Re: Kingsbridge Armory Project
1 West Kingsbridge Road
Block 3247, Lots 2 and 10
CEQR # 25DME006X

Dear Ms. Young:

The New York City Department of Environmental Protection, Bureau of Sustainability (DEP) has reviewed the February 2025 Draft Environmental Impact Statement Hazardous Materials Chapter and the February 2025 Phase I Environmental Site Assessment (Phase I), prepared by AKRF, Inc. on behalf of the New York City Economic Development Corporation (EDC/applicant). It is our understanding that EDC and the New York City Department of Citywide Administrative Services, are leading a collaborative process to reuse and redevelop a portion of Block 3247 in the Kingsbridge Heights neighborhood of the Bronx (Proposed Project). That portion includes the Kingsbridge Armory (Armory) Site at 1 West Kingsbridge Road (Block 3247, Lot 10), which is currently owned by EDC, and the New York National Guard (National Guard) Site (National Guard Site) at 10 West 195th Street (Block 3247, Lot 2), which is currently owned by the National Guard and occupied by two National Guard buildings (Project Site). The Project Site occupies the portion of Block 3247 that is bounded by West 195th Street, Reservoir Avenue, West Kingsbridge Road, and Jerome Avenue. The Proposed Project includes the adaptive reuse of the vacant, approximately 588,765-gross-square-foot (gsf) Armory, providing up to 760,000 gsf of floor area including a mix of new commercial, community facility, and light industrial uses. Further, it is assumed that the existing National Guard functions would be relocated, and the National Guard Site redeveloped with 500 new permanently affordable residential units (up to 497,000 gsf) in two buildings, replacing a one-story garage and a two-story office building. The Proposed Project would include a total of up to 1,257,000 gsf of new development at the Project Site. The following discretionary actions would be required to facilitate the Proposed Project: Disposition of City-owned property to a private developer pursuant to New York City Charter Section 197-c and separate Mayoral and Borough Board approval pursuant to City Charter Section 384(b)(4); Acquisition of property from New York State for the redevelopment of the National Guard Site; A zoning map amendment to rezone the project block to accommodate a wider range of uses; A zoning special permit may be required to permit an arena; Zoning text amendments may be

required to increase permitted arena capacity, or to modify other requirements. A zoning text amendment may be required to modify minimum distance between buildings on the same zoning lot and maximum base height restrictions. A zoning text amendment pursuant to ZR Section 74-182(b) may be required to increase permitted arena capacity and allow parking in excess of what is currently permitted; Potential public financing by the New York City Department of Housing Preservation and Development and/or the New York City Housing Development Corporation to facilitate the proposed permanently affordable housing units on the National Guard Site. Since the Armory is a New York City Landmark, any proposed changes to the exterior of the Armory and the landmark site would require a Binding Report from the New York City Landmarks Preservation Commission pursuant to the New York City Charter and the New York City Landmarks Law. It is also anticipated that the Proposed Project would receive City, State, and Federal funding. Receipt of State funding would require review by the New York State Office of Parks, Recreation, and Historic Preservation pursuant to Section 14.09 of the State Historic Preservation Act. The Proposed Project may also involve Federal historic preservation tax credits for the proposed adaptive reuse of the Armory, which is a non-discretionary action that would require consultation with the National Park Service and the New York State Historic Preservation Office (SHPO). The proposed alterations to the Armory would also be undertaken in accordance with the Secretary of Interior's Standards for Rehabilitation. In addition, receipt of federal funding would require consultation with SHPO and Federally recognized Tribal Nations in accordance with Section 106 of the National Historic Preservation Act.

The February 2025 Phase I report revealed that historical on-site and surrounding area land uses consisted of a variety of residential, commercial, and industrial uses including an armory, schools, a church, subway tracks, dry cleaners, a laundromat, auto repair, auto parts and repair, a park, residential dwellings, upholsters, picture framing, a movie theatre, a print shop, roofers, a substation, a filling station, a machinery repair shop, a garage, glass works, etc. Regulatory databases identified 9 underground storage tank sites, 55 aboveground storage tank sites, 3 historical auto sites, and 6 historical cleaner sites within 1/8 mile; 4 dry cleaners within 1/4 mile; 359 spills, 73 leaking storage tank sites, 2 voluntary cleanup program sites, and 1 brownfield site within 1/2 mile; and 1 manufactured gas plant site within 1 mile of the subject property.

A June 2013 Phase II Supplemental Environmental Site Investigation Report was prepared by Langan Engineering & Environmental Services, P.C. During the May 2013 fieldwork, nine soil borings (MW-5 through MW-10 and LG-19 through LG-21) were advanced to a depth of approximately 8 to 35 feet below grade surface. Two soil samples were collected from each boring. Five groundwater samples were collected from temporary monitoring wells (MW-6 through MW-10). Soil and groundwater samples were analyzed for volatile organic compounds (VOCs) by United States Environmental Protection Agency (EPA) Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides by EPA Method 8081, polychlorinated biphenyls (PCBs) by EPA Method 8082, and Target Analyte List metals by EPA Method 6020/7000. Five soil vapor samples (SV-1 though SV-5) were also collected and analyzed for VOCs by EPA Method TO-15.

The soil analytical results revealed that VOCs, pesticides, and PCBs were non-detect (ND) or below their New York State Department of Environmental Conservation (NYSDEC) 6 NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs). Several SVOCs (benzo(a)pyrene,

benzo(k)fluoranthene, and indeno(1,2,3-cd)pyrene) and several metals (barium, copper, chromium, lead, nickel, and zinc) were detected above their NYSDEC 6 NYCRR Part 375 Unrestricted Use SCOs and/or Commercial Use SCOs.

The groundwater analytical results revealed that SVOCs, pesticides, and PCBs were ND or below their NYSDEC Division of Water Technical Operational Guidance Series 1.1.1 Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations for Class GA standards (Water Quality Guidance Values). One VOC (methylene chloride) and several metals (iron, manganese, and sodium) were detected above their NYSDEC Water Quality Guidance Values.

The soil vapor analytical results revealed that several VOCs (acetone, methylene chloride, n-heptane, n-hexane, tetrachloroethylene, toluene, and trichloroethylene [TCE]) were detected. TCE was detected at a concentration of 400 $\mu g/m^3$.

Based upon our review of the submitted documentation, we have the following comments and recommendations to OEC:

- Based on the contamination identified, an (E) Designation for hazardous materials should be placed on the subject property pursuant to Section 11-15 of the New York City Zoning Resolution. The (E) Designation will ensure that testing and mitigation will be provided as necessary before any future development and/or soil disturbance occurs, as well as to ensure the maintenance and oversight of any required engineering controls through oversight by the Mayor's Office of Environmental Remediation (OER). Further hazardous materials assessments should be coordinated through OER.

Future correspondence and submittals related to this project should include the following CEQR # **25DME006X**. If OEC has any questions, you may contact me at weiy@dep.nyc.gov.

Sincerely,

Wei Yu

Re: Phase I Environmental Site Assessment
Kingsbridge Armory Redevelopment
Bronx Borough Block 3247, Lots 2 and 10
AKRF Project Number 231240

Dear Mr. Cohen:

AKRF, Inc. (AKRF) is pleased to submit this Phase I Environmental Site Assessment for the above-referenced Subject Property. This report includes the findings of a reconnaissance of the Subject Property, and an evaluation of readily available historical information and selected environmental databases and electronic records. The report meets the requirements of ASTM International Standard E1527-21, unless noted otherwise in Section 7.0, "Limitations and Data Gaps."

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely,
AKRF, Inc.

FEBRUARY 2025

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by the New York City Economic Development Corporation (NYCEDC; the User and Client) to prepare a Phase I Environmental Site Assessment (ESA) for the Kingsbridge Armory Redevelopment property consisting of the Kingsbridge Armory (the Armory Site) at 1 West Kingsbridge Road in the Bronx, NY 10468 (Tax Block 3247, Lot 10) and the National Guard Site at 10 West 195th Street in the Bronx, NY 10468 (Tax Block 3247, Lot 2) (collectively, the "Subject Property").

At the time of this Phase I ESA, the Armory Site consisted of a vacant former Armory building constructed circa 1912 to 1917 occupying most of the Subject Property, with frontages on West Kingsbridge Road to the south, Reservoir Avenue to the west, and Jerome Avenue to the east. The Armory Site included an approximately 180,000-gross-square-foot (gsf) column-free drill hall with an approximately 103-foot-tall ceiling and an approximately 20,000-gsf balcony mezzanine; an approximately 88,000-gsf headhouse; an approximately 279,000-gsf multi-level basement below the drill hall; and an approximately 26,000 square feet (sf) of outdoor open space. The Armory is a New York City Landmark (NYCL) and was listed on the New York State and National Registers of Historic Places (S/NR).

The National Guard Site, located immediately north of the Armory Site, consisted of two free-standing National Guard buildings, with frontage on West 195th Street to the north. The buildings were constructed by the New York Army National Guard to expand operations at the Armory, and these buildings remained in use by the National Guard at the time of the Phase I ESA. The west building was a one-story garage and storage space constructed between 1951 and 1954. The two-story east building was built in 1958 and contained classrooms, administrative offices, lockers, and storage rooms. The National Guard Site included landscaped areas and parking.

The Subject Property location is shown on **Figure 1**, a Subject Property detail map is shown on **Figure 2**, and annotated floor plans for the Armory building are shown on **Figures 3A through 3D**.

This Phase I ESA was conducted in conformance with ASTM International (ASTM) Standard E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Any exceptions to, or deletions from, the Standard are described in Section 7.0. The term "Recognized Environmental Condition" (REC) means: (1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historical REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as a condition that does not present a threat to human health or the environment and that generally would not be subject to enforcement action if brought to the attention of appropriate government agencies.

A Tier 1 Encroachment Screen was also conducted in accordance with ASTM Standard E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.* The term "Vapor Encroachment Condition" (VEC) means the presence or likely presence of vapors from chemicals of concern (COC) in the subsurface of a property caused by the release of vapors on or near the property.

A summary of the assessment findings is presented below:

Recognized Environmental Conditions (RECs)/Vapor Encroachment Conditions (VECs)

- Two unlisted 275-gallon ASTs were observed on the Armory's basement level. Both tanks may have previously contained fuel but appeared to be empty at the time of reconnaissance. One tank was standing on its end, and one tank was tipped on its side. Staining was observed on the concrete floor under one of the tanks.
- Several 55-gallon drums observed in the western portion of the Armory basement garage were unlabeled, were either empty or filled with unknown substances, and displayed signs of deterioration, with rust and holes in some of the drums. In addition, two unlabeled, partially full 55-gallon drums with unknown contents were observed in the Armory Site's western parking lot along the exterior wall of the drill hall and exhibited signs of deterioration. One unlabeled, partially full 55-gallon drum with unknown contents was observed resting on its side in the western parking lot of the National Guard Site near Reservoir Avenue. The drum exhibited signs of corrosion, and a small puddle of liquid from an apparent leak was observed beneath it.
- Elevated levels of lead from spent munitions were detected during previous investigations in the two rifle ranges and four pistol ranges in the Armory basement. Waste classification samples were determined to contain leachable lead above 5 parts per million (ppm), exceeding the hazardous waste criteria for lead.
- Several Resource Conservation and Recovery Act (RCRA) hazardous waste activities were identified on the Subject Property. The Armory Site was identified as a non-generator of lead in 2012 and a historic large quantity generator (LQG) of lead in 2011 and 2012. A separate listing identified the Armory Site as a very small quantity generator (VSQG) in 2007 and a historic LQG, small quantity generator (SQG), and VSQG of lead in 2002, 2001, and 2006 to 2007, respectively. The NYS Department of Military and Naval Affairs was also identified on the Subject Property as a non-generator of unspecified ignitable waste in 2007, a historic non-generator in 1995, 1999, 2006, 2007, and a historic LQG from 1985 to 1986.
- The Subject Property is listed in the NY MANIFEST database for the shipment of 4,195 pounds and 923 gallons of ignitable waste and 2,195 pounds of spent halogenated solvents. These listings indicate historic generators of hazardous waste, which have some potential to have affected the Subject Property and are considered RECs/VECs.
- Sump pits were observed in the southeast portion of the Armory building basement and on the National Guard Site in the east building basement boiler room and on the ground level of the west building. In addition, floor drains (possibly dry wells) were observed in the east National Guard building basement. The sumps and possible dry wells have the potential to have affected the Subject Property subsurface.
- Adjacent and nearby properties were identified in the regulatory databases, historical Sanborn maps City Directory listings, and during site reconnaissance with some potential to affect the Subject Property subsurface, including former and/or current automotive uses, commercial uses, and dry cleaners.
- The National Guard Site was listed in the Petroleum Bulk Storage (PBS) database with the following five underground storage tanks (USTs) associated with PBS Facility ID: 2-392014: one closed/removed 3,000-gallon diesel UST installed by 1988 and closed in September 1993; one closed/removed 2,000-gallon gasoline UST installed by 1988 and closed in September 1993; one closed/removed 2,000-gallon No. 2 fuel oil UST with an unspecified installation date and closed sometime after August 2003; one closed/removed 8,000-gallon No. 2 fuel oil UST with an unspecified installation date and closed in January 1999; and one

closed/removed 225-gallon gasoline UST installed by October 1996 and closed in May 1995. However, while these USTs are listed as closed/removed in the PBS database, two abandoned USTs were discovered in the western parking lot on the National Guard Site during the 2007 Phase II Environmental Site Assessment by TRC. These USTs were suspected to be the 3,000- and 2,000-gallon USTs closed in 1993. Given the conflicting information on the status of the historic USTs on the National Guard Site, it is possible the tanks were not closed and removed properly, potentially affecting the Subject Property subsurface.

- The National Guard Site was listed in the PBS database with the following two above-ground storage tanks (ASTs) associated with PBS Facility ID: 2-392014: one closed/removed 225-gallon diesel AST with unspecified installation and closure dates and one unregulated/closed 275-gallon diesel AST with unspecified installation and closure dates. It is possible the tanks were not closed and removed properly, potentially affecting the Subject Property subsurface.

Historic RECs (HRECs)

- The Subject Property was listed in the New York State Spills Information Database (NY SPILLS) and Leaking Underground Storage Tanks (LTANKs) database with the following closed-status spills:
    - Spill No. 8802461 was reported at 29 West Kingsbridge Road (the Armory Site) in June 1988 due to tank test failure. This No. 2 fuel oil spill was closed in August 2008 after confirmation that no contamination resulted from the spill and that the tank would be removed.
    - Spill No. 9211568 was reported at 29 West Kingsbridge Road (the Armory Site) in January 1993 due to a tank failure. This gasoline spill was administratively consolidated under Spill No. 9308016, which was assigned in October 1993 and identified as a diesel spill. Spill No. 9308016 was ultimately closed in March 2005. According to the listing details, soil contamination was discovered during a tank pull, but the location of the spill on the Subject Property was not provided. The spill was closed in June 2008 after site representatives confirmed the contaminated soil was removed, with NYSDEC noting that the original spill had been subject to natural attenuation for approximately 16 years and had no known adverse impacts to the public.

Business Environmental Risks (BERs)

- Historical on-site military operations at the Subject Property are considered BERs.
- Based on the age of the Subject Property buildings and observations during reconnaissance, as well as findings of previous environmental surveys, asbestos-containing materials (ACM), polychlorinated biphenyls (PCBs), and lead-based paint (LBP) are present within building material, debris, and/or in buried fill materials at the Subject Property and constitute a BER.
- The elevator machine room in the east National Guard building basement contained an approximately 10-gallon, 32-grade hydraulic oil reservoir tank. No staining or leaks were noted in connection with the tank. The elevator was installed in 2022, and there was no previous elevator on-site.
- A generator with an associated 5-gallon fuel tank was observed in a free-standing generator room on the Armory drill hall floor; no evidence of leaks was observed near the generator or its fuel tank.

- Deteriorated mechanical equipment at the Armory building may contain residual fluids, such as petroleum based fluids or fluids containing hazardous materials.
- Extensive water damage was observed throughout the Armory building.
- Animal/bird carcasses and excreta were present in much of the mezzanine and second levels of the Armory headhouse.

De Minimis Conditions

- Small containers of paint, cleaning supplies, and gas associated with building maintenance and groundskeeping activities were present at the Subject Property.
- Approximately 100 five-gallon buckets of graffiti remover and paint were observed in storage room S4 in the southeast portion of the Armory building basement mezzanine.
- Various 55-gallon drums were observed in the eastern portion of the Armory's basement garage were labelled as non-hazardous purged groundwater from a previous subsurface investigation by Langan Engineers and did not show any obvious signs of leakage or breeching.

Summary of Significant Data Gaps

No Significant Data Gaps (as defined in Section 3.2.78 of ASTM Standard E1527-21) were identified as part of the assessment.

Recommendations

Environmental

- A June 7, 2013, Phase II investigation report prepared by Langan Engineering & Environmental Services, P.C. (Langan) was submitted to New York City Department of Environmental Protection (NYCDEP) for a previous proposed development. NYCDEP issued comments on the report, stating that a Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP) would be required for NYCDEP approval prior to any soil disturbance. At that time, NYCDEP required that the RAP and CHASP include provisions for installation of a vapor barrier and a sub-slab depressurization system (SSDS) to mitigate potential vapor intrusion, as well as other environmental requirements related to soil management, dewatering, clean soil cap, environmental monitoring, and management of any encountered USTs.
- A Phase II investigation (i.e., soil, groundwater, and/or soil vapor sampling) under a NYCDEP-approved Work Plan may be warranted on the National Guard Site and possibly in areas of proposed excavation at the Armory Site. If excavation is required in the course of redevelopment, gridded in-situ characterization sampling of soil/fill to be excavated and disposed of will be required as a pre-construction task to obtain disposal facility acceptance prior to the start of any excavation/disposal activities.
- If dewatering is required during potential future construction activities, water must be discharged in accordance with NYCDEP requirements.
- The drum at the National Guard Site and the ASTs and drums found throughout the Armory Site should be removed, handled, and disposed of in accordance with applicable regulations. The 55-gallon drums observed on the Subject Property contain unknown materials and should be inventoried, and waste profile samples should be collected from each drum to determine the appropriate method(s) for disposal. The remaining contents (if any) within the two ASTs

present in the Armory Site should be emptied and properly disposed of. ASTs were not observed at the National Guard Site.

- Soil, debris, and/or dust containing elevated lead levels from the rifle and pistol ranges on the Armory Site should be removed, handled, and disposed of in accordance with applicable regulations. Additional sampling/surveying may be warranted to quantify affected areas/materials. Evidence of firing ranges was not observed at the National Guard Site.
- All deteriorating mechanical equipment in the Armory building and mechanical equipment in the National Guard Site slated for demolition/removal should be evaluated to determine if they contain any fluids, including petroleum and/or hazardous substances. Based upon the results of the evaluation, the equipment should be removed and properly disposed of.
- Graffiti remover observed in a storage room in the southeast portion of the Armory building basement mezzanine should be stored within secondary containment pallets to contain any accidental releases or should be removed and appropriately disposed of.

Asbestos, Lead Paint, Universal Waste, and PCB Caulk

- Depending on how the proposed redevelopment of the Subject Property compares to previous development plans, additional ACM testing of materials to be disturbed by renovations to the Armory building may be warranted. Prior to demolition, an ACM survey of the National Guard buildings should be conducted. Asbestos sampling must be performed by a NYC-certified asbestos investigator to determine whether the scope of work would disturb ACM. Any such ACM must be removed prior to the renovation or demolition activities at the Subject Property.
- Any activities at the Subject Property (including interior renovations, demolition, etc.) with the potential to disturb LBP or paint containing any detectable level of lead must be conducted in accordance with applicable regulatory agency requirements [e.g., United States Occupational Safety and Health Administration (USOSHA)]. If uses of the Armory building include residential or child-occupied facilities, additional regulations should be followed.
- Disposal of affected suspect mercury-containing or suspect PCB-containing equipment at the Subject Property would be conducted in accordance with applicable regulatory requirements. Additional PCB caulk sampling may be necessary in the Armory and National Guard buildings for identification and delineation purposes.
- Unless there is labeling or test data that indicates that fluorescent lights, hydraulic equipment, and other electrical equipment are not mercury- and/or PCB-containing, any disposal of these components from the Subject Property should be conducted in accordance with applicable federal, state, and local regulations and guidelines.
- Trash and debris present throughout the Armory building should be evaluated to determine its proper disposal, as it may contain hazardous substances. No trash or debris were observed at the National Guard Site.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by the New York City Economic Development Corporation (EDC; the User and Client) to prepare a Phase I Environmental Site Assessment (ESA) for the Kingsbridge Armory Redevelopment property consisting of the Kingsbridge Armory (the Armory Site) at 1 West Kingsbridge Road in the Bronx, NY 10468 (Tax Block 3247, Lot 10) and the National Guard Site at 10 West 195th Street in the Bronx, NY 10468 (Tax Block 3247, Lot 2) (collectively, the "Subject Property").

The Armory Site and the National Guard Site occupied the entire block bounded by West Kingsbridge Road to the south, Reservoir Avenue to the west, Jerome Avenue to the east, and West 195th Street to the north, with the Armory Site occupying most of the south side of the Subject Property and the National Guard Site occupying the north side of the Subject property, with frontage on West 195th Street.

The vacant former Armory building was constructed circa 1912 to 1917 and included an approximately 180,000-gross-square-foot (gsf) column-free drill hall with an approximately 103-foot-tall ceiling and an approximately 20,000-gsf balcony mezzanine; an approximately 88,000-gsf headhouse; approximately 279,000-gsf contained in two basement levels below the drill hall; and approximately 26,000 sf of outdoor open space, including parking and landscaped areas. The Armory is a New York City Landmark (NYCL) and was listed on the New York State and National Registers of Historic Places (S/NR).

The National Guard Site, located immediately north of the Armory Site, consisted of two free-standing National Guard buildings. The buildings were constructed by the New York Army National Guard to expand the operations of the Armory and remained in use by the National Guard at the time of the Phase I ESA. The west building was a one-story garage and storage space constructed between 1951 and 1954. The two-story east building was built in 1958 and contained classrooms, administrative offices, lockers, and storage rooms. The National Guard Site included landscaped areas and parking.

The Subject Property location is shown on **Figure 1**, a Subject Property detail map is shown on **Figure 2**, and annotated floor plans for the Armory building are shown on **Figures 3A through 3D**.

The purpose of this Phase I ESA is to identify, to the extent feasible pursuant to the processes described herein, *Recognized Environmental Conditions* (RECs) in connection with the Subject Property.

It is AKRF's understanding that NYCEDC is leading a collaborative process to redevelop the Subject Property. the redevelopment plans include the adaptive reuse of the vacant Armory building with up to approximately 730,226 gsf of new uses, including a mix of new commercial, community facility, and light industrial uses and the redevelopment of the National Guard Site with a new residential building (up to approximately 497,000 gsf) containing 500 new permanently affordable dwelling units (DUs). Limited ground disturbance is contemplated on the Armory property.

This assessment was conducted in conformance with ASTM Standard E1527-21 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process)* and also incorporates the requirements of ASTM Standard E2600-15 (*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*). Any exceptions to, or deletions from, the Standards are described in Section 7.0. The scope included the following:

- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor, and/or groundwater) within, from, and onto the Subject Property.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical land use maps for the Subject Property and nearby sites were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Subject Property and other properties within the ASTM-defined radii: the National Priority List (NPL); Superfund Enterprise Management System (SEMS), including Superfund Enterprise Management System Archive (SEMS-ARCHIVE); Comprehensive Environmental Response, Compensation, and Liability Information System-No Further Remedial Action Planned (CERCLIS-NFRAP); Corrective Actions Report (CORRACTS); Resource Conservation and Recovery Information System (RCRIS); and Emergency Response Notification System (ERNS). Federal ASTM supplemental records reviewed included: Toxic Chemical Release Inventory System (TRIS); Superfund Consent Decrees (CONSENT); Records of Decision (ROD); National Priority List Deletions (Delisted NPL); and United States Brownfields.
- The following state regulatory databases were reviewed to determine the regulatory status of the Subject Property and other properties within a predetermined radii: petroleum and hazardous material spills (SPILLS); Leaking Underground Storage Tanks (LTANKs); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Waste Disposal Site Inventory (HSWDS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program (ERP); Voluntary Cleanup Program (VCP); New York Brownfield Cleanup Program (BCP); and Environmental Data Resources, Inc. (EDR) High Risk Historical Records including US Historic Auto Station Listings, Historic Cleaners, and Manufactured Gas Plant (MGP) Sites.
- Local agency reviews, including online Buildings and Finance Department records and City Environmental Quality Review (CEQR) E-Designation sites, were conducted for the Subject Property only.

1.1 Selected Definitions

The following terms are used throughout this report and, for the purpose of clarity, corresponding definitions are provided. These terms are fully defined in ASTM E1527-21 and ASTM E2600-15.

- *Recognized Environmental Condition (REC)*—(1) The presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment.
- *Controlled Recognized Environmental Condition (CREC)*—A REC affecting the Subject Property that has been addressed to the satisfaction of the applicable

regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

- *Historical Recognized Environmental Condition (HREC)*—A previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meets unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the Subject Property to any controls (for example, activity and use limitations or other property use limitations).
- *Significant Data Gap*—A data gap that affects the ability of the environmental professional to identify a REC.
- *Vapor Encroachment Condition (VEC)*—The presence or likely presence of chemical of concern vapors in the subsurface of a property caused by the release of vapors from contaminated soil, groundwater, or both, either on or near the property.
- *Business Environmental Risk (BER)*—A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel.
- *De Minimis Condition*—A condition that does not present a threat to human health or the environment and that generally would not be subject to enforcement action if brought to the attention of appropriate government agencies.

2.0 PHYSICAL SITE DESCRIPTION

On September 6, 2024, Thomas Giordano and Gregory Baird of AKRF conducted a reconnaissance of the Armory Site (Block 3247, Lot 10) portion of the Subject Property. Armory personnel accompanied AKRF, including Site Manager, Mr. Carl Gregg of EDC, who answered pertinent questions throughout the reconnaissance. Properties neighboring the Subject Property were also viewed, but only from public rights-of-way. During the September 6, 2024 site visit, the weather was partly cloudy and approximately 59-79 °F and the visibility good. The Armory building did not have power during the inspection, and therefore, interior spaces were illuminated via natural light sources and flashlights.

On October 9, 2024, Thomas Giordano and Gregory Baird of AKRF returned to the Subject Property to conduct a reconnaissance of National Guard Site (Block 3247, Lot 2). Site personnel accompanied AKRF, including maintenance employee, Yovannie Alcantara, who answered pertinent questions throughout the reconnaissance. During the October 9, 2024, site visit, the weather was mostly sunny and approximately 51-66 °F, the visibility good, and the premises adequately illuminated.

Photographs from both days of the reconnaissance are included in **Appendix A**.

2.1 Adjacent Land Use

The Subject Property was bounded to the north by West 195th Street followed by schools; to the west by Reservoir Avenue followed by residential buildings, commercial uses, and a church; to the south by West Kingsbridge Road followed by commercial uses; and to the east by Jerome Avenue and an elevated portion of No. 4 Metropolitan Transit Authority (MTW) subway tracks followed by residential and commercial buildings and schools.

2.2 General Subject Property Description

Armory Site (Block 3247, Lot 10)

At the time of the reconnaissance, the approximately 245,612-square-foot (5.6-acre) Armory Site portion of the Subject Property (Block 3247, Lot 10) comprised a vacant former Armory building in the southern portion of the Subject Property, landscaped areas along the southern and southwestern perimeters, and a paved area at the western perimeter for parking, a security booth, and access to the Armory building drill hall. The eastern portion of the Armory building abutted the western Jerome Avenue sidewalk. The National Guard Site was located immediately north-adjacent to the Armory Site.

At the time of reconnaissance, the Armory Site was surrounded by security fencing, and Site management provided access via a security gate along Reservoir Avenue. The Armory building was entered via overhead doors at the western end of the drill hall. All other gates to the property and Armory building entrances were locked at the time of reconnaissance, including the headhouse main entrance to the south at the intersection of West Kingsbridge Road and Davidson Road, the eastern headhouse entrance along Jerome Avenue, and the basement garage entrance to the north with a driveway leading between the National Guard buildings to West 195th Street.

The Armory building was constructed of brick and stone masonry, with metal trusses supporting the drill hall roof. Observed interior finishing materials generally included poured concrete slabs, vinyl floor tile, wood flooring, plaster walls and ceilings, and drop-ceilings. Building materials appeared to be in fair to poor condition, with debris and evidence of water damage observed throughout the headhouse and basement levels.

Drill Hall

The Armory building included a large column-free drill hall with masonry walls, a concrete floor, and an approximately 103-foot-high roof supported by metal trusses. The periphery of the drill hall was cordoned off for storage of miscellaneous supplies, boxes, and wood pallets. Four acetylene cylinders were observed near the northwest corner of the hall floor and another acetylene cylinder was observed near the southeast corner of the hall floor. Near the northeast corner of the hall, a free-standing electrical room contained a dry-type transformer, and an attached room contained a generator with an associated 5-gallon fuel tank; no evidence of leaks was observed near the transformer, generator, or fuel tank. Another free-standing structure was observed at the eastern end of the hall, with six inaccessible maintenance garage bays and attached parts and part-cleaning rooms. The parts-cleaning room contained a 5-gallon neutralization tank under a slop sink.

Viewing balconies were located above the northern and southern edges of the drill hall and were connected by a catwalk along the eastern end of the hall. The balcony level was accessible via stairs from the drill hall floor, as well as the mezzanine level along the southern portion of the hall. A total of 79 ballasts for lighting (labelled as mercury-containing) were observed on the walls along both sides of the balcony level and were suspected to also contain PCBs. Radiators were also observed along the railings of both sides of the balcony and mezzanine.

The headhouse was accessible from the drill hall at the ground-level and mezzanine-level along the southern portion of the hall, and stairs at the northeast and southeast corners of the hall led to the basement mezzanine and basement levels.

The drill hall glass and metal roof was supported by a series of metal trusses and overlaid with asphalt rolled roofing, which appeared to be lifting/puckering in places but otherwise appeared to be in good condition.

Headhouse and Towers

The above-grade portions of the headhouse comprised three levels (first floor, mezzanine level, and second floor) consisting of a central ground level-lobby, stairwells, hallways, and various company rooms, including living quarters, office/administrative spaces, and dining and entertainment rooms (a library, bar, and sitting rooms). Peeling paint and suspected mold were observed throughout the headhouse, and animal/bird carcasses and excreta were present in much of the mezzanine and second levels. Deteriorating pipe insulation and floor tile were observed throughout much of the headhouse. Overhead fluorescent lights with attached ballasts were observed throughout the headhouse and could potentially contain mercury and PCBs. Radiators were present along walls throughout the company rooms. Trash and debris were also present in many of the company rooms. Rooms in the two towers and several of the living quarters in the headhouse could not be accessed due to excessive debris and structural concerns for the stairs and floors. AKRF inspected sufficient representative living quarters in the headhouse for the purposes of this Phase I ESA.

The headhouse parapet roof consisted of asphalt rolled roofing and appeared to be in good condition.

Basement, Basement Mezzanine, and Sub-Basement

The full basement and basement mezzanine levels included company rooms, storage rooms, locker rooms, workshops, offices, a theater and lecture hall, a former gymnasium and basketball court, a former bowling alley, rifle and pistol ranges, and a basement

garage. The eastern portion of the basement mezzanine had previously been renovated to serve as a women's shelter but was not being used at the time of reconnaissance.

On the basement mezzanine level, a deteriorating heating, ventilation, and cooling (HVAC) equipment and mechanical room was observed in room B-28, located west-adjacent to the theater. Also on the basement mezzanine level, approximately 100 five-gallon buckets of graffiti remover and paint were observed in storage room S4 in the southeast corner of the building. The boiler room (CS-7) in the sub-basement was not accessible due to flooding and, according to the Site Manager, it was non-operational.

On the basement level, an electrical room was observed between rooms C-20 and C-21 near the theater. Two rifle ranges and four pistol ranges were observed in the eastern portion of the basement level. Flooring in the majority of each range was earthen. No spent munitions were observed; however, access to the back end of the ranges was not possible without additional PPE (boot covers).

Evidence of previous intrusive studies were encountered in the basement, including several test pits (roughly 4-feet wide by 4-feet deep) in the basement garage; no staining, sheens, or odors were observed in the test pits. Excavated material remained stockpiled near the test pits. In addition, several permanent and temporary groundwater monitoring wells were observed in the basement garage and were believed to be associated with a previous subsurface investigation by Langan Engineering & Environmental Services, P.C. (Langan). Several 55-gallon drums observed in the eastern portion of the basement garage were labelled as non-hazardous purged groundwater from the investigation by Langan and did not show any obvious signs of leakage or breeching.

Additional drums observed in the western portion of the basement garage were unlabeled, were either empty or filled with unknown substances, and displayed signs of deterioration, with rust and holes in some of the drums. Two 275-gallon above-ground storage tanks (ASTs) were observed on the basement level between the theater and former bowling alley. Both tanks may have previously contained fuel but were empty at the time of reconnaissance. One AST was on its side, and it was not clear whether the tanks had been relocated from their original locations. No obvious signs of leaks were observed around the ASTs.

Standing water was observed within a sump pit in the southeast portion of the basement and within an open hatch in the garage adjacent to the northeast corner of the theatre room. In addition, as observed from the sub-basement stairwell in the southwestern corner of the Armory building, the boiler room (CS-7) was flooded, and water was heard pouring into the inaccessible sub-basement out of view. No staining, floating petroleum product, or sheens indicative of a material release were noted in the accessible areas in connection with the sump, other drainage structures, or the flooded boiler room.

Exterior

Several permanent flush-mount groundwater monitoring wells were observed in the on-site parking lot west of the Armory building, and another permanent flush-mount groundwater monitoring well was observed in the grassy area near the southwestern corner of the Armory building. In addition, rat traps were observed on the grounds outside the Armory building. Two unlabeled, partially full 55-gallon drums with unknown contents were observed in the Armory Site's western parking lot along the exterior wall of the drill hall. The drums exhibited signs of deterioration, but there were no visible signs of leaks or staining.

National Guard Site (Block 3247, Lot 2)

At the time of the reconnaissance, the approximately 50,537-square-foot (1.2-acre) National Guard Site portion of the Subject Property (Block 3247, Lot 2) comprised two annex buildings, with landscaped areas in a central courtyard between the buildings, as well as on the eastern portion of the property near the intersection of West 195th Street and Jerome Avenue, and a paved parking lot in the western portion of the property near the intersection of West 195th Street and Reservoir Avenue. A driveway from West 195th Street ran through the central courtyard between the two buildings to the Armory building basement garage to the south. The National Guard Site was surrounded by security fencing and abutted the northern face of the Armory building to the south. The site was accessed via a security gate at the central courtyard and also had vehicle access to the western parking lot along West 195th Street. Maintenance personnel stated that the two National Guard buildings had recently been renovated and freshly painted.

East Building

The east National Guard building was a two-story concrete and brick structure that housed the State Armory National Guard Recruiting office and the 258th Field Artillery Unit. Interior finishes included painted concrete block walls, drywall walls, suspended ceiling tiles, painted concrete floors, and terrazzo and vinyl floor tiles. The first and second floors consisted of offices, classrooms, bathrooms, locker rooms, a gym, and a janitor's closet with a slop sink. The full basement contained a boiler room, five storage rooms, an elevator mechanical room, and an inaccessible communications room. The boiler room housed a 100-gallon natural gas-fired water heater, a natural gas boiler, a slop sink, and a sump pit. No floating petroleum product or sheens indicative of a material release were noted in connection with the sump; however, an unknown white liquid stain was present on the sump pit metal cover. Floor drains were also noted throughout the basement, and maintenance personnel could not confirm whether the drains were connected to the NYC sewer. Of the storage rooms, three contained empty metal shelving units, one was partially full of maintenance and cleaning supplies, and one used to store National Guard gear was inaccessible.

A hydraulic elevator serviced the building's courtyard entrance and first and second floors. Maintenance personnel noted that the elevator was recently installed (a placard indicated it was installed in 2022) and that there was no previous elevator. The elevator machine room contained an approximately 10-gallon, 32-grade hydraulic oil reservoir tank. No staining or leaks were noted in connection with the tank. The building was heated via steam radiators and cooled with split units with roof mounted condensers. The east building was originally connected to the south-adjacent Armory drill hall via a skybridge, but the entrance had been walled off at the time of reconnaissance.

The east building roof consisted of rolled roofing with underlying insulation, which appeared to be in good condition.

West Building

The west National Guard building was a single-story slab-on-grade concrete and brick structure used for storage by the National Guard. Overhead doors were present along West 195th Street and at the western end of the building near the parking lot. The boiler room, which was accessible from the central courtyard, contained a natural gas boiler and booster pumps. The eastern end of the building stored office furniture, and the western end of the building housed restrooms, storage cages for National Guard gear, and a free-standing metal vault. Due to security concerns, the inspectors were restricted from viewing

inside the vault and from photographing the contents of the storage cages. Gas-powered maintenance equipment, including multiple snow blowers, were stored in the western portion of the building, along with miscellaneous cleaning supplies. Five-gallon gasoline containers were stored in a flammables locker at the west end of the building, and there was no visible evidence of spills. A sump pit and electric water heater were present at the western end of the building. No floating petroleum product or sheens indicative of a material release were noted in connection with the sump. The building was heated via steam radiators and cooled with split units with condensers located in the central courtyard.

The west building roof was not accessible at the time of reconnaissance.

Exterior

The western National Guard parking lot was occupied with personnel's vehicles, dumpsters, and an empty roll-off container. Rat traps and an unlabeled, partially full 55-gallon drum with unknown contents were observed in the western parking lot near Reservoir Avenue. The drum was resting on its side on a wooden pallet and exhibited signs of corrosion, and a small puddle of liquid from an apparent leak was observed beneath it. An approximately 6-inch-diameter unknown pipe was observed leading from the central courtyard near the west National Guard building to the Armory building to the south. The National Guard maintenance personnel had no knowledge of current or historic on-site tanks.

As noted above, some of the areas on the Subject Property were inaccessible during the reconnaissance. Inaccessible areas are discussed further in Section 7.0.

Surrounding Area

Residential properties were observed to the northwest of the Subject Property along Reservoir Avenue, with commercial uses to the west along Reservoir Avenue and to the south along West Kingsbridge Road. Commercial and residential uses were observed to the east along Jerome Avenue, along with two schools to the northeast: Kipp Affirm Elementary and Middle Schools at 2720 Jerome Avenue. Two additional schools were located immediately north of the Subject Property: Public School (PS) 86 The Kingsbridge Heights School at 2756 Reservoir Avenue and PS 340 at 25 West 195th Street. A church was observed immediately to the west-southwest at 2705 Reservoir Avenue. An elevated portion of the No. 4 Metropolitan Transportation Authority (MTA) subway tracks ran above Jerome Avenue to the east, with the elevated Kingsbridge Road station located to the southeast of the Subject Property at the corner of Kingsbridge Road and Jerome Avenue.

During the reconnaissance, several dry cleaners were observed in the vicinity of the Subject Property: All Day Cleaners approximately 450 feet to the west at 101 West Kingsbridge Road; Riteway Cleaners approximately 200 feet to the Southwest at 62 West Kingsbridge Road; and Giant Sams Laundromat approximately 250 feet to the northeast at 2734 Jerome Avenue. An auto repair shop, Armory Auto Parts & Repair Inc., was observed approximately 100 feet west of the Subject Property at 2717 Reservoir Avenue, Bronx, NY 10468.

The reconnaissance included noting whether the following items were present and their general condition:

Strong, Pungent, or Noxious Odors

No strong, pungent, or noxious odors indicative of a material release were observed at the Subject Property. During the September 6, 2024, reconnaissance of the Armory building, inspectors wore respirators with combination particulates and volatile organic compounds (VOCs) cartridges while inspecting the headhouse and basement, which limited olfactory observations in these spaces.

Standing Surface Water and Pools or Sumps Containing Liquid

Standing water was observed within a sump pit in the basement of the Armory and within an open hatch in the basement garage adjacent to the northeast corner of the theatre room. In addition, as observed from the sub-basement stairwell in the southwestern corner of the Armory building, the boiler room (CS-7) was flooded, and water was heard pouring into the sub-basement out of view. No staining, floating petroleum product, or sheens indicative of a material release were noted in connection with the sump, other drainage structures, or the flooded boiler room. Evidence of water leaks were observed on floors, walls, and ceilings throughout the Armory building.

At the National Guard Site, water was observed in the sumps in the east building basement boiler room and in the west building. No staining, floating petroleum product, or sheens indicative of a material release were noted in connection with the sumps. No standing surface water or pools were observed at the National Guard Site.

Pits, Ponds, and Lagoons

At the Armory Site, several test pits (roughly 4-feet wide by 4-feet deep) were observed in the basement garage (associated with a previous intrusive study); no staining, sheens, or odors were observed in the test pits. The excavated material remained stockpiled near the pits.

No pits, ponds, or lagoons were observed at the National Guard Site.

Storage Containers or Drums

At the Armory Site, several 55-gallon drums were observed in the basement. Several drums in the eastern portion of the basement garage were labelled as non-hazardous purged groundwater from a previous subsurface investigation by Langan and did not show any obvious signs of leakage or breeching. Additional drums in the western portion of the basement garage were unlabeled, were either empty or filled with unknown substances, and displayed signs of deterioration, with rust and holes in some of the drums. In addition, two unlabeled, partially full 55-gallon drums with unknown contents were observed in the Armory Site's western parking lot along the exterior wall of the drill hall, and these drums exhibited signs of deterioration.

Approximately 100 5-gallon buckets of graffiti remover and paint were observed in storage room S4 in the southeast corner of the Armory building basement mezzanine. In addition, small, scattered storage containers of paints and cleaning products were present throughout the Armory building. No evidence of a release was observed in connection with these containers.

At the National Guard Site, small storage containers of paints and household cleaning products, were present in the east building basement and western portion

of the west building, and 5-gallon gasoline containers were stored in a flammables locker at the west end of the west building. No evidence of a release was observed in connection with the containers. An unlabeled partially full 55-gallon drum with unknown contents was observed in the western parking lot near Reservoir Avenue. The drum was resting on its side on a wooden pallet and exhibited signs of corrosion, and a small puddle of liquid from an apparent leak was observed beneath it.

Deteriorated mechanical equipment throughout the Armory building may contain residual fluids, such as petroleum based fluids or fluids containing hazardous materials.

Stained Soil or Pavement, Stressed Vegetation

No evidence of stained soil or vegetative stress was observed at the Subject Property. Stained concrete was observed in the basement of the Armory, adjacent to a tipped-over 275-gallon AST. The AST may have previously contained fuel oil. In the western parking lot of the National Guard Site, a small puddle of liquid was observed beneath a tipped-over 55-gallon drum with unknown contents.

Wells (including dry wells, irrigation wells, injection wells, monitoring wells, abandoned wells, or other wells)

At the Armory Site, several permanent and temporary groundwater monitoring wells were observed in the basement garage and were believed to be associated with a previous subsurface investigation by Langan. In addition, several permanent groundwater monitoring wells were observed in the on-site parking lot west of the Armory building and another permanent groundwater monitoring well was observed in the grassy area near the southwestern corner of the Armory building.

Floor drains (possibly dry wells) were observed throughout the east National Guard building basement. No other wells were observed at the National Guard Site.

Septic Systems or Cesspools

No evidence of septic systems or cesspools was observed at the Subject Property.

2.3 Topography and Hydrogeology

Based on the United States Geological Survey (USGS), Central Park, New York 2019 Quadrangle map, the Subject Property is approximately 135 feet above the North American Vertical Datum (NAVD) of 1988 (an approximation of mean sea level).

Groundwater flow is expected to be generally in a southwesterly direction towards the Harlem River based on the findings of the Phase II Supplemental Environmental Site Investigation Report, prepared by Langn on June 7, 2013 for the Armory Site (discussed further in Section 5.0). However, actual groundwater depth and flow direction may be influenced by other factors, including past pumping and/or subsurface obstructions such as building foundations, subway tunnels, and other utilities. Groundwater in the Bronx is not used as a source of potable water.

According to a review of the United States Department of Agriculture (USDA) Natural Resources Conservation Service Map, subsurface soil at the Subject Property consisted of urban land. The Subject Property was not located in an area that may be affected by tidal wetlands, freshwater wetlands, a Coastal Erosion Hazard Area, or a Special Flood Hazard Area.

2.4 Storage Tanks

2.4.1 Underground Storage Tanks (USTs)

No evidence of USTs was observed during reconnaissance of the Armory Site, and the PBS database yielded no UST results for the Armory Site.

The National Guard Site (10 West 195th Street) was listed in the PBS database with the following five USTs associated with PBS Facility ID: 2-392014:

- One closed/removed 3,000-gallon diesel UST installed before the earliest documented tightness test in 1988 and closed in September 1993.
- One closed/removed 2,000-gallon gasoline UST installed before the earliest documented tightness test in 1988 and closed in September 1993.
- One closed/removed 2,000-gallon No. 2 fuel oil UST with an unspecified installation date and a closure date sometime after a documented test date in August 2003.
- One closed/removed 8,000-gallon No. 2 fuel oil UST with an unspecified installation date and closure in January 1999.
- One closed/removed 225-gallon gasoline UST with an unspecified installation date and closure in May 1995.

Fire Department approval for a fuel oil system was noted for the National Guard Site in a 1968 Certificate of Occupancy (CO) in electronic computerized New York City Department of Buildings (NYCDOB) records. However, no evidence of USTs was observed during reconnaissance of the Subject Property.

The former USTs at the National Guard Site constitute a REC.

Off-site USTs and spills associated with Subject Property USTs are discussed in Section 3.2.2.

2.4.2 Aboveground Storage Tanks (ASTs)

Two unlisted 275-gallon ASTs were observed on the Armory's basement level between the theater and former bowling alley. Both tanks may have previously contained fuel but appeared to be empty at the time of reconnaissance. One tank was standing on its end, and one tank was tipped on its side. Staining was observed on the concrete floor under the tank which had been tipped on its side. Both tanks appeared to have been relocated from their original locations. In addition, a free-standing generator room within the Armory drill hall contained a generator with an associated 5-gallon fuel tank. No obvious signs of leaks were observed around the generator tank.

The National Guard Site (10 West 195th Street) was listed in the PBS database with the following two ASTs associated with PBS Facility ID: 2-392014:

- One closed/removed 225-gallon diesel AST with unspecified installation and closure dates.
- One unregulated/closed 275-gallon diesel AST with unspecified installation and closure dates.

The elevator machine room in the east National Guard building basement contained an approximately 10-gallon, 32-grade hydraulic oil reservoir tank. No

staining or leaks were noted in connection with the tank, and no other ASTs were observed during the reconnaissance of the National Guard buildings.

The fuel tank associated with the Armory generator and the former and current ASTs at the National Guard Site constitute a BER. The two overturned 275-gallon ASTs in the Armory basement constitute a REC, due to visual indications of a release (stained concrete under the tank which was tipped on its side).

Off-site ASTs are discussed in Section 3.2.2.

2.5 Polychlorinated Biphenyls (PCBs)

Until 1979, PCBs, which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Based on the ages of the Armory building (constructed circa 1913 to 1917) and the National Guard buildings (constructed circa 1958), typical building components and equipment, such as electrical equipment, caulk, hydraulic equipment, lighting fixtures, switches, thermostats and other equipment and materials may include PCB- or mercury-containing components.

As further detailed in Section 5.0, previous investigations identified suspect PCB lighting ballasts, lighting fixtures, and caulking and confirmed the presence of hazardous levels of PCBs in one caulking sample. The following suspect PCB-containing materials were observed during reconnaissance of the Armory building during this Phase I ESA: a total of 79 mercury-containing ballasts for lighting on the walls along both sides of the drill hall balcony level, overhead fluorescent lights with attached ballasts throughout the headhouse, and caulking throughout the buildings.

The potential presence of PCBs in building material, debris, and/or in buried fill materials at the Subject Property constitutes a BER.

2.6 Lead-Based Paint (LBP)

LBP, which contains 0.5 percent (or greater) lead, was generally not used inside residential buildings after 1960 in NYC (after 1978 outside of NYC). LBP may still sometimes be used outdoors and for industrial applications. LBP can present a hazard, particularly to children, and especially when it is in poor condition.

Given the age of the Armory (constructed circa 1913 to 1917), LBP was suspected throughout the building. During reconnaissance, peeling and chipping suspect LBP was observed on interior walls and ceilings throughout the Armory building.

As further detailed in Section 5.0, previous lead paint surveys of the Armory building identified LBP on interior and exterior building components.

Based on the age of the National Guard buildings (constructed circa 1958), LBP was suspected throughout the buildings. During reconnaissance, paint in the National Guard building interiors was found to be in good condition and generally free of peeling and chipping.

The potential presence of LBP in building material, debris, and/or in buried fill materials at the Subject Property constitutes a BER.

Any activities (including interior renovations, demolition, etc.) with the potential to disturb LBP or paint containing any detectable level of lead must be conducted in accordance with applicable regulatory agency requirements [e.g., United States Occupational Safety and Health Administration (USOSHA)]. Additional regulations apply to residential and/or child-occupied facilities.

2.7 Utilities

According to the National Guard maintenance personnel, the Subject Property was connected to the NYC municipal water and sewer systems. The Armory building did not receive electricity at the time of the reconnaissance. Natural gas was provided to the Armory and the National Guard buildings by Con Edison. Electricity was provided to the Armory building by Con Edison and to the National Guard buildings by the New York Power Authority (NYPA).

2.8 Waste Management and Chemical Handling

According to maintenance personnel, general refuse and recyclables generated at the Subject Property buildings were removed by municipal waste haulers.

2.9 Radon

Radon is a colorless, odorless gas most commonly produced by the natural radioactive decay of certain rocks. The Subject Property was in USEPA Radon Zone 3, which corresponds to a predicted average indoor radon screening level less than 2 picocuries/liter (pCi/L). According to a New York State Department of Health (NYSDOH) database dated 2023, the average level of radon found in Bronx basements is 1.74 pCi/L and first floors is 1.14 pCi/L, below the USEPA recommended action level of 4 pCi/L.

2.10 Asbestos-Containing Material (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Materials containing more than one percent asbestos are considered ACM. Typical ACM includes: flooring, thermal system insulation, fireproofing, plaster, joint compound, ceiling tiles, roofing materials, waterproofing mastics, caulks, mortars, vermiculite, and other building materials. ACM is classified as either friable (i.e., more readily release fibers, such as spray-applied fireproofing or pipe insulation) or non-friable (such as floor tiles and roofing materials).

As further detailed in Section 5.0, previous asbestos surveys of the Armory Building identified ACM pipe and pipe fitting/joint insulation, wire wrap insulation, debris, roofing and flashing materials, flooring materials (including linoleum, terrazzo, and floor tile flooring and associated mastics, grout, and mortar), plaster walls and ceilings, cove base and adhesive, wall panel glue, mirror glue, window glazing, exterior and interior caulking, façade mastic, duct vibration cloth, tank mastic, an electric transite switch panel, tank mastics, and exterior joint, seam, and crack fill materials.

During reconnaissance, suspect ACM was observed throughout the interior of the Armory building in significantly damaged condition. Suspect ACM observed throughout the National Guard Site was in good condition. Additional suspect ACM may be present above ceilings, in pipe chases, behind walls, below grade, or in other hidden or inaccessible areas.

The potential presence of ACM building materials, debris, and/or in buried fill materials at the Subject Property constitutes a BER.

Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintaining the material in good condition and, prior to any renovation or demolition, inspection and sampling by an NYC-certified asbestos investigator to determine if the scope of work will disturb ACM. Any such ACM must be removed prior to the renovation or demolition.

The reconnaissance for this Phase I ESA did not constitute and cannot substitute for an asbestos survey, which includes inspection and material sampling by a certified individual, and laboratory analysis.

2.11 Emerging Contaminants

Emerging contaminants are chemicals that are not yet listed on the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) hazardous substances list, but may be regulated under state law or are under review for future federal regulation or inclusion on the CERCLA hazardous substance list. Per- and polyfluoroalkyl substances (PFAS) are a class of chemicals found in fire-suppression foam, fire and stain retardants, water repellant materials, non-stick coatings, cosmetics and personal care products, and many other common products. PFAS may discharge to the environment through releases during manufacturing, wastewater discharges from industrial and commercial processes involving PFAS-containing products, or the use of fire-suppression foam during an emergency response. In April 2024, the USEPA finalized a rule designating two widely used PFAS compounds [perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS)] as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

Current and historical uses of the Subject Property and adjoining/surrounding properties were reviewed to identify potential sources of PFAS at or around the Subject Property. The regulatory agency database report was also reviewed to determine whether the Subject Property or any nearby facilities potentially used and/or stored fire suppression foam. In addition, representatives of the Subject Property were interviewed to obtain information related to historical fires at and around the Subject Property.

Interviews with site representatives and the review of historical documentation and regulatory agency database reports did not reveal evidence that PFAS or PFAS-containing products were used or handled at the Subject Property or the nearby surrounding properties. Furthermore, there is no record that a fire occurred at or nearby the Subject Property.

3.0 RECORDS REVIEW

3.1 Prior Ownership and Usage

3.1.1 Historical Land Use Maps

Historical maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage, or disposal on or near the Subject Property and surrounding properties. Specifically, Sanborn Fire Insurance Maps from 1896, 1900, 1914, 1945, 1950, 1977, 1978-1981, 1984, 1986, 1989, 1991-1993, 1995-1996, 1998, and 2001-2007 were reviewed. Copies of the maps are provided in **Appendix B**.

Year	Comments
1896-1900	**Subject Property:** The Subject Property was shown to be part of the southern portion of the Jerome Park Reservoir at Jerome Park. In 1896, the “Line of Old Croton Aqueduct” was depicted on the west side of the Property, along Reservoir Avenue. **Surrounding Properties:** The area to the north of the Subject Property was labeled Jerome Park. The areas to the south, east, and west were largely undeveloped, with only a few scattered two-story dwellings, as well as a reformed church and cemetery at the northwest corner of West Kingsbridge Road and Reservoir Avenue.
1914	**Subject Property:** The Subject Property was shown to include the Armory building in its current configuration, labeled as the 8th Coast Artillery, District N.G.N.Y. (National Guard New York) and identified as "in the course of construction". The roof over the drill hall was indicated to be constructed with steel trusses with asbestos on wood planking. A gate house to the Armory was depicted at the northeast corner of Reservoir Avenue and West Kingsbridge Road. **Surrounding Properties:** The area immediately north of the Subject Property, previously identified as Jerome Park was shown as vacant land.

Year	Comments
1945	**Subject Property:** The Subject Property was not depicted on this map. **Surrounding Properties:** Only the areas to the east and south of the Subject Property were shown on the 1945 map. These areas were developed with residential and commercial buildings with some undeveloped properties interspersed. An elevated train and subway station (Interborough Rapid Transit Co.) were shown immediately east-adjacent to the Subject Property along Jerome Avenue. A storage and auto repair facility was shown south-adjacent to the Subject Property, across Kingsbridge Road, at 36 Kingsbridge Road. An auto service was located east-adjacent to the subject Property, across Jerome Avenue, between 2702 and 2710 Jerome Avenue. Other commercial property uses near the Subject Property included upholsters, picture framing, and a movie theatre on the east-adjacent block; upholsters and a print shop on the southeast-adjacent block; and roofers, a substation, and a filling station and auto repair facility on the south-adjacent block.
1950	**Subject Property:** The gate house located on the southwest portion of the Armory was no longer depicted, and the Armory was shown as complete in its current configuration. In addition, the Subject Property was identified as Tax Block 3247. **Surrounding Properties:** West 195th Street was shown north of the Subject Property. A dry cleaner and machinery repair shop were located south-adjacent to the Subject Property, across Kingsbridge Road, at 44 and 36 Kingsbridge Road, respectively. The property north-adjacent to the Subject Property was depicted as Public School 86, and the area west of the Subject Property was developed as either residential or commercial properties. A garage with three 550-gallon USTs was depicted west-adjacent to the Subject Property at 2717 Reservoir Avenue. Mattress manufacturing and book binding were shown on the southeast-adjacent block.
1977-1981	**Subject Property:** The National Guard Site buildings were shown on the 1978 map in their current configuration, with the west building labeled Armory Garage and the east building labeled lockers (first floor) and classrooms (second floor). A note indicated that both buildings were constructed in 1958. **Surrounding Properties:** A dry cleaner and a print shop were noted on the east-adjacent block; a dry cleaner was noted on the southeast-adjacent block; a glass works was shown in the south-adjacent block; no other significant changes were noted since 1950.
1984-2007	**Subject Property:** No significant changes were noted since 1978. **Surrounding Properties:** Other than construction and removal of buildings at the north-adjacent school no significant changes were noted since 1981.

Note: In the 1945, 1977, 1979-1980, 1986 Sanborn maps, the Subject Property and areas west and north of the Subject Property were not mapped.

In summary, historical Sanborn maps indicated that Subject Property was shown to be part of the eastern portion of the Jerome Park Reservoir. The Armory building was developed in its current configuration by 1945, and the National Guard Site was developed in its current configuration by 1978. On-site military operations are considered BERs.

Sanborn maps identified the following historical automotive, commercial, and drycleaning uses in the surrounding area:

- An auto service was shown on Block 3317 approximately 200 feet east of the Subject Property by 1945 through at least 2007; a storage and auto repair facility was shown approximately 100 feet south of the Subject Property at 36 Kingsbridge Road by 1945 and was no longer shown by 1950; an auto repair facility was located approximately 150 feet south of the Subject Property at 2650 Davidson Avenue near West Kingsbridge Road by 1945 through at least 2007 with a filling station shown operating by 1945 through at least 1981; and a garage was operating approximately 100 feet west of the Subject Property at 2717 Reservoir Avenue by 1950 through at least 2007 with three 550-gallon USTs noted by 1950 through at least 1993.
- A machinery repair shop was located approximately 100 feet south of the Subject Property at 36 Kingsbridge Road by 1950 and, by 1977, a glass works was shown in its place through at least 1992; a print shop was shown approximately 200 feet southeast of the Subject Property at 2640 Jerome Avenue by 1945 through at least 1950; roofers were shown approximately 170 feet to the south at 2659 Jerome Avenue by 1945 through at least 1950; a machinery repair shop was shown approximately 100 feet south of the Subject Property at 36 Kingsbridge Road by 1950 and was not shown by 1977; and a print shop was shown approximately 200 feet northeast of the Subject Property at 2728 Jerome Avenue by 1977 through at least 1978.
- Dry cleaners were shown at the following locations: approximately 130 feet south of the Subject Property at 44 Kingsbridge Road by 1950 and was no longer shown by 1977; approximately 190 feet northeast of the Subject Property at 2726 Jerome Avenue by 1977 through at least 1981; and approximately 350 feet southeast of the Subject Property at 38 East Kingsbridge Road by 1977 through at least 2007.

These off-site automotive, commercial, and dry cleaning uses have the potential to have affected the Subject Property subsurface and are considered a REC.

3.1.2 Historical Aerial Photographs and Topographic Maps

Since historical fire insurance maps were available for the Subject Property (and surrounding area) and these maps included information relating to land use, historical aerial photographs and topographic maps would, most likely, not provide additional useful information relevant to the potential for RECs or other environmental concerns. As such, aerial photographs were not reviewed.

3.1.3 Tax Files and Zoning Records

Based on the NYC Department of City Planning's Zoning Map information, all buildings were zoned C4-4 (commercial). Tax parcel information provided by the

NYCDOB online Buildings Information System (BIS) indicated that both Subject Property lots are L landmark status, and the occupancy code for both Subject Property lots is Y4 – Military and Naval Installation.

3.1.4 Local Street Directories

A City Directory prepared by Environmental Data Resources, Inc. (EDR) was reviewed as part of this Phase I ESA. The City Directory consisted of the names of businesses located on-site and at adjacent properties, compiled from city and reverse telephone directories at approximately five-year intervals starting in 1927. A summary of the directory findings is as follows:

Year	Comments
1927	**Subject Property:** Not Listed **Surrounding Properties:** Residential and Commercial**:** Park View Tailor Clng & Dyeing Co. (2622 Jerome Avenue)
1931	**Subject Property:** Not Listed **Surrounding Properties:** Residential
1940	**Subject Property:** 258th Field Artillery Armory (29 Kingsbridge Road) **Surrounding Properties:** Residential and Commercial: Harlan Auto Service (2702 Jerome Avenue), Wilson & Newman Auto (2690 Jerome Avenue), Kingsbridge Road Cleaners & Tailor (52 Kingsbridge Road), Davidson Auto Laundry/Davidson Av Garage (2656 Davidson Avenue), Park View Cleaners New York (2622 Jerome Avenue); and Town Cleaners (2696 Jerome Avenue)
1949	**Subject Property:** Not Listed **Surrounding Properties:** Residentials and Commercial: Round the Clock Cleaners (2690 Jerome Avenue) and Harlan Auto Service (2702 Jerome Avenue)
1956	**Subject Property:** Not Listed **Surrounding Properties:** Residential and Commercial: Round the Clock Cleaners (2690 Jerome Avenue) and Harlan Auto Service (2702 Jerome Avenue)
1961	**Subject Property:** Not Listed **Surrounding Properties:** Residential and Commercial: Amy's Auto Service (2704 Jerome Avenue) and ALRittle Refrigeration Co. (14 Kingsbridge Road)
1965	**Subject Property:** Military Use (29 Kingsbridge Road) **Surrounding Properties:** Residential and Commercial: Amy's Auto Service (2704 Jerome Avenue), Crestmor Cleaners (61 Kingsbridge Road), and Davidson Ave Garage (2650 Davidson Avenue)

Year	Comments
1971	**Subject Property:** Not Listed **Surrounding Properties:** Residential and Commercial: Amy's Auto Service (2704 Jerome Avenue), A & A Auto Service (2650 Davidson Avenue), and Crestmor Cleaners (61 Kingsbridge Road)
1976	**Subject Property:** Not Listed **Surrounding Properties:** Residential and Commercial: Amy's Auto Service (2704 Jerome Avenue), A & A Auto Service (2650 Davidson Avenue), and Crestmor Cleaners (61 Kingsbridge Road)
1983	**Subject Property:** Not Listed **Surrounding Properties:** Residential and Commercial: A & A Auto Service (2650 Davidson Avenue) and T & D Auto Service (2704 Jerome Avenue)
1992	**Subject Property:** Not Listed **Surrounding Properties:** Residential and Commercial: A & A Auto Service (2650 Davidson Avenue), Mullahoran Auto Diagnostic Inc. (2704 Jerome Avenue), and Sandy Dry Cleaners (32 East Kingsbridge Road)
1993	**Subject Property:** Not Listed **Surrounding Properties:** Residential and Commercial: A & A Auto Service (2650 Davidson Avenue) and Mullahoran Auto Diagnostic Inc. (2704 Jerome Avenue)
1995	**Subject Property:** Not Listed **Surrounding Properties:** Residential and Commercial: A & A Auto Service (2650 Davidson Avenue) and Sandy Dry Cleaners (32 East Kingsbridge Road)
2000	**Subject Property:** Military Use (10 195th Street & 29 Kingsbridge Road) **Surrounding Properties:** Residential and Commercial: T & D Auto Care (2650 Davidson Avenue) and Sandy Dry Cleaners (32 East Kingsbridge Road)
2005	**Subject Property:** Military Use (10 195th Street) **Surrounding Properties:** Residential and Commercial: T & D Auto Care (2650 Davidson Avenue)
2010	**Subject Property:** Military Use (10 195th Street) **Surrounding Properties:** Residential and Commercial
2014	**Subject Property:** Military Use (10 195th Street) **Surrounding Properties:** Residential and Commercial
2017	**Subject Property:** Military Use (10 195th Street) **Surrounding Properties:** Residential and Commercial

Year	Comments
2020	**Subject Property:** Not Listed **Surrounding Properties:** Residential and Commercial

Historical on-site military operations are considered BERs, including the Military and Naval Division (2000-2010) and the Army National Guard (2005-2017) uses.

Historically, the surrounding area included auto repair shops (1940-2005), dry cleaners (1940 through 1956), and a refrigeration company (1961) on the surrounding blocks, which have some potential to affect the Subject Property subsurface and constitute RECs.

The City Directory listings are consistent with the historical land use map findings (Section 3.1.1). The City Directory search results are included in **Appendix C**.

3.1.5 Interviews

Subject Property Owners/Operators/Occupants

Carl Gregg, the Armory Site Manager, and Yovannie Alcantara, a National Guard buildings maintenance employee, were interviewed during the site reconnaissance and provided information summarized in Section 2.2. CK Yannello and Erica Putnam, representatives of the Client, completed User Questionnaires for the Armory Site portion and National Guard Site portion of the Subject Property, respectively, as noted in Section 4.0.

Owners/Operators/Occupants of Adjacent Properties

Owners/operators/occupants of adjoining properties were not available for interview as part of this assessment.

3.2 Regulatory Records Review

EDR/Lightbox of Shelton, Connecticut, was contracted to obtain information regarding the regulatory status of the Subject Property and the surrounding area. This information included records from databases maintained by the USEPA and NYSDEC, and proprietary databases compiled by EDR. AKRF reviewed these records to identify the use, generation, storage, treatment, and/or disposal of hazardous material and chemicals, or releases of such materials, which may have impacted the Subject Property. All applicable regulatory databases met ASTM guidelines requesting utilization of information within 90 days' receipt from the appropriate agency. A copy of the EDR report is included in **Appendix C**.

A summary of the regulatory agency databases reviewed is provided in **Table 1**. A description of the types of records maintained for each of the databases reviewed is included in **Appendix D**. A summary of the facilities listed in the regulatory database report and any associated RECs/CRECs/HRECs/VECs identified based on the information provided in the database is provided below in Sections 3.2.1 and 3.2.2. Additional details for specific sites identified as part of the regulatory database review can be found in **Appendix D**.

A summary of the regulatory agency databases reviewed is provided in **Table 1**. Findings pertinent to the conclusions in this report are discussed below:

3.2.1 Federal

Resource Conservation and Recovery Information System (RCRIS)

This database lists sites that have filed notification forms regarding hazardous waste activity, including: treatment, storage, and disposal facilities (TSDF); very small quantity generators (VSQG), small quantity generators (SQG), large quantity generators (LQG) and non-generators regulated under RCRA.

No TSDF facilities were identified on the Subject Property or within the specified search radius.

Several RCRA non-generator and historic LQG listings were identified on the Subject Property. The Armory Site (1 West Kingsbridge Road) was identified as a non-generator of lead in 2012 and a historic LQG of lead in 2011 and 2012. A separate listing identified the Armory Site (2727 Jerome Avenue) as a VSQG in 2007 and a historic LQG, SQG, and VSQG of lead in 2002, 2001, and 2006 to 2007, respectively. The NYS Department of Military and Naval Affairs [29 West Kingsbridge Road (the Armory Site)] was also identified on the Subject Property as a non-generator of unspecified ignitable waste in 2007, a historic non-generator in 1995, 1999, 2006, 2007, and a historic LQG from 1985 to 1986. No violations were reported in association with these listings. These listings indicate historic generators of hazardous waste, which have some potential to have affected the Subject Property and are considered RECs.

Facility Index System/Facility Registry System (FINDS)

FINDS contains facility information from the following databases: Permit Compliance System (PCS), Aerometric Information Retrieval System (AIRS), Enforcement Docket (DOCKET) used to manage and track information on civil judicial enforcement cases for all environmental statutes, Federal Underground Injection Control (FURS), Criminal Docket System (C-DOCKET) used to track criminal enforcement actions for all environmental statutes, Federal Facilities Information System (FFIS), State Environmental Laws and Statutes (STATE), and PCB Activity Data System (PADS).

The Subject Property is listed on the USEPA FINDS database with Biennial Hazardous Waste reports, but no other information was provided. This listing, which is likely associated with hazardous exports from the facility, is considered a REC.

Enforcement & Compliance History Information (ECHO)

ECHO provides integrated compliance and enforcement information for regulated facilities nationwide.

The Subject Property is listed on the ECHO database for the Resource Conservation and Recovery Act (RCRA) and Clean Air Act (CAA). No violations were indicated in the past three years and no informal or formal enforcement actions were indicated in the past five years. This listing is not considered a REC.

3.2.2 State

New York State Spills Information Database (NY SPILLS)/Leaking Underground Storage Tanks (LTANKs)

This database includes releases reported to NYSDEC, including tank test failures (for USTs only) and tank failures.

The Subject Property was listed in both the NY SPILLS and LTANKs databases with closed status spills:

- Spill No. 8802461 was reported at 29 West Kingsbridge Road (the Armory Site) in June 1988 due to tank test failure. This No. 2 fuel oil spill was closed in August 2008 after confirmation that no contamination resulted from the spill and that the tank would be removed.
- Spill No. 9211568 was reported at 29 West Kingsbridge Road (the Armory Site) in January 1993 due to a tank failure. This gasoline spill was administratively consolidated with Spill No. 9308016, which was assigned in October 1993 and identified as a diesel spill. Spill No. 9308016 was ultimately closed in March 2005. According to the listing details, soil contamination was discovered during a tank pull, but the location of the spill on the Subject Property was not provided. The spill was closed in June 2008 after site representatives confirmed the contaminated soil was removed, with NYSDEC noting that the original spill had been subject to natural attenuation for approximately 16 years and had no known adverse impacts to the public.

These closed-status spills at the Subject Property constitute an HREC.

A total of 357 additional spills were reported on surrounding properties within the specified search radius. Of these, the following has some limited potential to have affected local environmental conditions:

- Spill No. 9504140 was reported at 2717 Reservoir Avenue, approximately 100 feet west of the Subject Property, in July 1995 after a caller reported the service station was putting waste oil down the drain. The spill was closed the same day, and no additional information was provided in the listing. This address was also included in the PBS database and, due to its potential to have affected subsurface conditions at the Subject Property, is considered a REC.

Based on listing details, including the nature of the spills, distances from the Subject Property, and/or presumed cross/downgradient locations, the remaining spill listings are not anticipated to have affected subsurface conditions at the Subject Property.

Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database.

The National Guard Site (10 West 195th Street) was listed in the PBS database with the following five USTs and two ASTs associated with PBS Facility ID: 2-392014:

- One closed/removed 3,000-gallon diesel UST installed before the earliest documented tightness test in 1988 and closed in September 1993.
- One closed/removed 2,000-gallon gasoline UST installed before the earliest documented tightness test in 1988 and closed in September 1993.
- One closed/removed 2,000-gallon No. 2 fuel oil UST with an unspecified installation date and a closure date sometime after a documented test date in August 2003.
- One closed/removed 8,000-gallon No. 2 fuel oil UST with an unspecified installation date and closure in January 1999.
- One closed/removed 225-gallon gasoline UST with an unspecified installation date and closure in May 1995.
- One closed/removed 225-gallon diesel AST with unspecified installation and closure dates.
- One unregulated/closed 275-gallon diesel AST with unspecified installation and closure dates.

The above historic on-site USTs and ASTs have to the potential to have affected the Subject Property subsurface and constitute RECs.

Sixty-three additional PBS facilities were identified within the specified search radius. Of these, the following facilities have some limited potential to have affected environmental conditions at the Subject Property:

- Power Test/Getty, located at 2717 Reservoir Ave, approximately 100 feet west of the Subject Property across Reservoir Avenue was listed as PBS Facility ID: 2-153028 with a status of inactive. The listing details include eight 550-gallon gasoline USTs and one 550-gallon No. 2 fuel oil UST that were installed in 1969 and closed/converted to non-regulated use in 1995. This address is also listed in the NY Spills and EDR Historic Auto databases and, due to its potential to have affected subsurface conditions at the Subject Property, is considered a REC.

Based on listing details, distances from the Subject Property, and/or inferred cross/downgradient groundwater flow direction, the remaining listings would not be expected to have significantly affected the Subject Property.

EDR Historic Auto Station Listings

The EDR Historic Auto Station database was researched to identify listings for the Subject Property and within a ⅛-mile radius of the Subject Property. This database lists properties that might include gas/filling station establishments based on EDR's search of select national business directories.

The Subject Property was not listed in the historic auto stations database.

Three EDR historic auto stations were identified within the specified search radius. Of these, the following have some limited potential to have affected the subsurface at the Subject Property:

- Mullahoran Auto Diagnostic, located at 2704 Jerome Ave, approximately 100 feet east of the Subject Property across Jerome Avenue, was listed as an automotive repair shop between 1997 and 1985. Due to its potential to have

affected subsurface conditions at the Subject Property, this listing is considered a REC.

- Reservoir Service Station, located at 2717 Reservoir Avenue, approximately 100 feet west of the Subject Property across Reservoir Ave, was listed as a gasoline service station between 1969 and 1989 and as a general automotive repair shop from 1969 to 2014. This address is also listed in the PBS and NY Spills databases and, due to its potential to have affected subsurface conditions at the Subject Property, is considered a REC.
- Tie-Castle Service Station, located at 50 West Kingsbridge Road, approximately 200 feet south of the Subject Property across West Kingsbridge Road, was listed as gasoline service station between 1974 and 1983. Due to its potential to have affected subsurface conditions at the Subject Property, this listing is considered a REC.

Based on their distances from the Subject Property and/or presumed hydraulic relationship, the remaining two historic auto stations are not anticipated to have affected subsurface conditions at the Subject Property.

Registered Dry Cleaners/EDR Historic Cleaners

The Registered Dry Cleaners database was researched to identify listings within ¼-mile of the Subject Property. As a supplement to the registered dry cleaners database, EDR's proprietary listing of potential EDR Historic Cleaner sites (listings based on the opinion of EDR) was also reviewed.

The Subject Property was not listed on the Registered Dry Cleaners or EDR Historic Cleaners databases.

Four Registered Dry Cleaners and six EDR Historic Cleaners sites were listed within the specified search radii and have some limited potential to have affected environmental conditions at the Subject Property and are considered a REC:

- Sidan Carpet Service, located at 2691 Reservoir Ave, approximately 170 feet west of the Subject Property, was listed as a drycleaning plant except rugs in the database from 1994 to 1998.
- Riteway Cleaners, located at 62 West Kingsbridge Road., approximately 200 feet southwest of the Subject Property, was listed as a drycleaning plant except rugs from 1991 through 2014. From 1994 to 1997 the facility was also listed as garment pressing and cleaners' agents.
- Gallarys Tailors & Cleaners, located at 71 Kingsbridge Road, approximately 280 feet west of the Subject Property, was listed as a drycleaning plant except rugs from 1969 through 1985.

Based on listing details, distances from the Subject Property, and/or inferred groundwater flow direction, the remaining listings would not be expected to have significantly affected the Subject Property.

New York, Pennsylvania, and New Jersey Facility and Manifest Data (NY MANIFEST and NJ MANIFEST)

The NY and NJ MANIFEST databases list and track hazardous waste from the generator through transporters to a TSDF facility.

The Subject Property (the Armory Site at 1 West Kingsbridge Road) was listed on the NY and NJ MANIFEST lists for disposal of 2,640 gallons and 5,300 pounds of lead in 2011 (Manifest Numbers 003537325JJK and 003537323JJK). The Subject Property [NYS DMNA; 29 West Kingsbridge Road (the Armory Site)] is also listed in the NY MANIFEST database for the shipment of 4,195 pounds and 923 gallons of ignitable waste; 193 gallons of lead; 2,195 pounds of spent halogenated solvents; 100 pounds and 55 gallons of corrosive waste; and 1,000 pounds of reactive waste between the years 1993 and 1995. These listings indicate historic generators of hazardous waste, which have some potential to have affected the Subject Property and are considered RECs.

Jerome Avenue and 196th Street, approximately 330 feet northeast of the Subject Property had a NY MANIFEST listing associated with EPA ID NYP003660917 for the disposal of 195 pounds of spent halogenated solvents on August 31, 1999. No manifest number was reported. This disposal event has some potential to have affected the Subject Property subsurface and constitutes an REC.

A total of 145 additional NY/NJ MANIFEST listings were reported on surrounding properties within the specified search radius. Based on listing details, distances from the Subject Property, and/or inferred groundwater flow direction, listings from the surrounding area would not be expected to have affected the Subject Property.

3.2.3 Local Agency File Review

Records available online from the NYC Buildings and Finance Departments were viewed for the Subject Property. Since the local records typically address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials (e.g., petroleum tank installation applications and permits) and records indicating prior uses. Copies of pertinent information are included in **Appendix E**.

NYC Buildings Department (NYCDOB)

Electronic NYCDOB records for the Subject Property were reviewed to determine whether there were any references to buildings, tanks or other structures, property usage, or inspection reports that may have indicated the presence, past use, or release of hazardous substances, wastes, or petroleum products within the Subject Property. The NYCDOB Building Information Systems (BIS) electronic database included:

Building Number	Address	Block	Lot(s)	Findings
BIN: 2098784	29 West Kingsbridge Road (the Armory Site)	3247	2	No Certificate of Occupancy on file. Four violations for failure to provide proof of compliance for the boiler were listed from September 1997 with an active status. This BIN is listed as obsolete.

Building Number	Address	Block	Lot(s)	Findings
BIN: 2098782	2 West 195th Street (the National Guard Site)	3247	2	No Certificate of Occupancy on file. Violations for failure to provide proof of compliance for the boiler listed from 1993 through 1999 with a status of active. A permit for replacement of three gas-fired boilers was submitted and approved in 1993. Boiler records indicate there were four boilers on the property, an inspection in 2000 indicated defects existed for the three boilers in the cellar, and no violations were listed for the fourth boiler listed in the Armory. In 2014, all four boilers were determined to be out of DOB jurisdiction.
BIN: 2098783	32 West 195th Street	3247	2	No Certificate of Occupancy on file.

The electronic NYCDOB files indicated four boilers throughout the Subject Property with three listed in the National Guard buildings and one listed in the Armory. A permit for replacement of three gas fired boilers/burners at the National Guard Site was submitted and approved in July 1993. Several violations were listed regarding failure to provide proof of compliance for the boilers from 1993 through 1999.

Land Title Records and Tax Records

Copies of title records were not provided to AKRF for review. A review of computerized NYC Automated City Register Information System (ACRIS) records, which included records of financial transactions involving the Subject Property, identified a landmark designation but no environmental liens or use restrictions for the Subject Property. No pertinent environmental information was included in the ACRIS files.

Freedom Of Information Law (FOIL) Requests

AKRF sent a freedom of information law (FOIL) requests to the New York City Department of Health and Mental Hygiene (NYCDOHMH), New York State Department of Environmental Conservation (NYSDEC), New York State Department of Health (NYSDOH), New York State Department of Health (NYSDOH), and New York City Fire Department (FDNY) for pertinent environmental records. No pertinent information was received.

AKRF sent a FOIL request to NYCDEP on August 7, 2024. The request was acknowledged on August 9, 2024, a response provided, and the request closed on August 12, 2024. The DEC provided PBS records listing the five former USTs and

two former ASTs at the National Guard Site, consistent with details provided in Section 3.2.2. No other pertinent records were provided.

FOIL requests and documents received are included in **Appendix E**.

3.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in the judgment of the environmental professional, such records for the Subject Property or any adjoining properties would be reasonably ascertainable, useful, accurate, and complete in light of the objective of the records review. These records may include:

- Local Brownfields Lists
- Local Lists of Landfill/Solid Waste Disposal Sites
- Local Lists of Hazardous Waste/Contaminated Sites
- Local Lists of Registered Tanks
- Local Land Records (for property use limitations)
- Records of Emergency Release Reports
- Records of Contaminated Public Wells

Sources for these records include:

- Chain of Title Reports and Title Records
- Department of Health/Environmental Division
- Fire Department
- Building Permit/Inspection Department
- Local/Regional Pollution Control Agency
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

In AKRF's judgment, no other local records are pertinent for the Subject Property.

4.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that the Client provide any pertinent information regarding the Subject Property, specifically:

- Whether any environmental liens or activity and land use limitations (AULs) were in place or filed or recorded against the Subject Property.
- Whether they had any specialized knowledge or experience related to the Subject Property or nearby properties (e.g., specialized knowledge of any chemicals used on-site).
- Whether the (anticipated) purchase price reflected that the Subject Property is or could be contaminated.
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Subject Property.
- Whether they were aware of any obvious indicators of contamination at the Subject Property.
- Whether they were aware of any pending, threatened, ongoing, or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products.

CK Yannello and Erica Putnam, representatives of the Client, completed User Questionnaires for the Armory portion and National Guard Site portion of the Subject Property, respectively. CK Yannello and Erica Putnam were not aware/had no information on the status of any: environmental liens or activity use limitations on the Subject Property; Subject Property value reduction due to environmental issues; any pending, threatened, ongoing, or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products; or any obvious indicators of contamination on the Subject Property. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report. The User Questionnaire is included in **Appendix F**.

5.0 PREVIOUS STUDIES

Kingsbridge Armory Roof Rehabilitation Project Environmental Survey Report (ET Environmental Corporation, September 15, 2000)

ET Environmental Corporation (ET) contracted ATC Associates Inc. (ATC) to conduct environmental sampling at the Armory Site:

- ATC performed testing of the roof in August 2000, including collection of 29 bulk samples of suspect asbestos-containing materials (ACM). The attached asbestos abatement specification identified the following ACM: 1,500 linear feet of pipe and pipe elbow insulation, 232,200 square feet of roofing materials, and 13,400 square feet of caulking, and 180,000 square feet of debris.
- ATC performed a limited lead-based paint (LBP) survey in July 2000, including testing 1,190 building surfaces with an X-ray fluorescence (XRF) analyzer for lead content. ATC identified LBP on a variety of building components, but did not provide a list of components or quantities. The report included a specification section for spot removal of lead paint from structural members.
- ET performed a survey of the roof area for bat guano or avian fecal matter (bird droppings) in August 2020. Bird droppings were observed on the steel roof trusses.

ET's September 2000 report also included an Environmental Survey Report prepared by ATC, dated August 24, 2000, as Attachment A. ATC conducted an environmental survey in August 2000 to identify the presence ACM, lead containing and/or lead based paints/coatings, mercury switches or lamps, suspect PCB or di(2-ethylhexyl) phthalate (DEHP) containing light ballasts, storage tanks, and stored or abandoned materials at the facility. ATC collected 225 bulk samples of suspect ACM, testing of 1,190 building surfaces with an X-ray fluorescence (XRF) analyzer for lead content, and the evaluation of several fluorescent and high-intensity discharge lighting (HID) ballasts. ATC also inspected the property for the presence of USTs. ATC's included the following findings/recommendations:

- ACM was identified in 14,260 linear feet of pipe and pipe elbow insulation, 33,660 square feet of flooring materials, 235,000 square feet of roofing materials, and an unknown quantity of caulking.
- ATC recommended that all painted surfaces be considered lead-containing.
- Lighting ballasts were found to be not labeled and/or in poor condition, and therefore ATC considered all as PCB or DEHP containing materials. An estimated 650 light fixtures, 1,250 bulbs/tubes, 700 ballasts, and 109 metal halide lights were observed. No mercury containing switches were observed.
- Evidence for at least four USTs (e.g., vent pipes and fill ports) were observed during the survey. An electromagnetic survey of suspect areas identified two possible USTs in the garage parking area. Additionally, ATC identified seven additional 275-gallon ASTs.
- ATC collected four composite waste classification samples from the basement rifle and pistol ranges. All four samples contained leachable lead above 5 parts per million (ppm), indicating that the materials are characterized as hazardous lead-containing solid waste.
- Other localized items observed by ATC included: various paints, solvents, and maintenance products; abandoned refrigeration/air conditioning units; and animal/bird carcasses and avian excreta.
- The report included an abatement plan for managing and removing these materials to reduce worker exposures and prevent the release of hazardous materials into the

environment and recommended that any new materials encountered during the renovation be tested prior to disturbance.

Phase I Environmental Site Assessment (Metcalf & Eddy | AECOM, August 2006)

The 2006 Phase I ESA prepared by Metcalf & Eddy | AECOM identified the following environmental concerns for the Armory Site: industrial and commercial use of properties in the surrounding area may have impacted groundwater at the Site; potential contamination from on-site fill materials may have impacted groundwater at the Site; one 275-gallon fuel oil AST was identified on the northeast portion of the drill hall floor, and two 275-gallon fuel oil ASTs were identified on the southwest portion of basement mezzanine; a petroleum odor was noted in a room (B-20) on the western portion of the basement mezzanine; multiple containers of petroleum products were observed in the motor pool workshops of the basement area, and 10 55-gallon deteriorated steel drums were noted in the basement garage; oil staining and a saw cut in the concrete floor near the center of the basement garage indicated a possible former UST; three earthen-floored rifle and pistol ranges were observed in the sub-basement, and were suspected to contain elevated concentrations of lead from spent munitions; three NYSDEC spills were associated with the Site; potentially hazardous materials, such as PCBs, asbestos, lead-based paint, lubricating oils, mold, and refrigerants, were associated with the basement boiler unit and air conditioning units and construction materials throughout the structure; and one 2,000-gallon fuel oil UST was reported to be in service at the adjacent property and four USTs were reported to have been closed at the adjacent property.

Phase II Environmental Site Assessment Report, Kingsbridge Armory (TRC Environmental Corporation, September 19, 2007)

The 2007 Phase II ESA prepared by TRC was conducted to investigate RECs for the Armory Site identified in the 2006 Metcalf & Eddy | AECOM Phase I ESA report. The report summarized a geophysical survey conducted in August 2000, and TRC coordinated a follow-up geophysical survey during the Phase II ESA, which found no evidence of buried metal near the location of a 12-foot by 15-foot saw-cut area but noted a near-by fill pipe labeled with the word “Gasoline”. The report noted that a guard booth had been constructed along the Armory’s western exterior at a potential former UST location. The survey noted no indications of potential USTs at the location of a 30- by 30-foot anomaly and suggested that the reinforced concrete area may be associated with a former reservoir pump house that was located west of the Armory building.

The report confirmed the presence of the three ASTs and stated that the AST on the drill hall floor still contained diesel fuel for an emergency generator that was no longer operable. TRC’s subsurface investigation included excavation of three test pits, advancement of 13 soil borings, and installation of four groundwater monitoring wells along the western portion of the property near the potential USTs. In addition, 18 soil samples were collected from the upper 1.5-foot depth interval in the pistol and rifle ranges. TRC reported the following findings:

Test Pits near Maintenance Building: Although this area was not part of the 2007 Project Site, the environmental issues identified may impact 2007 Project Site conditions. Test pit excavations confirmed two abandoned USTs west of the maintenance building. The tanks appeared to have been cut open and filled with sand and gravel. Organic vapors indicative of petroleum impacts were not reported in the sand and gravel and rain water that had accumulated within the former USTs. The report noted that the tanks were likely the 3,000-gallon diesel and 2,000-gallon gasoline USTs that were closed in September 1993, discussed in the 2006 Phase I ESA.

Soil Samples West of the Armory Building: Slightly elevated organic vapor concentrations were detected in two borings on the northwest portion of the property west of the maintenance building near the former USTs. Semi-volatile organic compounds (SVOCs) and metals (beryllium,

chromium, copper, iron, nickel, and zinc) were detected at concentrations above NYSDEC Technical and Administrative Guidance Memorandum (TAGM) Residential Use Soil Cleanup Objectives (RSCOs) in multiple soil samples collected from the western portion of the Site, VOCs, PCBs, and pesticides were not detected in soil samples at concentrations that exceeded TAGM RSCOs.

Groundwater Samples West of the Armory Building: One VOC, hexachlorobutadiene, was detected at a concentration above the NYSDEC Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards (AWQS) in a groundwater sample collected from the well located adjacent to the former gasoline UST near the western exterior of the Armory building. TRC noted that hexachlorobutadiene does not occur naturally in the environment and is formed during the processing of other chlorinated compounds. Several metals (iron, magnesium, manganese, and sodium) were detected at concentrations that exceeded TOGS Class GA standards in each groundwater sample. TRC concluded that the metals are naturally occurring; therefore, the detections were likely attributable to background soil and/or bedrock conditions in the area.

Asbestos Investigation, Kingsbridge Armory (Langan Engineering & Environmental Services, P.C., October 6, 2008)

Langan collected 66 bulk samples of suspect ACM during this investigation at the Armory Site. Langan's summary of asbestos survey findings indicated that pipe and joint insulation, wire wrap insulation, electric transite switch panel, floor joint fill material, wall panel glue, mirror glue, various floor tiles and associated mastics, exterior and interior door caulking, original built-up roofing and flashing materials, and pipe insulation debris were ACM. Langan also noted lead paint in poor condition and suspect PCB- and mercury- containing electrical articles throughout the building.

Phase II ESI Report, Kingsbridge Armory—29 West Kingsbridge Road (Langan Engineering & Environmental Services, P.C., Draft November 6, 2008)

The 2008 Phase II ESI prepared by Langan was conducted to assess environmental remediation costs associated with proposed Armory Site redevelopment, including lead contamination in the former pistol and rifle ranges, historic fill material below the basement and western parking area, and former USTs in the western parking area and off-site maintenance area (at the National Guard Site) northwest of the Armory Site. The investigation consisted of the following activities: a geophysical survey in the western exterior parking area; 17 soil borings from which 23 soil samples were collected in the western parking area, basement, and pistol and rifle ranges; 10 test pits from which 10 soil samples were collected in the basement; and monitoring wells from which three groundwater samples were collected in the basement.

Langan reported the following investigation findings: the geophysical survey did not identify obvious indications of USTs; soil underlying the site consists of historic fill comprised of sand with traces of silt, gravel, brick, and ash. The fill was found to generally extend to depths of 4 to 7 feet below the cellar floor slab and to about 20 to 25 feet below ground surface (bgs) in the western parking area. Weathered rock was encountered from 12 to 15 feet below the sub-cellar floor slab. Groundwater was encountered in the monitoring wells at depths of 4 to 7 feet below the sub-cellar floor slab. Elevated organic vapor concentrations, stained soil, and petroleum odors were observed in two test pits and one boring in the northwest portion of the sub-cellar. Impacted soil was observed at depths of between 2 and 12 feet below the floor slab; and a petroleum odor and an elevated organic vapor reading were detected in soil collected from the 25 to 30 feet depth interval in one boring in the western parking area. In general, soil samples exhibited concentrations of SVOCs and metals typical of historic urban fill and did not indicate a spill at the Site. Six of the 17 soil samples collected from the pistol and rifle ranges exhibited Toxicity

Characteristic Leaching Procedure (TCLP) lead concentrations indicative of hazardous waste. Five VOCs and one SVOC (naphthalene) were detected at concentrations that exceeded the TOGS AWQS in the groundwater sample collected from well MW-3 in the northwest portion of the sub-cellar. Naphthalene was also detected at a concentration exceeding the TOGS AWQS in a groundwater sample collected from the western parking area.

The report concluded that groundwater under the northwestern portion of the sub-cellar had been impacted with petroleum. Additional groundwater sampling on the National Guard Site was recommended to determine whether the two historical USTs on the National Guard Site were the source of the impacts.

Supplemental Groundwater Investigation Report, Kingsbridge Armory (Langan Engineering & Environmental Services, P.C., June 17, 2009)

Langan conducted groundwater sampling on the National Guard and Armory Sites to evaluate the source of groundwater impacts in the northwestern portion of the basement in the Armory building. Langan installed a monitoring well south of a former UST and collected groundwater samples from existing monitoring wells. The field observations and analytical results did not indicate the presence of a spill on the National Guard Site associated with decommissioned on-site USTs.

Phase II Supplemental Environmental Site Investigation Report (Langan Engineering & Environmental Services, P.C., June 7, 2013)

Langan completed a supplemental site investigation at the Armory Site in May 2013. The investigation included: a geophysical survey; installation of five subsurface soil vapor points and collection of five soil gas samples and one ambient air sample; collection of 18 soil samples from nine environmental borings to a depth of approximately 8 to 35 feet below grade surface; and installation and sampling of five temporary groundwater monitoring wells and sampling of two existing permanent monitoring wells.

Based on groundwater level readings collected during the geotechnical investigation, Phase II ESI, and Phase II SESI, groundwater elevations generally range from approximately 115 feet above mean sea level (amsl) on the eastern portion of the Armory Site to 109 feet amsl on the western portion of the Armory Site. The depth to groundwater in observation wells that were installed on paved exterior areas at sidewalk grade ranged from 12 feet along the northern exterior of the Armory building to 30 feet in the on-site parking area near Reservoir Avenue. The depth to groundwater in the interior monitoring wells installed inside the sub-cellar ranged from 3 feet on the northwestern portion of the sub-cellar to 10 feet on the southwestern portion of the sub-cellar. Groundwater elevation data indicated that groundwater at the Armory Site flows towards the southwest, which generally conforms to the south-southwest sloping topographic gradient shown on the USGS Central Park, N.Y. Topographic Quadrangle Map.

Based on the soil analytical results, Langan determined that PCBs and pesticides were either non- detect or below NYSDEC 6 NYCRR Part 375 Unrestricted and/or Restricted Use Soil Cleanup Objectives (SCOs). Several VOCs (2-butanone, acetone, bromomethane and methylene chloride), SVOCs [benzo(a) pyrene, benzo(k)fluoranthene, and indeno(1,2,3,-cd)pyrene] and several metals were detected above NYSDEC Unrestricted and or Restricted Use SCOs. Based on the groundwater analytical results, Langan determined that several VOCs, SVOCs, and metals were detected above the NYSDEC GA groundwater standard. Based on the soil vapor sample analytical results, Langan determined that several VOCs exceeded background concentrations established in NYSDOH October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York.

New York City Department of Environmental Protection Letter Review of Phase II Supplemental Environmental Site Investigation Report, Kingsbridge Armory, Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C., (NYCDEP, June 14, 2013)

NYCDEP reviewed the June 2013 Phase II Supplemental Environmental Site Investigation conducted by Langan on behalf of Kingsbridge National Ice Center (KNIC). NYCDEP provided the following comments and recommendations:

- A Remedial Action Plan (RAP) for the proposed construction project should be submitted to NYCDEP for review and approval. The RAP should specify that contaminated soils would be properly disposed of in accordance with the NYSDEC regulations. Additional testing of the soils may be required by the disposal and/or recycling facility.
- A site-specific Construction Health and Safety Plan (CHASP) should be submitted to NYCDEP for review and approval. Soil disturbance should not occur without DEP's written approval of the CHASP.
- A vapor barrier should be incorporated into the design plan of the proposed construction project in order prevent any future potential vapor migration conditions from occurring.
- KNIC should incorporate a passive sub-slab depressurization system (SSDS) with the capability of being converted to an active SSDS if warranted based on future conditions into the design plan of the proposed construction project.
- KNIC should include for all areas which will either be landscaped or covered with grass (not capped), a minimum of two (2) feet of clean fill/topsoil from an approved facility/source. The clean fill/top soil must be segregated at the source/facility, have qualified environmental personnel collect representative samples, analyze the samples by a certified laboratory, and compare the results to NYSDEC SCOs.
- Excavated soils, which are temporarily stockpiled on-site, must be covered with polyethylene sheeting while disposal options are determined. Additional testing may be required by the disposal/recycling facility. Excavated soil should not be reused for grading purposes.
- If any petroleum-impacted soils (which display petroleum odors and/or staining) are encountered during the excavation/grading activities, the impacted soils should be removed and properly disposed of in accordance with all NYSDEC regulations.
- Dust suppression must be maintained by the contractor during the excavating and grading activities at the site.
- All known or found underground storage tanks must be properly removed/closed in accordance with all applicable NYSDEC regulations.
- If dewatering into New York City storm/sewer drains will occur during the proposed construction, a NYCDEP Sewer Discharge Permit must be obtained prior to the start of any dewatering activities at the site.

Phase I Environmental Site Assessment, Kingsbridge Armory – 29 West Kingsbridge Road (AECOM, October 2013)

AECOM conducted a Phase I ESA of the Armory Site in 2013 to identify the presence of RECs, as defined by ASTM E1527-05. AECOM identified the following RECs in connection with the subject property:

- Various 55-gallon drums and one 30-gallon drum were encountered throughout the unoccupied portions of the Armory Site and along the western exterior portion of the Armory Site that were either empty or filled with unknown substances.

- Three abandoned 275-gallon ASTs, which may have still contained residual petroleum product.
- Deteriorated mechanical equipment, which may have contained residual fluids that could impact the Armory Site, such as petroleum based fluids or fluids containing hazardous materials.
- A sump pump located in the lower basement of the Armory, which had the potential to impact the soils and groundwater at the subject site.
- PCBs, which may have been present in lighting ballast found throughout the Armory building, as well as in window, bathroom, and locker room caulking.
- Lead in the form of bullets within the walls and floors of the pistol and rifle ranges.
- The storage of gasoline, diesel fuel, and paint-related products used by Graffiti Free NYC.
- The overall condition of the property, which included peeling paint that may have contained lead, pipe insulation, floor tile, and concrete surfaces that may have contained asbestos, mold, and a variety of debris throughout the Armory building, some of which may have contained petroleum and/or hazardous substances.

Based upon the information obtained and reviewed for the Phase I ESA, AECOM recommended the following:

- Conduct a comprehensive survey throughout the Armory to evaluate what material may potentially contain asbestos, lead, mold, and PCBs, and collect samples from these materials to confirm the presence of these substances.
- Conduct an inventory of 55-gallon drums containing unknown materials and collect waste profile samples to determine the appropriate method for disposal.
- Empty the remaining contents (if any) within the three ASTs present at the Armory and properly dispose of them.
- Conduct an evaluation of all deteriorating mechanical equipment to determine if they contain any fluids which may contain petroleum and/or hazardous substances. Based upon the results of the evaluation the equipment should be removed from the Armory and properly disposed.
- The earthen floors of the pistol and rifle ranges should be remediated and the spent rounds from the walls in the pistol range be removed due to the potential presence of lead.
- The materials use by Graffiti Free NYC such as gasoline, diesel fuel, lacquer thinner, and mineral spirits should be stored within secondary containment pallets to avoid accidental spills.
- The trash and debris found in almost every room inspected during the site reconnaissance needs to be evaluated to determine its proper disposal as some of it may contain petroleum or hazardous substances.

Limited Hazardous Materials Investigation Report (GZA GeoEnvironmental of New York, December 21, 2015)

In 2015, GZA GeoEnvironmental of New York (GZA) conducted a limited hazardous materials investigation (HMI) at the Armory Site for KNIC Properties, LP (KNIC). The HMI included an ACM survey, a lead paint survey, an assessment of hazardous chemicals and waste, and an assessment of universal waste and PCB-containing material. The limited investigation was intended to supplement previous investigation conducted by others at the site. The survey included limited areas in the sub-basement, basement, basement mezzanine, first floor,

mezzanine, second floor, and the tower level and previously sampled roof penetrations. Destructive sampling of the roofing materials and windows were not conducted.

Asbestos Summary: GZA collected 242 samples of suspect ACM from the site. Based upon laboratory analysis of suspect ACMs, façade mastic, floor tiles and associated mastic, vibration joint cloth, various wall mastics, tank mastic, plaster walls and ceilings, terrazzo flooring, and pipe insulation were determined to be ACM.

Lead Paint Summary: Lead was detected in all 21 samples collected by GZA. GZA concluded that all painted surfaces and building components should be assumed to contain lead and be handled in accordance with the applicable OSHA regulation (OSHA 29 CFR 1926.62-Lead Exposure in Construction).

Assessment for Hazardous Chemical and Waste: GZA collected eight composite samples from the observed waste piles and analyzed each sample for TCLP lead. Six of the eight waste piles were determined to contain hazardous levels of lead. A visual assessment was also conducted throughout the site for potential hazardous materials. Materials identified included propane tanks, two 275-gallon aboveground storage tanks of unknown contents, fire extinguishers, 5-gallon paint and paint removal buckets, and exterior high intensity discharge lights. Samples of these materials was not included in the assessment.

Universal Waste: GZA identified universal waste at the site including fluorescent bulbs inside overhead lighting fixtures, emergency exit lights, compact fluorescent light tubes and some round overhead lights were present, which may contain mercury vapor.

PCB Containing Equipment: GZA identified 987 potential PCB-containing fluorescent lighting fixtures at the site.

Caulking and Glazing: GZA collected and analyzed six caulk samples to determine the concentrations of PCBs present in building materials at the site. PCBs were not detected in five of the six samples; however, one of the samples detected PCBs at a concentration of 30,700 parts per million (ppm). Caulking materials with greater than 50 ppm are considered PCB bulk waste and must be disposed of as hazardous waste.

Results of the Supplemental Asbestos-Containing Material Survey, Kingsbridge Armory, 29 West Kingsbridge Road, Bronx, New York (GZA GeoEnvironmental of New York, January 5, 2016)

GZA conducted supplemental ACM sampling of wall and ceiling plaster at selected locations in the Armory building in 2015 to delineate the ACM plaster documented during GZAs December 21, 2015, Limited Hazardous Materials Investigation. One of the previous 14 plaster samples collected was determined to be ACM. This investigation was limited to areas that were subject to architectural inspection of the brick substate behind plaster in select areas in the basement, first and second floors. Other suspect materials were also sampled in the vicinity of these select areas.

GZA collected 72 supplemental samples of wall and ceiling plaster, floor tiles mastic, wall tiles and glue backing. None of the supplemental samples were determined to be ACM. As indicated in GZA's 2015 report, the plaster in bathroom (Room 1W-8) on the first-floor drill hall was ACM. GZA concluded that the drill hall bathrooms were an addition to the drill hall, and the plaster in these bathroom additions should be considered ACM.

Soil Sampling Results of Kingsbridge Armory (GZA GeoEnvironmental of New York, January 12, 2016)

GZA GeoEnvironmental (GZA) collected soil samples from five test pit locations within the Armory building on December 17, 2015. The soil sampling was conducted to characterize excavated material for disposal.

GZA collected soil samples from depths of 0-2 feet below the existing basement slab elevation. The samples were field screened for evidence of contamination using a photoionization detector (PID). None of the soil samples indicated elevated PID screening results above background. GZA compared the results to the NYSDEC Part 375 SCOs and Commissioner Policy 51 (CP-51).

GZA did not find detectable levels of VOCs in the samples collected. SVOCs analysis indicated that several compounds exceeded their respective Part 375 and CP-51 SCOs in one of the samples [TP-5 (0-2')] including benzo(a)anthracene, benzo(a)pyrene, benzo(b)flouranthene, benzo(k)flouranthene, chrysene, dibenzo(a,h)anthracene and indeno (1,2,3-cd)pyrene. SVOCs were either below detection limits or were detected at concentrations below their respective SCOs in the other four soil samples. Several metals including chromium, copper, lead, mercury, and zinc were detected at concentrations exceeding Part 375 Unrestricted SCOs in four of the samples [TP-101(0-2), TP-5 (0-2), TP-2 (0-2), and TP-7 (0-2)]. However, only chromium in sample TP-2 (0-2), and lead in samples TP-101 (0-2) and TP-7 (0-2) also exceeded their Part 375 Restricted Use Residential SCOs. Pesticides and PCBs concentrations in all of the soil samples were either below detection limits or were detected at concentrations below their respective SCOs.

GZA compared the five samples to typical disposal facility criteria for waste acceptance. One sample, TP-101 (0-2), had levels of TCLP lead detected at concentrations above the EPA standards exceeding hazardous waste thresholds. The RCRA characteristics (ignitability, corrosivity, and reactivity) and chemical analysis of the other samples indicated that material from these areas could be considered as non-hazardous waste.

Asbestos and Lead Paint Survey Report (TRC Environmental Corporation, June 6, 2023)

TRC was retained by Girandola and Shutkind Construction Corp on behalf of EDC to conduct an asbestos survey for suspect ACM and LBP in the interior portions the Armory building. Asbestos and lead paint survey activities were conducted on multiple dates between October 2022 and May 2023, and were limited to the following interior portions of the building: the drill hall (including the first-floor hall, viewing balconies, maintenance garage bays, and bathrooms), the three floors of the headhouse, tower areas, and accessible portions of the basement and basement mezzanine. Findings of the survey, which were based upon visual inspection of the Armory and analytical results of collected asbestos and lead paint samples, are summarized below.

TRC indicated the following ACM in the building: flooring debris (pipe insulation and plaster); wall and ceiling plaster; wall adhesives (wood panel glue and mirror glue); pipe insulation; thermal system insulation (duct vibration cloth); linoleum; floor tiles and associated mastics (9" and 12" floor tiles); cove base and adhesive; and ceramic tile grout and mortar. At the time of the inspections, ACMs were found to be in significantly damaged condition. TRC recommended that removal of floor debris containing asbestos and removal and/or repairs of damaged ACMs be conducted by a New York State Department of Labor- (DOL) licensed asbestos abatement contractor.

TRC collected suspect LBP samples to determine if interior surface coatings contained greater than or equal to 0.5 percent lead by weight (≥0.5%) or greater than or equal to 5,000 ppm. A total of 68 paint chip samples were collected from interior painted surfaces. Thirty-seven samples were determined to be LBP and 27 were determined to contain lower concentrations of lead [considered lead containing paint (LCP)] regulated by OSHA. There were also four samples that were Below Reportable Limit (BRL) <0.0080% weight for lead. For any paint in which lead was detected, TRC recommended that any demolition or renovation activities that may disturb painted surfaces be conducted according to the OSHA requirements regarding lead in construction (29 CFR 1926.62).

The survey report also detailed asbestos abatement activities conducted in January 2023. Based on the findings of the preliminary asbestos survey in October 2022, a licensed asbestos abatement contractor conducted abatement of approximately 4,260 square feet (sf) of asbestos plaster, floor debris (pipe insulation), and 70 linear feet of damaged pipe insulation located on the drill hall first floor and balcony areas.

Copies of the previous studies provided to AKRF are included as **Appendix G**.

6.0 VAPOR ENCROACHMENT SCREENING

A Tier 1 Vapor Encroachment Screening was conducted in accordance with ASTM Standard E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*. The term "Vapor Encroachment Condition" means the presence or likely presence of vapors from chemicals of concern (COC) in the subsurface of a property caused by the release of vapors on or near the property. The objective of the Tier 1 screening is to conduct a screen for vapor encroachment based on findings from the Phase I ESA to determine if a possible VEC exists at the Subject Property.

Based on AKRF's review of historical and regulatory database records, the following potential VECs were identified based on the Tier 1 Vapor Encroachment Screening:

- Several 55-gallon drums observed in the western portion of the Armory basement garage were unlabeled, were either empty or filled with unknown substances, and displayed signs of deterioration, with rust and holes in some of the drums. In addition, two unlabeled, partially full 55-gallon drums with unknown contents were observed in the Armory Site's western parking lot along the exterior wall of the drill hall and exhibited signs of deterioration.
- One unlabeled, partially full 55-gallon drum with unknown contents was observed resting on its side in the western parking lot of the National Guard Site near Reservoir Avenue. The drum exhibited signs of corrosion, and a small puddle of liquid from an apparent leak was observed beneath it.
- The National Guard Site was listed in the Petroleum Bulk Storage (PBS) database with the following five USTs associated with PBS Facility ID: 2-392014: one closed/removed 3,000-gallon diesel UST installed by 1988 and closed in September 1993, one closed/removed 2,000-gallon gasoline UST installed by 1988 and closed in September 1993, one closed/removed 2,000-gallon No. 2 fuel oil UST with an unspecified installation date and closed sometime after August 2003, one closed/removed 8,000-gallon No. 2 fuel oil UST with an unspecified installation date and closed in January 1999, and one closed/removed 225-gallon gasoline UST installed by October 1996 and closed in May 1995.
- The Subject Property was listed in the NY MANIFEST database for the shipment of 4,195 pounds and 923 gallons of ignitable waste and 2,195 pounds of spent halogenated solvents. These listings indicate historic generators of hazardous waste, which have some potential to have affected the Subject Property and are considered VECs.
- Adjacent and nearby properties identified in the regulatory databases, in historical Sanborn maps, in City Directory listings, and during site reconnaissance with some potential to affect the Subject Property subsurface included former and/or current dry cleaners, automotive, fill station, and refrigeration company uses.

7.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of ASTM as established by ASTM Standard E1527-21 at the time it was conducted, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was conducted.
- Owners/tenants of adjacent properties were not interviewed as part of this assessment. However, sufficient information about the history of the surrounding properties was obtained from historical Sanborn maps and/or city directories and this data gap is not considered significant or likely to alter the conclusions of this report.
- The Subject Property area history was not conducted in five-year intervals. However, sufficient information about the history of the Subject Property and surrounding area could be obtained from the available historical Sanborn maps and/or city directories, and this data gap is not likely to alter the conclusions of this report.
- Agency file reviews for the Subject Property and adjacent properties consisted of a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 3.2), as well as FOIL requests submitted to NYSDEC, NYCDEP, NYSDOH, and NYCDOHMH. AKRF believes that this file review was sufficient in determining the potential for RECs or other environmental concerns at the Subject Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.
- AKRF was unable to visually inspect several portions of the Armory building. The tower rooms and several of the living quarters in the headhouse could not be accessed due to excessive debris and structural concerns with the stairs and floors. A parts room on the drill floor and several garage bays on the drill floor were locked during the reconnaissance; the site representative was unable to provide access, as they did not have the appropriate key, and the building did not have power to operate the garage bay overhead doors. In addition, several basement and sub-basement spaces were inaccessible due to safety concerns: the boiler room (CS-7) sub-basement in the southwestern portion of the building was flooded, and other basement areas could not be entered due to concerns about structural stability. These data gaps are not likely to have altered the conclusions of this report.
- During the September 6, 2024, inspection, the Armory building did not have power. Interior spaces were sufficiently illuminated via natural light sources and flashlights, and this lighting condition is not likely to have altered the conclusions of this report.
- Due to security concerns, AKRF was restricted from viewing the contents of the vault located in the west National Guard building. Given the contained nature of the metal vault, its well-maintained condition, and the lack of evidence of releases/spills around the vault, this data gap is not likely to have altered the conclusions of this report.

No Significant Data Gaps (as defined in Section 3.2.78 of ASTM Standard E1527-21) were identified as part of the assessment.

8.0 CONCLUSIONS

AKRF, Inc. (AKRF) was retained by the New York City Economic Development Corporation (EDC; the User and Client) to prepare a Phase I Environmental Site Assessment (ESA) of the Kingsbridge Armory Redevelopment property consisting of the Kingsbridge Armory (the Armory Site) at 1 West Kingsbridge Road, Bronx, NY 10468 (Tax Block 3247, Lot 10) and the National Guard Site at 10 West 195th St, Bronx, NY 10468 (Tax Block 3247, Lot 2) (collectively, the "Subject Property"). The objective of this assessment was to identify any potential environmental concerns associated with the Subject Property resulting from past or current usage of the Subject Property or neighboring properties.

This Phase I ESA was conducted in conformance with ASTM Standard E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Any exceptions to, or deletions from, the Standards are described in Section 7.0. The term "Recognized Environmental Condition" or REC (as defined in the E1527-21 Standard) means (1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment.

The Standards also include definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as a condition that does not present a threat to human health or the environment and that generally would not be subject to enforcement action if brought to the attention of appropriate government agencies.

A summary of the assessment findings is presented below:

Recognized Environmental Conditions (RECs)/Vapor Encroachment Conditions (VECs)

- Two unlisted 275-gallon ASTs were observed on the Armory's basement level. Both tanks may have previously contained fuel but appeared to be empty at the time of reconnaissance. One tank was standing on its end, and one tank was tipped on its side. Staining was observed on the concrete floor under one of the tanks.
- Several 55-gallon drums observed in the western portion of the Armory basement garage were unlabeled, were either empty or filled with unknown substances, and displayed signs of deterioration, with rust and holes in some of the drums. In addition, two unlabeled, partially full 55-gallon drums with unknown contents were observed in the Armory Site's western parking lot along the exterior wall of the drill hall and exhibited signs of deterioration. One unlabeled, partially full 55-gallon drum with unknown contents was observed resting on its side in the western parking lot of the National Guard Site near Reservoir Avenue. The drum exhibited signs of corrosion, and a small puddle of liquid from an apparent leak was observed beneath it.
- Elevated levels of lead from spent munitions were detected during previous investigations in the two rifle ranges and four pistol ranges in the Armory basement. Waste classification samples were determined to contain leachable lead above 5 parts per million (ppm), exceeding the hazardous waste criteria for lead.
- Several RCRA hazardous waste activities were identified on the Subject Property. The Armory Site was identified as a non-generator of lead in 2012 and a historic LQG of lead in 2011 and 2012. A separate listing identified the Armory Site as a VSQG in 2007 and a historic LQG, SQG, and VSQG of lead in 2002, 2001, and 2006 to 2007, respectively. The NYS Department

of Military and Naval Affairs was also identified on the Subject Property as a non-generator of unspecified ignitable waste in 2007, a historic non-generator in 1995, 1999, 2006, 2007, and a historic LQG from 1985 to 1986.

- The Subject Property is listed in the NY MANIFEST database for the shipment of 4,195 pounds and 923 gallons of ignitable waste and 2,195 pounds of spent halogenated solvents. These listings indicate historic generators of hazardous waste, which have some potential to have affected the Subject Property and are considered RECs/VECs.
- Sump pits were observed in the southeast portion of the Armory building basement and on the National Guard Site in the east building basement boiler room and on the ground level of the west building. In addition, floor drains (possibly dry wells) were observed in the east National Guard building basement. The sumps and possible dry wells have the potential to have affected the Subject Property subsurface.
- Adjacent and nearby properties were identified in the regulatory databases, historical Sanborn maps City Directory listings, and during site reconnaissance with some potential to affect the Subject Property subsurface, including former and/or current automotive uses, commercial uses, and dry cleaners.
- The National Guard Site was listed in the Petroleum Bulk Storage (PBS) database with the following five USTs associated with PBS Facility ID: 2-392014: one closed/removed 3,000-gallon diesel UST installed by 1988 and closed in September 1993; one closed/removed 2,000-gallon gasoline UST installed by 1988 and closed in September 1993; one closed/removed 2,000-gallon No. 2 fuel oil UST with an unspecified installation date and closed sometime after August 2003; one closed/removed 8,000-gallon No. 2 fuel oil UST with an unspecified installation date and closed in January 1999; and one closed/removed 225-gallon gasoline UST installed by October 1996 and closed in May 1995. However, while these USTs are listed as closed/removed in the PBS database, two abandoned USTs were discovered in the western parking lot on the National Guard Site during the 2007 Phase II Environmental Site Assessment by TRC. These USTs were suspected to be the 3,000- and 2,000-gallon USTs closed in 1993. Given the conflicting information on the status of the historic USTs on the National Guard Site, it is possible the tanks were not closed and removed properly, potentially affecting the Subject Property subsurface.
- The National Guard Site was listed in the PBS database with the following two ASTs associated with PBS Facility ID: 2-392014: one closed/removed 225-gallon diesel AST with unspecified installation and closure dates and one unregulated/closed 275-gallon diesel AST with unspecified installation and closure dates. It is possible the tanks were not closed and removed properly, potentially affecting the Subject Property subsurface.

Historic RECs (HRECs)

- The Subject Property was listed in the NY SPILLS database and LTANKs database with the following closed-status spills:
    - Spill No. 8802461 was reported at 29 West Kingsbridge Road (the Armory Site) in June 1988 due to tank test failure. This No. 2 fuel oil spill was closed in August 2008 after confirmation that no contamination resulted from the spill and that the tank would be removed.
    - Spill No. 9211568 was reported at 29 West Kingsbridge Road (the Armory Site) in January 1993 due to a tank failure. This gasoline spill was administratively consolidated under Spill No. 9308016, which was assigned in October 1993 and

identified as a diesel spill. Spill No. 9308016 was ultimately closed in March 2005. According to the listing details, soil contamination was discovered during a tank pull, but the location of the spill on the Subject Property was not provided. The spill was closed in June 2008 after site representatives confirmed the contaminated soil was removed, with NYSDEC noting that the original spill had been subject to natural attenuation for approximately 16 years and had no known adverse impacts to the public.

Business Environmental Risks (BERs)

- Historical on-site military operations at the Subject Property are considered BERs.
- Based on the age of the Subject Property buildings and observations during reconnaissance, as well as findings of previous environmental surveys, ACM, PCBs, and LBP are present within building material, debris, and/or in buried fill materials at the Subject Property and constitute a BER.
- The elevator machine room in the east National Guard building basement contained an approximately 10-gallon, 32-grade hydraulic oil reservoir tank. No staining or leaks were noted in connection with the tank. The elevator was installed in 2022, and there was no previous elevator on-site.
- A generator with an associated 5-gallon fuel tank was observed in a free-standing generator room on the Armory drill hall floor; no evidence of leaks was observed near the generator or its fuel tank.
- Deteriorated mechanical equipment at the Armory building may contain residual fluids, such as petroleum based fluids or fluids containing hazardous materials.
- Extensive water damage was observed throughout the Armory building.
- Animal/bird carcasses and excreta were present in much of the mezzanine and second levels of the Armory headhouse.

De Minimis Conditions

- Small containers of paint, cleaning supplies, and gas associated with building maintenance and groundskeeping activities were present at the Subject Property.
- Approximately 100 five-gallon buckets of graffiti remover and paint were observed in storage room S4 in the southeast portion of the Armory building basement mezzanine.
- Various 55-gallon drums were observed in the eastern portion of the Armory's basement garage were labelled as non-hazardous purged groundwater from a previous subsurface investigation by Langan Engineers and did not show any obvious signs of leakage or breeching.

Summary of Significant Data Gaps

No Significant Data Gaps (as defined in Section 3.2.78 of ASTM Standard E1527-21) were identified as part of the assessment.

9.0 RECOMMENDATIONS

Based on the conclusions of this Phase I ESA, and the available details for the planned redevelopment of the Subject Property, AKRF recommends the following:

Environmental

- A June 7, 2013, Phase II investigation report prepared by Langan was submitted to NYCDEP for a previous proposed development. NYCDEP issued comments on the report, stating that a RAP and CHASP would be required for NYCDEP approval prior to any soil disturbance. At that time, NYCDEP required that the RAP and CHASP include provisions for installation of a vapor barrier and an SSDS to mitigate potential vapor intrusion, as well as other environmental requirements related to soil management, dewatering, clean soil cap, environmental monitoring, and management of any encountered USTs.
- A Phase II investigation (i.e., soil, groundwater, and/or soil vapor sampling) under an NYCDEP-approved Work Plan may be warranted on the National Guard Site and possibly in areas of proposed excavation at the Armory Site. If excavation is required in the course of redevelopment, gridded in-situ characterization sampling of soil/fill to be excavated and disposed of will be required as a pre-construction task to obtain disposal facility acceptance prior to the start of any excavation/disposal activities.
- If dewatering is required during potential future construction activities, water must be discharged in accordance with NYCDEP requirements.
- The drum at the National Guard Site and the ASTs and drums found throughout the Armory Site should be removed, handled, and disposed of in accordance with applicable regulations. The 55-gallon drums observed on the Subject Property contain unknown materials and should be inventoried, and waste profile samples should be collected from each drum to determine the appropriate method(s) for disposal. The remaining contents (if any) within the two ASTs present at the Armory Site should be emptied and properly disposed of. ASTs were not observed at the National Guard Site.
- Soil, debris, and/or dust containing elevated lead levels from the Armory rifle and pistol ranges should be removed, handled, and disposed of in accordance with applicable regulations. Additional sampling/surveying may be warranted to quantify affected areas/materials. Evidence of firing ranges was not observed at the National Guard Site.
- All deteriorating mechanical equipment in the Armory building and mechanical equipment in the National Guard Site slated for demolition/removal should be evaluated to determine if they contain any fluids, including petroleum and/or hazardous substances. Based upon the results of the evaluation, the equipment should be removed and properly disposed of.
- Graffiti remover observed in a storage room in the southeast portion of the Armory building basement mezzanine should be stored within secondary containment pallets to contain any accidental releases or should be removed and appropriately disposed of during redevelopment.

Asbestos, Lead Paint, Universal Waste, and PCB Caulk

- Depending on how the proposed redevelopment of the Subject Property compares to previous development plans, additional ACM testing of materials to be disturbed by renovations to the Armory building may be warranted. Prior to demolition, an ACM survey of the National Guard buildings should be conducted. Asbestos sampling must be performed by a NYC-certified

asbestos investigator to determine whether the scope of work will disturb ACM. Any such ACM must be removed prior to the renovation or demolition activities at the Subject Property.

- Any activities at the Subject Property (including interior renovations, demolition, etc.) with the potential to disturb LBP or paint containing any detectable level of lead must be conducted in accordance with applicable regulatory agency requirements [e.g., USOSHA]. If uses of the Armory building include residential or child-occupied facilities, additional regulations should be followed.
- Disposal of affected suspect mercury-containing or suspect PCB-containing equipment at the Subject Property would be conducted in accordance with applicable regulatory requirements. Additional PCB caulk sampling may be necessary in the Armory and National Guard buildings for identification and delineation purposes.
- Unless there is labeling or test data that indicates that fluorescent lights, hydraulic equipment, and other electrical equipment are not mercury- and/or PCB-containing, any disposal of these components from the Subject Property should be conducted in accordance with applicable federal, state, and local regulations and guidelines.
- Trash and debris present throughout the Armory building should be evaluated to determine its proper disposal, as it may contain hazardous substances. No trash or debris were observed at the National Guard Site.

10.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property for which the assessment was conducted. We have conducted all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

11.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination, on the Subject Property, and to identify, to the extent feasible pursuant to the processes described in the report, *Recognized Environmental Conditions* as defined in ASTM Standard E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was conducted in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard(s), except as noted otherwise in Section 7.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the Subject Property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the Subject Property and to the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services conducted by AKRF, Inc. professional staff and observation of the Subject Property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than the New York City Economic Development Corporation and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

Contact: Thomas A. Giordano

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AKRF, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AKRF, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1927 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 501 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/22/2024 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 2 RCRA-LQG sites within approximately 0.125 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 3 RCRA-SQG sites within approximately 0.125 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 2 RCRA-VSQG sites within approximately 0.125 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/01/2024 has revealed that there are 5 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 07/30/2024 has revealed that there are 73 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 9 NY UST sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 07/30/2024 has revealed that there are 359 NY Spills sites within approximately 0.5 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there are 25 RCRA NonGen / NLR sites within approximately 0.125 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 20 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 10 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CON EDISON - KINGSBR	BLOCK 3236, LOT 25 A	WSW 1/2 - 1 (0.692 mi.)	ED694	2259

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto

sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 6 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 8/4/2004 Transferred from Sigona to Sangesland Heidi Gable of US Army Facilities received a mass mailing TTF letter about the open spill number. She says the last of 7 tanks on the site is being removed this month. There was no indication on the spill report about which tank failed. Sangesland asked her to gather all the info she has about tank closures on her site and a statement that says no contamination was found. 8/10/2004 Sangesland received a packet of info from Michael Friess, Director of Facilities Management at NYS Division of Military and Naval Affairs. Packet shows a series of tank tests over the years showing the tank in question has been passing. It also confirms that this is the last buried tank on site and that it is being removed this month by Tyree. No contamination has been found therefore the spill is being closed out. If contamination is found when the tank is pulled, Tyree will need to open another spill number.
Remarks:	TRIED TO PERFORM TANK TEST. TANK WAS FILL UP STUCK TANK - FOUND 4 OF WATER. 1 1/2 GALLON & LEVEL DROPPED 40.

Spill Reopened Because A File Exists. 3/28/05 -

29 WEST KINGSBRIDGE RD. (Continued) **S102834179**

also see spill 9211568. - KST
Spill reassigned to Perez in June 2005 as part of the Spills Closure Initiative. 08/05/2005 -
Called Mr. Mike Bullock (Petro Envir), the phone number is not longer in service. 10/05/2005 -
According with Mr. William Knox(US ARMY) the armory was released to the City of New York in 1996
and the NYCDEP (718) 595-4784, handled the environmental issues at the site. As of today,
01/06/2006, no contact have been found for the site. Perez. 01/06/2006 - Next steps, Regional staff
should contact the NYC Economic Development Corporation (site managers) at (888) NYC-0100, (212)
312-3600 or (212) 619-500 (operator). Scheduled a site visit/inspection. Perez. Spill transferred
back to R-2 3/7/08 - Austin - Assigned to Ketani for further investigation - end 5/28/08 - Raphael
Ketani. The spill happened on 10/1/93. Stockpiled diesel contaminated soil was removed. There's no
PBS for the tank and no E-docs. There is no paper file. I tried to check the ownership of the site.
According to Property Shark, the main address is 2671 Jerome Avenue. The alternate addresses are: 1
to 29 West Kingsbridge Road, 2 to 50 West 195 Street, 2671 to 2727 Jerome Avenue. The block and lot
are 3247/0002. Notes in this database indicate that they switched to gas. ACRIS showed ownership as
the Landmarks Preservation Commission. I called up William Nealy, Asst. Director of the Division of
Preservation (212) 669-7824, but could only leave a message. I called up Gina Santucci, Dir. of
Environmental Review at the LPC and she told me that they didn't own the site, but merely
registered it. I tried calling up the DEP phone number above, their (212) 689-1520 number, and
their (718) 595-4646 number, but no one could locate the spill, nor the existence of any documents
relating to the spill. They said they will call me back if they find anything. 5/29/08 - Raphael
Ketani. I made an unannounced site visit. The Kingsbridge Armory takes up an entire city block. The
south, west, and north sides are closed by a chainlink fence. There is a school aross the street to
the north. I entered through the recruiting office entrance and met Mary Gather who was in charge
of maintenance at the site, but who is not the super. I asked her whether she knew where the spill
took place. She said she has been here for only 2 years and never heard of or dealt with a spill at
the armory. She gave me the name of Orlando Pinnock (cell (518) 275-8757). He is the super. for the
Harlem and Kingsbridge armories. I called up Mr. Pinnock and asked him whether he had heard about
the spill or whether he knew of any documentation regarding the spill and cleanup. He said he has
been the super. for only 1 year. He said that if I call him back on monday, 6/2/08, then he will be

29 WEST KINGSBRIDGE RD. (Continued) **S102834179**

able to give me the name of someone who might know. 6/2/08 - Raphael Ketani. I talked to Mr.
Pinnock. He said he didn't know whether any information was available regarding the spill. He said
he didn't know about the spill either. He will contact his people in Albany and get back to me.
Heidi Unwin of the Division of Military and Naval Affairs (518) 786-4347 called and left a message
that she needed the spill number in order to located the records in her office. I tried to contact
her, but could only leave a message with the spill number. 6/3/08 - Raphael Ketani. I spoke to Ms.
Unwin, Environmental Specialist with the DMNA. She said that she looked for the records, but can't
find anything. She said that her bureau owns the armories and maintains them for the National
Guard. However, there are only records for a 1999 and 2004 spill. As the NYC DEP and the Division
of Military and Naval Affairs do not have any records of the spill, as no one at the site knows
where the spill took place, as the few notes indicated that soil was removed, as 16 years have gone
by since the spill with natural attenuation modifying the original spill, and as the site is in use
with no known adverse affects to the public, I am closing the spill case.

Remarks: STOCK PILED 100 YDS OF SOIL PUT PDY OVER IT. WILL REMOVE OFF SITE WHEN LAB RESULTS COME BACK.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number: 001
Tank Id: 61178

P.S. 86 - BRONX X086 (Continued) **A100178440**

Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser
C03 - Pipe Location - Aboveground/Underground Combination
G02 - Tank Secondary Containment - Vault (w/access)
L00 - Piping Leak Detection - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
I02 - Overfill - High Level Alarm
E00 - Piping Secondary Containment - None
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/1997
Capacity Gallons: 5000
Tightness Test Method: 34
Date Test: 07/05/2023
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	3/21/16-Zhune spoke to Paul Scorzelli from Accura Environmental Inspections. Paul said Accura inspected the tank and performed a tightness test to the tank. The tank failed the test. Accura is working for the byer. The seller will hire an environmental company to remove and replace the tank. This spill is referred to Kumar Patel (Secondary-off hour). 03/30/16-Hiralkumar Patel. DEC Zhune forwarded email from Paul including copy of tank system test result. the tank system was tested on 03/18/16 and failed in dry portion. Paul Scorzelli Accurate Environmental Inspections PH. (914) 557-3491 email: Paulsaccurate@aol.com 04/15/16-Hiralkumar Patel. alternate address: none no PBS or other spills found. 3:29 PM:- spoke with Paul at Accurate Env. they have not done any further work at the site as initial tank system test was conducted for a potential buyer (Selvin , 917-497-1111). 3:37 PM:- left message for Ms. Gardner Colette Gardner **property owner** 2629 Grand Avenue Bronx, NY 10468 Ph. (646) 286-0254 email: cyg58@aol.com coletteygardner@gmail.com 3:50 PM:- sent TTF letter to Ms. Gardner and asked to submit report by the end of 05/20/16. 04/21/16-Hiralkumar Patel. 7:31 AM:- received message from Ms. Gardner. 8:47 AM:- left message for Ms. Gardner. 12:47 PM:- received message from Ms. Gardner. 04/25/16-Hiralkumar Patel. 9:04 AM:- spoke with Ms. Gardner and informed her that the department requires further investigation (and

RESIDENCE (Continued) **S118636942**

cleanup, if needed) of tank system test failure as per letter dated 04/15/16. she will retain a contractor for required work. 05/06/16-Hiralkumar Patel. 11:16 AM:- received message from Ms. Gardner. 11:23 AM:- spoke with Ms. Gardner. she has received quote from ABC tank and another company is inspecting the site today to provide cost estimate. she mentioned that as per initial tank testing company, the tank is 550 gal in size, but as per ABC Tank the tank is 1,000 gal in size. ABC Tank also mentioned that there is approx. 300 gal oil in the tank at this time. Ms. Gardner doesn't know the size and age of the tank system. the on-site building is a two-story house and there is a family living in the building. they are currently using the tank system and Ms. Gardner believes that the tank system was filled at least once after the tank test failure on 03/19/16. asked Ms. Gardner to contact their oil company (Skaggs-Walsh) for tank size information and delivery record for last two years. due to system failure, informed Ms. Gardner that the tank system can't be used anymore and tank has to be pumped unless confirmed tight. she will talk to contractor/oil company and will call back. 05/10/16-Hiralkumar Patel. 8:25 AM:- received message from Ms. Gardner. she mentioned that oil company will install a tank inside the building and will pump out the underground tank on 05/12/16. isolation test of the underground tank system will occur after that. she has also requested copy of two years of delivery record and waiting for response from oil company. 05/16/16-Hiralkumar Patel. 11:16 AM:- received message from Ms. Gardner. 3:29 PM:- spoke with Ms. Gardner. she mentioned that a new tank has been installed within the building and remaining oil from the underground tank has been transferred to new aboveground tank. she is in contact with few companies for cost estimates for an isolation test. 05/19/16-Hiralkumar Patel. 1:47 PM:- received email from Ms. Gardner including copy of last two year's delivery record. based on delivery record (705 gal on 02/13/15 and 877 gal on 04/11/16), on-site UST is more than 550 gal in size. 06/07/16-Hiralkumar Patel. 9:55 AM:- received call from Ms. Gardner. she is planning to conduct field work on 06/10/16. she will call back with final schedule. 07/22/16-Hiralkumar Patel. 10:34 AM:- received email from Ms. Gardner including copy of tank only test result. she mentioned that the tank was dug up, capped and properly tested. as per the test results, A-1 Crown tested the 1,000 gal tank on 07/12/16 and noted that the tank had 477 gal of product. but as per Ms. Gardner, the UST was pumped out. 07/27/16-Hiralkumar Patel. 9:34 AM:- left message for Phil Fazin (516-375-5890) at A-1 Crown. 9:58 AM:- left message for Ms. Gardner.

RESIDENCE (Continued) **S118636942**

10:11 AM:- received call from
Phil. A-1 Crown was retained by Metropolitan Heat. he tested the underground tank. during test, the
tank had oil in it. he also observed damaged vent pipe, which could be reason for dry leak reported
initially. he observed no contamination in damaged vent pipe location. 10:13 AM:- left message for
Henry (718-941-7600) at Metropolitan Heat. 07/28/16-Hiralkumar Patel. received message from Ms.
Gardner (at 6:58 PM on 07/27/16). 08/01/16-Hiralkumar Patel. 3:31 PM:- spoke with Ms. Gardner
regarding product volume in tank. Ms. Gardner mentioned that the UST was pumped out when they
installed new tank inside the building. she will contact Metro Heat and will call back.
08/10/16-Hiralkumar Patel. received message from Henry (at 12:48 PM on 08/09/16). 1:04 PM:- spoke
with Henry. he mentioned that when he went to the site for tank test work, he found some oil in the
UST. he stated that the UST is 1,000 gal in size and the new AST inside the building is 275 gal in
size. so owner pumped out only some oil from UST to fill up the AST. prior to tank test, Henry
noted that there was no cap on the vent pipe. as he tried to put cap on the vent pipe, piece of
vent pipe got separated as it was corroded. later on, owner has exposed the tank top which also
exposed the entire length of underground supply/return/vent lines. Henry mentioned that he did not
observed any petroleum contamination in the excavation, along the supply/return lines or under vent
pipe location. he also tested piece of remote fill line that was not exposed and found it tight.
asked Henry to submit letter/email including these information. Henry Traktman Metropolitan Heat
Ph. (718) 941-7600 email: henry@metropolitanheat.com 1:29 PM:- sent email to Henry and asked him to
submit details about tank test work. email copied to Ms. Gardner. 1:32 PM:- received email from
Suki Yen (Suki@metropolitanheat.com) from Metropolitan Heat including site pics.
08/31/16-Hiralkumar Patel. received email from Ms. Yen (at 9:33 AM on 08/17/16) including letter
with summary of work performed at the site. Henry mentioned that the tank was legally abandoned in
place. case closed based on available information. 10:16 AM:- sent spill closure letter to Ms.
Gardner. letter emailed to Ms. Gardner.

Remarks: tank removal - replace w/ above ground clean up pending removal

DEC Memo:	3/15/2017 - Feng - Duty Desk. Spoke to FDNY HAZMAT 1 Officer Augustyn (347-203-6886). The address is 80 West Kings Bridge Road, Bronx. It is about 40 gallons of fuel oil/water mixture leaked onto

BASEMENT (Continued) **S120701271**

the basement floor. All has been pumped out by the FDNY HAZMAT. He said that the cause of the leak
might be mechanical failure of the tank. The tank is not leaking now. There is heavy odor in the
basement. The building is a business (Aguila), no one live in the basement. He is not sure whether
any drain/sewer being impacted. The floor is in concrete, but he is not sure whether there is any
cracks. Everything inside the basement has been covered in black. Use the side entrance. brief to
runner Ryan Piper. He may stop by for an inspection. spill is assigned to R. Piper. 4/7/17- DEC
Piper received update from AL Eastman. We removed the entire front of the tank jacket. The tank is
resting on a concrete floor and is in good shape. The spill surely came from an over fill that
spilled out of an existing cut-out that was used to clean the tank. We removed some dirt debris but
wasn t excessive. Ran water behind the tank to move some oil to the front so we can clean behind
with out moving the tank and vacuumed everything up. Manny took some pictures before reinstalling
the concrete block but nothing came out very clear. The Cut-out was welded closed and tested. Based
on work performed to date, this spill is closed.

Remarks: Clean up is started unknown equipment failure

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was GRATHWOL Joe Ksturski - 1540. Ordered 3000 gallons - could not find super - found woman - this woman signed for delivery. 4/11/88 @ 1530. Talked to owner of building - Topk Realty. New line, 3 feet above old line. call office. broke old fill without checking first. Said they will document their side of the story. Sent out Grathwol to investigate. Petroleum Tank Cleaners - Anthony on scene. Belcher oil delivery was put in the wrong fill pipie. Invoice quoted 3000 gallons was delivered. Spill approximately 350 gallons. Fill pipe had been sealed with concrete and covered with epoxy. Driver hurried and left site. Two hours later, spill was discovered in basement. 5k tank. Brick vault. 200 gallons vacced out. Speedi dri dropped, cleaned, dropped and cleaned again. Recommended no electricity for thhe basement and to keep boiler out of operation until 4/12/88. PTC concreted bad fill pipe at both ends.
Remarks:	DRIVER USED OLD FILL LINE WITH LEAK IN IT, PRESENT SPILLAGE IS CONTAINED IN BOILER ROOM.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	12/10/07-Hiralkumar Patel. DEC Vought spoke with Mr. Fries. he complained about speedy dry on sidewalk, outside of building. as per Mr. Fries, oil spilled from oil delivery truck about week ago. driver put speedy dry and left. as per Mr. Fries, no odors inside building. DEC Vought asked for contact for property manager or super. Mr. Fries doesn't have anybody's contact info or oil company's info. no soil/drain affected. case closed.
Remarks:	unknown amount spilled; has not yet been cleaned up; there is no clean up scheduled at this time; would like a rep to call asap; says

RESIDANCIAL BUILDING (Continued) **S108981015**

it has been there for a week; it is on the side of the entrance of the building, on the cement sidewalk

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	05/04/09-Vought-Off hours responder. Called Ramon at Cosco Oil (718) 579-3480. Vought called and spoke to and no sewers or drains were affected. Crew will arrive on site today to confirm cleanup. Spill caused by possible defective gauge and spill was on sidewalk and soil and soil was removed. Millie will return call to Vought with status of cleanup after site visit is performed. 6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin and Vought transfer to Section A. 10/14/10 - Raphael Ketani. The spill took place on 5/2/09. It consisted of the release of 4 gals. of #6 oil out the vent line and onto the sidewalk and the soil. According to ACRIS, the owner is Ved Parkash at 172-14 89 Avenue, Jamaica, NY, 11432, phone (718) 658-0205. The PBS case is #2-274100. A 5,000 gal. AST with #6 oil is in service. I

APARTMENT BUILDING (Continued) **S109582487**

will make a site visit.
10/19/10 - Raphael Ketani. I made an unannounced site visit. The site is an apartment building.
There is a small garden area (see E-docs) at the front left side of the building. The soil looked
clean. There was no oil on the building wall. There was a very small drip mark emanating from the
vent. However, it looked as if it wasn't a fresh release. As the spill appears to have been cleaned
and as the spill was only 4 gals., I have determined that there is no threat to the public or the
environment from any residual material which may remain as a result of the spill. Therefore, I have
closed the spill case.

Remarks: 1332 The caller advised dispatch the spill has been cleaned up. No water ways affected.

Tank Info:

Tank Number:	001
Tank Id:	56182
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

WALTON HIGH SCHOOL (X430) (Continued) **A100139052**

Equipment Records:
E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
I02 - Overfill - High Level Alarm
L09 - Piping Leak Detection - Exempt Suction Piping
J02 - Dispenser - Suction Dispenser
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
K00 - Spill Prevention - None

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	09/01/1995
Capacity Gallons:	7500
Tightness Test Method:	34
Date Test:	07/07/2023
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	LABATIST

Date Record Added:	11/30/2000
Date Record Updated:	03/29/2005
Updated By:	VXBREVDO
Site Description:	"The site is located in a commercial/residential area of the Kingsbridge Heights section of the Bronx. The property is currently occupied by a two-story brick building which contains a laundromat. The site is bordered by a convenience store and apartment building on the north, by a formerly vacant lot (now under construction for Home/Hospital for the Aged), by a parking garage to the east, and by Universtity Avenue (a.k.a Martin Luther King, Jr. Boulevard) to the west. Before its use as a laundromat the property was previously utilized by a dry cleaner for an unknown length of time. Investigations conducted immediately south of the site (at 2614-2620 University Avenue) in 1997 identified tetracholoethylene (PCE) at high levels in the soil (200 ppm) and groundwater (110,000 ppb). Based on subsequent investigations, a PCE hot spot was identified. In 2000, excavation of the hot spot area was completed. Confirmatory samples collected from the excavation showed non-detectable levels of PCE and associated breakdown products. Levels of contamination in the groundwater dropped by several orders of magnitude since 1997. The remaining groundwater contamination will be addressed under the Operations, Maintenance and Monitoring Plan. See also site no. 203008, which determined there was no source of contamination on 2628 University Ave. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. "
Env Problem:	"The operations contaminated the soil and groundwater on the adjacent property with tetracholoroethylene (PCE) and its associated breakdown products. Excavations addressed soil contamination, and most of the groundwater contamiation. The remaining groundwater contamination is being addressed under the Operations, Maintenance and Monitoring Plan."

DEC Memo:	e2mis no. 129583: Jan. 13, 2000 Supervisor J. Kofoed reports that he discovers approximately 1 ounce of unknown oil on the wall in manhole 16973, while locating a fault on 1x27. The manhole has no water present. The oil appears to be solidify on the wall. There is an earthen sump in manhole 16973, which has a sewer connection according to conduit plate 30-J-1. The spill is nowhere in the area of the sump. The clean up is in progress and being handed as 50-499 PPM. Jan. 13, 2000 The clean up was completed by J. Kofoed at 01:45. The area was scrub with a cleaning solution and washed down. 1 bag of hazardous waste was generated and properly disposed of.
Remarks:	1 oz unk in manhole no water - clean up in progress - clean up as to 50-499 ppm con ed #129583

DEC Memo:	8/18/16- DEC piper spoke with Rob Hill. They received a call this morning that the tank was leaking. Approx 5-10 gallons on floor under vaulted tank. A vac truck is onsite to empty the tank. Rite Way is going to set up temp tanks for hot water and investigate.

APARTMENT BUILDING (Continued) **S118950865**

Spill assigned to DEC Zhune
for follow up and closure. 2-603894 11/7/16-David from Riteway sent the following email. For 2754
Claflin Ave The existing tank was removed, the floor underneath was sound and solid. We are now
currently waiting for the permits for the new install of a 3000 AST. (I am trying to get you
photos of the floor) 10/7/20-David from Riteway sent the report dated October 06,2020. I couldn't
find all the documents needed. As I am sure you know that in 2018 we had a fire at 700 Hicks street
and we had to move to the Bronx. Some of our documentation was lost during this incident. What I
did find (please see attached) was the invoice and job tickets as well as the liquid manifest for
the destination disposal site for the 500 gallons. I could not find the manifest that we wrote for
the500 gallon that was disposed of from the tank and I cannot find 1 drum manifest for the drum
that was disposed. But I find a composite load manifest for a container that we consolidated drums
into. 99% that the one drum from 2754 Clafin was consolidated into the 15 yard container (manifest
attached). At this time the NYSDEC came to our site at 700 Hicks Stand ordered us to remove and
dispose of the drums we have accumulated onsite(due to insufficient funds in our company at that
time). AS for the spill,... It appears that there was a small leak on the tank which discharge onto
a solid concrete floor. We were there 0n 8/18/2016 only. According our tickets (please see attached
, the spill cleaned up was completed and the disposal was 1 drum an 500 gallons of liquid from the
tank. I've included the composite manifest for the drum and the composite manifest for the 500
gallons in the attachment. I hope this helps as we do not have any other documentation and
unfortunately the men who were on the job as well as Rob Hill has no longer been with the company
for over 2 years now, and I have no one to ask for details, but the work tickets were helpful.
Spill Closed.

Remarks: Clean up is in progress.

JEWISH HOME & HOSPITAL (Continued) **S102402173**

AND GROUNDWATER JUST ABOVE
BEDROCK SURFACE. EDER HIRED AS CONSULTANT BECAUSE BUILDING TO BE TORN DOWN FOR NEW RESIDENTIAL
STRUCTURE. EDER DID DELINEATION OF PRODUCT PLUM AND FOUND VERY HIGH CONCENTRATIONS OF
TETRACHLOROETHENE & METHLYENE CHLORIDE. REFERED TO HAZ WASTE REMEDIATION ON 3/5/97. 05/28/03 Site
is being handled by Haz Waste Remediation (Brevdo) BTEX release from the former underground storage
tanks at 2614 University Avenue, which were removed as part of the remedy implemented under the
VCA. Remediation implemented to date included soil excavation; tanks removal; and operation of the
Soil Vapor Extraction system that proved to be ineffective to address groundwater contamination. To
address residual contamination in the soil and in the groundwater, consultant for the Volunteer had
initially (in April 2003) proposed dual phase extraction system, however, is now proposing
additional excavation instead. Rommel 12/29/03 The on-site remedial actions were completed by RP.
Spill number closed. Walsh

Remarks: underground tanks abandoned several years ago-soil contamination has been recently discovered by caller

ENG CONTROLS:

Name: JEWISH HOME FOR THE AGED
Address: 2614 UNIVERSITY AVENUE
City,State,Zip: BRONX, NY 10468
Site Code: 57987
HW Code: V00181
Control Code: 13
Control Type: ENG
Date Record Added: 08/05/2008
Date Rec Updated: 05/01/2024
Updated By: MCSALAZA
Site Description: "Location: The site is located in an urban area in Bronx County. The site encompasses about 0.5 acres and is located at 2614 and 2620 University Avenue, Bronx County, Block 3215, Lot 11 and Lot 14. Site Features: The new building (a home and hospital for the aged) has been constructed and consists of seven floors with 50 residential units of affordable housing for seniors. Current Zoning/Use: The current use is a home and hospital of senior citizens. Surrounding uses also include residential and commercial. Historical Use: The 2614 Kingsbridge Corporation had operated a parking garage at the site since it purchased the property in 1973. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue. Site Geology and Hydrogeology: The site is underlain by a thin veneer (less than 6-inches to 8-feet) of low permeability, unconsolidated overburden on top of dense crystalline bedrock. The overburden is primarily silt and clay (weathered bedrock) with pockets of fill and thin lenses of native fine sand and rock fragments. Groundwater is not present at all locations in the overburden. Groundwater has been measured to flow from University Avenue southeasterly toward Aqueduct Avenue at a gradient of approximately 0.03 ft/ft. "
Env Problem: "Nature and Extent of Contamination: Prior to Remediation - Contaminants of concern at the site included chlorinated volatile organic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Impacted media included soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially. Post Remediation

2614 KINGSBRIDGE CORP (Continued) **U001836650**

- The remedial measures commenced in 2000 and involved excavation and removal of the USTs and contaminated soils; installation and operation of a Soil Vapor Extraction (SVE) system to address any residual contamination; a Sub-slab Depressurization System (SSDS) beneath the new building; and groundwater monitoring to assess the effectiveness of these remedial actions. A total of 3,070 tons of contaminated soil was removed and disposed off-site. The SVE system operated continuously for two years. The semi-annual groundwater monitoring program was implemented in June 2001, following completion of the remedy. Engineering and Institutional Controls (ECs/ICs), including a Site Management Plan and deed restrictions, are in-place. Engineering controls consist of a composite cover system, vapor barrier and active sub-slab depressurization system. The remediation was completed in April 2007 with the approval of the Site Management Plan and issuance of the VCA Release letter. "

Health Problem: "Volatile organic compounds are present in the groundwater at this site, however, exposure via ingestion is not expected as the area is served by public water. The potential for soil vapor intrusion in the on-site building has been mitigated by the installation and operation of a sub-slab depressurization system under the building. "

Site Features: The new building (a home and hospital for the aged) has been constructed and consists of seven floors with 50 residential units of affordable housing for seniors. Current Zoning/Use: The current use is a home and hospital of senior citizens. Surrounding uses also include residential and commercial. Historical Use: The 2614 Kingsbridge Corporation had operated a parking garage at the site since it purchased the property in 1973. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue. Site Geology and Hydrogeology: The site is underlain by a thin veneer (less than 6-inches to 8-feet) of low permeability, unconsolidated overburden on top of dense crystalline bedrock. The overburden is primarily silt and clay (weathered bedrock) with pockets of fill and thin lenses of native fine sand and rock fragments. Groundwater is not present at all locations in the overburden. Groundwater has been measured to flow from University Avenue southeasterly toward Aqueduct Avenue at a gradient of approximately 0.03 ft/ft. "
Env Problem: "Nature and Extent of Contamination: Prior to Remediation - Contaminants of concern at the site included chlorinated volatile

2614 KINGSBRIDGE CORP (Continued) **U001836650**

organic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Impacted media included soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially. Post Remediation - The remedial measures commenced in 2000 and involved excavation and removal of the USTs and contaminated soils; installation and operation of a Soil Vapor Extraction (SVE) system to address any residual contamination; a Sub-slab Depressurization System (SSDS) beneath the new building; and groundwater monitoring to assess the effectiveness of these remedial actions. A total of 3,070 tons of contaminated soil was removed and disposed off-site. The SVE system operated continuously for two years. The semi-annual groundwater monitoring program was implemented in June 2001, following completion of the remedy. Engineering and Institutional Controls (ECs/ICs), including a Site Management Plan and deed restrictions, are in-place. Engineering controls consist of a composite cover system, vapor barrier and active sub-slab depressurization system. The remediation was completed in April 2007 with the approval of the Site Management Plan and issuance of the VCA Release letter. "

Health Problem: "Volatile organic compounds are present in the groundwater at this site, however, exposure via ingestion is not expected as the area is served by public water. The potential for soil vapor intrusion in the on-site building has been mitigated by the installation and operation of a sub-slab depressurization system under the building. "

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	6/5/06: Gas crew excavating for Con Ed found fuel oil contamination. Location is in front of building that has 3,000 gallon fuel oil tank (PBS # 2-331414). Referred to R. Austin for follow up by PBS unit. (JHO) 6/6/06 - Austin - Reassigned to Rahman for further investigation of oil contamination and to work with PBS unit on regulatory issues. - end 07/17/06 Rahman- Sharif performed a site visit on 06/16/06. The Con Edision gas curb is IFO 2767 Morris Ave. on sidewalk.Contaminated soil with petroleum odor was observed near the gas curb valve. The fill port is attached to the wall and close to the gas curb.No indication of oil spill in the tank room.Letter was sent to(on 06/20/06) JMV Realty Corp. 280 East 204th Street Bronx, NY 10467 Attn: Joseph Zagreda(914.374.0291) asking i)Tightness testing of the tank system including piping ii)Removal of cont. soil followed by end point sampling . 02/26/07 Rahman- Rec'd report from A.B.C Tank.Tank and System passed the tightness testing.ABC Tank broke up cement near the gas curb valve,removed contaminated soil and took one end point sample.Sample result shows contamination below TAGM limit.NFA required.
Remarks:	three 55 gal drums of contaminated soil were taken during an

(Continued) **U003391089**

excavation. Soil contaminated with unknown oil. No to the five questions. The contractor on site (unknown company) will be continuing the clean up. 200233

DEC Memo: 9/15/2016: Rashad 2690 Webb Avenue has alternate addresses of 2690-2698 Webb Avenue and 115-119 West Kingsbridge Road. Additional spill found spill#0708647 was reported due to an oil company having an equipment issue during delivery, 10 gallons spilled and no soil was impacted. Spoke to super Ignacio Castillo, he said Eastmond has been there since this morning. He said they received a delivery on Friday and he noticed oil backing up into the street as well as in the boiler room. Eastmond has ventilation active in building and they have yet to diagnose the problem. PBS# 2-116157 was given by super and has a 3,000 gallon AST #6 fuel oil tank. Discussed with DEC Vought, DEC Zhune will be responding to site as she is day time runner. Super Ignacio Castillo 718-207-1428 Castillo@msn.com Management company 914-999-4300 9/15/16-Zhune visited the site. Zhune met Ramon Cabezas (super) and the technician from the oil company. As per Ramon Eastmond was there and cleaned the spill on the the floor and sumps of the boiler room. Oil #4 is coming through the wall of the boiler room and entering into the sumps. I observed oil was raising in the sumps. I spoke to the owner of the building Mr. Ignacio Castillo, he said Eastmond will come back tomorrow at 8:30am to continue with the work. As per ther oil company fill line is broken. Oil is coming through a wall of the boiler room. I asked the oil company to notified DEP. The Pumpof the sump was disconnected. 9/16/16-Zhune visited the site in the morning met Neil Tomasetti from Petro. Petro is controlling the overflow of oil and water by pumping the mixture into 2(275) gallons collection tanks. They are going to let the water wash the oil from underneath the concrete into the sumps and pump out the mixture into the collection tanks. The process will take couple of month until the area contaminated is clean. On weekly basis Petro will inform me via email how much water and oil they will collected. 9/23/16-Niel sent the following email We found the source of the fill line leak at this spill location. At one time in the past there was a repair to the fill line. The underground line had a union in it that had loosened up. The pipe did not corrode. The building seems to have a spring issue (water). The water table is a few inches over the basement floor level causing the boiler room to flood. I am having a mason build a wall around the two sump pits and trench to enclose the area into one complete containment. There is

APT BUILDING (Continued) **S118951707**

very little oil on top of the
water which we can control with absorbent pads for its removal.
9/27/16-Niel sent the following
email The underground pipe did not leak. It was a union that was
buried that was leaking. We are
installing a new fill line aboveground with a wall mounted catch basin
on the wall where we have
the two 275 gallon tanks. 11/10/16-Neil Tomaselli emailed the spill
closure report dated 11/7/16.
The letter stated that On September 14th, 2016 we pumped and drained a
sump pit in the boiler room,
cut and excavated an additional sump closer to the area that the oil
was coming into the basement.
We surveyed the building exterior and new the cause of the leak was
the underground fill line.
There was a combination of what appeared to be # 6 and # 2 oil mixed
with water. On September 15th
we went to the building and found the boiler room flooded with at
least 4 of water with a light
coating of oil on top. We pumped and cleaned the entire boiler room
floor. Water was still entering
the building so we install two 275 gallon tank outside the boiler room
and a sump pump in the sump
inside the boiler room to collect the water and oil. On September 16th
we also excavated outside
the boiler room wall to remove contaminated soils and found that
someone installed a union in the 3
fill line that was buried right next to the building in front of a
rear building entrance and that
union was loose and leaking. The fill pipe itself was in excellent
condition. On September 19th,
20th we continued excavating to remove contamination and also pumped
and removed 550 gallons of oil
and water. On September 21st, 22nd, we remove approximately 1,000
gallons of water only. It was
found the same day, 9/22/16 that one of the stores on Kingsbridge Road
that is attached to the 2690
building had a broken underground water pipe that was sending water
directly to the 2690 Webb
boiler room via underground. We monitored the boiler room for a one
week period and no water or oil
came in either pit in the Webb boiler room. It was determined that the
leaking water had pushed any
underlying oil into the sumps therefore cleaning the subsurface. A new
aboveground fill line and
wall mounted catch basin were installed and the existing underground
pipe abandoned. Attached is an
analytical report for the exterior area of the fill line leak.

Remarks: spill under investigation

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
