information via July 9 email, which included in part:

I am requesting information/documentation for this spill. I understand the argument that is being made that Con Edison believes the product identified is actually a concrete form release product, but I would like to see some of the supporting documentation

as is described in the emis report. There were three borings for which some variety of impact was noted: borings #8, #8a, and #9 and all are described as being in the T−11 area of the plant, and are also noted as being proximate to the plant's cooling water intake and discharge tunnels. It seems as though, based on the comments included by Craig Little, that there is some kind of report available from the original investigation. Please provide me with copies of: the report or documentation for the investigation, which should include at least a figure/drawing(s) which shows the boring locations; if not included in the report figure, a figure which shows the location of the borings in relation to the intake/discharge tunnels; the boring logs; and the New York City Transit drawing from 1952 that Craig mentions.

Receiving the documentation in pdf format would be preferred. (JOC)

8/8/13 − The information requested above was received via email on 8/5. This spill was reported due to finding what was described as #6 fuel oil odors in a soil boring (B−8) which was being installed as part of a potential substation construction project within the generating station building. A second spill (0705593) was called in the same day for finding what was described as an unknown substance encountered in another boring (B−8A). The second spill was closed/consolidated at the time with this spill. A third finding of impact (consisting of petroleum odors) was noted in another boring (B−9). The three borings were located in relatively close proximity to each other inside the building, which were surrounded by other borings showing no impacts. The laboratory analysis concluded that it was similar to a heavy lubricating or gear oil. Con Edison believes the material is form−release oil from the construction of the facility intake and discharge tunnel structures, to which these borings were immediately adjacent. No other source for this residual material is apparent. Based on the limited area of impact, and the infeasibility of any remedies to address this residual material located beneath the concrete floor slab (with variable thickness from nine inches to almost five feet), the shallow bedrock and location between the two tunnel structures, this spill is closed. (JOC)

CONED # 202750

DEC Investigator Remarks:

Con Ed no. 202750 − see eDocs.

10/19/06: Investigation / Remedial action work plan received from Angel Chang (Con Ed remediation) − plan prepared by Langan Engineering. Contacted Chang by phone to relay the following comments: 1) All sample results must be compared to TAGM instead of STARS. 2) Provide a map and/or sketch of the area where the remedial investigation will take place. 3) Provide more detail in plan regarding number of borings proposed, locations, etc. 4) Plan must be signed/stamped by PE. (JHO)

10/23/06: Langan submits revised plan, which does not address items (2) and (3), above. Sent e−mail to Michael Burke (Langan project manager) requesting a map and information regarding the number of borings and locations. (JHO)

10/24/06: Langan submits site plan showing boring locations. E−mailed Burke comments: The drawing is not complete. It needs to include the following information: 1) The drawing shows 12 boring locations, but your e−mail indicates that only 5 are proposed initially. Which 5 are the initially proposed borings? 2) The location of the initial finding of oil should be shown, so that the adequacy of the boring plan can be assessed. (JHO)

10/25/06: revised drawing submitted which addresses all coomments. E−mail approval sent to Angel Chang. (JHO)

11/3/06: Formal approval letter for RI/RAWP sent. (JHO)

11−8−06. Breen met with Plt EH&S Manager, Kerri−Ann Southwell, Angel Chang, Frank Radoslovic, Jimena Ibanez and Michael Burke, consultant from Langan. Investigation of stained soil and odor will continue with borings into concrete floor to delineate extent.

11/10/06 − e−mail from Langan (Michael Burke) to DEC Breen: As we discussed on Wednesday, November 8, 2006, the work proposed in response to the kerosene spill in the basement of the East 74th Street Station (NYSDEC Spill No. 0607574) will proceed as detailed in the NYSDEC approved work plan, dated October 24, 2006. Additional actions that were not addressed in this work plan due to unforeseen conditions include the following:

1. Remedial action will not be performed concurrently with the investigation. A proper delineation will be completed following the same investigation procedure described in the RI/RA Work Plan. After the impacted area has been delineated, impacted concrete will be removed, to the extent practical without compromising structures associated with kerosene pumps and secondary containment walls, and will be restored to its original state.

2. Slab water samples will be collected for waste characterization parameters, including TCL VOCs and SVOCs, PCBs, TPH, and oil and grease. In situ pH measurements will also be collected from selected sample locations. The intended disposal option for slab water is to first be treated through Con Edison's on−site oil/water separator and then discharged under Con Edison's existing SPDES permit.

12/1/06: Con Ed (Angel Chang) e−mails copy of Langan's 11/22/06 summary of investigation and proposed RAWP, along with following: We have completed the investigatory phase of our workplan. However, we have not started implementing the remedial phase yet due to unforeseen events during the first phase. Enclosed for your information, find the latest proposal provided by Langan to proceed. Also, I am enclosing 2 drawings (we will have these drawings for you at the station). I would like to have either of you or both to come to the Station for Langan and us to make you a presentation of our findings and how we are proceeding next (we have made some assumptions we would like to run by you). Due to technical glitch, I was unable to open the 11/22/06 document. Langan agreed to forward a new copy to me directly.(JHO)

12/5/06: Langan (M. Burke) e−mails Remediation Scope of Work (RAWP Addendum no. 1) for review and approval. (JHO)

12/29/06: e−mail to Con Ed (Chang, Southwell, Cohen) and Langan (Burke): I have reviewed the revised RAWP dated December 5, 2006 for the East 74th St. station and find it acceptable to complete remedial action for NYSDEC spill no. 0607574. (JHO)

1/12/07: meeting is held at the 74th Street Generating Station among DEC (O'Connell, Breen), Con Edison (Southwell, Chang, Cohen, Lombardi, Musto, O'Donnell) and Langan (Burke). Discussed resutls if investigation around tank room, and requested additioonal delineation to the east and northwest of the tank room. Langan to put together a scope for additional borings. (JHO)

1/16/07: Langan (Burke) submits meeting minutes, which will serve as agreement to revised scope as requested by NYSDEC in Jan. 12 meeting. (JHO)

1/23/07: supplemental investigation work began − a total of 9 additional broigns are being isntalled. (JHO)

5/7/07: received supplemental RI report and RAWP Addendum no 2. (JHO)

5/23/07: completed review of supplemental RIR and RAWP Addendum no. 2. Based on results, additional area to be excavated to the east of the tank room. Called Langan (Burke) to tell him that he needs to submit revised Figure 1 from December 5, 2006 RAWP Addendum (proposed remediation areas). (JHO)

6/11/07: RAWP addendum no. 3 (revised drawing) received from Langan. (JHO)

7/12/07: RAWP addenda 1, 2 and 3 approved. (JHO)

8/27/07: e−mail from Con Ed (Southwell): This past Saturday, 3 core holes were drilled to 18 inches below the slab in the kerosene impacted area, west of the tank room. These core holes are done first and then the drill rig goes back to these areas and drills to approximately 10 ft into the bedrock. In three areas kerosene odors were detected. These are in relative area of Langan's GP5N, GP5N1 and GP5N5. These borings were installed as part of geotechnical investiagtion for proposed new substation. Findings of earlier contamination in these geotech borings can be found in sp 0705588. (JHO)

8/31/07: e−mail from Con Ed (Southwell): more kerosene odors were detected in B−1 approximately 2 ft below slab. We believe

this location to be very close to Langan's GP5N6 hole and in the impacted area. (JHO)

9/5/07: sent e−mail to Con Ed (Southwell) requesting drawing of boring locations. (JHO)

9/9/07: e−mail reply from Con Ed (Southwell): as soon as we receive the as−built drawings from our contractor, I'll forward that along to you. (JHO)

9/10/07: e−mail to Con Ed (Southwell): What is the time frame for the as−built? Was the boring work undertaken without a drawing showing proposed locations? (JHO)

see spills 0713073, 0712848 and 0705588.

2/24/12 − Obligado − Spill reassigned from O'Connell to Obligado

3/27/12 − Obligado − I completed review of the Supplemental Site Investigation Report. The report documents the installation and sampling of 7 monitoring wells at the site. During installation of MW2S. Soil was visibly stained black wiht a petroleum−like odor. PID readings up to 470 ppm. During the installation of MW2R soil was visibly stained with a petroleum like odor. PID readings were up to 185 ppm. During installation of MW7R langan did not observe any petroleum like odors but soil was stained black. According to the report, no soil samples from the well installations exceeded CP−51 soil cleanup levels for Industrial Use. According to the report, VOC and SVOCs were not detected in ground water samples. The report recommended closure. After discussion with DEC Ketani, Hussein, O'Connell, determine spill will not be closed and remediation is required due to presence of free product in the slab.

3/30/12 − Obligado − I sent a letter to Barry Cohen of Conedison disapproving of spill closure and requiring implementation of approved RAWP.

3/30/12 − Obligado − Email from Barry Cohen, Andre − Mariela and I will discuss this with our consultant and the rest of the Con Edison team before responding. However, before we do, we need a better understanding of the reasons for the Department's decision not to close the spill in question and whether the Department believes that the previously approved RAWP should be implemented at this time.

Once we receive this information and have an opportunity to discuss this matter with our team, we may request a meeting with the Department to discuss possible alternatives.

4/5/12 − Obligado − After discussion with DEC Ketani, Hussein, O'Connell, I sent a letter in response to Barry Cohen. Nav Law requires containment of discharges of petroleum. Petroleum at this site has not been contained and has migrated through the slab and to underlying soil and fractured bedrock, therefore clean−up is required. Nav Law requires prompt cleanup so Department will not approve delaying clean−up until 2020. Letter in edocs.

4/24/12 − Obligado − DEC met with Con Edison at the site to discuss DEC requirements. They provided a site synopsis and presented additional information, such as additional waste charactization sampling data, ground water sampling data, and crosssection diagrams showing impacted areas, to support their position that the case should be closed. The additional ground water sampling was done in April and all wells were non−detect except for one compound which also appeared in the up−gradient well and may represent back ground conditions. We also did a site walk through of the generating station areas of concern. DEC

informed Con EdDER will discuss internally.

5/30/12 − Obligado − I reviewed the Waste Characterization report. Six test pits were done in preparation for impacted slab removal. Based on the analysis, only one sample had an exceedence of CP51 soil clean−up criteria and the exceedence was slight. After review of the materials and based on post meeting internal discussions on 5/24/12 I sent Con Ed a letter requiring one additional monitoring well in the most impacted area, GP5−N1 which had 0.25 ft product during the initial investigation. (The closest well to this location was upgradient and 30 feet away) If the well is clean than the case may be considered for closure.

Caller Remarks:

spilled into #9 sump. no smoke fire sewers or watrways affected

DEC Investigator Remarks:

e2mis 153178

03−MAY−2004 10:45 hrs − During an inspection, an abnormal appearance was observed in the # 9 Sump. An oil absorbent pad was lowered into the sump, which revealed that there was oil on the surface of the water, and the oil appears to be lubricating oil. The control panel for the sump pump was then shutdown. Estimated quantity of oil in the sump based upon the size of the sump and the thickness of the oil layer is 10 gallons. Source of the lube oil could not be immediately determined, and an investigation will continue to try to determine the source.

11:00 hrs − Requested that the stations Contract Supervisor contact a vendor to mobilize for cleanup activities. Since Allstate Powervac was currently in the process of mobilizing to perform a boiler cleaning, their workforce was re−directed to the # 9 Sump.

12:40 hrs − Allstate begins cleaning of T−9 sump.

15:00 hrs − Allstate completed pumping out oil of T−9 sump. booms in T−9 sump and adjacent pit connecting with T−9 sump to absorb any remaining residue.

5/10/04 Environmental Engineers, J. Fox and W. Ellwood, removed booms in T−9 sump and adjacent pit connecting with T−9 sump. Boom in adjacent pit was clean so no new boom was placed back in pit. T−9 sump has traces of what appears to be a small sheen so boom was placed back in T−9 sump to absorb any remaining residue.

5/17/04 Environmental Engineers, J. Fox and W. Ellwood, removed booms in T−9 sump. T−9 sump seems to be free of oil but boom was placed back in T−9 sump to absorb any possible remaining residue.

6/2/04 Environmental Engineers, J. Fox and W. Ellwood, removed booms in T−9 sump. T−9 sump appears to remain free of oil. No more boom added.

sheen coming from the sub station into the east river **** UPDATE CON ED IS NOT THE SPILLER SHEEN IS COMING FROM STORM DRAIN NECT TO SUB STATION **********

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ REFERRED TO WATER FOR INVESTIGATION. RAW SEWAGE COMING OUT OF E74TH AND E73RD STREET REGULATORS/ ARS

E2MIS 150354

Sewer / Water Affected: Yes Is / Was Fire Involved: No IS / Was Smoke Involved: No Substance: Oil sheen Source of Spill: NYC sewer system Cause of Spill: Sewer system overflow Private Property Affected: No

08:23 hrs − OMA C. Macdowell was performing normal inspection rounds at the Station's dock and observed a light oil sheen in the river at the south end of the dock. He immediately notified Shift Supervisor J. Boehm. 08:24 hrs − Shift Supervisor notified Station's EH&S Manager, R. Boscarino, of the finding via Nextel phone. 08:25 hrs − Shift Supervisor called CIG operator Sean Mckeever and reported finding of oil sheen in the river in the vicinity of the south end of the dock. River was at slack tide and there were no visible oil clumps on the water. Shift Supervisor also spoke to ERT Bill Capune regarding finding. The EH&S Manager, who was at The Learning Center, informed the Station's Project Manager, S. Wong, about the reported finding via Nextel phone and asked him to investigate further. 08:28 hrs − At the Shift Supervisor's direction, COA G. Wagner calls Ken's Marine and requests a crew to respond to the 74th Street dock to investigate and take action if necessary. 08:29 hrs − Project Manager and Shift Supervisor arrive at dock and inspect entire dock area. They find no sheen, but see debris in the river in the vicinity of the dock, and sewer water flowing out of the regulator overflow pipe that is inline with 73rd Street and 74th Street. There is also a strong smell of sewer water toward the south end of the dock. Careful inspection at the location of the Station's north and south discharge tunnels finds no sheen or oil being discharged.

The conclusion is that the sheen was a third Party spill, and was the result of roadway oil that entered the river through the sewer regulator overflows due to overnight rain. 08:34 hrs − COA G. Wagner calls back Ken's Marine to cancel request for a response boat at 74th Street. 08:40 hrs − Shift Supervisor calls CIG operator Mark Schlagel to provide update that the sheen was not from the Station's discharge tunnel or any Station activity. 10:00 hrs − ERTs Bill Capune and Maureen Sicherman arrive at 74th Street to investigate incident. Project Manager escorts them to the dock and explains the incident details. 10:20 hrs − ERTs verify that there is no sheen or oil discharge from either the north or south discharge tunnel, and depart from the Station.

13:05 hrs − Personnel from NYCDEP (Philip Saglimbene, Jorge Villacis, and Keith McDonald) arrive at Station to investigate sheen roport. Project Manager escorts them to the dock and explains the incident details. They confirn that the sewer system was overflowing this morning due to rain yesterday night and due to a blockage in the system. 13::30 hrs − NYCDEP personnel depart from the Station.

Caller Remarks:

coming off 24 hour diminimous − clean up in progress − 1 gal found in floor drain thids morning − ref #150083

DEC Investigator Remarks:

e2mis no. 150−083:

8/27/03 14:15 hrs. Operator took vendor to site to troubleshoot compressor and found floor covered with oil. Operator shuts down unit and begins cleanup. Vendor corrects problem. Source of Spill :− Air compressor. Cause of Spill :− Blockage in oil scavenging system.

28−AUG−2003 08:45hrs:− Rover observes approx 1 gallon of oil in the floor drains sump pit in the basement and notifies supervisor. 09:30 :− Operators placing absorbent pads in sump to remove oil.

09:45 hrs − Supervisor updated e2MIS report. 11:00 hrs − EH&S Manager, R. Boscarino begins investigation of incident by interviewing all individuals involved. 18:00 hrs − Operations flushed out all drain lines leading to sump to clear out any residual lube oil. Maintenance installing a drain line from the west air compressor condensate traps into a 55−gallon drum so that condensate can be observed for any contamination. Both, Eric Dessen of the Law Department and Mark Maser of Corporate EH&S, determined that the spill must be considered a late notification since the drain line and sump should have been walked down upon discovery of the 8/27/03 spill.

08/29/03 07:30 hrs − Pads in sump show no more oil contamination, and spill is now considered closed. Clean pads will be left in the trench over the next several days to help capture any oil that may be adhered to the walls of the sump. 09:00 hrs − EH&S Manager, R. Boscarino continues investigation of incident. 15:00 hrs − Pads in sump appear to show no oil contamination.

09/02/03 09:00 hrs − EH&S Manager, R. Boscarino continues investigation of incident.

09/10/03 14:00 hrs − Repairs made to the air compressor appear to have corrected the oil carryover issue with the compressor.

sheen on water − unk if con ed is actual spiller − may be from a leaking tube in fuel oil heater

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ note: incident will be closed, will be followed under previous incident for the station dated 12/3/2002. ars

E2MIS 148495 12:30 hrs − Supervisor from Parkway Maintenance (W. Brown), who was working out on the dock on a pigeon dropping clean−up project, observed what he described as smoke coming from under the dock, towards the south end. He observed this shortly after a large boat had gone by rapidly, causing a large wake and banging noises. The supervisor reported his observation to Station's Safety Administrator who had gone out to the dock to check on the work progress. 12:32 hrs − The Safety administrator called the EH&S Manager and reported a possible sheen at the dock. 12:35 hrs − The EH&S Manager arrived at the dock and observed an oil sheen emanating from under the dock in the vicinity of the south discharge tunnel outlet. The tide was approaching low tide. The north discharge tunnel out was also inspected and nothing was seen coming out at that location. 12:43 hrs − EH&S Manager called ERT B. Pierre to report an oil sheen discharging from the Station's south tunnel and asked for Ken's Marine to respond to deploy absorbents and/or booms. 12:51 hrs − CIG Specialist Paul Di Donato made notification to National Response Center, Rawls, 646094. 13:01 hrs − CIG Specialist Paul Di Donato made notification to New York, State Department of Environmental Conservation, #390, 03−02022. 13:06 hrs − CIG Specialist Paul Di Donato made notification to CE Law, V. Cannon. 13:19 hrs − CIG Specialist Paul Di Donato made notification to Interstate Sanitation Commission, B. Mitchell. 13:22 hrs − CIG Specialist Paul Di Donato made notification to CE Audit, B. Kearny. CIG Specialist Paul Di Donato made notification to CE Barge Master, M. Glasser. 13:33 hrs − ERT M. Daughtrey arrived at Station to investigate sheen discharge. Divers with Miller Environmental, who have been on site, went into tunnel to inspect the absorbent booms which they had installed near the outlet of the discharge tunnel at the beginning of their tunnel clean−up operations. The water temperature in the discharge tunnel is notably higher than usual. The water temperature at the bottom of the tunnel is 90 deg. F. and the temperature near the surface is about 120 deg. F. The unusually high temperature is due to warming up of the station and the accumulation of wastestreams such as steam trap discharges. 14:05 hrs − Spill response boat from Ken's Marine arrived at the dock. They were instructed to deploy absorbent booms around the outlet of the south discharge tunnel. 15:20 hrs − ERT B. Pierre called EH&S Manager and advised that this sheen discharge incident should be added on to this e2MIS report as a continuation, rather than entering a new incident report. 15:30 hrs − Miller Environmental divers reported that at the outlet of the south discharge tunnel, the absorbent booms that they had installed along the walls was still in place. Regarding the two layers of boom that had been strung across the tunnel, one was missing and the other was detached but still in the tunnel. The divers installed two new layers of boom across the tunnel. 17:00 hrs − Ken's Marine retrieved absorbent pad−type boom that they utilized when they first arrived, finished deploying two layers of absorbent sausage− Environmental Detailed Incident Report type boom in front of the south discharge, and left site. 05/28/03 07:00 hrs − The south discharge tunnel at the dock is inspected; no sheen is present.

off of turbine #11 which is being taken dismantled and was found while doing the work

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #146872:

22−JAN−2003 Sewer/Water Affected: No Active Fire/Smoke: No Substance: Lube Oil Source of Spill: Turbine Unit #11−Lube Oil Return System Cause of Spill: Residual Oil Leak from Lube Oil Return System Private Property Affected: No

At 12:50, 74th Street Environmental Engineer James Fox discovered a petroleum release originating from Turbine Unit #11 Front Standard. Turbine Unit #11 is currently retired, and being dismantled. James Fox informed me of the Oil Spill at 13:00. Upon investigation, it was determined that approximately 4 gallons of lube oil had leaked from a section of return piping on the lube oil system. The release has since been controlled by applying oil pads, and had not entered any waterways or sewers. The oil was released on to an impervious, concrete floor. Jason Wilkes of construction, Dannion Jordan and George Wagner from the operations department were dispatched to the spill site for clean up.

At 13:30, David Kinberg of the ERT Desk was informed of the release. Mr. Kinberg was informed that the spill clean up time was

estimated to be greater than two hours.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #146233:

03−DEC−2002 21:35:52 Sewer / Water Affected: Yes Substance: #6 fuel oil Still under investigation, suspect leak in fuel oil heater.

12/03/02 14:30 hrs − While investigating a problem with the SPDES sampling system out on the dock, a thick black substance, which appeared to be #6 oil, was found clogging the tubing. Looking over the dock into the water found an couple of globs of black material floating away from the dock in the vicinity of the north tunnel outlet. No sheen, however, was observed on the water.

14:42 hrs − The EH&S Manager called CIG operator Kevin Mcardle and reported a possible oil spill to the waterway with an initial estimated quantity of a few ounces based on the blobs that were actually seen in the water. Asked that Ken's Marine be deployed

to the site with containment boom and absorbents.

14:47 hrs − ERT Sean Mahoney called EH&S Manager and advised that Ken's Marine was called and on the way, and ERT members were also on the way to the site. Further investigation by site personnel finds that there is #6 oil on the walls in the discharge tunnel.

15:08 hrs − Ken's Marine called EH&S Manager and confirmed that they were in route.

15:35 hrs −ERT members William Capune and Dan Ponticorvo arrive at site.

15:43 hrs − ERT Sean Mahoney called EH&S Manager and said that he would he faxing a Coast Guard Witness Statement to be filled out.

16:00 hrs − First vessel from Ken's Marine arrived on site. Started deploying containment boom in from of the north and south discharge tunnels.

16:12 hrs − Second vessel from Ken's Marine arrives on site and assists with boom deployment.

16:30 hrs − EH&S Manager spoke to Dennis of Clean Harbors. They will be on site at 09:00 hrs tomorrow with boom, vessels, and skimmer to replace Ken's Marine equipment. After consulting with the EH&S Manager, William Capune calls CIG and revises the estimated spill quantity to 20 gallons.

16:35 hrs − Env. Engr., J. Fox, called Adam at Miller Environmental about getting crew to start clean−up of discharge tunnel.

17:38 hrs − Miller Environmental called back and said that a supervisor and 3 technicians would be sent out with an estimated time of arrival of 19:30 hrs

19:15 hrs − Truckload of absorbent materials (snares, sausage boom, etc.) from Ken's Marine arrived on site. Materials were brought out to dock.

19:25 hrs − ERT Mike Kessler arrived at site.

20:15 hrs − Crew from Miller Environmental arrives on site.

20:20 hrs − Additional absorbent materials (snares, sausages) deployed in river within containment boomed area.

21:00 hrs − Miller Environmental placing snares and sausage absorbents in each of the 4 discharge tunnel access points and changing them out as they become soiled with oil.

21:45 hrs − After intensive investigation, Operations finds oily contamination on the condensate side of the fuel oil heater that is used when shuttling fuel oil back through the pipeline from Keyspan Ravenswood. This heater is used only occasionally (whenever fuel shuttling is needed) and was most recently put into service on Sunday (12/01/02) morning around 08:05 hrs. Based on this finding, the probable spill scenario is as follows: − sometime between when the fuel oil heater was last used and 12/01/02, a leak developed in the heater allowing fuel oil to move from the tube side of the heater to the shell side of the

heater; − when the heater was put into service on Sunday, the steam and condensate pushed out all of the oil that had accumulated on the shell side of the heater into the condensate discharge line; − since the steam pressure is maintained higher than the oil pressure when the heater is operating, the pressure differential kept additional oil from leaking out into the shell side of the heater; − when the shuttling operation was completed, the fuel oil heater isolation valves were shut at approximately 10:31 hrs, preventing any further oil from going to the condensate discharge line. Thus, the oil spill is believed to have occurred on Sunday, 12/01/02, shortly after 08:00 hrs, caused by a leak in the shuttling fuel oil heater, and the quantity was limited to the amount of oil that had migrated from the tube sire to the shell side of the heater.

12/04/02 09:00 hrs − First vessel from Clean Harbors Coop arrived a dock and was instructed to start deploying their boom in front of the dock so that the booms from Ken's Marine could be withdrawn.

09:30 hrs − An additional workboat and a skimmer boat from Clean Harbors arrives at Station. The skimmer boat would be used to capture recoverable oil if any were seen coming out from the discharge tunnels.

11:00 hrs − Kerry Foley of NYSDEC called EH&S Mgr. for an update on spill investigation and clean−up. She was advised that the estimated spill quantity would revised upwards somewhat and would be based on a calculation of the internal volume of the fuel oil heater found to be the cause of the spill. Although the figure was not yet available, the revised quantity would not be more than 100 gallons.

11:10 hrs − U.S. Coast Guard (BM3 Steven Decker, MST3 Mike Brady, MK3 Oscar Farios, GM3 James Caliendo, and MST3 Tim Fosdick) arrive at Station. EH&S Mgr. reviewed the entire incident history, its current status, and the planned operations with them. The Coast Guard was also shown all areas related to the incident including the dock, the package boiler fuel oil heater area, and the 4 access points to the discharge tunnel from the Station's basement. No sheen or globs of oil were observed by the tunnel discharge to the East River. The Coast Guard was asked whether the boom along the dock should be maintained; they advised that it wasn't necessary and that all of it could be removed. They were also advised that the estimated spill quantity would be increased somewhat. Overall, the Coast Guard indicated that they were satisfied with the spill response and plans, and imposed no additional requirements.

12:30 hrs − ERT members William Capune and Sean Mahoney arrived at site and were updated as to incident status. They too were advised that the estimated spill quantity would be increased somewhat.

12/05/02 07:00 hrs − Crew from Miller Environmental (1 supervisor, 4 technicians) arrives on site and works on recovering oil from the discharge tunnel using snares and absorbent materials. 08:00 hrs − Crew from Allstate Power−vac arrives on site with a vacuum tanker truck to work on cleaning out the fuel oil heater that is suspected to have caused the spill.

13:00 hrs − Abraham Rodriguez, from NYSDEC arrives at the site. He is given a complete overview of the spill incident and inspects the fuel oil heater area, the dock, and the discharge tunnel access locations in the basement. No sheen or globs of oil are seen emanating from the discharge tunnel at the river. He is satisfied with the spill response and plans.

19:15 hrs − Calculation of the shell−side internal volume of the fuel oil heater, which equates to the probable quantity of fuel oil spilled, yields an estimate of 40 gallons. The e2MIS report is updated.

19:19 hrs − EH&S Manager called CIG updating the estimated spill quantity from 20 gallons to 40 gallons.

19:30 hrs − Allstate Power Vac completed the cleaning out and opening of the shuttle fuel oil heater.

12/06/02 07:00 hrs − Crew from Miller Environmental on site to continue oil recover from the tunnel using snares and absorbents.

12/7/02 & 12/8/02 Crew from Miller Environmental on site to continue oil recover from the tunnel using snares and absorbents.

12/9/02 Miller Env. continuing oil recovery. Divers from International Telecom Group, subcontracting to Miller Environmental, arrive on scene and begin setup and testing of equipment.

12/10/02 Miller Env. continuing oil recovery. Divers finishing setup of equipment. Diver went into T11 manhole and did survey of south tunnel.

12/11/02 Miller Env. continuing oil recovery. Diver went in T−11 manhole and observed two sewer pipes running across south tunnel about 45' in from tunnel outlet. The tunnel is clean from pipes to outlet of tunnel. Second diver went in and power washed 12 foot area in south tunnel from pipes heading west toward building.

12/12, 12/13, 12/14, 12/15/02, 12/16−12/18/02 Miller Env. continuing oil recovery.

12/19/02 Miller Env. continuing oil recovery. Diver went into T−11 manhole and power washed from previous spot. Second diver went in and continued power wash. Skimmer set up and running at manhole by metal dumpster.

12/20, 12/21, 12/22, 12/23, 12/24/02 Miller Env. continuing oil recovery.

12/26−12/31/02, 1/3, 1/4, 1/6−1/11/03 Miller Env. continuing oil recovery. Diver went into metal dumpster access hatch and power washed from previous spot.

01/12/03 11:25 hrs − A Station security guard, inspecting the dock area during his normal rounds, observed a few globs of a black material floating in the river in the vicinity of the south discharge tunnel outlet. He reported his observation immediately to rover L. Claris.

11:35 hrs − The rover immediately checked both the north and south tunnel outlets, verified globs of congealed #6 oil by the south tunnel, and reported back to the Shift Manager. The East River was at slack tide.

11:40 hrs − Ken's Marine, the Company's 1−hour OSRO, was called and informed of a possible spill and was requested to report to site and deploy boom.

11:45 hrs − Shift Manager, W. Allen, notified Station's EH&S Manager of observation. The oil pipeline fuel oil leak detection system was reviewed and the East River Drive was inspected for oil leaks. Station personnel also began inspection of equipment in station including fuel oil heaters and tunnel manholes..

12:05 hrs − No oil was observed in vicinity of tunnel outlets.

12:52 hrs − EH&S Manager arrives on site and inspects discharge tunnel through the 4 access locations in the Station. No new oil was observed on the water surface. Dock area is also inspected and no oil is observed.

13:00 hrs − Ken's Marine arrived at station dock with their workboat. The watched the south discharge tunnel outlet but did not observe any oil globs floating out of tunnel or in the vicinity.

13:15 hrs − Based on thorough inspections of tunnel and Station equipment, the EH&S Manager concluded that the globs observed earlier were not the result of a new spill but rather, were residual oil from the original spill that migrated out of the tunnel.

13:30 hrs − As a precaution, Ken's Marine installed two layers of sausage absorbent boom at the south tunnel outlet, under the wood dock structure, and then departed.

14:00 hrs − Inspector from NYCDEP, Wai Man Wong, arrives on site. EH&S Manager and Env. Engr. J. Fox discuss incident with him and walk him through the Station. Inspector is satisfied with our response. 14:30 hrs − NYCDEP Inspector leaves site. 15:05 hrs − CIG Operator Morris is called and informed of change in status, that the earlier observation was not a new spill.

01/13/03 Miller Env. moved location to T−11 access. Removed old boom that was used as a dam and replaced with new boom. 0900 hrs 2nd skimmer located at 3rd acess hatch by #10 condenser is in service.

09:36 hrs − Representatives from U.S. Coast Guard (MST3 Kelly Garot, BM3 Michael Kenfield, MST3 Carlos Sivilla, and MST3 Michael Brady) arrive at Station. EH&S Manager, and Env. Engrs. J. Fox and W. Ellwood, brief them on yesterday's incident. After a thorough inspection, they are satisfied with the incident response and status.

10:20 hrs − Coast Guard representatives leave site.

10:45 hrs − Jane O'Connell of NYSDEC calls EH&S Manager for an update on the yesterday's reported spill. The entire incident was explained and this spill incident report was referenced. She was also informed that the e2MIS report that was entered yesterday (#146672) would be voided, and this report would be amended to include information about yesterday's events.

1/14, 1/15, 1/16/03 Miller Env. continuing oil recovery. Diver went into T−11 access hatch and power washed from previous spot. Second diver went in and continued power wash.

10:00 hrs − Received U.S. Coast Guard Notice of Violation, via interoffice mail from Anthony Drummings. Original Certified mail had been delivered to him and he forwarded it to 74th Street Station. The proposed penalty for the spill is $625.00.

11:00 hrs − Faxed copies of USCG Notice of Violation to Law Department, Corporate EH&S, and ERT. Mailed originals to Law Department via interoffice mail.

1/17, 1/18, 1/20−1/22, 1/24,1/25, 1/27−1/30/03 Miller Env. continuing oil recovery. Diver went into T−11 access hatch and power washed from previous spot. Second diver went in and continued power wash.

23:19 hrs − EH&S Manager called ERT David Duke and reported that a small leak on the west main heater was discovered at 22:45 hrs and that Operations was taking the heater out of service as of 23:00 hrs. ERT was informed that this leak has been determined to be the true cause of the oil spill originally reported on 12/03/02, rather than the shuttle heater, but that any additional oil that has been spilled to the discharge tunnel has not been discharging to the East River due to continuing clean−up operations that have been going on in the tunnel since 12/03/02 using barriers, absorbents, and divers.

01/31/03 00:15 hrs − EH&S Manager called ERT D. Duke and reported updated spill quantity to be an additional 180 gallons. This was based on visual observation of the rate at which oil was appearing in the fuel oil heater condensate oil/water separator. The rate of 16 ounces per hour, extended over approximately 60 days, yields 180 gallons. Thus the total reported spill quantity should be 40 gallons, plus an additional 180 gallons, for a total of 220 gallons.

0700 hrs Miller Env. continuing oil recovery. Diver went into T−11 access hatch and power washed from previous spot. Second diver went in and continued power wash.

10:30 hrs − NYSDEC engineer, Abraham Rodriguez, arrived at 74th Street for his quarterly unannounced SPDES inspection. In addition to the usual inspection items, Mr. Rodriguez was informed about the installation of the new cooling and separator equipment, discovery of the true spill cause, updated on the revised spill quantity, and briefed about the continuing clean−up status.

2/1, 2/3−2/6, 2/10−2/14, 2/19− 2/21, 2/24−2/28, 3/1/03 Miller Env. continuing oil recovery.

03/06/03 14:30 hrs − Engineering Inspector L. Sewell reports to Env. Engr. W. Ellwood and EH&S Mgr. S. Wong that the vendor cleaning the tunnel has reported that they think that there may be new oil going into the tunnel. EH&S Mgr. investigates and finds some indications of new oil in the tunnel including absorbent booms soiled with #6 oil and spots of oil on the surface water in the tunnel. The supervisor from Miller Environmental reports that he is not completely certain that the oil is new and that the temperature of the water in the tunnel seems higher today than previously, possibly causing oil residual oil on the walls to loosen. Inspection of the station's sumps, oil/water separator and epuipment areas finds no abnormal conditions. The tunnel outlet is inspected and there is no oil discharging to the river (due to the seven layers of boom that have been installed in the tunnel outlet to prevent any migration out of the tunnel during the clean−up project). If the oil sighted is new, the estimated quantity is less than 20 gallons. Investigation is continuing to try to determine if there is any new oil entering the tunnel, or whether its just oil from the old spill being loosened off the walls.

16:50 hrs − Thorough investigation, by Operations and EH&S personnel, of all fuel oil heaters, piping, tanks, systems, sumps, and related equipment has been unable to identify any source that might have caused any new #6 oil to enter the tunnel. Observation and investigation will continue as needed.

17:00 hrs − EH&S Mgr e−mailed a copy of this updated e2MIS report to ERT. 17:35 hrs − ERT, M. Doughtrey, informed EH&S Mgr. that Jane O'Connel of NYSDEC has been informed and that Inspector A. Rodriguez will probably visit site on Monday. 03/07/03 00:45 hrs − Shift Supervisor, W. Forte, had been investigating any other possible sources that may be adding oil to the discharge tunnel. He discovered some oil at the sodium hypochlorite injection manhole (which is a retired system) of the intake tunnel. The Shift Supervisor immediately calls the EH&S Mgr at home. 02:00 hrs − EH&S Mgr arrives on site and investigates further. Inspection of the intake tunnel at various other points finds no oil contamination, and no oil is seen discharging from either the intake or discharge tunnels.

0700 hrs − Miller Env. continuing oil recovery. Diver went into T−11 access hatch and power washed from previous spot. Second diver went in and continued power wash. 08:00 hrs − The sodium hypochlorite is a former cooling water pump cavity. Maintenance crews begin working on removing the 17 foot long hypochlorite injection probe and the manhole cover (which is held in place by thirty−two bolts). 15:00 hrs − Removal of the injection probe is complete, yielding a 6 hole in the manhole cover. Inspecting through the 6 hole finds that the oil in the pump cavity has a depth of approximately 2 feet. Based on the depth of oil and the

dimensiions of the cavity, the estimated quantity of oil in the cavity is 360 gallons. It is presumed at this time that the oil is from the same fuel oil heater leak and accumulated in the pump cavity through some subsurface defect. 16:00 hrs − Maintenance crews will continue working to remove the 3.5' diamater manhole cover and arrangements have been made to have Allstate PowerVac on site tomorrow morning to start clean−up in the pump cavity. Based on the 360 gallons of oil estimated to be in the pump cavity, and the 20 additional gallons that is estimated to have gone to the discharge tunnel, the total spill quantity estimate is now 600 gallons. 18:35 hrs − Updated e2MIS report, then called ERT Mike Doughtery and informed him of latest change in incident status, and that e2MIS report has already been updated. 03/08/03 Miller Env. continuing oil recovery. Diver went into T−11 access hatch and power washed from previous spot. Second diver went in and continued power wash. 08:00 hrs − Manhole cover at hypo tanks had been removed last night and crew from Allstate Power−vac has arrived on site with a 3,000 gallon vac truck.

10:00 hrs − A steam supply and a lance assembly was fabricated to help warm up the oil in the manhole to facilitate vacuuming it out. 16:00 hrs − Despite continuous heating with steam and efforts by Allstate Power−vac to remove the oil in the manhole, the vac truck's hose keeps getting clogged due to the thickness (high viscosity) of the oil. 03/10/03 Miller Env. continuing oil recovery. Diver went into T−11 access hatch and power washed from previous spot. Second diver went in and continued power wash. 08:00 hrs − Allstate Power−vac crew arrives on site again with a vac truck to remove oil from manhole. Miller Environmental and diver crew also on site to continue clean−up in discharge tunnel. Steam is again fed into the manhole to warm the oil to facilitate vacuum removal. 09:45 hrs − ERTs Bill Capune and David Duke arrive on site to check on spill incident. 11:50 hrs − NYSDEC representative Abraham Rodriguez arrives on site. The EH&S Manager shows him the manhole, and all available drawings of the manhole arrangement. He is informed that the oil probably seeped into the manhole through a subsurface defect path between the nearby package boiler wastewater trench and the manhole. Mr. Rodriguez witnesses the seepage of water into the manhole on its northwest wall, and also that there is no oil in the inlet tunnel at T−11 saltwater pumps, and no discharge into the river from the inlet or outlet tunnels. 12:55 hrs − Mr. Rodriguez leaves 74th Street Station and proceeds to 60th Street Station for a brief inspection. The ERTs also leave the site. 14:00 hrs − The manhole cover to the inlet tunnel, in the vicinity of the metal dumpster, is removed and verified to be oil free. 16:00 hrs − The Allstate Power−vac vacuum truck leaves the site with a full load (3,000 gallons) of oil/water (mostly water). Another vac truck is reported to be on the way to the site.

18:00 hrs − A second Allstate Power−vac truck arrives on site. In an effort to improve the vacuum's performance , the truck is backed into #1 door so as to minimize the length of hose needed and the friction losses through the hose. 20:00 hrs − Despite continuous heating with steam and the close proximity of the vac truck, the 3 hoses being used keep clogging−up and preventing suction of the oil. The EH&S Manager confers by phone with the Allstate Power−vac Project Manager, and they decide to try again the following morning with a 6 hose. 03/11/03 Miller Env. continuing oil recovery. Diver went into T−11 access hatch and power washed from previous spot. Second diver went in and continued power wash. 09:00 hrs − ERT Bill Capune arrives on site along with vac truck and crew from Allstate Power−vac. 09:30 hrs − Allstate setting up vac truck with a 6 suction hose. Meanwhile, a 1−liter samples of the oil in the manhole is taken as well as a sample of fresh #6 oil from the PB fuel oil heater. The sample of oil from the manhole is noticeably more viscous, appears to be a dark brown color, and is less odorous that the fresh oil sample. The samples will be sent to Astoria Lab for testing, including pour point, viscosity, sulfur content, API gravity, flash point, and oil ID.

14:00 hrs − Allstate Power−vac has removed the mass of viscous oil in the manhole and all free oil on the manhole's water surface. Clean−up of the walls in the manhole remain and Allstate will devise power washing tools/wands to reach the wall surfaces. 3/12/03 Miller Env. continuing oil recovery. Diver went into T−11 access hatch and power washed from previous spot. Second diver went in and continued power wash. 03/13/03 Miller Env. continuing oil recovery. Diver went into T−11 access hatch and power washed from previous spot. Second diver went in and continued power wash. 08:00 hrs − Allstate Power−vac cleaning walls of former pump cavity to intake tunnel, near hypo tanks, using high pressure & temperature power washer and vac truck.

14:00 hrs − Allstate's cleaning effort in former pump cavity is incomplete due to limited reach into cavity from their work position on the basement floor. EH&S Mgr. requested that Miller Environmental clean rest of pump cavity using their diver crew.

3/14/03 Miller Environmental begins cleaning of manhole of intake tunnel by hypo tanks. 03/15/03 Miller Environmental continuing cleaning of manhole of intake tunnel by hypo tanks. 14:00 hrs − Miller Environmental completed cleaning two of the walls in the former pump cavity. 3/17/03 Diver went into intake tunnel to inspect other retired pump cavitiies west of manhole. They found no trace of oil in other cavities. Second diver went in intake tunnel, went east of manhole and noticed 1/2 to 1 thick oil on roof of intake tunnel up to 60 feet away. 3/18/03 Diver went into intake tunnel with video camera and found that west of the tunnel on roof there was 1/2 to 1 thick oil on roof up to 60 feet away and east of manhole up to 160 feet away. 3/19/03 Divers went into intake tunnel to set up booming system to contain oil while cleaning. NOTE: THIS INCIDENT REPORT IS NOW TOO LONG TO ACCEPT ANY ADDITIONAL INFORMATION, AND IS THEREFORE CONTINUED IN e2MIS #148495.

DEC Notes: 12/4/02 ERT Sean Mahoney−upgraded to 20gal. Heater leaking in package boiler area. Should not be considered an active leak. Resetting boom. Clean Harbors Co−op Dennis McCarthy on site. Steam pressure is greater than pressure of oil line and is therefore not actively leaking. (KMF)

12/4/02 Steve Wong, EH&S Mgr of station− Clean Harbors on site. Picking up boom placed by Ken's Marine. Putting together Health and Safety plan for divers to cleanup tunnel. Miller Env. booms inside tunnel. Tunnel cleanup will be completed in short windows during low tide (3am). Leak is from heat exchanger within package boiler area. Was in service on Sunday. Suspected cause is a tube defect. Steam pressure > oil pressure during normal operating conditions. When steam was shut down, oil entered steam side. Isolated now. Not active leak. See very little oil on surface. Most is in tunnel on walls. (KMF)

12/5/2002: Con Ed monitor (Rodriguez) had a meeting with Steve Wong, E,H, and S manager of the East 74th Street Generating Station. The purpose of the meeting was to investigate the causes of a #6 oil spill that impacted the East River. The spill happened two days earlier. The spill was caused by a pinhole in one of the #6 oil heaters (heat enchangers). #6 oil is heated in a shell and tube heat exchanger using steam. The pressure of the steam is much higher than the pressure of the oil. The station personnel think that when they shut down the steam, some oil entered the steam side of the heat exchanger. The steam side discharges directly to the river with no treatment. The station used to have a oil water separator in that line, but they removed it because it could not withstand the high temperatures of the condensate (200 degrees Fahrenheit). The discharge tunnel was inspected and there was no sign of visible sheen leaving the station. However, there is a light sheen and black staining on the tunnels below the station. Miller Environmental is cleaning the sheen using pads. The station hired divers to remove the black staining from the tunnel wall.

Due to the high temperature of the condensate, it cannot be pumped to the station's sumps because it damages the sump pumps. However, the station has a project to redirect the condensate to the sumps and adding a heat exchanger to reduce the condensate temperature. The final drawings are to be finished at the end of this month. A copy of the drawings was requested for review.

The Coast Guard had 5 inspectors in the station last night; They were satisfied with the station's cleanup efforts.

1/31/03 0913hrs ERT Bernard Pierre called with an update. A total of 180gal of #6 fuel oil was determined to have spilled at a rate of 16oz/hr. (KMF)

2/6/2003 Drawings and specifications were received by the department regarding the installation of a heat exchanger system for the steam condensate. The project is expected to be completed June 30, 2003.

3/10/2003. Oil was found on the intake tunnel trapped inside a manhole. The divers mentioned that areas that were cleaned inside the discharge tunnel were starting to become stained with oil again. The station underwent a search of the possible source. They found that oil was trapped inside a manhole in the intake channel that now is not used anymore. Apparently there is a cross connection between the intake and the discharge. Con Edison estimates that around 2' of 6 oil was trapped in this manhole. Con Edison was warming the oil using steam to facilititate its cleanup. Clean ventures was at the site performing the cleanup. (ARS)

4/29/03 Update from ERT Dave Duke On 4/22/03 a sample taken from the tunnel area returned as a heavy fuel oil. Updated as 375gal. It was not ID'd as old lube oil as in the manhole. I requested that they use the same e2mis number (147703) to track this incident and send me the updated report. (KMF)

6/26/2003: The station was inspected. A sheen was visible in the outfall. Con Edison will now move to a maintenece phase of the cleanup. Con Edison completed the installation of the steam condensate condenser. ARS

9/12/2003: The condernser is in operation. A meeting will be set to see if the spill can be closed. ARS

10/31/2003: OUTFALL AND TUNNEL WAS INSPECTED BY RODRIGUEZ AND FOX(CON EDISON). NO EVIDENCE OF SHEEN WAS NOTICED. ABSORBENTS WILL BE LEFT AT OUTFALL AS A PRECAUTION. INCIDENT IS CLOSED. ARS

Caller Remarks:

SAMPLES TAKEN FROM DEBRIS IN BOILER ROOM TRENCH. CON ED # 142745.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY e2mis 142745

05/09/02, 16:00 hrs − EH&S manager opened an e−mail from Astoria lab. LSN 02−03790 contained lab results of six samples of debris that were taken from HP boiler room trenches. The sample from the vicinity of the treated water surge tank was 1,400 ppm for Aroclor 1260. 16:55 hrs − ERT S. Mahoney called EH&S manager back and said that if the trench could no be cleaned out within 2 hours then the situation should be reported to CIG and an e2MIS report needs to be entered. 17:20 hrs − Shift Manager, W. Allen called CIG McGuire to report incident. CIG was advised to assume that the quantity of Aroclor 1260 would be less than 5 gallons. 18:30 hrs − EH&S Manager called B. Cohen to discuss regulatory requirements for clean−up start time. B. Cohen advised that since this was obviously an old spill, there is no regulatory requirement for clean−up start time, however it would be prudent to start within 24 hours of discovery. 19:15 hrs − Installed barrier in trench downstream of the location where the sample was taken that produced the high PCB result.

05/10/02, 09:10 hrs − EH&S manager spoke to P. Keelan (of Astoria Lab) and discussed the implications of the finding of mercury levels as high as 10 ppm in the trench debris samples. His opinion was that the mercury that was detected was not the result of an elemental spill of mercury but rather was probably simple contamination of the debris due to years of accumulating paint flakes in the trenches (which have been known to sometimes contain lead, mercury, or PCBs). Mr. Keelan stated that the mercury contamination would not be a hazard to Station employees working of sampling or clean−up. 09:15 hrs − EH&S manager conferred with ERT's R. Lo and S. Mahoney on whether the findings of lead and mercury in the trench debris required any reporting. They stated that it did not since the finding could not be associated with any known spill event. 10:35 hrs − ERT R. Lo called EH&S manager and informed him the Abraham Rodriguez of NYSDEC would be arriving at the station around 13:00 hrs to investigate the incident. 13:15 hrs − NYSDEC inspector Abraham Rodriguez arrived at Station and was briefed about incident by EH&S manager. Action plan consisted of taking additional samples from the trenches to define the limits of the high PCB contamination and to start clean−up work in the vicinity of the high result. 14:00 hrs − Eleven additional samples of trench debris were collected and a sample of oil/water separator unit discharge water was also taken. 15:00 hrs − Station mechanics started clean−up of the trench in the vicinity of the 1,400 ppm PCB sample result. 19:00 hrs − The mechanics finished removing as much debris as possible from the trench, 10 feet in both directions from the 1,400 ppm PCB sample location. Approximately 50 gallons of dry debris was bagged and placed in a 55 gallon drum.

06/18/02 10:00 hrs − Incident type changed from Abnormal Occurrence to Spill − Dielectric − Other per instructions from B. Cohen and

08:00 hrs − Clean Venture mobilizes on site to begin clean−up of all trenches in the HP boiler room basement during the HP boiler outage. 7/17/02 Clean Venture completed cleanup of contaminated soil from trench and double wash of trench. Eleven 55−gallon drums of contaminated soil debris accumulated. 7/18/02 Waste pickup of the 11 drums of contaminated soil. 7/25/02 09:00 hrs − Chem Lab Tech J. Burgos #14404 took 15 wipe samples of trench area. 7/27/02 Received lab results LSN 02−06891−001; of the 15 wipe samples the highest PCB concentration was 1,730 ug/100cm^2 7/29/02 EH&S Manager S. Wong e−mailed Barry Cohen with results and requested guidance on further actions to be taken. Barry Cohen recommended using a soda blasting technique used by

Brooklyn/Queens (B/Q) Environmental on manholes. 8/02/02 Env. Eng. J. Fox called B/Q Environmental Bob Saladino to request their organization do soda blasting on the trench. Saladino said that they would do it when as soon as their schedule would permit, which would be a month or two. 11/11/02 08:45 hrs − B/Q Environmental supervisor and crew of 3 along with CFS supervisor and over 50 ppm tanker and driver arrived to do soda blast. Soda blast completed at 17:30 hrs. Chem Lab Tech requested by J. Fox to take wipe samples. Tech to come on 11/13/02. 11/13/02 Chem Lab canceled due to overload of work and rescheduled. 11/20/02 09:45 hrs − Chem Lab Tech Guy Ballerino #44296 took 7 wipe samples of trench as per grid made by Bob O'Kane of B/Q Environmental. 11/27/02 Received lab results LSN 02−11022−001 of the 7 wipe samples with highest PCB concentration of 292 ug/100cm^2. 11/30/02 EH&S Manager S. Wong e−mailed Barry Cohen with results and requested guidance on further actions to be taken. Barry Cohen scheduled to come see the trench area on 12/05/02 and evaluate. 12/05/02 08:30 hrs − Barry Cohen came to Station to see trench area and evalute further actions to be taken. Cohen will discuss situation with EPA representative.

12/13/02 Barry Cohen e−mailed S. Wong and J. Fox about his meeting with David Greenlaw of EPA Region II. The encapsulation options are as follows: 1. double coat the floor and walls with 2 different colors of paint (epoxy coating); 2. place a solid barrier (a solid liner − not plastic sheeting) on the floor and walls; 3. fill the trench with concrete, using a pipe encased in concrete to carry the A/C water. In addition, there must be a PCB label placed in the trench on the coating, solid barrier, or concrete. Alternatively, the contaminated trench concrete could also be removed down to uncontaminated material and disposed of as PCB waste. 1/22/03 − 1/23/03 Enecon NorthEast came in and double coated the trench with an encapsulating epoxy. 1/28/03 Chem Lab Tech L. DeSantis #51628 came in to take 7 wipe samples from trench. 02/5/03 Received lab results LSN 03−00803 of the 7 wipe samples. All samples were under 10 ug/100cm^2, but in locations 3, 4, & 5 low levels were detected. EH&S Manager S. Wong e−mailed Barry Cohen with results for review. Barry Cohen suggested another layer of coating. 02/18/03 Enecon came back in and applied another coating of encapsulating epoxy. 02/21/03 Chem Lab Tech L. DeSantis #51628 came in to take 3 wipe samples from trench. They were locations 3, 4, &5 where the traces of PCB very detected. 02/27/03 Received lab results LSN 03−01519 of the 3 wipe samples. All samples were under 10 ug/100cm^2. EH&S Manager S. Wong e−mailed Barry Cohen with results for review. Barry Cohen said that cleanup was complete. PCB labels were applied on the epoxy coated surface in the trench, and warning signs were applied to the floor immediately adjacent to the trench. Detailed Description:

INSPECTOR NOTES: 6/5/2002: Rodriguez called ERT Mike Daughtrey to request the additional sample results and the separator effluent sampling results. The results will be sent on 6/6/02.

open connection on fuel oil piping. spill contained in a moat. con ed# 137423

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #137423:

06:00 hrs − Package boiler operator calls Shift Manager's office to report a fuel oil spill in the package boiler area. 06:10 hrs − On−duty Shift Manager (Allen), relieving Shift Manager (Etheridge), and acting Operations Manager (Granger) report to the scene of the spill to investigate. Approximately 60 gallons of #6 fuel oil have leaked onto the burner elevation floor and into the fuel oil heater moated area in the basement from the fuel oil piping at #5 package boiler. The source of the spill was recirculation piping on PB#5 fuel oil system that had an open end. A package boiler operator has already put a wood plug into the open end to the pipe to stop the leakage and spill clean−up equipment is being brought to the scene. (The open ended pipe was the discharge side of a relief valve on PB#5 fuel oil header. The relief valve was cut out and removed yesterday as part of a maintenance project to replace the old fuel oil meter with a new electronic meter.)

09:26 hrs − Allstate Power−Vac arrives on site and begins clean−up of all soiled areas using shovels, oil absorbent materials, wipes, and degreasers. All clean−up waste materials are placed in plastic garbage bags.

16:00 hrs − AllstatePower−Vac completes spill clean−up. All clean−up debris is placed into oily waste dumpster near T−11.

Investigation of this incident yielded the following: On May 31st, during a full outage on the 74th Street package boilers, Station Maintenance and I&C were working on the replacement of the fuel oil meter for PB #5. The work scope of the project was modified because the spool piece assembly of the new fuel oil meter was longer than the spool piece of the old meter; this required that one of the relief / recirculation valves on the fuel oil line be relocated to allow for the additional length of

the new meter. Prior to cutting through the pipe on the discharge side of the relief / recirculation valve, #6 oil was drained out of the recirculation line at a connection in the basement near the recirculation meter. When no more oil came out of the drain valve, the pipe on the discharge side of the relief/ recirculation valve was cut. Since no oil came out of any of the pipe connections for the remainder of the work shift after the old meter and relief / recirculation valve were removed, it was concluded that the isolations provided and the draining that was performed were sufficient protection to work on the system. As this project required a fair amount of pipe fitting and welding, the work could not be finished in a single shift and was to resume the following morning. At 06:00 hrs the following morning (June 1st) an operator discovered the spill of approximately 60 gallons of #6 oil. The spill was completely contained on the concrete floor under the PB #5 fuel oil meter location and in the fuel oil heater moat in the basement. No oil entered any drain, sewer, or waterway. The chronology of the spill clean−up is already given above.

Investigation into the cause of the spill determined that a closed 3 valve on the bypass line around the fuel oil recirculation meter in the basement leaked through slowly, thus allowing fuel oil in the recirculation header (which has static head pressure on it due to the configuration of the piping system) to backfeed overnight through the piping and discharge from the open end of the pipe that had been connected to the discharge side of PB #5 relief / recirculation valve. Applying a wheel wrench to the bypass line valve handwheel, operators were able to get about an 1/8th of a turn on the valve. With this additional closure of the bypass line valve, no more oil came out of the recirculation line. As a corrective action measure as a result of the spill, temporary caps, plugs, or blind flanges will be installed on any open ends of oil system piping whenever people are not actively working on the system.

tank deteriorating − cleanup pending

DEC Investigator Remarks:

4/1/14: Mahat

DEC Mahat contacted Mr. Matthew Simpson (Pal Environmental Service @ 718.349.0900) inquiring more about the spill. Mr. Simpson informoed that the contaminated soil were discovered during the provcess of removal of abandoned tank. The tank was on the basement of the renovated area. Pal Enviornmental is retianed to remove the contaminated soil and soil boring to determine whether the GW is impacted or not. Mr. Simpson will provide necessary report and picture to DEC about the project.

4/18/14: T/C : A voice message was received from Steve (@ 201.207.6945) regarding the remediation work plan. DEC made an attepmt to reach back to him but he was away from his phone. A voice message to Mr. Steve to call back.

04/21/14−Hiralkumar Patel. 9:39 AM:− received call from Steven from Detail Associates. they found a 1,200 gal #2 fuel oil UST. PAL Env. has removed it. Steven asked for cleanup guidance. asked him to refer DER−10 and CP−51.

Steven Jaratzewski Detail Associates Ph. (201) 569−6708

6/9/14: Mahat E/C : A closure report on the spill case has been uploaded on edocs. The laboratory analysis of the soil sample

are below CP 51 guidance value. Based on the laboratory report of soil samples, Ground Water investigation is not required. The excavation was performed to it structure limits. Furthermore, based on site visit no further remediation and deliniation actions are required. Spill is closed on the database.

IN BASEMENT AND UNKNOWN CAUSE: FIRE DEPT ON SCENE

DEC Investigator Remarks:

02/08/08−Vought−Site visit by Vought and NYCFD and OEM Richard Wilde (ph: 718−422−8468 fax:718−422−8939) onsite with building management company Laurnece Jaret (ph:212−407−2537 fax:212−407−2677). Approximately 350 gallons of #6 fuel oil spilled into boiler room. Cause of spill as per Jaret was oil filter was being repaired yesterday and spill was caused this morning with no recent deliveries indicating poor maintenance of system and hence sole responsibility of building owners. No vapor complaints from resident to date and basement being ventilated via leaving doors open during cleanup. Boiler room floor well sealed with epoxy over poured concrete floor (no pathways to subsurface) and sump filled with oil and disconnected. DEP enroute to scene. Unable to confirm cause of spill as three inches of oil on floor and unable to examine exact location of spill.

Vought sent CSL with above requirement and one month due date to:

Mr. Laurence Jaret Rudin Management Company, Inc. 345 Park Avenue New York, NY 10154 Fax: (212) 407−2677

Vought called NYCOEM Wilde and left message that he was sent fax of letter to Jaret.

01/29/09−Vought−Spill closed due to no impact of petroleum to soil or groundwater and cleanup of spill by AL Eastmond.

Caller Remarks:

someone was there working on the water & oil burn over the weekend − sand was put down but not clean ed up − fumes are still in the bldg − epa did respond to scene & told them to call dec

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 10/9/2002−Vought−Oil spill of approximately 5 gallons occurred on 10/7/2002 during repair of burner line by super (LLC Duell Management−Asher 212−888−9848).

10/10/2002−Vought−Site visit by Vought. Concrete in good condition except for cracks under hot water heater. Duell was directed by NYSDEC to excavate floor and hire conctractor for endpoint sampling of both water and soil.

10/15/2002−Vought−Deull management hired PTC (718−624−4842) who will perform excavation and endpoint sampling under water tank.

11/7/02−Vought−Received endpoint analyticals from PTC which pass TAGM 4046 Required Soil Cleanup Objectives and Groundwater Standards. Also received copy of PTC invoice sent to Duell Management.

11/12/2002−Vought−Called Meara McIntyre to confirm that odors were gone. McIntyre informed that EPA was on−site along with FDNY due to a carbon monoxide exceedance. An immediate site visit was performed by NYSDEC. On−site were Inspector Crilly (212−442−1886) from DEP Enforcement and FDNY. Visual inspection of excavation yielded no remaining odors or petroleum impacted soil.

12/30/2002−Vought−Spoke with Meara McIntyre and no carbon monoxide readings since 11/12/2002. Spill closed by Vought due to reception of passing analyticals and work invoice. All future carbon monoxide complaints will be referred to FDNY.

1/15/2003−Vought−Recevied call from McIntyre of continuing Carbon monoxide problems. Vought returned call and referred McIntyre to NYCDOH (Ray Nieves 212−442−3376).

Caller Remarks:

CALLER STATES THAT THERE IS A UNK SHEEN ON THE WATER IN THE AREA OF EAST 74TH STREET.

DEC Investigator Remarks:

12/22/08 − See eDocs for Con Ed report detailing cleanup and closure. Con Ed reports a sheen on the East River, but says it is NOT from ConEd Station. Sangesland spoke to Coast Guard − They said they spoke to a tug boat in the area and they DID NOT see any sheen. As of 1:30PM Coast Guard is NOT sending anyone out to the site.

Caller Remarks:

FIRE IN MANHOLE AT ABOVE LOCATION. BLOOMBERG BUILDING. INCIDENT COMMMEND STRUCTURE SET UP ON SITE/JIMMY CLARK IN CHARGE ON SITE. NO FURTHER INFORMATION AVAILABLE AT TIME OF CALL.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ No e2mis notes generated for this incident.

Power switches that were put temporarily by Con Edison burned. As of this morning the cause of the fire is still under investigation. The transformers were not involved in the fire and there was no release of oil. No oil filled cable was involved

in the incident. This was not considered a environmental incident by Con Edison. Other agencies present on the scene were the Fire Department, Police Department, NYC Office of Emergency Management, NYC Department of Environmental Protection, and NYC Department of Buildings.

The building in front of the construction site lost power for approx. 3 hours. Power was restored to them when Con Edison replaced two fuses damaged.

incident is closed.

1 gallon unk oil found in manhole − clean up pending lab results con ed ref # 121451

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT e2mis 121451

If this is a Con Edison manhole it contains electrical cable and splices. Many manholes have a sealed sump in the floor which is used to allow runoff when pumping the structure. A hose is place in this sump and water on the floor will flow into the sump allowing the floor to be cleaned. If cleaned prior to analysis of the fluid, the structure will be cleaned as >50 PPM and all liquid and waste will be manifested accordingly. The structure will be double washed with a degreaser, i.e. Slix. All cleaning material and PPE will also be treated as >50. If any sludge is found within a manhole it is treated as lead contaminated and manifested accordingly. The spill identification tag will remain secured to the structure until the analysis is completed and if <500 PPM the signage will be removed. If the analysis is >499 PPM, a grid will be prepared for wipe testing the area. Until the analysis of the wipes are proven to be <10ugs/100cme2 all additional waste produced from the structure will be treated as the original analysis. If this spill occurred in a transformer vault containing a sump pump and there was a possible release, the drainpipe trap will be dismantled to determine if oil was released. Sludge found in a vault, through historical analysis, has been determined not to contain lead.

11/23/98 03:30 FLUGMACHER #99855 (FOD) REPORTS: WORKING ON TROUBLE FDR−24M96 IN M−50433 S/W/C E.70 ST. & MADISON AVE. FOUND APPROX. 1 GAL OF AN UNKNOWN FLUID THAT RESEMBLES OIL ON APPROX. 25 GALS OF WATER. FLUID IS CONTAINED TO THE MANHOLE DIDN'T ENTER ANY WATER WAYS OR SEWER SYSTEMS. THERE ARE NO CRACKS IN THE MANHOLE BUT THE STRUCTURE DOES HAVE A SUMP AND WAS UNABLE TO DETERMINE IF A SEWER CONNECTION EXISTS. TOOK A SAMPLE AND HUNG SIGN # 18132.

11/23/98 03:53 C.I.G. ROMERO # 09880 NOTIFIED..... 11/23/98 1135 HRS

RESULTS OF LAB ANALYSIS 98−12935: P.C.B: <1 PPM; AROCLOR: NONE

11/24/98 On 11/23/98 @ 13/00 UG cleaned structure with Bio−Gen 760 prior to lab results. 425 gallons of water treated as >50 PPM removed by Astoria tanker, 3 solid waste drums picked up by Astoria for disposal. EPA # NYP004029146. After removal of debris from sump pit it was determined the structure had a sewer connection which was clogged. Spill tag removed # 18132 job complete.

1 PINT OF UNK OIL ON 100 GALLONS OF WATER − CLEAN UP PENDING LAB RESULTS − SAMPLES TAKEN − REF #130911

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2MIS no. 130−911:

April 16, 2000 10:27 hrs. Andre Sahai #18615 Maint. Services reports that on April 16, 2000 @ 10:22 hrs he found approx. 1 pint of an unknown oil mixed with approx. 100 gallons of waterin mh−57310 @ 411 E 76 Street. There is no visual movement and undetermined if there is a sump or sewer connection and conduit plate 37−L−1 is not on record. A PCB sample was taken. Attempted to cleanup as a sheen and was unable. The cleanup is pending Test Results.

4/18/00 05:46 Received lab results, lab sequence # 00−03723 Aroclor − none PCB − <1.00 PPM. Lab Analysis SA00−03788−001 indicates an oil similar to Cooking Oil.

DATE AND TIME THE CLEANUP WAS COMPLETED : 04/21/00 : 12:00. CLEANUP PROCEDURE : FLUSH TRUCK FROM FLUSH OPERATIONS USED A HIGH PRESSURE HOSE TO DOUBLE WASHED THE FLOOR AND WALLS WITH BIO− GENESIS SOLUTION (SLIX), MANHOLE WAS THEN RINSED BY FLUSH TRUCK.

1 qt unk oil − samples taken − cleanup pending results con ed 136630 − on 100 gals water

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL DEC INSPECTOR'S NOTES E2MIS says no oil filled equipment' then says dielectric filled cable in structure called Ed Radtke 4−25−01 @4:30pm. He will gte clarification and update the report.

CON ED E2MIS REPORT 4−24−01 Unknown substance in MH59816, there is approx. 2pts. of an unknown oil on top of 100gals. of water in the structure. No oil filled equipment in structure. There is a dielectric− filled feeder in structure. 2 samples were taken on efor ID adn on for PCB. Env. tag hung.

The incident is being declassified a sa 24hr. clenaup since the cleanup cannot be completed within 24hrs. due to traffic conditions.

0704hrs 4−25−01 Clenaup completed @04:30hrs. Crew pumped out 315gals from MH, filled 2 barrels of solid and PPE waste, removed sludge and double washed MH with slix.

4−25−01 Clarfication. The initial data entry indictes that there is no oil filled equipment in the structure and then it states that there is a dielectric−filled feeder in the structure'. The logger was referring to a transformer(equipmetn) when he stated that there was no oil filled equipment in structure. According to the handwrittem e2mis incident log, the splicer entered the structure to work on the open end primary cable. This is what the logger was referring to when he stated that there is dielectric−filled feeder in the structure . The logger will be instructed regarding the definition of oil filled equipmetn in structure .

SUPER ORDERED FUEL AND IT OVERFLOWED ,DUE TO MUCH IN TANK, OUTSIDE AND CLEANING

DEC Investigator Remarks:

Patel made a site visit while Rockaway Oil cleanup team was on site. Required them to dig out oil contaminated soil from around tree at curb.

10/29/07−Hiralkumar Patel. visited site. found oil on street and on sidewalk. oil came out from vent pipe on sidewalk and ran along street curb for about 40−50 ft. Rockway oil was doing cleanup. requires soil excavation around tree in front of building near vent pipe. other than tree area, no soil impact. met Edison Cevallos (212−628−2132, cell: 917−837−4746), building super. no oil found in tank or boiler room.

spoke with Larry at Rockway oil. as per Larry, cleanup crew is on−site digging soil around tree. asked Larry to call with detailed information about area dug and observations.

received call from Dominick. they dug about 20 inch in soil area. asked him to take soil sample.

left message for Mr. Cevallos.

11/19/07−Hiralkumar Patel. spoke with Mr. Cevallos. he mentioned that rockaway fuel has excavated about 20 inches in tree area and has more contamination. oil company will remove tree and remaining contamiantion. spoke with Dominick at Rockaway fuel. they took soil sample on 11/16/07 and waiting for results. will send results once available. they area removing tree as co−op board is asking for such.

11/26/07−Hiralkumar Patel. received message from Anthony J. Lara from PTC. spoke with Anthony. he mentioned that NYC Parks department is not allowing to remove tree for further soil excavation. they did borings on three side of tree to depth of 4 ft and found no PID values. only area left is under tree. asked Anthony analyze soil prior to any further excavation, to know level of contamination.

01/02/08−Hiralkumar Patel. spoke with Anthony S. Lara at PTC. he couldn’t found any record. spoke with Dominick at Rockaway fuel. he mentioned that Anthony took samples. asked Dominick to contact Anthony and to provide analytical results for review.

01/31/08−Hiralkumar Patel. spoke with Dominick at Rockaway fuel. he will call PTC again. 02/05/08−Hiralkumar Patel. received sample analyticals and site map from PTC. they took two composite samples. no contamination found in composite samples.

left message for Dominick at Rockway fuel and to Bob Lamirata at PTC.

received fax from Bob. they took composite samples from 0 to 3 ft depth. spoke with Bob. asked him to find out date of sampling. if samples taken 14 days prior to analysis, then submitted results are not acceptable and need resampling.

02/06/08−Hiralkumar Patel. received message from Bob. spoke with Bob. they took second set of samples on 01/07/08 after long discussion with parks department regarding tree on sidewalk.

based on submitted sample results, case closed.

CALLER REPORTING A SPILL OF MATERIAL POSSIBLY FROM A TRANSFORMER CONED#133282 SAMPLES TAKEN CLEAN UP WILL BE PENDING RESULTS
NO CALLBACK NECESSARY

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY e2mis no. 133283:

3 gallons possible transformer oil mixed with approx. 20 gallons water in vault V9139. There are 2 adjacent vaults V9550 − Feeder 31M56 and V9618 − Feeder 31M08 with approx. the same amount of oil and water in each vault. There is a weep hole in vault V9139 which caused the oil & water to migrate to the other 2 vaults. There is a possible bottom leak in the transformer in vault V9139 which is the possible source of the oil.

There is NO sump in vault 9139. There are 2 sump pumps in the adjacent vaults but they were not working. There is a sewer connection. There is no evidence of release to sewer or waterway. No initial cleanup action was taken other than to unplug the pumps. Cleanup is pending lab analysis results and crews.

LSN 00−0865 V9550 −− Aroclor 1254 PCB 24 ppm V9139 −− Aroclor 1254 PCB 04 ppm V9618 −− Aroclor 120 PCB 22 ppm

9/26/00 Transformer was removed at :00 hours, and clean up began. Tanker from Astoria removed 1500 gallons of water, and oil from all three structures. V 9139 was cleaned first so the new transformer could be dropped. This structure was cleaned, and double washed with BG−Clean 402, and washed down with water from the flush truck. At 16:45 the clean up on V 9139 was complete, the weep holes were plugged. At 17:30 the clean up on V 9550, and V 9618 was started. Both structure were cleaned with the same soulution, and washed down with water from the flush truck. Clean up on these two stuctures were completed at 20:30 hours.

UNK IF CLEANED TOTALLY AT THIS TIME

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE WANTS CALL BACK.

07/15/2005: Call to Sarina Tang (previous building owner) at 212−242−9001, left message, no response. M. Brand NYSDEC DER Albany.

11/01/2005: Sent letter to owners requesting information. Current Owners (since 2002):

New York City Industrial Development Agency 110 William Street NY, NY 10038

The Hewitt School 45 East 75th Street NY, NY 10021−2736

M. Brand NYSDEC DER Albany.

11/04/2005: Conversation with Louis Uliano, Director of Community Relations and School Safety (212−994−2616), The Hewitt School, regarding open spill. He was unaware of spill until receipt of letter. School no longer uses oil, was converted to natural gas/steam heat, no apparent problems in furnace area. Entire bulding was renovated in 2002, no apparent environmental problems noted during that work or inspections. M.Brand NYSDEC DER Albany.

11/04/2005: Conversation with Sarina Tang, former owner of building (212−242−9001). Small amount of fuel oil spilled on concrete floor during replacement of oil burner (during conversion to natural gas) in 1998. Concrete floor was stained. Tang hired someone recommended by oil company to take up the concrete floor and remove any contaminated material/stained flooring. Approximately 6 inches of concrete was removed in area (more than necessary, Tang indicated they wanted to level floor anyway and took more out). Area was inspected several times during property transfer in 2002, no apparent environmental problems were noted. Spill closed 11/04/2005 due to small quantity of material spilled (<25 gallons), removal of stained concrete and fuel oil, and lack of environmental problems noted during property transfer inspections and continued/current use of the area. M.Brand NYSDEC DER Albany.

spill by ferrantino fuel oil. Milro responding. DEC Patel to respond.

05/06/14−Hiralkumar Patel. alternate address: 1061 to 1065 Lexington Ave

PBS #: 2−479896. as per PBS record, the site has/had following tanks: − one (1) 5,000 gal #6 oil AST on saddles, removed in Sep. 2007 − one (1) 5,000 gal #6 oil AST on saddles, installed in Oct. 2007

other spills: 0706201, 0706387, 0710615, 1401210

spill # 0706201 was reported on 09/01/07 due to 200 gal #6 oil spill inside tank room. the 5,000 gal tank started leaking. the leaking tank was replaced and a subsurface investigation was conducted in boiler room. case closed based on available report.

spill # 0706387 was reported on 09/07/07, which is duplicate of spill # 0706201. case closed.

spill # 0710615 was reported on 01/08/08 as 20 gal oil spilled due to overfill. oil spilled onto sidewalk. case closed.

spill # 1401210 is reported earlier today and is duplicate of the subject spill case. case closed.

9:10 AM:− visited site. site has one 5,000 gal #4 oil AST on saddles. the tank is located in secondary containment in sub−basement. the tank room is located in southwest corner of the building. the boiler room is located to the north of the tank room, in northwest corner of the building. the tank and boiler rooms are at the lowest elevation in the building. found cinder block covered opening in partition wall between tank and boiler room. all lines to/from the tank are aboveground, except part of fill line that runs under the sidewalk. fill line runs in old coal chute. found signs of historical spill on wall, under the coal chute.

met Michael Taylor from Ferrantino Fuel Corp. Mike mentioned that #4 oil was delivered around 6 AM today. Mike mentioned that the existing tank was installed about five years ago, when the previous tank was found leaking. during delivery earlier today, the tank was overfilled and oil spilled from the vent pipe and tank itself. oil from the vent pipe spilled onto concrete sidewalk, which then ran south on Lexington Ave and then east on E 75th Street. found a manhole cover (possibly ConEd structure) in spill impacted area in front of 157 E 75th Street.

oil also spilled from manhole and pipe joints on the tank. tank room floor was found in good condition. Mike mentioned that the tank room floor was recemented and sealed prior to installing the existing tank. some of the spilled oil in tank room seeped into adjacent boiler room, through cinder blocks in partition wall between the tank and boiler rooms. oil seeped into the boiler room ran into sump pit located in southeast corner of the boiler room. Mike mentioned that sump pump was disconnected immediately and they will pump out oil/water from the sump pit.

Ferrantino crew has applied absorbent sand on impacted surface. Milro arrived with vaccum truck. Mike mentioned that they will powerwash the impacted sidewalk, street and tank room floor.

asked Mike to seal the fill port to prevent any oil delivery, until the tank system is tested tight. also asked him to clean impacted cinder block area.

spoke with Neil Skow at ConEd. informed him about possible impact to coned structure, located along curb in front of 157 E 75th Street.

Michael Taylor Ferrantino Fuel Corp. Ph. (718) 832−6700 (O)

(646) 739−9677 (C) Fax (718) 832−6277 email: ferrantinofuel@ffcenergy.com

1:12 PM:− spoke with Tony Robustelli, property manager. informed him that the department requires tightness testing of the tank system prior to anymore oil deliveries.

1065 Lexington Avenue Corp.

property owner c/o The Adler Group Inc. 654 Madison Avenue, Suite # 2000 New York, NY 10065 Attn.: Tony Robustelli

property manager Ph. (212) 355−0600 email: trobustelli@theadlergroup.net

05/14/14−Hiralkumar Patel. 11:22 AM:− received call from Dot from Milro inquiring about requirements to close the spill. informed her that spill cleanup documents and tank system tightness test result must be submitted for review. she requested an email with requirements. 12:34 PM:− sent email to Dot with requirements. 3:46 PM:− received email from Paul from Milro. Milro crew returned to site on 05/12/14 to continue cleanup work, but street and sidewalk were blocked off with emergency vehicles for an emergency sewer repair. area is expected to be closed for 2 weeks.

06/13/14−Hiralkumar Patel. 12:35 PM:− sent email to Paul and asked to submit cleanup documents. email copied to Mr. Robustelli, Mr. Taylor and Rob Dowling (rdowling@energi.com).

08/19/14−Hiralkumar Patel. received email from Joe (at 4:46 PM on 08/12/14) from Milro including certification for the tank test. Advanced Tank Services certified that tank system was tested tight.

09/02/14−Hiralkumar Patel. 12:05 PM:− left message for Joe. 12:09 PM:− sent email to Joe and asked to submit tank system test result and summary of cleanup activities. 2:18 PM:− spoke with Joe. he doesn't have actual tank system test result. regarding street clenaup, they powerwashed impacted surface inside and outsite the building and also the street. no cracks were observed on boiler room floor.

based on observations during site visit and available information, case closed. 09/04/14−Hiralkumar Patel. 3:28 PM:− received email from Joe including closure report.

Caller Remarks:

found during construction and excavation on a vacant lot. cleanup in progress

DEC Investigator Remarks:

6/8/05 − Project transferred to TLGibbons in Central Office, Albany

9/21/05 − Sent certified letter to Trevor Davis, property owner, asking for information on spill and how it was, or will be, addressed. No response.

10/19/05 − Several attempts to get information on spill from Environmental Management Solutions, Inc, spill caller, was unproductive because company was in the process of moving and could not access files.

11/9/05 − Found spill closure report for this spill from Environmental Management Solutions, Inc. (EMS), dated April 14, 2000. EMS removed approximately 160 cubic yards of contaminated soil. Five end−point samples were either non−detect or below DEC action levels. The report further states that Mr. Anthony Sigona reviewed the data and on April 5, 2000 stated that the remediation had been sufficiently completed . Close site.

Caller Remarks:

Vault 9016. Contained to the structure. Clean up pending.

DEC Investigator Remarks:

EMIS 243092

11/17/2016 − Feng − Talked to Paul Walsh of EH&S Control Desk of Con Ed (212−580−8383). There are two transformers connected by a conduit and about 6 gallons of oil found in this conduit. It is contained to the structure. They did sampled and arrange to clean up. Pressure test was performed in the first transformer and it was holding . The 2nd one is in the process of pressure testing.

spill is assigned to ConEd−Unassigned .

03/28/17−Hiralkumar Patel. 6 gal of transformer oil was found between two vaults. units within vaults were pressure tested and passed. no sign of active leak was found. possibly historical contamination. spill was contained and cleaned up. case closed.

CLEANUP PENDING − NO SMOKE FIRE ETC − SPILL ON 400 GALL0NS WATER CON ED #145523

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ E2MIS NOTES 145543

On 10/10 @ 09:40 Bonaparte # 24219 I&A reported to me that while working in V−8984 for Feeder 31 M 56 he discovered app 3 gal of unknown oil and 400 gal of water. He was working on 460 routine inspections. He suspects that the oil is cable oil from the Transfromer unit due to heavy corrosion. The unit is condemned and pending removal. No sewer/waterway affected, no injuries, no weather contributed, no private property affected, no fire or smoke involved. There is no movement on the standing water. no sumps and no substantial cracks in the structure. The Enbvironmental tag # 31522 was hung. Two samples will be taken for PCB & ID with Chain of Custody # AA 22347. Cleanup pend Transfromer removal.

1/20/04 Sample results − 34 ppm PCBs. Cleanup completed 1/23/03. Transformer removed and replaced on 1/23/03.

CLOSED STATUS HAZARDOUS SPILLS − MISC. SPILL CAUSES − EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, VANDALISM AND STORMS − WITHIN 1/2 MILE SEARCH RADIUS.
All spills mapped and profiled within 1/8 mile. Between 1/8 mile and 1/2 mile search radius, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

PLEASE NOTE: * Compass directions can vary substantially for sites located very close to the subject property address.

Caller Remarks:

effected soil and concrete. clean up pending. 1/2 gal.

DEC Investigator Remarks:

On 10/ @ 02:5 Quintana # 51302 reported to me that a 02:15 while Trouble−shooting on FeederM77 he discovered in V−9187 located at 304−26 e 67 St. that approx ? gallon of what looks like Dielectric fluid sprayed on a tree plot and the surrounding sidewalk. The reason that he says the oil might be Dielectric is that he sees oil on the Vault grating and the top of the Transformer is wet with oil. He also noticied that the wall of the vault was also splattered with oil. No sewer/waterway are affected, no injuries, no Fire/smoke involved, weather did not contribute. The source of the spill may be the Transformer and the cause is unknown at this time. The spill was on the soil of a tree plot and the surrounding sidewalk. The sump pump in the Vault was found unplugged. According to Conduit plate #−K−1 there is no sewer connection. There is a duct run to M−12408 and it does have a sewer connection. Two samples will be taken for PCB and ID. Chain of Custody form # CC 09903 will be used. Environmental tag # 34541 was hung. Cleanup is in progress for the sidewalk. Speedy dry absorbent will be used. Speedy Dry was delivered to the sight along with a 55−gallon plastic . ERT has been notified and spoke to D Pontecorvo. Logger R Pagano # 48703

UPDATE 10/11/03 07:00 hrs W Quintana # 51302 reported to N Muldoon # 18723 that absorbent was put down on the sidewalk and soil. Area was made safe. Crew standing by pending arrival of I&A crews to drain unit and do a partial cleanup so unit can be removed. Final cleanup pending removal of unit.

UPDATE 10/11/03 Lab Sequence Number: 03−08425−001 TOTAL PCB 6 ppm

UPDATE 10/11/03 15:30 hrs J Cumberbatch # 10660 Operating Supervisor Manhatan I & A reported to N Muldoon # 18723 that the partial cleanup was completed @ 14:35 hrs. The sidewalk and the vault wall and floor were double washed with slix. Also there was a 2 Foot by 1 ? foot by 6 inches deep patch of soil removed from the E/S of the Tree Pit that was contaminated. The capacity of the unit was 285 gallons of oil. The tanker removed 260 gallons of oil from the unit and 20 gallons from the floor. There was one barrel of debri, soil and PPE removed and will disposed of properly. There was no release to sewer or trap. Spill tag # 34541 was left in place pending removal of unit and final cleanup. Cleanup persons can be found in the Event Involved Persons Screen.

UPDATE 10/11/03 15:30 hrs J Cumberbatch # 10660 Operating Supervisor Manhatan I & A reported to N Muldoon # 18723 that the partial cleanup was completed @ 14:35 hrs. The sidewalk and the vault wall and floor were double washed with slix. Also there was a 2 Foot by 1 ? foot by 6 inches deep patch of soil removed from the E/S of the Tree Pit that was contaminated. The capacity of the unit was 285 gallons of oil. The tanker removed 260 gallons of oil from the unit and 20 gallons from the floor. There was one barrel of debri, soil and PPE removed and will disposed of properly. There was no release to sewer or trap. Spill tag # 34541 was left in place pending removal of unit and final cleanup. Cleanup persons can be found in the Event Involved Persons Screen.

Lab Sequence #03−08427−001 Date Approved: 10/11/03 @ 15:36 hrs. Analysis indicates the presence of a substance similar to a dielectric fluid.

Update: 10/14/03 The following information regarding this incident is from an e−mail dated 10/14/03 @ 09:47 hrs. from J. Campanile to D. Battista, W. Fairechio & W. Choe: Joe Cumberbatch and our schedule team double washed the sidewalk with Sliks and removed the contaminated soil (2'x1'x6). The unit was LEC'd due to internal fault and hole in throat. Historical pcb count 10ppm 4/15/96, 10/11/03 sample came back as 6ppm. The transformer was drained and disconnected and structure was partially cleaned. Completion pending transformer removal.

Update 6−21−04 @ 06:50 E Hulser # 39723 reports that the cleanup is complete as of 03:00. Double washed with slix and flushed. Transformer has been removed and replaced. Tag # 34541 removed. Cleanup crew and supervisor are listed in the event involved person screen.

Caller Remarks:

1 1/2 gallons of dielectric fluid on 100 gallons of water. Cleanup pending crew type of dielectric fluid −insulatum − from a faulty joint Lab results 8ppm Ref 1

DEC Investigator Remarks:

e2mis no. 155630:

10−1−04 @ 11:10 J Rodriguez # 82289 discovered 1 1/2 gallons of insulatum coming from a damaged joint in m54560. Oil is ontop of 100 gallons of water. No smoke or fire involved. No sewer or waterway affected. No injuries and weather had no affect. Account # f3243 is being used for this incident. Source of spill is a joint and the cause is equiptment failure. Conduit plate 33−k−2 indicates no sewer connection. 1 liquid sample be taken from the spill. Cleanup is pending availability of resources.

10−02−04, 04:10 Lab Sequence Number: 04−07894−001 PCB 8 ppm. ANALYSIS INDICATES THE PRESENCE OF A MIXTURE OF A DIELECTRIC FLUID AND A LUBRICATING OIL/GREASE.

Update 10−02−04 05:00 e2MIS report had to be up graded to dielectric transformer spill; because of an unknown damaged feeder in the sturcture. Feeder has to be identified and repaired before clean−up can begin.

Oct. 2, 2004 20:49 @ 17:30 clean−up was completed. 1 drum of soilds and 2 gal of mixed water/oil was removed. MH was double washed w/ slix. Vactor and tanker was on location. Environmental tag was removed #44068. Source of spill; a blown joint. Joint is being repaired.

10/04/04 12;35 Update : To clarify the above entry, as per L.Faccini#20468 O.G.S of Feeder Control the leaking joint has been removed and the splicing on feeder 24m87 in M54560 was completed.

#6 FUEL OIL	PETROLEUM	6.00	GALLONS	0.00	GALLONS	SOIL IMPERVIOUS SURFACE

Caller Remarks:

LARGE OIL SPILL , ABOUT 50 FT LONG AND IN STREET:

DEC Investigator Remarks:

12/13/07 − Raphael Ketani. I went to the site. I saw an area of about 10’ by 15’ that had thick black oil on it. The oil looked frozen or turned to gel due to the freezing temperature. It looked like #6 oil − maybe 6 gals. The area was under a covered scaffolding and had been blocked off with caution tape. There was no danger of pedestrians coming in contact with the oil. The oil hadn’t run into the street. Cars parked next to the spill were unaffected. Pads and sausages were containing the oil at one end, and sand had been put down.

I met the super., Arif Kurt (212) 535−6964. He said that the spill came out the vent pipe. The vent pipe was a 6 by 6 grill built into the side of the 2 1/2 foot high retaining wall for the front garden. The garden was unaffected. Mr. Kurt said that it was an overfill. Mr. Kurt said that the boiler company had installed a new gauge and someone didn’t read it right. So the oil came out the vent. He said he wasn’t there when the spill happened. However, he said that he called the oil company, Bayridge Fuel (718) 451−2900 (Bayridge Fuel and Aggressive Heating), and they are sending out a cleanup company. He said that he had called them 45 minutes ago. I asked Mr. Kurt who was the management company. He said it’s Mark Greenberg Real Estate (516)

944−5000. He said the manager is Jim Cotter.

I called up Bayridge Fuel and Milt, the service manager, told me that ABC Tank had been called and they will be there at 1:00PM to clean everything. I told him that the concrete has to be powerwashed and the vent pipe cleaned inside and outside. He said he will let ABC know what has to be done. Next, I called up Mr. Cotter. He said he was aware of the spill. I told him that someone has to inspect the site to make sure a proper cleaning job was done. He didn't give me a definite answer that he would be there. I told him that DEC needed a verbal report regarding the cleanup, whether it is good or not. He said he will call me.

I called up ABC Tank (718) 272−2800, the contracted cleanup company. The woman I spoke to checked in her office and told me that she found out a cleanup crew from ABC was on the site right now.

At 2:20PM, I spoke to Mr. Kurt. He said that ABC was almost done. They took a vac. truck and sucked up as much oil as they could. Then they put down the first batch of absorbent sand. They worked it into the remaining oil and swept it up. The crew at ABC told him that they will put down more absorbent sand and come back tomorrow to power wash the concrete. Mr. Kurt said that he will clean the vent pipe grill himself and as far inside the vent pipe as he can get. He said they are doing a good job.

Based upon the small size of the spill, the fact that ABC is onsite doing the cleanup, and that most of the oil is already picked up, I am closing the spill case.

Caller Remarks:

cleanup pending − historic spill −

DEC Investigator Remarks:

6/27/11 − Raphael Ketani. The spill involved the discovery of oil in the subsurface below the 337 Garage. The site address is 337 East 64th Street.

I spoke to Shamus Kelly of Atlantic Environmental Solutions (201) 876−9400. They were doing some exploratory work when the oil was discovered. There is some old equipment at the garage − an oil water separator and a old gas pump. The present tenant has been there since 9/1986. However, this tenant has not used the equipment. Mr. Kelly said that, right now, AES is putting together a cost proposal for doing exploratory borings and removing the oil water separator. The contact person is Patrick Milner (212) 888−7400, Garage Management Co., 770 Lexington Avenue, 11th Floor, NY, 10065. The owner is 337 Garage, LLC.

I sent a CSL to Mr. Milner.

10/27/11 − Austin − Spill Transferred from Ahmed to Rahman − end

12/28/11 contamination found near oil water separator.A work Plan will be sent to DEC by Atlantic Environmental Solutions,201−876−9400, Seamus Kelly.(sr)

** Frank Galdun, 646−542−3465, new consultant to the site **

1/23/14: Mahat Case is transferred to DEC Mahat as per DEC Demeo. DEC received a call from Mr. Matt Collum (Property Owner @ 646.290.9400)inquiring about the status of the spill. Mr. Collum will provide all the required information to the Department accordingly.

Matt Collum Garage Management Company 770 Lexington Avenue 11th Floor New York, NY 10065 o. 212−888−7400 xt 7351 m. 843−810−5240 f. 212−980−0896

2/14/14: Mahat

DEC Contacted Mr. Collum to discuss details about the report. He will provide more information to DEC before making any decision on the case.

3/5/14: Mahat E/C: A email was sent out to Mr. Collum requesting to further investigation on SB # 7. The level of contamination on that particular spot higher than our guidance value. Mr. Collum confirmed that he will contact his Environmental consultant for more assistance and will get back to the Department.

6/21/14: Mahat Site Visit: DEC Mahat performed an site visit investigating ground water impacts on the monitoring water. All the analytical reports were uploaded on edocs for reference. SB # 7 was above DEC cleanup guidance. However, no sign of sheen and smell was detected while sampling from the baller.

9/29/14: Mahat DEC Mahat received an email from Mr. Collum with the laboratory analysis of MW #7. It does not have any detection of SVOCs and VOCs. The report has been up loaded to D2 for a reference. As per closure report that was submitted prior, all the monitoring well are bleow the guidance value except #7. Now, Mr. Collum has provided #7 MW lab result which is also below the CP 51 Guidance value. Remediation and delineation is not reuired by the department since all the GW samples are below guidance value. Based on the report submitted on 9/29/14, the department is closing the case.

Caller Remarks:

clean up crew enroute

DEC Investigator Remarks:

11−7−13 − Obligado − I spoke with Tony Murtaugh. He works for the insurance company Action Environmental for the fuel delivery company. According to Tony, the spill occurred as a result of an overfill of a 20,000 gallon fuel oil tank. The building is a very large residential appartment complex. The tank is above ground located in the basement. Prior to the delivery, the driver went to the basement with the landlord to check the guage. The gauge indicated 12−13k ullage in the tank. The order was for 6000 gallons. After 4000 gallons, oil began to overfill out of the vent in a garden area in front of the building, impacting soil. Tony estimated 10 gallons. They hired Milro to respond to the spill. Milro will be at the site in 1 hr to clena up the spill. I advised Tony to collect endpoint soil samples after excavation in the garden area to confirm the clean−up.

I also called Milro. The case Project Manager is Paul Basso and the field responder is Gene. I advised Milro to collect endpoint samples.

I spoke to the superintendent for the building, Collin Highland (917) 703−5043. According to him only 2 to 3 gallons was spilled. He also said a small amoount of oil spilled out of the manhole on the top of the tank in the basement to the concrete floor.

From PBS, the tank owner is:

Douglas Elliman Properties 675 Third Ave, 6th Floor New York, NY 10021

11/08/13−Hiralkumar Patel. 10:12 AM:− received call from Tony from Action Env. he mentioned that Milro responded yesterday and removed 2 yards of soil. Milro collected endpoint samples.

12/24/13−Milro emailed the report dated 12/23/13 Milro was contacted by Action Environmental to respond to an overfill of a

20,000 gal #2 storage tank on 11/7/13. Milro removed 2 yards of oil contaminated soil from an area around the vent pipe. The area excavated was 3´x5´ and extended 2.5´ deep. Attached is the site sketch with field screening results, manifest and endpoint sample lab analytical. The building contact for the Manhattan House is Colin at 917 703 5043. The Manhattan House paid for the emergency service not the oil delivery company.

Five endpoint samples were collected from sidewalls and bottom. The soil analytical result indicate that no VOCs and SVOCs were detected exceding the acceptable limit. Spill Closed.

Caller Remarks:

caller reporting superintendant of the building told the company driver to deliver 6,000 gallons to the east tank and it was supposed to be the west tank − the wrong tank was delivered to, and there was a spill − f.d. is on scene now.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO ROMMEL 2/10/03

9:26 Demeo on site. Delivery to wrong 20,000 gallon tank (east tank, not west tank). Catch basins impacted. Oil spread along 1/2 a city block. Some subsurface structures impacted. Eastmond just arrived on site. Oil is seeping from broken petrometer in basement. Manholes on top of USTs removed, no obvious oil on top of tank. Oil is being transferred to west tank to reduce pressure on petrometer.

11:29 Demeo on site. DLE notified for assistance with NYPD to close street. 68th Street closed between 2nd and 3rd.

Oil transferred from east to west tank. Oil stopped seeping from petrometer.

6/30/06 − Haggerty − received fax from Larry Jaret of Rudin Management Company (212−407−2537). The spill actually occurred on East 69th Street, not East 68th Street. The tanks are on opposite sides of the building − possibly cause of delivery error. The fax also included invoices from Al Eastmond who pressure washed and disposed of the oil contaminated water.

7/11/06 − Haggerty − received fax from Raymond Sojka of Amerada Hess Corp. The fax confirms the invoices from Al Eastmond represent the only work done concerning the spill.

Spill transferred from CO (MJHAGGER)

3/6/07 − Austin − Assigned to Rahman − end

06/29/07 − RAHMAN − Spoke with Anthony Lavarco, property manager (212−407−2400),who is looking for info/docs. He put me contact with their envirmental manager, Larry Jaret (212−407−2537),who is also looking for info/docs. He states their management comapany paid for repairs from Al Eastmond,but still trying to get Amerada Hess to pay. He gave me contact info for Steve King @ Hess (732−750−6707)− 06/29/07 11/05/07 Reviewed clean up documents. Eastmond provided equipment and service to clean up the spill.Documents in edocs. Spill can be closed.(SR)

Caller Remarks:

COULD BE AN OUTER WALL LEAK ,BUT UNSURE: NO RELEASE AS OF YET

DEC Investigator Remarks:

Sangesland spoke to rep from Cromco. He said there is a double walled tank with a moisure sensor between the two tank layers.
It appears that the inner tank wall failed and the alarm went off. There does not appear to be a release to the environment.
Spill should not be closed out until either the inner tank is repaired??? or when the tank is pulled out of the ground.

9/5/06 ttf letter sent. bf

10/20/06 received call from Michael Feeley of Avis. DW tank inner wall failed. no release of product. had tank repaired. will send letter with receipts/invoices of repair and tank test. FDNY was there to certify tank was tight. bf

3/5/07 Documentation as per 10/20/06 conversation submitted at 1/10/07 meeting w/Avis. NFA. bf

Caller Remarks:

caller reports 2 gallons on 50 gallons of water. con ed#127877. partial cleanup has been done.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL

e2mis no. 127877:

SEPT. 17, 1999 10:47 HRS. A. TOLOSA #18792 SUBSTATION OPERATOR REPORTS THAT ON 09/17/99 @ 07:30 HRS HE FOUND APPROX. 2 GALLONS OF TRANSFORMER OIL WITH APPROX. 50 GALLONS OF WATER THAT LEAKED FROM TRANSFORMER #6 ON FDR.# 69M01 @ E 63 ST SUBSTATION WHILE MAKING AN INSPECTION. THIS IS AN ONGOING LEAK LOCATION AND THE CATCH PANS OVERFLOWED FROM THE STORM YESTERDAY AND SPILLED INTO THE BLUESTONE. A PARTIAL CLEANUP WAS COMPLETED BY R. MACKNIGHT # 75368 AND G. COSTIDIS #12605. THEY PICKED UP THE EXISTING PADS AND MARRIAGE ROLLS AND EMPTIED THE CATCH PANS. THE REMAINING CLEANUP WILL BE DONE BY A CONTRACTOR. THE SPILL DID NOT ENTER THE WATERWAYS OR SEWERS. THERE IS A SAMPLE HISTORY {SEQ.# 98−10142 DATED 9/27/98} SHOWS < 5 PPM P.C.B. TAG# S−00085 & TAG# S−00098 WAS FOUND IN PLACE.

05−NOV−1999 THE CLEANUP WAS INITIATED. THE BLUESTONE IS CONTAMINATED FROM PREVIOUS SPILLS. WE WILL BRING IN A CONTRACTOR TO CLEANUP THE BLUESTONE.

On November 04, 2000 the unit was replaced with a refurbished unit. For details on the status of the bluestone removal see e2MIS #134264

10/22/03 Final clean up complete. All bluestone was removed from vault 6. The vault was lined with concrete and sealed with Kemper Seal.

Caller Remarks:

high temperaturs caused melting and leaks con ed 127536 being tested

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL con ed e2mis notes:

Found a spill of a tar like substance from gasketting material around transformer cubicle 6TR. Approximately 1 pint of a tar material (insulating grease) and approx. 4 oz of melting gasket material spilled (possibly due to high temperatures). The spill has affected two small areas on the cement floor inside the cubicle room, as well as several spots on the metal cabinets and equipment.

The material may contain asbestos, it may also contain over 50 ppm PCBS. Will start planning the removal of the damaged gaskets.

We will also sample for PCBS. Cleanup pending asbestos determination.

J. Busacca inspected the material and reports that the substance is rubber not asbestos. Cleanup to be started by mechanic R.Harris. Note that spots of the same material are visible in the other cubicles in the station. They will be cleaned as well. It seems that most of the gasketting material will have to be replaced.

An outage will be required to do this work. Cleanup completed by mechanic R.Harris. All cement areas affected were scrubbed with simple green. Dry tar was scraped off. The materials were placed in a drum for disposal. Cleaning of cubicle doors and equipment inside the cubicle to follow. An outage will be needed to complete that portion of the cleanup and replace the gaskets.

A wipe sample was taken. See lab results in micrograms per CM squared.

COOLING FIN ON TRANSFORMER #5 LEAKED ONTO BLUESTONE − CASE #125091 4PPM OF PCB

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL

CON ED E2MIS NOTES

2 gallons of dielectric transformer oil in bluestone/ soil. This was previously taken care of and a drip had been there which overflowed at this time, the drip rate is now 1 drop/sec. This is leaking from lower radiator fin of transformer #5. Installed pads and will change drip pan and fix source of leak.

5−25−99 Cleanup will start shortly, there is a transformer group crew in the station. They will remove all affected bluestone and reinstall the containment. They will also attempt to repair the leak.

The PCb count for this is 4ppm Aroclor 1260

5−25−99 14:20 hrs. A crew in the station working on the cleanup and applying Epoxy to slow down leak, the repairs will require an outage. Containment will be set up in the form of a drum to catch the oil. They will attempt to arrange the containment to keep the rain out of it.

This leak is from the lower radiator flanges and is presently contained by placing a plastic funnel around the flange connected via tygon tubing into a 5 gallin drum. To effect permanent epairs the radiator have to b eremoved and the flange regasketed. Obviously, an outage on the bank with the oil removed is required.

All affected bluestone ws removed and are awaiting sample results. Cleanup was completed on 5−25−99 on the 4−12 shift

This transformer was replaced in March 2000. Stained Stone Removed.

leak on a bushing caused materal to leak − clean up in progress at this time con ed spill no.120799

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT

NOTE: This is the Master Spill Number for Transformer #4. It is to remain open until all repairs on this equipment and remediation are completed. (JHO, 3/24/06)

~~~~~~~~~~~~~~~~~~~~~~~~~~~ e2mis #120799 (master):

~~~~~~~~~~~~~~~~~~~~~~~~~~~ e2mis no. 150075 (sub):

8−27−03 @ 13:40 R Macknight #18253 reports that while doing an inspection of e 63 st sub station, he discovered 12 ounces of transformer oil had leaked onto the concrete pad from transformer #4 sample valve. There is a drip rate of 3 drops per minute which is being contained by oil absorbent pads and a drip pan. No samples to be taken as there is valid samples on file. Cleanup pending to be performed using simple green and rags.

6/21/10 − changed Lead DEC to JMOCONNE (JOC)

11/22/16 ˇ Austin ˇ This spill report is being transferred from Joe O´Connell to Con Ed Unassigned − end

03/28/17−Hiralkumar Patel. the spill case was reported on 10/25/1998 due to findings of approx. 1 gal of dielectric fluid spill onto bluestone during regular inspection. leak was noted from secondary throat, but it was unknown if leak was coming from bushing or transformer. leak rate was 1 drop per min. pads were placed underneath the leak. affected bluestones were removed and cement area was cleaned. as leak was inside the secondary throat, power outage was required for repairs. containment was left in place. the transformer was replaced in 2017 (work order dated 01/25/17), all soil removed to depth and concrete moat to be installed.

case closed.

FOUND AT LEAK THAT WAS LEAKING AT A RATE OF 3 DROPS PER MINUTE OF DIELECTRIC FLUID (NO PCB'S REPORTED) AND LEAKED A TOTAL OF 180 DROPS ONTO BLUESTONE

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 12/16/97, 3:35 PM − spoke with Avery Tom, Con Ed ERT − cleanup is pending a scheduled outage. Historical analysis results indicate highest PCB results are 14 ppm.

e2mis 113524

ON 12/9/97 AT 1155 HRS M. AMERLING #20393 REPORTED TRANSFORMER OIL LEAK ON TR#6 SECONDARY THROAT IN 63 ST. S/S. IT IS LEAKING AT A RATE OF 3 DROPS PER MINUTE ONTO TOP OF NITRO CABINET, CONCRETE PAD AND INTO BLUESTONE. TANK TRAPS, PADS AND PIGS WERE PLACED

LEAK CONTAINED. S. M. DONAHUE WAS NOTIFIED, P. BYRNES #74864 AT 1340HRS ON 12/9/97.

On 12/15/97 @ 0753 hrs: Supervisor Trevor Hanson 81189 reports that an outage will be needed to make repairs and have leak cleaned up. LSN 95 08787 015 shows PCB level of 14 PPM.

UPDATE BY: William R Gresham 11648 12/15/97 @ 0800 hrs

Reported by M.Amerling 20393 to William R Gresham 11648 on 12/16/97 @ 1000 hrs: On Friday December 12th 1997 @ 0935 hrs a work permit was issued to cleanup crew under supervisor Bill Perine 79667 to remediate contaminated bluestone associated with this spill. Cleanup was completed at 1400 hrs. Amerling also reported an updated lab sample number 96−03252 which had a reading of less than 1 PPM PCBs. Outage is still needed to make the needed repairs to close this incident.

on 12/17/97 at 1030hrs SUPV. T. HANSON #81189 REPORTED TEMPORARY REPAIRS MADE ON BUSHING SEALS, MAJOR OUTAGE NEEDED FOR PERMANENT REPAIRS. P. BYRNES #74864 AT 1035HRS ON 12/17/97.

On Novemner 4, 2000 the transformer was replaced with a refurbished unit.

NO TO 5 QUESTIONS:

CONED # 157984: 3 OUNCES LEAKED:

DEC Investigator Remarks:

e2mis no. 157984:

4/7/05 @08:05 hrs. Bob Contino #16863, Substation Operator, found approx. 3 ounces of insulatum (dielectric fluid) leaked from the potheads on the breaker side of Capacitor Bank #1 at the East 63rd Street Substation. The insulatum spilled onto the metal floor inside the cubicle. Envionmental Spill Tag #S−0097 was installed. No samples were taken since this insulatum is similar to the insulatum in the feeder potheads that leaked in a previous spill. No cleanup action was taken. Maintenance will take the plate down and perform the cleanup.

6/6/05. I spoke with Sr. Operator Alex Tolosa. He stated that S/S maintanence reported to the station, recieved an outage and repaired the leaking pothead. They performed the clean up at the same time. There are no longer any leaks and the spill can be closed out.

Closed. 7−29−05. George Breen

2 BLOWN FUSES: NO TO THE 5 QUESTIONS: CONED # 156668: 2 DROPS LEAKED ONTO CONCRETE: CLEAN UP WILL BEGIN WHEN IT GETS DEENERGFIZED:

DEC Investigator Remarks:

e2mis 156668

Dec. 21, 2004 @ 07:05 S/S Operator Wendy Javier #86810 reported to T. Haynes 82326 mcc, that @ 06:16, 2 − fuses had blown for Cap−Bank #2 and two drops of dielectric fluid leaked onto concrete. Locate at 321 E 63 St. Substatation. The Cap−Bank is energized. When the equipment can be de−energized the cleanup will begin. No sewer/waterways affected. Substance; Dielectric fluid. Cause of spill; blown fuse. Souce of spill; Cap−Bank #2. Environmental tag # S01686 was hung.

01/10/04 I inspected the spill that morning. There was no oil spilled. I was on top of the capacitor fuse. When it blew the ice melted and dripped water. The operator could not open the cage to inspect becuase it was still energized. When we safely entered the caged the water evaporated and the capacitor cans were sealed and intact. No oil spill occured. P.Keelan

Caller Remarks:

they had a leaky valve on transformer 11 that caused about 1/2 pint of transformer oil to spill. spill has been cleaned up and valves are being repaired

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 152129:

discovered 1/2 pint of transformer oil had leaked from a valve on transformer #11 onto the bluestone around the transformer. No samples need to be taken as there is generator knowledge that the oil is non−hazardous. A valve bag was placed to contain the leak and the bluestone was being dug up for the cleanup. The cleanup started @1420 and was completed @1445. Transformer group is being instructed to perform a repair on the transformer.

1/24/05 Supervisor Wilton Mowatt reported on 1/10/05 that the Transformer group tightened the valve and the leak has been repaired. It was confirmed by Mr. Mowatt.

Caller Remarks:

spill was on blue stone and there were no water ways, private property, injuries or fire involved. The spill was caused by filling up a radiator on a transformer

DEC Investigator Remarks:

E2MIS 150349

At 17:53 M.Jenning #75470 sso reported to W.Lee #33243 mcc that he spill 20 gal. of transformer oil on bluestone while filling radiator on transf #2 at 321 e.63rd st station, On feeder 69m04 at 17:40 hrs. In prosses are clean up, Pcb less than <1. Cause of spill: Oper Error

9/16/03 Spill occured while refilling the radaitors after replacing leaking radiator pumps. Marriage roll and absorbent pads were placed around radiators during repairs. Most of the oil was contained in the pads. A small amount <1 gallon spilled onto the bluestone. The radiators were cleaned of all oil. A contractor will be called in to remove the stained bluestone from this leak and the leak from the repaired radiators and historic staining.

Clean harbors removed all stained bluestone and replaced with clean stone.

Caller Remarks:

spill to storm sewer after deludge system failed.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 6/3/02, 0830 hrs: Joe Susco called me to inform me that the deluge system in vault 5 malfunctioned, flooding vaults 5 and 6 (overflowed from 5 to 6). Water picked up residual oil from soil,5 overflowed through louvers onto sidewalk and down curbline to catch basin at southwest corner of 64th St and 1st Ave. (JHO)

6/2/02, 1030 hrs: met at station with Tom Whipple, SSO EH&S. Historical PCb results from soil previously removed from vaults is maximum 19 ppm. I requested that they collect a sample from the oil floating on the water in the vaults. Vaults are filled to

just below the entryway. Visual estimate is less than 20 gallons of oil total floating on tens of thousands of gallons of water. All State Power Vac has been contacted and is en route. There does not appear to be any residual staining on the curbline. Catch basin will be cleaned by All State first, as >50 ppm PCB pending lab results. If analytical is consistent with historical data, vaults will be pumped out and clean. If test comes back >50 ppm, curbline will also be power washed. (JHO)

e2MIS no. 143−131:

6/03/02 Stu Hanebuth #85259, Substation Operations, reported to Bob Bruns #21106, Manhattan Environmental Desk, at 07:25 hrs. that there was a release to the sewer of approx. 50 gallons of oil due to the activation of the Deluge System in Transformer Vault #5 at the East 63rd Street Substation.

R. Pellegrino called Stu Hanebuth, of Substation Operations to get the details of this report. Mr. Hanebuth reported that the NY Fire Dept. called Con Edison at 04:30 hrs. and stated that water was coming out of the substation. Substation Operations responded and sent Substation Operator, Daryl Carr #17860 to East 63rd Street Substation to investigate. Mr. Carr #17860 arrived at E63rd St. S/S at 05:50 hrs. and found the NY Fire Dept. on location. He reported the spill to the Manh. Env. Desk and stated that there was a previous incident with this vault −− reference Incident #135201. Mr. Hanebuth arrived at E63rd St. S/S at 07:25 hrs. and reported this incident to R. Bruns #21106. As detailed above Mr. Bruns reported the release to the sewer at 07:30 hrs. to CIG Anthony Natale #86017. Mr. Hanebuth stated that the Deluge System (Fire Protection System) for transformer #5 was activated and filled the moat surrounding the transformer with water. The Deluge System was running for over one hour and was shut down at 05:50 hrs. Mr. Hanebuth reported that the moat is capable of holding approx. 100,000 gallons of water. Due to the previous problem with oil in the soil (in the moat), reference incident #135201, the oil in the soil floated to the top of the water and when the moat over flowed, the oil and water mix went through the louvers of the transformer vault onto the sidewalk & street and into the driveway on the E.64th St. side of the station and onto the sidewalk and down the street. Approx. 60,000 gallons of water and approx. 50 gallons of oil went down the street and into the sewer. The source of the spill was the residual oil in the soil in the moat of transformer vault #5 and the cause was the activation of the deluge system. There was 12 private vehicles parked along the street and the bottom of the tires were affected by the oil & water flowing down the street.

No samples taken due to prior historical record of 19 ppm PCB as per Mr. Hanebuth. Cleanup is in progress by Substation Operations personnel using absorbent pads and Speedi−Dry granules. They are waiting for a vendor to arrive to continue and complete the cleanup.

12/9/02 I inspected the area on 12/9/02. Clean up was performed by Con Edison and Clean Harbors at the time of the spill. Clean up is complete.

FAULTY TRANSFORMER CUASED SPILL OF 5 OUNCES − CLEAN UP COMPLETE @ 1510 HRS − REF #140175

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY

Consolidated under DEC # 0106589. (JHO, 3/13/06)

~~~~~~~~~~~~~~~~~~~~~~~~~~~ e2mis 140175

Alex Tolosa, Substation Operator, reported approx. 5 oz. of transformer oil leaked from the primary transformer bushings of Transformer #3 at the East 63rd St. Substation. The source of the spill is the transformer and the cause is a leak from the primary bushings. The primary bushings are presently not leaking. The feeder associated with bank #3 is Fdr. 69M05. No sewer or waterways were affected.

Samples were taken by Stu Hanebuth for PCB analysis. Prior PCB historical data indicates 5 ppm as per lab sequence #98−10112 dated 9/26/01. Cleanup was started at:40 hrs. by Alex Tolosa #18792 and Robert Crespo #83732 using oil absorbent pads. They also picked up the affected bluestone and installed a drip pan under the leak area to contain the spill. The cleanup was completed at 15:10 hrs.

This entry is to correct errors in the initial report.

1) No samples were collected, and the date on the lab report should 27−SEP−1998
~~~~~~~~~~~~~~~~~~~~~~~~~~~

2) The oil is running through the conduit that is attached to the primary bus cans on one end and the Back−up relay panel terminal block box on the other. The rate of the migration appears to be in the range of 20 drops per day, it continues to migrate.

~~~~~~~~~~~~~~~~~~~~~~~~~~~~ e2mis no. 139550 (Master):
~~~~~~~~~~~~~~~~~~~~~~~~~~~~

~~~~~~~~~~~~~~~~~~~~~~~~~~~~ e2mis no. 140175 (sub):

11/08/01 15:30 hrs. Stu Hanebuth #85259 found approx. 5 oz. of transformer oil leaked from the primary transformer bushings of Transformer #3 located at the East 63rd St. Substation. The primary transformer bushing leaked along the pipe and spilled onto the bluestone. The source of the spill is the transformer and the cause is a leak from the primary bushings. The primary bushings are presently not leaking. The feeder associated with bank #3 is Fdr. 69M05. Samples were taken by Stu Hanebuth for PCB analysis. Prior PCB historical data indicates 5 ppm as per lab sequence #98−10112 dated 9/26/01. Cleanup was started at 14:40 hrs. using oil absorbent pads. They also picked up the affected bluestone and installed a drip pan under the leak area to contain the spill. The cleanup was completed at 15:10 hrs.

Correction: 1) No samples were collected, and the date on the lab report should 27−SEP−1998 2) The oil is running through the conduit that is attached to the primary bus cans on one end and the Back−up relay panel terminal block box on the other. The rate of the migration appears to be in the range of 20 drops per day, it continues to migrate.

spilled on to feeded cable and floor

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed e2mis #136037:

3/21/01 11:35 hrs. Winton Mowatt #86157, Substation Operator, reported at 11:15 hrs. that Ricky Harris #15146 found at 10:00 hrs. that approx. 1 quart of insulatum (dielectric fluid) had leaked from all 3 phases of the feeder potheads of Fdr. 25M49 located in cubicle 72 in Station #2 of the East 63rd Street Substation. The insulation leaked from the pothead fill valves onto the feeder cable and onto the metal floor of the cubicle. Substation maintenance was in the process of doing a breaker and cubilce inspection when they discovered the spill. The source of the spill is the feeder potheads and the cause is a leak from the fill valves. No environmental spill tag installed yet. Substation Operator will call back with the tag #. No samples taken due to prior generator knowledge and previous PCB history. Cleanup started at 11:10 hrs. by R. Harris #15146 and Rich Falch #43822. They are using absorbent pads, rags and simple green.

UPDATE: @ 12:23 hrs. Wilton Mowatt #86157 reported at 12:16 hrs. that the cleanup of this spill was completed at 12:00 hrs. by Ricky Harris and Rich Falch.

1/2 oz spill into blue stone...clean up complete @ 935. Ref #135236.

DEC Investigator Remarks:

8/1/08: As per 9/18/06 agreement between NYSDEC and Con Edison, approved engineering controls (valve bags, drip pans, absorbents, etc.) are in place and are being maintained for minor drips and small leaks. See eDocs for final emis report. Close out. (JHO)

~~~~~~~~~~~~~~~~~~~~ e2mis no. 135236:

Mike Coppola #13638, Substation Operator, reported that he found approx. 1/2 ounce of transformer oil had leaked from the top and bottom plugs of one of the radiator fins on Transformer #1 associated with Feeder 69M03. The transformer oil spilled onto the bluestone. The drip rate is approx. 1 drop per 30 minutes. Mr. Coppola was performing a station inspection when he discovered the leak. Spill tag #S − 01203 installed. Cleanup action was taken immediately. The soiled bluestone was picked up, a drip pan was placed under the radiator fin to contain the spill and the cleanup was completed at 09:35 hrs. The operator will notify Substation Maintenance to make repairs.

Note: Mike Coppola reported at 10:33 hrs. that previous PCB history indicates < 1.0 ppm as per lab sequence #99−01273 dated Oct.
~~~~~~~~~~~~~~~~~~~~

1999. Therefore no samples will be taken.

~~~~~~~~~~~~~~~~~~~~~~ e2mis no. 156618:

On 12/16 Amerlong # 20393 of SSO reoported that while doing inspections he noticed at Transformer #1 that 2 gallons of fluid spilled onto the concrete pad and into the Bluestone. The valve below the air tank is leaking. No sewre/waterway affected, no private property affected, no fire/smoke involved, no injuries and weather did not contribute. The Feeder is 69M03 on 69 KV. Environmental tag # S 01723 was hung. No samples will be taken because Previous Lab results will be used and the finder will update the incident and provide that information.

The spill has been contained and the bluestone will be picked up and bagged and on 12/17/2004 the valve will be inspected and replaced if neccessary to affect permenent repairs.

tank truck was pumping out dialectric fluid some type of problem w/ the truck caused the truck's vacum pump to reverse and start pumping material back in to the generator material overflowed into a secondary containment area

all material except 1.5 oz was contained that 1.5 oz was cleaned up the rest was allowed to remain in the containment area

clean up on remainder will be started at 4pm this date by allstate power−vac material appears to have overflowed from the top of generator and from top of pump truck

material and secondary containment pads still on scene all materil will be cleaned today

---

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

The following DEC Investigator Remarks were available prior to 1/1/2002:

e2mis Notes:

A. Tolosa of SSO reports spill of 10 to 15 gal of transformer oil in driveway of E 63rd St Substation. Spill was caused by pump on tanker running in reverse due to faulty wiring and causing truck to overflow. Spill was completely contained by spill apron routinely placed under tanker except for 1.5 oz that splashed onto concrete which was cleaned up with pads. Transformer PCB content is <1ppm as per sample from 11/10/00.

12/10/00 Stu Hanebuth moticed that the oil absorbants had not been picked up and the truck still needed cleaning. Oil residue remained on the outside of the tank. The free oil that had spilled directly onto the asphalt had been cleaned up. All State Power Vac completed cleanup on 3−11 shift on 12/10/00. Truck was cleaned and rinse water was collected and drummed. Oily absorbants were containerized.
KMF 4/9/01.

DEC Investigator Notes:
Okwuoha responded off−hours with Tibbe. Spoke with Stu Hanebuth. Driveway slopes into a sewer connection 8 ft away. It was cleaned up and pads put in place. Hanebuth called spill in when he found truck not cleaned and heard it was going to rain. Tibbe told him that he should have called it in to the hotline in the first instance because it is not deminimus.

cleanup complete 5 oz total product 134302

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis notes:

11/8/00 − Found leaking pothead in position #12 − b phase − feeder 20m01 (now out). Leak is 5 ounces of insulatum. Spill is ionto cable and into duct. Total capacity of pothead is 1/2 gallon. Cleanup is after sampling and will be done as 50−499 ppm PCB.

11/9/00 − Insulatum spilled on the cable and part of the duct where the cable comes from. The insulatum did NOT spill on the floor. ERT Shah stated that this was not a reportable incident. In addition insualtum, also known as semi−fluid joint filling compound, is a petroleum jelly very similar to Vaseline in viscosity and composition. As manufactured it would NOT contain PCBsand is NOT considered a reportable substance unless it is contaminated with another substance or oil.

11/9/00, 2147 hrs − The material did enter the duct as stated in the initial report. The suct is situated on the sloor of the cubicle section, so the material did leave the surface of the pothead. In addition, the cleanup took more than 2 hours, so the incident should have been reported tot he DEC. DEC (Foley) visited the site on Nov. 9 at 1330 hours and inspected the spill area. Clean up was completed on Nov. 9 at 1700 hrs.

11/22/16 ˇ Austin ˇ This spill report is being transferred from Joe O´Connell to Con Ed Unassigned − end

3/22/17 − Austin − According to Rev. # 34 of EMIS 134264, Jim Siesfeld checked this unit on 3/9/17 and found that repairs had been completed, and contaminated soil and bluestone was dug out to 6 feet, and then a concrete moat was installed around the

transformer − Con Ed contained and cleaned up the spill − See document files for further information − Spill closed − end

Caller Remarks:

LEAKING FLANG ON TRANSFORMER AT ABOVE LOCATION . LEAK HAS BEEN REPAIRED AND CLEANUP IS IN PROGRESS. ALL MATERIAL IS EXPECTED TO BE RECOVERED. AMOUNT REPORTED AS 2 OUNCES. CON ED # 134254.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL

Transformer oil to bluestone came from upper flange on TR. Pads placed on bluestone and flange was tightened. (KMF)

7/1/04 See #0009089 (e2mis #134264) for additional cleanup details. (JHO)

~~~~~~~~~~~~~~~~~~~~~~~~~~~~ Con Ed e2mis #134254 Notes:
~~~~~~~~~~~~~~~~~~~~~~~~~~~~

11−4−00 A new installation was being hot filled with dielectric oil. While checking for leaks, found 2oz oil on bluestone. THe leak came from upper flange of the transformer, pads were placed on bluestone to contain the spill. Torqued bolts on the transformer to prevent oil from leaking. Buckets being used to contain residual oil. LSN 00−10523 (11/2/00) <1ppm PCB.

11−9−00 Flange stopped leaking after the tightening. The oil that leaked out has been cleaned from the surfaces of the transformer. The absorbant that is on the ground will be removed once the installation is complete.

12/29/03 All bluestone has been removed from the vault. A sealed concrete moat was poured for permanent containment. A monitoring well has been installed as per NYSDEC aggreement.

Caller Remarks:

leak stopped − spilled onto concrete and bluestone pcb hx is less than 1ppm

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 9/28/00 50gal from Transformer #5 leaked to transformer vault room. Leaked from pressure relief valve when removing oil to shift transformer. Were draining about 900gal. Allstate PowerVac enroute. Pads placed by Con Ed and doing initial cleanup. Main body capacity 7066gal. Pressure relief valve did what it is designed to do. No repairs necessary. Stu Hanebuth and AllState onsite at 1620hrs. Wiping down equipement and walls. Will remove bluestone after repairs are complete. Post ex samples will be arranged after cleanup is complete.

6/29/04 See spill # 0011488 for additional cleanup information. Close out. (JHO)

~~~~~~~~~~~~~~~~~~~~~~~~ e2mis no. 133671:

50 gallons of transformer oil was released from the pressure relief device of Transformer #5 − Feeder 69M06. The Transformer Group was removing oil for inspection of the transformer when the incident occurred. The oil spilled onto the concrete pad and bluestone. No samples taken since this is a new transformer. Previous PCB history is less than 1 ppm from Lab Sequence #00−03946,
~~~~~~~~~~~~~~~~~~~~~~~~

dated 4/30/00.

On September 28, 2000 All State Power Vac cleaned the transformer, concrete transformer pad, and transformer vault walls, to remove the oil. All State completed the vault cleanup at approximately 22:00 hours. No blusestone was removed at that time. The stone was left in the vault so that the repairs to the transformer could be made safely and promptly. Plastic backed absorbent rolls were placed over the stone to prevent the spread oil from being tracked around while work is being performed.

Acceptable gas−in−oil readings have been obtained on transformer 5. Clean Harbors Environmental is scheduled to begin the bluestone removal on October 17, 2000.

November 27, 2000 Removal of the bluestone is ongoing. Approximately 50 yards of bluestone remain in the vault underneath the transformer pad. Enginering has reviewed the pad design and has approved the removal of the stone.

11/20/00 The bluestone can safely be removed from under the pad to a level 6 feet below the bottom of the pad. This bluestone is not required to support the pad. If we have to go any deeper than 6 feet than we must excavate one section at a time since the piers may become unstable.

Lab sequence # 02−01080−001 PCB 9 ppm.

12/29/03 All bluestone has been removed from the vault. A sealed concrete moat was poured for permanent containment. A monitoring well has been installed as per NYSDEC aggreement.

1/2 qt spill from transformer. waiting for de−energizing. con ed #132327

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 7−19−00 Transformer 12− leaks and contaminated soils. Requested grab and composite samples for PCBs, SVOCs, VOCs. Three photos taken.(MCO)

11/9/00 Transformer 12. Simple green used on concrete base. Con Ed wants to backfill. Post ex results will be faxed. (KMF)

11/9/00 Stu Hanebuth faxed results through the ERT. (KMF)

Con Ed e2mis #132327:

7/12/2000 09:37 hrs. R. Contino #16863, Substation Operator, reported at 09:25 hrs. that he found at 09:10 hrs. approximately one quart of oil on Transformer #12 concrete pad and bluestone at the East 63rd Street Substation. Mr. Contino was doing a substation inspection when he discovered the oil spill. Mr. Contino cannot locate the source of the oil leak since there is an outer shell around the transformer. He inspected the tap changer compartment and did not see any source of leak. Transformer #12 is supplied by 69kV feeder 69M04. The oil did spill onto the bluestone. The substation operator will be requesting Chem Lab to take samples for PCB and ID. Pigs were placed around the transformer shell and absorbent pads were placed on the concrete pad and bluestone.

7/12/2000 11:55 HRS. R. Contino reported that after digging some of the bluestone, they discovered approx 3 gallons of oil had spilled into the bluestone not the 1 quart that was originally reported. Clean Harbors was called by Substation Operations to clean up the spill. Chem Lab was on location to take the oil samples.

07/12/00 AT 20:46 HRS LAB−RESULTS 00−06721 PCB 13.PPM IN TR.#12/MB

PCB<1.00 PPM TR.#12/SEL PCB <1.00 PPM IN TR.#12/CONT

On September 9, 2000, GUW Anthony Natale, 86017, reports that permanemt repairs were made to the transformer and it is not leaking. Leak was the result of a lose piece of tubing on the sampling port. Repairs were made by the Transfomer Mantianence Group.

ABOVE MATERIAL DISCOVERED AT ABOVE LOCATION. AMOUNT REPORTED AS 12 OUNCES. ALL MATERIAL SPILLED ON CONCRETE AND CLEANED UP. MATERIAL TREATED AS 50/499 PPM. CON ED # 131940. NO CALL BACK REQEUSTED.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed e2mis #131940:

6/20/2000 11:50 Hrs. At 10:50 hrs. discovered an unknown substance had dripped down A, B and C phase potheads along the cable and spilled onto the concrete floor of the cubicle. Substation maintenance was in the process of changing the RMS coil in cubicle position #73, feeder 25M43 when the leak was discovered. They took plates down in the cubicle and discovered the leak. The unknown substance is like a semi−liquid substance and is contained on the floor of the cubicle. I recommended that pigs be placed around the substance. Approximately 10 to 12 ounces of the substance is on the concrete floor of the cubicle. R. MacKnight placed spill tag #S00851 in the cubicle. He will notify the Chem Lab to take samples for PCB and ID. Unknown substance will be cleaned up as 50 to 499 ppm PCB.

Operator R. MacKnight reports that the clean up was completed by 12:20 and that the permanent repairs had been completed by 12:00pm (noon) on 06/21/2000.

Caller Remarks:

400 TO 500 GALLONS OF OIL FROM A BROKEN LINE. CLEAN UP IS IN PROGRESS.

DEC Investigator Remarks:

7/16/2013 − Feng − DEC Jeff Vought, Sharif Rahman and June Feng spoke to Bob Hill. During the delievery of #4 oil (Hess is the oil company, Madio K is the deliver), the fuel line has broken and released around 400−500 gallons of oil. The oil ran on the boiler room floor, which they didn't know how much. A vac truck is onsite and so far generated 7 drums of oil. Contamination underneath the sidewalk is assumed. The tank size is unknown. NO vapor complaint yet. RP is unknown. DEP is involved too.

Dispatched DEC Rahman to be onsite to investigate. Spill is assigned to Rahman.

07/16/2013 Responded to the site on behalf of Veronica Zhune(Zhune is the day time runner).RiteWay crews and vac truck on site recovering loose oil from the back alley, under/around stairways floor. As per building management, estimated 400 gallons #4 oil spilled through the underground broken fill line, entered the building through wall and spreaded all over outside of boiler room. No oil in the tank room. Tank is 12,000 gallon vaulted. DEC requires: 1−Excavation of fill line under sidewalk, disposal of contaminated soil followed by end point sampling. 2− Clean up of loose oil from the open area at the back alley. 3− Submission of closure report to DEC 4− PBS update, 2−043389 expired.

Building Manager: Brian Mcglone, 212−535−6910.(sr)

07/22/13−Zhune−Diana sent an update of the cleanup. Right Way Tank arrived at 1:25 pm and began cleaning up the oil, pumping out the spilled oil. They clean up the back alley, what they could in the electric room (they could not clean inside the electric boxes), they cleaned out the floor drain and the sump pit. (a small amount of oil did find it way into the sump pit). They also disposed of all contaminated materials in the alleyway. including 36 paving stones. Right way needs return to clean up the oil under the side way, some spots in the electric room and remove their drums of contaminated waste. They are also giving a price on replacing the ruptured section on the fill line.

The electrical service boxes were covered in oil and need to be replaced. Response worked through the night to run temporary bypass so the boxes can be moved. Leardon Boiler Works will be doing the work on the new fill line and cement work. Their proposal has been accepted by the Board.

12/05/13− Jennifer Lewis from P.W. Grosser Consulting sent the following email dated 11/22/13. They have had to do the remediation in the sidewalk in stages so as not to completely block access to the sidewalk. The first stage involved the excavation of the fill port and soils towards the building. The second stage involved the excavation of impacted soils near the vent pipe. The third stage (which has not happened yet) will be the excavation of more soils in line with the fill pipe entering the building. Endpoint samples from the first stage (collected in August and shown on the attached data table) were clean, so they backfilled that section and re−poured the concrete. Endpoint samples from the second stage are slightly elevated for a couple of SVOCs (samples collected in November and shown on attached data table). The soils did not exhibit petroleum staining or odor, so this may be more consistent with fill material.

12/10/14−Jennifer Lewis sent the report dated 12/10/14. The report stated that Riteway removed approximately 600 gallons of petroleum and liquids that puddled on the electrical room and in the injector pit. After the petroleum was removed, the floor and walls in the electrical room were cleaned and recoated.

The soil removal beneath the sidewalk was conducted in four stages. The first stage involved the excavation of the sidewalk flags immediately over the fill line from the sidewalk to the building. Based upon the migration of the petroleum contaminants, the excavation then expanded into the three other stages along the building foundation wall. Groundwater was not encountered during the excavation.

Eleven endpoint soil samples were collected: Three bottom samples and eight sidewalls samples were collected. The analytical results inidicated some VOCs detected below the limit acceptable and minor exceedances of SVOCs consistent with urban fill material. Spill Closed.

from union on boiler − cleanup in progress

DEC Investigator Remarks:

spill occured in parking garage and boiler/tank room. PBS 2−110833. Riteway onsite to clean. DEC Patel responded.

09/14/12−Hiralkumar Patel. 11:15 AM:− visited site. met Frank Knispel (property manager) and Anthony (Riteway). site has one 17,000 gal AST in subterrain vault (with access) in the boiler room, which is in sub−basement of the building. there are three boilers in the boiler room. Mr. Knispel mentioned that overnight, return line on one of the boiler started leaking onto boiler room floor. oil pooled on boiler room floor and then entered into garage through two weep holes at the bottom of cinder block wall between the boiler room and garage. spill was noticed around 7:30 AM.

riteway crew was on−site removing oil/water mixture using vaccum truck. oil spread underneath the parked cars in garage. Anthony mentioned that tires of impacted vehicles were cleaned up using absorbent pads. during inspection, found one drain in garage. as per Mr. Knispel, there are no drains in impacted area in the boiler room and the drain in garage is connected to boiler room sump. floor in boiler room as well as in garage was in good condition. no cracks noticed in floor. Mr. Knispel mentioned that the sub−basement floor is made of a continous thick concrete layer.

during inspection Mr. Knispel mentioned that they recently changed from #6 to #2 oil. checked PBS registration and found that the registration was expired on 04/02/12. asked Mr. Knispel to renew PBS registration with correct product information. also asked him to color code the fill port and repair tank label at the gauge.

based on observations during the site visit, case closed.

LEAK IN FEEDER CABLE − NOTIFIED NRC & NYC DEP − CALLED BACK THEY ARE TRYING TO LOCATE THE LEAK; @6:00 TIL 11:00PM LEAK NOT LOCATED. USCG CALLED @ ~10:00PM, WILL SEND TEAM TO CHECK WATER WAYS.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 10/25/93, 10:05 AM: Spoke with John Hegerty (Con Ed). Leak is 50 to 100 gph, 2000 gallons so far. Did visual over weekend, did not find leak. No leak on bridge. Checked main manholes, now shecking side manholes. First freeze will be 1st Ave & 59th St Bridge.

10/25/93, 12:30 PM: Met with Petty Officers Dooley and Spendsen (USCG) − they said Con Ed examined the cable along the bridge and found no leaks. Con Ed crew was on site at 1st Ave & 59th St excavating to perform freeze on line to find leak. Left scene at 1:30 PM. (CAE)

10/25/93, 8:00 PM: Oil started coming up in road on 1st Ave between 70th and 71st St. When I arrived, Con Ed crew already excavating for freeze test. Con Ed had thrown sand on road to absorb oil. By 8:30 found leak, wedged wooden spike in it. By 9:15 had clamp on hole. Oil started seeping back into trench from surrounding soil.

While spill was still ongoing, checked manholes − found oil/water flowing in manhole at intersection of 71st St/1st Ave − sewer, high flow, 15 − 20 feet deep. Original excavation trench was about 4' x 8'. Con Ed planned to excavte another 2' on the south side of the trench and 18 on the east side. Left scene at 9:40 PM. (CAE)

10/26/93, 11:00 AM: Con Ed crew is welding barrel onto pipe. Bob DePass (Con Ed) showed me copies of the incident report for spill. The reason there was a delay in reporting was becuase the substation waited 19 hrs to report the loss of fluid to CIG.

There is still free product leaching into the excavation. DePass is taking samples but they are saturated with oil. Mr. Silva is supervising the repair − they are going to put steel sheeting over pit and not backfill right away. Says they are going to excavate soils and allow seepage to continue and pump out. Told DePass we may ask them to do borings in the area to determine extent of contamination.

10/28/93: spoke with John Hegerty and Bob DePass − total leak amount 8375 gallons.

11/9/93: spoke with Pete Fehn of AAA − he said only 200 gallons of liquid oil was removed from scene, along with 20 yards of contaminated soil. The majority of the 8375 − 200 = 8175 gallons still in the ground. Using porosity data for contaminated soils (assuming 50% saturation), calculated that approx. 6200 gallons still in ground. (CAE)

3/13/03: TRANSFERRED FROM ENGELHARDT TO O'CONNELL. APPENDIX B SITE NO. 7.

Update 12/8/05 This spill is being closed based on site 7b investigation report in eDocs link for Spill # 0111140.

all contained − cleanup pending −

DEC Investigator Remarks:

6/24/13−Vought−Duty desk officer. Vought called and spoke to Milo Martinovic (Rockefeller University Ph:212−327−8428) and spill of #4 fuel oil contained to concrete boiler room pit that has no cracks. ABC Tank has been called and will arrive to the site by 4:00pm. Martinovic noted that he closed all valves on the tanks and that no vapor complaints received to date and that building is used as a teaching hospital and there are NO patients inside building. Vought conferred with RSE and no site visit needed tonight however DEC Rahman (primary off−hours responder) to call this evening and confirm arrival of ABC Tank and DEC Zhune (secondary off−hours responder) to perform site visit tomorrow. Vought called Martinovic and provided number of DEC Rahman to provide update of ABC arrival on−site tonight.

06/25/13−Zhune visited the site met Peter Selestrin (Asistence Chief), Frank Schaefer (Director Laboratory Safety) and Milo

Martinovic. They walk me to the boiler room. The spil is contained in the concrete pit of the boiler room. Veolia Environmental used absorvent pads to removed oil from the pit. Eleven drums were used to disposal the contamination. As per Milo, Veolia will com back today 6/25/13 at 2:00 pm to cotinue with the cleanup.

8/6/13−Frank Schaefer email the spill closure letter dated August 5 2013. the letter stated the following:

On June 24th at approximately 2:30 pm an oil leak was discovered by University Power House Engineers Milo Martinovic and Peter Selestrin. They were firing up boiler number 2 as part of normal monthly protocol. Oil was detected in the siphon pit area, at which time the boiler was turned off and all oil supply lines shut off to the boiler. It was determined by meter readings that approximately 500 gallons of number 4 oil was dispensed from the above ground storage tank and 150 gallons were burned. The estimated total of number 4 oil spilled was 350 gallons. The cause of the leak was determined to be a feeder pipe that was located under the boiler. This pipe has since been replaced and relocated above the boiler, as to have the ability to better inspect the pipe and detect any potential future leaks sooner.

Cleanup activities started on the evening of the 24th, 2013 and finished on July 2nd, 2013, Veolia Environmental Services time sheets for details regarding daily activities and waste manifests in eDocs. All the spilled oil has been cleaned and waste shipped off−site. Spill Closed.

LEAKING PISTON IN THE ELEVATOR SHAFT ABOUT 100 GALLONS SPILLED TO THE CONCRETE PIT. CLEAN UP PENDING.

DEC Investigator Remarks:

Sangesland spoke to Mr. Bolger of the Facilities/Engineering Dept at the University − His cell # 917−440−6700 The piston on the elevator shaft was leaking and approx 100gal of hydraulic oil spilled to the elevator pit floor. Area is totally contained. He will hire someone to pump out the oil, clean the pit and then repair the system.

********** 8/20/2009 E−mail to DEC from Mr. Bolger at the University:

Hydraulic Oil Spill Completion Report. Rockefeller University 1230 York Ave.NY 10021.

On August 13th at 1.30pm I received a report that there was an oil leak in the elevator pit at Abby Aldrich Hall. on the campus of Rockefeller University, at 1230 York Ave. NY 10021. The elevator was taking out of service, which stopped the leak at 1.40pm.

The leak was coming from the piston rings in the elevator pit, all hydraulic oil was contained in the pit and there was no damage to the environment. A.B.oil Service LTD.1599 Ocean Avenue, Bohemia NY.11716. Telephone # 631−567−6545. State ID #NYD987023371. was called to vacuum out the pit and they placed absorbent pads on the floor*.* Type of waste generated, liquid and solid, Manifast Document No 61470.

The elevator piston will be repaired or replaced before the elevator is placed back in service.

Sincerely Yours Brendan F Bolger Chief Engineer and Manager Office. 212−327−8425. Cell. 917−440−6700.
****

08/19/09−HRAHMED−Spoke to Mr Bolger. As per him spill was contained in elevator pit and their contractor vacuumed all the oil from there. They will keep the elevator out of service until they fixed the piston which spilled the oil.

This case is closed.

DIESEL	PETROLEUM	100.00	GALLONS	0.00	GALLONS	SOIL, SEWER

Caller Remarks:

A generator failure caused above fuel to spill and run down the block into the storm sewer.

DEC Investigator Remarks:

9/9/08 − Sangesland spoke to NYFD & Clean Ventures. Patel responding to the site. Apartment building has a back up generator which had a problem with it's tank. 100 gal of diesel spilled to the street and down the storm sewer. Heavy rains are expected within the next 1−2 hours. Clean Ventures (908−354−0210) was called for the cleanup − they should be there by 10:45AM.

09/09/08−Hiralkumar Patel. visited site. subject site is located at the corner of East 71st Street and 1st Avenue and garage entrance is located along E 71st street. site has one 300 gal diesel tank in the basement, and one 250 gal diesel tank paired up with a generator on the roof. building contractor recently installed the tanks and the generator system, and they were testing the system today. during testing, they started pumping diesel from the basement tank to the tank on the roof. pump stopped successfully after completing the tank fill cycle, but due to some mechanical problem, fuel from the tank on the roof dropped back to the tank in basement via a suction line. as the basement tank was full, oil was pushed out through a vent pipe. oil spilled onto the concrete sidewalk, and ran on the asphalt paved street to a storm drain located at the intersection of York Ave and 71st street. FDNY responded and spread out sand on the oil slick on street along the curb. as per FDNY, about 3 inches of oil was also found inside the storm drain. there is ConEd vault next to this storm drain area that mayt have been impacted. DEC Steve notified ConEd regarding possible oil seeping into their vault. inspected the basement tank room and found a very minor (about 1 gal) spill on a new concrete floor. as per building super, there was no spill from the tank on the roof. there was no subsurface impact. FDNY and OEM were on scene.

Brown 36 OEM Ph. (718) 422−8700

Property owner/RP rep:

New York−Presbyterian

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #137921:

6/28/01 @ 04:55 hrs.: 27−JUNE−2001 04:55 hrs @ 04:11 hrs Field Operator Mechanic R.Jack #17064 was dispatched to the following location to due emergency repair work when he discovered approximately (200) gallons of transformer fluid mixed with approximatley (75) gallons of water located in V5525 located in front of 356−54 E.72nd Street. Sewer connection could not be verified, Concrete sump could not be verified, There was no visual water movement, No sump pump running, And there were no substantial cracks.There was oil filled equipment in the structure & there is a dielectric filled feeder in the structure.this is on feeder run of 24M91. A yellow tag #20736 was issued. (2) samples were were taken (1) for ID & (1) for PCB. A chain of custody #BB05278 was issued & no pre−cleanup or action has been taken. ERT is on location @ this time & is reporting that @ this time from what he can see @ this time the oil in the structure is stagnant. when the I&A dept arrives on location they will further investigate & give updates during the cleanup process. Spoke with CIG @ 04:29 hrs. Spoke with M.Schlagel #18276.There is an historical record for PCB of (7) PPM last dated 16−July−1997

Bob Biliski, I&A Supervisor reported at 11:40 hrs. that oil and water was pumped from the floor of the vault. The transformer is presently being drained. He verified that there was no entry into the sewer or waterway due to the operation of the oil minder that was installed by the pump. Oil was sensed by the probe and the pump was shut down. Partial cleanup of the vault is presently in progress.

EPA # NYP 004 085 494 was issued by the ERT.

01/15/02 11:48 J. Bencivenga #39929 Cable (cleanup) forman Reports that at 11:45 this structure was cleaned 100%. There was 250 gallons of water /oil mixture that was removed by a tanker. The structure was double washed with slix & rinsed down with a flush truck. The spill tag # 20736 was removed.

Caller Remarks:

cable oil spilled into a manhole tests reveal it may be dielectric fluid

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Engelhardt notes: John Hegerty − no cable in steam manhole. Oil actively leaking into manhole. Feeder 38M35 suspect by inventory (<1 gal/hr). Flow meters being installed into substation pumphouses for confirmation. Will know tomorrow. If they confirm feeder, will have contractor dig from steam pit to pipe to find leak.

5/24/96, 1340 hrs: Update from Con Edison − analysis results indicate cable oil. Loss of 400 gallons detected on feeder 38M35 running along 1st Avenue over an 18 day period.

5/26/96: leak located outside of steam manhole, clamp installed. Total amount lost = 500 gallons

4/18/05: Spill submitted for closure by Con Ed, with following cpmment: The spill reported in MH−7293 (located on 72nd St. E/O 1st Ave.) in 1996 has been reviewed by Steam EH&S and determined that the condition has been corrected. Upon inspection of MH−7293, there is no presence of oil. The manhole was rebuilt during the Steam Enhancement Program during September 1998. Close out. (JHO)

CONTRACTOR WORKING FOR WATER DEPT. WAS DIGGING − PIERCED CABLE. CONTAINED TRIPLE H2 THEY WILL CLEAN UP. CONTAINED IN EXCAVATION − WILL REMOVE SOIL DIRT − CON−ED IS VACUMMING OUT NOW.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 11/8/93, 3:00 PM: Tim Fitzgerald and Tom Coffin of Con Ed on scene. Contractors working for City water dept (DEP) struck dielectric cable with backhoe at about 10:00 AM. 3000 gallons of cable oil was removed by AAA along with 17 yards of contaminated soil. There did not appear to be any more oil in the soil that was still in trench. DEP was on scene earlier. Tim Fitzgerald claims there was no oil in sewer. This makes sense, as there was not time for it to migrate from the point of release. Leak was clamped and crew was preparing to put freezes on line. (CAE)

11/9/93, 9:30 AM. Called Pete Fehn of AAA. He does not have all paperwork yet but that 4000 to 5000 gallons of oil were taken to Astoria along with 17 yards of contaminated soil. (CAE)

10/10/95: This is additional information about material spilled from the translation of the old spill file: DIELECTRIC FLUID.

3/13/03: transferred from Engelhardt to O'Connell. Appendix B site no. 7.

Update 12/8/05 This spill is being closed based on Site 7b investigation report in eDocs link for spill # 0111140. (SKA)

Caller Remarks:

DURING REMOVAL OF COAL TAR WRAP A FEEDER LEAK WAS DISCOVERED. FEEDER HAS BEEN SHUT DONE. SAMPLE TO BE TAKEN. CON ED NOT AVAILABLE
.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis Notes:

Maintenance Services was doing an abatement of coal tar wrap when dielectric fluid began to leak from the bottom of the feeder pipe. The oil is filling the manhole at a fast rate. Approximately 650 gallons was initially reported. The 138kV feeder is 38M35 in manhole #M61861. The leak is probably due to corrosion. Maintenance Services tried to put a clamp on the pipe to stop the leak but the pressure was too high. The feeder was removed from service at 13:56. At 14:25 the feeder was put on reduced pressure of 70psi. Con Ed tankers were requested to location. Clean Harbors was called to respond to pressure wash the manhole. A temporary cleamp was installed and holding at 15:40. Transmission Operations mechanic was sent to take measurements for a custom barrel.

Feeder removed from service since pressure was not holding. Clean Harbors asked to respond to power wash manhole. Temporary clamp installed and holding. Coating removal continues to find good pipe to install barrel repair. Took measurements for barrel.

PCB count is 184ppm.

Because coal tar wrap was being removed from the feeder pipe when the leak occurred, there was concern that some coal tar became entrained in dielectric fluid that was removed from manhole and contaminated tanker. Coal tar wrap is assumed to contain PCBs and asbestos, and when removed from pipes with painted surfaces, lead, cadmium, chromium. Chemist took samples. Tanker held at Astoria pending analysis.

Clean Harbors triple washed manhole and treated debris as lead, PCB. Removed 210kg from manhole in two drums. Cleanup completed on 7/31/01. Custom 22 long 20 diameter barrel fabricated to go over 2nd joint sleeve to cover clamp. Samples taken from Con Ed tanker on 7/31/01. Barrel installed 8/1/01. Normal pressure returned and feeder returned to service.

Dielectric fluid from feeder 38M35: PCBs <1ppm

Coal tar wrap off manhole floor: PCBs 184ppm, Asbestos 7.3%, TCLP Lead 0.084ppm, TCLP Cadmium <0.010ppm, TCLP Chromium <0.001ppm.

Tanker 60536: PCBs <1ppm, TCLP Lead 0.43ppm, TCLP Cadmium <0.010ppm, TCLP Chromium <0.015ppm, Benzene (top) 0.30ppm, (middle) 0.17ppm, (bottom) 0.19ppm.

Tanker 60538:

DEC Inspector Notes:

7/30/01 Con Ed tankers were pumping oil from manhole while installing temporary clamp. Clamp was installed and feeder continued to leak at a rate of 2gal/hr. Barrel was to be welded on while on suction. Waste disposal became an issue when it was discovered that the oil was not tankered from the surface. There was a possibility that the coal tar wrap and paint debris, assumed to contain PCBs and metals, had entered the tankers. Sam Arakhan allowed Con Ed to temporarily store the tankers at the Astoria Transportation Yard. Sample results are expected to return on Wednesday, August 1. (KMF 7/31/01)

NOT AN ACTIVE LEAK

DEC Investigator Remarks:

4−10−07. Mike Pillig and Tom Columbia on scene with two men from DEP. Fluid, mainly water. contained within manhole. Vac truck arriving. Feeder leak is merely speculation − there has been no leak alarm. Breen

205314. see eDocs

George, I'll send you an updated report as soon as EMIS is updated. Tom Columbia

−−−−−Original Message−−−−− From: Pillig, Michael E. Sent: Tuesday, April 10, 2007 8:58 PM To: 'huangj@dep.nyc.gov' Cc: Paretsky, Leon; 'jhoconne@gw.dec.state.ny.us'; dl − Environmental Response Team Subject: Fw: Submitter: ROBERT K DUFFY LSN 07−03232 Incident # 205314

James, Here are the results you requested. A leak on a 2 nipple coming off our feeder pipe was located and clamped by 16:10 hours. There is evidence of dielectric fluid coming into the manhole at the north wall penetration. We will be obtaining an emergency DOT permit to excavate north of the MH wall, make the necessary repairs and remove any contaminated soil. Post excavation soil samples will be taken to verify effectiveness of the cleanup and will work with the NYSDEC for final closure of the spill. Please feel free to contact me with any questions you may have. Mike Pillig −−−−−−−−−−−−−−−−−−−−−−−− Sent from my BlackBerry Wireless Device

5−14−07. Conferred with Mike Pillig at site. ConEd has excavated on the north side of the vault down to 12 feet. The excavation is 8 by 8 feet across. They stopped at 12 feet because of a sewer pipe that runs east − west. They have removed impacted soil from the four foot level down to the bottom. There is water and floating product over the half of the bottom closest to the vault. Mike intends to try using pads to remove the oil. If that is not successful, he will bring in a tanker. Mike will sample the periphery of the excavation. Some of the remaining soil looks to be impacted. It seems likely that a well will have to be installed. It would be monitored as a long−term project by Barry Cohen and Matt Madsen. A reference tank was located outside the north wall of the vault with a penetration at the four foot level to connect the tank to the feeder. The vault wall is stained from this penetration on down. Breen

10/4/07: e−mail from Con ed (Pillig): Here is the diagram and sample results for the spill on FDR 73 at York Ave. and 73rd St. To refresh, there was approx. 4000 gallons contained in the manhole. Some DF had escaped through the north end penetration. We excavated to the north, conducted a first round of sampling and found elevated levels to the west of the excavation. We then backfilled the original excavation and opened a new one to the west. We dug down to bedrock and did not observe any oil. There is however a water main which runs parallel to the MH as illustrated in the diagram provided. While we were unable to excavate under the water main, we did excavate west of the water main down to bedrock. We then sampled the west wall of the new excavation and found that very little migration to the west occurred. To the extent we removed the contaminated soil, notwithstanding that which remains between the water main and the bedrock, we would like to request permission to close this spill. (JHO)

10/9/07: Spill submitted for closure by Con Ed (Pillig). Post−excavation sampling results indicate that a small amount of residual contamiantion remains in soil beneath a NYC water main. This soil is inaccessible for excavation, and is covered by pavement. All post−excavation sampling results to the north, south, east and west of the water main are clean. See eDocs for analytical results and site sketch. Close out. (JHO)

contained to basement floor − clean up pending

DEC Investigator Remarks:

Obligado − Covering Desk Duty for Santosh Mahat. I called Rob Hill. According to Rob, there was a delivery yesterday to the 7500 gallon AST. Today noticed they noticed oil in the basement tank room. Riteway are unable to spot exactly where the tank is leaking. Riteway guys are on−site right now emptying the tank. According to Rob, the oil is contained in the tank room.

Assigned to Santosh Mahat to respond.

7/8/15: Mahat Response: On 7/8/15, DEC Spill Staff responded to a leaking tank spill in a co−op apartment building located at 400 East 59th Street, Manhattan. The building recently went fuel grade conversion from #6 to #4 due to court consent order. Tanks was pressure tested before the first delivery of the #4 fuel oil. Spill was reported to the Department once oil was observed inside the secondary containment. Spill was initially reported as 100 gallon and it was discovered to be around 1040 gallon after mass balance calculation. Tank is emptied out and it is out of service. Management has retained a professional contractor to repair and retest the tank. A delineation investigation will be followed momentarily. Another site visit will be schedule once the preliminary investigation is executed.

Spill # 1503792 Attn: Ted Santos

CC: tsnycm@aol.com

Letter has been uploaded on D2 for the reference.

DEC Mahat is waiting for a report.

12/4/15: Mahat DEC Mahat sent an email to the Management: Email :

All, Where are we on this case? I will be obligated to refer this case to AG´s office for enforcement if I don´t receive any report on time. Please get back to me if you need extension. Thank you. Santosh Mahat − Environmental Engineer

4/22/16: Mahat Spill closure report is submitted to the Department. It was uploaded on D2 on 2/24/16 for reference. Report indicated that a new tank has been installed in place of old leaking tank. No sub surface contamination as it was contained in the secondary containment. Based on the report and site visit, the Department does not warrant any further on the spill case. Spill case is closed on NYSDEC Spill database.

cleanup in progress

DEC Investigator Remarks:

4/24/15 TJD Recall − met onsite with representatives of environmental contractor (All Boro). 3K AST was leaking from a visible hole in tank shell causing a slow discharge into tank vault. Tank vault not liquid tight allowing product to migrate into adjacent mechanical room in basement of church/school. At time of inspection, contractor had emptied the tank, washed the floor and was actively cleaning the pooled product from within the tank vault. Ventilation equipment was in operation and no petroleum odors were detected outside of the basement area. Contractor is negotiating with the property owner regarding repairs to the tank. Contractor will be installing a temporary 275 AST for hot water until tank condition is resolved.

4/27/15 TJD Received email from contractor, temp tank has been installed and surface cleanup is complete.

2/22/16 TJD File review. All Boro Tank Testing has submitted closure report. Contractor cleaned the estimated 100 gallon #2 FO discharge from basement floor utilizing a vacuum truck and granular absorbents. After the tank was properly cleaned and inspected, the leak was found to be coming from pitted areas on the bottom of the tank at several locations. All Boro repaired the tank by welding a new bottom in place followed by the performance of a full system test with passing results. The concrete floor appeared in good condition with now obvious cracks or holes. No subsurface investigation was performed. All required documentation has been received and uploaded to DECDOCS. No further action is required. Spill closed.

DEC INSPECTOR NOTES

5/6/2003 2:00 pm. Sam Arakhan and I met with Con Edison representatives Steve Wong, Jimmy Fox, and ERT Bernard Pierre. The purpose of the visit was to inspect the fill box in which kerosene oil spilled. The fill box location is next to the station at 75th Street.

Con Edison was taking an oil delivery when the tanker truck driver noticed that oil was coming through the bottom of the fill box. He reported having delivered 114 gallons of oil until he stopped the transfer. At the time of the inspection, oil was visible, Con Edison was instructed to clean the excess oil with pads and secure the fill box.

Con Edison will test the two adjacent fill box connections to see if they could use them. These connections all connect to the same manifold which divides in 5 to feed 5−20000 gallon tanks. They also have the alternative to connect the tanker truck hose directly to the manifold.

Con Edison has started to obtain the necessary permits to open the sidewalk. The sidewalk appears to be recently repaired (less than two years). (ARS)

6/9/2003: FOR SIMPLICITY, I WILL CLOSE THIS SPILL AND FOLLOW IT ON SPILL 0301656. CON EDISON SUBMITTED A CLEANUP WORKPLAN ON 6/4/2003. (ARS)

~~~~~~~~~~~~~~~~~~ E2MIS 148245

11:10 hrs − Shift Supervisor notified EH&S Manager of a problem with a kerosene delivery that had just started and requested that he come to the kerosene fill connection on 75th Street.

11:15 hrs − EH&S Manager arrived at kerosene fill connection. The operators and tanker truck driver report that as they started pumping kerosene into the fill connection, some product started bubbling up around the outside of the fill pipe (but contained within the connection box in the sidewalk). They promptly stopped pumping, but 114 gallons had already registered on the tanker trucks meter as having been transferred. It appears that there is a break in the fill pipe as it runs underground into the Station.

Caller Remarks:

caller states the spill is still in progress − there is a leak somehwere in the concrete duck that runs from the rainey substation under the east river to east 75th st substation and then to west 110th st substation − approx 1900 gallons so far − con ed #148640

DEC Investigator Remarks:

6/12/03 1835HRS Update from ERT Bernard Pierre− leak on fdr 38M35 was located in MH 59971 at 72nd St. between Lexington Ave and Park Ave. Oil contained to manhole.(KMF)

6/13/03 1100hrs Arakhan and Foley inspected site. John Terlecki of Transmission Operations was on−site. He explained that Clean Harbors removed approx 1100gal of oil last night from manhole. Leak has been clamped and a containment has been placed underneath for periodic tankering. Contractors were on site breaking out the sidewall to install a permanent barrel repair. Oil did not reach above the penetrations in the manhole. It is not expected that contamination will be found in soil. I told Terlecki to check for an odor and visible signs of oil during excavation. They will dig 2' below the feeder. Leak committee is still investigating for other possible leaks on this feeder since volume of oil is not accounted for.(KMF)

~~~~~~~~~~~~~~~~~~~~~~ e2mis 148640

6/8/03 1255hrs − Anthony Locascio # 19201 S/S Operator, Central Stations reports after investigating low pressure alarm from pump house determined that either Fdr 38M35 or Fdr 36252 has lost an estimate of 1900 gallons of dielectric fluid. These are 138KV Fdrs. At this time does not know where oil is. Fdrs run into Manhattan from Rainey. Investigation stil in progress. Will call when additional information is available.

Update 1420hrs R. Elliott advised that it has been determined to be fdr 38m35 that is leaking.

06/08/2003 14:15 08:55 Rainey Oper reported Pressurising Plant (PP) #4 tank level discrepancies. PP#4 and feeder 36252 & 38M35 pot heads were checked normal.

06/08/2003 14:15 11:30 Rainey Oper completed feeder 38M35 drop check which dropped 11 psi in 30 min.

06/08/2003 14:16 12:15 Rainey Oper completed feeder 36252 drop check which gained 5 psi in 30 min.
~~~~~~~~~~~~~~~~~~~~~~

06/08/2003 14:16 Feeder 38M35 de−energized at Rainey

06/08/2003 14:16 At 13:35 Gas dispatcher notified to have personnel check tunnel from Ravenswood to Manhattan for oil.

06/08/2003 14:20 Transmission Ops to check manholes and tunnel (Rainey to Ravenswood) for oil leak.

06/08/2003 14:42 Transmission Ops en route to Rainey and W110 St S/S to take oil samples for feeder 38M35 PFT gas analysis.

06/08/2003 17:55 Feeder 38M35 on reduced pressure at 90 psi.

06/08/2003 20:00 Conference call convened: U.T. checked manholes and tunnel (Rainey to Ravenswood), and found no leaks. UTO to drop check dead 38M35 and establish two pits for probing. Next conference call at 0700hrs

06/08/2003 20:45 Rainey Operator completed ~3000 gallons of oil transfer oil from PP #8 to PP #4.

06/09/2003 02:25 UTO Supv reports half hour drop check on dead portion of Fdr 38M35 shows no leak.

06/09/2003 03:36 UTO Supv reports oil was found in MH#60636 Chem Lab and contractor was responding.

06/09/2003 03:55 E75St. Fdr.38M35 3 oil line pressure check was completed, no leak

06/09/2003 04:30 UTO Supervisor reports oil found in MH#60636 may be old oil and not the oil leak.

06/09/2003 07:00 Leak Committee convened: Approximately 500 gals of oil found in MH# 606036. Feeder 38M33 & 38M35 in same manhole. Clean Harbors pumping manhole for inspection.

06/09/2003 08:00 Request made for Manhattan #9 to inspect distribution manholes on York Ave. between 72nd & 75th St.

06/09/2003 11:15 UTO reports oil leak found on 38M33 from reducer pipe. Oil loss in manhole approximately 500 gals cumulative over time temporary clamp to be applied.

06/09/2003 13:40 Manhattan #9 reports no oil found in MH's on York Ave between 72nd & 75th St.

06/09/2003 14:00 Leak Committee convened: Excavation at 72 & 1st Ave is complete. Two other probe location being excavated at 71st & York Ave and 102st & 3rd Ave.

06/09/2003 19:00 U.T.O. Report: With the flow from Rainey− probe pit on 72nd St. and 1st Ave. reads −2 (indicating no flow)

06/09/2003 19:00 Drop test on 3 line From M.H.# 60688 to Pumphouse #1 at 110th St. S/S.indicates no drop in pressure.

06/09/2003 20:25 U.T.O. Reports: With flow from E.75th St.− probe pit on 72nd St and 1st Ave. reads +6 (indicating flow).

06/09/2003 21:00 Leak Committee Convened: U.T.O. excavating two probe pits. 102nd St. and 3rd Ave. and on 71th St. E/O Y joint manhole.

Update: Thur, June 12, 1800 hrs Vern Schaefer, Project Manager, Transmission Operations reports that at about 1730 hrs Leonard Feld, Transmission Operations Mechanic A (employee no 27586) found about 16 inches of fluid that appears to be dielectric fluid in Manhole 59971, at 72nd Street between Park and Lexington Avenues. This manhole contains dead feeder D38M35 L&M which is hydraulically connected to feeder 38M35. Arrangements are being made for a Clean Harbors tanker, which is in the vicinity of the manhole, to pump out the manhole. The Chem Lab has been called to take a sample of the fluid in the manhole.

On Thursday Clean Harbors on site to begin removing dielectric fluid from manhole into tanker. At about 1930 hrs Clean Harbors had completed removal of free product in manhole and ? drum installed under leak to directly collect product for subsequent pumping into tanker. At that time Clean Harbors sticked their tanker and indicated it had collected 926 gal in tanker. LParetsky inspected feeder, indication was that leak was at the west end of the feeder pipe, on the south feeder pipe, at the reducer, at about the 6 o'clock position, about 6 to 7 inches from the manhole wall. Clean Harbors powered washed the manhole to remove the sludge. David Duke, ERT, was on site. Transmission Operations employees removed Coal Tar Wrap in order to place clamp on feeder pipe. Leak stopped at about 24:30 hrs (00:30 hrs) on Friday, June 13th. At that time Clean Harbors tanker (via stick of tanker) contained about 975 gals. Provisional USEPA number for site is : NYP 004 111 928.

On 6/12/03 at approx 21:00 the flow meter at 110th St S/S had stopped showing a leak and had made approx 2 gallons of oil during the last hour. At that point the preesurization source was going to be transferred to Rainey S/S. During the midnight shift the flowmeter lost approx 8gph while the feeder was pressurized at Rainey S/S at normal pressure. At 07:00 6/13/03 the flowmeter stopped showing a flow at Rainey S/S. The flowmeters were checked until 14:00. They did not show a loss of fluid. During the 14:00 conference call the flowmeter readings were discussed and at 14:25 the leak search was called off.

TO was to cap the MAC nipples used for the leak search and sign off the feeder so it could be energized. Weld repairs to follow on the dead portion of the feeder.

Feeder energized at 23:37 6/13/03. Barrel repairs started at approx 00:01 6/14/03. Barrel repair completed at approx 12 noon on 6/14/03.

SPILL CLOSURE CHECKLIST Amount discovered: 975 GALLONS Location of spill: MH 59971 72ND ST BETWEEN PARK AVE & LEX. AVE. Caller Remarks:

WHILE DRIVING TO WORK I NOTICED AN AAA OIL POLLUTION TRUCK WORKING ON THE SIDE OF FDR (NORTHBOUND) AT EAST 73RD ST.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL CALLER REMARKS (CONT'D): SPOKE WITH MR. ERIKSON OF CON EDISON WHO SAID THE 6 OIL LINE FAILED ON SUNDAY AND WAS DISCOVERED BY A JOGGER WHEN OIL WAS COMING UP THROUGH THE PROMENADE. VINCENT DE PASS (CON ED) CONFIRMED SPILL AND SAID THEY DID NOT REPORT SPILL BECAUSE IT DID NOT APPEAR TO THREATEN ANY WATER.

TRIPLE A REMOVED APPROXIMATLEY 30 TO 60 YARD (MY ESTIMATE) OF OIL SOAKED SAND AND REPAIRED 6 PIPELINE LOCATED APPROXIMATLEY 10 FEET FROM THE EAST RIVER, AND DEPLOYED SWEEP INTO THE RIVER. WORKED ON SPILL FROM SUNDAY (12/3) TO FRIDAY (12/8). (AJS)

11/15/94: REASSIGNED FROM SIGONA TO ENGELHARDT ON 11/15/94.

3/13/03: TRANSFERRED FROM ENGELHARDT TO O'CONNELL. APPENDIX B SITE NO. 7.

10/26/2016 − V. Brevdo Due to Project Manager Joe O'Connell's promotion to the DMM, and per discussions between Chiefs of Spill Prevention and Response and Remediation Section B, this spill case is re−assigned to Remediation Section B. VB

VALVE LEFT OPEN TOO LONG.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT 07/30/97: Spill was inadvertently assigned to Region 7 by Dispatch Center. This is a region 2 spill (county = new york). AMChieco.

e2mis 107844

04:20 hrs − OMA Flemming found the chemical mixing moat overflowing and the chemical mixing tank fill valve open. The emergency condensate pump was shutdown and chemical mixing tank fill valve was closed. Approximately 25 gallons of caustic mixed with water and overflowed into the 6th floor moat. The area was secured and clean−up was begun.

Note: the chemical mixing tank fill valve had been replaced by maintenance and had inadvertantly been left open. The emergency condensate pumps are used to fill the boiler when the boilers are off−line. Boiler 122 was being filled using the emergency condensate pump. The emergency condensate pumps are used as normal supply water to the chemical mixing tanks. 07:00 hrs − The chemist checked the ph of the flooded chemical moat on the 6th floor and found the pH to be 12. 07:05 hrs − The operators were dispatched to secure the area under and around the 6th floor chemical moat.

07:18 hrs − CIG Masseria was notified that there was a chemical spill of a dilute sodium hydroxide solution, ph of 12, and that several hundred gallons spilled into the moat and that the moat is overflowing.

07:50 hrs − As per the spill response plan, the chemical spill clean−up vendor, AETC, was notified that support is required. An answering service was contacted who stated that AETC will be notified.

08:15 hrs − A follow−up call was made to AETC. The answering service informed the station that Walt Bertell of AETCc has taken the call and will be contacting us shortly.

08:30 hrs − The area under the 6th floor moat was secured by operations personnel. 08:33 hrs − Mr. Eckhard Debbart of AETC called the station confirming with GWS Tweed that a 5000 gallon vac truck with enough hose to reach the 6th floor moat has been dispatched. 10:30 hrs − All sumps in the basement were tested for pH by the station's chem. techs. The pH in the sumps were normal with a pH of 7.1 and 8.6. As a precaution, the sumps were secured to prevent operation.

11:00 hrs − AETC vendor bird dog arrives at the station to determine the clean−up job scope.

11:30 hrs − Using the AETC vac truck, the moat is being vacuumed and all the captured liquid is being transferred to the waste neutralization system via the AETC truck.

18:28 hrs − The clean−up of the moat and the surrounding areas was completed.

Caller Remarks:

PH POF 7.8 AT THE DOCK SITE − SOLUTION IS 1% MIXTURE − SPILL WAS CAUSED BY TANK RUN OFF.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Zhitomirsky 9initial responder) notes: Leak in the boiler. Some oil from burner went on the floor (~100 galons of #6 oil). All contained. Con Ed was doing an acid wash, they have to neutralize the water. Soda ash (~10 gallons) was leaking from the bottom of the boiler. In acid wash soda ash used to neutralize. Some HCl leaked in the containment, it was pumped out, then soda ash solution leaked into the containment (~50 gallons). It was pumped out. Then some of the #6 oil (~50 to 100 gallons) leaked into the containment. They are pumping this product out. No product, no soda ash in river (pH 7.6−7.7). USCG inspected and they were satisfied. 8/28/95 (Engelhardt's notes): Len Gelford − USCG gave approval to remove boom on Friday. Moat awaiting repair. Presently removing loose concrete from moat. Leak caused by valve being left open. Have been neutralizing everything with the waste neutralization system. Need to repair valve on waste neutralization line.

Material Spilled	Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
#6 FUEL OIL	PETROLEUM	200.00	GALLONS	0.00	GALLONS	SEWER IMPERVIOUS SURFACE

Caller Remarks:

inside tank of 5000 gals leaked approx 200 gals of 6 oil inside but possible some into a sump sewer−cleanup crew enroute now−not stopped the leak at present pending arrival of crew

DEC Investigator Remarks:

09/04/07−Vought−Off hours responder. Vought called and spoke to PTC Lara and sewer affected and NYCDEP notified by Lara. Spill on concrete and cleaned by PTC. Spill caused by leaking 5000−gallon #6 fuel oil AST. Cleanup included removal of oil from tank, steam cleaning of secondary containment and floor. Spill cleaned via vacuum truck and speedi dry. Vought spoke to Joe and some oil still under tank. Temporary tanks set up and further cleanup by PTC tommorrow. Sump and sewer was cleaned and powerwashed.

09/05/07−Vought−Received call from Anthony Lara (PTC) that oil was present in sump that was not directly affected by spill and as such soil contamination may be present. Lara asked for DEC site visit. Vought spoke to big anthony and tank was sitting directly on floor. Crack in secondary containment caused spill to room with sump pit. PTC onsite today in tank room due to oil coming out of floor and PTC removing soil. Vought called little anthony (646−772−7180) to set up site visit. Vought spoke to little anthony and five drums of soil were removed and another fifteen more drums of soil were removed. Junior will be foreman on site. Site visit set up for 1pm. Site contact is Tony (Adler Group−732−683−9760 and fax:732−683−976 cell 917−757−7856).

09/07/07−Vought−Site visit by Vought with PTC Little Anthony Lara and:

Managing Agent: Anthony Robustelli

The Adler Group

Cell: 917−757−7856

Fax: 212−239−0504

Fifteen drums of soil removed to date. Tank is 5000−gallon AST that sits directly on dirt floor of tank room with seconday containment. Spill was discovered by oil leaching out of seconday containment. Excavation was begun in tank room and free product on groundwater and large schist boulders in excavation (bedrock may be shallow). Product also reappearing in sump despite it being cleaned out and no overland flow to sump indicating extensive subsurface contamination. DEP not responded to spill to sump to date. Drums of soil will be picked up daily due to high traffic on Lexington Avenue and visibility of site. Two (275−gallon) #2 fuel oil AST set up to provide hot water. No spill out of vent pipe despite recent delivery by Farrantino Fuel Oil. Significant Odors in Iris Nail Salon directly above tank room (contact for salon is SooJin Nam cell:917−747−2883 Fax: 212−940−0807). Site is adjacent to Lexington Avenue IRT line. Vought called DEP and provided second report of spill to sewer.

DEC requires: 1)immediate installation of ventilation system in basement and also in Iris Nail Salon 2)immediate PBS registration 3)cc to SooJin Nam, A Lara (PTC) 4)immediate recovery of product from sump. The following by 10/15/07: 4)soil excavation and collection of endpoint samples 5)summary of work performed and sealing of basement floor 6)installation of vapor barrier.

Vought sent letter with above requirements. Vought called SooJin and she stopped by site yesterday and odors were better. Fans in place in store and store is reopened as odors are diminished.

9/28/10 − Raphael Ketani. I tried to contact Anthony Robustelli of the Adler Group (212) 355−0600/cell (917) 757−7856 regarding the spill and the documentation showing that the spill had been cleaned up. However, I could only leave messages.

Mr. Robustelli called me back. He said that everything was cleaned up. PTC dug out the contaminated soil, put in a gravel bed, and put in a new tank in place of the old one. Mr. Robustelli said that he will get DEC the paperwork. I told him that the old tank needs to be listed as removed with the date of removal and the new tank needs to be listed as installed, with its date of installation. He said that New York Engineering is working on the tank registrations right now with the City. I added that, according to the database notes, the groundwater was impacted. I said that a groundwater investigation must take place. The DEC will not close its case until the investigation takes place and the groundwater is remediated, if necessary. Mr. Robustelli's e−mail is: trobustelli@theadlergroup.net.

9/29/10 − Raphael Ketani. Mr. Robustelli sent me an e−mail with 5 documents (see E−docs). These documents were the old tank PBS registration #2−479896, the new registration #2−254975, the Mercury Tank & Pump Certificate of Affidavit, the 1/29/08 NYC DOB tank replacement permit, and the 10/5/07 PTC invoices. He also stated that the PBS registration will be worked on by Bob Lamirata of PTC and should be signed off in the next 2 or 3 weeks. I reminded Mr. Robustelli that a groundwater investigation still needs to take place.

12/2/10 − Raphael Ketani. I tried to contact Mr. Robustelli (212) 355−0600/cell (917) 757−7856, but was told that he was on vacation. His assistant (his daughter Victoria) said that he would be back on monday, 12/6/10. I told his assistant that the DEC needed the soil disposal manifests, a work plan for the groundwater investigation, and a PBS registration showing the old tank as removed and the new tank as installed (the new registration is not in the database).

12/6/10 − Raphael Ketani. I spoke to Mr. Robustelli cell (917) 757−7856 about the site. He said that Bob Lamirata of PTC will meet Mark Salamack of PTC at the site and they will see what can be done regarding the groundwater investigation. I reminded Mr.

Robustelli that there still was the matter of the PBS violation with the old tank still listed as active and the new tank not listed. He said that he has people working on updating the paperwork and submitting it to the DEC. I told him to hurry on this as I could not hold off submitting a PBS violation to our legal office indefinitely. He said that he will move on the paperwork.

2/28/11 − Raphael Ketani. I spoke to Mr. Robustelli (212) 355−0600/cell (917) 757−7856 in regards to work at the site and the proper registration for the old and new tanks. I told him that the DEC has not been told that any investigative work is going on and the new PBS registration does not appear in the database. Mr. Robustelli apologized for the lack of progress on the case. He said that PTC recommended HydroTech for the soil investigation. He thought that they had sent the DEC paperwork for doing several borings in the boiler room area, the lowest part of the building. I told him that the DEC hasn't received anything. He apologized and he said that he will get on them right away to see what happened.

I sent Mr. Robustelli a standard letter demanding a report by March 28, 2011 and a PBS registration for the new tank, or else 1065 Lexington Avenue Corp. will be subject to fines.

3/1/11 − Raphael Ketani. Mr. Robustelli sent me an e−mail containing the PTC 9/25/07 itemized costs list for the tank replacement work and a 2/8/11 FAX containing the invoice for the tank replacement work.

Later, Mark Robbins of HydroTech (631) 462−5866 called. He said that HydroTech had put a proposal together for Mr. Robustelli some time ago, but they never heard from him. Mr. Robbins said that he will put together another proposal and it will include soil borings through the basement and sump area floor. I told him that sounded fine.

3/2/11 − Raphael Ketani. Mr. Robustelli sent me a copy of the 2/21/11 Hydro Tech work proposal by e−mail with his approval signature at the end of the document. I reviewed the proposal and found it to be acceptable.

Also, Andrew Garcia of the Adler Group sent Mr. Robbins a form to fill out for insurance purposes.

Later, Leszek Zielinski, EE II and acting head of the PBS Unit, came over to me and told me that the owners are in violation of the PBS laws. They will be given an Order on Consent.

3/15/11 − Raphael Ketani. Today Timothy Lo of Hydro Tech Environmental (718) 636−0800 sent me the 3/11/11 Subsurface Investigation Work Plan by e−mail.

I reviewed the work plan. Hydro Tech proposed to install four soil borings and to take four soil samples. Each boring would be turned into a well and groundwater samples would also be taken. A figure showing where the borings will be installed was included with the work plan. The plan did not call for installing borings in the tank room.

I contacted Mark Robbins, Mr. Lo's supervisor, (631) 462−5866 regarding why there will be no borings in the tank room. He said that, earlier, he was told by DEC that the borings should be in the sump−tank room area. Also, the tank room floor has been sealed with epoxy. He said that if the borings suggest that there is oil under the tank room, then borings will be performed there, also. I told Mr. Robbins that, given the information that he has just given me, the plan is acceptable.

I sent Mr. Lo a reply to his e−mail and told him to start as soon as possible.

4/8/11 − Raphael Ketani. Mr. Lo sent me an e−mail that the boring will take place from 4/12 to 4/13. He also stated that due to

space limitations, a smaller geoprobe will be used that installs 1 inch borings, instead of 2 inch borings. I wrote that it is up to him what size borings he wants to use, but 1 inch borings sometimes have many technical problems due to the small diameter.

4/29/11 − Raphael Ketani. The Site Investigation Report was due today, but has not been received.

6/2/11 − Raphael Ketani. I tried to contact Mr. Robbins, Mr. Lo's supervisor, (631) 462−5866, but I could only leave a message that the SIR was one month overdue and that the DEC was concerned that no progress had been made at the site.

6/10/11 − Raphael Ketani. I spoke to Mr. Robbins. He said that the investigation report was completed. The soil and groundwater analytical results were almost entirely non−detect. The DEC will receive it very soon. However, HydroTech could not get the manifests from Mr. Robustelli. I told Mr. Robbins to send the report anyway and the DEC will decide whether additional work is needed. I ended the conversation by telling Mr. Robbins that the building had PBS violations as the old tank was still listed as active and the new tank wasn't listed. Mr. Robbins said that he will talk to Mr. Robustelli about this.

6/13/11 − Raphael Ketani. Mr. Robustelli sent Nick Lombardo (DEC PBS Technician) a revised form for the registration of the new tank.

6/17/11 − Raphael Ketani. Ms. Ataman from Hydro Tech sent me the 5/5/11 Site Investigation Report. I reviewed the report. Groundwater was found at an elevation of about 22.5 feet and was flowing towards Lexington Avenue. The only soil sample to have exceedences was from location SP−2. These were benzo(a)anthracene, chrysene, and benzo(a)pyene. Their exceedences were just over the 1,000 ppb for soil that is listed in CP−51. The only groundwater sample to have an exceedence was from location MW−1. This was 11 ppb of 1,2,3−trichlorobenzene. The sample from MW−4 had a number of VOC hits, but they were either below the CP−51 limit or just above it.

As there was very little residual contamination from the spill, I determined that there was no threat to the public or the environment. Therefore, I closed the spill case.

Map Identification Number 697 **V00728** **Spill Number: 0312524** **Close Date: 09/28/2004**
109 E 58TH ST MANHATTAN, NY TT−Id: 520A−0095−595

MAP LOCATION INFORMATION
Site location mapped by: PARCEL MAPPING (1)
Approximate distance from property: 2621 feet to the WSW

ADDRESS CHANGE INFORMATION

02/10/2004		EQUIPMENT FAILURE	NO	NO

Material Spilled	Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
TRANSFORMER OIL	PETROLEUM	100.00	GALLONS	0.00	GALLONS	SOIL

Caller Remarks:

Transformer leaked through the bottom of the transformer at the above location. The spill is contained to the vault.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 152043:

100 gal of transformer oil and 300 gal of water in v00728. Took two sample one for pcb and one for oil id, hung signal #17182.
Sewer connection: no, Concrete sump: Yes. Source of spill: Transformer Cause of spill: Bottom leak

Lab Sequence Number: 04−01053−001: Analysis indicates the presence of a substance similar to a dielectric fluid.

Lab Sequence Number: 04−01052−001: TOTAL PCB 306 ppm

UPDATE: 2/27/04 The transformer in vault V0728 was drained and the transformer holds 530 gallons of oil. Approx. 30 gallons spilled from the transformer into the vault.

Lab Sequence Number: 04−01065−001 (Trans): TOTAL PCB: 39 ppm

2/13/2004 @ 19:05 Allstate reported that they completed cleanup at 1800 hrs. They did Vaults − 0728, 8192, 8206 and 0455. They double−washed the structure with Citiclean . There was no visible sign of the source of the spill.

06/18/04 17:00HRS. The walls and floors were double washed with citro clean, the cleanup crew were all Allstate personnel. The transformer has been removed. The cleanup was completed on 06/18/04 at 5:30hrs.

THE FOLLOWING CLOSED SPILLS FOR THIS CATEGORY WERE REPORTED BETWEEN 1/8 MILE AND 1/2 MILE FROM THE SUBJECT ADDRESS. THESE SPILLS WERE REPORTED TO BE LESS THAN 100 UNITS IN QUANTITY AND CAUSED BY: EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, VANDALISM OR STORMS. THESE SPILLS ARE NEITHER MAPPED NOR PROFILED IN THIS REPORT.

NYS DEC Manifested Waste Summary:
Waste Codes, Waste Units, and Transaction Types are only shown for the most recently reported year.

WASTE CODE	WASTE DESCRIPTION	WASTE AMOUNT	WASTE UNITS	TRANSACTION TYPE	YEAR	HISTORIC MAXIMUM AMOUNT	HISTORIC MAXIMUM YEAR
D001	Solid waste that exhibits the characteristic of ignitability	77	POUNDS	GENERATED	2010	1742	2005
D002	Solid waste that exhibits the characteristic of corrosivity	130	POUNDS	GENERATED	2010	1650	1990
D009	Mercury	3	POUNDS	GENERATED	2010	4500	1995
D011	Silver	108	POUNDS	GENERATED	2010		
More than one waste code was reported for the following waste amount:		26	POUNDS	GENERATED	2010		
D001	Solid waste that exhibits the characteristic of ignitability						
D002	Solid waste that exhibits the characteristic of corrosivity						
More than one waste code was reported for the following waste amount:		4	POUNDS	GENERATED	2010		
D001	Solid waste that exhibits the characteristic of ignitability						
D002	Solid waste that exhibits the characteristic of corrosivity						
F003	Spent non−halogenated solvents						
More than one waste code was reported for the following waste amount:		1	POUNDS	GENERATED	2010		
D001	Solid waste that exhibits the characteristic of ignitability						
D003	Solid waste that exhibits the characteristic of reactivity						

NYS DEC Manifested Waste Transactions for NYD073271827 continued −−−

WASTE CODE	WASTE DESCRIPTION	WASTE AMOUNT	WASTE UNITS	TRANSACTION TYPE	YEAR	HISTORIC MAXIMUM AMOUNT	HISTORIC MAXIMUM YEAR
More than one waste code was reported for the following waste amount:		50	POUNDS	GENERATED	2010

Historically listed as the following USEPA RCRA Generator Size(s) as well:
SMALL QUANTITY GENERATOR

NYS DEC Manifested Waste Summary:
Waste Codes, Waste Units, and Transaction Types are only shown for the most recently reported year.

WASTE CODE	WASTE DESCRIPTION	WASTE AMOUNT	WASTE UNITS	TRANSACTION TYPE	YEAR	HISTORIC MAXIMUM AMOUNT	HISTORIC MAXIMUM YEAR
More than one waste code was reported for the following waste amount:		3	KILOGRAMS	GENERATED	2019	75	2012
D008	Lead						
D007	Chromium						
D006	Cadmium						
B007	Other PCB Wastes including contaminated soil, solids, sludges, clothing, etc.						
D018	BENZENE	10	POUNDS	GENERATED	2018		
B004	PCB Articles containing 50 ppm or greater of PCBs but less than 500 ppm PCBs.	600	KILOGRAMS	GENERATED	2016		
B007	Other PCB Wastes including contaminated soil, solids, sludges, clothing, etc.	20	KILOGRAMS	GENERATED	2014	607	1998
D009	Mercury	10	POUNDS	GENERATED	2013	150	2006
More than one waste code was reported for the following waste amount:		20	POUNDS	GENERATED	2013		
D008	Lead						
D009	Mercury						
More than one waste code was reported for the following waste amount:		20	KILOGRAMS	GENERATED	2011		
D006	Cadmium						
D007	Chromium						
D008	Lead						
B007	Other PCB Wastes including contaminated soil, solids, sludges, clothing, etc.						
D001	Solid waste that exhibits the characteristic of ignitability	20	POUNDS	GENERATED	2010	25	2002
More than one waste code was reported for the following waste amount:		10	KILOGRAMS	GENERATED	2010		
D008	Lead						
D007	Chromium						
D008	Lead						
B007	Other PCB Wastes including contaminated soil, solids, sludges, clothing, etc.						
More than one waste code was reported for the following waste amount:		10	KILOGRAMS	GENERATED	2009		
D006	Cadmium						
D008	Lead						
D007	Chromium						
B007	Other PCB Wastes including contaminated soil, solids, sludges, clothing, etc.						

NYS DEC Manifested Waste Transactions for NYD982719452 continued −−−

WASTE CODE	WASTE DESCRIPTION	WASTE AMOUNT	WASTE UNITS	TRANSACTION TYPE	YEAR	HISTORIC MAXIMUM AMOUNT	HISTORIC MAXIMUM YEAR
More than one waste code was reported for the following waste amount:		10	KILOGRAMS	GENERATED	2009		
D008	Lead

Hazardous waste codes presented in individual Toxic Information Profiles are defined below.

B001 PCB Oil (concentrated) from transformers, capacitors, etc.

B002 Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

B003 Petroleum oil or other liquid containing 500 ppm or greater of PCBs.

B004 PCB Articles containing 50 ppm or greater of PCBs but less than 500 ppm PCBs excluding, small capacitors. This includes oil filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable

B005 PCB Articles containing 500 ppm or greater of PCBs, excluding small capacitors.

B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.

D000

D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.

D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.

D003 Solid waste that exhibits the characteristic of reactivity, but is not listed under any other hazardous waste code.

D004 Arsenic

D005 Barium

D006 Cadmium

D007 Chromium

D008 Lead

D009 Mercury

D010 Selenium

D011 Silver

D012 Endrin(1,2,3,4,10,10−hexachloro−1,7−epoxy− 1,4,4a,5,6,7,8,8a−octahydro−1,4−endo, endo−5,8−dimeth− ano−naphthalene)

D018 BENZENE

D019 Carbon Tetrachloride

D022 Chloroform

D027 1,4−Dichlorobenzene

D038 Pyridine

F001 The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1−trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1−trichloroethane, chlorobenzene, 1,1,2−trichloro−1,2,2−trifluoroethane, ortho−dichlorobenzene, trichlorofluoromethane, and 1,1,2−trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F003 The following spent non−halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n−butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non−halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non−halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

F004 The following spent non−halogenated solvents: Cresols and cresylic acid, and nitrobenzene; all spent solvent mixtures/ blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non−halogenated solvents or those solvents listed in F001, F002, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F005 The following spent non−halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2−ethoxyethanol, and 2−nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non−halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)

F006 Wastewater treatment sludges from electroplating operations except from the following processes: (1) Sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc−aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum. (T)

F012 Quenching waste water treatment sludges from metal heat treating operations where cyanides are used in the process. (T)

F038 Petroleum refinery secondary (emulsified) oil/water/solids separation sludge − Any sludge and/or float generated from the physical and/or chemical separation of oil/water/solids in process wastewaters and oily cooling wastewaters from petroleum refineries. Such wastes include, but are not limited to, all sludges and floats generated in induced air flotation (IAF) units, tanks and impoundments, and all sludges generated in DAF units. Sludges generated in stormwater units that do not do not receive dry weather flow, sludges generated in aggressive biological treatment units as defined in Section 261.31(b)(2) (including sludges generated in one or more additional units after wastewaters have been treated in aggressive

P001 2H−1−Benzopyran−2−one, 4−hydroxy−3−(3−oxo−1−phenylbutyl)−, & salts, when present concentrations greater than 0.3%

How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a digital version of the U. S. Census map or those used by local authorities using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each Toxic Site Profile, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12 Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street Anytown, NY 11797

MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a digital version of the street or parcel map. These site locations are identified with the method used to map them.

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/ operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxic Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect.

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

Information Source Guide

Toxics Targeting's Environmental Reports contain government and other information compiled on 21 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **National Priority List for Federal Superfund Cleanup:** Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. Also includes delisted NPL sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated from: 9/09/2015. Data obtained by Toxics Targeting: 9/09/2015.
New Facilities updated through: 9/30/2016. Data obtained by Toxics Targeting: 9/30/2016.

2) **Inactive Hazardous Waste Disposal Site Registry:** New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. Also included are sites that qualify for possible inclusion on the Registry. These Registry Qualifying sites may or may not be on the Site Registry.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 6/15/2019. Data obtained by Toxics Targeting: 6/15/2019.
New Facilities updated to: 6/15/2019. Data obtained by Toxics Targeting: 6/15/2019.

3) **Federal & State Corrective Action Activity (CORRACTS):** New York State and Federal databases of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.**

Federal Data Source: U. S. Environmental Protection Agency[1]
Data attributes updated through: 3/01/2018. Data obtained by Toxics Targeting: 3/07/2018.
New facilities updated through: 3/01/2018. Data obtained by Toxics Targeting: 3/07/2018.

State Data Source: New York State Department of Environmental Conservation[2]
Data attributes updated through: 6/15/2019. Data obtained by Toxics Targeting: 6/15/2019.
New facilities updated through: 6/15/2019. Data obtained by Toxics Targeting: 6/15/2019.

4) **CERCLIS:** Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. Includes Active and No Further Remedial Action Planned (NFRAP) sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated through: 10/25/2013. Data obtained by Toxics Targeting: 1/07/2014.
New Facilities updated through: 7/17/2017. Data obtained by Toxics Targeting: 8/22/2017.

5) **Brownfield Programs:** NYS & NYC programs for sites that are abandoned, idled or under-used industrial and/or commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.
ASTM required.*

(a) **NYS DEC Brownfield Programs**: Source: New York State Department of Environmental Conservation.[2]
includes: **Brownfield Cleanup Program (BCP), Voluntary Cleanup Program (VCP), and Environmental Restoration Program (ERP)**
Data attributes updated through: 6/15/2019. Data obtained by Toxics Targeting: 6/15/2019.
New Facilities updated to: 6/15/2019. Data obtained by Toxics Targeting: 6/15/2019.

(b) **NYC Voluntary Cleanup Program:** Source: NYC Office of Environmental Remediation
Data attributes updated through: 10/13/2017. Data obtained by Toxics Targeting: 10/13/2017.
New Facilities updated to: 10/13/2017. Data obtained by Toxics Targeting: 10/13/2017.

6) **Solid Waste Facilities:** a compilation of the following 2 databases:

(a) **NYS Solid Waste Registry:** which includes, but is not limited to, landfills, incinerators, transfer stations, recycling centers.
ASTM required.* Fannie Mae required.** Source: New York State Dept. of Environmental Conservation.[2]
Data updated to: 4/1/2013. Data obtained by Toxics Targeting: 4/1/2013.

(b) **1934 Solid Waste Disposal Site in New York City:** which includes sites operated by municipal authorities circa 1934. Source: City of New York Department of Sanitation (1984). The Waste Disposal Problem in New York City: A Proposal For Action.

7) **RCRA Hazardous Waste Treatment, Storage or Disposal Facility Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the DEC's Division of Environmental Remediation pursuant to NYS Law and the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

New facilities updated through: 06/10/2019. New facilities obtained by Toxics Targeting: 06/15/2019.
Manifest transactions data updated to: 06/10/2019. Manifest transactions data obtained by Toxics Targeting: 06/15/2019.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency[1]
New facilities updated through: 3/01/2018. Data obtained by Toxics Targeting: 3/07/2018.
Data attributes updated through: 3/01/2018. Data obtained by Toxics Targeting: 3/07/2018.

8) **Spills Information Database:** Spills reported to the DEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from Petroleum Bulk Storage Regulations) or 6 NYCRR Section 595.2 (from Chemical Bulk Storage Regulations). This database includes both *active* and *closed* spills.
ASTM required.* Fannie Mae.** Source: NYS Department of Environmental Conservation.[2]

New spills through: 6/09/2019 New spills data obtained by Toxics Targeting: 6/09/2019
Spill attribute data through: 6/09/2019 Spill attribute data obtained by Toxics Targeting: 6/09/2019

Active spills: paperwork not completed. Closed spills: paperwork completed.
Both active and closed spills may or may not have been cleaned up (see Date Cleanup Ceased in spill profiles).

9) **Major Oil Storage Facilities:** NYS database of facilities licensed pursuant to Article 12 of the Navigation Law, 6NYCRR Parts 610 and 17NYCRR Part 30, such as onshore facilities or vessels, with petroleum storage capacities equal to or greater than four hundred thousand gallons. **Tank & other data withheld by NYSDEC as of 4/1/2002**.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

Data updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.

10) **Petroleum Bulk Storage Facilities:** a compilation of local and state databases of aboveground and underground petroleum storage tank facilities.

(a) **NYS Petroleum Bulk Storage Database:** This includes all New York State counties except Cortland, Nassau, Rockland, Suffolk, and Westchester. ASTM required.* Fannie Mae required.**
Source: NYS Department of Environmental Conservation.[2]
New facilities updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.
Tank data updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.

(b) **New York City Fire Department Tank Data:** **Data has been withheld by the NYC Fire Dept.**
Source: New York City Fire Department. Data obtained by Toxics Targeting: 2/18/1997

11) **RCRA Hazardous Waste Generators and/or Transporters Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the NYS Department of Environmental Conservation's Division of Environmental Remediation pursuant to New York State Law. ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

New facilities updated through: 06/10/2019. New facilities obtained by Toxics Targeting: 06/15/2019.
Manifest transactions data updated to: 06/10/2019. Manifest transactions data obtained by Toxics Targeting: 06/15/2019.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency[1]

New facilities updated through: 3/01/2018. Data obtained by Toxics Targeting: 3/07/2018.
Data attributes updated through: 3/01/2018. Data obtained by Toxics Targeting: 3/07/2018.

12) **Chemical Bulk Storage Facilities:** New York State database of facilities compiled pursuant to 6NYCRR Part 596 that store regulated substances listed in 6NYCRR Part 597 in aboveground tanks with capacities greater than 185 gallons and /or in underground tanks of any size. **Tank & other data withheld by NYSDEC as of 4/1/2002**.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.

13) **Historic New York City Utility Facilities (1898 to 1950):** An inventory of selected power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports of New York utility companies, including: Sanborn Fire Insurance Maps of NYC (1898-1950); Consolidated Edison Co. Annual Reports (1922-1939); Consolidated Edison Co. Map: "Boroughs of Manhattan and the Bronx Showing Distribution Mains of the New York Edison Co.," (1922); and Consolidated Edison document: "Generating and Annex Stations," (1911).

14) **Hazardous Substance Waste Disposal Site Study:** NYS database of waste disposal sites that may pose threats to public health or the environment, but could not be remediated using monies from the Hazardous Waste Remedial Fund.
Source: New York State Department of Environmental Conservation.[2]
Data updated to: 5/16/2000. Data obtained by Toxics Targeting: 5/16/2000.

15) **Toxic Release Inventory (TRI):** Federal database of manufacturing facilities required under Section 313 of the Federal Emergency Planning and Community Right-to-Know Act to report releases to the air, water and land of any specifically listed toxic chemical. See Fannie Mae requirement** below.
Source: U. S. Environmental Protection Agency.[1] / NYS Department of Environmental Conservation[2]
Data updated through: 3/8/2004. Data obtained by Toxics Targeting: 3/25/2004

16) **Toxic Wastewater Discharges (Permit Compliance System):** Federal database of discharges of wastewater to surface waters and groundwaters. See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency.[1]
Data updated through: 6/17/2004. Data obtained by Toxics Targeting: 7/19/2004.

17) **Air Discharge Facilities:** EPA AIRS database containing address information on each air emission facility and the type of air pollutant emission it is. Compliance information is also provided on each pollutant as well as the facility itself.
See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency[1]
Data updated through: 11/24/1999. Data obtained by Toxics Targeting: 1/6/2000

18) **Civil Enforcement & Administrative Docket:** This database is the U. S. EPA's system for tracking administrative and civil judiciary cases filed on behalf of the agency by the Department of Justice. Fannie Mae required.**
Source: U. S. Environmental Protection Agency.[1]
New Sites through: 10/14/1999.
Data updated through: 10/14/1999. Data obtained by Toxics Targeting: 11/18/1999.

19) **New York City Environmental Quality Review (CEQR) – E Designation Sites:** These sites are parcels assigned a special environmental ("E") designation under the CEQR process. E designation requires specific protocols that must be followed. Source: New York City Department of Planning[3]
Data updated through: 3/22/2018. Data obtained by Toxics Targeting: 4/3/2018.

20) **Emergency Response Notification System (ERNS):** Federal database of spills compiled by the Emergency Response Notification System. On-site searches only.
ASTM required.* See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency.[1]
Data updated through: 1/31/2000. Data obtained by Toxics Targeting: 2/15/2000

21) **Remediation Site Borders:** Remediation site borders reported by NYSDEC.
Source: New York State Department of Environmental Conservation.[2]
Updated through: 9/17/2018. Data obtained by Toxics Targeting: 9/17/2018.

* American Society of Testing Materials: Standard Practice on Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527-05).

** Fannie Mae's Part X Environmental Hazards Management Procedures specify 1.0 mile searches for "any state or Federal list of hazardous waste sites (e.g. CERCLIS, HWDMS etc.)." Searches for the property and adjacent properties are specified for "chemical manufacturing plants," "obvious high risk neighbors engaging in storing or transporting hazardous waste, chemicals or substances" and "...any documented or visible evidence of dangerous waste handling... (e.g. stressed vegetation, stained soil, open or leaking containers, foul fumes or smells, oily ponds, etc." Searches for property and adjacent properties can include sites up to a quarter mile away (W. Hayward, Director, Multi-Family Business Planning and Control, Fannie Mae, personal communication, 5/94).
