U = Not Detected
LOQ = Limit of Quantitation
MDL = Method Detection Limit
LOD = Limit of Detection
D = Dilution
Q = indicates LCS control criteria did not meet requirements

J = Estimated Value
B = Analyte Found in Associated Method Blank
* = indicates the duplicate analysis is not within control limits.
E = Indicates the reported value is estimated because of the presence of interference.
OR = Over Range
N =Spiked sample recovery not within control limits

Comments: DISSOLVED METALS-TAL

U = Not Detected
LOQ = Limit of Quantitation
MDL = Method Detection Limit
LOD = Limit of Detection
D = Dilution
Q = indicates LCS control criteria did not meet requirements

J = Estimated Value
B = Analyte Found in Associated Method Blank
* = indicates the duplicate analysis is not within control limits.
E = Indicates the reported value is estimated because of the presence of interference.
OR = Over Range
N =Spiked sample recovery not within control limits

Re: Ferry Point Park Golf Course
Permit No. 2-6006-00014/00013
Post-Closure Groundwater Monitoring
Request for Cessation for Groundwater Monitoring

Dear Mr. Rowland,

New York State Department of Environmental Conservation (Department) staff have reviewed your November 20, 2019 request to terminate the Ferry Point Golf Course post-closure groundwater monitoring program This request is based on the relatively consistent ground water elevation and flow direction, the laboratory results from ground water samples collected during both pre-closure and post closure monitoring over an eight-year period of monitoring events, and the lack of any potential direct receptors or routes of exposure associated with ground water at Ferry Point Park.

After careful review of the post-closure groundwater monitoring program, the laboratory results from ground water samples collected during both pre-closure and post closure monitoring over an eight-year period of monitoring events and specific circumstances and history of this site, the Department cannot grant this request but rather the following frequency reduction to the Ferry Point Golf Course groundwater monitoring program can be implemented:

1) Starting immediately, the Ferry Point Golf Course groundwater monitoring frequency can be reduced from annual to once every two years through 2030.

2) After 2030, the Ferry Point Golf Course groundwater monitoring frequency can be modified from once every two years to once every five years indefinitely as custodial care consistent with Part 363-9.6(b).

If you have any questions you may contact me at 718-482-4996.

Sincerely,

Kenneth B. Brezner

Dear Ms. Catalanotto:

**Re: Quarterly Landfill Gas Monitoring - Quarter 1, 2023**
**Ferry Point Park Golf Course**
**NYSDEC Permit No. 2-6006-00014/00013**
**Bronx, NY**

GEI Consultants, Inc. (GEI) has prepared the following report on behalf of the New York City Department of Parks & Recreation (NYCDPR) to document the quarterly post-closure landfill gas monitoring event conducted on March 28-30, 2023, at the Ferry Point Park Golf Course. Landfill gas monitoring is conducted to measure and report landfill-related parameters at on-Site and off-Site monitoring points in compliance with the NYSDEC Permit No. 2-6006-00014/00013, the October 2013 *Post Construction Custodial Care Plan*, and the October 2013 *Landfill Gas Management Plan*.

Landfill gas monitoring included the collection of methane (percent methane by volume, percent lower explosive limit [LEL]), oxygen, carbon monoxide, hydrogen sulfide, organic vapors, well pressure, humidity, air flow, vacuum pressures, and/or temperature measurements. Data was collected using a photoionization detector (PID), a TSI Velocicalc, and a Landtek GEM5000 with CO and $H_2S$. All equipment was properly calibrated prior to data collection.

The Quarter 1, 2023 data tables and figure are provided in this report. Overall, the landfill gas monitoring results are consistent with prior post-closure monitoring events and illustrates that landfill gas conditions are stable.

If you have any questions, please feel free to contact me at (347) 514–3861.

**Re: Quarterly Landfill Gas Monitoring - Quarter 2, 2023**
**Ferry Point Park Golf Course**
**NYSDEC Permit No. 2-6006-00014/00013**
**Bronx, NY**

Dear Ms. Catalanotto:

GEI Consultants, Inc. (GEI) has prepared the following report on behalf of the New York City Department of Parks & Recreation (NYCDPR) to document the quarterly post-closure landfill gas monitoring event conducted on June 27-28, 2023, at the Ferry Point Park Golf Course. Landfill gas monitoring is conducted to measure and report landfill-related parameters at on-Site and off-Site monitoring points in compliance with the NYSDEC Permit No. 2-6006-00014/00013, the October 2013 *Post Construction Custodial Care Plan*, and the October 2013 *Landfill Gas Management Plan*.

Landfill gas monitoring included the collection of methane (percent methane by volume, percent lower explosive limit [LEL]), oxygen, carbon monoxide, hydrogen sulfide, organic vapors, well pressure, humidity, air flow, vacuum pressures, and/or temperature measurements. Data was collected using a photoionization detector (PID), a TSI Velocicalc, and a Landtek GEM5000 with CO and $H_2S$. All equipment was properly calibrated prior to data collection.

The Quarter 2, 2023 data tables and figure are provided in this report. Overall, the landfill gas monitoring results are consistent with prior post-closure monitoring events and illustrates that landfill gas conditions are stable.

If you have any questions, please feel free to contact me at (347) 514–3861.

## Piezometer Monitoring Reports

February 2, 2023
Project 2204594

Geotechnical
Environmental
Water Resources
Ecological

VIA EMAIL: samantha.catalanotto@parks.nyc.gov

Ms. Samantha Catalanotto
Environmental Project Manager
Capital Projects – Environmental Remediation Unit
New York City Department of Parks & Recreation
Olmsted Center
117-02 Roosevelt Avenue
Corona, NY 11368

Dear Ms. Catalanotto:

**Re: January 2023 Piezometer Monitoring Event**
**Ferry Point Park Golf Course**
**NYSDEC Permit No. 2-6006-00014/00013**
**Bronx, NY**

GEI Consultants, Inc. (GEI) has prepared the following report on behalf of the New York City Department of Parks & Recreation (NYCDPR) to document the piezometer monitoring event conducted in January 2023 at the Ferry Point Park Golf Course. Monthly piezometer monitoring is conducted in compliance with the October 2013 *Post Construction Custodial Care Plan* and the October 2013 *Landfill Gas Management Plan.*

On January 31, 2023, GEI mobilized to Site to conduct the monthly piezometer monitoring. A summary of the weather condition during the monitoring event is included in Table 1 below:

**Table 1 - Summary of January 31, 2023, Weather Conditions**

| | | |
|---|---|---|
| **Date:** 1/31/2023 | **On site:** 07:30 | **Off site:** 13:30 |
| **Weather Conditions** | Light rain and snow | Mostly Cloudy |
| **Temperature** | 35° F | 38° F |
| **Relative Humidity** | 87% | 57% |
| **Wind** | NNW 3 mph | NNW 12 mph |
| **Barometric Pressure** | 30.17 in | 30.17 in |
| **Precipitation** | 0.0 in | 0.0 in |

GEI gathered water level readings from 24 piezometers utilizing an electronic water level meter between the hours of 7:30 am and 1:30 pm. On January 31, 2023, high

GEI Consultants, Inc.
530 7th Avenue, Suite 2007, New York, NY 10018
212.687.8282

tide was at 7:47 am and low tide was at 2:23 pm. Tides were going out during the data collection window.

The attached Table 2 summarizes the January 2023 monitoring event, including the groundwater elevations collected from the piezometers.

## Conclusions

The January 2023 piezometer monitoring event results indicate that all piezometers are functional and there is sufficient groundwater contouring to prevent the migration of methane off Site. The collected groundwater elevations are also consistent with historical trends and data.

A routine visual inspection of the piezometers was conducted, and the piezometers were found in good condition as follows:

- The outer protective casings remain locked.
- The inner casings and plugs remain intact and in place; and
- The outer and inner casings remain in good condition and in their intended positions.

If you have any questions, please feel free to contact me at (347) 514–3861.

Sincerely,

GEI CONSULTANTS, INC.

Stacey Ng, P.G
Project Manager

VIA EMAIL: samantha.catalanotto@parks.nyc.gov

Ms. Samantha Catalanotto
Environmental Project Manager
Capital Projects – Environmental Remediation Unit
New York City Department of Parks & Recreation
Olmsted Center
117-02 Roosevelt Avenue
Corona, NY 11368

Dear Ms. Catalanotto:

**Re: March 2023 Piezometer Monitoring Event**
**Ferry Point Park Golf Course**
**NYSDEC Permit No. 2-6006-00014/00013**
**Bronx, NY**

GEI Consultants, Inc. (GEI) has prepared the following report on behalf of the New York City Department of Parks & Recreation (NYCDPR) to document the piezometer monitoring event conducted in March 2023 at the Ferry Point Park Golf Course. Monthly piezometer monitoring is conducted in compliance with the October 2013 *Post Construction Custodial Care Plan* and the October 2013 *Landfill Gas Management Plan.*

On March 29, 2023, GEI mobilized to Site to conduct the monthly piezometer monitoring. A summary of the weather conditions during the monitoring event is included in Table 1 below:

**Table 1 - Summary of March 29, 2023, Weather Conditions**

| | | |
|---|---|---|
| **Date:** 3/29/2023 | **On site:** 07:00 | **Off site:** 15:30 |
| **Weather Conditions** | Sunny | Mostly Sunny |
| **Temperature** | 39°F | 53°F |
| **Relative Humidity** | 37% | 20% |
| **Wind** | NNW 2 mph | SW 8 mph |
| **Barometric Pressure** | 30.17 in | 30.04 in |
| **Precipitation** | 0.0 in | 0.0 in |

GEI gathered water level readings from 23 out of 24 currently known piezometers utilizing an electronic water level meter between the hours of 7:00 am and 3:30 pm.

GEI Consultants, Inc.
530 7th Avenue, Suite 2007, New York, NY 10018
212.687.8282

On March 29, 2023, low tide was at 11:29 am and high tide was at 5:13 pm. Tides were alternating during the data collection window.

PZ-11 was unable to be located in the southeastern area of the Community Park. The well location was previously marked out on the fronting fence post, adjacent to the park entrance. However, upon inspection of the area, PZ-11 could not be located, possibly due to vegetation, vandalism, or landscaping (downed tree nearby).

Table 2 attached summarizes the March 2023 monitoring event, including the groundwater elevations collected from the accessible piezometers.

## Conclusions

The March 2023 piezometer monitoring event results indicate that all piezometers, except PZ-11, are functional and there is sufficient groundwater contouring to prevent the migration of methane off Site. The collected groundwater elevations are also consistent with historical trends and data.

A routine visual inspection of the piezometers was conducted, and all located piezometers were found in good condition as follows:

- The outer protective casings remain locked;
- The inner casings and plugs remain intact and in place; and
- The outer and inner casings remain in good condition and in their intended positions.

If you have any questions, please feel free to contact me at (347) 514–3861.

Sincerely,

Ms. Samantha Catalanotto
Environmental Project Manager
Capital Projects – Environmental Remediation Unit
New York City Department of Parks & Recreation
Olmsted Center
117-02 Roosevelt Avenue
Corona, NY 11368

Dear Ms. Catalanotto:

**Re: April 2023 Piezometer Monitoring Event**
**Ferry Point Park Golf Course**
**NYSDEC Permit No. 2-6006-00014/00013**
**Bronx, NY**

GEI Consultants, Inc. (GEI) has prepared the following report on behalf of the New York City Department of Parks & Recreation (NYCDPR) to document the piezometer monitoring event conducted in April 2023 at the Ferry Point Park Golf Course. Monthly piezometer monitoring is conducted in compliance with the October 2013 *Post Construction Custodial Care Plan* and the October 2013 *Landfill Gas Management Plan.*

On April 24, 2023, GEI mobilized to Site to conduct the monthly piezometer monitoring. A summary of the weather conditions during the monitoring event is included in Table 1 below:

**Table 1 - Summary of April 24, 2023, Weather Conditions**

| **Date:** 4/24/2023 | **On site:** 07:00 | **Off site:** 13:30 |
|---|---|---|
| **Weather Conditions** | Sunny | Partly Sunny |
| **Temperature** | 45°F | 56°F |
| **Relative Humidity** | 78% | 44% |
| **Wind** | NW 3 mph | WNW 3 mph |
| **Barometric Pressure** | 30.04 in | 30.02 in |
| **Precipitation** | 0.0 in | 0.0 in |

GEI gathered water level readings from 23 out of 24 currently known piezometers utilizing an electronic water level meter between the hours of 7:00 am and 1:30 pm.

GEI Consultants, Inc.
530 7th Avenue, Suite 2007, New York, NY 10018
212.687.8282

On April 24, 2023, low tide was at 11:37 am and high tide was at 5:03 pm. Tides were going out during the majority of the data collection window.

Since the March 2023 monitoring event, PZ-11 is still unable to be located in the southeastern area of the Community Park. The well location is marked out on the fronting fence post, adjacent to the park entrance, however, following closer inspection of the area, PZ-11 cannot be located, possibly due to vegetation, vandalism, or landscaping (downed tree nearby).

Evidence of well tampering was noted at PZ-05, also located within the Community Park. Upon arrival, the well cover was found open, leaving the j-plug to the piezometer exposed. GEI re-secured the cover in place following monitoring.

Table 2 attached summarizes the April 2023 monitoring event, including the groundwater elevations collected from the accessible piezometers.

## Conclusions

The April 2023 piezometer monitoring event results indicate that all piezometers, except PZ-11, are functional and there is sufficient groundwater contouring to prevent the migration of methane off Site. The collected groundwater elevations are also consistent with historical trends and data.

A routine visual inspection of the piezometers was conducted, and all located piezometers were found in good condition as follows:

- The outer protective casings remain locked (if applicable);
- The inner casings and plugs remain intact and in place; and
- The outer and inner casings remain in good condition and in their intended positions.

If you have any questions, please feel free to contact me at (347) 514–3861.

Ms. Samantha Catalanotto
Environmental Project Manager
Capital Projects – Environmental Remediation Unit
New York City Department of Parks & Recreation
Olmsted Center
117-02 Roosevelt Avenue
Corona, NY 11368

Dear Ms. Catalanotto:

**Re: May 2023 Piezometer Monitoring Event**
**Ferry Point Park Golf Course**
**NYSDEC Permit No. 2-6006-00014/00013**
**Bronx, NY**

GEI Consultants, Inc. (GEI) has prepared the following report on behalf of the New York City Department of Parks & Recreation (NYCDPR) to document the piezometer monitoring event conducted in May 2023 at the Ferry Point Park Golf Course. Monthly piezometer monitoring is conducted in compliance with the October 2013 *Post Construction Custodial Care Plan* and the October 2013 *Landfill Gas Management Plan.*

On May 22, 2023, GEI mobilized to Site to conduct the monthly piezometer monitoring. A summary of the weather conditions during the monitoring event is included in Table 1 below:

**Table 1 - Summary of May 22, 2023, Weather Conditions**

| **Date:** 5/22/2023 | **On site:** 08:00 | **Off site:** 14:00 |
|---|---|---|
| **Weather Conditions** | Partly Sunny | Partly Sunny |
| **Temperature** | 62°F | 67°F |
| **Relative Humidity** | 73% | 64% |
| **Wind** | N 3 mph | NE 4 mph |
| **Barometric Pressure** | 30.11 in | 30.15 in |
| **Precipitation** | 0.0 in | 0.0 in |

GEI gathered water level readings from the 24 piezometers utilizing an electronic water level meter between the hours of 8:00 am and 2:00 pm. On May 22, 2023,

GEI Consultants, Inc.
530 7th Avenue, Suite 2007, New York, NY 10018
212.687.8282

high tide was at 8:51 am and low tide was at 2:31 pm. Tides were going out during the majority of the data collection window.

During this piezometer monitoring event, PZ-11, which was previously unable to be located due to vegetation, was found and gauged along with the other piezometers located in the Community Park.

Table 2 attached summarizes the May 2023 monitoring event, including the groundwater elevations collected from the accessible piezometers.

## Conclusions

The May 2023 piezometer monitoring event results indicate that all piezometers are functional and there is sufficient groundwater contouring to prevent the migration of methane off Site. The collected groundwater elevations are also consistent with historical trends and data.

A routine visual inspection of the piezometers was conducted, and the piezometers were found in good condition as follows:

- The outer protective casings remain locked.
- The inner casings and plugs remain intact and in place; and
- The outer and inner casings remain in good condition and in their intended positions.

If you have any questions, please feel free to contact me at (347) 514–3861.

Sincerely,

GEI CONSULTANTS, INC.

Ms. Samantha Catalanotto
Environmental Project Manager
Capital Projects – Environmental Remediation Unit
New York City Department of Parks & Recreation
Olmsted Center
117-02 Roosevelt Avenue
Corona, NY 11368

Dear Ms. Catalanotto:

**Re: June 2023 Piezometer Monitoring Event**
**Ferry Point Park Golf Course**
**NYSDEC Permit No. 2-6006-00014/00013**
**Bronx, NY**

GEI Consultants, Inc. (GEI) has prepared the following report on behalf of the New York City Department of Parks & Recreation (NYCDPR) to document the piezometer monitoring event conducted in June 2023 at the Ferry Point Park Golf Course. Monthly piezometer monitoring is conducted in compliance with the October 2013 *Post Construction Custodial Care Plan* and the October 2013 *Landfill Gas Management Plan.*

On June 27, 2023, GEI mobilized to Site to conduct the monthly piezometer monitoring. A summary of the weather conditions during the monitoring event is included in Table 1 below:

**Table 1 - Summary of June 27, 2023, Weather Conditions**

| | | |
|---|---|---|
| **Date:** 6/27/2023 | **On site:** 07:00 | **Off site:** 15:00 |
| **Weather Conditions** | Fog | Partly Sunny |
| **Temperature** | 66°F | 78°F |
| **Relative Humidity** | 79% | 83% |
| **Wind** | W 1 mph | N 2 mph |
| **Barometric Pressure** | 29.8 in | 29.7 in |
| **Precipitation** | 0.0 in | 0.0 in |

GEI gathered water level readings from the 18 of the 24 piezometers utilizing an electronic water level meter between the hours of 7:00 am and 3:00 pm. On June

GEI Consultants, Inc.
530 7th Avenue, Suite 2007, New York, NY 10018
212.687.8282

27, 2023, high tide was at 6:14 am and low tide was at 12:31 pm. Tides were going out during the majority of the data collection window.

During this piezometer monitoring event, PZ-18, PZ-19, PZ-20 and PZ-23, located in a gated area along the southeastern boundary of the golf course, were unable to be gauged due to overgrown vegetation limiting access in the area. Additionally, PZ-21 and PZ-23, located in a gated area within the Waterfront Park, were also unable to be accessed due to a locked entrance.

Table 2 attached summarizes the June 2023 monitoring event, including the groundwater elevations collected from the accessible piezometers.

## Conclusions

The June 2023 piezometer monitoring event results indicate that the 18 accessible piezometers are functional and there is sufficient groundwater contouring to prevent the migration of methane off Site. The collected groundwater elevations are also consistent with historical trends and data.

A routine visual inspection of the piezometers was conducted, and the accessible piezometers were found in good condition as follows:

- The outer protective casings remain locked.
- The inner casings and plugs remain intact and in place; and
- The outer and inner casings remain in good condition and in their intended positions.

If you have any questions, please feel free to contact me at (347) 514–3861.

Sincerely,

Ms. Samantha Catalanotto
Environmental Project Manager
Capital Projects – Environmental Remediation Unit
New York City Department of Parks & Recreation
Olmsted Center
117-02 Roosevelt Avenue
Corona, NY 11368

Dear Ms. Catalanotto:

**Re: 2023 Annual Settlement Plate Monitoring Report**
**Ferry Point Park Golf Course**
**NYSDEC Permit No. 2-6006-00014/00013**
**Bronx, NY**

GEI Consultants, Inc. (GEI) has prepared the following report on behalf of the New York City Department of Parks & Recreation (NYCDPR) to document the annual settlement plate monitoring event conducted on March 29, 2023, at the Ferry Point Park Golf Course.

Long-term settlement monitoring initially began following completion of the golf course, which included the importation and placement of significant volumes of fill material in various thicknesses around the site, as well as construction of a large Clubhouse structure. Monitoring is currently conducted on an annual basis to survey and report elevation data, and to determine if significant changes (rise or fall) have occurred at the any of the nine (9) plate locations since the last monitoring event.

Monitoring/surveying was performed in compliance with Section 3.3.2.4 of the October 2013 *Post Construction Custodial Care Plan, DEC Permit No. 2-6006-00014/000013,* and the New York State Department of Environmental Conservation (NYSDEC) letter, dated January 7, 2020, providing approval to modify the settlement plate monitoring frequency from quarterly to annually.

The settlement plate surveying was performed by GEI's subcontractor, Contractors Line and Grade of Elmsford, NY. Enclosed is a copy of the latest report, signed and sealed by a licensed surveyor, providing elevation data since October 2013. A

GEI Consultants, Inc.
530 7th Avenue, Suite 2007, New York, NY 10018
212.687.8282

summary of the last few years since commencing annual monitoring is provided below.

| Date Surveyed | Settlement (feet) | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Plate 1 | Plate 2 | Plate 3 | Plate 4 | Plate 5 | Plate 6 | Plate 7 | Plate 8 | Plate 9 |
| **3/5/2020** | -0.04 | -0.01 | 0.00 | 0.01 | -0.02 | -0.11 | -0.02 | 0.01 | -0.04 |
| **4/8/2021** | 0.02 | 0.01 | 0.02 | -0.02 | 0.02 | 0.12 | -0.01 | -0.01 | 0.01 |
| **3/17/2022** | -0.08 | -0.03 | -0.01 | -0.01 | 0.00 | -0.03 | -0.02 | -0.01 | 0.00 |
| **3/29/2023** | 0.04 | 0.00 | 0.02 | -0.02 | 0.01 | -0.01 | -0.01 | 0.02 | -0.01 |
| **Cumulative Settlement (2020-2023)** | -0.02 | -0.02 | 0.03 | -0.04 | 0.03 | -0.08 | -0.04 | 0.00 | 0.00 |
| **Cumulative Settlement Since 10/3/2013** | -0.06 | -0.06 | 0.12 | -0.06 | 0.09 | -0.11 | -0.30 | 0.01 | 0.00 |

Based on review of recent data, GEI notes the following:

- No significant changes in elevation have been observed since the last reporting period or since transitioning to annual monitoring in 2020.
- Cumulative settlement since 2013 is negligible and ranges from 0.00 ft to -0.30 ft across all nine (9) plates.
- Fluctuations in elevation measurements are likely due to human error such as changes between surveying personnel and accuracy of the equipment (generally +/- 0.01 ft).
- Any future minor fluctuations (rise or fall) in plate elevations, indicating potential movement of the overall landfill, do not have an impact on the current site operations.

Based on the March 2023 results and assessment of historic settlement data, GEI recommends to NYCDPR that a request be made to NYSDEC to terminate all future settlement plate monitoring, as long as the former landfill continues to be utilized and maintained in its current condition as a golf course.

If you have any questions, please feel free to contact me at (347) 514–3861.

Settlement Plate Monitoring
Request to Change the Monitoring Frequency from Quarterly to Annual

Dear Mr. Rowland,

New York State Department of Environmental Conservation (Department) staff have reviewed your December 19, 2019 request to modify the Ferry Point Golf Course settlement plate monitoring frequency from quarterly to annual. This request is based on the negligible changes in the settlement plate data from the quarterly reports for the last four years.

After careful review of the settlement plate data from the quarterly reports for the last four years and specific circumstances and history of this site, the Department hereby grants this request to modify the Ferry Point Golf Course settlement plate monitoring frequency from quarterly to annual starting immediately.

If you have any questions you may contact me at 718-482-4996.

Sincerely,

Kenneth B. Brezner

LEGEND:

■ FINAL LOCATION OF SETTLEMENT PLATES

▶ 3 LANGAN SETTLEMENT PLATE LOCATIONS, (2005)

NOTES:

1. SETTLEMENT PLATE LOCATIONS WERE TO REFLECT THE APPROXIMATE LOCATIONS SHOWN IN THE 2005 LANGAN DRAWING PER DISCUSSIONS BETWEEN THE IEM AND SANFORD GOLF.
2. THE SETTLEMENT PLATES WERE LOCATED IN FILL AREAS, NEAR GREENS AND/OR UTILITIES.

Re: **2023 Annual Settlement Plate Monitoring Report**
**Ferry Point Park Golf Course, Bronx, NY**
**NYSDEC Permit No. 2-6006-00014/00013**

New York State Department of Environmental Conservation (Department) staff have received the subject report prepared by GEI Consultants, Inc. (GEI) dated June 15, 2023, on behalf of the New York City Department of Parks & Recreation (NYCDPR) to document the annual settlement plate monitoring event conducted on March 29, 2023, at the Ferry Point.

Based on the March 2023 results and assessment of historic settlement data, GEI has recommended that NYCDPR make a request to NYSDEC to terminate all future settlement plate monitoring, as long as the former landfill continues to be utilized and maintained in its current condition as a golf course.

After careful review of the settlement plate data from the last four annual reports from 2020-2023 and previously performed quarterly monitoring (later reduced to annual monitoring as per NYSDEC approval dated Jan 7, 2020) along with specific circumstances and history of this site, the Department hereby grants your request to suspend all future annual settlement plate monitoring.

If you have any questions regarding this matter or need additional information on the regulatory requirements, please feel free to contact our office at 718 482-4996.

Sincerely,

**Mahmoud Assi, P.E.**
Regional Materials Management Engineer

Corona, NY 11368

Dear Ms. Catalanotto:

**Re: Quarterly Sub-Slab Depressurization System (SSDS) Monitoring - Quarter 1, 2023**
**Ferry Point Park Golf Course**
**NYSDEC Permit No. 2-6006-00014/00013**
**Bronx, NY**

GEI Consultants, Inc. (GEI) has prepared the following report on behalf of the New York City Department of Parks & Recreation (NYCDPR) to document the SSDS infrastructure monitoring event conducted on March 28, 2023, at the Ferry Point Park Golf Course and Community Park. Quarterly sub-slab depressurization (SSD) and combustible gas (CG) monitoring system operations, maintenance, and monitoring (OM&M) is performed in compliance with the NYSDEC Permit No. 2-6006-00014/00013, the October 2013 *Post Construction Custodial Care Plan*, the October 2013 *Landfill Gas Management Plan*, and the site-specific OM&M Manual.

The following locations are included in the SSDS and/or CG OM&M:

- Community Park Comfort Station (CPCS);
- Golf Course Maintenance Building (Maintenance Building):
- Golf Course Comfort Station (GCCS);
- Golf Course Cart Storage Barn (Cart Barn); and
- Golf Course Clubhouse (Clubhouse).

GEI Consultants, Inc.
530 7th Avenue, Suite 2007, New York, NY 10018

## Summary of OM&M Inspection Activities

SSD and CG monitoring systems OM&M activities included visual inspections and collection of oxygen, organic vapor, and methane (percent methane by volume, percent lower explosive limit [LEL]) readings from beneath the building slabs. In locations with sub-slab monitoring points, sub-slab pressure was measured to determine if the SSDS is creating a negative pressure beneath the structures. The location of on- and off-Site buildings with SSD and CG systems are depicted on Figure 1, and the system layout and components for each building are depicted on Figure 2 through 6.

## OM&M Observations and Results

Community Park Comfort Station (CPCS)

OM&M was performed at the CPCS on March 28, 2023, which included the collection of sub-slab pressure CG readings, inspection of the SSDS to verify it was operational, as well as a review of the real-time data at the CG sensor. Table 1 contains a summary of the OM&M visit results, with historical data presented on Table 2A. Below is a summary of the observations made during the CPCS monitoring event:

- The SSD and CG systems were operational during, and prior to, the Q1 monitoring event;
- The combustible gas data logging system was online, operational and transmitting data to the central datalogging panel, registering the ambient readings of 0.0% LEL;
- Low levels of volatile organic compounds (VOCs) were detected within the building;
- Methane and VOCs were detected at low concentrations under the building;
- Sub-slab pressure measurements collected from the sub-slab monitoring point (Figure 2) during the Q1 monitoring event indicated that there was not a negative pressure gradient being generated beneath the building slab by the SSDS, however the blower was operational and CG concentrations were low within the building. The pressure issue has occurred during previous events and is thought to be associated with seasonal variations.

Golf Course Maintenance Building (Maintenance Building)

OM&M performed at the Maintenance Building included the inspection of the SSDS to verify it was operational, collection of sub-slab pressure CG readings, and

review of the real-time data at the CG sensor. A summary of the Q1 monitoring results is presented on Table 1, with historical data presented on Table 2B. Below is a summary of the observations denoted at the Maintenance Building during the OM&M event:

- The SSD and CG systems were operational during, and prior to, the Q1 monitoring event;
- The combustible gas data logging system was online, operational and transmitting data to the central datalogging panel, registering the ambient readings of 0.0% LEL;
- Low levels of volatile organic compounds (VOCs) were detected within the building;
- Methane and VOCs were detected at low concentrations under the building;
- Sub-slab pressure measurements collected from the sub-slab monitoring points (Figure 3) during the Q1 monitoring event indicated that the SSDS was generating negative pressure beneath the building slab. The negative pressure was greater than Q4 2022, and of similar to that of Q1 2022. The methane LEL detected at MP-1 was lesser than that of Q4 2022 (8% and 34%, respectively) while the methane LEL was greater at MP-2 and MP-3 than Q4 2022 (2% and 0%, respectively).

Golf Course Comfort Station (GCCS)

GCCS monitoring included the review of the real-time data at the CG sensor, the inspection of the SSDS to verify it was operational, and collection of sub-slab pressure CG readings. Table 1 contains a summary of the OM&M visit results, with historical data presented on Table 2C. Below is a summary of the observations made at the GCCS during the OM&M event:

- The SSD and CG systems were operational prior to and during the Q1 monitoring event;
- The combustible gas data logging system was online, operational and transmitting data to the central datalogging panel, registering the ambient readings of 0.0% LEL;
- Low levels of volatile organic compounds (VOCs) were detected within the building at MP-1;

- Methane and VOCs were detected at low concentrations under the building at all three monitoring points;

- Sub-slab pressure measurements collected from the three sub-slab monitoring points (Figure 4) during the Q1 monitoring event indicated that the SSDS is generating negative pressure beneath the slab. The vacuum pressure recorded at MP-3 was significantly lower than that of Q4 2022, however it was consistent with historical data.

Golf Course Cart Storage Barn (Cart Barn)

OM&M performed at the Cart Barn included the inspection of the SSDS to verify it was operational, collection of sub-slab pressure CG readings, and review of the real-time data at the CG sensor. A summary of the Q1 monitoring results is presented on Table 1, with historical data presented on Table 2D. Below is a summary of the observations made during the OM&M event at the Cart Barn:

- The SSD and CG systems were operational during, and prior to, the Q1 monitoring event;

- The combustible gas data logging system was online, operational and transmitting data to the central datalogging panel, registering the ambient readings of 0.0% LEL;

- Low levels of volatile organic compounds (VOCs) were detected at all monitoring points within the building;

- Methane and VOCs were detected at low concentrations under the Cart Barn;

- Sub-slab pressure measurements collected from all four sub-slab monitoring points (Figure 5) during the Q1 monitoring event indicated that the SSDS was generating negative pressure beneath the building slab, consistent with historical data. However, the flow pressure measured at the blower was significantly lower than that of previous OM&M events.

Golf Course Clubhouse (Clubhouse)

The Clubhouse OM&M event included the review of the real-time data at the CG sensor, the inspection of the SSDS to verify it was operational, and collection of sub-slab pressure CG readings. Table 1 contains a summary of the OM&M visit results, with historical data presented on Table 2E. Below is a summary of the observations made at the Clubhouse during the monitoring event:

- The SSD and CG systems were operational prior to and during the Q1 monitoring event;

- The combustible gas data logging system was online, operational and transmitting data to the central datalogging panel, registering the ambient readings of 0.0% LEL;

- Low levels of volatile organic compounds (VOCs) were detected within the building at all ten monitoring point locations;

- Methane and VOCs were detected at low concentrations under the building at all monitoring points (MP-1 to MP-10);

- Sub-slab pressure measurements collected from the ten sub-slab monitoring points (Figure 6) during the Q1 monitoring event indicated that the SSDS is generating negative pressure beneath the slab, consistent with measurements collected during previous events. The vacuum pressure noted at MP-3 (located in the dining area) was greater than that of historical events.

Conclusions and Recommendations

From the Quarter 1 OM&M event, the results confirm that the SSD and GC systems are operational. Sub-slab pressure readings collected from the on- and off-Site monitoring points indicated that the SSDS in the Golf Course Comfort Station, Golf Course Cart Storage Barn, Golf Course Maintenance Building and Golf Course Clubhouse are creating a negative pressure gradient beneath the building slabs. The Community Park Comfort Station did not demonstrate negative pressure conditions; however, the blower was operational and only low levels of volatile organic compounds (VOCs) were detected within the building.

All CG sensors were communicating with their respective control panels and registered ambient methane readings of 0.0% LEL. The main datalogging panel, located in the Golf Course Maintenance Building, is receiving data from the Golf Course Cart Barn, Golf Course Clubhouse, Community Park and Golf Course Comfort Stations, and Golf Course Maintenance Building. Combustible gas data is accessed remotely, reviewed and downloaded periodically. Methane readings from the CG sensor data are monitored and downloaded periodically, and no alarm conditions have been registered.

If you have any questions, please feel free to contact me at (347) 514–3861.

Sincerely,

GEI CONSULTANTS, INC.

Stacey Ng, P.G
Project Manager

**Notes:**
"WC - Inches of Water
"Hg - inches of mercury
LEL - Lower Explosive Limit
PID - Photoionization Detector (Total Organic Vapors)
ppm - Parts per million
MP - Sub-slab monitoring point (see Figure 4 for locations)
cfm - cubic feet per minute: Due to instrumentation malfunction this reading was collected in cfm instead of WC to ensure accuracy
NM - not measured
% $O_2$ - percent oxygen
°F - degrees Fahrenheit
[1]Ambient % O2 reading of 23.5% due to inability to field calibrate GEM5000 oxygen sensor
[2]Monitoring event conducted under ambient humid conditions
[3]Monitoring event split between two days due to access issues. MP-1 monitored 12/18/18; MP-2 and MP-3 monitored 12/17/18

**Notes:**
"WC - Inches of Water
"Hg - inches of mercury
LEL - Lower Explosive Limit
PID - Photoionization Detector (Total Organic Vapors)
ppm - Parts per million
MP - Sub-slab monitoring point (see Figure 5 for locations)
cfm - cubic feet per minute
NM - not measured
% $O_2$ - percent oxygen
°F - degrees Fahrenheit
[1]Ambient % O2 reading of 23.5% due to inability to field calibrate GEM5000 oxygen sensor
[2]Sub-Slab monitoring points all inaccessible due to golf carts being stored for winter
[3]Only Subslab monitoring points MP-2 and MP-4 were accessible during remobilization on 2/4/2019
[4]Blower was accessible on 3/15/2019. Only Subslab monitoring points MP-2 and MP-4 were accessible during remobilization on 4/3/2019

Table 2E
Comparison of OM Data - Sub-Slab Depressurization and Combustible Gas Monitoring Systems
Golf Course Clubhouse
Ferry Point Park, Bronx, NY

**Re: Quarterly Sub-Slab Depressurization System (SSDS) Monitoring - Quarter 2, 2023**
**Ferry Point Park Golf Course**
**NYSDEC Permit No. 2-6006-00014/00013**
**Bronx, NY**

Dear Ms. Catalanotto:

GEI Consultants, Inc. (GEI) has prepared the following report on behalf of the New York City Department of Parks & Recreation (NYCDPR) to document the SSDS infrastructure monitoring event conducted on June 26, 2023, at the Ferry Point Park Golf Course and Community Park. Quarterly sub-slab depressurization (SSD) and combustible gas (CG) monitoring system operations, maintenance, and monitoring (OM&M) is performed in compliance with the NYSDEC Permit No. 2-6006-00014/00013, the October 2013 *Post Construction Custodial Care Plan*, the October 2013 *Landfill Gas Management Plan*, and the site-specific OM&M Manual.

The following locations are included in the SSDS and/or CG OM&M:

- Community Park Comfort Station (CPCS);
- Golf Course Maintenance Building (Maintenance Building):
- Golf Course Comfort Station (GCCS);
- Golf Course Cart Storage Barn (Cart Barn); and
- Golf Course Clubhouse (Clubhouse).

GEI Consultants, Inc.
530 7th Avenue, Suite 2007, New York, NY 10018
212.687.8282

## Summary of OM&M Inspection Activities

SSD and CG monitoring systems OM&M activities included visual inspections and collection of oxygen, organic vapor, and methane (percent methane by volume, percent lower explosive limit [LEL]) readings from beneath the building slabs. In locations with sub-slab monitoring points, sub-slab pressure was measured to determine if the SSDS is creating a negative pressure beneath the structures. The location of on- and off-Site buildings with SSD and CG systems are depicted on Figure 1, and the system layout and components for each building are depicted on Figure 2 through 6.

## OM&M Observations and Results

Community Park Comfort Station (CPCS)

OM&M was performed at the CPCS on June 26, 2023, which included the collection of sub-slab pressure CG readings, inspection of the SSDS to verify it was operational, as well as a review of the real-time data at the CG sensor. Table 1 contains a summary of the OM&M visit results, with historical data presented on Table 2A. Below is a summary of the observations made during the CPCS monitoring event:

- The SSD and CG systems were operational during, and prior to, the Q2 monitoring event;
- The combustible gas data logging system was online, operational and transmitting data to the central datalogging panel, registering the ambient readings of 0.0% LEL;
- Low levels of volatile organic compounds (VOCs) were detected within and under the building;
- No methane was detected under the building;
- Sub-slab pressure measurements collected from the sub-slab monitoring points (Figure 2) during the Q2 monitoring event indicated that the SSDS was generating negative pressure beneath the building slab. The pressure gradient was positive during the last three quarterly reports; the Q2 2023 reading was greater than previous negative pressure readings in the building. No methane was detected at MP-1, compared to 0.1% detected in Q1 2023.

Golf Course Maintenance Building (Maintenance Building)

OM&M performed at the Maintenance Building included the inspection of the SSDS to verify it was operational, collection of sub-slab pressure CG readings, and

review of the real-time data at the CG sensor. A summary of the Q2 monitoring results is presented on Table 1, with historical data presented on Table 2B. Below is a summary of the observations denoted at the Maintenance Building during the OM&M event:

- The SSD and CG systems were operational during, and prior to, the Q2 monitoring event;
- The combustible gas data logging system was online, operational and transmitting data to the central datalogging panel, registering the ambient readings of 0.0% LEL;
- Low levels of volatile organic compounds (VOCs) were detected within and under the Maintenance Building;
- No methane was detected under the building;
- Sub-slab pressure measurements collected from the sub-slab monitoring points (Figure 3) during the Q2 monitoring event indicated that the SSDS was generating negative pressure beneath the building slab. The negative pressure was greater than Q1 2023, and similar to that of July 2022. The methane LEL detected at MP-1 through MP-3 was lesser than that of Q1 2023.

Golf Course Comfort Station (GCCS)

GCCS monitoring included the review of the real-time data at the CG sensor, the inspection of the SSDS to verify it was operational, and collection of sub-slab pressure CG readings. Table 1 contains a summary of the OM&M visit results, with historical data presented on Table 2C. Below is a summary of the observations made at the GCCS during the OM&M event:

- The SSD and CG systems were operational prior to and during the Q2 monitoring event;
- The combustible gas data logging system was online, operational and transmitting data to the central datalogging panel, registering the ambient readings of 0.0% LEL;
- Low levels of volatile organic compounds (VOCs) were detected within and under the building;
- No methane was detected under the station;

- Sub-slab pressure measurements collected from the three sub-slab monitoring points (Figure 4) during the Q2 monitoring event indicated that the SSDS is generating negative pressure beneath the slab. The vacuum pressure recorded at MP-1 through MP-3 was significantly lower than that of Q1 2023, however they are consistent with historical data.

Golf Course Cart Storage Barn (Cart Barn)

OM&M performed at the Cart Barn included the inspection of the SSDS to verify it was operational, collection of sub-slab pressure CG readings, and review of the real-time data at the CG sensor. A summary of the Q2 monitoring results is presented on Table 1, with historical data presented on Table 2D. Below is a summary of the observations made during the OM&M event at the Cart Barn:

- The SSD and CG systems were operational during, and prior to, the Q2 monitoring event;

- The combustible gas data logging system was online, operational and transmitting data to the central datalogging panel, registering the ambient readings of 0.0% LEL;

- Low levels of volatile organic compounds (VOCs) were detected within and under the building;

- No methane was detected under the Cart Barn;

- Sub-slab pressure measurements collected from MP-1, MP-3 and MP-4 sub-slab monitoring points (Figure 5) during the Q2 monitoring event indicated that the SSDS was generating a negative pressure beneath the building slab, consistent with historical data. MP-2 displayed a positive pressure gradient, dissimilar to previous collection events. Oxygen was also abnormally low, (detected at 1.8% compared to 21.1% in Q1 2023) possibly associated with the positive pressure gradient. The flow pressure measured at the blower continues to be lower than historical OM&M events, similar to Q1 2023.

Golf Course Clubhouse (Clubhouse)

The Clubhouse OM&M event included the review of the real-time data at the CG sensor, the inspection of the SSDS to verify it was operational, and collection of sub-slab pressure CG readings. Table 1 contains a summary of the OM&M visit results, with historical data presented on Table 2E. Below is a summary of the observations made at the Clubhouse during the monitoring event:

- The SSD and CG systems were operational prior to and during the Q2 monitoring event;

- The combustible gas data logging system was online, operational and transmitting data to the central datalogging panel, registering the ambient readings of 0.0% LEL;

- Low levels of volatile organic compounds (VOCs) were detected within and under the building at all ten monitoring point locations;

- No methane was detected underneath the Clubhouse;

- Sub-slab pressure measurements collected from eight of the ten sub-slab monitoring points (Figure 6) during the Q2 monitoring event indicated that the SSDS is generating negative pressure beneath the slab, consistent with measurements collected during previous events. MP-3 and MP-5 displayed positive pressure gradients, which has occurred in previous monitoring events.

Conclusions and Recommendations

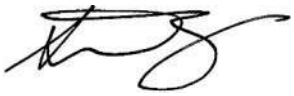
From the Quarter 2 OM&M event, the results confirm that the SSD and GC systems are operational. Sub-slab pressure readings collected from the on- and off-Site monitoring points indicated that the SSDS in the Golf Course Comfort Station, Community Park Comfort Station, Golf Course Cart Storage Barn, Golf Course Maintenance Building and Golf Course Clubhouse are creating a negative pressure gradient beneath the building slabs. Certain monitoring points did not demonstrate negative pressure conditions; however, other monitoring points within the buildings were displaying negative pressures and only low levels of volatile organic compounds (VOCs) were detected within the buildings.

All CG sensors were communicating with their respective control panels and registered ambient methane readings of 0.0% LEL. The main datalogging panel, located in the Golf Course Maintenance Building, is receiving data from the Golf Course Cart Barn, Golf Course Clubhouse, Community Park and Golf Course Comfort Stations, and Golf Course Maintenance Building. Combustible gas data is accessed remotely, reviewed and downloaded periodically. Methane readings from the CG sensor data are monitored and downloaded periodically, and no alarm conditions have been registered.

If you have any questions, please feel free to contact me at (347) 514–3861.

Sincerely,

GEI CONSULTANTS, INC.



Stacey Ng, P.G
Project Manager

**Notes:**
"WC - Inches of Water
"Hg - inches of mercury
LEL - Lower Explosive Limit
PID - Photoionization Detector (Total Organic Vapors)
ppm - Parts per million
MP - Sub-slab monitoring point (see Figure 2 for locations)
cfm - cubic feet per minute
N/A - not applicable
% $O_2$ - percent oxygen
°F - degrees Fahrenheit
[1]Ambient % Ox reading of 23.5% due to inability to field calibrate GEM5000 oxygen sensor
[2]Monitoring event split between two days due to access issues
[3]Vacuum fluctuated between +0.024 to -0.018. Average = +0.003
[4]Recheck to see if Vacuum is generating negative pressure at MP-1

**Notes:**
"WC - Inches of Water
"Hg - inches of mercury
LEL - Lower Explosive Limit
PID - Photoionization Detector (Total Organic Vapors)
ppm - Parts per million
MP - Sub-slab monitoring point (see Figure 4 for locations)
cfm - cubic feet per minute: Due to instrumentation malfunction this reading was collected in cfm instead of WC to ensure accuracy
NM - not measured
% $O_2$ - percent oxygen
°F - degrees Fahrenheit
[1]Ambient % O2 reading of 23.5% due to inability to field calibrate GEM5000 oxygen sensor
[2]Monitoring event conducted under ambient humid conditions
[3]Monitoring event split between two days due to access issues. MP-1 monitored 12/18/18; MP-2 and MP-3 monitored 12/17/18

**Notes:**
"WC - Inches of Water
"Hg - inches of mercury
LEL - Lower Explosive Limit
PID - Photoionization Detector (Total Organic Vapors)
ppm - Parts per million
MP - Sub-slab monitoring point (see Figure 5 for locations)
cfm - cubic feet per minute
NM - not measured
% $O_2$ - percent oxygen
°F - degrees Fahrenheit

[1]Ambient % O2 reading of 23.5% due to inability to field calibrate GEM5000 oxygen sensor
[2]Sub-Slab monitoring points all inaccessible due to golf carts being stored for winter
[3]Only Subslab monitoring points MP-2 and MP-4 were accessible during remobilization on 2/4/2019
[4]Blower was accessible on 3/15/2019. Only Subslab monitoring points MP-2 and MP-4 were accessible during remobilization on 4/3/2019

Table 2E
Comparison of OM Data - Sub-Slab Depressurization and Combustible Gas Monitoring Systems
Golf Course Clubhouse
Ferry Point Park, Bronx, NY

# EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) completed a Phase I Environmental Site Assessment (ESA) for a section of Hutchinson River Parkway, referred to as Ring Road, located within Ferry Point Park, Bronx, New York (the "Subject Property") under the written authorization of Bally's Corporation LLC (Bally's, "Client" and the "user").

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA to identify recognized environmental conditions (REC), controlled recognized environmental conditions (CREC), historical recognized environmental conditions (HREC), and de minimis conditions associated with the Subject Property.

*Subject Property Layout*

The Subject Property is an approximately 9.85-acre, U-shaped section of Ferry Point Park that primarily serves as a park thoroughfare and public recreation space. The Subject Property is improved with an uninterrupted, circular roadway, referred to as Ring Road. Ring Road is a one-lane, one-way, asphalt-paved roadway and is bordered on either side by concrete curbing, metal guardrails, and grass shoulders. The remainder of the Subject Property includes vegetated areas and footpaths associated with Ferry Point Park. The section of Ring Road comprising the Subject Property totals about 1 mile.

Improvements to the Subject Property, including widening of Ring Road are contemplated by Bally's as part of the proposed development of a gaming facility. The Subject Property encompasses the total area of proposed roadway improvements, which includes park land extending between about 40 and 60 feet beyond the current extents of Ring Road.

*Subject Property Current Use*

The Subject Property is used as a park roadway and also contains vegetation and footpaths. Vehicles must travel along Ring Road to enter Ferry Point Park, the adjoining Bally's Golf Links at Ferry Point golf course, and adjoining Bronx-Whitestone Bridge Metropolitan Transportation Authority (MTA) facility.

*Subject Property History*

The majority of the Subject Property was part of Westchester Creek and the Baxter Creek Inlet (now the East River) before infilling and development of Ferry Point Park in the 1940s. By 1947, the Subject Property and surrounding area had been infilled to create new land, and Ring Road had been constructed. Improvements to the Subject Property continued through 2015, when adjoining park and golf course construction were completed, and the Subject Property appeared as it does today.

*Adjoining Properties and Surrounding Area*

The surrounding area was depicted as mostly undeveloped and inundated in the topographic maps in the late 1800s and early 1900s. During the 1940s, the general area was infilled, and the Bronx-Whitestone Bridge was constructed on the southern-adjoining property. The supporting toll plaza and MTA structures were also erected north of the Subject Property during this time period. Landfilling operations took place on the eastern- and southern-adjoining properties

between 1950 and the 1960s. Development related to Ferry Point Park operations continued east, south, and west of the Subject Property until the current configuration was achieved circa 2015. North of the Subject Property, commercial development continued through the 1990s, until the existing buildings were constructed.

*Conclusions*

Langan completed a Phase I ESA of the Subject Property using the scope guidelines and inherent limitations of ASTM E1527-21. Table ES-1 presents the conclusions of the Phase I ESA.

**Table ES-1 Conclusions, Findings and Opinions**

| **ASTM E1527-21 Scope Items** |
|---|
| **Recognized Environmental Conditions (RECs)** |
| *Current and Historical Use of the Adjoining and Surrounding Properties:* Historical adjoining and surrounding property use includes a municipal solid waste landfill (1950-1960s), a United Parcel Service (UPS) facility with petroleum and chemical bulk storage (1985 - present), and a Metropolitan Transportation Authority (MTA) bridge support facility with petroleum bulk storage (1951 - present). Documented and undocumented spills or releases of petroleum products or hazardous substances associated with these properties may have adversely affected groundwater and/or soil vapor on the Subject Property.<br><br>*Non-native Fill:* Non-native fill is expected to underly the site above native soil. Non-native fill in New York City may contain contaminants, particularly metals and semi-volatile organic compounds (SVOCs), at concentrations that exceed applicable state and/or federal standards. Non-native fill does not trigger a regulatory reporting requirement, but may require implementation of special soil handling, management, and off-site disposal procedures if disturbed during development of the Subject Property. |
| **Controlled Recognized Environmental Conditions (CRECs)** |
| Langan did not identify CRECs. |
| **Historical Recognized Environmental Conditions (HRECs)** |
| Langan did not identify HRECs. |
| **De Minimis Conditions** |
| Langan did not identify de minimis conditions. |
| **Significant Data Gaps** |
| Langan did not identify significant data gaps. |
| **Non-ASTM E1527-21 Scope Items** |
| **Business Environmental Risks (BERs)** |
| Langan did not identify BERs. |

# 1. INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) completed a Phase I Environmental Site Assessment (ESA) for a section of Hutchinson River Parkway, referred to as Ring Road, located within Ferry Point Park, Bronx, New York (the "Subject Property") under the written authorization of Bally's Corporation LLC (Bally's, "Client" and the "user"). A Subject Property Location Map is provided in Appendix A (Figure 1).

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA to identify recognized environmental conditions (REC), controlled recognized environmental conditions (CREC), historical recognized environmental conditions (HREC), and de minimis conditions associated with the Subject Property.

## 1.1 Purpose

The purpose of this Phase I ESA is to identify RECs associated with the Subject Property. This purpose also includes identifying CRECs, HRECs, de minimis conditions, and significant data gaps. The definitions of REC, CREC, HREC, de minimis condition and other select ASTM terms used in this report are in Section 8.

## 1.2 Scope of Services

Langan's scope of services consisted of the completion of a Phase I ESA following the guidelines of ASTM E1527-21. Langan's scope of services as it pertains to the elements of a Phase I ESA as specified in ASTM E1527-21 is described below.

On 8 July 2024, the US EPA final rule designating two per- and polyfluoroalkyl substances (PFAS) – perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) including their salts and structural isomers – as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) became effective. Because of the complex and varied historical use of PFAS in various industries; limited prior disclosures of PFAS content on product specification sheets, Material Safety Data Sheets (MSDS), and Safety Data Sheets (SDS); the complex chemistry and chemical transformations associated with some PFAS; and the ever-growing and varied list of state regulations, it is not feasible to evaluate PFOA and PFOS without also considering other PFAS. As such, absent analytical data, Langan incorporated a review of PFAS as a general class into this Phase I ESA.

PFAS and other CERCLA hazardous substances and petroleum products have been detected in background environmental samples across the globe, including in areas removed from specific recognized sources. This Phase I ESA was not intended to evaluate background concentrations of CERCLA hazardous substances or petroleum products, regardless of whether the source is naturally occurring or anthropogenic. The objective of Langan's scope of services was to identify the presence, likely presence, and/or material threat of a release of CERCLA hazardous substances and petroleum products related to specific property uses that are generally recognized as known or potential sources of such substances and products.

### *1.2.1 Records Review and Local Government Interviews*

Langan contracted a third-party provider to search environmental regulatory databases and provide historical records. The database search included select federal, state, local and tribal standard source environmental databases within the approximate search radii specified by ASTM E1527-21.

Langan submitted Freedom of Information Act (FOIA) requests to supplement environmental database listing information. The FOIA requests were submitted to the New York City Department of Environmental Protection (NYCDEP), New York City Department of Health and Mental Hygiene (NYCDHMH), New York City Fire Department (FDNY), New York State Department of Health (NYSDOH), New York State Department of Environmental Conservation (NYSDEC) and US EPA Region 2.

Langan supplemented the third-party-provided historical records with review of online historical record sources including Google Earth Pro, the New York City Department of Buildings (NYCDOB) online query system, New York City Department of City Planning Commission (NYCDCP) zoning maps, the City Environmental Quality Review (CEQR) Environmental Designation list, the Automated City Register Information System (ACRIS) website, and US EPA databases. Agency FOIA-requested information, where received, is discussed in relevant sections of this report and referenced in Section 7. Pertinent documents are provided in Appendix B.

### *1.2.2 Site Reconnaissance and Owner/Operator/Occupant Interviews*

Langan completed the site reconnaissance on 9 August 2024. Kaitlyn Gioia of Langan coordinated with Brian Crowell (General Manager with Bally's Golf Links at Ferry Point [the User]; the "key site manager") to schedule the site reconnaissance for the Subject Property.

Langan walked the periphery of the Subject Property and observed the Subject Property from adjoining public thoroughfares. Langan observed the adjoining properties and the surrounding area from the periphery of the Subject Property and from public thoroughfares adjoining to or traveled on to access the Subject Property. The weather at the time of the site reconnaissance was approximately 80°F and rainy. Photographs from the site reconnaissance are provided in Appendix C.

An owner/operator questionnaire was completed by Ms. Kay Zias, a representative of the current owner of the Subject Property, the NYC Department of Parks and Recreation (NYCDPR). Ms. Zias is the Director of the Environmental Remediation Unit with NYCDPR. Ms. Zias noted that she is not aware of litigation administrative proceedings, or environmental notices related to hazardous substances or petroleum products at the Subject Property. A summary of the owner's responses is provided in Appendix D and relevant information from environmental reports provided from NYCDPR is discussed in applicable sections of this report.

### *1.2.3 Evaluation, Report and Parts Used in Concert*

Langan evaluated the information obtained from the records reviews, site reconnaissance and interviews described above, and from the user as described in Section 1.3 in concert with each other. Langan's findings, opinions, and conclusions are discussed throughout this report. Significant assumptions, or deletions, deviations or exceptions to ASTM E1527-21 are noted in Section 1.4.

### *1.2.4 Non-ASTM Scope Services*

The scope of services for the Phase I ESA did not include non-scope ASTM considerations including, but not limited to, asbestos, biological agents, mold, etc.

## 1.3 User Responsibilities

Langan requested that the user provide the results of tasks the user is responsible for completing to satisfy the requirements of AAI. The tasks include: providing information related to specialized knowledge or experience of the user or the degree of obviousness relative to conditions indicative of releases or threatened releases; actual knowledge of the user regarding environmental liens or activity and use limitations (AULs) related to the Subject Property; specialized knowledge or experience of the user; reasons for significantly lower purchase prices, and commonly known or reasonably ascertainable information within the local community about the Subject Property. Langan also requested that the user state the reason the Phase I ESA was requested. A summary of the user's responses is provided in Appendix D and relevant information provided by the user is discussed in applicable sections of this report.

Langan contracted Environmental Data Resources, Inc. (EDR) to conduct an environmental lien and AUL search for the Subject Property. The result of the search, which included a compilation of available data and verification of the findings with the appropriate regulatory authorities, did not reveal environmental liens or AULs. A copy of the environmental lien search is provided in Appendix B.

## 1.4 Limiting Conditions/Deviations

Langan was unable to observe the ground surface throughout unpaved sections of the Subject Property exterior due to vegetation overgrowth. This limiting condition did not impact Langan's conclusions based on review of aerial photographs.

Langan did not delete or deviate from the ASTM E1527-21 guidelines during this Phase I ESA.

## 1.5 Data Gaps

Data gaps, if encountered, are discussed throughout the report. Significant data gaps, if any, are summarized in Section 5.0.

# 2. SUBJECT PROPERTY DESCRIPTION AND CURRENT USE

The following sections describe the Subject Property location, ownership, physical setting, and current layout and operations.

## 2.1 Location, Legal Description, and Ownership

The approximately 9.85-acre Subject Property is identified on the New York City Bronx Borough Tax Map as part of Block 5622, Lot 1. The Subject Property is bound by Schley Avenue, the Hutchinson River Parkway, and service roads to the north; Bally's Golf Links at Ferry Point golf course to the east; Ferry Point Park and the Bronx-Whitestone Bridge to the south; and Ferry Point Park to the west. Between the western and eastern legs of the U-shape formed by the Subject Property lies public parking areas for Ferry Point Park and the Bronx-Whitestone Bridge Metropolitan Transit Authority (MTA) Building. According to ACRIS, the Subject Property is owned by the NYCDPR.

## 2.2 Physical Setting

The physical setting that includes the geologic, hydrogeologic, hydrologic, and topographic characteristics of the Subject Property and surrounding area is discussed below.

### *2.2.1 Topography*

The 2019 United States Geological Survey (USGS) 7.5-minute quadrangle topographic map for Flushing depicts the Subject Property at an elevation of approximately 16 feet above mean sea level (msl) with a gentle slope downward toward the west-southwest. The regional topography slopes downward toward the west-southwest and Westchester Creek, which is located approximately 320 feet west of the Subject Property.

### *2.2.2 Geology*

According to the U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) Soil Survey Geographic (SSURGO) data for Summit County, soils at the Subject Property consist primarily of urban land with tidal marsh stratum, and lesser amounts of Greenbelt loam, Greatkills gravelly sandy loam, and North Meadow sandy loam. Urban Land refers to soils that have been altered by human activities thus making them unidentifiable. Typically, these soils have been mixed with other materials, such as brick, concrete, and demolition debris of unknown origin (non-native fill). Non-native fill found in urban environments typically contains ash, demolition debris, and/or municipal waste products and may contain contaminants (e.g., semi volatile organic compounds [SVOCs] or metals) at concentrations above current regulatory standards. Non-native fill does not trigger a regulatory reporting requirement, but may require implementation of special soil handling, management, and off-site disposal procedures if disturbed during development of the Subject Property. The presence of non-native fill is considered a REC.

According to the USGS Bedrock and engineering geologic maps of New York County and parts of Kings and Queens Counties, New York, and parts of Bergen and Hudson Counties, New Jersey (Baskerville, C.A., 1994), the Subject Property is in the Pelham Bay Member, which consists of sillimanite-grade gneisses. According to previous geotechnical investigations in the surrounding area, subsurface conditions generally consist of a layer of miscellaneous fill, overlying natural,

soft, silty, clayey, peat and sands, which overly glacial till. Bedrock is expected to be 80 to 120 feet below current grade.

### *2.2.3 Hydrogeology*

Surface water bodies are not present within the boundary of the Subject Property. The nearest surface water bodies are Westchester Creek and the East River. Information regarding Subject Property-specific groundwater flow direction is unavailable. Groundwater flow can be influenced by several factors such as surface water bodies, wetlands, hydrogeologic and anthropogenic variables. However, based on topographic gradient and proximity to Westchester Creek and the East River, it is expected that groundwater generally flows to the west-southwest.

A review of the Geocheck section of the LightBox Environmental Data Resources (EDR) Regulatory Database Report (Appendix E) and site reconnaissance observations did not identify groundwater wells on the Subject Property. The EDR report identified one groundwater monitoring well within a quarter mile of the Subject Property. No groundwater elevation data from the well is available; however, based on Langan's experience with, and previous reports for the area, groundwater is tidally influenced and estimated between 2 and 20 feet below grade surface (bgs).

## 2.3 Subject Property Description

The Subject Property is an approximately 9.85-acre, U-shaped section of Ferry Point Park that primarily serves as a park thoroughfare and public space. The Subject Property is improved with an uninterrupted, circular roadway, referred to as Ring Road. Ring Road is a one-lane, one-way, asphalt-paved park roadway and is bordered on either side by concrete curbing, metal guardrails, and grass shoulders. The remainder of the Subject Property includes vegetated areas and footpaths associated with Ferry Point Park. The section of Ring Road comprising the Subject Property totals about 1 mile.

Improvements to the Subject Property, including widening of Ring Road are contemplated by Bally's as part of the proposed development of a gaming facility. The Subject Property encompasses the total area of proposed roadway improvements, which includes park land extending between about 40 and 60 feet beyond the current extents of Ring Road.

A Subject Property Layout Map is provided in Figure 2 of Appendix A. Photographs of the Subject Property and a checklist documenting Langan's observations relative to the features, activities, uses and conditions outlined in Section 9.4 of ASTM E1527-21 are in Appendix C.

## 2.4 Current Subject Property Use

The Subject Property is used as a park roadway and also contains vegetation and footpaths. Vehicles must travel along Ring Road to enter Ferry Point Park, the adjoining Bally's Golf Links at Ferry Point golf course, and adjoining Bronx-Whitestone Bridge MTA facility.

The following table summarizes Subject Property utility providers.

**Table 2-1 Utility Providers**

| Utility | Providers |
|---|---|
| Electricity | Consolidated Edison (Con Edison) |
| Natural gas | None – within the Con Edison service area |

| Utility | Providers |
|---|---|
| Water | NYCDEP |
| Sewer | NYCDEP |

## 2.5 Hazardous Substances and Petroleum Products

Langan did not observe hazardous waste or petroleum products at the Subject Property. According to EDR database records, no hazardous waste is currently being generated at the Subject Property.

### *2.5.1 Underground Storage Tanks (USTs)*

Langan did not observe evidence of USTs at the Subject Property.

### *2.5.2 Aboveground Storage Tanks (ASTs)*

Langan did not observe evidence of ASTs at the Subject Property.

### *2.5.3 Drums, Totes, and Intermediate Bulk Containers*

Langan did not observe drums, totes, or other intermediate bulk containers at the Subject Property.

### *2.5.4 Other Chemical Storage, Containers, or Equipment*

Langan did not observe chemical storage, containers or equipment at the Subject Property.

## 2.6 Air Emissions

Langan did not identify sources of air emissions at the Subject Property.

## 2.7 Waste Management

The following sections describe current hazardous and non-hazardous waste streams, and observations of fill areas or other solid waste throughout the Subject Property.

### *2.7.1 Hazardous Waste*

According to EDR database records, no hazardous waste is currently being generated at the Subject Property. Langan did not observe hazardous waste at the Subject Property.

### *2.7.2 Non-Hazardous Waste*

Langan did not observe non-hazardous waste at the Subject Property.

### *2.7.3 Fill Areas or Solid Waste*

Langan observed several about 1-inch-diameter holes adjacent to the metal guardrail along the eastern leg of the Subject Property. The holes are presumed to be associated with guardrail installation.

Langan did not observe areas that were apparently filled or graded by non-natural causes (or filled with material of unknown origin) that suggest the presence of garbage, construction debris,

demolition debris, or other solid waste disposal, or mounds or depressions suggesting solid waste disposal.

## 2.8 Wastewater

No wastewater streams are generated at the Subject Property. Connection to the municipal sanitary sewer has not yet been provided to the Subject Property but is available through the City of New York. Langan did not observe or identify evidence of septic systems or cesspools at the Subject Property.

## 2.9 Storm Water

Storm water at the Subject Property percolates through pervious areas or sheet flows to the into the municipal storm sewer system. Several storm drains are located throughout Ring Road. Langan did not observe evidence of impact (e.g., sheens, staining) to storm water pathways. As indicated by the user, Ring Road is prone to flooding during extreme weather events.

# 3. SUBJECT PROPERTY HISTORY AND RECORDS REVIEW

The following sections provide summaries of the historical uses of the Subject Property, and available information regarding documented environmental conditions associated with the historical uses.

## 3.1 Historical Summary

Langan compiled the following summary of the Subject Property history based on a review of readily available and reasonably ascertainable sources and interviews. Historical resources are provided in Appendix F.

**Table 3-1 Subject Property History**

| Time Period | Historical Discussion |
|---|---|
| 1890s – 1930s | The Subject Property is depicted as undeveloped and predominantly marsh- and swampland on topographic maps during this period. The majority of the Subject Property is part of the Westchester Creek and Baxter Creek Inlet and entirely submerged in the aerial photograph from 1924. |
| 1940 – 1960s | According to the 1947 topographic map, the former marsh was filled in and Ring Road is visible on the Subject Property. Baxter Creek Inlet adjoins the Subject Property to the east. The Subject Property is bisected by a newly-constructed Bronx-Whitestone Bridge and associated toll plaza. Based on aerial photographs between 1950 and 1966, development of Ring Road continues, including widening the road and paving its surface. Connections from Ring Road are also made to the adjoining toll plaza. |
| 1970s – 2010s | Between the 1970s and 2010s, Ring Road appears to remain relatively unchanged in aerial photographs, topographic maps, and Sanborn maps. Beyond Ring Road, the shoulder along the eastern part of the Subject Property is decreased circa 2011 to add a park footpath and accommodate development of the east-adjoining property. |
| 2015 – Present | Based on the 2015 aerial photograph, development of the east-adjoining property is completed, and the Subject Property appears in its current configuration. |

The majority of the Subject Property was part of Westchester Creek and the Baxter Creek Inlet (now the East River) before infilling and development of Ferry Point Park in the 1940s. During infilling, the Subject Property was backfilled with fill of unknown quality. As discussed in Section 2.2.2, the presence of non-native fill is considered a REC.

## 3.2 Regulatory Database Review

The Subject Property is identified in the NYC Land Use database. The NYC Land Use database listing relates to general information regarding the current zoning as a park and building class information for the Subject Property. No violations are reported in this database; therefore, the listing is not considered a REC.

## 3.3 Prior Report Review

Prior reports were not provided for review.

# 4. ADJOINING PROPERTIES AND SURROUNDING AREA

The following sections describe current and historical uses of and database listings for adjoining properties and the surrounding area.

## 4.1 Current Use of Adjoining Properties and Surrounding Area

The current use of adjoining and surrounding properties is summarized in Table 4-1.

**Table 4-1 Current Use of Adjoining Properties and Surrounding Area**

| Direction | Adjoining Properties | Surrounding Area |
|---|---|---|
| **North** | Schley Avenue, Ferry Point Park, and Bronx-Whitestone Bridge MTA Building (492 Hutchinson River Parkway, Bronx, NY 10465) | Interstate 678, St. Raymond New Cemetery and commercial buildings |
| **East** | Bally's Golf Links at Ferry Point (500 Hutchinson River Parkway, Bronx, NY 10465) | Residential buildings |
| **South** | Bronx-Whitestone Bridge and Ferry Point Park (no address) | East River |
| **West** | Ferry Point Park (no address) | Westchester Creek |

A diesel-fired generator was observed along the perimeter of Ring Road at the eastern adjoining property during the site reconnaissance. Langan did not observe indications of leaks or releases from the generator.

Langan did not observe obvious conditions likely to represent environmental concerns for the Subject Property from current uses of adjoining or surrounding properties.

## 4.2 Adjoining Properties and Surrounding Area History

Langan compiled the following summaries of the adjoining properties and surrounding area history based on a review of historical resources and interviews. Historical resources are provided in Appendix F.

**Table 4-2 Historical Use of Adjoining Properties**

| Direction | Adjoining Properties |
|---|---|
| **North** | The northern-adjoining properties are depicted as undeveloped on topographic maps in the late 1800s. The 1924 aerial photograph shows that some of the properties are inundated and part of Westchester Creek. By 1947, topographic maps depict one of the northern-adjoining properties to be developed as part of the Bronx-Whitestone Bridge and associated toll plaza. Continued development through the late-1900s includes construction of an additional support facility for the Bronx-Whitestone Bridge, a warehouse along Schley Avenue, and several parking lots.<br><br>Langan does not consider the historical uses of the northern-adjoining properties an environmental concern for the Subject Property. |
| **East** | The eastern-adjoining property is depicted as undeveloped on topographic maps and aerial photographs from the 1890s to 1920s. Based on aerial photographs, between the 1950s and 1960s, the east-adjoining property is part of landfilling operations that form the present-day shoreline. Limited road development on the eastern-adjoining property continues |

| Direction | Adjoining Properties |
|---|---|
| | through the 1990s, until the construction of the present-day golf course begins in the 2000s. The golf course was completed circa 2015.<br><br>Landfilling operations are further discussed in Section 4.3.1. |
| **South** | The southern adjoining property is depicted as undeveloped on topographic maps and aerial photographs between the 1890s and 1920s. By 1947, the Bronx-Whitestone Bridge is constructed. The remaining property south of the Subject Property consists of Ferry Point Park and also includes landfilling operations described above, as further discussed in Section 4.3.1. |
| **West** | Based on topographic maps, the western-adjoining property was developed with a roadway as early as the late-1800s, and Sanborn maps show that this property is part of Ferry Point Park. Aerial photographs and Sanborn maps indicate limited development of the western-adjoining property, until about 1985, when an athletic field and additional park footpaths are constructed. This configuration is generally consistent with present day.<br><br>Langan does not consider the historical use of the western-adjoining property an environmental concern for the Subject Property. |

The surrounding area was depicted as mostly undeveloped and inundated in the topographic maps in the late 1800s and early 1900s. During the 1940s, the general area was infilled, and the Bronx-Whitestone Bridge was constructed on the southern-adjoining property. Supporting toll plaza and MTA structures were also erected north of the Subject Property during this time period. Landfilling operations took place on the eastern- and southern-adjoining properties between 1950 and the 1960s. Development related to Ferry Point Park operations continued east, south, and west of the Subject Property until the current configuration was achieved circa 2015. North of the Subject Property, commercial development continued through the 1990s, until the existing buildings were constructed.

Between 1950 and the 1960s, landfilling operations appear to take place on the eastern- and southern adjoining properties. Contaminants of concern on the eastern- and southern- adjoining properties include municipal solid waste and landfill gas (including methane) generated from the decomposition of residual landfill contents. Operations are further discussed in Section 4.3.1.

## 4.3 Regulatory Database Review

Langan reviewed the environmental database report to evaluate if adjoining or surrounding area properties identified in the database report are suspected to represent an environmental concern for the Subject Property (see Section 8.2). Unless discussed in Section 4.3.1 or 4.3.2 below, Langan did not consider the associated regulatory agency files potential RECs for the Subject Property.

### *4.3.1 Adjoining Properties*

Database listings for adjoining properties are summarized as follows. Adjoining and nearby properties of concern are depicted on Figure 3 of Appendix A.

Ferry Point Park Recreational Facility – 500 Hutchinson River Parkway (eastern/southern-adjoining, inferred upgradient/cross-gradient)

This facility, also identified as "NYCP&R – Ferry Point Waterfront Park", "Ferry Point Golf Course", "Ferry Point Recreational Fac.", and "NYC Parks – Ferry Point Park", was identified on the PFAS Enforcement and Compliance History Online (ECHO), State Pollutant Discharge Elimination System (SPDES), Facility Index System (FINDS), ECHO, and NY Spills databases.

The area of Ferry Point Park east of the Whitestone Bridge was formerly used as a municipal solid waste landfill. In 2000, the NYSDEC issued a Part 360 Permit (Permit No. 2-6006-00014) to allow the import and placement of nonhazardous regulated fill and soil for the construction of the current the golf course. Golf course construction was completed by 2015. The PFAS ECHO, SPDES, FINDS, and ECHO listings are related to former landfill operations as well as golf course construction activities. The site is also identified as a Resource Conservation and Recovery Act (RCRA) – Large Quantity Generator (LQG) in 2009 for the disposal of 10.4 tons of lead waste. No violations were reported related to the database entries. Further information regarding operational use of PFAS was unavailable.

The NY Spills listing is related to NY Spill No. 0913675 and the release of about 5 gallons of diesel fuel in January 2010. According to the listing, a generator was overfilled, and diesel overflowed onto the surrounding ground affecting an approximately 20-foot-long by 10-foot-wide area. Impacted soil was excavated and disposed of, and the spill was closed on 25 March 2010.

Langan did not identify evidence of release of PFAS. However, given the reported history of a chemical release and operations as a municipal solid waste landfill, Langan cannot rule out the potential for PFAS and other contaminant impacts to soil and/or groundwater at the Subject Property from former operations at this eastern/southern-adjoining and inferred upgradient/cross-gradient facility. Therefore, this adjoining property is considered a REC.

Bronx-Whitestone Bridge Facility – 1 Hutchinson River Parkway (northern-adjoining, inferred cross-gradient)

This facility, also identified as "NYSDOT BIN 55211229 – Bronx Whitestone Bridge", and "Bronx Whitestone Bridge", and "Bronx Whitestone Bridge", was listed in the FINDS, NY Spills, UST, AST, Leaking Tanks (LTANKS), Manifest, UST Finder Release, and RCRA-LQG databases.

The UST, UST Finder Release, and AST listings are related to petroleum bulk storage at this facility. According to these databases and the NYSDEC Petroleum Bulk Storage Database (PBS) listing for the site (ID No. 2-481645), there have been 15 tanks at this facility. Four are currently listed in-service, and the remaining 11 tanks have been closed/removed. Tanks sizes range from 550 gallons to 20,000 gallons, and contents include diesel, No. 2 fuel oil, and gasoline. The active tanks include three USTs and one AST.

Several releases related to petroleum bulk storage are associated with this site. The following spills were reported for the site: 8807410, 9201985, 9303540, 9408139, 9501417, 9503672, 9601373, 9607895, 9801266, 9906022, and 0100477. Most of the spills are noted as the result of equipment failure; product releases include diesel, No. 2 fuel oil, ethylene glycol, and gasoline. Spill Nos. 9201985, 9501417, 9601373, 9801266 and 0100477 note impacts to groundwater. Each spill incident has been granted closed status by the NYSDEC, indicating that NYSDEC is satisfied with spill remediation; however, based on the frequency of releases from the facility, variety of products released, and causes of releases, residual contamination or unknown releases may have impacted subsurface conditions at the Subject Property.

The facility is listed in the RCRA generator databases for generation of corrosive-, ignitable-, benzene-, lead-, and mercury-hazardous-wastes. The facility has been listed as a LQG in 1989, 1992, 1994, 1995, 1998, 2001, 2002, 2004, 2006, 2007, 2010, 2012, 2018, and a Small Quantity Generator (SQG) in 2006. Manifests documenting waste disposal are available between 2011 and 2016. Several violations are listed during operations, including compliance evaluation-inspection-, general-generator-, and pre-transport-violations. Undocumented spills or releases of solvents or other hazardous substances associated with operations may have migrated and adversely affected groundwater, and/or soil vapor on the Subject Property.

Petroleum bulk storage, documented releases, and potential releases of solvents or other hazardous substances associated with operations at this adjoining property are considered a REC.

Manhole 15002 – 80 North Hutchinson River Parkway (western adjoining, inferred upgradient)

This facility was identified in the NY Spills database under Spill No. 1000322. The spill was reported on 8 April 2010 for the release of 25 gallons of dielectric cable fluid from a Con Edison pole-mounted transformer onto the adjoining sidewalk and soil. The spill was remediated and subsequently closed on 22 April 2010.

Similar listings are noted for several Con Edison structures surrounding the Subject Property. Con Edison maintains an internal protocol for managing hazardous substances, and none of the database listings indicate open spills or violations for these facilities; therefore, the listings are not considered RECs.

MTA Bridges & Tunnels (BWB) (southern adjoining, inferred cross-gradient)

This facility, also identified as "Whitestone Bridge BX", and "Whitestone Bridge", is listed in the NY Spills, LTANKS, RCRA –SQG, and Manifest databases. The facility is listed in the RCRA generator databases for generation of ignitable-, benzene-, and lead-hazardous-wastes. The facility is listed as a SQG in 2007. Manifests documenting waste disposal are available between 2011 and 2016. No violations were reported for this facility.

Whitestone Bridge BX is listed in the LTANKS database under Spill No. 8912020. The spill was reported on 19 March 1990 when a commercial vehicle pulled off-road and spilled oil from its saddle tank into a drain. FDNY hosed spillage into the drain and the spill was closed on the same day.

The NY Spills database listing is related to Spill No. 0011525, reported on 25 January 2001. The spill was caused by the release of 1 pint of dielectric fluid onto the floor of a Con Edison vault. The spill was remediated and subsequently closed 1 June 2001.

Based on the lack of violations and closed status of the above listings, this facility is not considered a REC.

### *4.3.2 Surrounding Area*

Langan evaluated each of the database listings for surrounding area properties (see Section 8.2). Those warranting further discussion in the context of potential to represent an environmental concern for the Subject Property are discussed below.

Vault #2232 – 555 Hutchinson River Parkway (approximately 0.08 miles north, inferred cross-gradient)

This facility is listed in the AST and NY Spills databases. According to the AST listing, there is one 6,000-gallon No. 2 fuel oil storage tank at the property used for on-site consumption. The tank reportedly rests on soil, allowing for no visual inspection; however, there are no reported releases related to this tank system.

The site is listed in the NY Spills database under Spill No. 0813834, which is related to equipment failure within a Con Edison vault adjacent to the building located at 555 Hutchinson River Parkway. About 5 gallons of transformer oil was released into the vault on 23 March 2009. The spill was remediated, and the spill number was closed on 8 June 2009.

Based on the lack of reported releases or closed status of the above listings, this facility is not considered a REC.

United Parcel Service (UPS) – 545 Brush Avenue (approximately 0.13 miles north, inferred cross-gradient)

This facility is listed in the LTANKS, RCRA-SQG, Chemical Bulk Storage (CBS) AST, E Manifest, Manifest, Tanks, SPDES, AST, UST, UST Finder, NY Spills, and CBS databases.

The following NY Spill Numbers are associated with the facility: 8909242, 8908245, 9307821, 9507165, 1807344, and 2207848. Most of the spills are noted as the result of equipment failure, and product releases include diesel, unknown petroleum, gasoline, and unknown material. Spill Nos. 8908245 and 9507165 note impacts to groundwater. With the exception of Spill No. 2207848, each spill incident has been granted closed status by the NYSDEC, indicating that NYSDEC is satisfied with spill remediation; however, based on the frequency of releases from the facility, variety of products released, and causes of releases, residual contamination or unknown releases may have impacted subsurface conditions at the Subject Property.

Spill No. 2207848, reported on 21 December 2022, is related to a punctured saddle tank that spilled 20 gallons of diesel to the road adjoining the facility. Spill closure is still pending.

The facility is listed in the RCRA generator databases for generation of ignitable-, corrosive-, reactive-, chromium-, silver-, benzene-, carbon-tetrachloride-, chlorobenzene-, cresol-, 1,2-dichloroethane-, methyl-ethyl-ketone-, tetrachloroethylene-, undefined-, nicotine-, salts-, dichloro-methane-, acetic-acid-, formaldehyde-, hydrofluoric-acid-, methanol-, 2-propenoic-acid-, furan-, and ester-hazardous-wastes. The facility has been listed as a Conditionally Exempt Small Quantity Generator (CESQG) in 1995, 2006, and a SQG in 1990, 2007, and 2022. There are fourteen violations recorded for this facility. Undocumented spills or releases of solvents or other hazardous substances associated with operations may have migrated and adversely affected groundwater, and/or soil vapor on the Subject Property.

The facility is listed in the CBS AST database for active chemical-bulk storage, including two 200-gallon ethylene glycol storage tanks. Based on the aforementioned documented releases, chemical-bulk storage at this facility poses an environmental concern for the Subject Property.

Chemical bulk storage, documented releases, and potential releases of petroleum products, chemicals, or other hazardous substances associated with this surrounding property may have adversely affected groundwater, and/or soil vapor on the Subject Property; therefore, this site is a REC.

# 5. CONCLUSIONS, FINDINGS AND OPINIONS

Langan completed a Phase I ESA consistent with the scope and limitations of ASTM E1527-21 for the Subject Property, referred to as Ring Road, located within Ferry Point Park, Bronx, New York. Exceptions to, or deletions from, ASTM E1527-21 are described in Section 8 of this report.

This assessment has revealed the following RECs in connection with the Subject Property as presented in Table 5-1.

**Table 5-1 Conclusions, Findings and Opinions**

| **ASTM E1527-21 Scope Items** |
|---|
| **Recognized Environmental Conditions (RECs)** |
| *Current and Historical Use of the Adjoining and Surrounding Properties:* Historical adjoining and surrounding property use includes a municipal solid waste landfill (1950-1960s), a UPS facility with petroleum and chemical bulk storage (1985 - present), and a MTA bridge support facility with petroleum bulk storage (1951 - present). Documented and undocumented spills or releases of petroleum products or hazardous substances associated with these properties may have adversely affected groundwater and/or soil vapor on the Subject Property.<br><br>*Non-native Fill:* Non-native fill is expected to underly the site above native soil. Non-native fill in New York City may contain contaminants, particularly metals and SVOCs, at concentrations that exceed applicable state and/or federal standards. Non-native fill does not trigger a regulatory reporting requirement, but may require implementation of special soil handling, management, and off-site disposal procedures if disturbed during development of the Subject Property. |
| **Controlled Recognized Environmental Conditions (CRECs)** |
| Langan did not identify CRECs. |
| **Historical Recognized Environmental Conditions (HRECs)** |
| Langan did not identify HRECs. |
| **De Minimis Conditions** |
| Langan did not identify de minimis conditions. |
| **Significant Data Gaps** |
| Langan did not identify significant data gaps. |
| **Non-ASTM E1527-21 Scope Items** |
| **Business Environmental Risks (BERs)** |
| Langan did not identify any BERs. |

## 6. ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and I have the specific qualifications based on my education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Brian Gochenaur, QEP
Associate Principal/Vice President (Environmental Professional)

Resumes outlining the qualifications of the project team and the Environmental Professional are included in Appendix G.

# 8. LIMITATIONS AND DEFINITIONS

This Phase I ESA report was prepared for Client and is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. The Client is the sole intended beneficiary of the report. The user requested no special terms or conditions regarding this Phase I ESA.

Langan's scope of services, which is described in Section 1.2 and in the contract executed between Langan and the Client, was limited to that agreed to with the Client/user and no other services beyond those explicitly stated are implied. To the extent possible, the services performed and agreed upon for this Phase I ESA are consistent with the guidelines of ASTM E1527-21.

This report is not intended to be an exhaustive assessment of the Subject Property. The purpose of the Phase I ESA is to reduce uncertainty about unknown conditions at the Subject Property. No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a Subject Property. Therefore, Langan cannot "verify", "insure", "certify", or "guarantee" that the Subject Property is free of environmental concerns.

No expressed or implied representation or warranty is included or intended in this report, except that our services were completed using the care and skill ordinarily followed by professionals providing similar services under similar circumstances in similar locations at the same point in time.

The conclusions provided in this report are based solely on information obtained through completing the standard activities required by ASTM E1527-21 and are intended exclusively for the purpose stated herein, at the specified Subject Property, as it existed at the point in time the assessment was completed. The conclusions provided in this report do not apply to conditions and features of which Langan was not made aware of through good faith efforts to complete the activities required by ASTM E1527-21 and did not have the opportunity to evaluate.

## 8.1 ASTM Definitions

The following definitions are provided in ASTM E1527-21 and presented below for reference. This section is not a comprehensive list of definitions provided in ASTM E1527-21 and is intended to summarize those pertinent to this Phase I ESA report.

Activity and use limitations (AULs): legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effective-ness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

Adjoining properties: any real property or properties the border of which is contiguous or partially contiguous with that of the Subject Property, or that would be contiguous or partially contiguous with that of the Subject Property but for a street, road, or other public thoroughfare separating them.

All Appropriate Inquiries: that inquiry constituting all appropriate inquiries into the previous ownership and uses of the Subject Property consistent with good commercial and customary practice as defined in CERCLA, 42 U.S.C.§ 9601(35)(B) and 40 C.F.R. Part 312, that will qualify a party to a commercial real estate transaction for one of the threshold criteria for satisfying the LLPs to CERCLA liability (42U.S.C. §§ 9601(35)(A) & (B), § 9607(b)(3), § 9607(q), and§ 9607(r)), assuming compliance with other elements of the defense.

Approximate minimum search distance: the area for which records must be obtained and reviewed pursuant to ASTM E1527-21 Section 8 subject to the limitations provided in that section. This may include areas outside the Subject Property and shall be measured from the nearest Subject Property boundary. This term is used in lieu of radius to include irregularly shaped properties.

Business environmental risk (BER): a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations.

Controlled recognized environmental condition (CREC): recognized environmental condition affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

Data gap: a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

De minimis condition: a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.

Engineering controls: physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on a property. Engineering controls are a type of activity and use limitation (AUL).

Environment: environment shall have the same meaning as the definition of environment in CERCLA 42 U.S.C. § 9601(8).

Historical recognized environmental condition (HREC): previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the Subject Property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.

Institutional controls (IC): a legal or administrative mechanism (for example, "deed restrictions," restrictive covenants, easements, or zoning) on the use of, or access to, a site or facility to (1) reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. An institutional control is a type of activity and use limitation (AUL).

Key site manager: the person identified by the owner or operator of a Subject Property as having good knowledge of the uses and physical characteristics of the Subject Property.

Material threat: obvious threat which is likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment.

Obvious: that which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer.

Property use limitation: limitation or restriction on current or future use of a property in connection with a response to a release, in accordance with the applicable regulatory authority or authorities that allows hazardous sub-stances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria.

Reasonably ascertainable: information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.

Recognized environmental conditions: (1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment. For the purposes of this definition, "likely" is that which is neither certain nor proved, but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinions given therein.

Release: a release of any hazardous substance or petroleum product shall have the same meaning as the definition of "release" in CERCLA 42 U.S.C. § 9601(22). There are a number of statutory exclusions from the definition of release that may impact the environmental professional's opinions and conclusions, such as the normal application of fertilizer.

Significant data gap: a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Site reconnaissance: that part that is contained in Section 9 of ASTM E1527-21 and addresses what should be done in connection with the site visit. The site reconnaissance includes, but is not limited to, the site visit done in connection with such a Phase I Environmental Site Assessment.

Site visit: the visit of the Subject Property during which observations are made constituting the site reconnaissance section of this practice.

Subject property: the property that is the subject of the environmental site assessment described in this practice.

User: the party seeking to use ASTM E1527-21 to complete an environmental site assessment of the Subject Property.

## 8.2 Standard Environmental Record Sources

Langan reviewed an environmental database search report prepared by an environmental database search provider for the Subject Property and surrounding area. The database search report includes a listing of properties identified on select federal, state, local and tribal standard source environmental databases within the approximate minimum search radii outlined in ASTM E1527-21. This information was supplied to Langan by the environmental database search provider, and to the environmental database search provider by government sources; therefore, neither Langan nor the environmental database search provider can verify the completeness and accuracy of the database information. Appendix E contains a copy of the report, with specific source and property descriptions, and the dates of the last update for each database searched. Langan reviewed the database search report on a record-by-record basis to evaluate if certain properties identified in the database report are likely to represent an environmental concern for the Subject Property. The evaluation criteria included factors such as distance, groundwater gradient, nature of the listing, and regulatory status. Unless specifically discussed in the body of this report, the facilities listed on the database do not appear to represent an environmental concern to the Subject Property.

**To:** Kaitlyn Gioia
**Subject:** [External] [OpenRecords] Request FOIL-2024-826-03671 Submitted to Department of Environmental Protection (DEP)

Your request FOIL-2024-826-03671 has been successfully submitted to the Department of Environmental Protection (DEP). The details of your request are shown below.

Request Title: Environmental Conditions

Request Description: Re: Freedom of Information Request 450 Hutchinson River Parkway Block 5622, Lot 1 Bronx, New York Langan Project No. 170773001 Dear Sir or Madam: Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have. The Subject Property is located at 450 Hutchinson River Parkway in the Bronx, New York and is identified as Tax Block 5622, Lot 1. The site is located entirely within Ferry Point Park and is bisected by Hutchinson River Expressway. Please contact me at 212-479-5531 with any questions or send your response to my attention at kgioia@langan.com or at the below address: Langan Engineering and Environmental Services, P.C. 21 Penn Plaza 360 West 31st Street, 8th floor New York, New York 10001-2727 Thank you in advance for your cooperation. Sincerely, Langan Engineering, Environmental, Surveying Landscape Architecture, and Geology, D.P.C. Kaitlyn Gioia Senior Staff Scientist

**Cc:** Kaitlyn Gioia
**Subject:** [External] Re: [EXTERNAL] 450 Hutchinson River Parkway, Block 5622, Lot 1, Bronx, NY

Dear Philip Lynch

The NYC Department of Health and Mental Hygiene is retuning your Freedom of Information Law request with the instructions for resubmitting it below. Please follow the instructions and we will be able to process the request. If you have any questions about these instructions, please contact the Records Access Officer at bodonnell1@health.nyc.gov

***Phase I Environmental Site Assessment (ESA) Records***
**All data related to indoor environmental complaints is here. Before submitting a FOIL request for Environmental Site Assessment records, you must check this database to see if the site you are investigating has any entries.**

1. If your site has no entries, then we have no indoor environmental complaint records and your ESA FOIL request should ***only*** concern well sites. Please see below for information on accessing other records that may be relevant to your ESA investigation.

2. If your site does have an entry or entries, you will need to provide the date(s) of the indoor environmental complaint(s) for us to locate the related records.

3. ***The Department will not process any ESA FOIL requests without the information required above.***

The following are some common environmental issues that are addressed by *other agencies* that may be relevant to your ESA investigation:

- Chemical spills that impact outdoor areas – NYS Department of Environmental Conservation (NYS DEC), NYS Department of Health, and NYC Department of Environmental Protection (NYC DEP)
- Underground storage tanks – NYS DEC and NYC DEP
- Community air impacts – NYC DEP
- Sewers – NYC DEP
- Environmental impacts to parkland – NYC Parks Department

Please contact these agencies for records. For other NYC agencies, you can submit FOIL requests here

Thank you,

FOIL Administration
Office of the General Counsel

**Subject:** [EXTERNAL] 450 Hutchinson River Parkway, Block 5622, Lot 1, Bronx, NY

**Re: Freedom of Information Request**
**450 Hutchinson River Parkway**
**Block 5622, Lot 1**
**Bronx, New York**
**Langan Project No. 170773001**

Dear Sir or Madam:

Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have. There are no listings in the database for this site. Therefore, we are looking for information on whether it is a well site.

The Subject Property is located at **450 Hutchinson River Parkway** in the **Bronx, New York** and is identified as Tax **Block 5622, Lot 1**. The site is located entirely within Ferry Point Park and is bisected by Hutchinson River Expressway.

Please contact me at 212-479-5531 with any questions or send your response to my attention at kgioia@langan.com or at the below address:

Langan Engineering and Environmental Services, P.C.
21 Penn Plaza

**To:** Kaitlyn Gioia; Philip Lynch
**Subject:** [External] FOIL Control #: 2024FR01115

**FOIL Control #:** 2024FR01115

Dear Kaitlyn Gioia

The NYC Department of Health and Mental Hygiene (DOHMH) acknowledges receipt of your Freedom of Information Law request. It has been assigned the above-noted control number and has been forwarded to the following bureau for processing:

Environmental Health Services
Sheba Taylor-Medina, e-mail: staylor2@health.nyc.gov

You should receive a response from the program/bureau within twenty(20) business days. Please note that as of January 1, 2019, the Department charges the statutorily allowable fee of 25¢ per page for FOIL responses of records maintained in hard copy format only. You will be advised by the program/bureau of the fee that is due and, upon receipt of your payment by check or money order, the copies will be forwarded to you.
All inquiries about the status of your request should be made with the program/bureau and control number noted above.

Thank you,

FOIL Administration

Good morning FOIL Administration team,

To clarify our request below, there are no listings in the database for this site. Therefore, we are looking for information on whether it is a well site. Let me know if you need any additional information to process this request.

Thank you!

**Kaitlyn Gioia**

**Subject:** [External] Re: [EXTERNAL] 450 Hutchinson River Parkway, Block 5622, Lot 1, Bronx, NY

Dear Philip Lynch

The NYC Department of Health and Mental Hygiene is retuning your Freedom of Information Law request with the instructions for resubmitting it below. Please follow the instructions and we will be able to process the request. If you have any questions about these instructions, please contact the Records Access Officer at bodonnell1@health.nyc.gov

***Phase I Environmental Site Assessment (ESA) Records***
**All data related to indoor environmental complaints is here. Before submitting a FOIL request for Environmental Site Assessment records, you must check this database to see if the site you are investigating has any entries.**

1. If your site has no entries, then we have no indoor environmental complaint records and your ESA FOIL request should ***only*** concern well sites. Please see below for information on accessing other records that may be relevant to your ESA investigation.

2. If your site does have an entry or entries, you will need to provide the date(s) of the indoor environmental complaint(s) for us to locate the related records.

3. ***The Department will not process any ESA FOIL requests without the information required above.***

The following are some common environmental issues that are addressed by *other agencies* that may be relevant to your ESA investigation:

- Chemical spills that impact outdoor areas – NYS Department of Environmental Conservation (NYS DEC), NYS Department of Health, and NYC Department of Environmental Protection (NYC DEP)
- Underground storage tanks – NYS DEC and NYC DEP
- Community air impacts – NYC DEP
- Sewers – NYC DEP
- Environmental impacts to parkland – NYC Parks Department

Please contact these agencies for records. For other NYC agencies, you can submit FOIL requests here

Thank you,

FOIL Administration

**Re: Freedom of Information Request**
**450 Hutchinson River Parkway**
**Block 5622, Lot 1**
**Bronx, New York**
**Langan Project No. 170773001**

Dear Sir or Madam:

Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have. There are no listings in the database for this site. Therefore, we are looking for information on whether it is a well site.

The Subject Property is located at **450 Hutchinson River Parkway** in the **Bronx, New York** and is identified as Tax **Block 5622, Lot 1**. The site is located entirely within Ferry Point Park and is bisected by Hutchinson River Expressway.

Please contact me at 212-479-5531 with any questions or send your response to my attention at kgioia@langan.com or at the below address:

Langan Engineering and Environmental Services, P.C.
21 Penn Plaza
360 West 31st Street, 8th floor
New York, New York 10001-2727

Thank you in advance for your cooperation.

Sincerely,

**Langan Engineering, Environmental, Surveying**
**Landscape Architecture, and Geology, D.P.C.**

# Appendix D User Provided Information

Docusign Envelope ID: 3CE5B05B-9955-4E49-BEED-0490AFAA772C

Clear Form

# ASTM E1527-21 User Questionnaire

*Please complete the below form and return to Langan.*

Providing the following information (if available) to the environmental professional (Langan) is one of the requirements to qualify for one of the Landowner Liability Protections (LLP) offered under CERCLA. Missing or incomplete information for questions 1 through 6 could result in a determination that "all appropriate inquiry" is not complete. Additional information should be provided for "Yes" answers where relevant.

## General Information

**User/Client Names:** Bally's Golf Links at Ferry Point

**Reason for the Phase I ESA:** New Gaming Resort Development

**Type of property:** Casino Hotel

**Type of property transaction (e.g. sale, purchase, exchange):** New Zoning

**Subject property address (provide documentation of subject property boundary):**
500 Hutchinson River Parkway Bronx, New York 10465

**Site Contact and Contact Information:** Brian Crowell General Manager

**Relying Party(ies):**

## Required Information

**(1.) Environmental liens that are filed or recorded against the subject property (40 CFR 312.25).**

Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the subject property under federal, tribal, state or local law?

Yes ○ No ◉

**(2.) Activity and use limitations that are in place on the subject property or that have been filed or recorded against the subject property (40 CFR 312.26(a)(1)(v) and (vi)).**

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded against the subject property under federal, tribal, state or local law?

Yes ○ No ◉

**(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).**

Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ◉ No ○

**(4.) Relationship of the purchase price to the fair market value of the subject property if it were not contaminated (40 CFR 312.29).**

Does the purchase price being paid for this subject property reasonably reflect the fair market value of the subject property?

Yes ◉ No ○

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject property?

Yes ○ No ◉

Docusign Envelope ID: 3CE5B05B-9955-4E49-BEED-0490AFAA772C

**(5.) Commonly known or reasonably ascertainable information about the subject property (40 CFR 312.30).**

| | Yes | No |
|---|---|---|
| Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? | ◉ | ○ |
| For example, | Yes | No |
| (a.) Do you know the past uses of the subject property? | ◉ | ○ |
| (b.) Do you know of specific chemicals that are present or once were present at the subject property? | ○ | ◉ |
| (c.) Do you know of spills or other chemical releases that have taken place at the subject property? | ○ | ◉ |
| (d.) Do you know of any environmental cleanups that have taken place at the subject property? | ○ | ◉ |

**(6.) The degree of obviousness of the presence or likely presence of contamination at the subject property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).**

| | Yes | No |
|---|---|---|
| Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of releases at the subject property? | ○ | ◉ |
| Do you have knowledge or experience with the subject property that may be pertinent to the environmental professional (for example, copies of any available prior environmental site assessment reports, documents, correspondence, etc., concerning the property and its environmental condition)? | ◉ | ○ |

**(7.) Proceedings Involving the Subject Property Questions (Section 10.9 of ASTM E1527-21 and Section 10.10 of ASTM E2247-16)**

| Do you know of: | Yes | No |
|---|---|---|
| (a.) Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property? | ○ | ◉ |
| (b.) Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, at, or from the subject property? | ○ | ◉ |
| (c) Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? | ○ | ◉ |

**Signature**

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Langan will evaluate and rely on this information in the development of the final Phase I ESA report.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

# EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal RCRA generators***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

***Lists of state and tribal landfills and solid waste disposal facilities***

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the  list.

A review of the NY SWF/LF list, as provided by EDR, and dated 03/25/2024 has revealed that there are 6 NY SWF/LF sites within approximately  0.5 miles of the target property.

***Lists of state and tribal leaking storage tanks***

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/06/2024 has revealed that there are 6 NY LTANKS sites within approximately  0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

***Lists of state and tribal voluntary cleanup sites***

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there is 1 NY VCP site within approximately 0.5 miles of the target property.

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Records of Emergency Release Reports***

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/06/2024 has revealed that there are 8 NY Spills sites within approximately 0.125 miles of the target property.

***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/09/2024 has revealed that there are 4 FINDS sites within approximately 0.001 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/01/2024 has revealed that there are 2 PFAS ECHO sites within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 07/24/2023 has revealed that there are 3 E MANIFEST sites within approximately 0.25 miles of the target property.

NY SPDES: New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

A review of the NY SPDES list, as provided by EDR, and dated 01/12/2024 has revealed that there is 1 NY SPDES site within approximately 0.001 miles of the target property.

# EXECUTIVE SUMMARY

NY ILI: A solid waste site priority list of mitigation and remedial activities to address sites causing, or substantially contributing to, impairments of drinking water quality. Inactive solid waste disposal sites, primarily landfills, and their potential impact on New York?s drinking water resources from site-related contaminants, with a focus on emerging contaminants.

A review of the NY ILI list, as provided by EDR, and dated 01/30/2024 has revealed that there are 3 NY ILI sites within approximately 0.5 miles of the target property.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

| Contact Name: | PASHKO CAMAJ |
| DEC Memo: | Sangesland spoke to Pashko from MTA. He said the site has a 1000 gal buried gasoline tank. Vapor recovery line was pitched the wrong way and gasoline condensed and eventually leaked out of the line into the pea gravel. Franklin Company has been hired to deal with the cleanup and repairs. 12/28/2011 Sangesland spoke to Martin Wozolowski at Liro Engineering. He said F & N did the work supervised by Liro Engineer. Vacuumed out the water from the tank/lines. Found staining in the pea gravel. Vac truck pulled out groundwater from the area around the tank. Removed 3 yards of contaminated pea gravel/stone. Then took 2 ground water samples. One sample was totally clean, the other had a single hit for Benzene. They will submit this report within the next couple of days and request closure. Report dated Jan 3, 2012 submitted by LiRo Engineers Inc. summarized all of this work. Minor Hit for Benzene. OK to close out. |

**BRONX WHITESTONE BRIDGE FACILITY (Continued)** **S111158225**

Remarks: from vapor recovery line from fill station - repairs and cleanup in progress

DEC Memo: 4/8/10-Vought-Duty desk officer. Called Con Ed ERT (212-580-8383) and spoke to Tony Delgado, 21 gallons on asphalt and 4 gallons on soil. No PCB concentrations on file and will be treated as 50-499. Transformer on public property. Endpoint samples will be collected upon determination of PCB concentrations or EPA Method 8100. Spill assigned to DEC Feroze as part of routine Con Ed portfolio review and possible closure. Vought received second call from and spoke to Con Ed Delagado and transformer installed in 1992 and had non-PCB dielectric fluid. Initial EMIS #220992 deleted from proxy and put into e-docs. 4/22/10 - Austin - Pole Transformer leak on soil and sidewalk, no other impacts- spill contained and cleaned up by Con Ed - see eDocs for more details - Spill closed - end

Remarks: unknown pcb's onto ashalt. Contained and clean up pending

| DEC Memo: | 3/25/10 - Raphael Ketani. The spill happened on 1/10/10, but wasn't called in until today.<br>According to Robert Gantzer (347) 386-5695 of the NYC Parks |

**FERRY POINT PARK GOLF COURSE (Continued)** **S110243664**

Department, a generator was being filled with diesel and it overflowed onto the bare ground (see pictures in E-docs and report). The affected area was 10' by 20'. He said that Marc Redis of the DEC Div. of Solid Waste told him to clean it up. Mr. Redis was at the site because it's a Part 360 site. The cleanup was undertaken during January, but it wasn't discovered until sometime later (Mr. Gantzer didn't specify how much later) that there was more contamination below ground. So more digging took place. He said that they dug down one and a half feet to remove all of the contamination, and all of the contaminated soil was put into drums. I told Mr. Gantzer that, in the future, a spill has to be reported to the Spills Hotline within 2 hours of the occurrence. He said that he will report quickly next time. I spoke to Mr. Redis. He said that the Parks Department did dig out the area. As the contaminated soil has been remediated, I am closing the case. 3/25/10-Vought-Matter referred to Solid Waste who will supervise cleanup as per DEC Austin.

Remarks: CLEANUP DONE - MATERIAL IN DRUMS

| DEC Memo: | 10/18/05: This spill was originally closed by Anthony Sigona as part of a consolidation effort. The spill was reassigned to Tibbe. The investigation (approved by Sigona)that was performed was inadequate to identify the existance of contamination. The spill has been re-opened and further investigation is necessary. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 11/16/11 - Raphael Ketani. I tried to contact Colleen Channer of the Triborough Bridge and Tunnel Authority (TBTA) (212) 878-1035, but I could only leave a message with her secretary. Her mailing address is: MTA Legal Department, 347 Madison Avenue, 9th Floor, NY, 10017. The |

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

TBTA is part of the MTA.
11/17/11 - Raphael Ketani. I spoke to Ms. Channer. I told her that the DEC still had two open spill
cases, #0100477 and #9801266, and that we were seeking documentation for these cases. I told her
that the spills may involve tanks 1 to 4 on the west side of the northern approach to the bridge.
She said that she will look for the documentation and get back to me. 1/13/12 - Raphael Ketani. Ms.
Channer (212) 878-1035 called me. She said that she had found some documentation for cases #0100477
and #9801266. We went over the documents that she had and that the DEC had. Some were the same. I
told her that #0100477 was open because the consultant used the TCLP method to process the samples,
rather than methods 8260 and 8270, and because not enough samples were taken and no groundwater
samples were taken in the vicinity of tanks 1 and 2. I added that #9801266 was open because the
source of the free floating product that had entered a utility vault was never found. Tanks 3, 4,
and 7 had been removed in the nineteen nineties. However a full soil and groundwater investigation,
and transmission lines investigation for product had never been done. Ms. Channer asked that I send
the MTA a letter indicating the work that needs to be done and which documents the DEC still needs.
Her address is: Senior Environmental Counsel, MTA,347 Madison Avenue, 9th Floor, NY, 10017. 1/17/12
- Raphael Ketani. I sent a letter to Ms. Channer requesting that the MTA submit a work plan to
conduct a soil and groundwater investigation in the vicinity of the former locations of USTs #1 and
#2. I also put in the letter a request for a work plan to conduct an investigation of the former
vicinity of USTs #3, #4 and #7 (spill #9801266). 1/19/12 - Raphael Ketani. I was notified that
Peter Bass, Director of the Environmental Policy and Compliance group at the MTA, should also
receive a copy of the letter to Ms. Channer. So I sent the letter to him. His address is also 347
Madison Avenue. 1/30/12 - Raphael Ketani. Ms. Channer and the MTA environmental engineer, George
Bassil, called me today to request an extension for submitting the work plan as their consultant
was heavily involved with another MTA project and could not devote much attention to the Whitestone
Bridge projects. I granted the MTA a two month extension of the deadline for submitting the work
plan. This set a deadline of April 16. Mr. Bassil's contact information is: MTA, 2 Broadway, 23rd
Floor, NY, 10004, (646) 252-7020. 4/25/12 - Raphael Ketani. Today I received 4/16/12 Environmental
Site Investigation Work Plan from LiRo Engineers. I began my review. 5/15/12 - Raphael Ketani. I
finished my review of the ESIWP. LiRo proposed to perform 6 soil borings. Three in the vicinity of

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

the grave for the former tank #3 and its general spill area, and three in the vicinity of the grave
for the former tank #2 and its general spill area. Soil and groundwater samples will be collected.
The soil sample with the highest PID reading will be submitted for analysis and one groundwater
sample from each boring. Samples will be analyzed for STARS list VOCs by method 8260 and for STARS
list SVOCs by method 8270. The results will be compared to CP-51 standards. I disapproved the
ESIWP. First, the list of analytes to be tested should be the expanded lists for VOCs and SVOCs.
Secondly, there were not enough borings planned to properly cover each spill area. Lastly, the
areas affected by the spills need to be delineated. I drafted a disapproval letter for the review
of Hassan Hussein, EE III and head of the Hazardous Materials Unit. I set a deadline of June 22 for
the submission of a revised SIWP. Mr. Hussein approved the letter and it was sent out today.
5/18/12 - Raphael Ketani. Mr. Wesolowski of LiRo Engineering (718) 321-3136, ext 242 called me
today regarding my 5/15/12 response letter for the ESIWP. He said that the area of tanks 4 and 7
has a building over it. The building was constructed in 1998 after the tanks were removed. The
building is an office for their security group and there are many utilities under the floor.
Therefore, it would be very difficult to do any borings there. I told him that LiRo and the MTA
should go ahead and do the work for tanks 1 to 3 anyway. He said that this will be done, but he was
concerned about the request to do borings around tanks 4 and 7. I told him that horizontal borings
may be the only way to sample around the tank graves for these former tanks. I added that we need
some information in order to tell us whether elevated levels of contaminants are still at these
locations. I told him to go ahead with the work around the other tanks and to talk to the MTA and
see what can be done. He said that he will do this. With that, the conversation ended. 6/27/12 -
Raphael Ketani. Mr. Wesolowski sent me a response letter to the DEC ESIWP review letter dated
5/15/12. Attached to the LiRo Engineering response letter was a revised ESIWP dated 6/22/12. I
reviewed both documents. LiRo proposes to do many more borings around tanks #1, #2 and #3.
Additional borings around tanks #4 and #7 will be performed only if contamination appears to be
emanating from them. However, as these two tanks are under the building, the tone of the letter
suggested that the idea of boring around these tanks will be open for discussion. Mr. Wesolowski
also wrote that all environmental samples will be tested for the expanded lists of VOCs and SVOCs.
Also, drilling will proceed deeper than the 20 feet down that was

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

originally planned if
contamination is found at that level. Work will start within 60 days of the approval of the revised
ESIWP. I drafted a response letter approving the revised ESIWP and stating that indoor air PID
surveying should be done in the areas of the building which are above tanks #4 and #7. The letter
was submitted to Mr. Hussein for his approval. Mr. Hussein approved the letter and it was sent out.
8/3/12 - Raphael Ketani. Mr. Wesolowski sent me a letter dated 7/18/12. This letter was LiRo's
response to the DEC 6/7/12 letter approving the June 22 ESIWP. In the letter, Mr. Wesolowski
described the methodology for doing the indoor air sampling with the PID meter. Specifically, if
elevated readings are detected that are not attributed to materials stored in the building, then
air sampling will take place for 1 hour at each location of concern. If there are no elevated
detections, then air sampling will take place at a minimum of 8 sampling stations for a period of
30 minutes each using the PID meter. These 8 or more stations will be over the former locations of
USTs #4 and #7. I found the letter plan to be acceptable and submitted a draft letter to Mr.
Hussein for his review. The letter approved the methodology and also requested that the sampling
take place during a period when air exchange (due to people opening doors to rooms or ventilation)
is not taking place. I stated that this is in order to have stable conditions for the air sampling.
I also added that if the indoor air detections are above 500 ppb or 0.5 ppm, then the NYC DEP
Hotline should be contacted and a work plan must be submitted for a more extensive air
investigation. 8/7/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out today.
11/17/12 - Raphael Ketani. I received the 11/13/12 Site Investigation Summary Report from Li Ro.
Soil borings, groundwater sampling and indoor air sampling were conducted on September 12, 13 and
17. Fourteen borings were performed down to 20 feet bgs. Temporary 1 inch monitoring wells were
installed. After the sampling was completed, the borings were filled in and the wells were
abandoned. Soil samples were recovered from LSB-01, 03, 04, 06 to 09, 13, and 15 to 17. Borings
could not be performed at LSB-02, 05, 10 to 12 and 14 due to refusal - it was believed that the
foundations were encountered at these locations. If no visual evidence or PID detections were
encountered in a boring, then soil samples were collected at the water table interface and at 20
feet bgs. The water table was encountered at 3 to 9 feet bgs. Flow was expected to be to the
southwest to the East River. The indoor air results were obtained by sampling at each station for

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

30 minutes, except for the entrance area which was sampled for 15 minutes. There were no
detections. Soil samples were collected from 5.5 feet to 20 feet below grade. The VOC results were
either non-detect or well below the CP-51 standards. The SVOC results were either non-detect, well
below the standards or just above the standards. For total results, the most contaminated soil
horizon at LSB-01 was at 7 feet bgs and LSB-03 was worst at 20 feet bgs. The groundwater samples
from LSB-01, LSB-03 and LSB-17 had 280 ppb, 260 ppb and 210 ppb of naphthalene, respectively. The
rest of the VOC results and the SVOC results were either non-detect or slightly above the GW
standards to two digits. From the data in the report, it appears that there is a source of
groundwater contamination. I drafted a letter to Mr. Bassil and to Mr. Wesolowski approving the
SISR and requesting that groundwater contamination delineation take place. The draft letter was
submitted to Mr. Hussein for his approval. 12/4/12 - Raphael Ketani. The letter was approved by Mr.
Hussein and was sent out with a deadline of January 4, 2013 for submission of a work plan for
delineating the groundwater contamination. 1/9/2013 - Raphael Ketani. I reviewed the LiRo 1/4/13
Supplemental Environmental Site Investigation Work Plan. LiRo plans to install 3 wells. One well
will be upgradient of LSB-17, one well will be downgradient of LSB-17 and one well will be
downgradient of locations LSB-1 and LSB-3. A maximum of 2 soil samples and 1 groundwater sample
will be taken from each proposed well location (MW-1 to MW-3). If no contamination is found at a
location, then one soil sample will be taken from just above the water table. The water table is
believed to be at about 8 feet bgs. I found the work plan to be acceptable and drafted a letter for
the review of Mr. Hussein approving the work plan and requesting that each well be surveyed and a
groundwater flow map be constructed. 1/11/13 - Raphael Ketani. Mr. Hussein approved the letter and
it was sent out today. 12/23/13 - Raphael Ketani. As there has been no correspondence from Martin
Wesolowski of LiRo Engineering (718) 321-3136, ext 242 regarding conducting the work that was
described in the 1/4/13 SESIWP, I sent an e-mail to Colleen Channer (legal division Triborough
Bridge and Tunnel Authority (TBTA) (212) 878-1035), Peter Bass (Director of Environmental Policy
and Compliance) and George Bassil (MTA environmental engineer (646) 252-7020) requesting that the
work start by February 3, 2014, or else the spill cases will be referred to the Office of General
Counsel for legal action. Later, Mr. Wesolowski responded by e-mail and stated that the TBTA was
obtaining the funding to do the approved work. The work is scheduled

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

to take place during early
January 2014. 1/7/14 - Raphael Ketani. Mr. Wesolowski sent me an e-mail stating that the agreed
upon work will take place on 1/21/14. 1/21/14 - Raphael Ketani. Mr. Wesolowski sent me an e-mail
stating that they had completed locating the utilities and doing the markouts for the 3 planned
wells. Due to the snowy weather, the actual work will not start until 1/23/14. 1/23/14 - Raphael
Ketani. Mr. Wesolowski sent me an e-mail stating that the wells were installed today and that
groundwater sampling will take place in two weeks. A report will be sent to the DEC in February
2014. 3/7/14 - Raphael Ketani. I reviewed the 3/6/14 LiRo Engineers, Inc. Supplemental
Environmental Site Investigation Report. The supplemental investigation took place in order to
further delineate the extent of the groundwater contamination at 3 specific locations. Borings SB-1
to SB-3 were installed on 1/23/14. None of the samples had odors or PID hits. These borings were
turned into wells MW-1 to MW-3 and developed on 1/29/14. The wells were sampled on 2/12/14. All of
the soil and groundwater samples were analyzed via methods 8260B and 8270C. The soil samples were
almost entirely non-detect for VOCs. The SVOC hits were also almost entirely non-detect with hits
that were well below the CP-51 unrestricted soil standards. The groundwater results for all of the
samples were almost entirely non-detect for the VOCs and the SVOCs. I sent an e-mail to Mr. Bassil
and Mr. Wesolowski stating that the Supplemental Environmental SIR had been approved, but the
Department was a little concerned about some past naphthalene results which had been from samples
taken from wells LSB-1, LSB-3 and LSB-17. Later, Mr. Wesolowski responded by e-mail that after the
September 2012 sampling event, these temporary wells had been removed. So no additional groundwater
samples could be taken. 3/18/14 - Raphael Ketani. The spill case was presented to Mr. Hussein for
closure. Mr. Hussein reviewed the data and determined that the spill case could be closed. Based
upon the documentation and the data in the case file, it has been determined that the oil spill has
been remediated and that any residual contamination is not a threat to the public or the
environment. Additionally, from the PID screening data, it has been determined that there are no
threats from the vapors of volatile chemicals in the MTA owned and maintained building. Therefore,
the spill case has been closed effective today.

Remarks: Petroleum Contaminated Soils reported as Gasoline was found during Tank Excataion work at the Site.

| DEC Memo: | 09/04/07: Transferred from Sigona to Tibbe. Spill reopened due to lack of documentation of proper remediation of contamination identified around tanks 5&6, as well as 3, 4 and 7. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 11/10/11 - Raphael Ketani. Kevin O'Connor of Action Remediation (516) 781-3000/cell (516) 236-7468 called regarding this spill case and cases #9601373, #9801266 and #0100477. He mentioned that an attempt was made to combine the 4 cases into one by the DEC, but this added to the confusion. The areas of concern are to the |

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

west and to the east of the
north end approach to the Whitestone Bridge. He said that many years back, the tanks were taken
out, but the contaminated soil wasn't. I told him that there were almost no documents in the e-docs
and no case notes. He said that he would like to give the DEC all of the documents pertaining to
this site. I asked him to put them on disk. He said that he will. Mr. O'Connor said that he would
like to meet in person to discuss the site. I told him that would be fine. The PBS is #2-481645.
There are at least 6 tanks, according to some notes I saw. 11/16/11 - Raphael Ketani. A meeting
took place with Mr. O'Connor of Action Remediation and Tom O'Brien of Active Environmental
Techologies Inc. (609) 702-1500. Mr. O'Connor did most of the talking for the two consultants. He
explained that Action and Active were originally
sub-sub-sub-contractors for a very large
construction project to widen the northern approach to to the Whitestone Bridge. They were involved
in removing tanks and excavating contaminated soil. The work was done in two weeks. He said that
PBS case #2-481645 lists only four tanks that are still active. These are tank #11 (20,000 gal. UST
with biodiesel), tank #12 (1,000 gal. UST with gasoline), tank #13 (2,500 gal. UST with biodiesel)
and tank #15 (900 gal. UST with biodiesel). Mr. O'Connor added that their companies removed tanks
#10 (north part west side) and #5 and #6 (south part west side). However, tanks #8 and #9 on the
east side had already been removed. So all they did there was soil removal. Mr. O'Brien stated that
when they started digging, they discovered that the upper layer was made of cobbles and the rest
was native marsh clay. Lots of water came out of the layer of cobbles and this proved costly to
handle. The Triborough Bridge and Tunnel Authority refused to pay them for the cost of handling all
of the water from the cobble zone. So the remediation reports were never sent to the TBTA. Steel
sheet pilings were used to keep the holes open at all of the tank excavation locations. Soil end
point samples were taken by boring holes through the sheet piling. Mr. O'Brien showed me some
pictures of the work at the various locatoins. Mr. O'Connor had sent me e-mail pdf files containing
the soil analytical results, groundwater analytical results and some diagrams showing where the
samples had been taken. He also gave me copies of the manifests for the soil that was removed from
all of the locations. However, he said that the manifests were not in any particular order and were
for all of the excavation locations. Mr. O'Connor showed me PBS printouts for tanks #5 and #6. The
closure dates were 12/16/1993. He added that tank #10 was pulled by his company and it was a steel

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

tank with a fiberglass wrapping. It was in very good condition. After the meeting, I reviewed the
Long Island Analytical Labs 4/7/09 and 4/14/09 soil and groundwater analytical results reports.
They were almost entirely non-detect. The few hits that were present were almost entirely below
TAGM limits. I also reviewed the Action Remediation 5/6/09 Closeout Package for tank #10 (2,000
gal. UST in the northern part of the area on the west side) and the Action Remediation 6/1/09 soil
profile and sampling letter for all of the sampling locations. I also reviewed the manifests, other
documents and pictures concerning tanks #5, #6 and #10. Based upon my data in the documents in the
case file, I determined that the great majority of the contamination had been removed and that the
residual contamination was not a threat to the public or the environment. Also, as the groundwater
that had entered the site is part of the groundwater table that is under the landfill which is
Ferry Point Park, I determined that any impacts are not due conditions at the former tank removal
areas. So I closed the spill case. 11/17/11 - Raphael Ketani. I sent Mr. O'Connor and Mr. O'Brien a
spill closure letter for this spill case and case number 9601373.

Remarks: TWO 550'S (# 5 & 6) TAKEN OUT OF SERVICE & EMPTIED.

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill site investigation has been consolidated under Spill No. 9801266. A site investigation work plan was submitted to DEC for review and approval on November 7, 2003. Investigation was approved on 6/21/2004. The remaining spill case is under 9801266. DEC's comments regarding a proposed Work Plan for Site Investigation by BEM Systems, Inc., dated November 5, 2003. Based on the results of our site visit and PBS inspection on June 25, 2003, and evaluation of the proposal by BEM, the DEC accepts MTA Bridges and Tunnel's Work Plan to perform further investigatory actions to address any of the DEC's concerns related to the prior spill investigations for |

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

this spill number referenced at
this site. MTA Bridges & Tunnels must now complete the implementation of the BEM's Work Plan
according to the proposed schedule 7/19/04 - AUSTIN - TRANSFERRED FROM SIGONA TO ROMMEL DUE TO THE
OTHER TBTA SITES BEING UNDER HER JURISDICTION - END 03/29/05: Transfer from Rommel to Tibbe.
11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 11/16/11 - Raphael Ketani. I tried to
contact Colleen Channer of the Triborough Bridge and Tunnel Authority (TBTA) (212) 878-1035, but I
could only leave a message with her secretary. Her mailing address is: MTA Legal Department, 347
Madison Avenue, 9th Floor, NY, 10017. The TBTA is part of the MTA. 11/17/11 - Raphael Ketani. I
spoke to Ms. Channer. I told her that the DEC still had two open spill cases, #0100477 and
#9801266, and that we were seeking documentation for these cases. I told her that the spills may
involve tanks 1 to 4 on the west side of the northern approach to the bridge. She said that she
will look for the documentation and get back to me. 1/13/12 - Raphael Ketani. Ms. Channer (212)
878-1035 called me. She said that she had found some documentation for cases #0100477 and #9801266.
We went over the documents that she had and that the DEC had. Some were the same. I told her that
#0100477 was open because the consultant used the TCLP method to process the samples, rather than
methods 8260 and 8270, and because not enough samples were taken and no groundwater samples were
taken in the vicinity of tanks 1 and 2. I added that #9801266 was open because the source of the
free floating product that had entered a utility vault was never found. Tanks 3, 4, and 7 had been
removed in the nineteen nineties. However a full soil and groundwater investigation, and
transmission lines investigation for product had never been done. Ms. Channer asked that I send the
MTA a letter indicating the work that needs to be done and which documents the DEC still needs. Her
address is: Senior Environmental Counsel, MTA,347 Madison Avenue, 9th Floor, NY, 10017. 1/17/12 -
Raphael Ketani. I sent a letter to Ms. Channer requesting that the MTA submit a work plan to
conduct a soil and groundwater investigation in the vicinity of the former locations of USTs #3, #4
and #7. I also put in the letter a request for a work plan to conduct an investigation of the
former vicinity of USTs #1 and #2 (spill #0100477). 1/19/12 - Raphael Ketani. I was notified that
Peter Bass, Director of the Environmental Policy and Compliance group at the MTA, should also
receive a copy of the letter to Ms. Channer. So I sent the letter to him. His address is also 347
Madison Avenue. 1/30/12 - Raphael Ketani. Ms. Channer and the MTA environmental engineer, George

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

Bassil, called me today to request an extension for submitting the work plan as their consultant
was heavily involved with another MTA project and could not devote much attention to the Whitestone
Bridge projects. I granted the MTA a two month extension of the deadline for submitting the work
plan. This set the deadline at April 16. Mr. Bassil's contact information is: MTA, 2 Broadway, 23rd
Floor, NY, 10004, (646) 252-7020. 4/25/12 - Raphael Ketani. Today I received 4/16/12 Environmental
Site Investigation Work Plan from LiRo Engineers. I began my review. 5/15/12 - Raphael Ketani. I
finished my review of the ESIWP. LiRo proposed to perform 6 soil borings. Three in the vicinity of
the grave for the former tank #3 and its general spill area, and three in the vicinity of the grave
for the former tank #2 and its general spill area. Soil and groundwater samples will be collected.
The soil sample with the highest PID reading will be submitted for analysis and one groundwater
sample from each boring. Samples will be analyzed for STARS list VOCs by method 8260 and for STARS
list SVOCs by method 8270. The results will be compared to CP-51 standards. I disapproved the
ESIWP. First, the list of analytes to be tested should be the expanded lists for VOCs and SVOCs.
Secondly, there were not enough borings planned to properly cover each spill area. Lastly, the
areas affected by the spills need to be delineated. I drafted a disapproval letter for the review
of Hassan Hussein, EE III and head of the Hazardous Materials Unit. I set a deadline of June 22 for
the submission of a revised SIWP. Mr. Hussein approved the letter and it was sent out today.
5/18/12 - Raphael Ketani. Mr. Wesolowski of LiRo Engineering (718) 321-3136, ext 242 called me
today regarding my 5/15/12 response letter for the ESIWP. He said that the area of tanks 4 and 7
has a building over it. The building was constructed in 1998 after the tanks were removed. The
building is an office for their security group and there are many utilities under the floor.
Therefore, it would be very difficult to do any borings there. I told him that LiRo and the MTA
should go ahead and do the work for tanks 1 to 3 anyway. He said that this will be done, but he was
concerned about the request to do borings around tanks 4 and 7. I told him that horizontal borings
may be the only way to sample around the tank graves for these former tanks. I added that we need
some information in order to tell us whether elevated levels of contaminants are still at these
locations. I told him to go ahead with the work around the other tanks and to talk to the MTA and
see what can be done. He said that he will do this. With that, the conversation ended. 6/27/12 -
Raphael Ketani. Mr. Wesolowski sent me a response letter to the DEC

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

ESIWP review letter dated
5/15/12. Attached to the LiRo Engineering response letter was a revised ESIWP dated 6/22/12. I
reviewed both documents. LiRo proposes to do many more borings around tanks #1, #2 and #3.
Additional borings around tanks #4 and #7 will be performed only if contamination appears to be
emanating from them. However, as these two tanks are under the building, the tone of the letter
suggested that the idea of boring around these tanks will be open for discussion. Mr. Wesolowski
also wrote that all environmental samples will be tested for the expanded lists of VOCs and SVOCs.
Also, drilling will proceed deeper than the 20 feet down that was originally planned if
contamination is found at that level. Work will start within 60 days of the approval of the revised
ESIWP. I drafted a response letter approving the revised ESIWP and stating that indoor air PID
surveying should be done in the areas of the building which are above tanks #4 and #7. The letter
was submitted to Mr. Hussein for his approval. Mr. Hussein approved the letter and it was sent out.
8/3/12 - Raphael Ketani. Mr. Wesolowski sent me a letter dated 7/18/12. This letter was LiRo's
response to the DEC 6/7/12 letter approving the June 22 ESIWP. In the letter, Mr. Wesolowski
described the methodology for doing the indoor air sampling with the PID meter. Specifically, if
elevated readings are detected that are not attributed to materials stored in the building, then
air sampling will take place for 1 hour at each location of concern. If there are no elevated
detections, then air sampling will take place at a minimum of 8 sampling stations for a period of
30 minutes each using the PID meter. These 8 or more stations will be over the former locations of
USTs #4 and #7. I found the letter plan to be acceptable and submitted a draft letter to Mr.
Hussein for his review. The letter approved the methodology and also requested that the sampling
take place during a period when air exchange (due to people opening doors to rooms or ventilation)
is not taking place. I stated that this is in order to have stable conditions for the air sampling.
I also added that if the indoor air detections are above 500 ppb or 0.5 ppm, then the NYC DEP
Hotline should be contacted and a work plan must be submitted for a more extensive air
investigation. 8/7/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out today.
11/17/12 - Raphael Ketani. I received the 11/13/12 Site Investigation Summary Report from Li Ro.
Soil borings, groundwater sampling and indoor air sampling were conducted on September 12, 13 and
17. Fourteen borings were performed down to 20 feet bgs. Temporary 1 inch monitoring wells were

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

installed. After the sampling was completed, the borings were filled in and the wells were abandoned. Soil samples were recovered from LSB-01, 03, 04, 06 to 09, 13, and 15 to 17. Borings could not be performed at LSB-02, 05, 10 to 12 and 14 due to refusal - it was believed that the foundations were encountered at these locations. When no visual evidence or PID detections were encountered in a boring, then soil samples were collected at the water table interface and at 20 feet bgs. The water table was encountered at 3 to 9 feet bgs. Flow was expected to be to the southwest to the East River. The indoor air results were obtained by sampling at each station for 30 minutes, except for the entrance area which was sampled for 15 minutes. There were no detections. Soil samples were collected from 5.5 feet to 20 feet below grade. The VOC results were either non-detect or well below the CP-51 standards. The SVOC results were either non-detect, well below the standards or just above the standards. For total results, the most contaminated soil horizon at LSB-01 was at 7 feet bgs and LSB-03 was worst at 20 feet bgs. The groundwater samples from LSB-01, LSB-03 and LSB-17 had 280 ppb, 260 ppb and 210 ppb of naphthalene, respectively. The rest of the VOC results and the SVOC results were either non-detect or slightly above the GW standards to two digits. From the data in the report, it appears that there is a source of groundwater contamination. I drafted a letter to Mr. Bassil and to Mr. Wesolowski approving the SISR and requesting that groundwater contamination delineation take place. The draft letter was submitted to Mr. Hussein for his approval. 12/4/12 - Raphael Ketani. The letter was approved by Mr. Hussein and was sent out with a deadline of January 4, 2013 for submission of a work plan for delineating the groundwater contamination. 1/9/2013 - Raphael Ketani. I reviewed the LiRo 1/4/13 Supplemental Environmental Site Investigation Work Plan. LiRo plans to install 3 wells. One well will be upgradient of LSB-17, one well will be downgradient of LSB-17 and one well will be downgradient of locations LSB-1 and LSB-3. A maximum of 2 soil samples and 1 groundwater sample will be taken from each proposed well location (MW-1 to MW-3). If no contamination is found at a location, then one soil sample will be taken from just above the water table. The water table is believed to be at about 8 feet bgs. I found the work plan to be acceptable and drafted a letter for the review of Mr. Hussein approving the work plan and requesting that each well be surveyed and a groundwater flow map be constructed. 1/11/13 - Raphael Ketani. Mr. Hussein found the letter to be acceptable and it was sent out today. 12/23/13 - Raphael Ketani. As

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

there has been no
correspondence from Martin Wesolowski of LiRo Engineering (718) 321-3136, ext 242 regarding
conducting the work that was described in the 1/4/13 SESIWP, I sent an e-mail to Colleen Channer
(legal division Triborough Bridge and Tunnel Authority (TBTA) (212) 878-1035), Peter Bass (Director
of Environmental Policy and Compliance) and George Bassil (MTA environmental engineer (646)
252-7020) requesting that the work start by February 3, 2014, or else the spill cases will be
referred to the Office of General Counsel for legal action. Later, Mr. Wesolowski responded by
e-mail and stated that the TBTA was obtaining the funding to do the approved work. The work is
scheduled to take place during early January 2014. 1/7/14 - Raphael Ketani. Mr. Wesolowski sent me
an e-mail stating that the agreed upon work will take place on 1/21/14. 1/21/14 - Raphael Ketani.
Mr. Wesolowski sent me an e-mail stating that they had completed locating the utilities and doing
the markouts for the 3 planned wells. Due to the snowy weather, the actual work will not start
until 1/23/14. 1/23/14 - Raphael Ketani. Mr. Wesolowski sent me an e-mail stating that the wells
were installed today and that groundwater sampling will take place in two weeks. A report will be
sent to the DEC in February 2014. 3/7/14 - Raphael Ketani. I reviewed the 3/6/14 LiRo Engineers,
Inc. Supplemental Environmental Site Investigation Report. The supplemental investigation took
place in order to further delineate the extent of the groundwater contamination at 3 specific
locations. Borings SB-1 to SB-3 were installed on 1/23/14. None of the samples had odors or PID
hits. These borings were turned into wells MW-1 to MW-3 and developed on 1/29/14. The wells were
sampled on 2/12/14. All of the soil and groundwater samples were analyzed via methods 8260B and
8270C. The soil samples were almost entirely non-detect for VOCs. The SVOC hits were also almost
entirely non-detect with hits that were well below the CP-51 unrestricted soil standards. The
groundwater results for all of the samples were almost entirely non-detect for the VOCs and the
SVOCs. I sent an e-mail to Mr. Bassil and Mr. Wesolowski stating that the Supplemental
Environmental SIR had been approved, but the Department was a little concerned about some past
naphthalene results which had been from samples taken from wells LSB-1, LSB-3 and LSB-17. Later,
Mr. Wesolowski responded by e-mail that after the September 2012 sampling event, these temporary
wells had been removed. So no additional groundwater samples could be taken. 3/18/14 - Raphael
Ketani. The spill case was presented to Mr. Hussein for closure. Mr. Hussein reviewed the data and

**MTA BRIDGES & TUNNELS WHITESTONE BRIDGE FACILITY (Continued)** **S102150368**

determined that the spill case could be closed. Based upon the documentation and the data in the
case file, it has been determined that the oil spill has been remediated and that any residual
contamination is not a threat to the public or the environment. Additionally, from the PID
screening data, it has been determined that there are no threats from the vapors of volatile
chemicals in the MTA owned and maintained building. Therefore, the spill case has been closed
effective today.

Remarks: DEC Sigona was performing a site inspection and contamination was found.

Tank Info:

Tank Number: 001
Tank Id: 247593
Material Code: 2712
Common Name of Substance: Gasoline/Ethanol

Equipment Records:

G01 - Tank Secondary Containment - Diking (Aboveground)
J06 - Dispenser - Tank Mounted Dispenser
F00 - Pipe External Protection - None
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin

**FERRY POINT PARK GOLF COURSE (Continued)** **A100366170**

L09 - Piping Leak Detection - Exempt Suction Piping
E00 - Piping Secondary Containment - None
C01 - Pipe Location - Aboveground
G12 - Tank Secondary Containment - Double-Walled (AG only)
I03 - Overfill - Automatic Shut-Off
D01 - Pipe Type - Steel/Carbon Steel/Iron
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel Tank in Concrete
Tank Status: In Service
Pipe Model: Not reported
Install Date: 02/15/2013
Capacity Gallons: 1000
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

| DEC Memo: | 12/21/22 - Ye - DDO - Spoke with the caller, who is from Haz-Mat One. UPS, one of their clients, reported a punctured saddle tank that spilled 20 gallons of diesel. Miller Environmental is currently performing clean-up. Miller PM: Michael (631) 603-2564. Spoke with Michael. The spill is halfway cleaned up. They are first focusing the cleanup on the main part of the road, where there's a lot of traffic. They arrived in time to put sausage booms to prevent oil entering the soil and are using speedy dry and citrus cleaner. There are no drain impacts. They will send photos and the fully executed manifest. |
| Remarks: | punctured saddle tank, MILLER Env for clean up |

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE TRANSFERED FROM SIGONA TO TIBBE. 7/15/2005 JAA (Jack Aversa) file review. Reviewed UST closure report (Jan 1996) - requested by Mike Haggerty and faxed by LBG on 6/17/2005, Report Appendix- faxed by LBG on 6/27/2005, and Disposal receipts (faxed by LBG on 7/15/2005). Leggette, Brashears, and Graham, Inc (LBG) retained by UPS to observe and document the removal of tanks and piping. Two 550 gallon used oil USTs (1 steel, 1 fiberglass) and one 4,000 gallon (double wall steel, fiberglass coated) UST were removed from 2 separate excavations on Sept 5,12 and 13, 1995. Approx 20 feet of 1 inch diameter steel piping connected to a 10k gallon heating oil UST were replaced. UST remvoal and piping replacement conducted by Gas Installations Inc (GI), of Inwood NY. Steel tanks transported by GI to Broxn Iron and Metal works for recycling (receipt provided). FRP tank crushed and disposed by GI at a sanitary landfill. PID readings showed non-detect for used oil ust soil samples. 4 excavation samples were sent to the lab and were non-detect for BTEX. amd VOCs, non-detect for RCRA metals. UG piping confirmatory samples - 2 PAH’s slightly exceeded STARS. Gasoline UST removal - soil screened with PID and separated into 2 piles(clean and gasoline impacted). Approx 100 yards stockpiled and later shipped off site for disposal/recycling (receipt included - soil remediation |

**UPS (Continued)** **S102180041**

of Philadelphia). 6 post excavation samples indicated minor exceedances for total BTEX and MTBE.
Receipts provided for tank bottoms. PBS # 2-601299 - tanks shown as closed. No further action
required. File closed.

Remarks: FOUND CONTAMINATED SOIL AND SOME SHEEN ON GROUND WATER

| DEC Region: | 2 |
| DER Facility ID: | 324195 |
| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was MULQUEEN 11/8/04 - Austin - received Site assessment/tank closure report from Ira Conklin and sons for H.O. Penn on 8/5/04 - report dated 5/12/97 - end This was NOT transferred to CO 11/16/06 - Austin - Reassigned from Austin to Ketani for followup/review - end 12/6/06 - Raphael Ketani. The site is owned and occupied by H O Penn Machinery Co., Inc., 699 Brush Avenue, Bronx, 10465. The NYC Property Tax database and Property Shark do not list 699 Brush Avenue. The parent company is H O Penn Machinery Co., Inc., 122 Noxon Road, Poughkeepsie, NY, 12603, (845) 452-1200. The site in the Bronx is (718) 863-3800. The PBS case is #2-064084 and there are 2 tanks that were closed 1/1/97 and 6 active tanks. The active tanks are: 2-2000 gal. with lube oil and 1-2000 gal. with waste oil; 1-500 gal. with lube oil; 1-3000 gal. with diesel; 1-6000 gal. with #2 oil. These 6 tanks were installed 2/1/97. There was a tank test failure on 1/8/97 and the finding of contaminated soil around the tank. The caller was Stacey Pettine of Ira D. Conklin & Sons (914) 561-1512. I called H O Penn Machinery Co at (718) 863-3800, but could only leave a voice mail for Jeff Baumann of the Service Department. I sent a CSL. 12/8/06 - Raphael Ketani. Donna Eagan of H O Penn's Poughkeepsie office (845) 437-4069 left a voice mail yesterday stating that she will be working with DEC as Mr. Baumann is out. She asked me to call her to discuss what DEC needs in the way of documentation. I tried calling her, but could only leave a message. 12/11/06 - Raphael Ketani. Ms. Eagan called me. She said that she had a copy of the cleanup closure report for the Bronx site. I asked her to send me a copy. She said she would. 12/13/06 - Raphael Ketani. I received the closure report from Donna Egan. The report contained a short narative section, tables of PID readings for each excavation area - there was only a detection of 149.7 ppm for only the floor of excavation #1, a tank location diagram, a set of end-point soil analytical results for each excavation site - there were no detections, a tank cleaning certificat, a soil manifest, bills of lading for the tank bottoms, and soil tracking forms. Based on the documentation in the closure report, I am closing the case. |
| Remarks: | contaminated soil around tank |

| DEC Memo: | 06/08/17 - Lakhani The property is a Caterpillar dealership. The dealership has one Caterpillar in operation in the shop bay. During a normal procedure at the dealership, the Caterpillar's fuel line ruptured releasing 25 gallons of diesel onto the concrete. No drains or catch basins were affected. Miller Environmental was hired to complete the cleanup and provide DEC with a report. Contact for H.O. Penn Machinery Company, the dealership, is Markus Wesaw (Cell: 845-416-7173, Ph: 845-437-4069) 06/15/17 File Review: Spill Report (Miller Environmental, 06/14/17) - Miller was contacted by H.O. Penn Machinery Company, Inc. on 06/08/17 with a report of a hydraulic oil leak at the location. Upon inspection of the impacted area, it appeared that while working on payloader a hydraulic oil line was cut and hydraulic oil was released onto the concrete pavement. HO Penn personnel applied absorbents. Miller applied additional speedy dry to all impacted areas to contain and recover the discharged product. The speedy dry was swept up and containerized prior to offsite disposal. Miller reports that all impacted material has been recovered and disposed of an it appears that no further action is warranted regarding the spill. Spill is closed. |

| Feature Description: | The site containing 4.07 acres lease and permit was obtained by US Government in early 1952 for an AAA location. Between August 1952 and February 1954 all the leases and permits ware cancelled and the properties reverted back to the original owners. Currently the ownership of the site is subdivided between 24 owners of one and two family housing units. |

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal NPL (Superfund) sites***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Data Release Frequency: No Update Planned

***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/25/2024

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/03/2024

***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009
Date Data Arrived at EDR: 04/16/2009

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database
EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248

**USGS TOPOGRAPHIC MAP**

| | |
|---|---|
| Target Property Map: | 14115946 FLUSHING, NY |
| Version Date: | 2019 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

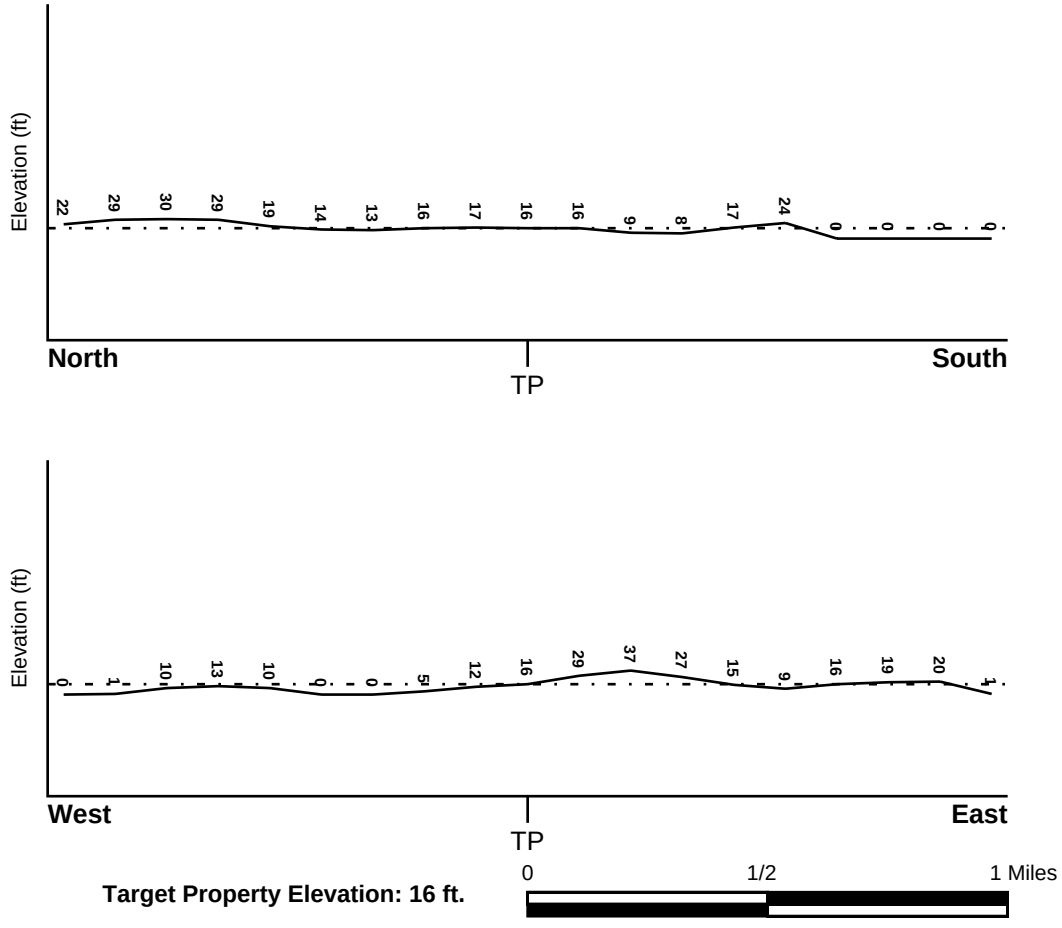
**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General West

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**



**Target Property Elevation: 16 ft.**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### FEMA FLOOD ZONE

| Flood Plain Panel at Target Property | FEMA Source Type |
|---|---|
| 3604970104F | FEMA FIRM Flood data |

| Additional Panels in search area: | FEMA Source Type |
|---|---|
| 3604970103F | FEMA FIRM Flood data |
| 3604970111F | FEMA FIRM Flood data |
| 3604970112F | FEMA FIRM Flood data |

### NATIONAL WETLAND INVENTORY

| NWI Quad at Target Property | NWI Electronic Data Coverage |
|---|---|
| FLUSHING | YES - refer to the Overview Map and Detail Map |

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

***Site-Specific Hydrogeological Data*:***

| Search Radius: | 1.25 miles |
| Status: | Not found |

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| MAP ID | LOCATION FROM TP | GENERAL DIRECTION GROUNDWATER FLOW |

| Not Reported | | |

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

**ROCK STRATIGRAPHIC UNIT** **GEOLOGIC AGE IDENTIFICATION**

| | | | |
|---|---|---|---|
| Era: | Paleozoic | Category: | Stratified Sequence |
| System: | Ordovician | | |
| Series: | Middle Ordovician (Mohawkian) | | |
| Code: | O2 *(decoded above as Era, System & Series)* | | |

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information | | | | | | | |
|---|---|---|---|---|---|---|---|
| | Boundary | | | Classification | | | |
| Layer | Upper | Lower | Soil Texture Class | AASHTO Group | Unified Soil | Permeability Rate (in/hr) | Soil Reaction (pH) |
| 1 | 0 inches | 6 inches | variable | Not reported | Not reported | Max: 0.00<br>Min: 0.00 | Max: 0.00<br>Min: 0.00 |

**OTHER SOIL TYPES IN AREA**

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: fine sandy loam

Surficial Soil Types: fine sandy loam

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: unweathered bedrock
gravelly - fine sandy loam
stratified
fine sandy loam

**LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

**WELL SEARCH DISTANCE INFORMATION**

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

## HYDROGEOLOGIC INFORMATION

AQUIFLOW$^{R}$ Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

## OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Kaitlyn Gioia

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

**Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

# EXECUTIVE SUMMARY

## DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1927 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 2640 feet of the target property.

Summary information obtained is provided in the text of this report.

## RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

## RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Contact: Kaitlyn Gioia

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

***Search Results:***

| Year | Scale | Details | Source |
|---|---|---|---|
| 2019 | 1"=500' | Flight Year: 2019 | USDA/NAIP |
| 2015 | 1"=500' | Flight Year: 2015 | USDA/NAIP |
| 2011 | 1"=500' | Flight Year: 2011 | USDA/NAIP |
| 2006 | 1"=500' | Flight Year: 2006 | USDA/NAIP |
| 1994 | 1"=500' | Acquisition Date: April 08, 1994 | USGS/DOQQ |

# Appendix G Resumes of Environmental Professionals

# BRIAN GOCHENAUR, QEP

## ASSOCIATE PRINCIPAL

## ENVIRONMENTAL SCIENTIST

Mr. Gochenaur is an environmental project manager with 20 years of experience in environmental due diligence, site investigation and remediation, fuel oil storage tank investigation and removal, soil vapor intrusion assessments, in-situ remedial technology, spill closure, vapor barrier and sub-slab depressurization system design and construction, emergency response, environmental and geotechnical site investigations, and health and safety monitoring. He has extensive experience with the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup, Voluntary Cleanup and Spill Programs and New York City Department of Environmental Protection (NYCDEP) "E" Designated and New York City Voluntary Cleanup Program (BCP) sites. His areas of expertise include Phase I Environmental Site Assessments, Phase II Site Investigations, and environmental consulting and oversight on large scale construction projects.

**EDUCATION**

B.S., Environmental Science
University of Florida

**PROFESSIONAL REGISTRATION**

Qualified Environmental Professional (QEP) certified by the Institute of Professional Environmental Practice

40-Hour OSHA (HAZWOPER)

# LAMEES ESMAIL, EIT

## PROJECT ENGINEER

## ENVIRONMENTAL ENGINEERING

Ms. Esmail is a civil and environmental engineer with four years of experience supporting environmental oversight and remediation projects in New York City. She has performed environmental field work including preparing daily inspection reports, photo documentation of work, and reviewing contractor submittals. She currently performs site research, manages field oversight, reviews/approves contractor submittals, prepares reports, and is involved with remedial design, implementation and project management.

Prior to joining Langan, Ms. Esmail gained three years of experience supporting environmental permitting and erosion and sedimentation control primarily for linear overhead transmission line projects. Types of permits included state land disturbance approvals and Army Corps of Engineers Section 10 Pre-Construction Notifications. Ms. Esmail also has experience aiding with the siting of new substation properties, using ArcGIS and AutoCAD to compile data for potential sites.

**EDUCATION**

B.S., Civil Engineering (Environmental Concentration)
George Washington University

Appendix C Health and Safety Plan

## 1. INTRODUCTION

This Phase II Environmental Site Investigation (ESI) Work Plan has been developed for a section of the Hutchinson River Parkway, referred to as Ring Road, located within Ferry Point Park, Bronx, New York (the "site"). The following work scope has been developed to evaluate the recognized environmental conditions (REC) identified during the Phase I Environmental Site Assessment (ESA) and to satisfy the New York City Department of Environmental Protection (NYCDEP) requirements for a Phase II ESI Work Plan outlined in the 2021 City Environmental Quality Review (CEQR) Technical Manual.

## 2. SITE LOCATION, CURRENT USE, AND PROPOSED DEVELOPMENT PLAN

The site is an approximately 9.85-acre, U-shaped section of Ferry Point Park, that primarily serves as a park thoroughfare and public recreation space and is identified on the New York City Bronx Borough Tax Map as part of Block 5622, Lot 1. The site is improved with an uninterrupted, circular roadway, referred to as Ring Road. Ring Road is a one-lane, one-way, asphalt-paved roadway and is bordered on either side by concrete curbing, metal guardrails, and grass shoulders. The remainder of the site includes vegetated areas and footpaths associated with Ferry Point Park. The section of Ring Road comprising the site totals about 1 mile.

The site is bound by Schley Avenue, the Hutchinson River Parkway, and service roads to the north; Bally's Golf Links at Ferry Point golf course to the east; Ferry Point Park and the Bronx-Whitestone Bridge to the south; and Ferry Point Park to the west. Between the western and eastern legs of the U-shape formed by the site lies public parking areas for Ferry Point Park and the Bronx-Whitestone Bridge Metropolitan Transit Authority (MTA) Building. A site location map is provided as Figure 1.

Improvements to the site, including widening of Ring Road are contemplated by Bally's Corporation LLC (Bally's) as part of the proposed development of a gaming facility. The site encompasses the total area of proposed roadway improvements, which includes park land extending between about 40 and 60 feet beyond the current extents of Ring Road. Excavation depths to facilitate widening of Ring Road are expected to extend from 1 to 5 feet below grade surface (bgs). Groundwater is tidally influenced and estimated between 2 and 20 feet bgs. Groundwater flow direction is generally to the west-southwest, towards Westchester Creek and the East River. The proposed conceptual development plans are included as Appendix A.

## 3. PHASE I ENVIRONMENTAL SITE ASSESSMENT SUMMARY

The following recognized environmental conditions (RECs) were identified in the September 6, 2024, Phase I ESA prepared by Langan Engineering, Environmental, Surveying, Landscape Architecture, and Geology, D.P.C. (Langan):

*REC 1 – Current and Historical use of Adjoining and Surrounding Properties*

Historical adjoining and surrounding property use includes a municipal solid waste landfill (1950-1960s), a United Parcel Service (UPS) facility with petroleum and chemical bulk storage (1985 - present), and a MTA bridge support facility with petroleum bulk storage (1951 - present). Documented and undocumented spills or releases of petroleum products or hazardous substances associated with these properties may have adversely affected groundwater and/or soil vapor on the site.

*REC 2 – Non-Native Fill*

Non-native fill is expected to underly the site above native soil. Non-native fill in New York City may contain contaminants, particularly metals and semi-volatile organic compounds (SVOCs), at concentrations that exceed applicable state and/or federal standards. Non-native fill does not trigger a regulatory reporting requirement, but may require implementation of special soil handling, management, and off-site disposal procedures if disturbed during development of the site.

A copy of the Phase I ESA is included in Appendix B.

# 4. SUBSURFACE INVESTIGATION WORK SCOPE

## 4.1 Geophysical Survey

A geophysical survey will be performed to locate buried utilities and anomalies in the vicinity of the proposed sample locations.

## 4.2 Soil, Groundwater, and Soil Vapor Summary

An investigation of soil and groundwater will be performed to properly evaluate the site for potential environmental impacts from current and historic off-site uses. A proposed sampling location plan is included as Figure 2. The proposed sampling will further investigate the RECs and evaluate the presence and/or quality of non-native fill material, as well as provide general horizontal/vertical information across the site for development purposes. Sampling will be conducted in general accordance with the New York State Department of Environmental Conservation (NYSDEC) Technical Guidance for Site Investigation and Remediation DER-10 and the 2021 CEQR Technical Manual.

Forty-two soil borings (SB01 to SB42) will be installed across the site (one soil boring about every 100 linear feet). At a minimum, a total of 84 soil samples will be collected from the borings. Ten soil boring locations will be converted into temporary groundwater monitoring wells and ten groundwater samples will be collected. Conditions in the field may require adjustment of sampling locations. Each soil boring location will be accurately measured to fixed benchmarks (i.e., select property lines, adjacent structures, etc.).

There are currently no enclosed structures proposed for this development project; therefore, soil vapor sampling is not proposed for this investigation.

### 4.3 Soil Sampling

A licensed environmental driller will be retained to advance soil borings using a Geoprobe® drill rig. Field personnel will screen the soil samples during borehole advancement for organic vapors with a photo-ionization detector (PID) and evaluate visual and olfactory impacts prior to collecting environmental samples. All field work will be recorded in a field log. At a minimum, two soil samples will be collected from each soil boring (for a total of 84 soil samples) for laboratory analysis: a surface soil sample (from the 0-2 feet bgs interval), and a subsurface soil sample (from the two-foot interval beneath the proposed maximum excavation depth of 5 feet bgs). Discrete (grab) samples will be taken from the aforementioned sampling intervals. The subsurface soil samples may also serve as in-situ post-excavation soil samples for the remedial plan. A third soil sample may be collected if indications of impacts are identified (e.g., PID readings above background and/or visual and olfactory observations of a release).

### 4.4 Monitoring Well Installation and Groundwater Sampling

Ten one-inch diameter temporary groundwater monitoring wells will be installed. Ten representative groundwater samples will be collected using low-flow sampling techniques from each well with a peristaltic pump and dedicated tubing. Sampling will be conducted in accordance with NYSDEC Draft DER-10 Technical Guidance for site Investigation and Remediation, dated May 2010, and Sampling Guidelines and Protocols, dated March 1991. Groundwater wells will be gauged with a water level meter to record a depth to groundwater reading (1/100 foot), and if necessary, an interface meter to determine the thickness of light non-aqueous phase liquid (LNAPL) or dense non-aqueous phase liquid (DNAPL).

### 4.5 Soil Vapor Sampling

There are currently no enclosed structures proposed as part of site development; therefore, soil vapor sampling is not proposed for this investigation. Should the design be modified to include enclosed structures, soil vapor sampling will be conducted in the proposed building location in accordance with the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH October 2006, and subsequent updates).

### 4.6 Sample Analysis

Soil and groundwater samples will be submitted to a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory for full analysis:

- Volatile organic compounds (VOCs) by EPA Method 8260;
- SVOCs by EPA Method 8270;

- Pesticides, herbicides, polychlorinated biphenyls (PCBs) by EPA Method 8081/8082; and
- Target Analyte List (TAL) metals by EPA Method 6010 and 7471.

All groundwater samples will be analyzed for both filtered (dissolved) and unfiltered (total) metals.

If either LNAPL and/or DNAPL are detected, appropriate samples will be collected for characterization and "fingerprint analysis" and any legally-required, regulatory reporting (i.e., NYSDEC spills hotline) will be completed.

Soil and groundwater samples collected from each well location will also be analyzed for NYSDEC-List Per- and polyfluoroalkyl Substances (PFAS) by EPA Method 1633. A proposed sample summary is provided as Table 1.

### 4.7 Quality Assurance/Quality Control Procedures

Quality assurance/quality control (QA/QC) procedures will be used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures will be used (1) to document that samples are representative of actual conditions at the site and (2) identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses will be used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. QA/QC samples (field and trip blanks, duplicates, etc.) will be collected and analyzed at an ELAP certified laboratory.

### 4.8 Investigation Derived Waste

Soil cuttings may be disposed at the site within the borehole that generated them to within 6 inches of the surface unless:

- Free product or grossly contaminated soil are present in the cuttings
- The borehole has penetrated an aquitard, aquiclude or other confining layer; or extends significantly into bedrock
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability
- The soil cannot fit into the borehole.

Those soil cuttings needing to be managed on-site will be containerized in properly labeled New York State Department of Transportation (NYSDOT)-approved 55-gallon drums for future off-site disposal at a permitted facility. All boreholes which require drill cuttings disposal would ultimately

be filled with bentonite chips (hydrated) and asphalt/concrete capping. Disposable sampling equipment including, spoons, gloves, bags, paper towels, etc. that came in contact with environmental media will be double bagged and disposed as municipal trash as non-hazardous trash.

### 4.9 Reporting

A Phase II ESI Report will be prepared following completion of the field activities and receipt of the laboratory data. The report will provide detailed summaries of the investigative procedures and findings. Soil analytical results will be compared to the NYSDEC Part 375-6.8(a) Soil Cleanup Objectives and groundwater samples will be compared to the Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (SGVs). The report will include an updated sampling plan, spider diagrams, analytical data tables for all reported constituent compounds (including non-detectable concentrations) and remedial recommendations, as warranted.

### 4.10 Investigation Health and Safety Plan

An Occupational Safety and Health Administration (OSHA) compliant Health and Safety Plan that meets all OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER) requirements will be implemented during the site work to protect worker safety. The Site Safety Coordinator will ensure full compliance of the Health and Safety Plan (HASP) in accordance with applicable health and safety laws and regulations. All field personnel involved in investigation activities will participate in training required under OSHA HAZWOPER 29 Code of Federal Regulations (CFR) 1910.120, including 40-hour hazardous waste operator training and annual 8-hour refresher training. Emergency telephone numbers will be posted at the site location before any work begins. A safety meeting will be conducted before each shift begins. Topics to be discussed include task hazards and protective measures (physical, chemical, environmental); emergency procedures; personal protection equipment (PPE) levels and other relevant safety topics including a highlighted route map to the nearest hospital/emergency room. Meetings will be documented in a logbook or specific form. Potential on-site chemicals of concern include VOCs, SVOCs, pesticides/PCBs, and metals. Information fact sheets and/or summary tables for each contaminant group are included in the HASP. A copy of this HASP is included as Appendix C and will be on-site during each sampling event.

| | GWTB03_date | Trip Blank | | | | | | | |

**Areas of Concern (AOCs):**
REC 1 - Current and Historical use of Adjoining and Surrounging Properties
REC 2 - Non-native Fill

**Notes:**
1. Sample depth intervals will be determined in the field.
2. Soil samples to be analyzed for New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules and Regulations (6 NYCRR) Part 375-list compounds.
3. If field evidence of contamination is noted (e.g., photoionization detector readings above background, staining, odor), a third sample will be collected within the observed impacts.
4. Two soil samples collected from every fifth boring and one groundwater sample will be analyzed for PFAS
5. TBD = to be determined (in the field)
6. VOC = volatile organic compound
7. SVOC = semivolatile organic compound
8. PCB = polychlorinated biphenyl
9. TCL = Target Compound List
10. TAL = Target Analyte List
11. QA/QC = quality assurance/quality control
12. NA = not applicable
13. REC = recognized environmental condition
14. PFAS = Per- and Polyfluoroalkyl Substances

## Appendix B Phase I Environmental Site Assessment

## (Included as Separate Document)

# Appendix C Site Reconnaissance Checklist and Photographs

LANGAN

**PHASE I ESA SITE RECONNAISSANCE CHECKLIST**

**GENERAL INFORMATION**

Langan personnel: Kaitlyn Gioia
Date of site reconnaissance: August 9, 2024
Business name / subject property occupant: Ferry Point Park – Ring Road
Full subject property address: 450 Hutchinson River Parkway, Bronx, NY
Weather conditions: ~80°F - Rainy

| Features, Activities, Uses, and Conditions | Identified/Observed? | | Report Section(s) |
|---|---|---|---|
| **General Subject Property Setting** | **Yes** | **No** | |
| Current use(s) of the subject property | ☒ | ☐ | 2.0 |
| Past use(s) of the subject property | ☐ | ☒ | 3.1 |
| Current use(s) of adjoining properties | ☒ | ☐ | 4.1 |
| Past use(s) of adjoining properties | ☐ | ☒ | 4.2 |
| Current or past uses in the surrounding area | ☒ | ☐ | 4.1 and 4.2 |
| Geologic, hydrogeologic, hydrologic, and topographic conditions | ☒ | ☐ | 2.2 |
| Structures and other improvements at the subject property | ☒ | ☐ | 2.3 |
| Roads | ☒ | ☐ | 2.3 |
| Potable water supply/source for the subject property | ☒ | ☐ | 2.4 |
| Sewage disposal system for the subject property | ☐ | ☒ | 2.4 |

| **Interior/Exterior Features** | **At Interior?** | | **At Exterior?** | | **Report Section(s) (if yes)** |
|---|---|---|---|---|---|
| | **Yes** | **No** | **Yes** | **No** | |
| Hazardous substances and petroleum products in connection with identified uses | ☐ | ☒ | ☐ | ☒ | 2.5 |
| Storage tanks | ☐ | ☒ | ☐ | ☒ | 2.5.1 and 2.5.2 |
| Strong, pungent, or noxious odors and their sources | ☐ | ☒ | ☐ | ☒ | 2.6 |
| Standing surface water and pools or sumps containing liquids likely to be hazardous substances or petroleum products | ☐ | ☒ | ☐ | ☒ | 2.5 |
| Drums, totes, and intermediate bulk containers | ☐ | ☒ | ☐ | ☒ | 2.5.3 |
| Hazardous substance and petroleum product containers not in connection with identified uses | ☐ | ☒ | ☐ | ☒ | 2.5.4 |
| Unidentified substance containers | ☐ | ☒ | ☐ | ☒ | 2.5.4 |
| PCB-containing items | ☐ | ☒ | ☐ | ☒ | 2.5.4 |
| Heating/cooling | ☐ | ☒ | ☐ | ☒ | 2.4 |
| Stains or corrosion on floors, walls, or ceilings | ☐ | ☒ | ☐ | ☒ | 2.5 and 2.7 |
| Drains and sumps | ☐ | ☒ | ☒ | ☐ | 2.8 |
| Pits, ponds, or lagoons | ☐ | ☒ | ☐ | ☒ | 2.2.3 |
| Stained soil or pavement | ☐ | ☒ | ☐ | ☒ | 2.5 and 2.7 |
| Stressed vegetation | ☐ | ☒ | ☐ | ☒ | 2.9 |
| Solid waste | ☐ | ☒ | ☐ | ☒ | 2.7 |
| Water/wastewater | ☐ | ☒ | ☐ | ☒ | 2.8 and 2.9 |
| Wells | ☐ | ☒ | ☐ | ☒ | 2.2.3 |
| Septic systems or cesspools | ☐ | ☒ | ☐ | ☒ | 2.8 |

Docusign Envelope ID: 3CE5B05B-9955-4E49-BEED-0490AFAA772C

Clear Form

# ASTM E1527-21 User Questionnaire

*Please complete the below form and return to Langan.*

Providing the following information (if available) to the environmental professional (Langan) is one of the requirements to qualify for one of the Landowner Liability Protections (LLP) offered under CERCLA. Missing or incomplete information for questions 1 through 6 could result in a determination that "all appropriate inquiry" is not complete. Additional information should be provided for "Yes" answers where relevant.

## General Information

**User/Client Names:** Bally's Golf Links at Ferry Point

**Reason for the Phase I ESA:** New Gaming Resort Development

**Type of property:** Casino Hotel

**Type of property transaction (e.g. sale, purchase, exchange):** New Zoning

**Subject property address (provide documentation of subject property boundary):**
500 Hutchinson River Parkway Bronx, New York 10465

**Site Contact and Contact Information:** Brian Crowell General Manager

**Relying Party(ies):**

## Required Information

**(1.) Environmental liens that are filed or recorded against the subject property (40 CFR 312.25).**

Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the subject property under federal, tribal, state or local law?

Yes ○ No ◉

**(2.) Activity and use limitations that are in place on the subject property or that have been filed or recorded against the subject property (40 CFR 312.26(a)(1)(v) and (vi)).**

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded against the subject property under federal, tribal, state or local law?

Yes ○ No ◉

**(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).**

Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ◉ No ○

**(4.) Relationship of the purchase price to the fair market value of the subject property if it were not contaminated (40 CFR 312.29).**

Does the purchase price being paid for this subject property reasonably reflect the fair market value of the subject property?

Yes ◉ No ○

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject property?

Yes ○ No ◉

Docusign Envelope ID: 3CE5B05B-9955-4E49-BEED-0490AFAA772C

**(5.) Commonly known or reasonably ascertainable information about the subject property (40 CFR 312.30).**

| | Yes | No |
|---|---|---|
| Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? | ◉ | ○ |
| For example, | Yes | No |
| (a.) Do you know the past uses of the subject property? | ◉ | ○ |
| (b.) Do you know of specific chemicals that are present or once were present at the subject property? | ○ | ◉ |
| (c.) Do you know of spills or other chemical releases that have taken place at the subject property? | ○ | ◉ |
| (d.) Do you know of any environmental cleanups that have taken place at the subject property? | ○ | ◉ |

**(6.) The degree of obviousness of the presence or likely presence of contamination at the subject property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).**

| | Yes | No |
|---|---|---|
| Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of releases at the subject property? | ○ | ◉ |
| Do you have knowledge or experience with the subject property that may be pertinent to the environmental professional (for example, copies of any available prior environmental site assessment reports, documents, correspondence, etc., concerning the property and its environmental condition)? | ◉ | ○ |

**(7.) Proceedings Involving the Subject Property Questions (Section 10.9 of ASTM E1527-21 and Section 10.10 of ASTM E2247-16)**

| Do you know of: | Yes | No |
|---|---|---|
| (a.) Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property? | ○ | ◉ |
| (b.) Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, at, or from the subject property? | ○ | ◉ |
| (c) Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? | ○ | ◉ |

**Signature**

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Langan will evaluate and rely on this information in the development of the final Phase I ESA report.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

# EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal RCRA generators***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/06/2024 has revealed that there are 6 NY LTANKS sites within approximately  0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

***Lists of state and tribal voluntary cleanup sites***

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there is 1 NY VCP site within approximately 0.5 miles of the target property.

***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/09/2024 has revealed that there are 4 FINDS sites within approximately 0.001 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/01/2024 has revealed that there are 2 PFAS ECHO sites within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

NY SPDES: New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

A review of the NY SPDES list, as provided by EDR, and dated 01/12/2024 has revealed that there is 1 NY SPDES site within approximately 0.001 miles of the target property.

# EXECUTIVE SUMMARY

NY ILI: A solid waste site priority list of mitigation and remedial activities to address sites causing, or substantially contributing to, impairments of drinking water quality. Inactive solid waste disposal sites, primarily landfills, and their potential impact on New York?s drinking water resources from site-related contaminants, with a focus on emerging contaminants.

A review of the NY ILI list, as provided by EDR, and dated 01/30/2024 has revealed that there are 3 NY ILI sites within approximately 0.5 miles of the target property.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

| DEC Memo: | Sangesland spoke to Pashko from MTA. He said the site has a 1000 gal buried gasoline tank. Vapor recovery line was pitched the wrong way and gasoline condensed and eventually leaked out of the line into the pea gravel. Franklin Company has been hired to deal with the cleanup and repairs. 12/28/2011 Sangesland spoke to Martin Wozolowski at Liro Engineering. He said F & N did the work supervised by Liro Engineer. Vacuumed out the water from the tank/lines. Found staining in the pea gravel. Vac truck pulled out groundwater from the area around the tank. Removed 3 yards of contaminated pea gravel/stone. Then took 2 ground water samples. One sample was totally clean, the other had a single hit for Benzene. They will submit this report within the next couple of days and request closure. Report dated Jan 3, 2012 submitted by LiRo Engineers Inc. summarized all of this work. Minor Hit for Benzene. OK to close out. |

**BRONX WHITESTONE BRIDGE FACILITY (Continued)** **S111158225**

Remarks: from vapor recovery line from fill station - repairs and cleanup in progress

DEC Memo: 4/8/10-Vought-Duty desk officer. Called Con Ed ERT (212-580-8383) and spoke to Tony Delgado, 21 gallons on asphalt and 4 gallons on soil. No PCB concentrations on file and will be treated as 50-499. Transformer on public property. Endpoint samples will be collected upon determination of PCB concentrations or EPA Method 8100. Spill assigned to DEC Feroze as part of routine Con Ed portfolio review and possible closure. Vought received second call from and spoke to Con Ed Delagado and transformer installed in 1992 and had non-PCB dielectric fluid. Initial EMIS #220992 deleted from proxy and put into e-docs. 4/22/10 - Austin - Pole Transformer leak on soil and sidewalk, no other impacts- spill contained and cleaned up by Con Ed - see eDocs for more details - Spill closed - end

Remarks: unknown pcb's onto ashalt. Contained and clean up pending

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.

| DEC Memo: | 3/25/10 - Raphael Ketani. The spill happened on 1/10/10, but wasn't called in until today.<br>According to Robert Gantzer (347) 386-5695 of the NYC Parks |

**FERRY POINT PARK GOLF COURSE (Continued)** **S110243664**

Department, a generator was being filled with diesel and it overflowed onto the bare ground (see pictures in E-docs and report). The affected area was 10' by 20'. He said that Marc Redis of the DEC Div. of Solid Waste told him to clean it up. Mr. Redis was at the site because it's a Part 360 site. The cleanup was undertaken during January, but it wasn't discovered until sometime later (Mr. Gantzer didn't specify how much later) that there was more contamination below ground. So more digging took place. He said that they dug down one and a half feet to remove all of the contamination, and all of the contaminated soil was put into drums. I told Mr. Gantzer that, in the future, a spill has to be reported to the Spills Hotline within 2 hours of the occurrence. He said that he will report quickly next time. I spoke to Mr. Redis. He said that the Parks Department did dig out the area. As the contaminated soil has been remediated, I am closing the case. 3/25/10-Vought-Matter referred to Solid Waste who will supervise cleanup as per DEC Austin.

Remarks: CLEANUP DONE - MATERIAL IN DRUMS

Tank Info:

| | |
|---|---|
| Tank Number: | 001 |
| Tank Id: | 2261 |
| Material Code: | 0001 |
| Common Name of Substance: | #2 Fuel Oil (On-Site Consumption) |

Equipment Records:

H99 - Tank Leak Detection - Other
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
L09 - Piping Leak Detection - Exempt Suction Piping

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
