Total Sulfur	0.50%

N/A = Not Available
SB = Site Background
* = Total SVOCs must be less that 500ppm. Total carcinogenic SVOCs must be less than 3 ppm if any one of the cSVOCs** exceeds TAGM.
** = cSVOC list includes: Benzo(a)pyrene, Dibenzo(a,h)anthracene, Benzo(a)anthracene, Benzo(b)fluoranthene, Indeno(1,2,3-cd)pyrene, Benzo(k)fluoranthene, and Chrysene.
*** = Some forms of Cyanide are complex and very stable while other forms are pH dependent and hence are very unstable. Site-specific form(s) of Cyanide should be taken into consideration when establishing soil cleanup objective
**** = Background levels for lead vary widely. Average levels in undeveloped, rural areas may range from 4-61 ppm. Average background levels in metropolitan or suburban areas or near highways are much higher and typically range from 200-500 ppm.
MDL = Method Detection Limit

a. New York Recycling

Details of the New York Recycling (475 Exterior Street, Bronx NY) source site review and site testing for this cover layer material source site are included in the DORs. Analytical sampling and testing was completed at the site in September 2017. A site inspection was performed concurrently with the sampling event.

Approximately 1,062 cubic yards of cover layer material were imported to the Site from this source site for construction of the permanent clubhouse between November 2017 and March 2018. The majority of the material was used to raise the grade elevation in the immediate vicinity of the Clubhouse foundation and the landscape beds surrounding same.

b. Ranco Sand & Stone

The source site review for Ranco Sand & Stone (151 South Street, Manorville NY) consisted of an August 25, 2018 site visit to collect samples of this cover layer material for laboratory analysis; results are included in **Appendix N**. Results indicated that analyzed parameters met the permit standards.

Approximately 690 cubic yards of cover layer material were imported to the Site from this source site for cover material related to the gas main installation project.

D. On-Site Fill Importation Inspections

c. Process

As required under Special Condition 24 of the 2014 Permit, fill importation was inspected at the Site by the IEM. Fill material volume (truck volume) was measured and recorded for each delivery of fill material as it arrived on-site by NYCDPR's appointed representative. The fill material was then inspected by the IEM at the entrance to the Site. At this time, the fill material was visually inspected and field screened for signs of contamination. The visual inspection included observations of the material, disturbing the material with a shovel, and close-up observations of the material retrieved by shovel while still in the truck or trailer. Field screening of the fill material was executed using a PID. If the fill material failed to meet the Permit requirements for reasons such as a PID reading above ambient air, the presence of asphalt, concrete or brick components, or some other unauthorized debris, the load was rejected immediately prior to dumping. If the material was rejected, the truck was not allowed to dump on-site and was directed to exit the site immediately.

During the material imports for the Clubhouse and the gas main installation project, the IEM found no reason to reject the imported loads. Loads met the visual and field screening tests and were subsequently accepted.

If the fill material passed the initial inspection at the IEM observation area, either it was allowed to dump directly at a work location for immediate use as cover layer material or it was transported to, and dumped at, a stockpile location. At the dump location, the IEM screened the fill material visually and with a PID for a second time prior to spreading if dumped at an active work location. If the fill material did not meet the permit requirements at the dump location, it was immediately rejected, loaded back onto the same truck, and transported off-site. During the material imports for the Clubhouse and the gas main installation project, the IEM found no reason to reject the imported loads. Loads met the visual and field screening tests and were subsequently accepted.

d. Trucking Manifests

Trucking manifests were utilized for imported cover layer materials. A three-part manifest form was completed to track each load of material from origination at the source site to destination at the Site. The manifest contained information including but not limited to a manifest number, the source site name and address, the truck driver's name, truck and trailer license plate numbers, volume of material, as well as the time of departure from the source site and arrival time at the Site. Copies of fill import manifests are provided in **Appendix K**.

e. Rejected Trucks & Materials

Materials imported to the Site met the IEM's importation inspections, and none were rejected.

E. Fill Tracking

Testing per 2,000 cubic yards for cover layer material is included in Special Condition 14 of the 2014 Permit).

Cover layer material volumes were tracked based upon the calculated volumes within each truck. This provided for the most accurate and consistent approach to monitoring the volume of imported fill materials. Prior to receipt of the calculated volumes, the IEM tracked estimated volumes as trucks dumped on the Site.

The total volume of cover layer material imported to the Site for construction of the permanent clubhouse was 1,530 cubic yards (truck volume) or 0.39 percent of the authorized amount under the Permit.

F. Total Carcinogenic Semi-Volatile Organic Compound Tracking

As identified in Special Condition 14 of the 2014 Permit, the NYSDEC Acting Regional Director letter dated October 25, 2006 authorized the import of shaping material with a total carcinogenic SVOC (tcSVOC) level of up to 10 parts per million (ppm), which would not otherwise be acceptable, provided the tcSVOC weighted average of all imported material is equal to or less than 3 ppm at the end of each quarter. The tcSVOC weighted average is defined as the sum of the products of the material volume and the material tcSVOC, for each material source, divided by the total volume of the material imported. The weighted average was calculated over the course of construction and the final weighted average for shaping layer and cover layer materials imported to the Site was 0.70 ppm, less than the 3 ppm maximum. The total carcinogenic SVOC weighted average table and computations are included in the 2015 Final Construction Certification Report for materials imported to the Site after November 18, 2005.

SVOCs were sampled for New York Recycling on September 28, 2017. The tcSVOC level did not exceed 10 ppm. A copy of the laboratory report is provided in **Appendix J**.

SVOCs were sampled for Ranco Sand & Stone on August 25, 2018. The tcSVOC level did not exceed 10 ppm. A copy of the laboratory report is provided in **Appendix N**.

IV. PERMANENT CLUBHOUSE CONSTRUCTION

A. General

From July 2017-September 2018, Trump Golf Links at Ferry Point constructed a permanent clubhouse facility. The 14,100 square foot one-story building is located in the far southern section of the Site (immediately west of the 18th fairway) and includes locker rooms, showers, a bar room, a kitchen and associated facilities, ballrooms, administrative offices and a golf pro shop. The Trump Organization contracted with JCS Construction, Inc. to build this facility on piles, as it was formerly a landfill.

B. Environmental Controls / Construction

a. Landfill Gas Monitoring

Steel beams were driven to intermediate depths of approximately 40 feet, welded to another steel beam of the same length, driven to completion depths of approximately 75 feet, then cut to grade. Prior to welding/cutting, the piles were checked at the inlet (i.e. ground surface elevation) with a four-gas MiniRAE Meter. The meter alarm was triggered if concentrations of carbon monoxide, hydrogen sulfide, oxygen and methane (as Lower Explosive Limit) were above OSHA exposure limits; the alarm was not triggered for the vast majority of field activities, and on the few occasions when triggered, soil was placed over the inlet until the meter alarm was not triggered prior to welding/cutting activities. As an added measure of protection, when the meter alarm activated, explosion-proof industrial ventilation fans were activated to vent the work area and disperse gases emanating from the subsurface.

b. Imported Soils Monitoring

Fifty-nine (59) loads of soil (approximately 1,062 cubic yards) were imported from New York Recycling, a donor source located at 475 Exterior Street in the Bronx; and 27 loads of soil (approximately 690 cubic yards) were imported from Ranco Sand & Stone, a donor source located at 151 South Street in Manorville NY. Air monitoring performed during the course of the workday revealed no detections above background on the PID. Visual observation and PID monitoring of each load of soil from New York Recycling and from Ranco Sand & Stone showed no evidence of VOCs or visual signs of debris within the material.

C. Municipal Solid Waste

A Royal Carting commercial municipal solid waste (MSW) six-yard container was available on Site during the duration of clubhouse construction activities. MSW was not encountered or generated during digging, earth-moving or excavation activities associated with the new clubhouse or the gas main installation activities.

D. Earthwork / Fill Placement

Earthwork and fill placement for this Project were performed in accordance with the Permit.

a. Cover Layer Material

Cover layer material was installed at the Site in accordance with the 2014 Permit (**Appendix A**).

Imported soil from New York Recycling and from Ranco Sand & Stone was backfilled and graded around the perimeter of the concrete sub-structure. The soil from New York Recycling was characterized as brown fine-coarse sand with occasional crushed stone roughly 1-1.5 inches in diameter. Materials imported from Ranco Sand & Gravel was characterized as clean, well-rounded white to gray medium sands.

b. Topsoil

Topsoil was used on the Site (in lieu of sand) specifically in tree planting pits and other landscape areas. Topsoil was imported from commercially available sources (i.e. Home Depot) and used on the Site as approved. This material met the cover layer material Permit requirements including the specification included in the 2014 Permit.

E. Meetings

On a weekly basis during construction of the permanent clubhouse, progress meetings were held in the JCS field office trailer or in the temporary clubhouse on site. Various representatives from NYCDPR, the Trump Organization, JCS and the IEM (Maser Consulting) attended the meetings to discuss construction progress, current issues and scheduling.

Available meeting minutes from construction progress meetings are provided in **Appendix M**.

F. SSDS / Liquid Boot® Installation

From November 2-7, 2017 the SSDS was installed. Lateral collection piping was laid, and the SSDS pits were excavated and connected to the lateral collection piping. The IEM provided oversight, including taking measurements of the as-built SSDS component installed locations for use in this report.

Stone cover was then poured over the SSDS prior to Liquid Boot® installation.

From November 8-15, 2017 the stone cover was lined (base fabric), sprayed with Liquid Boot®, and allowed to cure. Smoke testing was then performed, with leaks identified and resprayed. Coupon samples were measured to ensure that the cured thickness met the design requirement. Once smoke testing, coupon measurements and leak repairs were complete, a cover fabric was placed over the floor footprint prior to pouring the slab.

On two separate occasions after the initial spraying, curing and smoke testing of the vapor barrier, repairs had to be made to the barrier layer. IEM observations of damage to the cover fabric provided the impetus for additional spraying and testing. The first event took place in January/February of 2018 when weather conditions and mild temperatures prevailed. A final smoke test and barrier layer repair took place before the concrete floor was poured and once the Clubhouse was being enclosed. During both re-spray events, defects were located, repaired and re-tested for integrity. Like the previous smoke tests, the final smoke test indicated no signs of vapor barrier leaks, tears or defects.

On one occasion, Liquid Boot® was sprayed at temperatures below the recommended 45 degrees F. However, it was determined by experienced applicators and inspectors—based on site specific conditions—that the curing of the spray was acceptable. See documentation from CETCO/Minerals Technologies (the Liquid Boot® manufacturer) dated November 9, 2017 (**Appendix P**).

A letter of completion provided by EAI is provided in **Appendix P**.

G. Six-Inch Gas Main Construction

In July 2018, the existing 2-inch gas service line was determined by FPA engineers to be insufficient to support the demands of the new Clubhouse facility. A new 6-inch gas main was required to meet the demand. Installed between August and October 2018, the new main provides sufficient volumes of natural gas to support the new Clubhouse facility and its amenities.

The new gas line was connected to a Con Ed main located on Schley Drive, north of the golf course. The new pipeline runs along the western perimeter of the site along fairways #6, #7 and #8. The line doglegs to the west side of the maintenance area and generally follows the service cart path along the west side of the property. The line turns to the east toward the new Clubhouse in the general vicinity of the parking lot.

The service connection to the Clubhouse is located in a vault approximately 50 feet west of the Clubhouse, near the driveway entrance.

Architect drawings for this gas main are provided in **Appendix Q**. DORs are provided in **Appendix R** beginning on August 24, 2018 through October 22, 2018.

H. Record Drawings & Deviations from Approved Design Plans

The permanent clubhouse project consisted of the following features and was designed by Hart Howerton and FPA:

- Golf pro shop
- Women's and men's locker rooms
- Dining room
- Bar/grill
- Kitchen
- Terraces
- Offices
- Vestibule and porch
- SSDS/Vapor Barrier

Deviations to the permanent clubhouse construction project were as follows:

- Drawing No. FO-500.00 "Vapor Remediation Underslab Plan" – lateral piping to SSDS pits DP-2B & DP-2C built approximately 2 feet offset from design due to piping conflicts
- Drawing No. FO-501.00 "Vapor Remediation Floor Plan" – riser piping for fan units SF-1 & SF built within walls to conceal system and prevent unauthorized access; gas sensors in Hall 124, Vestibule 101 & Electrical 113 ceilings built approximately 3-5 feet from design due to piping conflicts; monitoring point MP-1 built approximately 9 feet from design due to piping conflicts; monitoring point MP-8 built approximately 50 feet from design due to piping conflicts; monitoring point MP-9 built approximately 14 feet from design due to piping conflicts; monitoring point MP-10 built approximately 14 feet from design due to piping conflicts; monitoring point MP-2 was installed at the location shown in the Plan, however, it appears to have been tiled-over and is no longer accessible as a sampling point
- Drawing No. FO-502.00 "Vapor Remediation Attic & Mezzanine Plan" – fan unit SF-1 built approximately 10 feet to the left of design due to piping conflicts
- Drawing No. FO-504.00 "Vapor Remediation Details" – detail 1B built using hollow (instead of solid) concrete blocks; 'Methane Gas Sensor Detail (option 1)' & 'Methane Gas Sensor Detail (option 2)' added for sensor plenum boxes
- Drawing No. SD201 "Methane Monitoring System Ceiling Plan (As Built)" – methane gas sensor S16 built approximately 5 feet from design due to piping conflicts; methane gas sensor S19 built approximately 4.5 feet from design due to piping conflicts; methane gas sensor S28 built approximately 5 feet from design due to piping conflicts

Copies of the drawings issued for construction are provided in **Appendix C**. Copies of the drawings showing deviations from design are provided in **Appendices E and O**.

V. ENVIRONMENTAL MONITORING

A. Stormwater Pollution Prevention Plan (SWPPP)

The IEM performed weekly erosion control inspections to ensure compliance with Permit requirements. Erosion control inspections were carried out through the duration of permanent clubhouse construction. The SPDES permit remained effective until completion of ongoing construction including the permanent clubhouse. Copies of erosion control inspection reports are provided in **Appendix H**.

B. Landfill Gas Monitoring

NYCDPR will implement post-construction monitoring necessary to fulfill the requirements of the Post-Construction Custodial Care Plan for landfill gas monitoring per the 2015 Final Construction Certification Report.

VI. SUMMARY

Construction of a permanent clubhouse in the southern corner of the Site began in July 2017 and was substantially completed in October 2018. Activities included clearing and grubbing, excavation, installation of support pilings, grading, importation of fill material, construction of the permanent clubhouse with a protective vapor barrier system and associated SSDS and associated appurtenances, installation, testing and calibration of an interior methane detection system, installation of utilities and infrastructure, installation of plantings, and installation of a new gas main. A representative of the IEM was present during construction activities. For this project, fill importation and SSDS/Vapor Barrier construction followed the Permit and NYSDEC requirements as documented in the DORs as summarized herein.

VII. CERTIFICATION

Certification Statement

I, Donald Bowman, an employee of Maser Consulting P.A. and a Registered Professional Engineer licensed by the State of New York, exercising independent judgment and discretion do hereby certify that this Subslab Depressurization System (SSDS) for the Trump Golf Links at Ferry Point Clubhouse was constructed under my direction and supervision. The information contained herein is based upon: (1) work which I have personally inspected both during and after construction from July 2017 to date; (2) information provided to me by those directly employed by Maser Consulting P.A.; (3) Design Consultants; and (4) contractors responsible for construction pursuant to their contracts except as indicated[2].

I certify that, from July 2017 to date, Maser Consulting representatives observed the installation of the critical elements of the SSDS for the Trump Golf Links at Ferry Point Clubhouse, with the following deviations from design:

- Drawing No. FO-500.00 "Vapor Remediation Underslab Plan" – lateral piping to SSDS pits DP-2B & DP-2C built approximately 2 feet offset from design due to piping conflicts
- Drawing No. FO-501.00 "Vapor Remediation Floor Plan" – riser piping for fan units SF-1 & SF built within walls to conceal system and prevent unauthorized access; gas sensors in Hall 124, Vestibule 101 & Electrical 113 ceilings built approximately 3-5 feet from design due to piping conflicts; monitoring point MP-1 built approximately 9 feet from design due to piping conflicts; monitoring point MP-8 built approximately 50 feet from design due to piping conflicts; monitoring point MP-9 built approximately 14 feet from design due to piping conflicts; monitoring point MP-10 built approximately 14 feet from design due to piping conflicts; monitoring point MP-2 was installed at the location shown in the Plan, however it appears to have been tiled-over and is no longer accessible as a sampling point
- Drawing No. FO-502.00 "Vapor Remediation Attic & Mezzanine Plan" – fan unit SF-1 built approximately 10 feet to the left of design due to piping conflicts
- Drawing No. FO-504.00 "Vapor Remediation Details" – detail 1B built using hollow (instead of solid) concrete blocks; 'Methane Gas Sensor Detail (option 1)' & 'Methane Gas Sensor Detail (option 2)' added for sensor plenum boxes

[2] Certification means a statement of professional opinion based upon investigation, analysis, knowledge and belief that is stated to be true and accurate. 6 NYCRR Part 360-1.2(b)24.

- Drawing No. SD201 "Methane Monitoring System Ceiling Plan (As Built)" – methane gas sensor S16 built approximately 5 feet from design due to piping conflicts; methane gas sensor S19 built approximately 4.5 feet from design due to piping conflicts; methane gas sensor S28 built approximately 5 feet from design due to piping conflicts

Re: DEC No. 2-6006-00014/000013 (2-6006-00014/00016)
Permit Issuance - Solid Waste Management Facility (Tidal Wetlands)
Ferry Point Park Golf Course, Bronx, NY

Dear Ms Zias:

Enclosed are permits for the referenced facility. Please read all conditions carefully. Please provide a copy of the permit and all attachments to the document repository established for this project.

Special Conditions 28, 29, 32, 37, 38 and 39, among others, specify post permit submittals, please make a note of the submission deadlines. To assist the development of a deed restriction for the project site, Attachment A, to this notice contains draft language of the conditions to be specified in the restrictive covenant.

If you have questions on the specific solid waste management conditions, please contact Sam Arakhan at 718-482- 4894. If you have questions regarding marine resources issues and the development of the waterfront park contact Susan Maresca at 718-482-6464. If you have any other questions regarding the administration of this permit, please contact Michelle Moore at 718-4982-4967.

Sincerely,

John F. Cryan
Regional Permit Administrator

ATTACHMENT A

DECLARATION OF COVENANTS AND RESTRICTIONS

THIS COVENANT made this __ day of _____, 2014, by the City of New York ("City"), a municipal corporation organized and existing under the laws of the State of New York, acting by and through the New York City Department of Parks and Recreation ("DPR") and having an office for the transaction of business 830 Fifth Avenue, New York, New York, 10021, and the New York City Department of Citywide Administrative Services ("DCAS"), having an office for the transaction of business at 1 Centre Street, New York, New York, 10007, in favor of the New York State Department of Environmental Conservation ("Department"), an agency of the State of New York, with offices at 625 Broadway, Albany, New York, 12233;

WHEREAS, DPR has jurisdiction pursuant to the New York City Charter over certain municipal parkland in the Borough and County of the Bronx, New York, known as "Ferry Point Park", which was the site of a former municipal landfill;

WHEREAS, pursuant to the New York State Environmental Conservation Law, Article 27, Title 7 and regulations promulgated pursuant thereto at 6 NYCRR Part 360, the Department has issued DPR a Solid Waste Management Permit (DEC Permit No. 2-6006-00014/00013-0)(the "Permit"), annexed hereto as Attachment A, to construct a Golf Course, Community Park and Waterfront Park (hereinafter "the Project") on the eastern portion of Ferry Point Park, a 222 acre parcel bounded by Bronx-Whitestone Bridge to the West, Balcom, Miles and Emerson Avenues to the East, Schley Avenue and St. Raymond's Cemetery to the North and the East River to the South (the "Site"), said parcel comprising Block 5583, Lot 100 and a portion Block 6522, Lot 1, as shown on the Bronx County Tax Map and more particularly depicted on the map attached hereto as Attachment B;

WHEREAS, the Permittee is authorized to import a total of 2,514,000 cubic yards of in-place fill material to the Site, which fill material shall consist of approximately 2,120,000 cubic yards of select exempt construction and demolition (C&D) debris for the shaping layer, and approximately 394,000 cubic yards of cover material, to be used in constructing the Project;

WHEREAS, Special Condition 17 requires the Permittee to implement a Groundwater Monitoring Program as described in section 4.5 of the Supplemental Engineering Report, Volume 1, dated October 15, 2013 (hereinafter the "Supplemental Engineering Report");

WHEREAS, Special Condition 26 requires the Permittee to perform monthly monitoring of the Landfill Gas Passive Venting Trenches for the duration of the Permit, and, thereafter, to monitor the Landfill Gas Passive Venting Trenches as described in the Supplemental Engineering Report, Volume 3, Appendix F;

WHEREAS, Special Condition 28 requires the Permittee, during the duration of the Permit, to inspect the Landfill Gas Passive Venting Trenches monthly to verify the integrity of the venting trenches and their mulch cover, and, thereafter, to maintain the Landfill Gas Passive Venting Trenches after the completion of construction of the Project, in the manner described in the Supplemental Engineering Report, Volume 3, Appendix F;

WHEREAS, Special Condition 29 requires the Permittee, until the completion of the Project, to conduct monthly monitoring of the depth of ground water in each piezometer installed at the gas venting trenches, and, thereafter, such piezometer monitoring shall be performed in accordance with the Supplemental Engineering Report, Volume 3, Appendix F, Section 6;

WHEREAS, Special Condition 32 requires the Permittee to execute and file a Department approved deed restriction, which shall run with the land in perpetuity, and shall recite and require compliance with the Permit's provisions as regards to the custodial care requirements described in the Supplemental Engineering Report, Volume 3, Appendix I;

WHEREAS, Special Condition 33 requires the Permittee to conduct bi-weekly monitoring of the On and Off-site Gas Monitoring Networks;

WHEREAS, Special Condition 34 requires the Permittee to maintain, and upgrade if required, the On and Off-site Gas Monitoring Networks during facility construction and after completion of the Project;

WHEREAS, Special Condition 35 requires the Permittee, upon Department approval of the Permittee's written post-construction certification report, to implement the custodial care plan described in the Supplemental Engineering Report, Volume 3, Appendix I;

WHEREAS, Special Condition 36 requires Permittee, should the Project be abandoned, to close, monitor and maintain after closure the entire 222 acre Site, in accordance with 6 NYCRR Sect. 360-2.15 as a landfill in operation since 2000;

WHEREAS, Special Conditions 17, 26, 28, 29, 33 and 34, require the installation, maintenance and operation of the Groundwater Monitoring Program, the Landfill Gas Passive Venting Trenches, the piezometers, and the On and Off-site Gas Monitoring Networks, on the perimeter of the site and off-site, for the purposes of monitoring groundwater and Landfill Gas and/or preventing Landfill Gas from migrating from the Site (hereinafter "Engineering Controls") said Engineering Controls being more particularly depicted on the map attached hereto as Attachment C.

WHEREAS, Special Condition 32 of the Permit requires the City of New York to execute and file a deed restriction for the real property beneath the site to run with the land in perpetuity, and that the deed restriction recites and requires compliance with the Permit's provisions as regards to Groundwater monitoring, the maintenance of Landfill Gas venting trenches, the piezometers, the On-site Landfill Gas Monitoring Network, including perimeter monitoring wells, the Off-site Landfill Gas Monitoring Network, and the criteria for abandonment of the site as specified in Special Condition 36 of the Permit;

NOW THEREFORE, pursuant to its terms, this covenant runs with the land and:

(1) requires the maintenance and operation of the Engineering Controls as set forth in Special Conditions 17, 26, 28, 29, 33 and 34 of the Permit;

(2) prevents modification or alteration of the Engineering Controls except as otherwise set forth in Special Conditions 17, 26, 28, 29, 33 and 34 of the Permit or in any subsequent written authorization by the Department or its successor agency;

(3) unless prior written approval by the Department or its successor agency is first obtained, there shall be no construction, use or occupancy of the Site that results in the disturbance or excavation of the Site which threatens the integrity of the Engineering Controls, or which results in unacceptable human exposure to contaminated soils;

(4) the owner of the Site shall not disturb, remove, or otherwise interfere with the installation, use, operation, and maintenance of Engineering Controls required by the Permit and the Supplemental Engineering Report, unless in each instance the owner first obtains a written waiver of such prohibition from the Department or its successor agency;

(5) the owner of the Site shall prohibit the Site from ever being used for purposes other than for the Project described in the Permit, without the express written waiver of such prohibition by the Department or its successor agency;

(6) the owner of the Site shall provide a periodic certification, prepared and submitted by a professional engineer or other environmental professional acceptable to the Department or its successor agency, which will certify that the Engineering Controls put in place are unchanged from the previous certification, comply with the Permit and the Supplemental Engineering Report, and have not been impaired;

(7) this Declaration is and shall be a covenant that shall run with the land and shall be binding upon all future owners of the Site, and shall provide that the owner and its successors and assigns consent to enforcement by the Department or its successor agency of the prohibitions and restrictions that the Permit requires be recorded, and hereby covenant not to contest the authority of the Department or its successor agency to seek enforcement;

(8) any deed of conveyance of the Site, or any portion thereof, shall recite, unless the Department or its successor agency has consented to the termination of such covenants and restrictions, that said conveyance is subject to this Declaration of Covenants and Restrictions;

(9) in the event that the Project is abandoned, requires closure, monitoring and maintenance of the Site as a landfill in operation since 2000, in accordance with 6 NYCRR Part 360-2.15 and Special Condition 36 of the Permit; and

(10) may be modified by mutual agreement of the City or its successors and the Department or its successor agency.

IN WITNESS WHEREOF, the undersigned have executed this instrument on the day(s) written below.

PROJECT/FACILITY NAME: Ferry Point Park Golf Course Construction

PROJECT/FACILITY ADDRESS: Eastern portion of Ferry Point Park, bounded by the Bronx Whitestone Bridge, Balcom, Miles and Emerson Avenues, Schley Avenue and the East River, Bronx County. Block 5583, Lot 100, Block 5622, Lot 1

DESCRIPTION OF AUTHORIZED ACTIVITY:

Construction of a Golf Course, Community Park and Waterfront Park on 222 acres of Ferry Point Park, requiring a total of approximately 2,514,000 cubic yards of material in-place volume. This material will be imported to the Site by truck and consist exclusively of: 1) recognizable and uncontaminated concrete or concrete products (including steel or fiberglass reinforcing rods that are embedded in the concrete), brick, soil, sand, gravel, and rock (hereafter referred to in this permit as select exempt construction and demolition debris) totaling approximately 2,120,000 in-place cubic yards for the shaping layer, and 2) approximately 394,000 in-place cubic yards of cover material. The imported material will be used to attain the final approved grades and contours.

All work associated with the authorized activity described above shall comply with all of the applicable provisions of 6 NYCRR Part 360 (Solid Waste Management Regulations), effective 29 September 1997. By acceptance of this permit, the Permittee agrees that this permit is contingent upon strict compliance with the ECL, all applicable regulations, and the General Conditions and Special Conditions included herein.

REGIONAL PERMIT ADMINISTRATOR:	ADDRESS:	
John F. Cryan	NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101	
AUTHORIZED SIGNATURE: John F. Cryan	DATE May 21, 2014	Page 1 of 17

NOTIFICATION OF OTHER PERMITTEE OBLIGATIONS

Item A: Permittee Accepts Legal Responsibility and Agrees to Indemnification

The Permittee has accepted expressly, by the execution of its application for the subject work, the full legal responsibility for all damages and costs, direct or indirect, of whatever nature and by whomever suffered, for liability it incurs resulting from activity conducted pursuant to this permit or in noncompliance with this permit and has agreed to indemnify and save harmless the State from suits, actions, damages, and costs of every name and description resulting from such activity.

Item B: No Right to Trespass or Interfere with Riparian Rights

This permit does not convey to the Permittee any right to trespass upon the lands or interfere with the riparian rights of others in order to perform the subject work nor does it authorize the impairment of any rights, title, or interest in real or personal property held or vested in a person not a party to the permit.

GENERAL CONDITIONS

General Condition 1: Facility Inspection by the Department

The subject facility, including relevant records, is subject to inspection at reasonable hours and intervals by an authorized representative of the Department of Environmental Conservation (the Department) to determine whether the Permittee is complying with this permit and the ECL. Such representative may order the subject work suspended pursuant to ECL 71-0301 and SAPA 401(3).

The Permittee must provide a person to accompany the Department's representative during an inspection of the subject facility when the Department provides written or verbal notification to the Permittee at least 24 hours prior to such inspection.

A copy of this permit, including all general and special conditions therein, all amendments thereto, and all documents referenced therein must be available for inspection by the Department at the project site at all times that activity associated with the subject work is occurring. Failure to produce a copy of such permit, conditions, amendments, or documents upon request by a Department representative is a violation of this permit.

Any sign provided by the Department with this permit must be protected from the weather and posted in a conspicuous location at the subject work site throughout the period during which any of the subject work occurs.

General Condition 2: Relationship of this Permit to Other Department Orders and Determinations

Unless expressly provided for by the Department, this permit does not modify, supersede, or rescind any order or determination previously issued by the Department or any of the terms, conditions, or requirements contained in such order or determination.

General Condition 3: Applications for Permit Renewals or Modifications

The Permittee must submit a separate written application to the Department for renewal, modification, or transfer of this permit, including but not limited to a change in facility operator. Such application must include any forms or supplemental information the Department requires. Any renewal, modification, or transfer granted by the Department must be in writing. The Permittee must submit a renewal application at least:

a) 180 days before expiration of permits for State Pollutant Discharge Elimination System (SPDES), Hazardous Waste Management Facilities, major Air Pollution Control (APC) and Solid Waste Management Facilities; and
b) 30 days before the expiration of all other permit types.

Submission of applications for permit renewal, modification, or transfer are to be submitted to:
NYSDEC Regional Permit Administrator, Region 2, 47-40 21 Street, Long Island City, NY 11101 (tel. 718/482-4997).

General Condition 4: Permit Modifications, Suspensions, and Revocations by the Department

The Department reserves the right to modify, suspend, or revoke this permit when:

a) the scope of the permitted activity is exceeded or a violation of any condition of the permit or provisions of the ECL and pertinent regulations is found;
b) the permit was obtained by misrepresentation or failure to disclose relevant facts;
c) new material information is discovered; or
d) environmental conditions, relevant technology, or applicable law or regulation have materially changed since the permit was issued.

General Condition 5: Compliance with Other Regulatory Requirements

The Permittee is responsible for obtaining any other permits, approvals, lands, easements, and rights-of-way that may be required for the subject work. The Permittee and its independent contractors, employees, agents, and assigns must comply with all applicable local, State, and federal regulatory requirements.

General Condition 6: Permittee to Ensure that its Contractors to Comply with Permit

The Permittee must ensure that its independent contractors, employees, agents, and assigns read, understand, and comply with this permit, including all General and Special Conditions herein, in general, and General Condition No. 5, above, in particular. Such persons must be subject to the same sanctions for violations of this permit as those prescribed for the Permittee.

ADDITIONAL GENERAL CONDITIONS FOR ARTICLE 27 and 6 NYCRR Part 360 (Solid Waste Management Facilities)

7. That if future operations by the State of New York require an alteration in the position of the structure or work herein authorized, or if, in the opinion of the Department it shall cause unreasonable obstruction to the free navigation of said waters or flood flows or endanger the health, safety or welfare of the people of the State, or cause loss or destruction of the natural resources of the State, the owner may be ordered by the Department to remove or alter the structural work, obstructions, or hazards caused thereby without expense to the State, and if, upon the expiration or revocation of this permit, the structure, fill, excavation, or other modification of the watercourse hereby authorized must not be completed, the owners, must, without expense to the State, and to such extent and in such time and manner as the Department may require, remove all or any portion of the uncompleted structure or fill and restore to its former condition the navigable and flood capacity of the watercourse. No claim shall be made against the State of New York on account of any such removal or alteration.
8. The State of New York must in no case be liable for any damage or injury to the structure or work herein authorized which may be caused by or result from future operations undertaken by the State for the conservation or improvement of navigation, or for other purposes, and no claim or right to compensation shall accrue from any such damage.
9. All necessary precautions must be taken to preclude contamination of any wetland or waterway by suspended solids, sediments, fuels, solvents, lubricants, epoxy coatings, paints, concrete, leachate, or any other environmentally deleterious materials associated with the project. Any creosote-treated lumber must be weathered for at least six months before it is brought to the subject work site.
10. Any material dredged in association with the work herein permitted must be removed evenly, without leaving large refuse piles, ridges across the bed of a waterway or flood plain, or deep holes that may have a tendency to cause damage to navigable channels, the banks of a waterway, water quality, sediment quality, or benthic habitat.
11. There must be no unreasonable interference with navigation by the work herein authorized.
12. If upon the expiration or revocation of this permit, the project hereby authorized has not been completed, the Permittee must, without expense to the State, and to such extent and in such time and manner as the Department may require, remove all or any portion of the uncompleted structure or fill and restore the site to its former condition. No claim shall be made against the State of New York on account of any such removal or alteration.
13. If granted under Article 36, this permit does not signify in any way that the project will be free from flooding.
14. If granted under 6 NYCRR Part 608, the Department hereby certifies that the subject project will not contravene effluent limitations or other limitations or standards under Sections 301, 302, 303, 306, and 307 of the Clean Water Act of 1977 (PL 95-217) provided that all of the conditions listed herein are met.
15. In accordance with Title 19, Part 600.4 (c) of the New York Code of Rules and Regulations, the Department hereby certifies that the action described and approved in this permit, if located within the Coastal Zone, is consistent to the maximum extent practicable with the policies and purposes of the New York City Waterfront Revitalization Program.

SPECIAL CONDITIONS

Site Work

1. All activities authorized by this permit shall conform to all documents supporting the original permit, DEC No. 2-6006-00014/00011, dated July 17, 2000 ,and modified October 18, 2002 , November 18, 2005 and December 27, 2005 as modified by the following:

- Technical Environmental Assessment for the Ferry Point Park Recreation Facility prepared by Allee, King, Rosen and Fleming dated February 11, 2002 and amended September 29, 2004;
- Geotechnical Engineering Study prepared by Langan Engineering and Environmental Services, Inc. dated July 2, 2002;
- Response to Request for Additional Information prepared by TRC Raymond Keyes Associates dated July 2, 2002;
- Fill Procurement Protocol shall be as per the Department letters dated May 21, 2001 and May 23, 2001 from John Nehila to Steve Kass;
- Ferry Point Park: Offsite Methane Monitoring-Bronx, New York prepared by AKRF, Inc., October 12, 2001;
- Landfill Gas (LFG) Passive Vent Trench Along Miles And Emerson Avenues Plan and Detail, V-1, Sheet 1 of 4 prepared by TRC with checked date 02/04/02 ;
- Landfill Gas (LFG) Passive Vent Trench Along Balcom, Miles And Schley Avenues Plan and Detail, V-2, Sheet 2 of 4 prepared by TRC with checked date 02/04/02 ;
- Landfill Gas (LFG) Passive Vent Trench Along Northern Property Boundary Plan and Detail, V-3, Sheet 3 of 4 prepared by TRC with checked date 02/04/02;

SPECIAL CONDITIONS
ADDITIONAL SPECIAL CONDITIONS FOR ARTICLES 27 and 6 NYCRR Part 360 (Solid Waste Management Facilities)

- LFG Vent Trench and Piezometer Network Profile, V-4, Sheet 4 of 4 prepared by TRC with checked date 02/04/02;
- Landfill Gas (LFG) Passive Vent Trench Along Balcom, And Schley Avenues Plan and Detail, C-2, Sheet 1 of 1 prepared by TRC with checked date 07/20/01;
- Landfill Gas (LFG) Passive Vent Trench Along Balcom between Sampson & Dewey Avenues Plan and Detail, C-1, Sheet 1 of 1 prepared by TRC with checked date 03/09/01;
- Volume#1, Application for Modification to the Solid Waste Management Facility Permit for Construction of Ferry Point Park Recreation Facility, Bronx, NY, Engineering Report, prepared by TRC Raymond Keyes Associates, dated June 30, 2005. (revised)
- Volume #2, Application for Modification to the Solid Waste Management Facility Permit for Construction of Ferry Point Park Recreation Facility, Bronx, NY, Engineering Report, prepared by TRC Raymond Keyes Associates, dated June 30, 2005.
- Settlement Evaluation and Long Term Monitoring Plan, Ferry Point Golf Course, Ferry Point Park, Bronx, NY, prepared by Langan Engineering and Environmental Services, Inc., dated January 26, 2005.
- Response to Department Comments prepared by TRC Raymond Keyes Associates, dated August 2, 2005 and by Langan Engineering and Environmental Services, Inc., dated June 30, 2005.
- Application for Modification to the Solid Waste Management Facility Permit for Construction of Ferry Point Park Recreation Facility, Bronx, NY, "Second Supplement to Engineering Report," prepared by TRC Raymond Keyes Associates, dated August 23, 2004.
- Site plans labeled "Ferry Point Park Public Recreational Facility Bulk Earthwork, Ferry Point Park Public Recreation Facility, Ferry Point Park, Bronx, New York" prepared by TRC Raymond Keyes Associates, dated April 22, 2005 (revised) consisting of drawings:

    - GC-2, G1 and G-2 dated 7/01/05 (last revised);
    - G-3, and G-4 dated 1/21/05 (last revised);
    - D-1 dated 7/1/04 (last revised);
    - D-2 dated 7/1/05 (last revised);
    - V-1, V-2, V-3 and V-4 dated 02/04/04 (last revised);
    - C-1 dated 3/09/01 (last revised);
    - C-2 dated 7/20/01;
    - SW-1.00 dated 4/13/04;
    - SW 1A.01 dated 2/18/04;
    - SW 1B.01 and SW 1b.02 dated 4/13/04;
    - Irrigation Design Phase 1 Ferry Point Park Approval Set, labeled "Ferry Point Park 0514-AS-R04-060704, Phase 1 Approval Set" dated 06/07/04 (last revised), sheets numbered 1, 2, 3 and 4 dated 5/22/03 and sheets numbered I, II and III dated 5/22/03

- Supplemental Engineering Report for the Solid Waste Management Facility Permit Application for Ferry Point Park East Bronx, NY, Vol. 1 - 3 dated May 31, 2012 and last revised October 15, 2013.

SPECIAL CONDITIONS
ADDITIONAL SPECIAL CONDITIONS FOR ARTICLES 27 and 6 NYCRR Part 360 (Solid Waste Management Facilities)

2. Activities authorized by this permit include development of a golf course and parks, as well as the construction of associated structures, utility lines, gas venting and control systems. All aspects of the project must be constructed in accordance with the Department approved design plans, specifications and documents noted in Special Condition # 1. All physical aspects of the project including project location referenced in this permit shall be referred to as the "Site." All construction aspects of the permitted activities referenced in this permit shall be referred to as the "Project."

3. In accordance with "Item A" of the Notification of Other Permittee Obligations" found on page 2 of this permit, the Department in general accepts no liability for the structural integrity and/or the adequacy of the buildings and/or foundation designs of the proposed buildings or other structures associated with the development of the golf course. In addition, the Department specifically does not guarantee nor accept liability in regards to the measures proposed to prevent the subsidence of any buildings, foundations and other structures built on or adjacent to the Site, or to prevent the migration of explosive gas.

4. All operations at the Site shall occur Monday through Saturday during daylight hours, between sunrise and sunset, unless otherwise authorized by the Department.

5. All truck traffic entering and leaving the Site shall use only authorized truck traffic routes, and conform to the construction traffic management plans noted in Exhibit K of Volume #1, Application for Modification to the Solid Waste Management Facility Permit for Construction of Ferry Point Park Recreation Facility, Bronx, New York, Engineering Report, prepared by TRC Raymond Keyes Associates, dated June 30, 2005 (revised).

a) All truckers shall receive written instruction on the truck access routes to and from the Site.

b) All trucks entering the site shall be tarped or sufficiently covered to comply with local and state highway regulations. The Site access and exit routes shall be maintained so that they are free from dust, dirt and debris resulting from the truck traffic.

6. Short-term settlement monitoring must strictly conform to the recommendations listed in the Settlement Evaluation and Long Term Monitoring Plan, Ferry Point Golf Course Ferry Point Park, Bronx, NY, prepared by Langan Engineering and Environmental Services, Inc., dated January 26, 2005. As construction progresses and long term plates are installed, short term plates do not need to be re-installed.

7. The long-term settlement monitoring must strictly conform to the recommendations listed in the Settlement Evaluation and Long Term Monitoring Plan, Ferry Point Golf Course Ferry Point Park, Bronx, NY, prepared by Langan Engineering and Environmental Services, Inc., dated January 26, 2005.

a) The long-term monitoring shall be performed for locations shown in Appendix H of the October 15, 2013 supplemental engineering report as described in Appendix I of the October 15, 2013 supplemental engineering report.

b) All monitoring points must be maintained in proper working condition. If any points are unable to be sampled for any reason, they must be repaired within two weeks of such detection and re-tested.

Fill Importation

8. The Permittees are authorized to import a total of 2,514,000 cubic yards of in-place fill material to the Site. The fill material shall consist of approximately 2,120,000 cubic yards of select exempt construction and demolition (C&D) debris for the shaping layer, and approximately 394,000 cubic yards of cover material. The imported material shall be used on Site to attain the final approved grades and contours approved by the Department, and referenced on plans made a part of this permit.

a) The use of asphalt as fill material on the Site is prohibited.

b) The use of dredge spoils as fill material on the Site is prohibited.

c) There shall be no mechanical separation of steel and fiberglass reinforcing rods from concrete and concrete products at the Site.

d) No size reduction or material processing may occur on Site, except with earth moving equipment in the course of placement. However, the breakdown and removal of stumps and wood previously left on Site by the New York City Department of Sanitation (DOS) is permitted.

e) All solid waste material excavated from the Site shall be properly secured immediately, and then removed from the Site and legally disposed of within seven (7) days.

f) All unauthorized solid waste or fill material found on the Site shall be properly secured immediately, and then removed and legally disposed of within five (5) days of its discovery by Permittees.

g) All select exempt construction and demolition (C&D) debris for the shaping layer and the cover layer material must be free of all non-exempt C&D recognizable debris.

9. The quantification of all imported fill material shall be continuously tracked by both truck volume, and periodic topographic survey of the imported in-place fill volume. Since compacted in-place fill volumes will not equal truck volumes of fill, a 41.7 percent (41.7%) correction factor shall be applied for shaping layer material and a correction factor of 18 percent (18%) shall be applied for cover material. The correction factor for converting truck volume into in-place volume may be modified by the Department.

10. The Permittees must cease the importation of fill material if:

a) The final approved grades are attained prior to the permitted amount of fill material being imported;

b) 2,120,000 cubic yards of select exempt construction and demolition debris for the shaping layer, as measured by in-place fill volume determined through topographic survey, are accepted. All material imported to the Site is considered shaping layer material, unless testing determines otherwise; or

c) 394,000 cubic yards of cover layer material, as measured by in-place volume, are accepted.

SPECIAL CONDITIONS

ADDITIONAL SPECIAL CONDITIONS FOR ARTICLES 27 and 6 NYCRR Part 360 (Solid Waste Management Facilities)

11. Use of fill material from DEC registered construction and demolition debris processing facilities (DEC registered C&D facilities or registration facilities) requires written Departmental approval. Such requests must be submitted to the Department for approval not less than ten (10) business days prior to any proposed date for importation from the new locations. No fill material may be received from unapproved facilities or locations. DEC registered construction and demolition debris processing facilities (DEC registered C&D facilities or registration facilities) may be used to obtain select exempt construction and demolition debris for fill material to the Department for its approval prior to use. The subsequent transportation and use of fill material from other additional registration facilities requires written Departmental approval. Such requests must be submitted to the Department for approval not less than ten (10) business days prior to any proposed date for importation from the new locations. No fill material may be received from unapproved facilities or locations.

12. Select exempt construction and demolition debris to be used as fill material at the Site may be accepted from DEC registered C&D facilities as approved pursuant to Special Condition #11, provided that the facilities segregate and clearly mark each stockpile with a specific identification number, the date each stockpile was started and the date when it was sampled by the Permittees. The Department shall be notified by Permittees at least 24 hours before any sampling event at a DEC registered C&D facility. All sampling reports shall be transmitted to the Department or the IEM directly from the certified testing laboratory.

13. The Permittee shall be responsible for ensuring that cover layer material is procured from a DEC approved source, and it meets all permit specifications.

a) If cover layer material is manufactured, the soil used in its manufacture must not originate from any industrial sites, brownfield site, historical fill site or DEC registered C&D facilities.

14. The Permittee shall be responsible for ensuring that the shaping and cover layer materials meet sections 4.2.1 and section 4.3 of the October 15, 2013 Supplemental Engineering Report, Volume 1, as well as the following:

a) In order for select exempt construction and demolition debris material to be used on Site, it must be sampled both prior to acceptance and after the importation of each additional 10,000 cubic yards (in truck volumes). Each soil sample is to be analyzed for Toxicity Characteristic Leachate Procedure (TCLP), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals (including Resource Conservation and Recovery Act (RCRA) metals).

b) Cover layer material must be sampled prior to acceptance and after the importation of each additional 2,000 cubic yards (in truck volumes). Each soil sample is to be analyzed for the entire analyte list in the NYSDEC Technical and Administrative Guidance Memorandum (TAGM) 4046, total volatile organic compounds (VOCs), total semi- volatile organic compounds (SVOCs), pesticides and herbicides, polychlorinated biphenyls (PCBs), and metals (including Resource Conservation and Recovery Act (RCRA) metals).

c) The shaping layer must meet the following chemical limits:

i. Total carcinogenic SVOC levels (weighted average as calculated by formula provided in 10/25/06 letter from NYSDEC) must be less than 3 ppm by completion of construction; maximum carcinogenic SVOCs level from individual source must be 10 ppm or less. The following are the list of carcinogenic SVOCs that are subject to this 3 ppm limit: Benzo(a)pyrene, Dibenzo(a,h)anthracene, Benzo(a)anthracene, Benzo(b)fluoranthene, Indeno(1,2,3-cd)pyrene, Benzo(k)fluoranthene, and Chrysene.

ii. Total SVOCs must be less than 500 ppm

iii. Metals:

- Arsenic less than 28 ppm;
- Barium less than 2,000 ppm;
- Cadmium less than 20 ppm;
- Chromium less than 1,000 ppm;
- Copper less than 1000 ppm;
- Lead less than 400 ppm;
- Mercury less than 0.57 ppm
- Selenium less than 11 ppm
- Silver less than 100 ppm

iv. Asbestos for all layers must be 0.5% or less

v. Total sulfur for all layers must be 0.5% or less

vi. Total PCBs less than 10 ppm

vii. Total Pesticides less than 10 ppm

viii. VOCs (all individual analytes less than TAGM 4046)

d) The final placement of shaping and cover layer materials is subject to installation of a demarcation layer at locations where combined shaping and cover layers thickness are less than five (5) feet.

e) All shaping and cover layer material placed after the final placement of shaping and cover layer must meet the 6NYCRR Part 375 protection of public health restricted residential Part 375-6.8(b) SCOs.

15. The major components (greens, contours, heights and top soil) of the cover layer shall meet the Nicklaus Design Technical Specification, as noted in Exhibit C of the June 30, 2005 Engineering Report, and as follows:

- Greens - Greens mix imported to the site shall be tested as per material testing requirements. Fertilizer and soil amendments may be applied on the greens mix after spreading to construction specifications and finally grassed, as per the specifications provided by the agronomist.
- Topsoil - Topsoil imported shall be consistent with native topsoil, and shall be free of rock and debris greater than three quarters of an inch, as per Exhibit C of the Engineering Report. Soil amendments, fertilizer applications and seed may be applied to tee, fairway and rough areas, as per Exhibit C of the June 30, 2005 Engineering Report.

16. The Department may conduct joint sampling or take split samples as necessary for verification purposes.

Groundwater

17. The Permittee shall implement a groundwater monitoring program as described in section 4.5 of the Supplemental Engineering Report, Volume 1, dated October 15, 2013.

Fill Progression Monitoring

18. The Permittee shall place grade stakes indicating elevations for proposed final grades of fill and cover material.

19. The Permittee shall place benchmarks throughout the Site, in a manner acceptable to the Department, for the purpose of periodically measuring and surveying fill elevations. Benchmarks are to be maintained at all times. If it becomes necessary, they shall be repaired promptly.

Project Completion Schedule

20. The project shall progress according to the Construction Schedule provided in Volume #1, Application for Modification to the Solid Waste Management Facility Permit for Construction of Ferry Point Park Recreation Facility, Bronx, NY, Engineering Report, prepared by TRC Raymond Keyes Associates, dated June 30, 2005 (as revised), Exhibit A, and as updated in section 3.1 of the Supplemental Engineering Report dated October 15, 2013. The effective date for implementation of the construction schedule is the effective date of this permit.

21. In accordance with the approved plan in Special Condition #1, placement of fill material in each section of the Site shall not exceed the designed and approved final contours for each section.

22. Only cover material may be stockpiled in a section upon completion of the placement of fill material for the shaping layer in that section as per design calculations. In addition, cover material may be stockpiled in a section where the completion of fill placement has not occurred, if such stockpile is segregated and secured from construction and demolition debris used for the shaping layer.

23. Upon completion of filling operations to approved grades in a section, the Permittees shall commence the rough shaping and placement of cover material, and the installation of drainage, irrigation and utilities, as per Construction Schedule noted in Special Condition # 20. Prior to placement of this cover material, Permittee must comply with the requirements of Special Condition # 15(d).

Independent Environmental Monitor

24. An Independent Environmental Monitor (IEM), accountable to the Department, shall be retained by the Permittee to provide environmental oversight of all activities authorized by this permit for the duration of its permitted term, including, but not limited to, the quantification, importation and placement of fill, and the monitoring of the Site.

SPECIAL CONDITIONS

ADDITIONAL SPECIAL CONDITIONS FOR ARTICLES 27 and 6 NYCRR Part 360 (Solid Waste Management Facilities)

a) It shall be the IEM"s responsibility to provide notice of any deviation from the activities authorized by this permit and any deviation from New York State Environmental Regulations (6NYCRR Part 360) to the Department immediately, but in no event later than 24 hours after such deviation is detected. This notification must include the date and time of the potential non-compliance, the nature of the non-compliance, any corrective action, and any additional measures the IEM will be undertaking to track the issue until corrected. Should the IEM be uncertain as to whether such a deviation has occurred, the matter shall be promptly reported to the Department for a determination. For the purposes of this permit, a deviation(s) shall mean any of the following:

i. An apparent violation of any condition of this permit;

ii. An apparent violation of Federal, State or Local Law;

iii. A material difference between construction or monitoring data obtained by the Permittees or their consultants, and that obtained by the IEM;

iv. Any receipt of fill that does not meet the specifications authorized in this permit;

v. Any receipt of fill from a site not authorized under the permit or by the Department.

vi. Any condition, activity or occurrence that may endanger or pose a threat to public health, safety or the environment.

b) Notwithstanding any other reporting this permit requires, the IEM shall submit a detailed written report to the Department no less frequently than every three months detailing the IEM"s activities at the Site, the estimated total volume of fill material (including cover material) received during the reporting period based on truck volume, the total volume of fill in place at the Site, the percentage of filling to final grades, and the number(s) of trucks prohibited from entering the Site. The report also shall summarize any site meetings amongst the Permittee, its consultants or others, verify that all samples taken and monitoring done at the Site by the Permittee or consultants conform to this permit, detail any substantive change in the condition of the Site or project, fully explain any deviations occurring during the reporting period and their disposition, and describe any other occurrence, circumstance or condition that may have a bearing upon the safe and environmentally sound operation of the Project or Site.

c) The IEM must be approved by the Department prior to the finalization of any contractual agreement with the Permittee, and the initial receipt of any fill material at the Site.

d) The continued retention, discharge, or replacement of the IEM shall be at the sole discretion of the Department. The Permittee waive any right to seek judicial review of the Department's exercise of that discretion. The Permittees must fully pay all invoices and bills from the IEM within sixty days of submission. The IEM or its Department approved representative shall be present on Site whenever it is open. Under no circumstances shall Project activities, including the receipt or management of fill, take place while the IEM or its designated representative is absent from the Site.

SPECIAL CONDITIONS

ADDITIONAL SPECIAL CONDITIONS FOR ARTICLES 27 and 6 NYCRR Part 360 (Solid Waste Management Facilities)

e) The Department shall have access to any information obtained by the IEM at any time. The IEM shall keep all information including, but not limited to, fill records, inspection reports, field notes, monitoring data, graphics, databases, financial records, minutes of meetings and other information in a form approved by the Department

f) The IEM, if an individual, shall possess a New York State Professional Engineer license. If an engineering firm serves as the IEM, the firm must provide an employee of that firm who is a New York State licensed professional engineer to perform all functions and certifications noted in Section 1.1 of the Engineering Report referenced in Special Condition No. 1 above. In addition, the IEM shall:

i. monitor all aspects of the Permittees" fill operations at the Ferry Point Park ("FPP") facility;

ii. have unrestricted access to all personnel employed by the Permittee at the FPP facility, and to all files and records maintained by the Permittees at the FPP facility pursuant to this permit;

iii. inspect the proposed sources of fill, review the documentation about the sources of the material, including without limitation, any off-site sampling, and certify as to the acceptability of the material for use at the Site, in accordance with the criteria specified in the Engineering Report, Section 2. The IEM shall notify the Department at least 24 hours before any on-site sampling;

iv. visually inspect each truckload of imported fill material at the Site, and undertake reasonable verification activities including directing, where appropriate, verification sampling, analysis and certification by the IEM on a Project specific tracking form that it meets criteria for acceptable fill at the Site;

v. inspect each truckload of material upon its dumping on Site with a Photo-Ionization Detector (PID).

vi. prohibit any truck from leaving the dumping area before the load has been inspected, and the manifest signed by the IEM. If any load is rejected, the rejected fill material shall be reloaded onto the same truck immediately and legally transported off-site. However, if the rejected fill material is a DEC regulated solid waste or hazardous waste, it must be segregated immediately and secured on-site, until it is removed by a DEC permitted hauler for appropriate disposal. Such regulated or hazardous waste must be removed from the Site within 3 days of its discovery;

vii. monitor the off loading of all material at the unloading station. No truck shall be allowed to off load unless the IEM is present. Such truck shall only be allowed to leave the station after the load is tested and found acceptable.

viii. certify that the sampling of material at the project Site conforms to the permit requirements, and review the results of all laboratory tests;

ix. notify the Department daily about the receipt of unacceptable material or any violations of conditions set forth in this permit;

x. maintain files on Site of fill sampling data, site histories, and internal manifest (tracking) forms;

xi. report and certify to the Department that the on-site gas well monitoring has been conducted as required by this permit. Notify the Department immediately if levels exceed 25% of the lower explosive limit (LEL) in any gas monitoring well;

xii. certify that: (a) all grades of the shaping layer of a section are correct prior to the placement of cover material on that section; (b) a minimum of two feet of fill material covers the existing municipal solid waste layer; and (c) the final cover layer meets the appropriate specifications of the Engineering Report noted in Special Condition #1;

xiii. during fill delivery and earthwork, submit bi-weekly reports to the Department summarizing all Site activities set forth by this permit. Each report shall provide details of all rejected fill material, quantify the amount of material imported onto the Site using truck volumes, and the results of all on-site gas monitoring for that period;

xiv. review the final post-construction report and provide comments to the Department on whether the fill operation was performed in accordance with the permit documents and including any deviations thereof. These comments must be submitted by the IEM to the Department within sixty (60) calendar days of the receipt of the final post construction report, certify that the fill operation was performed in accordance with the permit documents. The certified post-construction report must be submitted by the IEM to the Department within sixty (60) calendar days after the completion of the earthwork portion of the Project;

xv. report all operational upsets, emergencies, unusual circumstances (including, but not limited to, unauthorized entries, security breaches, equipment breakdowns, fires, thefts, acts of vandalism, and on-site accidents) to the Regional Solid Waste Engineer by telephone (at 718/482-4996) within 24 hours of the occurrence, and in writing within 3 business days advising the engineer of the nature of the event, and providing a description of how the event was handled.

Gas Venting Trench

25. During the duration of this permit, the Permittee shall inspect the gas venting trench monthly to verify the integrity of the venting trench and its mulch cover. The Permittee shall maintain the gas venting trench at all times, and promptly repair any soil washouts of the mulch cover, as necessary. If any portion of the venting trench or mulch cover is found in need of repair, this fact must be reported to the IEM immediately and all necessary repairs must be made within two weeks of discovery.

(SC 25 continued) In addition, the mulch cover shall be replaced, at a minimum, every spring to maintain the effectiveness of the gas venting trench. The Permittee shall maintain the gas venting trench after the completion of construction of the golf course in the manner described in the Supplemental Engineering Report, Volume 3, Appendix F.

26. Monthly monitoring of the gas venting trench shall continue for the duration of the permit.

27. **As required by the Custodial Care Plan**: Gas venting trench inspection reports shall include the inspection date, the name of inspector, and a description of repairs, monitoring results and maintenance performed. A log of these self-inspections must be maintained including the dates, times and results of the inspections.

Piezometers

28. The Permittee shall conduct monthly monitoring of the depth of ground water in each piezometer installed at the gas venting trench, until the completion of the construction of the golf course. All readings shall be submitted to the Department in a monthly report.

a) **As required by the Custodial Care Plan**: Post-construction piezometers monitoring shall be performed in accordance with the Supplemental Engineering Report dated October 15, 2013, Volume 3, Appendix F, Section 6.

29. Within sixty (60) days of receipt of this permit, the Permittee shall submit a Response Action Plan to the Department. This Plan shall set forth the measures to be implemented by the Permittee, if the piezometer readings indicate that the groundwater table has dropped below the depth of the gas venting trench during the post construction monitoring period.

30. The Permittee shall sample the perimeter gas monitoring wells #0, #1A, #1 to #3, #5 to #12, and #14 to #18, and the on-site monitoring wells #13 and #19 on a bi-weekly basis to detect any explosive gas migration. Copies of the bi-weekly monitoring field notes shall be electronically mailed to the Department within 24 hours after the sampling event and a copy of this report shall be submitted to the Department within 3 business days and reported to the IEM immediately and all necessary repairs must be made within two weeks of discovery.

31. All perimeter gas monitoring wells should be tested at least on a bi-weekly basis. However, if any individual monitoring point has a bi-weekly reading that equals or exceeds 100% LEL or three consecutive bi-weekly reading are greater than 25% LEL, a modified methane gas action plan shall be implemented by the Permittee. Such plan shall require, at minimum, weekly testing of the individual monitoring point(s) with the elevated readings. The Department also may require any additional measures it deems necessary. Any individual point under the modified methane gas action plan may return to the regular bi-weekly monitoring schedule, when three (3) consecutive weekly readings are all less than the 25% LEL action level.

SPECIAL CONDITIONS

ADDITIONAL SPECIAL CONDITIONS FOR ARTICLES 27 and 6 NYCRR Part 360 (Solid Waste Management Facilities)

Deed Restriction

32. Within thirty (30) days of the date of the issuance of this permit, the Permittee shall submit a draft Deed Restriction to the Regional Permit Administrator. The deed restriction, which shall run with the land in perpetuity, shall recite and require compliance with this permit's provisions as regards to the custodial care requirements described in the Supplemental Engineering Report dated October 15, 2013, Volume 3, Appendix I. The deed restriction must be filed within six (6) months of the issuance date of this permit.

Off-site Gas Monitoring Network

33. The Permittee shall conduct bi-weekly monitoring of the Off-site Gas Monitoring Network. A copy of the bi-weekly monitoring field notes shall be electronically mailed to the Department within 24 hours, and a copy of the monitoring report shall be submitted to the Department within 3 days of the completion of each round of monitoring.

a) **As required by the Custodial Care Plan**. Each bi-weekly monitoring report shall include the geoprobe monitoring point(s) installed on or near Buttrick, Schley, Balcom, Miles and Emerson Avenues, as described in the methane monitoring reports referenced in Special Condition #1 of this permit.

34. The Permittee shall maintain, and upgrade if required, the Off-site Gas Monitoring Network during facility construction and after completion of the golf course.

a) The Permittees may request Departmental approval to substitute for all, or part of, the Off-site Gas Monitoring Network by installing geoprobe soil gas monitoring points of a placement and design suitable to the Department. Such points must be at linear intervals no greater than 50 feet (on 50-foot centers) along either segments of the perimeter boundary of the gas venting trench or the drainage ditch.

b) If any point used for off-site gas monitoring is found to require repairs, this fact must be reported to the IEM immediately and all necessary repairs must be made within two weeks of discovery. A copy of the off-site gas monitoring well results also must be sent to the New York City Housing Authority.

c) All off-site gas monitoring points shall be tested on a bi-weekly basis. If any individual monitoring point has a bi-weekly reading that equals or exceeds 100% LEL, or three consecutive bi-weekly readings that are greater than 25% LEL, sampling of that point shall be done weekly. Any individual point under the later modified methane gas action plan may return to the regular bi-weekly monitoring schedule, if there are three (3) consecutive weekly readings all less than the 25% LEL action level.

d) None of the requirements specified in Special Conditions Nos. 26 through 34, 36 (a) through (c) may be terminated without written approval from the Department.

SPECIAL CONDITIONS

ADDITIONAL SPECIAL CONDITIONS FOR ARTICLES 27 and 6 NYCRR Part 360 (Solid Waste Management Facilities)

Ferry Point Park East Post Construction Custodial Care Plan (Custodial Care Plan)

35. Upon Department approval of the Permittee's written post construction certification report, Permittee shall implement the Custodial Care Plan described in Supplemental Engineering Report dated October 15, 2013, Volume 3, Appendix I, as referenced in Special Condition No. 1.

Project Abandonment and Environmentally Sound Closure

36. Should the Project be abandoned, the entire 222 acre Site must be closed, monitored and maintained after closure in accordance with 6 NYCRR Sect. 360-2.15 as a landfill in operation since 2000.

a) Within one hundred and twenty (120) days after notice from the Department that the Site has been deemed abandoned, the Permittee shall implement the custodial care plan contained in the Supplemental Engineering Report dated October 15, 2013, Volume 3, Appendix I, as referenced in Special Condition No. 1.
b) For the purpose of this permit, abandonment shall mean any of the following:
   i. Filling operations authorized under this permit cease for a period of 12 consecutive months, as provided in 6NYCRR sect 360-1.11(f);
   ii. Failure to complete the Project within 12 months of the issuance of this permit, as determined by the Department, by the expiration date of this permit; or
   iii. Termination of this Project as a result of enforcement action by the Department or another government agency for non compliance with this permit, or with applicable Federal, State or Local Law.
c) The terms of this Special Provision shall govern, if in conflict with the terms of General Condition No. 12.

Waterfront Park

37. Within one hundred and eighty (180) days of the effective date of this permit, provide three hard copies and one copy on CD of revised design plans for the Waterfront Park, to the Regional Permit Administrator. Include in this submission details on the extent of adjacent area and tidal wetlands encroachment, water balance, proposed mitigation (including mitigation for the pool barge), implementation plans and staging.

SPECIAL CONDITIONS

ADDITIONAL SPECIAL CONDITIONS FOR ARTICLES 27 and 6 NYCRR Part 360 (Solid Waste Management Facilities)

Submittals

38. Within sixty (60) days of completion of the filling operation on the Site and construction of the earthwork portion of the Project, the Permittees shall provide:

a) as-built drawings of the Project, signed by a professional engineer licensed in New York State for DEC's approval. The post construction as built drawings shall, at a minimum, include detailed cross-sections illustrating the depth of fill placed and location of all utilities and associated structures, road ways, demarcation layer and storm water drainage control structures for the Project. The as-built plans also shall include the location of all monitoring and control systems and devices (including gas control and monitoring, water quality and elevation monitoring and settlement monitoring).

b) a written post-construction certification report for review and approval by the Department and certification by the Independent Environmental Monitor. This report shall include approved "as-built" drawings demonstrating that the earthwork and filling operation was accomplished in accordance with the Department approved plans and this permit. If as-built drawings are not approved by DEC within 120 days of the completion of the filling operation, the Site is deemed abandoned, as per Special Condition No. 36. This report and the as-built drawings cannot be done or submitted by the IEM.

39. Within ninety (90) days of approval of the post construction certification report, the Permittee shall submit an amended subsurface operations plan which includes relevant post construction storm water pollution prevention maintenance documentation as per the State Pollution Discharge Elimination System (SPDES) general permit for storm water discharges from construction activity.

40. Within sixty (60) days of the effective date of the permit, the Permittee shall submit a full size (24 inches by 36 inches) scaled, signed and sealed drawing showing construction of the irrigation lake passive venting system.

41. Thirty (30) days after approval of the construction certification report, the Permittee must provide to the Regional Solid Waste Engineer, a revised Table 6-1 (noted in the engineering report referenced in Special Condition #1 above).

42. Prior to the installation of any sub slab depressurization systems for onsite buildings, the Permittee must secure written approval of these systems from the NYS Department of Environmental Conservation and the NYS Department of Health.

43. All reports and written submissions shall be sent in duplicate to the regional office of the DEC, with an additional copy to DEC Central Office, and another copy to the document repository as noted below. Each submission shall have a transmittal page, which references the DEC permit number and the relevant Special Condition number.

APPENDIX C

SSDS Construction Drawings Submitted by FPA to NYSDEC dated June 12, 2017

UNDERSLAB PLAN

SCALE: 1/8" = 1'-0"

NOTES :

1. DRAWINGS NOT TO BE USED FOR STRUCTURAL, ARCHITECTURAL OR OTHER REFERENCE EXCEPT FOR SUB-SLAB DEPRESSURIZATION SYSTEM.
2. THE EXTENTS OF BUILDING CONSTRUCTION BENEATH THE FLOOR SLABS SHALL BE LINED WITH GAS VAPOR BARRIER. AS PART OF BUILDING CONSTRUCTION, THE GAS VAPOR BARRIER SHALL ALSO BE APPLIED VERTICALLY TO BELOW GRADE WALLS AND WALLS OF PITS AND SUMPS AS SHOWN AND SPECIFIED.
3. SLOPE HORIZONTAL PIPE UNIFORMLY A MINIMUM OF 1% TOWARD SUB-SLAB DEPRESSION SYSTEM PITS OR TO CONDENSATE DRAINS WHEN PIPING CANNOT BE SLOPED TO PIT.
4. SECURE VERTICAL RISER TO WALL IN ACCORDANCE WITH ARCHITECTURAL AND PLUMBING REQUIREMENTS.
5. ELECTRICAL WIRING AND EQUIPMENT NOT SHOWN. REFER TO ELECTRICAL DRAWINGS AND SPECIFICATIONS FOR REFERENCES.
6. SEAL ALL JOINTS IN SLAB ON GRADE, INCLUDING BUT NOT LIMITED TO, CONTROL JOINTS, EXPANSION JOINTS, CRACKS, WALL JOINTS, PENETRATIONS ETC. WITH NON-CRACKING CAULK. POLYURETHANE TYPE PREFERRED.
7. COORDINATE GAS VENTING SYSTEM WITH ALL TRADES, INCLUDE VENTING SYSTEM PIPING ON COORDINATION DRAWINGS.
8. ALL GAS VENTS SHALL BE CONTINUOUS FROM UNDERSLAB STONE BASE TO 36" ABOVE ROOF LINE OR PARAPET (WHICHEVER IS HIGHER). ALL VENTS SHALL BE 10'-0" MIN FROM LOT LINES, OUTSIDE AIR INTAKES, WINDOWS, ETC.
9. DRAWING ILLUSTRATES WALLS AND ALL SLAB ON GRADE FLOOR AREAS. COORDINATE THIS WORK WITH ARCHITECTURAL, MECHANICAL, AND STRUCTURAL PLANS.
10. ALL GAS VENT PIPING SHALL BE PVC PIPING. WHERE PIPING IS LOCATED IN RETURN AIR PLENUMS CHANGE MATERIAL TO NO-HUB CAST IRON PIPE.
11. LABEL GAS PIPING AT INTERVALS OF NOT MORE THAN 25 FT IN CONCEALED LOCATIONS AND NOT MORE THAN 50 FT ON EXPOSED AND NOT LESS THAN ONCE IN ANY ROOM OR SPACE.
12. GAS VAPOR BARRIER TO BE INSTALLED IMMEDIATELY BELOW FLOOR SLAB AS INDICATED ON THE STRUCTURAL DRAWINGS. PROVIDE 12" MINIMUM CLEAN #57 STONE SUB-BASE FOR GAS MITIGATION SYSTEM.
13. SLOPE HORIZONTAL PIPE A MINIMUM OF 1% UNIFORMLY TOWARD SUCTION PITS.
14. REFER TO SPECIFICATION FOR ADDITIONAL SUB-SLAB DEPRESSURIZATION SYSTEM AND ACCESSORIES REQUIREMENTS.

LEGEND

- EXTENT OF GAS PERMEABLE AGGREGATE LAYER BENEATH FLOOR SLAB
- 4" SCHEDULE 80 PVC PIPE
- SFV-1 — SUCTION FAN VERTICAL 4" RISER AND IDENTIFICATION NUMBER. EXTEND THRU ATTIC TO SUCTION FAN
- MP-1 — SUB-SLAB MONITORING POINT AND IDENTIFICATION NUMBER
- DP-1A — SUB-SLAB DEPRESURAIZATION PIT AND IDENTIFICATION NUMBER

PROVIDE LIQUID BOOT GAS VAPOR BARRIER SYSTEM UNDER SLAB AS MANUFACTURED BY CETCO CONSISTING OF ULTRASHIELD G-1000, 60 DRY MILS LIQUID BOOT AND LIQUID BOOT BASE FABRIC. SYSTEM SHALL INSTALLED BY AUTHORIZED INSTALLER. REFER TO DETAILS FOR ADDITIONAL INFORMATION. REFER TO CONTRACT DOCUMENTS FOR LOCATIONS OF PENETRATIONS THROUGH THE SLAB.

OFFSET VENT ABOVE CEILING AT ROOF AND EXTEND THROUGH ROOF APPROXIMATELY 3' FROM PARAPET WALLS AND TERMINATE 24" ABOVE FINISHED ROOF.

VAPOR REMEDIATION GENERAL NOTES

A. SCOPE

1. ALL CONSTRUCTION SHALL COMPLY WITH THE NYSDEC APPROVED POST CONSTRUCTION CUSTODIAL CARE PLAN DATED OCTOBER 2013, PREPARED BY NYC DPR, INCLUDING THE APPROPRIATE HANDLING OF COVER, SOIL, SHAPING LAYER MATERIAL, DEMARCATION LAYER MATERIALS, AND MSW, AND INSPECTION AND CONSTRUCTION CERTIFICATION REQUIREMENTS.
2. THE GAS MITIGATION SYSTEM IS TO BE INSTALLED BY A LICENSED GAS MITIGATION CONTRACTOR IN THE STATE OF NEW YORK. CONTRACTOR TO SUBMIT DESIGN SHOP DRAWINGS FOR REVIEW PRIOR TO CONSTRUCTION.
3. THE REQUIREMENTS ADDRESSED IN THE GAS MITIGATION SYSTEM (GMS) INCLUDE THE FOLLOWING CATEGORIES OF CONTRACTOR ACTIVITY: GENERAL PRACTICES, WORKER HEALTH AND SAFETY, SYSTEMS INSTALLATION, MATERIALS, MONITORS AND LABELING, POST-MITIGATION TESTING, AND CONTRACTS AND DOCUMENTATION.

B. IMPLEMENTATION

1. THE GMS INCLUDES REQUIREMENTS FOR INSTALLATION OF GAS REMEDIATION SYSTEMS AND PROVIDES A BASIS FOR EVALUATING THE QUALITY OF THOSE INSTALLATIONS. IT MAY BE ADOPTED BY STATE REGULATORY AGENCIES FOR STATE OR LOCAL GAS MITIGATION CONTRACTOR LICENSURE PROGRAMS. IT MAY ALSO BE USED AS A REFERENCE DURING INSPECTION OF IN-PROGRESS OR COMPLETED GAS MITIGATION WORK.
2. CONTRACTORS SHALL PERSONALLY CONDUCT FOLLOW-UP INSPECTION OF ANY GAS MITIGATION SYSTEMS INSTALLED BY THEIR FIRM OR BY SUBCONTRACTORS TO INSURE CONFORMANCE WITH THE REQUIREMENTS OF THE GMS. THIS REQUIREMENT SHALL INCLUDE THE POST-MITIGATION TESTING PRESCRIBED IN THIS SPECIFICATION.
3. THOSE PROVISIONS OF THE GMS THAT ARE CONSIDERED TO BE MANDATORY ARE PREFACED BY THE TERM "SHALL." PROVISIONS THAT ARE CONSIDERED GOOD PRACTICE BUT WHICH ARE NOT MANDATORY ARE PREFACED BY THE TEGMS "SHOULD" OR "RECOMMENDED."

C. LIMITATIONS

1. ALTHOUGH THE PROVISIONS OF THE GMS HAVE BEEN CAREFULLY REVIEWED FOR POTENTIAL CONFLICTS WITH OTHER REGULATORY REQUIREMENTS, ADHERENCE TO THE GMS DOES NOT GUARANTEE COMPLIANCE WITH THE APPLICABLE CODES OR REGULATIONS OF ANY OTHER FEDERAL, STATE, OR LOCAL AGENCY HAVING JURISDICTION.
2. WHERE DISCREPANCIES EXIST BETWEEN PROVISIONS OF THE GMS AND LOCAL CODES OR REGULATIONS, LOCAL CODES SHALL TAKE PRECEDENCE. HOWEVER, WHERE COMPLIANCE WITH LOCAL CODES NECESSITATES A DEVIATION FROM THE GMS, EPA RECOMMENDS THAT RPP LISTED MITIGATION SERVICE PROVIDERS (MITIGATION CONTRACTORS) REPORT THE DEVIATION IN WRITING TO THE APPROPRIATE EPA REGIONAL OFFICE AND THE APPROPRIATE STATE REGULATORY OFFICIAL WITHIN 30 DAYS. IT SHOULD BE NOTED THAT EPA IS NOT REQUIRING THE REPORTING THAT IS RECOMMENDED IN THIS PARAGRAPH. STATES WITH GAS MITIGATION CONTRACTOR CERTIFICATION PROGRAMS MAY REQUIRE THAT CONTRACTORS GIVE PRIOR NOTIFICATION OF THEIR INTENT TO DEVIATE FROM THE GMS FOR RESEARCH OR OTHER PURPOSES.
3. THE GMS IS NOT INTENDED TO BE USED AS A DESIGN MANUAL, AND COMPLIANCE WITH ITS PROVISIONS WILL NOT GUARANTEE REDUCTION OF INDOOR GAS CONCENTRATIONS TO ANY SPECIFIC LEVEL.
4. BECAUSE OF THE WIDE VARIATION IN BUILDING DESIGN, SIZE, OPERATION AND USE, THE GMS DOES NOT INCLUDE DETAILED GUIDANCE ON HOW TO SELECT THE MOST APPROPRIATE MITIGATION STRATEGY FOR A GIVEN BUILDING. THAT GUIDANCE IS PROVIDED IN THE DOCUMENTS REFERENCED IN IN THIS SPECIFICATION.
5. CONTRACTORS WHO EXPECT TO DEVIATE FROM PROVEN GAS MITIGATION TECHNOLOGIES AND METHODS FOR PURPOSES OF RESEARCH ON INNOVATIVE MITIGATION TECHNIQUES, SHALL OBTAIN PRIOR APPROVAL FROM STATE REGULATORY OFFICES, DOCUMENT THE NON-STANDARD TECHNIQUES, AND INFORM THE CLIENT OF THE DEVIATION FROM STANDARD PROCEDURES. IN CASES WHERE GAS MITIGATION IS NOT REGULATED BY THE STATE, CONTRACTORS SHALL OBTAIN PRIOR APPROVAL FROM A REGIONAL EPA OFFICE.

D. WORKER HEALTH AND SAFETY

1. CONTRACTORS SHALL COMPLY WITH ALL OSHA, STATE AND LOCAL STANDARDS OR REGULATIONS RELATING TO WORKER SAFETY AND OCCUPATIONAL GAS EXPOSURE. APPLICABLE REFERENCES IN THE CODE OF FEDERAL REGULATIONS AND NIOSH PUBLICATIONS.
2. IN ADDITION TO THE OSHA AND NIOSH STANDARDS, THE FOLLOWING REQUIREMENTS THAT ARE SPECIFICALLY OR UNIQUELY APPLICABLE FOR THE SAFETY AND PROTECTION OF GAS MITIGATION WORKERS SHALL BE MET:
   a. THE CONTRACTOR SHALL ADVISE WORKERS OF THE HAZARDS OF EXPOSURE TO GAS AND THE NEED TO APPLY PROTECTIVE MEASURES WHEN WORKING IN AREAS OF ELEVATED GAS CONCENTRATIONS.
   b. THE CONTRACTOR SHALL HAVE A WORKER PROTECTION PLAN ON FILE THAT IS AVAILABLE TO ALL EMPLOYEES AND IS APPROVED BY ANY STATE OR LOCAL REGULATING AGENCIES THAT REQUIRE SUCH A PLAN. EXCEPTION: A WORKER PROTECTION PLAN IS NOT REQUIRED FOR A CONTRACTOR WHO IS A SOLE PROPRIETOR UNLESS REQUIRED BY STATE OR LOCAL REGULATIONS.
   c. THE CONTRACTOR SHALL ENSURE THAT APPROPRIATE SAFETY EQUIPMENT SUCH AS HARD HATS, FACE SHIELDS, EAR PLUGS, STEEL-TOE BOOTS AND PROTECTIVE GLOVES ARE AVAILABLE ON THE JOB SITE DURING CUTTING, DRILLING, GRINDING, POLISHING, DEMOLISHING OR OTHER ACTIVITY ASSOCIATED WITH GAS MITIGATION PROJECTS.
   d. ALL ELECTRICAL EQUIPMENT USED DURING GAS MITIGATION PROJECTS SHALL BE PROPERLY GROUNDED. CIRCUITS USED AS A POWER SOURCE SHOULD BE PROTECTED BY GROUND-FAULT CIRCUIT INTERRUPTERS (GFCI).
   e. WHEN WORK IS REQUIRED AT ELEVATIONS ABOVE THE GROUND OR FLOOR, THE CONTRACTOR SHALL ENSURE THAT LADDERS OR SCAFFOLDING ARE SAFELY INSTALLED AND OPERATED.
   f. WORK AREAS SHALL BE VENTILATED TO REDUCE WORKER EXPOSURE TO GAS DECAY PRODUCTS, DUST, OR OTHER AIRBORNE POLLUTANTS. IN WORK AREAS WHERE VENTILATION IS IMPRACTICAL OR WHERE VENTILATION CANNOT REDUCE GAS LEVELS TO LESS THAN 0.3 WL (BASED ON A SHORT TERM DIAGNOSTIC TEST, E.G., GRAB SAMPLE), THE CONTRACTOR SHALL ENSURE THAT RESPIRATORY PROTECTION CONFOGMS WITH THE REQUIREMENTS IN THE NIOSH GUIDE TO INDUSTRIAL RESPIRATORY PROTECTION. ((NOTE: IF UNABLE TO MAKE WORKING LEVEL MEASUREMENTS, A GAS LEVEL OF 30 PCI/L SHALL BE USED.)
   g. WHERE COMBUSTIBLE MATERIALS EXIST IN THE SPECIFIC AREA OF THE BUILDING WHERE GAS MITIGATION WORK IS TO BE CONDUCTED AND THE CONTRACTOR IS CREATING ANY TEMPERATURES HIGH ENOUGH TO INDUCE A FLAME, THE CONTRACTOR SHALL ENSURE THAT FIRE EXTINGUISHERS SUITABLE FOR TYPE A, B, AND C FIRES ARE AVAILABLE IN THE IMMEDIATE WORK AREA.
   h. PENDING DEVELOPMENT OF AN APPROVED PERSONAL GAS EXPOSURE DEVICE AND A PROTOCOL FOR ITS USE, CONTRACTORS SHALL RECORD EMPLOYEE EXPOSURE TO GAS AT EACH WORK SITE, BASED ON:
      1) THE HIGHEST PRE-MITIGATION INDOOR GAS OR WORKING LEVEL MEASUREMENT AVAILABLE, AND
      2) THE TIME EMPLOYEES ARE EXPOSED (WITHOUT RESPIRATOR PROTECTION) AT THAT LEVEL

      (NOTE: THIS APPROACH IS NOT INTENDED TO PRECLUDE THE ALTERNATIVE USE OF ON-SITE GAS OR GAS DECAY PRODUCT MEASUREMENTS TO DETERMINE EXACT EXPOSURE.) CONSISTENT WITH OSHA PERMISSIBLE EXPOSURE LIMITS, CONTRACTORS SHALL ENSURE THAT EMPLOYEES ARE EXPOSED TO NO MORE THAN 4 WORKING LEVEL MONTHS (WLM) OVER A 12 MONTH PERIOD. (AN EQUILIBRIUM RATIO OF 50 PERCENT SHALL BE USED TO CONVERT GAS EXPOSURE TO WLM.)
   i. WHEN MITIGATION WORK REQUIRES THE USE OF SEALANTS, ADHESIVES, PAINTS, OR OTHER SUBSTANCES THAT MAY BE HAZARDOUS TO HEALTH, CONTRACTORS SHALL PROVIDE EMPLOYEES WITH THE APPLICABLE MATERIAL SAFETY DATA SHEETS (MSDS) AND EXPLAIN THE REQUIRED SAFETY PROCEDURES.

E. SYSTEMS REQUIREMENT

1. ALL GAS MITIGATION SYSTEMS SHALL BE INSTALLED AS PERMANENT, INTEGRAL ADDITIONS TO THE BUILDING, EXCEPT WHERE A TEMPORARY SYSTEM HAS BEEN INSTALLED.
2. ALL GAS MITIGATION SYSTEMS SHALL BE INSTALLED TO AVOID THE CREATION OF OTHER HEALTH, SAFETY, OR ENVIRONMENTAL HAZARDS TO BUILDING OCCUPANTS, SUCH AS BACKDRAFTING OF NATURAL DRAFT COMBUSTION APPLIANCES.
3. ALL GAS MITIGATION SYSTEMS SHALL MAXIMIZE GAS REDUCTION AND IN CONSIDERATION OF THE NEED TO MINIMIZE EXCESS ENERGY USAGE, TO AVOID COMPROMISING MOISTURE AND TEMPERATURE CONTROLS AND OTHER COMFORT FEATURES, AND TO MINIMIZE NOISE.
4. ALL GAS MITIGATION SYSTEMS AND THEIR COMPONENTS SHALL COMPLY WITH THE LAWS, ORDINANCES, CODES, AND REGULATIONS OF RELEVANT JURISDICTIONAL AUTHORITIES, INCLUDING APPLICABLE MECHANICAL, ELECTRICAL, BUILDING, PLUMBING, ENERGY, AND FIRE PREVENTION CODES.

F. SYSTEMS INSTALLATION

1. GENERAL REQUIREMENTS
   a. ALL COMPONENTS OF GAS MITIGATION SYSTEMS INSTALLED IN COMPLIANCE WITH PROVISIONS OF THE GMS SHALL ALSO BE IN COMPLIANCE WITH THE APPLICABLE MECHANICAL, ELECTRICAL, BUILDING, PLUMBING, ENERGY AND FIRE PREVENTION CODES, STANDARDS, AND REGULATIONS OF THE LOCAL JURISDICTION.
   b. THE CONTRACTOR SHALL OBTAIN ALL REQUIRED LICENSES AND PERMITS, AND DISPLAY THEM IN THE WORK AREAS AS REQUIRED BY LOCAL ORDINANCES.
   c. WHERE PORTIONS OF STRUCTURAL FRAMING MATERIAL MUST BE REMOVED TO ACCOMMODATE GAS VENT PIPES, MATERIAL REMOVED SHALL BE NO GREATER THAN THAT PERMITTED FOR PLUMBING INSTALLATIONS BY APPLICABLE BUILDING OR PLUMBING CODES.
   d. WHERE INSTALLATION OF A GAS MITIGATION SYSTEM REQUIRES PIPES OR DUCTS TO PENETRATE A FIREWALL OR OTHER FIRE RESISTANCE RATED WALL OR FLOOR, PENETRATIONS SHALL BE PROTECTED IN ACCORDANCE WITH APPLICABLE BUILDING, MECHANICAL, FIRE, AND ELECTRICAL CODES.
2. GAS VENT PIPE INSTALLATION REQUIREMENTS
   a. ALL JOINTS AND CONNECTIONS IN GAS MITIGATION SYSTEMS USING PLASTIC VENT PIPES SHALL BE PERMANENTLY SEALED WITH ADHESIVES AS SPECIFIED BY THE MANUFACTURER OF THE PIPE MATERIAL USED. JOINTS OR CONNECTIONS IN OTHER VENT PIPE MATERIALS SHALL BE MADE AIR TIGHT.
   b. ATTIC AND EXTERNAL PIPING RUNS IN AREAS SUBJECT TO SUBFREEZING CONDITIONS SHOULD BE PROTECTED TO AVOID THE RISK OF VENT PIPE FREEZE-UP.
   c. GAS VENT PIPES SHALL BE FASTENED TO THE STRUCTURE OF THE BUILDING WITH HANGERS, STRAPPING, OR OTHER SUPPORTS THAT WILL ADEQUATELY SECURE THE VENT MATERIAL. EXISTING PLUMBING PIPES, DUCTS, OR MECHANICAL EQUIPMENT SHALL NOT BE USED TO SUPPORT OR SECURE A GAS VENT PIPE.
   d. SUPPORTS FOR GAS VENT PIPES SHALL BE INSTALLED AT LEAST EVERY 6 FEET ON HORIZONTAL RUNS. VERTICAL RUNS SHALL BE SECURED EITHER ABOVE OR BELOW THE POINTS OF PENETRATION THRU FLOORS, CEILINGS, AND ROOFS, OR AT LEAST EVERY 8 FEET ON RUNS THAT DO NOT PENETRATE FLOORS, CEILINGS, OR ROOFS.
   e. TO PREVENT BLOCKAGE OF AIR FLOW INTO THE BOTTOM OF GAS VENT PIPES, THESE PIPES SHALL BE SUPPORTED OR SECURED IN A PERMANENT MANNER THAT PREVENTS THEIR DOWNWARD MOVEMENT TO THE BOTTOM OF SUCTION PITS OR SUMP PITS, OR INTO THE SOIL BENEATH AN AGGREGATE LAYER UNDER A SLAB.
   f. GAS VENT PIPES SHALL BE INSTALLED IN A CONFIGURATION THAT ENSURES THAT ANY RAIN WATER OR CONDENSATION WITHIN THE PIPES DRAINS DOWNWARD INTO THE GROUND BENEATH THE SLAB OR SOIL-GAS RETARDER MEMBRANE.
   g. GAS VENT PIPES SHALL NOT BLOCK ACCESS TO ANY AREAS REQUIRING MAINTENANCE OR INSPECTION. GAS VENTS SHALL NOT BE INSTALLED IN FRONT OF OR INTERFERE WITH ANY LIGHT, OPENING, DOOR, WINDOW OR EQUIPMENT ACCESS AREA REQUIRED BY CODE. IF GAS VENT PIPES ARE INSTALLED IN SUMP PITS, THE SYSTEM SHALL BE DESIGNED WITH REMOVABLE OR FLEXIBLE COUPLINGS TO FACILITATE REMOVAL OF THE SUMP PIT COVER FOR SUMP PUMP MAINTENANCE.
3. GAS VENT FAN INSTALLATION REQUIREMENTS
   a. VENT FANS USED IN GAS MITIGATION SYSTEMS SHALL BE SEALED TO REDUCE THE POTENTIAL FOR LEAKAGE OF SOIL GAS FROM THE FAN HOUSING.
   b. GAS VENT FANS SHALL BE SIZED TO PROVIDE THE PRESSURE DIFFERENCE AND AIR FLOW CHARACTERISTICS NECESSARY TO ACHIEVE THE GAS REDUCTION GOALS ESTABLISHED FOR THE SPECIFIC MITIGATION PROJECT
   c. GAS VENT FANS USED IN ACTIVE SOIL DEPRESSURIZATION OR BLOCK WALL DEPRESSURIZATION SYSTEMS SHALL NOT BE INSTALLED BELOW GROUND NOR IN THE CONDITIONED (HEATED/COOLED) SPACE OF A BUILDING, NOR IN ANY BASEMENT, CRAWLSPACE, OR OTHER INTERIOR LOCATION DIRECTLY BENEATH THE CONDITIONED SPACES OF A BUILDING. ACCEPTABLE LOCATIONS FOR GAS VENT FANS INCLUDE ATTICS NOT SUITABLE FOR OCCUPANCY (INCLUDING ATTICS OVER OCCUPIED) OR ON THE EXTERIOR OF THE BUILDING.
   d. GAS VENT FANS SHALL BE INSTALLED IN A CONFIGURATION THAT AVOIDS CONDENSATION BUILDUP IN THE FAN HOUSING. WHENEVER POSSIBLE, FANS SHOULD BE INSTALLED IN VERTICAL RUNS OF THE VENT PIPE.
   e. GAS VENT FANS MOUNTED ON THE EXTERIOR OF BUILDINGS SHALL BE RATED FOR OUTDOOR USE OR INSTALLED IN A WATER TIGHT PROTECTIVE HOUSING.
   f. GAS VENT FANS SHALL BE MOUNTED AND SECURED IN A MANNER THAT MINIMIZES TRANSFER OF VIBRATION TO THE STRUCTURAL FRAMING OF THE BUILDING.
   g. TO FACILITATE MAINTENANCE AND FUTURE REPLACEMENT, GAS VENT FANS SHALL BE INSTALLED IN THE VENT PIPE USING REMOVABLE COUPLINGS OR FLEXIBLE CONNECTIONS THAT CAN BE TIGHTLY SECURED TO BOTH THE FAN AND THE VENT PIPE.
5. SEALING REQUIREMENTS
   a. SUMP PITS THAT PERMIT ENTRY OF SOIL-GAS OR THAT WOULD ALLOW CONDITIONED AIR TO BE DRAWN INTO A SUB-SLAB DEPRESSURIZATION SYSTEM SHALL BE COVERED AND SEALED. THE COVERS ON SUMPS THAT PREVIOUSLY PROVIDED PROTECTION OR RELIEF FROM SURFACE WATER COLLECTION SHALL BE FITTED WITH A WATER OR MECHANICALLY TRAPPED DRAIN. WATER TRAPS SHOULD BE FITTED WITH AN AUTOMATIC SUPPLY OF PRIMING WATER.
   b. OPENINGS AROUND GAS VENT PIPE PENETRATIONS OF THE SLAB, THE FOUNDATION WALLS, OR THE CRAWLSPACE SOIL-GAS RETARDER MEMBRANE SHALL BE CLEANED, PREPARED, AND SEALED IN A PERMANENT, AIR-TIGHT MANNER USING COMPATIBLE CAULKS OR OTHER SEALANT MATERIALS. OPENINGS AROUND OTHER UTILITY PENETRATIONS OF THE SLAB, WALLS, OR SOIL-GAS RETARDER SHALL ALSO BE SEALED.
   c. OPENINGS, PERIMETER CHANNEL DRAINS, OR CRACKS THAT EXIST WHERE THE SLAB MEETS THE FOUNDATION WALL (FLOOR-WALL JOINT), SHALL BE SEALED WITH URETHANE CAULK OR EQUIVALENT MATERIAL. WHEN THE OPENING OR CHANNEL IS GREATER THAN 1/2 INCH IN WIDTH, A FOAM BACKER ROD OR OTHER COMPARABLE FILLER MATERIAL SHALL BE INSERTED IN THE CHANNEL BEFORE APPLICATION OF THE SEALANT. THIS SEALING TECHNIQUE SHALL BE DONE IN A MANNER THAT RETAINS THE CHANNEL FEATURE AS A WATER CONTROL SYSTEM. OTHER OPENINGS OR CRACKS IN SLABS OR AT EXPANSION OR CONTROL JOINTS SHOULD ALSO BE SEALED. OPENINGS OR CRACKS THAT ARE DETERMINED TO BE INACCESSIBLE OR BEYOND THE ABILITY OF THE CONTRACTOR TO SEAL SHALL BE DISCLOSED TO THE CLIENT AND INCLUDED IN THE DOCUMENTATION.
   d. WHEN INSTALLING BASEBOARD-TYPE SUCTION SYSTEMS, ALL SEAMS AND JOINTS IN THE BASEBOARD MATERIAL SHALL BE JOINED AND SEALED USING MATERIALS RECOMMENDED BY THE MANUFACTURER OF THE BASEBOARD SYSTEM. BASEBOARDS SHALL BE SECURED TO WALLS AND FLOORS WITH ADHESIVES DESIGNED AND RECOMMENDED FOR SUCH INSTALLATIONS. IF A BASEBOARD SYSTEM IS INSTALLED ON A BLOCK WALL FOUNDATION, THE TOPS OF THE BLOCKWALL SHALL BE CLOSED AND SEALED.

G. ELECTRICAL REQUIREMENTS

1. WIRING FOR ALL ACTIVE GAS MITIGATION SYSTEMS SHALL CONFORM TO PROVISIONS OF THE NATIONAL ELECTRIC CODE AND ANY ADDITIONAL LOCAL REGULATIONS.
2. WIRING MAY NOT BE LOCATED IN OR CHASED THRU THE MITIGATION INSTALLATION DUCTING OR ANY OTHER HEATING OR COOLING DUCTWORK.
3. GAS MITIGATION FANS INSTALLED ON THE EXTERIOR OF BUILDINGS SHALL BE HARD-WIRED INTO AN ELECTRICAL CIRCUIT. PLUGGED FANS SHALL NOT BE USED OUTDOORS.
4. IF THE RATED ELECTRICITY REQUIREMENTS OF A GAS MITIGATION SYSTEM FAN EXCEEDS 50 PERCENT OF THE CIRCUIT CAPACITY INTO WHICH IT WILL BE CONNECTED, OR IF THE TOTAL CONNECTED LOAD ON THE CIRCUIT (INCLUDING THE GAS VENT FAN) EXCEEDS 80 PERCENT OF THE CIRCUIT'S RATED CAPACITY, A SEPARATE, DEDICATED CIRCUIT SHALL BE INSTALLED TO POWER THE FAN.
5. AN ELECTRICAL DISCONNECT SWITCH OR CIRCUIT BREAKER SHALL BE INSTALLED IN GAS MITIGATION SYSTEM FAN CIRCUITS TO PERMIT DEACTIVATION OF THE FAN FOR MAINTENANCE OR REPAIR BY THE BUILDING OWNER OR SERVICING CONTRACTOR (DISCONNECT SWITCHES ARE NOT REQUIRED WITH PLUGGED FANS).

H. MATERIALS

1. ALL MITIGATION SYSTEM ELECTRICAL COMPONENTS SHALL BE U.L. LISTED OR OF EQUIVALENT SPECIFICATIONS.
2. AS A MINIMUM, ALL PLASTIC VENT PIPES IN MITIGATION SYSTEMS SHALL BE MADE OF SCHEDULE 80 PVC OR EQUIVALENT PIPING MATERIAL.
3. VENT PIPE FITTINGS IN A MITIGATION SYSTEM SHALL BE OF THE SAME MATERIAL AS THE VENT PIPES.
4. CLEANING SOLVENTS AND ADHESIVES USED TO JOIN PLASTIC PIPES AND FITTINGS SHALL BE AS RECOMMENDED BY MANUFACTURERS FOR USE WITH THE TYPE OF PIPE MATERIAL USED IN THE MITIGATION SYSTEM.
5. WHEN SEALING CRACKS IN SLABS AND OTHER SMALL OPENINGS AROUND PENETRATIONS OF THE SLAB AND FOUNDATION WALLS, CAULKS AND SEALANTS DESIGNED FOR SUCH APPLICATION SHALL BE USED. URETHANE SEALANTS ARE RECOMMENDED BECAUSE OF THEIR DURABILITY.
6. WHEN SEALING HOLES FOR PLUMBING ROUGH-IN OR OTHER LARGE OPENINGS IN SLABS AND FOUNDATION WALLS THAT ARE BELOW THE GROUND SURFACE, NON-SHRINK MORTAR, GROUTS, EXPANDING FOAM, OR SIMILAR MATERIALS DESIGNED FOR SUCH APPLICATION SHALL BE USED.

I. MONITORS AND LABELING

1. ALL ACTIVE SOIL DEPRESSURIZATION AND BLOCK WALL DEPRESSURIZATION GAS MITIGATION SYSTEMS SHALL INCLUDE A MECHANISM TO MONITOR SYSTEM PERFORMANCE AND WARN OF SYSTEM FAILURE. THE MECHANISM SHALL BE SIMPLE TO READ OR INTERPRET AND BE LOCATED WHERE IT IS EASILY SEEN OR HEARD BY BUILDING OCCUPANTS AND PROTECTED FROM DAMAGE OR DESTRUCTION.
2. ELECTRICAL GAS MITIGATION SYSTEM MONITORS (WHETHER VISUAL OR AUDIBLE) SHALL BE INSTALLED ON NON-SWITCHED CIRCUITS AND BE DESIGNED TO RESET AUTOMATICALLY WHEN POWER IS RESTORED AFTER SERVICE OR POWER SUPPLY FAILURE. BATTERY OPERATED MONITORING DEVICES SHALL NOT BE USED UNLESS THEY ARE EQUIPPED WITH A LOW POWER WARNING FEATURE.
3. MECHANICAL GAS MITIGATION SYSTEM MONITORS, SUCH AS MANOMETER TYPE PRESSURE GAUGES, SHALL BE CLEARLY MARKED TO INDICATE THE RANGE OR ZONE OF PRESSURE READINGS THAT EXISTED WHEN THE SYSTEM WAS INITIALLY ACTIVATED.
4. A SYSTEM DESCRIPTION LABEL SHALL BE PLACED ON THE MITIGATION SYSTEM, THE ELECTRIC SERVICE ENTRANCE PANEL, OR OTHER PROMINENT LOCATION. THIS LABEL SHALL BE LEGIBLE FROM A DISTANCE OF AT LEAST THREE FEET AND INCLUDE THE FOLLOWING INFORMATION: "GAS REDUCTION SYSTEM," THE INSTALLER'S NAME, PHONE NUMBER, AND RCP IDENTIFICATION NUMBER, THE DATE OF INSTALLATION, AND AN ADVISORY THAT THE BUILDING SHOULD BE TESTED FOR GAS AT LEAST EVERY TWO YEARS OR AS REQUIRED OR RECOMMENDED BY STATE OR LOCAL AGENCIES. IN ADDITION, ALL EXPOSED AND VISIBLE INTERIOR GAS MITIGATION SYSTEM VENT PIPE SECTIONS SHALL BE IDENTIFIED WITH AT LEAST ONE LABEL ON EACH FLOOR LEVEL. THE LABEL SHALL READ, "GAS REDUCTION SYSTEM."
5. THE CIRCUIT BREAKERS CONTROLLING THE CIRCUITS ON WHICH THE GAS VENT FAN AND SYSTEM FAILURE WARNING DEVICES OPERATE SHALL BE LABELED "GAS SYSTEM."

J. POST-MITIGATION TESTING

1. AFTER INSTALLATION OF AN ACTIVE GAS CONTROL SYSTEM (E.G., SSD), THE CONTRACTOR SHALL RE-EXAMINE AND VERIFY THE INTEGRITY OF THE FAN MOUNTING SEALS AND ALL JOINTS IN THE INTERIOR VENT PIPING.
2. AFTER INSTALLATION OF ANY ACTIVE GAS MITIGATION SYSTEM, THE CONTRACTOR SHALL PERFORM TESTS. SEE SPECIFICATION SECTION 072727 'SUBSLAB DEPRESSURIZATION SYSTEM' FOR ADDITIONAL INFORMATION.
3. IMMEDIATELY AFTER INSTALLATION AND ACTIVATION OF ANY ACTIVE (FAN-POWERED) SUB-SLAB DEPRESSURIZATION OR BLOCK WALL DEPRESSURIZATION SYSTEM IN BUILDINGS CONTAINING NATURAL DRAFT COMBUSTION APPLIANCES, THE BUILDING SHALL BE TESTED FOR BACKDRAFTING OF THOSE APPLIANCES. ANY BACKDRAFTING CONDITION THAT RESULTS FROM INSTALLATION OF THE GAS MITIGATION SYSTEM SHALL BE CORRECTED BEFORE THE SYSTEM IS PLACED IN OPERATION.
4. UPON COMPLETION OF GAS MITIGATION WORK, A TEST OF MITIGATION SYSTEM EFFECTIVENESS SHALL BE CONDUCTED. SEE SPECIFICATION SECTION 072726 'GAS VAPOR BARRIER (FLUID APPLIED) FOR ADDITIONAL INFORMATION.
5. TO ENSURE CONTINUED EFFECTIVENESS OF THE GAS MITIGATION SYSTEM(S) INSTALLED, THE CONTRACTOR SHALL ADVISE THE CLIENT TO RETEST THE BUILDING AT LEAST EVERY TWO YEARS OR AS REQUIRED OR RECOMMENDED BY STATE OR LOCAL AUTHORITY. RETESTING IS ALSO RECOMMENDED IF THE BUILDING UNDERGOES SIGNIFICANT ALTERATION.

K. CONTRACTS AND DOCUMENTATION

1. EPA RECOMMENDS THAT CONTRACTORS PROVIDE THE FOLLOWING WRITTEN INFORMATION TO CLIENTS PRIOR TO INITIATION OF WORK:
   a. THE CONTRACTOR'S EPA RPP MITIGATION SERVICE PROVIDER IDENTIFICATION NUMBER.
   b. A STATEMENT THAT DESCRIBES THE PLANNED SCOPE OF THE WORK AND THAT INCLUDES AN ESTIMATE OF THE TIME NEEDED TO COMPLETE THE WORK.
   c. A STATEMENT DESCRIBING ANY KNOWN HAZARDS ASSOCIATED WITH CHEMICALS USED IN OR AS PART OF THE INSTALLATION.
   d. A STATEMENT INDICATING COMPLIANCE WITH AND IMPLEMENTATION OF ALL EPA STANDARDS AND THOSE OF OTHER AGENCIES HAVING JURISDICTION (E.G., CODE REQUIREMENTS).
   e. A STATEMENT DESCRIBING ANY SYSTEM MAINTENANCE THAT THE BUILDING OWNER WOULD BE REQUIRED TO PERFORM.
   f. AN ESTIMATE OF THE INSTALLATION COST AND ANNUAL OPERATING COSTS OF THE SYSTEM.
   g. THE CONDITIONS OF ANY WARRANTY OR GUARANTEE.
2. EPA RECOMMENDS THAT RPP LISTED MITIGATION CONTRACTORS KEEP RECORDS OF ALL GAS MITIGATION WORK PERFORMED AND MAINTAIN THOSE RECORDS FOR 3 YEARS OR FOR THE PERIOD OF ANY WARRANTY OR GUARANTEE, WHICHEVER IS LONGER. THESE RECORDS SHOULD INCLUDE:
3. THE BUILDING INVESTIGATION SUMMARY AND FLOOR PLAN SKETCH.
4. PRE- AND POST-MITIGATION GAS TEST DATA.
5. PRE- AND POST-MITIGATION DIAGNOSTIC TEST DATA.
6. COPIES OF CONTRACTS AND WARRANTIES.
7. A NARRATIVE OR PICTORIAL DESCRIPTION OF MITIGATION SYSTEM(S) INSTALLED.
8. APPENDIX A CONTAINS A SUGGESTED STANDARD FORMAT FOR COMPILING MITIGATION PROJECT RECORDS.
9. OTHER RECORDS OR BOOKKEEPING REQUIRED BY LOCAL, STATE, OR FEDERAL STATUTES AND REGULATIONS SHALL BE MAINTAINED FOR THE PERIOD(S) PRESCRIBED BY THOSE REQUIREMENTS.
10. EPA RECOMMENDS THAT HEALTH AND SAFETY RECORDS, INCLUDING WORKER GAS EXPOSURE LOGS, BE MAINTAINED FOR A MINIMUM OF 20 YEARS.
11. UPON COMPLETION OF THE MITIGATION PROJECT, CONTRACTORS SHALL PROVIDE CLIENTS WITH AN INFORMATION PACKAGE THAT INCLUDES:
12. ANY BUILDING PERMITS REQUIRED BY LOCAL CODES.
13. COPIES OF THE BUILDING INVESTIGATION SUMMARY AND FLOOR PLAN SKETCH.
14. PRE-AND POST-MITIGATION GAS TEST DATA.
15. COPIES OF CONTRACTS AND WARRANTIES.
16. A DESCRIPTION OF THE MITIGATION SYSTEM INSTALLED AND ITS BASIC OPERATING PRINCIPLES.
17. A DESCRIPTION OF ANY DEVIATIONS FROM THE GMS OR STATE REQUIREMENTS.
18. A DESCRIPTION OF THE PROPER OPERATING PROCEDURES OF ANY MECHANICAL OR ELECTRICAL SYSTEMS INSTALLED, INCLUDING MANUFACTURER'S OPERATION AND MAINTENANCE INSTRUCTIONS AND WARRANTIES.
19. A LIST OF APPROPRIATE ACTIONS FOR CLIENTS TO TAKE IF THE SYSTEM FAILURE WARNING DEVICE INDICATES SYSTEM DEGRADATION OR FAILURE.
20. THE NAME, TELEPHONE NUMBER, AND EPA RPP MITIGATION SERVICE PROVIDER IDENTIFICATION NUMBER OF THE CONTRACTOR, AND THE PHONE NUMBER OF THE STATE GAS OFFICE.

THE ACCEPTANCE TESTING SHALL BE AS FOLLOWS:

1. THE EXPLOSIVE GAS MONITORING SYSTEM CONTRACTOR SHALL COMPLETE ACCEPTANCE TESTING TO DEMONSTRATE THAT THE ENTIRE SYSTEMS FUNCTIONS AS DESIGNED. TESTING SHALL INCLUDE:
   A. TESTING EACH FUNCTION OF THE INTEGRATED CONTROLS AT THE CONTROLLER.
   B. CONFIRMATION OF THE CALIBRATIONS OF ALL SENSORS.
   C. TESTING OF ALL COMMUNICATIONS BETWEEN SENSORS AND CONTROLLERS AND BETWEEN THE CONTROLLER AND ALARMS AND AUTO DIALER.
   D. TESTING OF ALL ALARM FUNCTIONS OF ALL SENSORS (ABILITY TO DETECT EXPLOSIVE GAS CONCENTRATIONS) AND OTHER TROUBLE ALARM/DIAGNOSTIC CONDITIONS.
   E. THE CONTRACTOR SHALL CORRECT ALL DEFICIENCIES AND REPEAT THE TESTING FOR ANY ITEMS THAT FAIL INITIAL TESTING. OWNER SHALL NOT ACCEPT THE SYSTEM UNTIL ALL COMPONENTS AND THE ENTIRE COORDINATED SYSTEM HAVE BEEN DEMONSTRATED TO BE OPERATING AS DESIGNED.

Re: Ferry Point Park
SSDS/Foundation Drawings – Trump Golf Links Clubhouse

Dear Mr. Roediger,

New York State Department of Environmental Conservation (department) staff have reviewed the Ferry Point Park Sub-Slab Depressurization System plan and included attachments, prepared by French & Parrello Associates, which was provided by your letter dated June 12th, 2017.

The above-referenced plan appears to comply with the applicable regulations, and, therefore, is approved on the following conditions:

1) The alarm set point for the gas monitoring system is set to 25% LEL.

2) On the completion of the project and prior to occupancy of the building, a construction certification letter from a New York State registered professional engineer must be sent to the department for approval stating that the Ferry Point Park Sub-Slab Depressurization System and Foundation was constructed in accordance with the above-referenced plan and attachments. If there are deviations to the construction, they must be specified.

If you have any questions you may contact me at 718-482-4996.

Sincerely yours,

Kenneth B. Brezner

Re: Ferry Point Park
SSDS/Foundation Drawings – Trump Golf Links Clubhouse

Dear Mr. Roediger,

New York State Department of Environmental Conservation (department) staff have reviewed the Ferry Point Park Sub-Slab Depressurization System plan and included attachments, prepared by French & Parrello Associates, which was provided by your letter dated June 12th, 2017.

The above-referenced plan appears to comply with the applicable regulations, and, therefore, is approved on the following conditions:

1) The alarm set point for the gas monitoring system is set to 25% LEL.

2) On the completion of the project and prior to occupancy of the building, a construction certification letter from a New York State registered professional engineer must be sent to the department for approval stating that the Ferry Point Park Sub-Slab Depressurization System and Foundation was constructed in accordance with the above-referenced plan and attachments. If there are deviations to the construction, they must be specified.

If you have any questions you may contact me at 718-482-4996.

Sincerely yours,

Kenneth B. Brezner

Kenneth B. Brezner, P.E.
Regional Material Management Engineer

Certification Statement

I, Donald Bowman, an employee of Maser Consulting P.A. and a Registered Professional Engineer licensed by the State of New York, exercising independent judgment and discretion do hereby certify that this Subslab Depressurization System (SSDS) for the Trump Golf Links at Ferry Point Clubhouse was constructed under my direction and supervision. The information contained herein is based upon: (1) work which I have personally inspected both during and after construction from July 2017 to date; (2) information provided to me by those directly employed by Maser Consulting P.A.; (3) Design Consultants; and (4) contractors responsible for construction pursuant to their contracts except as indicated[1].

I certify that, from July 2017 to date, Maser Consulting representatives observed the installation of the critical elements of the SSDS for the Trump Golf Links at Ferry Point Clubhouse, with the following deviations from design:

- Drawing No. FO-500.00 "Vapor Remediation Underslab Plan" – lateral piping to SSDS pits DP-2B & DP-2C built approximately 2 feet offset from design due to piping conflicts
- Drawing No. FO-501.00 "Vapor Remediation Floor Plan" – riser piping for fan units SF-1 & SF built within walls to conceal system and prevent unauthorized access; gas sensors in Hall 124, Vestibule 101 & Electrical 113 ceilings built approximately 3-5 feet from design due to piping conflicts
- Drawing No. FO-502.00 "Vapor Remediation Attic & Mezzanine Plan" – fan unit SF-1 built approximately 10 feet to the left of design due to piping conflicts
- Drawing No. FO-504.00 "Vapor Remediation Details" – detail 1B built using hollow (instead of solid) concrete blocks; 'Methane Gas Sensor Detail (option 1)' & 'Methane Gas Sensor Detail (option 2)' added for sensor plenum boxes

[1] Certification means a statement of professional opinion based upon investigation, analysis, knowledge and belief that is stated to be true and accurate. 6 NYCRR Part 360-1.2(b)24.

Site Summary[1]

Ferry Point Park in the Bronx (the "Site") is a former landfill covering 222 acres that is bound by the Bronx-Whitestone Bridge and Hutchinson River Parkway to the west, Balcom/Miles/Emerson Avenues to the east, Schley Avenue and St. Raymond's Cemetery to the north, and the East River to the south. The project was originally managed under Ferry Point Partners, LLC and was taken over solely by the City of New York Department of Parks and Recreation in October 2007.

The origins of the site back to the early 1900s. At that time an available 1900 map of the Bronx showed the western edge of the site which now contains the expressway and Whitestone Bridge was a long narrow peninsula extending out to the same area that the northern landing of the Whitestone Bridge now extends. Immediately east of this peninsula was a large open bay which is the area that the Ferry Point Golf Course is now located. Northeast of the bay and well inlandwas the Baxter Creek that drained into the bay. The eastern landfall of this embayment area is a larger peninsula that contains roadways and a residential development. The road patterns do not resemble the roadways that currently exist in that area and appear to have been changed.

A 1938 aerial photo showing the construction of the Whitestone Bridge shows the Bay, mooring, residential area and land to the west to be virtually the same as shown in the 1900 map. The significant change is in the widening of the western peninsula where the expressway was being constructed leading to the bridge ramps. The widening was not significant at this time but a rectangular area in the extreme northwest corner of what is now the site appears to be filled and graded – possibly to support construction staging area for the bridge/expressway. Areas of filling can be readily identified in the photograph by the contrasting lighter color typically indicative of sandy dredge sand placement. Other areas along the shoreline can be seen as containing a lighter colored band of fill material and this includes much of the new Ferry Point Park located west of the Whitestone Bridge. Much of the park area was filled and graded by 1938. Bulkheads were constructed with linear components to present a smooth shoreline but one that does not appear to contain a beach where water diminishes in depth to 0. Photos of the eastern area of the bay where mooring and docks can be seen showing large vessels moored against the shore. This would indicate the water had significant depth all of the way to the center of the bay.

Aerial photographs from the 1950s show a drastic change in the area currently referred to as the site. Large expansion of the filling that was evident in 1938-39 up in the northeast corner can be clearly seen. The filling extends well into the bay and it appears that a connective bridge was constructed from the eastern shore to the fill area. It is difficult to discern if this is a usable structure for crossing or if it had some other purpose. The filling operation appears from the photo to consist of the same light-colored material that was placed in the Ferry Point Park and from photos showing a large number of barges in the water filled with material of the same light color. There is specific documentation that presents the specific origin and consistency of the

[1] Reference: "Ferry Point Park Golf Course & Community Park, Bronx New York, Final Construction Certification Report, NYSDEC Permit #2-6006-00014 / 00013 (SW)" prepared by the City of New York Department of Parks and Recreation dated October 19, 2015

material. but from the prior aerials showing filling and this large expansion, it appears to be of a similar origin which would be dredge sand. In the 1951 aerial, no specific municipal solid waste dumping and disposal can be seen; however, records indicate the landfill operated during this approximate time period. It is therefore assumed that municipal solid waste was disposed shortly after the photo was taken. The landfilling shown in the aerial may have been the initial construction of the upper portion of the landfill with the tidal gate or bridge closing in the upper bay area. Additional aerials of the landfilling were not identified and more recent aerials document the completion of filling as well as the more recent golf course construction.

What can be discerned from this compilation of photos is that the landfill could be located in an area that may have been open water as well as some area that was previously reclaimed land with dredge material.

The Site operated as a landfill from before 1951 to the 1960s. The landfill reportedly accepted municipal solid waste during its operating period and was closed and covered in the mid-1960s, with additional closure operations conducted more recently in the 1980s. Prior Site use was determined from historic aerial photographs from 1938 thru 1991. The aerial photographs span the entire operational period of the prior landfill, from its initial operations to the present, and provides substantial information about the Site's development.

The original project scope included the construction of three main elements including a golf course, a community park, and a waterfront park over the 222-acre Site as follows:

- An 18-hole golf course with practice facility, driving range, clubhouse, maintenance facility, irrigation lake, stormwater retention ponds, and a parking lot (192.5 acres);
- A passive recreation waterfront park with walkways and a comfort station (19.5 acres); and
- A community park with baseball fields, basketball court, walkways, comfort station, and landscaped stormwater retention area (10 acres)

Construction of a permanent clubhouse in the southern corner of the site began in July 2017, with a projected completion date of June 2018.

UNDERSLAB PLAN

SCALE: 1/8" = 1'-0"

NOTES :

1. DRAWINGS NOT TO BE USED FOR STRUCTURAL, ARCHITECTURAL OR OTHER REFERENCE EXCEPT FOR SUB-SLAB DEPRESSURIZATION SYSTEM.
2. THE EXTENTS OF BUILDING CONSTRUCTION BENEATH THE FLOOR SLABS SHALL BE LINED WITH GAS VAPOR BARRIER. AS PART OF BUILDING CONSTRUCTION, THE GAS VAPOR BARRIER SHALL ALSO BE APPLIED VERTICALLY TO BELOW GRADE WALLS AND WALLS OF PITS AND SUMPS AS SHOWN AND SPECIFIED.
3. SLOPE HORIZONTAL PIPE UNIFORMLY A MINIMUM OF 1% TOWARD SUB-SLAB DEPRESSION SYSTEM PITS OR TO CONDENSATE DRAINS WHEN PIPING CANNOT BE SLOPED TO PIT.
4. SECURE VERTICAL RISER TO WALL IN ACCORDANCE WITH ARCHITECTURAL AND PLUMBING REQUIREMENTS.
5. ELECTRICAL WIRING AND EQUIPMENT NOT SHOWN. REFER TO ELECTRICAL DRAWINGS AND SPECIFICATIONS FOR REFERENCES.
6. SEAL ALL JOINTS IN SLAB ON GRADE, INCLUDING BUT NOT LIMITED TO, CONTROL JOINTS, EXPANSION JOINTS, CRACKS, WALL JOINTS, PENETRATIONS ETC. WITH NON-CRACKING CAULK. POLYURETHANE TYPE PREFERRED.
7. COORDINATE GAS VENTING SYSTEM WITH ALL TRADES, INCLUDE VENTING SYSTEM PIPING ON COORDINATION DRAWINGS.
8. ALL GAS VENTS SHALL BE CONTINUOUS FROM UNDERSLAB STONE BASE TO 36" ABOVE ROOF LINE OR PARAPET (WHICHEVER IS HIGHER). ALL VENTS SHALL BE 10'-0" MIN FROM LOT LINES, OUTSIDE AIR INTAKES, WINDOWS, ETC.
9. DRAWING ILLUSTRATES WALLS AND ALL SLAB ON GRADE FLOOR AREAS. COORDINATE THIS WORK WITH ARCHITECTURAL, MECHANICAL, AND STRUCTURAL PLANS.
10. ALL GAS VENT PIPING SHALL BE PVC PIPING. WHERE PIPING IS LOCATED IN RETURN AIR PLENUMS CHANGE MATERIAL TO NO-HUB CAST IRON PIPE.
11. LABEL GAS PIPING AT INTERVALS OF NOT MORE THAN 25 FT IN CONCEALED LOCATIONS AND NOT MORE THAN 50 FT ON EXPOSED AND NOT LESS THAN ONCE IN ANY ROOM OR SPACE.
12. GAS VAPOR BARRIER TO BE INSTALLED IMMEDIATELY BELOW FLOOR SLAB AS INDICATED ON THE STRUCTURAL DRAWINGS. PROVIDE 12" MINIMUM CLEAN #57 STONE SUB-BASE FOR GAS MITIGATION SYSTEM.
13. SLOPE HORIZONTAL PIPE A MINIMUM OF 1% UNIFORMLY TOWARD SUCTION PITS.
14. REFER TO SPECIFICATION FOR ADDITIONAL SUB-SLAB DEPRESSURIZATION SYSTEM AND ACCESSORIES REQUIREMENTS.

LEGEND

- EXTENT OF GAS PERMEABLE AGGREGATE LAYER BENEATH FLOOR SLAB
- 4" SCHEDULE 80 PVC PIPE
- SFV-1 — SUCTION FAN VERTICAL 4" RISER AND IDENTIFICATION NUMBER. EXTEND THRU ATTIC TO SUCTION FAN
- MP-1 — SUB-SLAB MONITORING POINT AND IDENTIFICATION NUMBER
- DP-1A — SUB-SLAB DEPRESURAIZATION PIT AND IDENTIFICATION NUMBER

PROVIDE LIQUID BOOT GAS VAPOR BARRIER SYSTEM UNDER SLAB AS MANUFACTURED BY CETCO CONSISTING OF ULTRASHIELD G-1000, 60 DRY MILS LIQUID BOOT AND LIQUID BOOT BASE FABRIC. SYSTEM SHALL INSTALLED BY AUTHORIZED INSTALLER. REFER TO DETAILS FOR ADDITIONAL INFORMATION. REFER TO CONTRACT DOCUMENTS FOR LOCATIONS OF PENETRATIONS THROUGH THE SLAB.

OFFSET VENT ABOVE CEILING AT ROOF AND EXTEND THROUGH ROOF APPROXIMATELY 3' FROM PARAPET WALLS AND TERMINATE 24" ABOVE FINISHED ROOF.

VAPOR REMEDIATION GENERAL NOTES

A. SCOPE

1. ALL CONSTRUCTION SHALL COMPLY WITH THE NYSDEC APPROVED POST CONSTRUCTION CUSTODIAL CARE PLAN DATED OCTOBER 2013, PREPARED BY NYC DPR, INCLUDING THE APPROPRIATE HANDLING OF COVER, SOIL, SHAPING LAYER MATERIAL, DEMARCATION LAYER MATERIALS, AND MSW, AND INSPECTION AND CONSTRUCTION CERTIFICATION REQUIREMENTS.
2. THE GAS MITIGATION SYSTEM IS TO BE INSTALLED BY A LICENSED GAS MITIGATION CONTRACTOR IN THE STATE OF NEW YORK. CONTRACTOR TO SUBMIT DESIGN SHOP DRAWINGS FOR REVIEW PRIOR TO CONSTRUCTION.
3. THE REQUIREMENTS ADDRESSED IN THE GAS MITIGATION SYSTEM (GMS) INCLUDE THE FOLLOWING CATEGORIES OF CONTRACTOR ACTIVITY: GENERAL PRACTICES, WORKER HEALTH AND SAFETY, SYSTEMS INSTALLATION, MATERIALS, MONITORS AND LABELING, POST-MITIGATION TESTING, AND CONTRACTS AND DOCUMENTATION.

B. IMPLEMENTATION

1. THE GMS INCLUDES REQUIREMENTS FOR INSTALLATION OF GAS REMEDIATION SYSTEMS AND PROVIDES A BASIS FOR EVALUATING THE QUALITY OF THOSE INSTALLATIONS. IT MAY BE ADOPTED BY STATE REGULATORY AGENCIES FOR STATE OR LOCAL GAS MITIGATION CONTRACTOR LICENSURE PROGRAMS. IT MAY ALSO BE USED AS A REFERENCE DURING INSPECTION OF IN-PROGRESS OR COMPLETED GAS MITIGATION WORK.
2. CONTRACTORS SHALL PERSONALLY CONDUCT FOLLOW-UP INSPECTION OF ANY GAS MITIGATION SYSTEMS INSTALLED BY THEIR FIRM OR BY SUBCONTRACTORS TO INSURE CONFORMANCE WITH THE REQUIREMENTS OF THE GMS. THIS REQUIREMENT SHALL INCLUDE THE POST-MITIGATION TESTING PRESCRIBED IN THIS SPECIFICATION.
3. THOSE PROVISIONS OF THE GMS THAT ARE CONSIDERED TO BE MANDATORY ARE PREFACED BY THE TERM "SHALL." PROVISIONS THAT ARE CONSIDERED GOOD PRACTICE BUT WHICH ARE NOT MANDATORY ARE PREFACED BY THE TEGMS "SHOULD" OR "RECOMMENDED."

C. LIMITATIONS

1. ALTHOUGH THE PROVISIONS OF THE GMS HAVE BEEN CAREFULLY REVIEWED FOR POTENTIAL CONFLICTS WITH OTHER REGULATORY REQUIREMENTS, ADHERENCE TO THE GMS DOES NOT GUARANTEE COMPLIANCE WITH THE APPLICABLE CODES OR REGULATIONS OF ANY OTHER FEDERAL, STATE, OR LOCAL AGENCY HAVING JURISDICTION.
2. WHERE DISCREPANCIES EXIST BETWEEN PROVISIONS OF THE GMS AND LOCAL CODES OR REGULATIONS, LOCAL CODES SHALL TAKE PRECEDENCE. HOWEVER, WHERE COMPLIANCE WITH LOCAL CODES NECESSITATES A DEVIATION FROM THE GMS, EPA RECOMMENDS THAT RPP LISTED MITIGATION SERVICE PROVIDERS (MITIGATION CONTRACTORS) REPORT THE DEVIATION IN WRITING TO THE APPROPRIATE EPA REGIONAL OFFICE AND THE APPROPRIATE STATE REGULATORY OFFICIAL WITHIN 30 DAYS. IT SHOULD BE NOTED THAT EPA IS NOT REQUIRING THE REPORTING THAT IS RECOMMENDED IN THIS PARAGRAPH. STATES WITH GAS MITIGATION CONTRACTOR CERTIFICATION PROGRAMS MAY REQUIRE THAT CONTRACTORS GIVE PRIOR NOTIFICATION OF THEIR INTENT TO DEVIATE FROM THE GMS FOR RESEARCH OR OTHER PURPOSES.
3. THE GMS IS NOT INTENDED TO BE USED AS A DESIGN MANUAL, AND COMPLIANCE WITH ITS PROVISIONS WILL NOT GUARANTEE REDUCTION OF INDOOR GAS CONCENTRATIONS TO ANY SPECIFIC LEVEL.
4. BECAUSE OF THE WIDE VARIATION IN BUILDING DESIGN, SIZE, OPERATION AND USE, THE GMS DOES NOT INCLUDE DETAILED GUIDANCE ON HOW TO SELECT THE MOST APPROPRIATE MITIGATION STRATEGY FOR A GIVEN BUILDING. THAT GUIDANCE IS PROVIDED IN THE DOCUMENTS REFERENCED IN IN THIS SPECIFICATION.
5. CONTRACTORS WHO EXPECT TO DEVIATE FROM PROVEN GAS MITIGATION TECHNOLOGIES AND METHODS FOR PURPOSES OF RESEARCH ON INNOVATIVE MITIGATION TECHNIQUES, SHALL OBTAIN PRIOR APPROVAL FROM STATE REGULATORY OFFICES, DOCUMENT THE NON-STANDARD TECHNIQUES, AND INFORM THE CLIENT OF THE DEVIATION FROM STANDARD PROCEDURES. IN CASES WHERE GAS MITIGATION IS NOT REGULATED BY THE STATE, CONTRACTORS SHALL OBTAIN PRIOR APPROVAL FROM A REGIONAL EPA OFFICE.

D. WORKER HEALTH AND SAFETY

1. CONTRACTORS SHALL COMPLY WITH ALL OSHA, STATE AND LOCAL STANDARDS OR REGULATIONS RELATING TO WORKER SAFETY AND OCCUPATIONAL GAS EXPOSURE. APPLICABLE REFERENCES IN THE CODE OF FEDERAL REGULATIONS AND NIOSH PUBLICATIONS.
2. IN ADDITION TO THE OSHA AND NIOSH STANDARDS, THE FOLLOWING REQUIREMENTS THAT ARE SPECIFICALLY OR UNIQUELY APPLICABLE FOR THE SAFETY AND PROTECTION OF GAS MITIGATION WORKERS SHALL BE MET:
   a. THE CONTRACTOR SHALL ADVISE WORKERS OF THE HAZARDS OF EXPOSURE TO GAS AND THE NEED TO APPLY PROTECTIVE MEASURES WHEN WORKING IN AREAS OF ELEVATED GAS CONCENTRATIONS.
   b. THE CONTRACTOR SHALL HAVE A WORKER PROTECTION PLAN ON FILE THAT IS AVAILABLE TO ALL EMPLOYEES AND IS APPROVED BY ANY STATE OR LOCAL REGULATING AGENCIES THAT REQUIRE SUCH A PLAN. EXCEPTION: A WORKER PROTECTION PLAN IS NOT REQUIRED FOR A CONTRACTOR WHO IS A SOLE PROPRIETOR UNLESS REQUIRED BY STATE OR LOCAL REGULATIONS.
   c. THE CONTRACTOR SHALL ENSURE THAT APPROPRIATE SAFETY EQUIPMENT SUCH AS HARD HATS, FACE SHIELDS, EAR PLUGS, STEEL-TOE BOOTS AND PROTECTIVE GLOVES ARE AVAILABLE ON THE JOB SITE DURING CUTTING, DRILLING, GRINDING, POLISHING, DEMOLISHING OR OTHER ACTIVITY ASSOCIATED WITH GAS MITIGATION PROJECTS.
   d. ALL ELECTRICAL EQUIPMENT USED DURING GAS MITIGATION PROJECTS SHALL BE PROPERLY GROUNDED. CIRCUITS USED AS A POWER SOURCE SHOULD BE PROTECTED BY GROUND-FAULT CIRCUIT INTERRUPTERS (GFCI).
   e. WHEN WORK IS REQUIRED AT ELEVATIONS ABOVE THE GROUND OR FLOOR, THE CONTRACTOR SHALL ENSURE THAT LADDERS OR SCAFFOLDING ARE SAFELY INSTALLED AND OPERATED.
   f. WORK AREAS SHALL BE VENTILATED TO REDUCE WORKER EXPOSURE TO GAS DECAY PRODUCTS, DUST, OR OTHER AIRBORNE POLLUTANTS. IN WORK AREAS WHERE VENTILATION IS IMPRACTICAL OR WHERE VENTILATION CANNOT REDUCE GAS LEVELS TO LESS THAN 0.3 WL (BASED ON A SHORT TERM DIAGNOSTIC TEST, E.G., GRAB SAMPLE), THE CONTRACTOR SHALL ENSURE THAT RESPIRATORY PROTECTION CONFOGMS WITH THE REQUIREMENTS IN THE NIOSH GUIDE TO INDUSTRIAL RESPIRATORY PROTECTION. ((NOTE: IF UNABLE TO MAKE WORKING LEVEL MEASUREMENTS, A GAS LEVEL OF 30 PCI/L SHALL BE USED.)
   g. WHERE COMBUSTIBLE MATERIALS EXIST IN THE SPECIFIC AREA OF THE BUILDING WHERE GAS MITIGATION WORK IS TO BE CONDUCTED AND THE CONTRACTOR IS CREATING ANY TEMPERATURES HIGH ENOUGH TO INDUCE A FLAME, THE CONTRACTOR SHALL ENSURE THAT FIRE EXTINGUISHERS SUITABLE FOR TYPE A, B, AND C FIRES ARE AVAILABLE IN THE IMMEDIATE WORK AREA.
   h. PENDING DEVELOPMENT OF AN APPROVED PERSONAL GAS EXPOSURE DEVICE AND A PROTOCOL FOR ITS USE, CONTRACTORS SHALL RECORD EMPLOYEE EXPOSURE TO GAS AT EACH WORK SITE, BASED ON:
      1) THE HIGHEST PRE-MITIGATION INDOOR GAS OR WORKING LEVEL MEASUREMENT AVAILABLE, AND
      2) THE TIME EMPLOYEES ARE EXPOSED (WITHOUT RESPIRATOR PROTECTION) AT THAT LEVEL

      (NOTE: THIS APPROACH IS NOT INTENDED TO PRECLUDE THE ALTERNATIVE USE OF ON-SITE GAS OR GAS DECAY PRODUCT MEASUREMENTS TO DETERMINE EXACT EXPOSURE.) CONSISTENT WITH OSHA PERMISSIBLE EXPOSURE LIMITS, CONTRACTORS SHALL ENSURE THAT EMPLOYEES ARE EXPOSED TO NO MORE THAN 4 WORKING LEVEL MONTHS (WLM) OVER A 12 MONTH PERIOD. (AN EQUILIBRIUM RATIO OF 50 PERCENT SHALL BE USED TO CONVERT GAS EXPOSURE TO WLM.)
   i. WHEN MITIGATION WORK REQUIRES THE USE OF SEALANTS, ADHESIVES, PAINTS, OR OTHER SUBSTANCES THAT MAY BE HAZARDOUS TO HEALTH, CONTRACTORS SHALL PROVIDE EMPLOYEES WITH THE APPLICABLE MATERIAL SAFETY DATA SHEETS (MSDS) AND EXPLAIN THE REQUIRED SAFETY PROCEDURES.

E. SYSTEMS REQUIREMENT

1. ALL GAS MITIGATION SYSTEMS SHALL BE INSTALLED AS PERMANENT, INTEGRAL ADDITIONS TO THE BUILDING, EXCEPT WHERE A TEMPORARY SYSTEM HAS BEEN INSTALLED.
2. ALL GAS MITIGATION SYSTEMS SHALL BE INSTALLED TO AVOID THE CREATION OF OTHER HEALTH, SAFETY, OR ENVIRONMENTAL HAZARDS TO BUILDING OCCUPANTS, SUCH AS BACKDRAFTING OF NATURAL DRAFT COMBUSTION APPLIANCES.
3. ALL GAS MITIGATION SYSTEMS SHALL MAXIMIZE GAS REDUCTION AND IN CONSIDERATION OF THE NEED TO MINIMIZE EXCESS ENERGY USAGE, TO AVOID COMPROMISING MOISTURE AND TEMPERATURE CONTROLS AND OTHER COMFORT FEATURES, AND TO MINIMIZE NOISE.
4. ALL GAS MITIGATION SYSTEMS AND THEIR COMPONENTS SHALL COMPLY WITH THE LAWS, ORDINANCES, CODES, AND REGULATIONS OF RELEVANT JURISDICTIONAL AUTHORITIES, INCLUDING APPLICABLE MECHANICAL, ELECTRICAL, BUILDING, PLUMBING, ENERGY, AND FIRE PREVENTION CODES.

F. SYSTEMS INSTALLATION

1. GENERAL REQUIREMENTS
   a. ALL COMPONENTS OF GAS MITIGATION SYSTEMS INSTALLED IN COMPLIANCE WITH PROVISIONS OF THE GMS SHALL ALSO BE IN COMPLIANCE WITH THE APPLICABLE MECHANICAL, ELECTRICAL, BUILDING, PLUMBING, ENERGY AND FIRE PREVENTION CODES, STANDARDS, AND REGULATIONS OF THE LOCAL JURISDICTION.
   b. THE CONTRACTOR SHALL OBTAIN ALL REQUIRED LICENSES AND PERMITS, AND DISPLAY THEM IN THE WORK AREAS AS REQUIRED BY LOCAL ORDINANCES.
   c. WHERE PORTIONS OF STRUCTURAL FRAMING MATERIAL MUST BE REMOVED TO ACCOMMODATE GAS VENT PIPES, MATERIAL REMOVED SHALL BE NO GREATER THAN THAT PERMITTED FOR PLUMBING INSTALLATIONS BY APPLICABLE BUILDING OR PLUMBING CODES.
   d. WHERE INSTALLATION OF A GAS MITIGATION SYSTEM REQUIRES PIPES OR DUCTS TO PENETRATE A FIREWALL OR OTHER FIRE RESISTANCE RATED WALL OR FLOOR, PENETRATIONS SHALL BE PROTECTED IN ACCORDANCE WITH APPLICABLE BUILDING, MECHANICAL, FIRE, AND ELECTRICAL CODES.
2. GAS VENT PIPE INSTALLATION REQUIREMENTS
   a. ALL JOINTS AND CONNECTIONS IN GAS MITIGATION SYSTEMS USING PLASTIC VENT PIPES SHALL BE PERMANENTLY SEALED WITH ADHESIVES AS SPECIFIED BY THE MANUFACTURER OF THE PIPE MATERIAL USED. JOINTS OR CONNECTIONS IN OTHER VENT PIPE MATERIALS SHALL BE MADE AIR TIGHT.
   b. ATTIC AND EXTERNAL PIPING RUNS IN AREAS SUBJECT TO SUBFREEZING CONDITIONS SHOULD BE PROTECTED TO AVOID THE RISK OF VENT PIPE FREEZE-UP.
   c. GAS VENT PIPES SHALL BE FASTENED TO THE STRUCTURE OF THE BUILDING WITH HANGERS, STRAPPING, OR OTHER SUPPORTS THAT WILL ADEQUATELY SECURE THE VENT MATERIAL. EXISTING PLUMBING PIPES, DUCTS, OR MECHANICAL EQUIPMENT SHALL NOT BE USED TO SUPPORT OR SECURE A GAS VENT PIPE.
   d. SUPPORTS FOR GAS VENT PIPES SHALL BE INSTALLED AT LEAST EVERY 6 FEET ON HORIZONTAL RUNS. VERTICAL RUNS SHALL BE SECURED EITHER ABOVE OR BELOW THE POINTS OF PENETRATION THRU FLOORS, CEILINGS, AND ROOFS, OR AT LEAST EVERY 8 FEET ON RUNS THAT DO NOT PENETRATE FLOORS, CEILINGS, OR ROOFS.
   e. TO PREVENT BLOCKAGE OF AIR FLOW INTO THE BOTTOM OF GAS VENT PIPES, THESE PIPES SHALL BE SUPPORTED OR SECURED IN A PERMANENT MANNER THAT PREVENTS THEIR DOWNWARD MOVEMENT TO THE BOTTOM OF SUCTION PITS OR SUMP PITS, OR INTO THE SOIL BENEATH AN AGGREGATE LAYER UNDER A SLAB.
   f. GAS VENT PIPES SHALL BE INSTALLED IN A CONFIGURATION THAT ENSURES THAT ANY RAIN WATER OR CONDENSATION WITHIN THE PIPES DRAINS DOWNWARD INTO THE GROUND BENEATH THE SLAB OR SOIL-GAS RETARDER MEMBRANE.
   g. GAS VENT PIPES SHALL NOT BLOCK ACCESS TO ANY AREAS REQUIRING MAINTENANCE OR INSPECTION. GAS VENTS SHALL NOT BE INSTALLED IN FRONT OF OR INTERFERE WITH ANY LIGHT, OPENING, DOOR, WINDOW OR EQUIPMENT ACCESS AREA REQUIRED BY CODE. IF GAS VENT PIPES ARE INSTALLED IN SUMP PITS, THE SYSTEM SHALL BE DESIGNED WITH REMOVABLE OR FLEXIBLE COUPLINGS TO FACILITATE REMOVAL OF THE SUMP PIT COVER FOR SUMP PUMP MAINTENANCE.
3. GAS VENT FAN INSTALLATION REQUIREMENTS
   a. VENT FANS USED IN GAS MITIGATION SYSTEMS SHALL BE SEALED TO REDUCE THE POTENTIAL FOR LEAKAGE OF SOIL GAS FROM THE FAN HOUSING.
   b. GAS VENT FANS SHALL BE SIZED TO PROVIDE THE PRESSURE DIFFERENCE AND AIR FLOW CHARACTERISTICS NECESSARY TO ACHIEVE THE GAS REDUCTION GOALS ESTABLISHED FOR THE SPECIFIC MITIGATION PROJECT
   c. GAS VENT FANS USED IN ACTIVE SOIL DEPRESSURIZATION OR BLOCK WALL DEPRESSURIZATION SYSTEMS SHALL NOT BE INSTALLED BELOW GROUND NOR IN THE CONDITIONED (HEATED/COOLED) SPACE OF A BUILDING, NOR IN ANY BASEMENT, CRAWLSPACE, OR OTHER INTERIOR LOCATION DIRECTLY BENEATH THE CONDITIONED SPACES OF A BUILDING. ACCEPTABLE LOCATIONS FOR GAS VENT FANS INCLUDE ATTICS NOT SUITABLE FOR OCCUPANCY (INCLUDING ATTICS OVER OCCUPIED) OR ON THE EXTERIOR OF THE BUILDING.
   d. GAS VENT FANS SHALL BE INSTALLED IN A CONFIGURATION THAT AVOIDS CONDENSATION BUILDUP IN THE FAN HOUSING. WHENEVER POSSIBLE, FANS SHOULD BE INSTALLED IN VERTICAL RUNS OF THE VENT PIPE.
   e. GAS VENT FANS MOUNTED ON THE EXTERIOR OF BUILDINGS SHALL BE RATED FOR OUTDOOR USE OR INSTALLED IN A WATER TIGHT PROTECTIVE HOUSING.
   f. GAS VENT FANS SHALL BE MOUNTED AND SECURED IN A MANNER THAT MINIMIZES TRANSFER OF VIBRATION TO THE STRUCTURAL FRAMING OF THE BUILDING.
   g. TO FACILITATE MAINTENANCE AND FUTURE REPLACEMENT, GAS VENT FANS SHALL BE INSTALLED IN THE VENT PIPE USING REMOVABLE COUPLINGS OR FLEXIBLE CONNECTIONS THAT CAN BE TIGHTLY SECURED TO BOTH THE FAN AND THE VENT PIPE.
5. SEALING REQUIREMENTS
   a. SUMP PITS THAT PERMIT ENTRY OF SOIL-GAS OR THAT WOULD ALLOW CONDITIONED AIR TO BE DRAWN INTO A SUB-SLAB DEPRESSURIZATION SYSTEM SHALL BE COVERED AND SEALED. THE COVERS ON SUMPS THAT PREVIOUSLY PROVIDED PROTECTION OR RELIEF FROM SURFACE WATER COLLECTION SHALL BE FITTED WITH A WATER OR MECHANICALLY TRAPPED DRAIN. WATER TRAPS SHOULD BE FITTED WITH AN AUTOMATIC SUPPLY OF PRIMING WATER.
   b. OPENINGS AROUND GAS VENT PIPE PENETRATIONS OF THE SLAB, THE FOUNDATION WALLS, OR THE CRAWLSPACE SOIL-GAS RETARDER MEMBRANE SHALL BE CLEANED, PREPARED, AND SEALED IN A PERMANENT, AIR-TIGHT MANNER USING COMPATIBLE CAULKS OR OTHER SEALANT MATERIALS. OPENINGS AROUND OTHER UTILITY PENETRATIONS OF THE SLAB, WALLS, OR SOIL-GAS RETARDER SHALL ALSO BE SEALED.
   c. OPENINGS, PERIMETER CHANNEL DRAINS, OR CRACKS THAT EXIST WHERE THE SLAB MEETS THE FOUNDATION WALL (FLOOR-WALL JOINT), SHALL BE SEALED WITH URETHANE CAULK OR EQUIVALENT MATERIAL. WHEN THE OPENING OR CHANNEL IS GREATER THAN 1/2 INCH IN WIDTH, A FOAM BACKER ROD OR OTHER COMPARABLE FILLER MATERIAL SHALL BE INSERTED IN THE CHANNEL BEFORE APPLICATION OF THE SEALANT. THIS SEALING TECHNIQUE SHALL BE DONE IN A MANNER THAT RETAINS THE CHANNEL FEATURE AS A WATER CONTROL SYSTEM. OTHER OPENINGS OR CRACKS IN SLABS OR AT EXPANSION OR CONTROL JOINTS SHOULD ALSO BE SEALED. OPENINGS OR CRACKS THAT ARE DETERMINED TO BE INACCESSIBLE OR BEYOND THE ABILITY OF THE CONTRACTOR TO SEAL SHALL BE DISCLOSED TO THE CLIENT AND INCLUDED IN THE DOCUMENTATION.
   d. WHEN INSTALLING BASEBOARD-TYPE SUCTION SYSTEMS, ALL SEAMS AND JOINTS IN THE BASEBOARD MATERIAL SHALL BE JOINED AND SEALED USING MATERIALS RECOMMENDED BY THE MANUFACTURER OF THE BASEBOARD SYSTEM. BASEBOARDS SHALL BE SECURED TO WALLS AND FLOORS WITH ADHESIVES DESIGNED AND RECOMMENDED FOR SUCH INSTALLATIONS. IF A BASEBOARD SYSTEM IS INSTALLED ON A BLOCK WALL FOUNDATION, THE TOPS OF THE BLOCKWALL SHALL BE CLOSED AND SEALED.

G. ELECTRICAL REQUIREMENTS

1. WIRING FOR ALL ACTIVE GAS MITIGATION SYSTEMS SHALL CONFORM TO PROVISIONS OF THE NATIONAL ELECTRIC CODE AND ANY ADDITIONAL LOCAL REGULATIONS.
2. WIRING MAY NOT BE LOCATED IN OR CHASED THRU THE MITIGATION INSTALLATION DUCTING OR ANY OTHER HEATING OR COOLING DUCTWORK.
3. GAS MITIGATION FANS INSTALLED ON THE EXTERIOR OF BUILDINGS SHALL BE HARD-WIRED INTO AN ELECTRICAL CIRCUIT. PLUGGED FANS SHALL NOT BE USED OUTDOORS.
4. IF THE RATED ELECTRICITY REQUIREMENTS OF A GAS MITIGATION SYSTEM FAN EXCEEDS 50 PERCENT OF THE CIRCUIT CAPACITY INTO WHICH IT WILL BE CONNECTED, OR IF THE TOTAL CONNECTED LOAD ON THE CIRCUIT (INCLUDING THE GAS VENT FAN) EXCEEDS 80 PERCENT OF THE CIRCUIT'S RATED CAPACITY, A SEPARATE, DEDICATED CIRCUIT SHALL BE INSTALLED TO POWER THE FAN.
5. AN ELECTRICAL DISCONNECT SWITCH OR CIRCUIT BREAKER SHALL BE INSTALLED IN GAS MITIGATION SYSTEM FAN CIRCUITS TO PERMIT DEACTIVATION OF THE FAN FOR MAINTENANCE OR REPAIR BY THE BUILDING OWNER OR SERVICING CONTRACTOR (DISCONNECT SWITCHES ARE NOT REQUIRED WITH PLUGGED FANS).

H. MATERIALS

1. ALL MITIGATION SYSTEM ELECTRICAL COMPONENTS SHALL BE U.L. LISTED OR OF EQUIVALENT SPECIFICATIONS.
2. AS A MINIMUM, ALL PLASTIC VENT PIPES IN MITIGATION SYSTEMS SHALL BE MADE OF SCHEDULE 80 PVC OR EQUIVALENT PIPING MATERIAL.
3. VENT PIPE FITTINGS IN A MITIGATION SYSTEM SHALL BE OF THE SAME MATERIAL AS THE VENT PIPES.
4. CLEANING SOLVENTS AND ADHESIVES USED TO JOIN PLASTIC PIPES AND FITTINGS SHALL BE AS RECOMMENDED BY MANUFACTURERS FOR USE WITH THE TYPE OF PIPE MATERIAL USED IN THE MITIGATION SYSTEM.
5. WHEN SEALING CRACKS IN SLABS AND OTHER SMALL OPENINGS AROUND PENETRATIONS OF THE SLAB AND FOUNDATION WALLS, CAULKS AND SEALANTS DESIGNED FOR SUCH APPLICATION SHALL BE USED. URETHANE SEALANTS ARE RECOMMENDED BECAUSE OF THEIR DURABILITY.
6. WHEN SEALING HOLES FOR PLUMBING ROUGH-IN OR OTHER LARGE OPENINGS IN SLABS AND FOUNDATION WALLS THAT ARE BELOW THE GROUND SURFACE, NON-SHRINK MORTAR, GROUTS, EXPANDING FOAM, OR SIMILAR MATERIALS DESIGNED FOR SUCH APPLICATION SHALL BE USED.

I. MONITORS AND LABELING

1. ALL ACTIVE SOIL DEPRESSURIZATION AND BLOCK WALL DEPRESSURIZATION GAS MITIGATION SYSTEMS SHALL INCLUDE A MECHANISM TO MONITOR SYSTEM PERFORMANCE AND WARN OF SYSTEM FAILURE. THE MECHANISM SHALL BE SIMPLE TO READ OR INTERPRET AND BE LOCATED WHERE IT IS EASILY SEEN OR HEARD BY BUILDING OCCUPANTS AND PROTECTED FROM DAMAGE OR DESTRUCTION.
2. ELECTRICAL GAS MITIGATION SYSTEM MONITORS (WHETHER VISUAL OR AUDIBLE) SHALL BE INSTALLED ON NON-SWITCHED CIRCUITS AND BE DESIGNED TO RESET AUTOMATICALLY WHEN POWER IS RESTORED AFTER SERVICE OR POWER SUPPLY FAILURE. BATTERY OPERATED MONITORING DEVICES SHALL NOT BE USED UNLESS THEY ARE EQUIPPED WITH A LOW POWER WARNING FEATURE.
3. MECHANICAL GAS MITIGATION SYSTEM MONITORS, SUCH AS MANOMETER TYPE PRESSURE GAUGES, SHALL BE CLEARLY MARKED TO INDICATE THE RANGE OR ZONE OF PRESSURE READINGS THAT EXISTED WHEN THE SYSTEM WAS INITIALLY ACTIVATED.
4. A SYSTEM DESCRIPTION LABEL SHALL BE PLACED ON THE MITIGATION SYSTEM, THE ELECTRIC SERVICE ENTRANCE PANEL, OR OTHER PROMINENT LOCATION. THIS LABEL SHALL BE LEGIBLE FROM A DISTANCE OF AT LEAST THREE FEET AND INCLUDE THE FOLLOWING INFORMATION: "GAS REDUCTION SYSTEM," THE INSTALLER'S NAME, PHONE NUMBER, AND RCP IDENTIFICATION NUMBER, THE DATE OF INSTALLATION, AND AN ADVISORY THAT THE BUILDING SHOULD BE TESTED FOR GAS AT LEAST EVERY TWO YEARS OR AS REQUIRED OR RECOMMENDED BY STATE OR LOCAL AGENCIES. IN ADDITION, ALL EXPOSED AND VISIBLE INTERIOR GAS MITIGATION SYSTEM VENT PIPE SECTIONS SHALL BE IDENTIFIED WITH AT LEAST ONE LABEL ON EACH FLOOR LEVEL. THE LABEL SHALL READ, "GAS REDUCTION SYSTEM."
5. THE CIRCUIT BREAKERS CONTROLLING THE CIRCUITS ON WHICH THE GAS VENT FAN AND SYSTEM FAILURE WARNING DEVICES OPERATE SHALL BE LABELED "GAS SYSTEM."

J. POST-MITIGATION TESTING

1. AFTER INSTALLATION OF AN ACTIVE GAS CONTROL SYSTEM (E.G., SSD), THE CONTRACTOR SHALL RE-EXAMINE AND VERIFY THE INTEGRITY OF THE FAN MOUNTING SEALS AND ALL JOINTS IN THE INTERIOR VENT PIPING.
2. AFTER INSTALLATION OF ANY ACTIVE GAS MITIGATION SYSTEM, THE CONTRACTOR SHALL PERFORM TESTS. SEE SPECIFICATION SECTION 072727 'SUBSLAB DEPRESSURIZATION SYSTEM' FOR ADDITIONAL INFORMATION.
3. IMMEDIATELY AFTER INSTALLATION AND ACTIVATION OF ANY ACTIVE (FAN-POWERED) SUB-SLAB DEPRESSURIZATION OR BLOCK WALL DEPRESSURIZATION SYSTEM IN BUILDINGS CONTAINING NATURAL DRAFT COMBUSTION APPLIANCES, THE BUILDING SHALL BE TESTED FOR BACKDRAFTING OF THOSE APPLIANCES. ANY BACKDRAFTING CONDITION THAT RESULTS FROM INSTALLATION OF THE GAS MITIGATION SYSTEM SHALL BE CORRECTED BEFORE THE SYSTEM IS PLACED IN OPERATION.
4. UPON COMPLETION OF GAS MITIGATION WORK, A TEST OF MITIGATION SYSTEM EFFECTIVENESS SHALL BE CONDUCTED. SEE SPECIFICATION SECTION 072726 'GAS VAPOR BARRIER (FLUID APPLIED) FOR ADDITIONAL INFORMATION.
5. TO ENSURE CONTINUED EFFECTIVENESS OF THE GAS MITIGATION SYSTEM(S) INSTALLED, THE CONTRACTOR SHALL ADVISE THE CLIENT TO RETEST THE BUILDING AT LEAST EVERY TWO YEARS OR AS REQUIRED OR RECOMMENDED BY STATE OR LOCAL AUTHORITY. RETESTING IS ALSO RECOMMENDED IF THE BUILDING UNDERGOES SIGNIFICANT ALTERATION.

K. CONTRACTS AND DOCUMENTATION

1. EPA RECOMMENDS THAT CONTRACTORS PROVIDE THE FOLLOWING WRITTEN INFORMATION TO CLIENTS PRIOR TO INITIATION OF WORK:
   a. THE CONTRACTOR'S EPA RPP MITIGATION SERVICE PROVIDER IDENTIFICATION NUMBER.
   b. A STATEMENT THAT DESCRIBES THE PLANNED SCOPE OF THE WORK AND THAT INCLUDES AN ESTIMATE OF THE TIME NEEDED TO COMPLETE THE WORK.
   c. A STATEMENT DESCRIBING ANY KNOWN HAZARDS ASSOCIATED WITH CHEMICALS USED IN OR AS PART OF THE INSTALLATION.
   d. A STATEMENT INDICATING COMPLIANCE WITH AND IMPLEMENTATION OF ALL EPA STANDARDS AND THOSE OF OTHER AGENCIES HAVING JURISDICTION (E.G., CODE REQUIREMENTS).
   e. A STATEMENT DESCRIBING ANY SYSTEM MAINTENANCE THAT THE BUILDING OWNER WOULD BE REQUIRED TO PERFORM.
   f. AN ESTIMATE OF THE INSTALLATION COST AND ANNUAL OPERATING COSTS OF THE SYSTEM.
   g. THE CONDITIONS OF ANY WARRANTY OR GUARANTEE.
2. EPA RECOMMENDS THAT RPP LISTED MITIGATION CONTRACTORS KEEP RECORDS OF ALL GAS MITIGATION WORK PERFORMED AND MAINTAIN THOSE RECORDS FOR 3 YEARS OR FOR THE PERIOD OF ANY WARRANTY OR GUARANTEE, WHICHEVER IS LONGER. THESE RECORDS SHOULD INCLUDE:
3. THE BUILDING INVESTIGATION SUMMARY AND FLOOR PLAN SKETCH.
4. PRE- AND POST-MITIGATION GAS TEST DATA.
5. PRE- AND POST-MITIGATION DIAGNOSTIC TEST DATA.
6. COPIES OF CONTRACTS AND WARRANTIES.
7. A NARRATIVE OR PICTORIAL DESCRIPTION OF MITIGATION SYSTEM(S) INSTALLED.
8. APPENDIX A CONTAINS A SUGGESTED STANDARD FORMAT FOR COMPILING MITIGATION PROJECT RECORDS.
9. OTHER RECORDS OR BOOKKEEPING REQUIRED BY LOCAL, STATE, OR FEDERAL STATUTES AND REGULATIONS SHALL BE MAINTAINED FOR THE PERIOD(S) PRESCRIBED BY THOSE REQUIREMENTS.
10. EPA RECOMMENDS THAT HEALTH AND SAFETY RECORDS, INCLUDING WORKER GAS EXPOSURE LOGS, BE MAINTAINED FOR A MINIMUM OF 20 YEARS.
11. UPON COMPLETION OF THE MITIGATION PROJECT, CONTRACTORS SHALL PROVIDE CLIENTS WITH AN INFORMATION PACKAGE THAT INCLUDES:
12. ANY BUILDING PERMITS REQUIRED BY LOCAL CODES.
13. COPIES OF THE BUILDING INVESTIGATION SUMMARY AND FLOOR PLAN SKETCH.
14. PRE-AND POST-MITIGATION GAS TEST DATA.
15. COPIES OF CONTRACTS AND WARRANTIES.
16. A DESCRIPTION OF THE MITIGATION SYSTEM INSTALLED AND ITS BASIC OPERATING PRINCIPLES.
17. A DESCRIPTION OF ANY DEVIATIONS FROM THE GMS OR STATE REQUIREMENTS.
18. A DESCRIPTION OF THE PROPER OPERATING PROCEDURES OF ANY MECHANICAL OR ELECTRICAL SYSTEMS INSTALLED, INCLUDING MANUFACTURER'S OPERATION AND MAINTENANCE INSTRUCTIONS AND WARRANTIES.
19. A LIST OF APPROPRIATE ACTIONS FOR CLIENTS TO TAKE IF THE SYSTEM FAILURE WARNING DEVICE INDICATES SYSTEM DEGRADATION OR FAILURE.
20. THE NAME, TELEPHONE NUMBER, AND EPA RPP MITIGATION SERVICE PROVIDER IDENTIFICATION NUMBER OF THE CONTRACTOR, AND THE PHONE NUMBER OF THE STATE GAS OFFICE.

THE ACCEPTANCE TESTING SHALL BE AS FOLLOWS:

1. THE EXPLOSIVE GAS MONITORING SYSTEM CONTRACTOR SHALL COMPLETE ACCEPTANCE TESTING TO DEMONSTRATE THAT THE ENTIRE SYSTEMS FUNCTIONS AS DESIGNED. TESTING SHALL INCLUDE:
   A. TESTING EACH FUNCTION OF THE INTEGRATED CONTROLS AT THE CONTROLLER.
   B. CONFIRMATION OF THE CALIBRATIONS OF ALL SENSORS.
   C. TESTING OF ALL COMMUNICATIONS BETWEEN SENSORS AND CONTROLLERS AND BETWEEN THE CONTROLLER AND ALARMS AND AUTO DIALER.
   D. TESTING OF ALL ALARM FUNCTIONS OF ALL SENSORS (ABILITY TO DETECT EXPLOSIVE GAS CONCENTRATIONS) AND OTHER TROUBLE ALARM/DIAGNOSTIC CONDITIONS.
   E. THE CONTRACTOR SHALL CORRECT ALL DEFICIENCIES AND REPEAT THE TESTING FOR ANY ITEMS THAT FAIL INITIAL TESTING. OWNER SHALL NOT ACCEPT THE SYSTEM UNTIL ALL COMPONENTS AND THE ENTIRE COORDINATED SYSTEM HAVE BEEN DEMONSTRATED TO BE OPERATING AS DESIGNED.

UNDERSLAB PLAN

SCALE: 1/8" = 1'-0"

NOTES :

1. DRAWINGS NOT TO BE USED FOR STRUCTURAL, ARCHITECTURAL OR OTHER REFERENCE EXCEPT FOR SUB-SLAB DEPRESSURIZATION SYSTEM.
2. THE EXTENTS OF BUILDING CONSTRUCTION BENEATH THE FLOOR SLABS SHALL BE LINED WITH GAS VAPOR BARRIER, AS PART OF BUILDING CONSTRUCTION. THE GAS VAPOR BARRIER SHALL ALSO BE APPLIED VERTICALLY TO BELOW GRADE WALLS AND WALLS OF PITS AND SUMPS AS SHOWN AND SPECIFIED.
3. SLOPE HORIZONTAL PIPE UNIFORMLY A MINIMUM OF 1% TOWARD SUB-SLAB DEPRESSION SYSTEM PITS OR TO CONDENSATE DRAINS WHEN PIPING CANNOT BE SLOPED TO PIT.
4. SECURE VERTICAL RISER TO WALL IN ACCORDANCE WITH ARCHITECTURAL AND PLUMBING REQUIREMENTS.
5. ELECTRICAL WIRING AND EQUIPMENT NOT SHOWN. REFER TO ELECTRICAL DRAWINGS AND SPECIFICATIONS FOR REFERENCES.
6. SEAL ALL JOINTS IN SLAB ON GRADE, INCLUDING BUT NOT LIMITED TO, CONTROL JOINTS, EXPANSION JOINTS, CRACKS, WALL JOINTS, PENETRATIONS ETC. WITH NON-CRACKING CAULK. POLYURETHANE TYPE PREFERRED.
7. COORDINATE GAS VENTING SYSTEM WITH ALL TRADES, INCLUDE VENTING SYSTEM PIPING ON COORDINATION DRAWINGS.
8. ALL GAS VENTS SHALL BE CONTINUOUS FROM UNDERSLAB STONE BASE TO 36" ABOVE ROOF LINE OR PARAPET (WHICHEVER IS HIGHER). ALL VENTS SHALL BE 10'-0" MIN FROM LOT LINES, OUTSIDE AIR INTAKES, WINDOWS, ETC.
9. DRAWING ILLUSTRATES WALLS AND ALL SLAB ON GRADE FLOOR AREAS. COORDINATE THIS WORK WITH ARCHITECTURAL, MECHANICAL, AND STRUCTURAL PLANS.
10. ALL GAS VENT PIPING SHALL BE PVC PIPING. WHERE PIPING IS LOCATED IN RETURN AIR PLENUMS CHANGE MATERIAL TO NO-HUB CAST IRON PIPE.
11. LABEL GAS PIPING AT INTERVALS OF NOT MORE THAN 25 FT IN CONCEALED LOCATIONS AND NOT MORE THAN 50 FT ON EXPOSED AND NOT LESS THAN ONCE IN ANY ROOM OR SPACE.
12. GAS VAPOR BARRIER TO BE INSTALLED IMMEDIATELY BELOW FLOOR SLAB AS INDICATED ON THE STRUCTURAL DRAWINGS. PROVIDE 12" MINIMUM CLEAN #57 STONE SUB-BASE FOR GAS MITIGATION SYSTEM.
13. SLOPE HORIZONTAL PIPE A MINIMUM OF 1% UNIFORMLY TOWARD SUCTION PITS.
14. REFER TO SPECIFICATION FOR ADDITIONAL SUB-SLAB DEPRESSURIZATION SYSTEM AND ACCESSORIES REQUIREMENTS.

LEGEND

- EXTENT OF GAS PERMEABLE AGGREGATE LAYER BENEATH FLOOR SLAB
- 4" SCHEDULE 80 PVC PIPE
- SFV-1 — SUCTION FAN VERTICAL 4" RISER AND IDENTIFICATION NUMBER. EXTEND THRU ATTIC TO SUCTION FAN
- MP-1 — SUB-SLAB MONITORING POINT AND IDENTIFICATION NUMBER
- DP-1A — SUB-SLAB DEPRESURAIZATION PIT AND IDENTIFICATION NUMBER

FOR CONSTRUCTION

PROVIDE LIQUID BOOT GAS VAPOR BARRIER SYSTEM UNDER SLAB AS MANUFACTURED BY CETCO CONSISTING OF ULTRASHIELD G-1000, 60 DRY MILS LIQUID BOOT AND LIQUID BOOT BASE FABRIC. SYSTEM SHALL INSTALLED BY AUTHORIZED INSTALLER. REFER TO DETAILS FOR ADDITIONAL INFORMATION. REFER TO CONTRACT DOCUMENTS FOR LOCATIONS OF PENETRATIONS THROUGH THE SLAB.

OFFSET VENT ABOVE CEILING AT ROOF AND EXTEND THROUGH ROOF APPROXIMATELY 3' FROM PARAPET WALLS AND TERMINATE 24" ABOVE FINISHED ROOF.

Re: Ferry Point Park Golf Course
Permanent Clubhouse Sub-Slab Depressurization System (SSDS)
Construction Certification Report

Dear Ms. Zias,

New York State Department of Environmental Conservation (Department) staff have reviewed the Ferry Point Park Permanent Clubhouse Sub-Slab Depressurization System (SSDS) Construction Certification Report Sub-Slab Depressurization System plan and included drawings dated June 8, 2018 and found the report to be incomplete. Please resubmit the report incorporating the following comments:

1) The Construction Certification Report (CCR) needs to be one single document rather a compilation of various documents
2) The text needs significant expansion to describe the original problem that required addressing, proposed design including reasons for that design, the construction, including any and all problems and deviations, and timeframe. Also, all tests showing the proper operation of the system should be included in the report; it should not be included as printed e-mails. As discussed during the June 6, 2018 site visit, the level of detail necessary is such that the general public will understand the entire process.
3) During our discussion on June 6, 2018, it was request that this CRR include stamped and signed As-Built Drawings and Red-Line Drawings. They were not included. Please correct.

If you have any questions you may contact me at 718-482-4996.

Sincerely,

Kenneth B. Brezner, P.E.
Regional Material Management Engineer

Re: Ferry Point Park Golf Course
Permanent Clubhouse Sub-Slab Depressurization System (SSDS)
Construction Certification
MC Project No. 17002426A

Dear Mr. Brezner:

Maser Consulting P.A. (Maser Consulting) has reviewed your July 2, 2018 letter (copy enclosed) to the New York City Department of Parks and Recreation ("NYC Parks") regarding our June 8, 2018 SSDS Construction Certification submittal, and provides the following clarifications based on our site meeting on June 6, 2018 attended by NYSDEC, NYC Parks, Woodard & Curran, The Trump Organization, EAI and Maser Consulting:

1) Our June 8, 2018 submittal was not the Construction Certification Report, instead it was the minimum information needed for NYSDEC's consideration to issue a temporary Certificate of Occupancy for June 11, 2018; this information (Construction Certification Statement with deviations, site summary, SSDS drawings issued for construction, SSDS drawings showing deviations from design, and daily field observation reports) was specifically detailed by you during our June 6, 2018 site meeting
2) The objective of the June 8, 2018 submittal was to demonstrate that the clubhouse is built with engineering controls (i.e. Liquid Boot® and SSDS) that, when functioning properly, will adequately protect occupants
3) The June 8, 2018 submittal did satisfy NYSDEC's requirements, as a temporary Certificate of Occupancy was issued for the June 11, 2018 clubhouse opening
4) Our final Construction Certification As-Built Report will be issued within 90 days of June 11, 2018 in accordance with NYSDEC's statutory timeframe

Please contact us if you have any questions regarding this review.

Very truly yours,
MASER CONSULTING P.A.

NYSDEC Construction Duration Inspections performed by Maser Consulting P.A.

Erosion and Sediment Control Inspection
Trump Golf Links at Ferry Point Park
500 Hutchinson River Parkway
Bronx, NY 10453

SITE PLAN/SKETCH

John Fortunato — 7/21/2017

Inspector (print name) — **Date of Inspection**

David Keil

Qualified Professional (print name) — **Qualified Professional Signature**

The above signed acknowledges that, to the best of his/her knowledge, all information provided on the forms is accurate and complete.

Maintaining Water Quality

Yes No NA
☐ ☐ ☑ Is there an increase in turbidity causing a substantial visible contrast to natural conditions?
☐ ☐ ☑ Is there residue from oil and floating substances, visible oil film, or globules or grease?
☐ ☐ ☑ All disturbance is within the limits of the approved plans.
☐ ☐ ☑ Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions
Yes No NA
☑ ☐ ☐ Is construction site litter and debris appropriately managed?
☑ ☐ ☐ Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?
☐ ☑ ☐ Is construction impacting the adjacent property?
☑ ☐ ☐ Is dust adequately controlled?

2. Temporary Stream Crossing
Yes No NA
☐ ☐ ☑ Maximum diameter pipes necessary to span creek without dredging are installed.
☐ ☐ ☑ Installed non-woven geotextile fabric beneath approaches.
☐ ☐ ☑ Is fill composed of aggregate (no earth or soil)?
☐ ☐ ☑ Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering
Yes No NA
☐ ☐ ☑ Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
☐ ☐ ☑ Clean water from upstream pool is being pumped to the downstream pool.
☐ ☐ ☑ Sediment laden water from work area is being discharged to a silt-trapping device.
☐ ☐ ☑ Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
☐ ☐ ☑ Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales
Yes No NA
☐ ☐ ☑ Installed per plan with minimum side slopes 2H:1V or flatter.
☐ ☐ ☑ Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
☐ ☐ ☑ Sediment-laden runoff directed to sediment trapping structure

CONSTRUCTION DURATION INSPECTIONS
Runoff Control Practices (continued)

4. Stone Check Dam

Yes No NA

☐ ☐ ☑ Is channel stable? (flow is not eroding soil underneath or around the structure).
☐ ☐ ☑ Check is in good condition (rocks in place and no permanent pools behind the structure).
☐ ☐ ☑ Has accumulated sediment been removed?.

5. Rock Outlet Protection

Yes No NA

☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles

Yes No NA

☐ ☑ ☐ Stockpiles are stabilized with vegetation and/or mulch.
☐ ☑ ☐ Sediment control is installed at the toe of the slope.

2. Revegetation

Yes No NA

☐ ☐ ☑ Temporary seedings and mulch have been applied to idle areas.
☐ ☐ ☑ 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance

Yes No NA

☑ ☐ ☐ Stone is clean enough to effectively remove mud from vehicles.
☑ ☐ ☐ Installed per standards and specifications?
☑ ☐ ☐ Does all traffic use the stabilized entrance to enter and leave site?
☑ ☐ ☐ Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence

Yes No NA

☑ ☐ ☐ Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☐ ☑ ☐ Joints constructed by wrapping the two ends together for continuous support.
☐ ☑ ☐ Fabric buried 6 inches minimum.
☑ ☐ ☐ Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation is ___% of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes No NA

☐ ☐ ☑ Installed concrete blocks lengthwise so open ends face outward, not upward.
☐ ☐ ☑ Placed wire screen between No. 3 crushed stone and concrete blocks.
☐ ☐ ☑ Drainage area is 1acre or less.
☐ ☐ ☑ Excavated area is 900 cubic feet.
☐ ☐ ☑ Excavated side slopes should be 2:1.
☐ ☐ ☑ 2" x 4" frame is constructed and structurally sound.
☐ ☐ ☑ Posts 3-foot maximum spacing between posts.
☐ ☐ ☑ Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☐ ☐ ☑ Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation ___% of design capacity.

4. Temporary Sediment Trap

Yes No NA

☐ ☐ ☑ Outlet structure is constructed per the approved plan or drawing.
☐ ☐ ☑ Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes No NA

☐ ☐ ☑ Basin and outlet structure constructed per the approved plan.
☐ ☐ ☑ Basin side slopes are stabilized with seed/mulch.
☐ ☐ ☑ Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

General Notes
Cover material to approximately 1' in depth was stockpiled to a temporary location on the Clubhouse construction area and then moved onto tarp in the parking lot location. Maser Consulting observed silt fence installed around the perimeter of Clubhouse construction area and parking lot. Parking lot stockpile tarped and anchored with sandbags. Storm drain inlet protection was installed in the parking lot area. Maser Consulting and Woodard & Curran advised the Contractor to bury the silt fence approximately 6" in depth.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

General Notes:
Clean cover material to approximately 1' in depth was stockpiled to a temporary location on the Clubhouse construction area and then moved onto tarp in the parking lot location. Maser Consulting observed silt fence installed around the perimeter of Clubhouse construction area and parking lot. Parking lot stockpile tarped and anchored with sandbags. Sediment accumulation is ___% of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes	No	NA	
☐	☑	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.
☐	☐	☑	Placed wire screen between No. 3 crushed stone and concrete blocks.
☑	☐	☐	Drainage area is 1acre or less.
☑	☐	☐	Excavated area is 900 cubic feet.
☑	☐	☐	Excavated side slopes should be 2:1.
☑	☐	☐	2" x 4" frame is constructed and structurally sound.
☑	☐	☐	Posts 3-foot maximum spacing between posts.
☑	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☑	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation ___% of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

General Notes
Silt fencing buried 6" into soil in construction site area. Tarping placed over silt fencing in parking lot since the area surrounds pavement. Maser Consulting informed foreman that the temporary shaping layer stockpile within the construction area will require a silt fence boundary and tarping with sand bags as anchors.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:

1. Topsoil and Spoil Stockpiles
Yes No NA
☐ ☑ ☐ Stockpiles are stabilized with vegetation and/or mulch.
☑ ☐ ☐ Sediment control is installed at the toe of the slope.

2. Revegetation
Yes No NA
☐ ☐ ☑ Temporary seedings and mulch have been applied to idle areas.
☐ ☐ ☑ 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance
Yes No NA
☑ ☐ ☐ Stone is clean enough to effectively remove mud from vehicles.
☑ ☐ ☐ Installed per standards and specifications?
☑ ☐ ☐ Does all traffic use the stabilized entrance to enter and leave site?
☑ ☐ ☐ Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence
Yes No NA
☑ ☐ ☐ Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☐ ☑ ☐ Joints constructed by wrapping the two ends together for continuous support.
☑ ☐ ☐ Fabric buried 6 inches minimum.
☑ ☐ ☐ Posts are stable, fabric is tight and without rips or frayed areas.
Sediment accumulation is ___% of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes	No	NA	
☐	☑	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.
☐	☐	☑	Placed wire screen between No. 3 crushed stone and concrete blocks.
☑	☐	☐	Drainage area is 1acre or less.
☑	☐	☐	Excavated area is 900 cubic feet.
☑	☐	☐	Excavated side slopes should be 2:1.
☑	☐	☐	2" x 4" frame is constructed and structurally sound.
☑	☐	☐	Posts 3-foot maximum spacing between posts.
☑	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☑	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation ___% of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

General Notes
Silt fencing installed around base of the shaping layer stockpile and buried 6" into soil in construction site area. Maser Consulting informed foreman that the temporary shaping layer stockpile within the construction area will require tarping/hydroseeding. Silt fencing and tarping after storm event caused some sumping and uncovered stockpiles as shown. Silt fencing and tarping was readjusted to be tight immediately.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

Haybales were not installed at up-slope of the parking lot area since water would not be exiting this area through the stockpiles. Temporary shaping stockpile installed onsite to contain remaining shaping layer soil for backfill.

General Notes
Silt fencing installed around base of the shaping layer stockpile and buried 6" into soil in construction site area. Maser Consulting informed foreman that the temporary shaping layer stockpile within the construction area will require tarping/hydroseeding. Silt fencing and tarping after storm event caused some sumping and uncovered stockpiles as shown. Silt fencing and tarping was readjusted to be tight immediately.

Inspector (print name) — **Date of Inspection**

David Keil

Qualified Professional (print name) — **Qualified Professional Signature**

The above signed acknowledges that, to the best of his/her knowledge, all information provided on the forms is accurate and complete.

Maintaining Water Quality

Yes No NA
☐ ☐ ☑ Is there an increase in turbidity causing a substantial visible contrast to natural conditions?
☐ ☐ ☑ Is there residue from oil and floating substances, visible oil film, or globules or grease?
☐ ☐ ☑ All disturbance is within the limits of the approved plans.
☐ ☐ ☑ Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions
Yes No NA
☑ ☐ ☐ Is construction site litter and debris appropriately managed?
☑ ☐ ☐ Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?
☐ ☑ ☐ Is construction impacting the adjacent property?
☑ ☐ ☐ Is dust adequately controlled?

2. Temporary Stream Crossing
Yes No NA
☐ ☐ ☑ Maximum diameter pipes necessary to span creek without dredging are installed.
☐ ☐ ☑ Installed non-woven geotextile fabric beneath approaches.
☐ ☐ ☑ Is fill composed of aggregate (no earth or soil)?
☐ ☐ ☑ Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering
Yes No NA
☐ ☐ ☑ Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
☐ ☐ ☑ Clean water from upstream pool is being pumped to the downstream pool.
☐ ☐ ☑ Sediment laden water from work area is being discharged to a silt-trapping device.
☐ ☐ ☑ Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
☐ ☐ ☑ Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales
Yes No NA
☐ ☐ ☑ Installed per plan with minimum side slopes 2H:1V or flatter.
☐ ☐ ☑ Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
☐ ☐ ☑ Sediment-laden runoff directed to sediment trapping structure

CONSTRUCTION DURATION INSPECTIONS
Runoff Control Practices (continued)

4. Stone Check Dam
Yes No NA
☐ ☐ ☑ Is channel stable? (flow is not eroding soil underneath or around the structure).
☐ ☐ ☑ Check is in good condition (rocks in place and no permanent pools behind the structure).
☐ ☐ ☑ Has accumulated sediment been removed?.

5. Rock Outlet Protection
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles
Yes No NA
☐ ☑ ☐ Stockpiles are stabilized with vegetation and/or mulch.
☑ ☐ ☐ Sediment control is installed at the toe of the slope.

2. Revegetation
Yes No NA
☐ ☐ ☑ Temporary seedings and mulch have been applied to idle areas.
☐ ☐ ☑ 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance
Yes No NA
☑ ☐ ☐ Stone is clean enough to effectively remove mud from vehicles.

Sediment accumulation ___% of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

General Notes:
Maser Consulting and Woodard & Curran informed the foreman that the shaping layer temporary stockpile could not exceed a height over the temporary fence. The stockpile was lowered so that the pile height was lower than the temporary fence. The foreman was also informed to hydroseed the temporary stockpile.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

General Notes:
Additional stormwater drain inlet protection drains were intalled in the parking lot. Co-mingled temporary stockpile soil was backfilled to small area locations.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

Co-mingled construction area temporary stockpile to be tarped and anchored instead of hydroseeded,

General Notes:
Additional stormwater drain inlet protection drains were intalled in the parking lot. Co-mingled temporary stockpile soil was backfilled to small area locations for concrete base installation.

Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

General Notes:
The co-mingled temporary stockpile on-site was tarped and anchored. The silt fencing around it was taken down towards the center where pile driving activities were done.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

Orange-brown coating coming off of parking lot stockpiles. Coating doesn`t reach drains. Additional sheeting was placed under the haybales to better retain coating. The silt fence around the co-mingled stockpile was opened as to allow pile driving activities to commence.

General Notes:
The co-mingled temporary stockpile on-site was tarped and anchored. The silt fencing around it was taken down towards the center where pile driving activities were done.

Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

General Notes:
Heavy wind dislogged tarping on the parking lot and temporary on-site stockpiles. The stockpiles were fixed immediately.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

General Notes:
Heavy wind dislogged tarping on the parking lot and temporary on-site stockpiles. The stockpiles were fixed immediately. Co-mingled soil was used to backfill and hold concrete forms.

Qualified Professional (print name) — **Qualified Professional Signature**

The above signed acknowledges that, to the best of his/her knowledge, all information provided on the forms is accurate and complete.

Maintaining Water Quality

Yes No NA
☐ ☐ ☑ Is there an increase in turbidity causing a substantial visible contrast to natural conditions?
☐ ☐ ☑ Is there residue from oil and floating substances, visible oil film, or globules or grease?
☐ ☐ ☑ All disturbance is within the limits of the approved plans.
☐ ☐ ☑ Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions
Yes No NA
☑ ☐ ☐ Is construction site litter and debris appropriately managed?
☑ ☐ ☐ Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?
☐ ☑ ☐ Is construction impacting the adjacent property?
☑ ☐ ☐ Is dust adequately controlled?

2. Temporary Stream Crossing
Yes No NA
☐ ☐ ☑ Maximum diameter pipes necessary to span creek without dredging are installed.
☐ ☐ ☑ Installed non-woven geotextile fabric beneath approaches.
☐ ☐ ☑ Is fill composed of aggregate (no earth or soil)?
☐ ☐ ☑ Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering
Yes No NA
☐ ☐ ☑ Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
☐ ☐ ☑ Clean water from upstream pool is being pumped to the downstream pool.
☐ ☐ ☑ Sediment laden water from work area is being discharged to a silt-trapping device.
☐ ☐ ☑ Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
☐ ☐ ☑ Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales
Yes No NA
☐ ☐ ☑ Installed per plan with minimum side slopes 2H:1V or flatter.
☐ ☐ ☑ Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
☐ ☐ ☑ Sediment-laden runoff directed to sediment trapping structure

CONSTRUCTION DURATION INSPECTIONS
Runoff Control Practices (continued)

4. Stone Check Dam
Yes No NA
☐ ☐ ☑ Is channel stable? (flow is not eroding soil underneath or around the structure).
☐ ☐ ☑ Check is in good condition (rocks in place and no permanent pools behind the structure).
☐ ☐ ☑ Has accumulated sediment been removed?.

5. Rock Outlet Protection
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles
Yes No NA
☐ ☑ ☐ Stockpiles are stabilized with vegetation and/or mulch.
☑ ☐ ☐ Sediment control is installed at the toe of the slope.

2. Revegetation
Yes No NA
☐ ☐ ☑ Temporary seedings and mulch have been applied to idle areas.
☐ ☐ ☑ 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance
Yes No NA
☑ ☐ ☐ Stone is clean enough to effectively remove mud from vehicles.
☑ ☐ ☐ Installed per standards and specifications?
☑ ☐ ☐ Does all traffic use the stabilized entrance to enter and leave site?
☑ ☐ ☐ Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence
Yes No NA
☑ ☐ ☐ Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☑ ☐ ☐ Joints constructed by wrapping the two ends together for continuous support.
☑ ☐ ☐ Fabric buried 6 inches minimum.
☑ ☐ ☐ Posts are stable, fabric is tight and without rips or frayed areas.
Sediment accumulation is ___% of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes	No	NA	
☐	☑	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.
☐	☐	☑	Placed wire screen between No. 3 crushed stone and concrete blocks.
☑	☐	☐	Drainage area is 1acre or less.
☑	☐	☐	Excavated area is 900 cubic feet.
☑	☐	☐	Excavated side slopes should be 2:1.
☑	☐	☐	2" x 4" frame is constructed and structurally sound.
☑	☐	☐	Posts 3-foot maximum spacing between posts.
☑	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☑	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation ___% of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

General Notes:
Soil from co-mingled soil stockpile on-site was backfilled into concrete base. Stockpile uncovered as backfilled.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or

1. Topsoil and Spoil Stockpiles
Yes No NA
☐ ☑ ☐ Stockpiles are stabilized with vegetation and/or mulch.
☑ ☐ ☐ Sediment control is installed at the toe of the slope.

2. Revegetation
Yes No NA
☐ ☐ ☑ Temporary seedings and mulch have been applied to idle areas.
☐ ☐ ☑ 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance
Yes No NA
☑ ☐ ☐ Stone is clean enough to effectively remove mud from vehicles.
☑ ☐ ☐ Installed per standards and specifications?
☑ ☐ ☐ Does all traffic use the stabilized entrance to enter and leave site?
☑ ☐ ☐ Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence
Yes No NA
☑ ☐ ☐ Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☑ ☐ ☐ Joints constructed by wrapping the two ends together for continuous support.
☑ ☐ ☐ Fabric buried 6 inches minimum.
☑ ☑ ☐ Posts are stable, fabric is tight and without rips or frayed areas.
Sediment accumulation is ___% of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes	No	NA	
☐	☑	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.
☐	☐	☑	Placed wire screen between No. 3 crushed stone and concrete blocks.
☑	☐	☐	Drainage area is 1acre or less.
☑	☐	☐	Excavated area is 900 cubic feet.
☑	☐	☐	Excavated side slopes should be 2:1.
☑	☐	☐	2" x 4" frame is constructed and structurally sound.
☑	☐	☐	Posts 3-foot maximum spacing between posts.
☑	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☑	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation ___% of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

General Notes:
Co-mingled soil stockpile is located towards the eastern side of the construction site. Clean crushed stone is stockpiled on the western side in preparation for installation of SSDS components.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

Erosion and Sediment Control Inspection
Trump Golf Links at Ferry Point Park
500 Hutchinson River Parkway
Bronx, NY 10453

SITE PLAN/SKETCH

The above signed acknowledges that, to the best of his/her knowledge, all information provided on the forms is accurate and complete.

Maintaining Water Quality

Yes No NA
☐ ☐ ☑ Is there an increase in turbidity causing a substantial visible contrast to natural conditions?
☐ ☐ ☑ Is there residue from oil and floating substances, visible oil film, or globules or grease?
☐ ☐ ☑ All disturbance is within the limits of the approved plans.
☐ ☐ ☑ Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions
Yes No NA
☑ ☐ ☐ Is construction site litter and debris appropriately managed?
☑ ☐ ☐ Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?
☐ ☑ ☐ Is construction impacting the adjacent property?
☑ ☐ ☐ Is dust adequately controlled?

2. Temporary Stream Crossing
Yes No NA
☐ ☐ ☑ Maximum diameter pipes necessary to span creek without dredging are installed.
☐ ☐ ☑ Installed non-woven geotextile fabric beneath approaches.
☐ ☐ ☑ Is fill composed of aggregate (no earth or soil)?
☐ ☐ ☑ Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering
Yes No NA
☐ ☐ ☑ Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
☐ ☐ ☑ Clean water from upstream pool is being pumped to the downstream pool.
☐ ☐ ☑ Sediment laden water from work area is being discharged to a silt-trapping device.
☐ ☐ ☑ Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
☐ ☐ ☑ Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales
Yes No NA
☐ ☐ ☑ Installed per plan with minimum side slopes 2H:1V or flatter.
☐ ☐ ☑ Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
☐ ☐ ☑ Sediment-laden runoff directed to sediment trapping structure

CONSTRUCTION DURATION INSPECTIONS
Runoff Control Practices (continued)

4. Stone Check Dam
Yes No NA
☐ ☐ ☑ Is channel stable? (flow is not eroding soil underneath or around the structure).
☐ ☐ ☑ Check is in good condition (rocks in place and no permanent pools behind the structure).
☐ ☐ ☑ Has accumulated sediment been removed?.

5. Rock Outlet Protection
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles
Yes No NA
☐ ☐ ☑ Stockpiles are stabilized with vegetation and/or mulch.
☑ ☐ ☐ Sediment control is installed at the toe of the slope.

2. Revegetation
Yes No NA
☐ ☐ ☑ Temporary seedings and mulch have been applied to idle areas.
☐ ☐ ☑ 4 inches minimum of topsoil has been applied under permanent seedings

1. Stabilized Construction Entrance
Yes No NA
☑ ☐ ☐ Stone is clean enough to effectively remove mud from vehicles.
☑ ☐ ☐ Installed per standards and specifications?
☑ ☐ ☐ Does all traffic use the stabilized entrance to enter and leave site?
☑ ☐ ☐ Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence
Yes No NA
☑ ☐ ☐ Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☑ ☐ ☐ Joints constructed by wrapping the two ends together for continuous support.
☑ ☐ ☐ Fabric buried 6 inches minimum.
☑ ☐ ☐ Posts are stable, fabric is tight and without rips or frayed areas.
Sediment accumulation is ___% of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes No NA

☐ ☐ ☐ Installed concrete blocks lengthwise so open ends face outward, not upward.
☐ ☐ ☐ Placed wire screen between No. 3 crushed stone and concrete blocks.
☐ ☐ ☐ Drainage area is 1acre or less.
☐ ☐ ☐ Excavated area is 900 cubic feet.
☐ ☐ ☐ Excavated side slopes should be 2:1.
☐ ☐ ☐ 2" x 4" frame is constructed and structurally sound.
☐ ☐ ☐ Posts 3-foot maximum spacing between posts.
☐ ☐ ☐ Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☐ ☐ ☐ Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation ___% of design capacity.

4. Temporary Sediment Trap

Yes No NA

☐ ☐ ☐ Outlet structure is constructed per the approved plan or drawing.
☐ ☐ ☐ Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes No NA

☐ ☐ ☐ Basin and outlet structure constructed per the approved plan.
☐ ☐ ☐ Basin side slopes are stabilized with seed/mulch.
☐ ☐ ☐ Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

General Notes:
Co-mingled soil towards the southern end of the building compacted in lifts. Clean gravel brought in and spread across compacted areas in preparation for installation of SSDS.

☐ ☐ ☑ Installed non-woven geotextile fabric beneath approaches.
☐ ☐ ☑ Is fill composed of aggregate (no earth or soil)?
☐ ☐ ☑ Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering
Yes No NA
☐ ☐ ☑ Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
☐ ☐ ☑ Clean water from upstream pool is being pumped to the downstream pool.
☐ ☐ ☑ Sediment laden water from work area is being discharged to a silt-trapping device.
☐ ☐ ☑ Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
☐ ☐ ☑ Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales
Yes No NA
☐ ☐ ☑ Installed per plan with minimum side slopes 2H:1V or flatter.
☐ ☐ ☑ Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
☐ ☐ ☑ Sediment-laden runoff directed to sediment trapping structure

CONSTRUCTION DURATION INSPECTIONS
Runoff Control Practices (continued)

4. Stone Check Dam

Yes No NA

☐ ☐ ☑ Is channel stable? (flow is not eroding soil underneath or around the structure).
☐ ☐ ☑ Check is in good condition (rocks in place and no permanent pools behind the structure).
☐ ☐ ☑ Has accumulated sediment been removed?.

5. Rock Outlet Protection

Yes No NA

☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles

Yes No NA

☐ ☑ ☐ Stockpiles are stabilized with vegetation and/or mulch.
☑ ☐ ☐ Sediment control is installed at the toe of the slope.

2. Revegetation

Yes No NA

☐ ☐ ☑ Temporary seedings and mulch have been applied to idle areas.
☐ ☐ ☑ 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance

Yes No NA

☑ ☐ ☐ Stone is clean enough to effectively remove mud from vehicles.
☑ ☐ ☐ Installed per standards and specifications?
☑ ☐ ☐ Does all traffic use the stabilized entrance to enter and leave site?
☑ ☐ ☐ Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence

Yes No NA

☑ ☐ ☐ Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☑ ☐ ☐ Joints constructed by wrapping the two ends together for continuous support.
☑ ☐ ☐ Fabric buried 6 inches minimum.
☑ ☑ ☐ Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation is 10 % of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes	No	NA	
☐	☑	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.
☐	☐	☑	Placed wire screen between No. 3 crushed stone and concrete blocks.
☑	☐	☐	Drainage area is 1acre or less.
☑	☐	☐	Excavated area is 900 cubic feet.
☑	☐	☐	Excavated side slopes should be 2:1.
☑	☐	☐	2" x 4" frame is constructed and structurally sound.
☑	☐	☐	Posts 3-foot maximum spacing between posts.
☑	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☑	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation 10 % of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

High winds displaced several tarps that were used to cover the soil stockpile in the parking lot. Tarps are being replaced and secured.

Maintaining Water Quality

Yes No NA
☐ ☐ ☑ Is there an increase in turbidity causing a substantial visible contrast to natural conditions?
☐ ☐ ☑ Is there residue from oil and floating substances, visible oil film, or globules or grease?
☐ ☐ ☑ All disturbance is within the limits of the approved plans.
☐ ☐ ☑ Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions
Yes No NA
☑ ☐ ☐ Is construction site litter and debris appropriately managed?
☑ ☐ ☐ Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?
☐ ☑ ☐ Is construction impacting the adjacent property?
☑ ☐ ☐ Is dust adequately controlled?

2. Temporary Stream Crossing
Yes No NA
☐ ☐ ☑ Maximum diameter pipes necessary to span creek without dredging are installed.
☐ ☐ ☑ Installed non-woven geotextile fabric beneath approaches.
☐ ☐ ☑ Is fill composed of aggregate (no earth or soil)?
☐ ☐ ☑ Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

all stockpile soils inside the construction area have been spread to grade level(s). Soil stockpile in the parking area continues to require re-tarping and anchoring as a result of high winds. Security screening between the construction site and the golf course has-for the most part, been taken down also due to high wind conditions.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

Weathered sections of non-essential silt fence surrounding the soil stockpile in the parking lot are scheduled for removal and replacement. Repairs are expected on or before January 17, 2018.

Inspector (print name) — **Date of Inspection**

David Keil

Qualified Professional (print name) — **Qualified Professional Signature**

The above signed acknowledges that, to the best of his/her knowledge, all information provided on the forms is accurate and complete.

Maintaining Water Quality

Yes No NA
☐ ☐ ☑ Is there an increase in turbidity causing a substantial visible contrast to natural conditions?
☐ ☐ ☑ Is there residue from oil and floating substances, visible oil film, or globules or grease?
☐ ☐ ☑ All disturbance is within the limits of the approved plans.
☐ ☐ ☑ Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions
Yes No NA
☑ ☐ ☐ Is construction site litter and debris appropriately managed?
☑ ☐ ☐ Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?
☐ ☑ ☐ Is construction impacting the adjacent property?
☑ ☐ ☐ Is dust adequately controlled?

2. Temporary Stream Crossing
Yes No NA
☐ ☐ ☑ Maximum diameter pipes necessary to span creek without dredging are installed.
☐ ☐ ☑ Installed non-woven geotextile fabric beneath approaches.
☐ ☐ ☑ Is fill composed of aggregate (no earth or soil)?
☐ ☐ ☑ Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering
Yes No NA
☐ ☐ ☑ Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
☐ ☐ ☑ Clean water from upstream pool is being pumped to the downstream pool.
☐ ☐ ☑ Sediment laden water from work area is being discharged to a silt-trapping device.
☐ ☐ ☑ Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
☐ ☐ ☑ Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales
Yes No NA
☐ ☐ ☑ Installed per plan with minimum side slopes 2H:1V or flatter.
☐ ☐ ☑ Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
☐ ☐ ☑ Sediment-laden runoff directed to sediment trapping structure

CONSTRUCTION DURATION INSPECTIONS
Runoff Control Practices (continued)

4. Stone Check Dam

Yes No NA

☐ ☐ ☑ Is channel stable? (flow is not eroding soil underneath or around the structure).
☐ ☐ ☑ Check is in good condition (rocks in place and no permanent pools behind the structure).
☐ ☐ ☑ Has accumulated sediment been removed?.

5. Rock Outlet Protection

Yes No NA

☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles

Yes No NA

☐ ☑ ☐ Stockpiles are stabilized with vegetation and/or mulch.
☑ ☐ ☐ Sediment control is installed at the toe of the slope.

2. Revegetation

Yes No NA

☐ ☐ ☑ Temporary seedings and mulch have been applied to idle areas.
☐ ☐ ☑ 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance

Yes No NA

☑ ☐ ☐ Stone is clean enough to effectively remove mud from vehicles.
☑ ☐ ☐ Installed per standards and specifications?
☑ ☐ ☐ Does all traffic use the stabilized entrance to enter and leave site?
☑ ☐ ☐ Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence

Yes No NA

☑ ☐ ☐ Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☑ ☐ ☐ Joints constructed by wrapping the two ends together for continuous support.
☑ ☐ ☐ Fabric buried 6 inches minimum.
☑ ☑ ☐ Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation is 10 % of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes	No	NA	
☐	☑	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.
☐	☐	☑	Placed wire screen between No. 3 crushed stone and concrete blocks.
☑	☐	☐	Drainage area is 1acre or less.
☑	☐	☐	Excavated area is 900 cubic feet.
☑	☐	☐	Excavated side slopes should be 2:1.
☑	☐	☐	2" x 4" frame is constructed and structurally sound.
☑	☐	☐	Posts 3-foot maximum spacing between posts.
☑	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☑	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation 0 % of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

Storm Drain Sediment filters--downslope of the soil stockpile in the parking lot--were cleaned and reinstalled over the past week.

Sediment accumulation 0 % of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

20 to 25mph winds today displaced some of the tarps used to cover the soil stockpile in the parking lot. By day's end, new tarps were spread over the soil stockpile and anchored.

Yes	No	NA	
☑	☐	☐	Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☑	☐	☐	Joints constructed by wrapping the two ends together for continuous support.
☐	☑	☐	Fabric buried 6 inches minimum.
☑	☑	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation is 0 % of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes	No	NA	
☐	☑	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.
☐	☐	☑	Placed wire screen between No. 3 crushed stone and concrete blocks.
☑	☐	☐	Drainage area is 1acre or less.
☑	☐	☐	Excavated area is 900 cubic feet.
☑	☐	☐	Excavated side slopes should be 2:1.
☑	☐	☐	2" x 4" frame is constructed and structurally sound.
☑	☐	☐	Posts 3-foot maximum spacing between posts.
☑	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☑	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation 0 % of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

New silt fence was installed around the soil stockpile in the parking area. The silt fence is staked in-place above the curb-line in the grassy islands of the northern parking lot. New tarps and tarp-anchors were set in place on this same stockpile.

Storm sewer sediment traps were also cleaned and replaced.

The above signed acknowledges that, to the best of his/her knowledge, all information provided on the forms is accurate and complete.

Maintaining Water Quality

Yes No NA
☐ ☐ ☑ Is there an increase in turbidity causing a substantial visible contrast to natural conditions?
☐ ☐ ☑ Is there residue from oil and floating substances, visible oil film, or globules or grease?
☐ ☐ ☑ All disturbance is within the limits of the approved plans.
☐ ☐ ☑ Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions
Yes No NA
☑ ☐ ☐ Is construction site litter and debris appropriately managed?
☑ ☐ ☐ Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?
☐ ☑ ☐ Is construction impacting the adjacent property?
☑ ☐ ☐ Is dust adequately controlled?

2. Temporary Stream Crossing
Yes No NA
☐ ☐ ☑ Maximum diameter pipes necessary to span creek without dredging are installed.
☐ ☐ ☑ Installed non-woven geotextile fabric beneath approaches.
☐ ☐ ☑ Is fill composed of aggregate (no earth or soil)?
☐ ☐ ☑ Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering
Yes No NA
☐ ☐ ☑ Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
☐ ☐ ☑ Clean water from upstream pool is being pumped to the downstream pool.
☐ ☐ ☑ Sediment laden water from work area is being discharged to a silt-trapping device.
☐ ☐ ☑ Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
☐ ☐ ☑ Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales
Yes No NA
☐ ☐ ☑ Installed per plan with minimum side slopes 2H:1V or flatter.
☐ ☐ ☑ Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
☐ ☐ ☑ Sediment-laden runoff directed to sediment trapping structure

CONSTRUCTION DURATION INSPECTIONS
Runoff Control Practices (continued)

4. Stone Check Dam

Yes	No	NA	
☐	☐	☑	Is channel stable? (flow is not eroding soil underneath or around the structure).
☐	☐	☑	Check is in good condition (rocks in place and no permanent pools behind the structure).
☐	☐	☑	Has accumulated sediment been removed?.

5. Rock Outlet Protection

Yes	No	NA	
☐	☐	☑	Installed per plan.
☐	☐	☑	Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles

Yes	No	NA	
☐	☑	☐	Stockpiles are stabilized with vegetation and/or mulch.
☑	☐	☐	Sediment control is installed at the toe of the slope.

2. Revegetation

Yes	No	NA	
☐	☐	☑	Temporary seedings and mulch have been applied to idle areas.
☐	☐	☑	4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance

Yes	No	NA	
☑	☐	☐	Stone is clean enough to effectively remove mud from vehicles.
☑	☐	☐	Installed per standards and specifications?
☑	☐	☐	Does all traffic use the stabilized entrance to enter and leave site?
☑	☐	☐	Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence

Yes	No	NA	
☑	☐	☐	Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☑	☐	☐	Joints constructed by wrapping the two ends together for continuous support.
☑	☐	☐	Fabric buried 6 inches minimum.
☑	☑	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation is 0 % of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes	No	NA	
☐	☑	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.

   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

All erosion control features were found to be in satisfactory condition following the March 7, 2018 Nor'easter. Only minor displacements to the tarps covering the soil stockpile in the parking lot were noted. It was recommended that the contractor adjust the tarp anchors where they may have loosed to form a more wind-resistant cover.

☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

The post-storm inspection of the soil pile in the parking lot showed that several tarps have been displaced. JCS has been directed to re-trap and re-anchor the tarps as soon as possible.

Excess soils from the electrical trench for the clock tower remain on-site. The soil will be re-used in the construction area in the near future.

☐ ☐ ☑ Is there residue from oil and floating substances, visible oil film, or globules or grease?
☐ ☐ ☑ All disturbance is within the limits of the approved plans.
☐ ☐ ☑ Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions
Yes No NA
☑ ☐ ☐ Is construction site litter and debris appropriately managed?
☑ ☐ ☐ Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?
☐ ☑ ☐ Is construction impacting the adjacent property?
☑ ☐ ☐ Is dust adequately controlled?

2. Temporary Stream Crossing
Yes No NA
☐ ☐ ☑ Maximum diameter pipes necessary to span creek without dredging are installed.
☐ ☐ ☑ Installed non-woven geotextile fabric beneath approaches.
☐ ☐ ☑ Is fill composed of aggregate (no earth or soil)?
☐ ☐ ☑ Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering
Yes No NA
☐ ☐ ☑ Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
☐ ☐ ☑ Clean water from upstream pool is being pumped to the downstream pool.
☐ ☐ ☑ Sediment laden water from work area is being discharged to a silt-trapping device.
☐ ☐ ☑ Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
☐ ☐ ☑ Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales
Yes No NA
☐ ☐ ☑ Installed per plan with minimum side slopes 2H:1V or flatter.
☐ ☐ ☑ Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
☐ ☐ ☑ Sediment-laden runoff directed to sediment trapping structure

CONSTRUCTION DURATION INSPECTIONS
Runoff Control Practices (continued)

4. Stone Check Dam

Yes	No	NA	
☐	☐	☑	Is channel stable? (flow is not eroding soil underneath or around the structure).
☐	☐	☑	Check is in good condition (rocks in place and no permanent pools behind the structure).
☐	☐	☑	Has accumulated sediment been removed?.

5. Rock Outlet Protection

Yes	No	NA	
☐	☐	☑	Installed per plan.
☐	☐	☑	Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles

Yes	No	NA	
☐	☑	☐	Stockpiles are stabilized with vegetation and/or mulch.
☑	☐	☐	Sediment control is installed at the toe of the slope.

2. Revegetation

Yes	No	NA	
☐	☐	☑	Temporary seedings and mulch have been applied to idle areas.
☐	☐	☑	4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance

Yes	No	NA	
☑	☐	☐	Stone is clean enough to effectively remove mud from vehicles.
☑	☐	☐	Installed per standards and specifications?
☑	☐	☐	Does all traffic use the stabilized entrance to enter and leave site?
☑	☐	☐	Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence

Yes	No	NA	
☑	☐	☐	Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☑	☐	☐	Joints constructed by wrapping the two ends together for continuous support.
☑	☐	☐	Fabric buried 6 inches minimum.
☑	☑	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation is 0 % of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes	No	NA	
☐	☑	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.
☐	☐	☑	Placed wire screen between No. 3 crushed stone and concrete blocks.
☑	☐	☐	Drainage area is 1acre or less.
☑	☐	☐	Excavated area is 900 cubic feet.
☑	☐	☐	Excavated side slopes should be 2:1.
☑	☐	☐	2" x 4" frame is constructed and structurally sound.
☑	☐	☐	Posts 3-foot maximum spacing between posts.
☑	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☑	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation 10 % of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

Cover tarps on the soil stockpile in the parking lot need to be re-adjusted. Winds have displaced them again. JCS has been advised to address this matter asap and to clean the silt traps in the storm sewer at the same time.

☑	☐	☐	Posts 3-foot maximum spacing between posts.
☑	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☑	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation 10 % of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

movement of soils from parking lot into the construction site did not take place as scheduled this week.

Inspector (print name) — **Date of Inspection**

David Keil

Qualified Professional (print name) — **Qualified Professional Signature**

The above signed acknowledges that, to the best of his/her knowledge, all information provided on the forms is accurate and complete.

Maintaining Water Quality

Yes No NA
☐ ☐ ☑ Is there an increase in turbidity causing a substantial visible contrast to natural conditions?
☐ ☐ ☑ Is there residue from oil and floating substances, visible oil film, or globules or grease?
☐ ☐ ☑ All disturbance is within the limits of the approved plans.
☐ ☐ ☑ Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions
Yes No NA
☑ ☐ ☐ Is construction site litter and debris appropriately managed?
☑ ☐ ☐ Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?
☐ ☑ ☐ Is construction impacting the adjacent property?
☑ ☐ ☐ Is dust adequately controlled?

2. Temporary Stream Crossing
Yes No NA
☐ ☐ ☑ Maximum diameter pipes necessary to span creek without dredging are installed.
☐ ☐ ☑ Installed non-woven geotextile fabric beneath approaches.
☐ ☐ ☑ Is fill composed of aggregate (no earth or soil)?
☐ ☐ ☑ Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering
Yes No NA
☐ ☐ ☑ Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
☐ ☐ ☑ Clean water from upstream pool is being pumped to the downstream pool.
☐ ☐ ☑ Sediment laden water from work area is being discharged to a silt-trapping device.
☐ ☐ ☑ Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
☐ ☐ ☑ Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales
Yes No NA
☐ ☐ ☑ Installed per plan with minimum side slopes 2H:1V or flatter.
☐ ☐ ☑ Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
☐ ☐ ☑ Sediment-laden runoff directed to sediment trapping structure

CONSTRUCTION DURATION INSPECTIONS
Runoff Control Practices (continued)

4. Stone Check Dam

Yes No NA

☐ ☐ ☑ Is channel stable? (flow is not eroding soil underneath or around the structure).
☐ ☐ ☑ Check is in good condition (rocks in place and no permanent pools behind the structure).
☐ ☐ ☑ Has accumulated sediment been removed?.

5. Rock Outlet Protection

Yes No NA

☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles

Yes No NA

☐ ☑ ☐ Stockpiles are stabilized with vegetation and/or mulch.
☑ ☐ ☐ Sediment control is installed at the toe of the slope.

2. Revegetation

Yes No NA

☐ ☐ ☑ Temporary seedings and mulch have been applied to idle areas.
☐ ☐ ☑ 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance

Yes No NA

☑ ☐ ☐ Stone is clean enough to effectively remove mud from vehicles.
☑ ☐ ☐ Installed per standards and specifications?
☑ ☐ ☐ Does all traffic use the stabilized entrance to enter and leave site?
☑ ☐ ☐ Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence

Yes No NA

☑ ☐ ☐ Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☑ ☐ ☐ Joints constructed by wrapping the two ends together for continuous support.
☑ ☐ ☐ Fabric buried 6 inches minimum.
☑ ☑ ☐ Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation is 10 % of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes	No	NA	
☐	☑	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.
☐	☐	☑	Placed wire screen between No. 3 crushed stone and concrete blocks.
☑	☐	☐	Drainage area is 1acre or less.
☑	☐	☐	Excavated area is 900 cubic feet.
☑	☐	☐	Excavated side slopes should be 2:1.
☑	☐	☐	2" x 4" frame is constructed and structurally sound.
☑	☐	☐	Posts 3-foot maximum spacing between posts.
☑	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☑	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation 10 % of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

with the soil re-use in progress, the silt fence has limited use and has been taken down in areas where the stockpile has been removed. Hay bails continue to surround the pile. Materials are being moved to areas on the construction site.

Yes No NA
☐ ☐ ☑ Installed per plan with minimum side slopes 2H:1V or flatter.
☐ ☐ ☑ Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
☐ ☐ ☑ Sediment-laden runoff directed to sediment trapping structure

CONSTRUCTION DURATION INSPECTIONS
Runoff Control Practices (continued)

4. Stone Check Dam

Yes No NA

☐ ☐ ☑ Is channel stable? (flow is not eroding soil underneath or around the structure).
☐ ☐ ☑ Check is in good condition (rocks in place and no permanent pools behind the structure).
☐ ☐ ☑ Has accumulated sediment been removed?.

5. Rock Outlet Protection

Yes No NA

☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles

Yes No NA

☐ ☑ ☐ Stockpiles are stabilized with vegetation and/or mulch.
☑ ☐ ☐ Sediment control is installed at the toe of the slope.

2. Revegetation

Yes No NA

☐ ☐ ☑ Temporary seedings and mulch have been applied to idle areas.
☐ ☐ ☑ 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance

Yes No NA

☑ ☐ ☐ Stone is clean enough to effectively remove mud from vehicles.
☑ ☐ ☐ Installed per standards and specifications?
☑ ☐ ☐ Does all traffic use the stabilized entrance to enter and leave site?
☑ ☐ ☐ Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence

Yes No NA

☐ ☑ ☐ Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☐ ☑ ☐ Joints constructed by wrapping the two ends together for continuous support.
☐ ☑ ☐ Fabric buried 6 inches minimum.
☐ ☑ ☐ Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation is 0 % of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes	No	NA	
☐	☑	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.
☐	☐	☑	Placed wire screen between No. 3 crushed stone and concrete blocks.
☑	☐	☐	Drainage area is 1acre or less.
☑	☐	☐	Excavated area is 900 cubic feet.
☑	☐	☐	Excavated side slopes should be 2:1.
☑	☐	☐	2" x 4" frame is constructed and structurally sound.
☑	☐	☐	Posts 3-foot maximum spacing between posts.
☑	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☑	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation ___% of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is 10 % of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

minor volumes of soil remain in the parking lot (estimate 2 yards of material)

The above signed acknowledges that, to the best of his/her knowledge, all information provided on the forms is accurate and complete.

Maintaining Water Quality

Yes No NA
☐ ☐ ☑ Is there an increase in turbidity causing a substantial visible contrast to natural conditions?
☐ ☐ ☑ Is there residue from oil and floating substances, visible oil film, or globules or grease?
☐ ☐ ☑ All disturbance is within the limits of the approved plans.
☐ ☐ ☑ Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions
Yes No NA
☑ ☐ ☐ Is construction site litter and debris appropriately managed?
☑ ☐ ☐ Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?
☐ ☑ ☐ Is construction impacting the adjacent property?
☑ ☐ ☐ Is dust adequately controlled?

2. Temporary Stream Crossing
Yes No NA
☐ ☐ ☑ Maximum diameter pipes necessary to span creek without dredging are installed.
☐ ☐ ☑ Installed non-woven geotextile fabric beneath approaches.
☐ ☐ ☑ Is fill composed of aggregate (no earth or soil)?
☐ ☐ ☑ Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering
Yes No NA
☐ ☐ ☑ Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
☐ ☐ ☑ Clean water from upstream pool is being pumped to the downstream pool.
☐ ☐ ☑ Sediment laden water from work area is being discharged to a silt-trapping device.
☐ ☐ ☑ Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
☐ ☐ ☑ Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales
Yes No NA
☐ ☐ ☑ Installed per plan with minimum side slopes 2H:1V or flatter.
☐ ☐ ☑ Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
☐ ☐ ☑ Sediment-laden runoff directed to sediment trapping structure

CONSTRUCTION DURATION INSPECTIONS
Runoff Control Practices (continued)

4. Stone Check Dam
Yes No NA
☐ ☐ ☑ Is channel stable? (flow is not eroding soil underneath or around the structure).
☐ ☐ ☑ Check is in good condition (rocks in place and no permanent pools behind the structure).
☐ ☐ ☑ Has accumulated sediment been removed?.

5. Rock Outlet Protection
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles
Yes No NA
☐ ☑ ☐ Stockpiles are stabilized with vegetation and/or mulch.
☑ ☐ ☐ Sediment control is installed at the toe of the slope.

2. Revegetation
Yes No NA
☐ ☐ ☑ Temporary seedings and mulch have been applied to idle areas.
☐ ☐ ☑ 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance
Yes No NA
☐ ☐ ☑ Stone is clean enough to effectively remove mud from vehicles.
☐ ☐ ☑ Installed per standards and specifications?
☐ ☐ ☑ Does all traffic use the stabilized entrance to enter and leave site?
☐ ☐ ☑ Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence
Yes No NA
☐ ☐ ☑ Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☐ ☐ ☑ Joints constructed by wrapping the two ends together for continuous support.
☐ ☐ ☑ Fabric buried 6 inches minimum.
☐ ☐ ☑ Posts are stable, fabric is tight and without rips or frayed areas.
Sediment accumulation is ___% of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes	No	NA	
☐	☑	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.
☐	☐	☑	Placed wire screen between No. 3 crushed stone and concrete blocks.
☑	☐	☐	Drainage area is 1acre or less.
☑	☐	☐	Excavated area is 900 cubic feet.
☑	☐	☐	Excavated side slopes should be 2:1.
☑	☐	☐	2" x 4" frame is constructed and structurally sound.
☑	☐	☐	Posts 3-foot maximum spacing between posts.
☑	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☑	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation ___% of design capacity.

4. Temporary Sediment Trap

Yes	No	NA	
☐	☐	☑	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☑	Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is 25 % of design capacity.

5. Temporary Sediment Basin

Yes	No	NA	
☐	☐	☑	Basin and outlet structure constructed per the approved plan.
☐	☐	☑	Basin side slopes are stabilized with seed/mulch.
☐	☐	☑	Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:

Yes No NA
☐ ☐ ☑ Is there an increase in turbidity causing a substantial visible contrast to natural conditions?
☐ ☐ ☑ Is there residue from oil and floating substances, visible oil film, or globules or grease?
☐ ☐ ☑ All disturbance is within the limits of the approved plans.
☐ ☐ ☑ Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions
Yes No NA
☑ ☐ ☐ Is construction site litter and debris appropriately managed?
☑ ☐ ☐ Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?
☐ ☑ ☐ Is construction impacting the adjacent property?
☑ ☐ ☐ Is dust adequately controlled?

2. Temporary Stream Crossing
Yes No NA
☐ ☐ ☑ Maximum diameter pipes necessary to span creek without dredging are installed.
☐ ☐ ☑ Installed non-woven geotextile fabric beneath approaches.
☐ ☐ ☑ Is fill composed of aggregate (no earth or soil)?
☐ ☐ ☑ Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering
Yes No NA
☐ ☐ ☑ Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
☐ ☐ ☑ Clean water from upstream pool is being pumped to the downstream pool.
☐ ☐ ☑ Sediment laden water from work area is being discharged to a silt-trapping device.
☐ ☐ ☑ Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
☐ ☐ ☑ Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales
Yes No NA
☐ ☐ ☑ Installed per plan with minimum side slopes 2H:1V or flatter.
☐ ☐ ☑ Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
☐ ☐ ☑ Sediment-laden runoff directed to sediment trapping structure

CONSTRUCTION DURATION INSPECTIONS
Runoff Control Practices (continued)

4. Stone Check Dam
Yes No NA
☐ ☐ ☑ Is channel stable? (flow is not eroding soil underneath or around the structure).
☐ ☐ ☑ Check is in good condition (rocks in place and no permanent pools behind the structure).
☐ ☐ ☑ Has accumulated sediment been removed?.

5. Rock Outlet Protection
Yes No NA
☐ ☐ ☑ Installed per plan.
☐ ☐ ☑ Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles
Yes No NA
☐ ☑ ☐ Stockpiles are stabilized with vegetation and/or mulch.
☐ ☐ ☑ Sediment control is installed at the toe of the slope.

2. Revegetation
Yes No NA
☐ ☐ ☑ Temporary seedings and mulch have been applied to idle areas.
☐ ☐ ☑ 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Stabilized Construction Entrance
Yes No NA
☐ ☐ ☑ Stone is clean enough to effectively remove mud from vehicles.
☐ ☐ ☑ Installed per standards and specifications?
☐ ☐ ☑ Does all traffic use the stabilized entrance to enter and leave site?
☐ ☐ ☑ Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence
Yes No NA
☐ ☐ ☑ Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
☐ ☐ ☑ Joints constructed by wrapping the two ends together for continuous support.
☐ ☐ ☑ Fabric buried 6 inches minimum.
☐ ☐ ☑ Posts are stable, fabric is tight and without rips or frayed areas.
Sediment accumulation is 0 % of design capacity.

Sediment Control Practices (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes No NA

☐ ☑ ☐ Installed concrete blocks lengthwise so open ends face outward, not upward.
☐ ☐ ☑ Placed wire screen between No. 3 crushed stone and concrete blocks.
☐ ☐ ☑ Drainage area is 1acre or less.
☐ ☐ ☑ Excavated area is 900 cubic feet.
☐ ☐ ☑ Excavated side slopes should be 2:1.
☐ ☐ ☑ 2" x 4" frame is constructed and structurally sound.
☐ ☐ ☑ Posts 3-foot maximum spacing between posts.
☐ ☐ ☑ Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☐ ☐ ☑ Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation ___% of design capacity.

4. Temporary Sediment Trap

Yes No NA

☐ ☐ ☑ Outlet structure is constructed per the approved plan or drawing.
☐ ☐ ☑ Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is 25 % of design capacity.

5. Temporary Sediment Basin

Yes No NA

☐ ☐ ☑ Basin and outlet structure constructed per the approved plan.
☐ ☐ ☑ Basin side slopes are stabilized with seed/mulch.
☐ ☐ ☑ Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: Cloudy/Slight Sun and wind** **Humidity**

Date: July 19, 2017 **Time: 0700** **Temp: 80-90** °F High Med Low

Name of Project: Trump Golf Links **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Trump Construction

Active Site Work Areas: Sonotube installation.

Site Work Progress: An approximately 5' x 5' x 6' deep hole was dug for the installation of a Sonotube Security Camera towards the northeastern bounds of the Trump Golf Links golf course. Soil from the camera location (cover and shaping) was placed separately (cover material placed in one stockpile; shaping material in a separate stockpile) and on top of plywood. In addition a 2' x 60' x 2' trench was cut from the Sonotube location to a nearby "hotbox" in order to power the camera.

The shaping layer soil was marked by a demarcation layer prior to stockpiling. The orange snow sheeting was cut out with a box cutter and the shaping layer was dug out. To avoid hitting a fiber optic electrical line, the area was hand dug with shovels until the line was located.

The two separate stockpiles along the Sonotube location and trench (cover and shaping) were covered with tarps and anchored with surrounding rocks after soil disturbance was complete.

Remarks: Two locations are proposed to have the security cameras installed. The first location is outlined in today`s report in the north east outer limits of the golf course. The second location is proposed to be towards the north western limits of the golf course property and will be solar powered rather than powered by the "hotbox".

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W (TH) F SA SU **Weather: Cloudy/Slight Sun and wind** **Humidity**

Date: July 20, 2017 **Time: 0700** **Temp: 90-100** °F High Med (Low)

Name of Project: Trump Golf Links **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Trump Construction

Active Site Work Areas: Sonotube Installation.

Site Work Progress: Two conduit PVC 40 pipes (1" dia.) were placed in the trench from the previous day (roughly 60' long). Pipes were spread out in the trench as to reduce interference from each line.

The pipes were fitted with elbows into the "hotbox" and had caution tape placed over them. The pipes were then covered with surrounding shaping layer material and the demarcation boundary re-established. The trench was backfilled with surrounding cover layer material.

Caution tape was also placed on top of the fiber optic cable as a demarcation barrier/caution warning to future excavators.

Remarks: Shaping layer material was covered overnight and anchored with a tarp to eliminate disturbance.

Date: Trump Golf Links **Time: 0700** **Temp: 90-100** °F High Med Low

Name of Project: Trump Golf Links **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS, Triple G

Active Site Work Areas: Removal and stockpile of Cover layer in proposed building location

Site Work Progress: Cover layer soil was excavated within the building location. Soil was stockpiled on the construction site at first until approval by DEC was met. Once approved, soil was transferred to the back parking lot on top of clear polyethylene sheeting.

Remarks: Soil was scanned with a PID after being transferred off site. No detection above regulatory limits was found. Careful attention by the excavator was paid as to not cross contaminate the cover with shaping. Clean fill manifests were supposedly brought in for the soil.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: Sun and Slight wind** **Humidity**

Date: July 25, 2017 **Time: 0700** **Temp: 70-80** °F High Med Low

Name of Project: Trump Golf Links **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS, Triple G

Active Site Work Areas: Excavation of existing underground electrical conduits, Trenching of new electrical conduits, spreading of Aeration core piles into non-play areas.

Site Work Progress: Roughly 100 ft. of underground electrical conduit was exposed from the eastern trench to the current clubhouse/office building in the construction site. A similar trench was excavated along the outer limits of the current conduit trench, with the exception of the eastern side which expanded over the former asphalt golf cart roadway. Two parallel PVC pipes (4" dia.) for the electrical conduits were then laid in the outer trench. Silt fencing along the lower elevation limits was trenched as to have 6" of fencing in the ground, preventing erosion/ runoff. The upgradient area of the aeration piles was excavated and aeration soil was distributed behind Hole 18 in a non-playing area of the golf course.

Remarks: Water accumulated towards the center of the construction area from the previous rain event. JCS proposes to dig the soil with the water and see if there is recharge. If recharge occurs-against expectation, water will be pumped and containerized in advance of off-site disposal at an approved facility.

No detection from the down-wind gas monitor was seen, with the exception of % oxygen which peaked at 21.7% (up from 20.9). PID readings were found from 10:00 to 10:30 am around the perimeter of the excavation at 0.8 ppm (average) and 2.5 ppm (peak). Readings inside the trailer were found 0.0 ppm and the PID was recalibrated inside the trailer. No odor was observed on site and readings returned to 0.0 ppm after 10:30 am; humidity may have affected PID. Silt fencing was installed between the aeration core and hole 18.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T (W) TH F SA SU **Weather: Sun and Slight wind** **Humidity**

Date: July 26, 2017 **Time: 0700** **Temp: 70-80** °F High Med (Low)

Name of Project: Trump Golf Links **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS, Triple G, Trump Construction

Active Site Work Areas: Accumulation of trenching and cover soil stockpile, Trenching of proposed electrical conduits, Aeration pile excavation and stockpiling in non-play area behind Hole 18.

Site Work Progress: Brown fine-course sand from the proposed conduit trench at the southern end of the construction area and soil from the cover layer stockpile was moved to the north-eastern end. PVC 40 (4" dia.) piping was installed along the eastern and southern reaches of the conduit trench. Roughly 4 – 6" of excavated soil (shaping and cover layer materials) around the trench was placed on top of the conduit piping and electrical warning label tape was placed on top. Aeration core stockpiling continued behind Hole 18. Roughly 1/4 of the pile up gradient of the aeration pile was hauled with two alternating John Deere tractors piling roughly 3' high, silt fenced at the stockpile location. Trenching for new conduit moved roughly 10' south into asphalt. Asphalt stockpile moved north roughly 25' (see Photo #3).

Remarks: Rain water accumulation from the previous storm event was trenched to act as a retention basin. Bulk of the water mass either percolated through soil or evaporated (no recharge). Fencing towards the southern part of the construction area was offset roughly 10' in order to follow site construction plans and allow for trenching next to office building. Silt fencing in this area was reinstalled on the outer temporary fencing side (asphalt blocking inside) and anchored with sandbags.

No detections from the PID or gas monitor were encountered throughout the day, with the exception of oxygen at 20.5% (down from 20.9).

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W (TH) F SA SU **Weather: Sun and Slight wind** **Humidity**

Date: July 27, 2017 Time: 0700 **Temp: 70-80 °F** (High) Med Low

Name of Project: Trump Golf Links **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS, Triple G

Active Site Work Areas: Stockpiling of soil, Trenching and installation of new electrical conduits, Pile driving preparation.

Site Work Progress: New electrical conduit piping in the vicinity of the existing club house building was completed. Warning label tape was placed on top of the 40 PVC (4" dia.) electrical conduit. Trench was later backfilled with original cover material. Electrical wiring was installed through the conduit piping. Shaping layer soil was stockpiled to roughly 20'. Sediment and erosion control plans are proposed to be installed for the stockpile (silt fence, tarped, etc.) once the pile is completely gathered. The "Septic box" was prepared to be relocated away from pile driving activities (disconnection of PVC piping and wiring). Pile driving locations were leveled to grade as needed and marked out. Soil from the piles was gray fine to course sand with rock fragments and moved next to shaping layer stockpile.

Remarks: Rain water accumulation from the previous storm event lowered about 7-9". High humidity throughout the day resulting in a "spotty" PID; readings fluctuated from 3-10 ppm on and off site. No gas detections were made throughout the day. Conduit piping openings were covered with duct tape to prevent water infiltration. PVC 40 (3" dia.) drainage lines into the septic tank were broken when attempting to locate the lines. Water accumulation from the line was drained back into the septic box. Repairs to be made.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH (F) SA SU **Weather: Sun and heavy fog** **Humidity**

Date: July 28, 2017 Time: 0700 **Temp: 70-80** °F (High) Med Low

Name of Project: Trump Golf Links **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS, Triple G, Trump Construction

Active Site Work Areas: Construction site for proposed new Club House; soil stockpiling in parking area.
Activities included: Grading in construction area; stockpiling of shaping material in the parking area with erosion controls; stockpiling of co-mingled material with erosion controls; stockpiling of aeration cores with controls and removal of septic box.

Site Work Progress: Shaping layer soil was stockpiled in the back parking lot from grading activities taking place to the southeast. Sheeting and silt fencing was installed prior to soil stocking. Sheeting was placed over the concrete curb with silt fencing underneath and anchored with large rocks on top. The stock pile lies next to the cover layer material pile with no observable cross-contamination or co-mingling of materials. Stockpiles are to be covered with a tarp, anchored with sand bags, and have hay bales surrounding them once completed. Drainage and erosion controls are in place. Brown shaping soil derived from "Septic" box removal was added to the stockpile on the construction site. The stockpile will have a silt fence surrounding it and either tarping or seeding once stockpiling is complete. Roughly half of the aeration core material has been relocated to the nearby placement location. Odors are very potent in the aeration pile location and aeration stockpile area. A PID peak reading 12.7 ppm (Likely due to humidity).

Remarks: Very high humidity and heavy fog; PID not working properly even with hydrophobic filter. Some rain water accumulation from the previous storm event remains in the construction area. PID is calibrated every morning within the JCS construction trailer with Isobutylene (100 ppm). Trevor from Woodard and Curran recommended using a newer model such as the MiniRAE 3000, as it is less sensitive to moisture. Large boulders (4' dia.) were encountered during the grading activities. These will be segregated and stockpiled in the construction area until removed from site.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: Sun, slight wind** **Humidity**

Date: July 31, 2017 **Time: 0700** High Med Low

Temp: 70-80 °F

Name of Project: Trump Golf Links **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS Construction, Triple G, Trump Construction, GZA Environmental, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Club House

Activities included: PDA Test Pile Driving, Shaping layer stockpiling in construction area; Asphalt stockpiling away from backfill materials; stockpiling of aeration cores with controls and removal of septic box.

Site Work Progress: Shaping layer on the eastern bounds of the construction site was stockpiled as depicted in Photo # 4. Soil in this area had trace amounts of construction material such as rebar, blasting rope/materials and scrap metal. These types of materials were previously noted in a meeting from July 17, 2017 that they may be encountered. A water tight roll off was ordered to store any municipal solid waste that may be encountered. The shaping layer stockpile was spread-out (lowered) so as not to exceed the height of the construction fence and to minimize to migration of sediments that could potentially be transported by high winds.

PDA test piles were installed to a depth of 70'. Steel beams were roughly 40' length wise and were welded throughout the interlocking joints. In-between welds, the breathing zone area was scanned with a PID MiniRAE 2000 showing 0.0 ppm for all piles. For additional safety, a MAXX AIR PRO portable fan was set up as an engineering control to vent any gases arising from the piles.

Leftover asphalt from new electrical conduit trenching activities was stockpiled from stockpiled soil. Asphalt is being temporary staged prior to off-site disposal.

Aeration core stockpiling continued with about half of the pile remaining. Some odors were detected but a scan on the area with the PID/gas detectors indicated no sustained readings. The PID MiniRAE 2000 showed 0.0 ppm. Test Drive Piling began with gas monitoring and engineering controls throughout the process.

Remarks: Low humidity; PID working properly. PID readings of about 0.7 ppm were encountered during disturbance of the shaping layer with construction debris around 13:50 to 14:00. PID readings were not detected throughout the day. A newer model such as the MiniRAE 3000 was proposed to be ordered for better PID readings. Gas monitoring indicated that oxygen sporadically increased to 23.0% (up from 20.9%).

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU (T circled)

Weather: Sun, slight wind

Humidity High Med Low (Med circled)

Date: August 1, 2017 Time: 0700

Temp: 70-85 °F

Name of Project: Trump Golf Links **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS Construction, Triple G, Trump Construction, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Club House

Activities included: Pile driving and welding of steel beams. Soil and erosion control plans for co-mingled soil stockpile on site. Aeration core stock piling

Site Work Progress:

Twelve piles were driven to a depth of about 35'. Of those twelve, seven were welded and driven to about 70'. Steel beams were roughly 40' length wise and were welded between the interlocking wedge plates of each beam and across the flange. Before welding, the piles were monitored at ground surface elevation (without ventilation fan) with a 4-gas MiniRAE Meter. If no detections were found above the Lower Explosive Limit (LEL) for methane gas (determined by OSHA), welding was deemed safe and a Maxx Air Pro industrial fan was placed next to the base of the beam and turned on for additional safety. Industrial fire safety equipment (fire extinguisher) is present near driving piles.

A silt fence was installed around the co-mingled soil stockpile and trenched (6" of fence in the ground). Tarping/seeding is proposed to be placed on top of the pile within the week.

Aeration core stockpiling continued. About of 1/3 of the pile remains.

Remarks: PID hits were detected during marking activities (spray paint). Gas meter detections were found for carbon monoxide (32 ppm peak) during welding activities (attributed to exhaust fumes from the welder itself). Oxygen content was found to increase to 21.4% (up from 20.9%) from 12:00 to 13:00.

Site Contractors: JCS Construction, Triple G, Trump Construction, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Club House

Activities included: Pile driving and welding of steel beams. Aeration core stock piling.

Site Work Progress:

Twelve piles were driven to a depth of about 35'. Of those twelve, seven were welded and driven to about 70'. Steel beams were roughly 40' length wise and were welded between the interlocking wedge plates of each beam and across the flange. Before welding, the piles were monitored with the four-gas meter as per protocol. The ventilation fan was not in use during the monitoring. During welding activities that fan was utilized for an added measure of safety.The 4-gas MiniRAE Meter was mounted to a PVC pipe and placed next to the pile during all welding and driving. Industrial fire safety equipment (fire extinguisher) is present near driving piles.

Remarks: Grindings and cuttings from beams tended to hit the 4-gas monitor. To protect the instrument, the meter was placed in a protected position with the tubing extending into the pile hole. The gas monitor was then observed from a safe distance with a set of binoculars. Hydrogen sulfide and LEL were found in low concentrations briefly when grindings hit the monitor of 0.8 ppm and 2% (Not high enough to trigger alarm systems).

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W (TH) F SA SU **Weather: Sunny, slightly cloudy** **Humidity**

Date: August 3, 2017 Time: 0700 **Temp: 70-85** °F (High) Med Low

Name of Project: Trump Golf Links **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS Construction, Triple G, Trump Construction, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Club House, Aeration core piling behind Hole 18

Activities included: Pile driving and welding of steel beams. Aeration core stock piling.

Site Work Progress:

Nine piles were driven to depth a depth of roughly 40' and four piles were driven to roughly 70'. Before welding, the piles were checked at the inlet (ground surface elevation) with a 4-gas MiniRAE Meter. If no alarms were triggered by the meter, an industrial fan was turned on, pointed towards the pile location, and welding was conducted. The meter alarm is triggered if concentrations of the carbon monoxide, hydrogen sulfide, oxygen, and methane are above OSHA exposure limits. The 4-gas MiniRAE Meter was mounted to a PVC pipe and placed next to the pile during all welding and driving. A piece of construction debris was laid on top of the meter to prevent damage from welding activities. A fire extinguisher was present near driving piles.

Aeration core stockpile relocation was completed and grass seeding was placed over the old stockpile location. The new stockpile location (Behind Hole 18) was roughly 8' high and 100' in length.

Small asphalt pile still remains on-site, bulk majority was disposed of off-site when the asphalt was originally broken up.

Remarks: No alarms were triggered with the exception of carbon monoxide early in the day. Closer investigation of OSHA Permissible Exposure Limits (PEL) indicated that 200 ppm was the recommended PEL for carbon monoxide. Inspection of the meter determined that the PEL was actually set to the Time Weighted Average (TWA) of 35 ppm. The 4-gas meter alarm was thus changed to the correct 200 ppm alarm limit for carbon monoxide. No alarm triggers occurred after this. Hydrogen sulfide was detected at a peak 1.2 ppm during the pile driving, below all OSHA exposure limits.

Site Contractors: JCS Construction, Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Club House

Activities included: Pile driving and welding of steel beams.

Site Work Progress:

Nine piles were driven to their completion depths of roughly 70'. Before welding, the piles were checked at the inlet (ground surface elevation) with a 4-gas MiniRAE Meter. The 4-gas MiniRAE Meter was mounted to a PVC pipe and placed next to the pile during welding and pile driving. The 4-gas MiniRAE Meter was calibrated in the field successfully. A piece of construction debris was placed on top of the meter to prevent damage from welding activities. A fire extinguisher was present near pile driving and welding activities. The meter alarm is triggered if concentrations of the carbon monoxide, hydrogen sulfide, oxygen, and methane are above OSHA exposure limits; the alarm was not triggered for these four gases during today's activities. Since no alarms were triggered by the meter, an explosion-proof? industrial fan was turned on, pointed toward the pile location, and welding was conducted.

Approximately xx tons (truckloads?) of cover material was excavated and transported to its dedicated stockpile area. Approximately yy tons (truckloads?) of shaping material was excavated and transported to its dedicated stockpile area.

Remarks: Thunderstorms occurred early in the morning in the morning from 7:00 to 9:30, no piles were driven during this time. After the thunderstorms passed, conditions were sunny with some clouds. Large pools of water (from the storm event) remained on site. Silt fencing was inspected for the cover and shaping material stockpiles and the perimeter of the construction site with no soil visibly penetrating the haybale barriers.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: Rain, light to heavy** **Humidity**

Date: August 7, 2017 Time: 0700 **Temp: 70 °F** High Med Low

Name of Project: Trump Golf Links – Ferry Point Park Municipality: Bronx, NY Job No: 17002426A

Site Contractors: JCS Construction, Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams

Site Work Progress:

Four piles were driven to their completion depths of approximately 75 feet, three piles were driven to their intermediate depths of approximately 40 feet, and six completed pilings were cut to grade by the welder. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas MiniRAE Meter. The 4-gas MiniRAE Meter was mounted to a PVC pipe and placed next to the pile during welding and pile driving. A piece of construction debris was placed on top of the meter to prevent damage from welding activities. A fire extinguisher was present near pile driving and welding activities and a fan was turned on, aimed at the active piling. The meter alarms is triggered if concentrations of carbon monoxide, hydrogen sulfide, oxygen and methane (as Lower Explosive Limit) are above OSHA exposure limits; the alarm was not triggered for these four gases during today's activities.

Remarks: Rain was light to heavy for this workday, and site activities (including pile driving and cutting) concluded at 1400. Silt fencing and haybales were observed for the stockpiles and the perimeter of the construction site with no soil visibly penetrating the barriers.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: Sunny and slightly cloudy** **Humidity**

Date: August 9, 2017 Time: 0700 High Med Low

Temp: 70 - 80 °F

Name of Project: Trump Golf Links – Ferry Point Park Municipality: Bronx, NY Job No: 17002426A

Site Contractors: JCS Construction, Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams

Site Work Progress:

Seven piles were driven to their completion depths of approximately 75 feet and three completed pilings were cut to grade by the welder. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas Q RAE Meter II. The 4-gas Q RAE II Meter was mounted to a PVC pipe and placed next to the pile during welding and pile driving. A piece of construction debris was placed on top of the meter to prevent damage from welding activities. A fire extinguisher was present near pile driving and welding activities and a fan was turned on, aimed at the active piling. The meter alarms is set to trigger if concentrations of carbon monoxide, hydrogen sulfide, oxygen and methane (as Lower Explosive Limit) are above OSHA exposure limits; the alarm was not triggered for these four gases or on the PID during today's activities.

Remarks: The Q RAE II gas meter and he MiniRAE 2000 PID were calibrated and used prior to welding and pile driving as an added measure of safety. A new Q RAE III gas meter was delivered from Pine Environmental LLC and switched with the old Q RAE II meter at 14:30. The new meter was calibrated on site and placed with the same setup as the Q RAE II (PVC joint mounted with cover for protection).

Site Contractors: JCS Construction, Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams

Site Work Progress:

Ten piles were driven to their completion depths of approximately 75 feet. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas Q RAE Meter III. The 4-gas Q RAE III Meter was used to scan the piles prior to welding and placed next to the pile if gas concentrations didn`t trigger any alarms. A piece of construction debris was placed on top of the meter to prevent damage from welding activities. A fire extinguisher was present near pile driving and welding activities and a fan was used to ventilate the area during welding/driving. The meter alarms is triggered if concentrations of carbon monoxide, hydrogen sulfide, oxygen and methane (as Lower Explosive Limit) are above OSHA exposure limits; the alarm was not triggered for these four gases or on the PID during today's activities.

Remarks: The survey markings for pile P-213 couldn`t be located, measurements were estimated by Byan`s Quality Plus personnel. No utilities were hit during the driving. Piles that were cut to grade by the welder were stockpiled next to the asphalt stockpile location.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: Sunny, cloudy later in day** **Humidity**

Date: August 14, 2017 Time: 0700 – 17:00 High Med Low

Temp: 70 - 85 °F

Name of Project: Trump Golf Links – Ferry Point Park Municipality: Bronx, NY Job No: 17002426A

Site Contractors: JCS Construction, Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams, concrete perimeter preparation

Site Work Progress:

Ten piles were driven to their completion depths of approximately 75 feet. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas Q RAE Meter III. A piece of construction debris was placed on top of the meter to prevent damage from welding activities. A fire extinguisher was present near pile driving and welding activities and a fan was turned on, aimed at the active piling during welding. The meter alarms are triggered if concentrations of carbon monoxide, hydrogen sulfide, oxygen and methane (as Lower Explosive Limit) are above OSHA exposure limits. The alarm was triggered for pile P-155, with 51% LEL for methane towards the end of the work day. This pile was driven down to roughly 37' and no welding was done on it. The pile was labeled "CAUTION METHANE" and welders were informed not to work on it. The pile will be rescanned with the 4-gas meter before any further work resumes. Work will only be allowed if safe conditions are re-established.

Remarks: A water line leading into the temporary clubhouse building was cracked during trenching for new clubhouse concrete perimeter. Water was determined to be clean municipal water which was pumped onto a grassy area next to the temporary clubhouse on-site. The leak has been fixed.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: Sunny and slightly cloudy, Rainy later in day** **Humidity**

Date: August 15, 2017 Time: 0700 – 16:45 High Med Low

Temp: 70 - 80 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS Construction, Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams, concrete base preparation

Site Work Progress:

Two piles were driven to their completion depths of approximately 75 feet, ten piles were cut to grade level, and 2 piles were driven halfway to the completion depth of approximately 37'. Before welding/cutting, the piles were monitored at the inlet (ground surface elevation) with a 4-gas Q RAE Meter III. Welding is not permitted when combustible gases are present. As an added measure of safety, any space between the pile and the surrounding soils was filled and foot-tamped to eliminate any open pathways. In addition—as an engineering control, the fan was used to ventilate the immediate area and to dissipate any potential vapors. A fire extinguisher was also present. The meter alarms are set to trigger if concentrations of carbon monoxide, hydrogen sulfide, oxygen and methane (as Lower Explosive Limit) are measured above OSHA exposure limits. At two pile locations, the meter was triggered for LEL methane at pile P-155 (51%) and P-154 (13%). The space between the piles were filled with surrounding co-mingled soil and the industrial fan was used to ventilate the work zone. No LEL (0%) was detected after filling and ventilation. A PID MiniRAE 2000 is being used as backup to the 4-gas meter.

Remarks: The JUNTAN pile driver developed minor hydraulic leaks which led to a stoppage of work until the problem was fixed. Leaking hydraulic fluid was captured in a 5-gallon bucket and stored on-site. The hydraulic leak was quickly fixed, however rain later in the day prevented welding from resuming.

The asphalt and construction debris stockpiles were loaded on to a disposal truck and transported off-site to a disposal facility. No leftover debris was observed on the former stockpile soil location.

Site Contractors: JCS Construction, Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams, concrete base preparation

Site Work Progress:

11 piles were driven to their completion depths of approximately 75 feet and 2 piles were driven to halfway depth of approximately 37'. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas Q RAE Meter III. Although no gas detections were recorded, an industrial fan was used to ventilate the work zone. A fire extinguisher was also present near pile driving and welding activities. The meter alarms are set to trigger if concentrations of carbon monoxide, hydrogen sulfide, oxygen and methane (as Lower Explosive Limit) are measured above OSHA exposure limits. The meter was not triggered for any gases during the course of the work day. A PID MiniRAE 2000 is being used as backup to the 4-gas meter.

Remarks:

Boulders roughly 3-4' in diameter were encountered at pile P-95. An excavator was used to remove the boulders which were approximately four feet below grade. No municipal solid waste was encountered; trace amounts of construction debris was observed in the shaping soil. Debris is being stockpiled for proper disposal.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W (TH) F SA SU **Weather: Sunny and slightly cloudy** **Humidity**

Date: August 16, 2017 Time: 0700 – 17:00 High (Med) Low

Temp: 70 - 85 °F

Name of Project: Trump Golf Links – Ferry Point Park Municipality: Bronx, NY Job No: 17002426A

Site Contractors: Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams, concrete base preparation, soil and erosion inspection

Site Work Progress:

10 piles were driven to their completion depths of approximately 70 feet and 2 piles were driven to halfway completion depth of roughly 37'. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas Q RAE Meter III. A piece of construction debris was placed on top of the meter to prevent damage from welding activities. A fire extinguisher was present near pile driving and welding activities and a fan was turned on, aimed at the active piling during welding. The meter alarms are triggered if concentrations of carbon monoxide, hydrogen sulfide, oxygen and methane (as Lower Explosive Limit) are above OSHA exposure limits; the meter was triggered for pile P-80 for methane LEL at 99%. The pile was at it`s completion depth of 70 feet when the gas was detected. An odor was present at the pile and surrounding co-mingled soil was filled into the inlet. The inlet was then rescanned reading 0% for methane LEL. Later in the day the pile was rescanned showing 5% LEL (below the alarm trigger) and was labeled to have the fan turned on prior to cutting. The pile was not cut today. A PID MiniRAE 2000 was on site as backup if the 4-gas meter wasn`t working properly.

Remarks: Boulders roughly 3-4' in diameter were hit on pile P-80. An excavator was brought in and the boulders were dug out to roughly 4' below ground surface. No municipal solid waste was encountered; trace amounts of construction debris was observed in the shaping soil.

The area where leakage was seen on August 15 from the JUNTAN pile driver was inspected. Some visual staining was present (roughly 5 gallons of soil). JCS agreed to have the soil placed into buckets and set aside until later disposed of.

JCS was notified to hydro seed the on-site co-mingled soil stockpile. Currently the Triple-G is scheduling the hydro seeder to arrive on-site as soon as possible.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: Sunny and Cloudy** **Wind: Medium** **Humidity**

Date: August 22, 2017 Time: 0700 – 15:30 **Temp: 70 - 95** °F High Med Low

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams, concrete base preparation, Soil and erosion inspection

Site Work Progress:

9 piles were driven to their completion depths of approximately 70 feet. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas Q RAE Meter III. No alarm triggers were activated at any time and all safety measures (ventilation fan, fire extinguisher etc) were in-place during the operations.

Remarks: Piles P-110 and P-105 had methane's level detected of 5% and 6% (below alarm limit). The inlets of the piles were covered in surrounding co-mingled soil for safety. No readings were detected after piles were covered.

Areas were trenched roughly 10 ft. deeper for certain piles per specs for concrete slabs. No municipal solid waste observed.

Currently the co-mingled pile is now scheduled to be tarped and anchored with sandbags rather than hydro seeding. Tarping is expected to take place on August 23, 2017. Storm water inlet drains were covered with sediment erosion catch basins all around the parking lot construction area.

Soils previously stained with oil from the pile driver leakage was disposed of properly.

Site Contractors: Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams, concrete base preparation, Soil and erosion inspection

Site Work Progress:

10 piles were driven to their completion depths of approximately 70 feet. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas Q RAE Meter III. The meter was not triggered for any alarms over OSHA standards.

Remarks: Some of the tarping from the parking lot stockpiles was slightly displaced from the high winds/rain in yesterday's storm event. There was no visual evidence that any of the soils had been disturbed or had been blown or washed away. The JCS foreman was informed that the tarping needed to be re-secured. The tarps were replaced over the stockpiles and additional haybales were staged on the downslope side of the stockpile.

Pile P-73 had methane's level detected 3% (below alarm limit). Shortly after measuring P-73, a reading was not observed (0%). No action was needed.

The co-mingled pile was tarped over and anchored with sandbags rather than hydro seeded.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W (TH) F SA SU **Weather: Sunny and Cloudy** **Wind: Medium** **Humidity**

Date: August 24, 2017 Time: 0700 – 17:00 High (Med) Low

Temp: 70 - 85 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams, concrete base preparation, Soil and erosion inspection

Site Work Progress:

11 piles were driven to their completion depths of approximately 70 feet. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas Q RAE Meter III. The meter was not triggered for any alarms over OSHA standards. A PID MiniRAE 2000 was on site as backup.

Remarks: The silt fence on the construction side of the co-mingled stockpile was knocked over during pile driving set up. The foreman was notified and a new silt fence will be put in.

An obstruction (large boulders) was hit on P-59. Excavator called in to move boulders and continue driving.

No methane readings were detected throughout the day.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: Cloudy and Rainy** **Wind: Medium** **Humidity**

Date: August 29, 2017 Time: 0700 – 1445 **Temp: 70 - 80** °F High Med Low

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams, concrete base preparation

Site Work Progress:

2 piles were driven to their completion depths of approximately 75 feet, 6 piles were driven halfway to the completion depth of roughly 37'. Two (2) piles were driven to roughly 82'. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas Q RAE Meter III. The meter was not triggered for any alarms over OSHA standards. A PID MiniRAE 2000 is used as a backup if the 4-gas meter.

Remarks: The silt fence on the construction side of the co-mingled stockpile was taken down to make room for pile driving towards the northern bounds of the pile area. The silt fence will be re-established immediately following the pile-driving; despite rainy conditions, no sediment was observed to migrate or slump.

Rain towards the end of the day prevented welding, bottoms (40' depth piles) were driven instead.

No methane readings were detected throughout the day.

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams, concrete base preparation

Site Work Progress:

9 piles were driven to their completion depths of approximately 75 feet and 1 pile was driven halfway to the completion depth of approximately 37'. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas Q RAE Meter III. The meter was triggered for one (1) pile over OSHA Lower Explosive Limit (LEL) standards of 10%. A PID MiniRAE2000 is used as a backup.

Remarks: Pile P-33 was the only pile to trigger an alarm for methane (at 23%). The alarm sounded at the pile completion depth of 70'. The gap between the pile and the surrounding soil was filled with co-mingled soil material to eliminate a gas migration pathway. No readings (0%) were detected after the space was closed. The fan was moved closer to the pile to increase ventilation in the immediate vicinity of the work zone.

Pile P-47 hit refusal at 50 feet below grade. A sister pile (P-47S) was installed immediately to the southeast. P-47S also hit refusal at 50 feet below grade.

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams, concrete base preparation

Site Work Progress:

7 piles were driven to their completion depths of approximately 75 feet. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas Q RAE Meter III. The meter was triggered for one (1) pile over OSHA Lower Explosive Limit (LEL) standards of 10%. Mitigation measures were taken to eliminate the vapor migration pathway. A PID MiniRAE2000 was used as a backup to the 4-gas meter.

Remarks: Pile P-38 was the only pile to trigger the alarm limits for methane at completion depth (~70'). A reading of 17% of the LEL was measured. The void space between the pile and surrounding soil was filled with co-mingled soil. No readings (0%) were detected after the gap was closed. The fan was re-oriented to maximize ventilation.

Additional pile driving beyond the 80 foot level--remains pending at the piles that will support the future access ramp to the clubhouse located on the north side of the building. The engineer of record will determine if further driving is necessary. When that decision is made, appropriate measures will be enacted.

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G, Bryans Quality Plus Pile Driving

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Pile driving and welding of steel beams, concrete base preparation

Site Work Progress:

8 piles were driven to their completion depths of approximately 75 feet. Two (2) piles were driven to 82'. Three (3) piles were driven to 40'. Before welding/cutting, the piles were checked at the inlet (ground surface elevation) with a 4-gas Q RAE Meter III. The meter was triggered for one (1) pile over OSHA Lower Explosive Limit (LEL) standards for methane. Mitigation measures were taken before welding was allowed to continue. A PID MiniRAE2000 is used as a backup to the 4-gas meter.

Remarks:

Piles driven past 80' were located in the northern end of the clubhouse building for the proposed ramp for heavy vehicles. Cement that was poured yesterday August 31, 2017 has cured. Some soil from the co-mingled soil stockpile on-site was used to backfill the outer bounds of the cement.

Pile P-16 was found to have high levels of methane (91%) after being driven 40'. The industrial fan was turned on and pointed towards the pile. Soil cuttings were placed and tamped around the pile. No methane detections were recorded and work was allowed to proceed. The 4-gas meter was placed adjacent to the pile. The alarm was not triggered during welding.

Temp: 70 - 85 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Co-mingled on-site soil backfill, concrete base preparation

Site Work Progress:

Plywood forms and reinforcing bars were placed on the northern side of the new clubhouse. The forms are to be filled with concrete. Co-mingled soil was backfilled and compacted between the plywood forms and perimeter of the forms. Approximately 150 yd^3 of soil was backfilled from the co-mingled on-site pile. The parking lot stockpiles remain covered and untouched, however soils from the stockpile may be used on the clubhouse construction site if additional material is required.

Remarks:

A new 4-gas meter was ordered from Pine Environmental to replace the original meter whose sensors were beginning to wear. The new QRAE II delivered on-site had sensors that worked properly except for LEL. A new 4-gas meter will be delivered tomorrow.

Soil was periodically scanned throughout the day with a PID. The perimeter of the construction site was also scanned with PID throughout the day. No detections were found above ambient levels throughout the day from either the PID or the 4-gas meter.

Site Work Progress:

Plywood forms and reinforcing bars continue to be placed on the northern side of the clubhouse. Forms will be filled with concrete. Co-mingled soil was backfilled and compacted between the plywood forms and perimeter of the forms. Approximately 128 yd^3 of soil was backfilled from the co-mingled on-site pile. The parking lot stockpiles remains covered.

Remarks:

A new 4-gas meter was delivered to the site. The sensors on the new VRAE all worked properly.

Soil was periodically scanned throughout the day with the new 4 gas meter and the PID. The perimeter of the construction site was also scanned throughout the day. No detections were found above ambient levels throughout the day from either the PID nor 4-gas meter.

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G Contractors, Trimble Surveying, JCS Construction

Active Site Work Areas: Construction site for proposed new Clubhouse, Soil Stockpile Staging Area in Parking Lot

Activities included: Cutting & bending of re-enforcing bar, survey, movement of soils from parking lot staging area to the construction site, environmental air monitoring.

The excavation located behind the 7th green-which had been opened to install an isolation valve for the irrigation system-was properly backfilled. (No valve was installed as the location was determined to be infeasible).

Offsite: soil samples were collected at New York Recycling located at 475 Exterior Road Bronx, NY. Sample results will help determine whether the material is suitable of importation to the Ferry Point construction site.

Site Work Progress:

The contractor spent the day preparing re-enforcement bars in advance of an upcoming concrete pour.

Approximately 110 cubic yards of soil was taken from the soil stockpile in the parking lot and moved to three locations on the construction site. The material will be utilized to raise grade level on the construction site at some point in the near future.

Air monitoring was performed during the soil movement activities.

Remarks:

Air monitoring identified no detections above background levels throughout the day from either the PID nor 4-gas meter. Soil samples collected at New York Recycling were delivered to Hampton Clarke/Veritech labs.

Temp: 68 - 88 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Offsite Work Area: Irrigation pipeline behind the 7th Green

Trump Links Maintenance personnel had opened an excavation behind the 7th Green during the week of September 20. The purpose of the excavation was to install a new isolation valve in the irrigation line so that sections of the golf course could be isolated in the event of and irrigation line leak. Total size of the excavation was approximately 8 feet long, 8 feet wide and 6 feet deep. Based on discussions with a contractor, no isolation valve was installed. The location was deemed to be infeasible. The excavated soils were segregated; cover material on the north side of the excavation; shaping material on the south side. No demarcation barrier or waste was observed. Excavation was covered with plywood sheets supported by 2inch x 10 inch planks.

Site Work Progress:

After determining that the location was not suitable for the installation of an isolation valve, Trump Maintenance personnel, backfilled the excavation. Material that had been segregated was placed back into the hole in the same stratigraphic sequence. Materials were compacted in lifts of approximately 1 foot each using a small backhoe. All excavated material was successfully replaced into the hole—leaving no excess material for disposal. The vegetative layer at the surface was restored to the extent practical. Maintenance personnel are expected to seed the area.

Remarks:

Air monitoring data collected from the open excavation and during the backfilling activities, recorded no detections above background.

Offsite Work Area: Offsite Shaping Layer Material Sampling and Investigation: New York Recycling, 475 Exterior Street, Bronx, NY

It is noted that this site was previously reviewed and approved (desktop level) by Woodard Curran and NYSDEC during the pre-closure phase of the project.

New York Recycling NYSDEC Permit # 03W87

Site Work Progress:

Soil sampling was conducted at New York Recycling located at 475 Exterior Street. Facility Manager Roger Freitas sectioned-off an approximately 2,500 cubic yard area from which the composite sample was collected. It is noted that the sample for VOC's was a discrete grab sample. Soils were screened with a PID with no indications of contamination. The soil pile was also inspected for signs of asphalt, slag, brick, concrete and other debris. No unauthorized debris was observed in the soil pile. A shovel was used to dig into the pile approximately 1 to 2 feet. Thereafter a dedicated trowel was used to collect representative point samples from approximately 12 locations. Samples were composited in a stainless steel bowl and troweled into the laboratory-supplied sample jars. Samples were placed on ice under chain of custody control.

Remarks:

Samples were delivered to Hampton Clarke Labs in Fairfield, NJ. Analyses to include all the parameters noted in "Table 1 Chemical Permit Limits Ferry Point" as provided by Woodard Curran.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH (F) SA SU **Weather: Sunny** **Wind: Low** **Humidity**

Date: September 29, 2017 **Time: 0700 – 1500** **Temp: 60 - 75 °F** High Med (Low)

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G Contractors, JCS Construction

Active Site Work Areas: Construction site for proposed new Clubhouse, Soil Stockpile Staging Area in Parking Lot

Activities included: Movement of soils from on-site co-mingled stockpile in parking lot to the construction site, backfill, compaction of co-mingled soil backfill, environmental air monitoring.

Site Work Progress:

The contractor spent the day preparing re-enforcement bars in advance of an upcoming concrete pour.

Approximately 100 cubic yards of soil was taken from the soil stockpile in the parking lot and moved to three locations on the construction site. The material will be utilized to raise grade level on the construction site at some point in the near future.

Air monitoring was performed during the soil movement activities.

Remarks:

Air monitoring identified no detections above background levels throughout the day from either the PID nor 4-gas meter.

Site Photographs: (Yes) No

Additional Action Required by Project Mgr. or Eng.:

YES (NO)

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH (F) SA SU **Weather: Sunny and Cloudy** **Wind: Light-midium** **Humidity**

Date: November 3, 2017 **Time: 0700 – 1300** **Temp: 56 - 60** °F (High) Med Low

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G Contractors, JCS Construction

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Continued installation of sub-grade plumbing and electrical conduits; SSDS installation of crushed stone, PVC piping, and concrete cage pits

Site Work Progress:

The second installation of the SSDS piping was advanced by EAI and inspected by Maser Consulting. The configuration consisted of header 4" dia. Schedule 80 PVC piping connecting to four (4) sub-slab depressurization pits and one (1) riser 4" dia. Schedule 80 PVC pipe.

Deviations to the original EAI site plan denoted as Drawing No. SD004 were made to account for as-built utilities. The pit locations did not change, however the PVC piping was altered slightly. Minor changes includeded PVC piping entering from a different pit side and removal of unnecessary elbows. All pits were constructed based on EAI's approved spec, which slightly differs from the SD004 spec in regard to the concrete block configuration and steel rods. DP-2B was the only pit left unconstructed at the end of the day however, Triple G will be installing the final pit prior to liquid boot installation.

As-built dimensions were measured for both first and second SSDS piping advancements.

A 4-gas meter was kept on-hand and checked periodically throughout the day.

Remarks:

Air monitoring identified no detections above background on the PID or the 4-gas meter.

Site Contractors: JCS Construction, Triple G, EAI (Newark, NJ)

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: SSDS installation

Site Work Progress:

The 7th and final SSDS pit (DP-2B) was excavated and connected to the lateral SSDS collection piping. EAI stated that low point drains were installed in the lateral collection piping at intervals of no more than 20 feet. Measurements of the SSDS system component installed locations were taken for use in the P.E.'s as-built report. The vent risers were found to be uncovered, and temporary duct tape covers were placed over these two open pipes; the standing water needs to be removed from these pipes, and more permanent covers need to cap these pipes until construction of the remaining piping to the roof begins.

A fire extinguisher was present near work activities. The VRAE meter alarms is triggered if concentrations of carbon monoxide, hydrogen sulfide, oxygen and methane (as Lower Explosive Limit) are above OSHA exposure limits; the alarm was not triggered for these four gases during morning and afternoon walkarounds of today's activities.

A walkdown of the soil stockpiles for erosion and sediment control was conducted, with the haybales and tarps found to be satisfactory.

Tomorrow's planned activities include pouring stone cover over the lateral SSDS collection piping, with Liquid Boot® installation planned for Wednesday/Thursday of this week.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: Mostly sunny, then turned 100% cloudy** **Humidity**

Date: November 7, 2017 **Time: 6:45am** High Med Low

Temp: 45 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS Construction, Triple G

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: SSDS installation

Site Work Progress:

Stone was poured to an approximate depth of 12 inches per design over the eastern third of the lateral SSDS collection piping.

A fire extinguisher was present near work activities. The VRAE meter alarms is triggered if concentrations of carbon monoxide, hydrogen sulfide, oxygen and methane (as Lower Explosive Limit) are above OSHA exposure limits; the alarm was not triggered for these four gases during morning and afternoon walkarounds of today's activities.

A walkdown of the soil stockpiles for erosion and sediment control was conducted, with the haybales and tarps found to be satisfactory.

Tomorrow's planned activities include pouring stone cover over the balance of the lateral SSDS collection piping, with (weather permitting) Liquid Boot® installation in parallel over the eastern third (i.e. area that was covered with stone today).

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: overcast** **Wind: easterly wind** **Humidity**

Date: November 8, 2017 **Time: 0700 – 1400** High Med Low

Temp: 40 - 50 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G Contractors, JCS Construction, EAI (Liquid Boot Application)

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: spreading of crushed stone for use in SSDS; weekly construction meeting; application of base layer and liquid boot application in the northwestern section of new clubhouse.

Site Work Progress:

20ML thick vapor barrier base layer was placed over completed floor sections in the northwest corner of the clubhouse. Application of Liquid Boot was delayed until ambient temperatures reached and climbed above 45 degrees. Two floor sections were completed before a pump malfunction forced an early shutdown. Liquid Boot will cure overnight. Smoke and swatch thickness testing will be performed tomorrow. Air monitoring was performed around the perimeter of the construction area and at select locations.

Remarks:

Base layer was measured at a thickness of 20.5 ML. Vapor barrier base layers were overlapped a minimum of 6 inches as per the specification. Liquid Boot spray was also applied as per specifications and only when ambient temperatures climbed above 45 degrees.

Air monitoring identified no detections above background on the PID or the 4-gas meter.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W (TH) F SA SU **Weather: Sunny/Partialy Cloudy** **Wind: Low Wind** **Humidity**

Date: November 9, 2017 **Time: 0700 – 1500** High (Med) Low

Temp: 40 - 55 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G Contractors, JCS Construction, EAI (Liquid Boot Application)

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Spreading of crushed stone for use in SSDS; application of base layer geomembrane and liquid boot in the northwestern section of new clubhouse.

Site Work Progress:

The floor sections where liquid boot was applied on November 8th were smoke tested today. A total of five (5) coupon samples (1 per concrete section) were taken from the area designated as Area A. The coupon sampling frequency complies with the specifications. Four (4) smoke tests were performed in Area A. Representatives Ethan and Jen from Woodard & Curran were present during the smoke test. A protective geotextile fabric was placed on top of the liquid boot section following successful smoke testing and coupon thickness testing.

A 20 mil thick geomembrane base layer (VI-20) and liquid boot was placed over the completed floor sections in Area B. This area is south of Area A. After 6 hours of curing time, Area B was smoke tested. A total of three (3) coupon samples and (4) smoke tests were performed in Area B. Portions of the area where smoke was visibly escaping the barrier were re-sprayed with liquid boot. A protective geotextile fabric was placed over the barrier following successful testing.
Smoke testing was also performed on the SSDS piping network to confirm no blockages. During the test, visible smoke was observed from pits DP-1A and DP-1C.

Air monitoring was performed around the perimeter of the construction area and at select locations.

Remarks:

Coupon samples were measured with digital calipers. Coupon thicknesses met or exceeded the 60 ml specification with most coupons measuring thicknesses of 70-90 mils. Vapor barrier base layers were overlapped a minimum of 6 inches as per the specification. Liquid Boot spray was also applied as per specifications and only when ambient temperatures climbed above 45 degrees. Air monitoring identified no detections above background on the PID or the 4-gas meter.

Date: November 15, 2017 **Time: 0800 – 1200**
Temp: 45 - 50 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G Contractors, JCS Construction, EAI (Liquid Boot)

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: spraying of Liquid Boot over remaining floor sections, smoke testing, liner thickness testing; air monitoring

Site Work Progress:

The remaining floor sections of the new clubhouse interior were lined, sprayed and smoke tested today. All coupons were measured for thickness and all were found to exceed the minimum thickness requirements. Smoke testing was performed to identify areas that were not vapor tight. Multiple areas were found to emit smoke, however all leaks were appropriately sealed before the protective fabric layer was placed over the remaining floor sections. This phase of the Liquid Boot application is now complete.

Remarks:

Air monitoring performed during the course of the day revealed no detections above background on the PID or the 4-gas meter.

Site Contractors: Triple G Contractors, JCS Construction

Active Site Work Areas: Construction site for proposed new Clubhouse, Clean Soil Fill \Imported to Site, Steel beam frame construction continued.

Activities included: Visual and PID inspection of clean fill imports from New York Recycling 475 Exterior Street.

Site Work Progress:

Soil was filled around the eastern perimeter of the concrete sub-structure (future patio). Prior to filling the soil was visually inspected for any solid debris. The soil was characterized as brown fine-course sand with gravel/rock fragments roughly 1-1.5" in diameter. Once dumped, the fill was visually inspected again and scanned with a PID. All loads were found to be acceptable. Clean fill was imported by DJCI Trucking LLC and IEV Trucking Corp. Two trucks were loaded and unloaded continuously throughout the day. Soil Manifests were completed for all loads.

Remarks:

There were no PID readings recorded on the imported materials. All loads passed visual and PID screenings

Site Contractors: Triple G Contractors, JCS Construction

Active Site Work Areas: Construction site for proposed new Clubhouse, Clean Soil Fill, Steel beam frame construction

Activities included: Inspection of clean fill.

Site Work Progress:

Approximately 180 yd^3 of clean fill was imported to the site today (10 loads; 18 yd^3 each). Soil was backfilled around the eastern, northern, and western perimeters of the concrete sub-structure. Prior to filling the soil was visually inspected for any solid debris. The soil was characterized as brown fine-course sand with occasional crushed stone roughly 1-1.5" thick in diameter. Once dumped the fill was visually inspected a second time and scanned with a PID. Clean fill was imported by DJCI Trucking LLC and IEV Trucking Corp. Two trucks were loaded and unloaded continuously throughout the day.

Remarks:

Two loads were brought onto the site yesterday November 29, 2017—and segregated for inspection. The loads were visually inspected and scanned with a PID. Manifests for the loads were collected from the truck drivers.

No readings were detected on the PID. No staining or solid waste was observed in any of the imported materials.

Total loads of fill imported: 11/27/2017 (14 Loads), 11/29/2017 (2 Loads), 11/30/2017 (10 Loads)

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W (TH) F SA SU **Weather: Mostly sunny** **Humidity**

Date: December 7, 2017 **Time: 6 : 10 am** High (Med) Low

Temp: 37-45 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS Construction, Triple G; DJCI (soils transporter)

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: Soils Importing

Site Work Progress:

Importation of 7 loads of soil (~ 126 cubic yards) from New York Recycling, a donor source located at 475 Exterior Street in the Bronx. Air monitoring performed during the course of the workday revealed no detections above background on the photoionization detector (PID). Visual observation and PID monitoring of each load of soil from New York Recycling showed no evidence of VOCs or visual signs of debris within the material.

Imported soil was backfilled and graded around the northern and eastern perimeters of the concrete sub-structure. The soil was characterized as brown fine-course sand with occasional crushed stone roughly 1-1.5 inches thick in diameter. Fill was imported by DJCI Trucking LLC, with a single truck loaded and unloaded throughout the day.

A fire extinguisher was present near work activities. A Royal Carting 4-cubic yard municipal solid waste (MSW) commercial container was present near the work area, should MSW be generated from construction activities. A walkdown of the soil stockpiles for erosion and sediment control was conducted, with the haybales and tarps found to be satisfactory.

Tomorrow's planned activities include continuation of soils importing from New York Recycling, and EAI resuming smoke testing and repairs of the vapor barrier.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH (F) SA SU **Weather: Mostly Cloudy** **Wind: Moderate** **Humidity** High Med (Low)

Date: December 8, 2017 **Time: 0600 – 1500** **Temp: 30-40 °F**

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: Triple G Contractors, JCS Construction, DJCI Trucking (Soil Transpiration), EAI Environmental

Active Site Work Areas: Construction site for proposed new Clubhouse, Clean Soil Fill, Steel beam frame construction

Activities included: Inspection of clean fill.

Site Work Progress:

One DJCI truck was running throughout the day hauling in approximately 108 yd^3 of clean fill to the site today (6 loads; 18 yd^3 each). Visual observation and PID monitoring of each load of soil from New York Recycling showed no evidence of VOC's or signs of large debris within the soil.
The soil was characterized as brown fine-course sand with recycled crushed concrete stone 1-1.5" thick in diameter.
Imported soil was dumped and stock piled on the south-southwest side of the building. Some of the imported soil was used for backfilling around the steps leading to the patio bar and grill area on the eastern side of the clubhouse. Backfilling was completed using 1ft lifts and compacted using a jumping jack compactor.
EAI was onsite today to perform spot treatment of all locations where the LiquidBoot barrier was damaged causing holes to be put in the LiquidBoot. Smoke testing was performed a second time to help in locating all damaged areas of the Liquid Boot.
EAI said no coupon thickness testing was required because everything already passed the thickness test during the first smoke test.
The plan for Monday December 11th 2017, is for the steel structure of the building to continue being put up as well as the rebar for the floor slab to begin being installed.

Remarks:

No readings were detected on the PID. No staining or solid waste was observed in any of the imported materials.

All material imported for the day passed visual and PID inspections.

Site Contractors: Triple G Contractors, JCS Construction, NV5 (Re-bar work, concrete pour, concrete testing); EAI (smoke testing)

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: reinforcing bar installation by subcontractors; smoke testing by EAI, air monitoring and concrete pouring.

Site Work Progress:

Steel reinforcing bar installation continued on the south side of the new clubhouse; smoke testing of the vapor barrier was completed in advance of the concrete pour. Smoke testing revealed several areas of the liquid boot barrier to have been compromised during the re-bar installation. All vapor barrier defects were properly repaired with trowel grade by EAI in advance of the concrete pour. This was the third and final round of smoke testing.

Air monitoring revealed no detections above background on the PID.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: sunny & clear** **Wind:light** **Humidity**

Date: March 6, 2018 Time: 0800 - 1600 High Med Low

Temp: 40-45 °F

Name of Project: Trump Golf Links – Ferry Point Park Municipality: Bronx, NY Job No: 17002426A

Site Contractors: JCS Construction, Triple G, IEV Trucking

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: general work tasks, soil importation from New York Recycling, trenching of new electical conduit for clock tower relocation, oversight of EAI SSDS installations

Site Work Progress:

Club House: General work tasks being performed by subcontractors including roof shingles and cupola installation

No SSDS work was conducted as EAI was not on-site as scheduled.

Inspection of former aeration core disposal area and former excavation site near the 7th green. Tarps and sand bags for the soil stockpile in the Parking Lot were being secured inadvance of tomorrow's forecast nor'easter.

Soil importation from New York Recylcing: a total of 108 cubic yards in 6 loads. Maser visited New York Recycling to confirm that stockpiled materials from that facility (which were sampled in September 2017) were still being used as the source of fill material for the new club house construction site.

Trenching for the installation of new electrical conduit to the new location of the clock tower. Trench is approximately 40 feet long, 2 feet deep, 18 inches wide. No obervations of demarcation layer, odors, smells, debris or PID readings.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W (TH) F SA SU **Weather: increasing clouds** **Wind:light** **Humidity**

Date: March 8, 2018 Time: 0800 - 1200 High Med (Low)

Temp: 35- 40 °F

Name of Project: Trump Golf Links – Ferry Point Park Municipality: Bronx, NY Job No: 17002426A

Site Contractors: JCS Construction, Triple G

Active Site Work Areas: Construction site for proposed new Clubhouse

Activities included: general work tasks, excavation to install the new foundation for the soon-to-be relocated clock tower, weekly construction meeting.

Site Work Progress:

Club House: General work tasks being performed by subcontractors.

Assessment of tarps covering the soil stockpile in the Parking Lot and other erosion control features. All found to be in satisfactory condition-with only minor displacements--following yesterday's nor'easter. Recommended to JCS that the tarp anchors be re-adjusted at the earliest opportunity.

Excavation for the installation of the new clock tower foundation was completed. The excavation is approximately 4 feet long, 4 feet wide and 4 feet deep. No groundwater, debris, smells or wastes were observed. The demarcation barrier was not encountered. Surplus cover and shaping material is being stockpiled adjacent to the construction area until it is ready to be used on-site and appropriately covered.

Site Contractors: EAI, Inc., JCS Construction, Triple G

Active Site Work Areas: Maintenance Building, Two (2) Comfort Stations, Construction site for Clubhouse

Activities included: Methane Detection Alarm System Upgrading, Erosion Control Measures Inspection

Site Work Progress:

General documentation of methane detection improvements at the comfort stations and maintenance building. Note one of the comfort stations was off-site and owned by Ferry Point Park. Victor and Mike from EAI made the improvements to the system, which consisted of installing a RACO Thervotim into the sytem. This improved system is designed to send an alert message to monitors indicating a system malfunction.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: most sunny skies** **Wind: light breeze** **Humidity**

Date: April 23, 2018 **Time: 1300 - 1600** High Med Low

Temp: 60 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS, Triple G

Active Site Work Areas: Interior and exterior work at the new club house.

Activities included: oversight of new cart path installation

Site Work Progress:

Interior work at the new club house continues. There were no new excavations for the cart path installation at the rear of the clubhouse. However a 6-inch layer of crushed stone and 4 inches of asphalt was installed along a 600 foot long pathway at the rear of the club house for the new cart path. A 2-inch thick layer of sealing material will be applied over the asphalt according to the contractor. Once completed, this will bring the total cover thickness to 12-inches. Soil from the parking lot stockpile remains in the parking lot—although there are plans to re-use this material on the construction site soon. Contractor will provide Maser with advanced notice of the work schedule. Trenching for the installation of pipe for the stormwater system has been completed. There were no obsevations of MSW, the demarcation barrier or debris in the trenches. Surplus materials are being stockpiled and temporarily covered before re-use on site. No odors or PID readings recorded.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: most sunny skies** **Wind: breezey** **Humidity**

Date: April 26, 2018 **Time: 1000 - 1500** High Med Low

Temp: 55-65 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS, Triple G, EAI

Active Site Work Areas: Interior and exterior work at the new club house.

Activities included: weekly construction meeting, movement of soils, SSDS piping, blower and monitor installation. Inspection of Erosion Control meaures.

Site Work Progress:

EAI resumed the installation of SSDS piping by installing the riser on the northern SSDS pit into the utility spaces above the new offices. Piping for the southern SSDS pit was also configured and later connected to the SSDS blower. SSDS monitors were also installed. SSDS Sensors will be installed once their proposed new locations are reviewed and approved.

Soils (imported earlier from NY Recycling) were relocated from the front of the clubhouse to the rear of the building—to elevate the grade levels. Soils from the parking lot stockpile remain in-place in the parking lot.

Minor trenching work was implemented for the irrigation system between the club house and the new cart path. Excavations were shallow (12”) and through soils that were relocated to the rear of the building—with no potential to encounter MSW.

Site Contractors: JCS, Triple G, Rinaldi

Active Site Work Areas: Interior and exterior work at the new club house.

Activities included: Re-use of soil stockpile in the parking lot; transport material to rear of clubhouse and used to increase the grade elevation.

Site Work Progress:

Contractor Rinaldi used a backhoe and small dump truck to begin the re-use process for soils stockpiled in the parking lot for the past several months. Soils were transported to the rear (eastern side) of the clubhouse and used to increase the grade elevation. Additional material is planned to be moved to the northern side of the clubhouse of the next several days or weeks.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: warm & sunny** **Wind: light** **Humidity**

Date: May 8, 2018 **Time: 1000 - 1430** High Med Low

Temp: 70 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS, Triple G, Rinaldi

Active Site Work Areas: Interior and exterior work at the new club house.

Activities included: Re-use of soil stockpile in the parking lot; transport material to rear of clubhouse and used to increase the grade elevation.

Site Work Progress:

Contractor Rinaldi used a backhoe and small dump truck to begin the re-use process for soils stockpiled in the parking lot for the past several months. Soils were transported to the rear (eastern side) of the clubhouse and used to increase the grade elevation.

Weekly Erosion Control Inspections were conducted.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH F SA SU **Weather: overcast, drizzle** **Wind: light** **Humidity**

Date: May 31, 2018 **Time: 1000 - 1430** **Temp: 60** °F High Med Low

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS, Triple G, EAI

Active Site Work Areas: Interior and exterior work at the new club house.

The previous sewer pump installation was found to have been performed incorrectly. The unit will have to be re-excavated, re-oriented and piped.

Con Ed is on site for the installation of natural gas supply lines to the new club house. Trenching was performed to facilitate gas pipe installation. Excavations were shallow and through materials that were previously imported from NY Reclycling. Excavations did not encounter any demarcation barriers, MSW or debris. No odors or PID readings were recorded.

EAI continues installation of SSDS components including sensors and monitors. EAI reinstalled the suction blower on the southern side of the club house—which had been dismantled to allow the trades to install components of the HVAC-without interference.

Site Work Progress:

EAI continues work on SSDS component installations. Senors and monitors were installed. Sampling and calibration lines were prepared for installation.

Trenching for gas line installation was performed on the western (front) side of the clubhouse. Con Ed will be installing the servce line.

Weekly Erosion Control Inspections were conducted.

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426A**

Site Contractors: JCS, Triple G, Woodard Curran, EAI

Active Site Work Areas: Interior and exterior work at the new club house.

Continued movement of soils from the parking to lot the berm on the northwestern side of the new club house.

Inspections of SSDS components and testing of suction blowers and sub-slab monitoring ports by EAI and WC.

Site Work Progress:

EAI and Woodard Curran tested the suction blowers and select sub-slab monitoring ports for the presence of a vacuum beneath the building. Ports on the northeastern and southwestern sides of the new clubhouse were tested. Vacuum pressures greater than -1 inch of water were record at both locations indicating the SSDS is functioning as designed.

Only a few yards of soil remains in the parking lot.

DAILY FIELD OBSERVATION REPORT

M T W TH F SA SU **Weather:** Weather **Wind:** 0-5 mph **Humidity** (High Med Low)
Date: 8-24-2018 **Time:** 7:30 **Temp:** 90+

Name of Project: Trump Links Golf Course - Ferry Point **Municipality:** Bronx, NY **Job No:** 17002426C

Site Contractors: Bellisimo Masonry & Construction (Anthony)

Active Site Work Areas: Proposed Gas Main installation & excavation

Site Work Progress: Arrived on-site at 7:30am

8:00am - Was informed by that excavation cannot commence until umbrella insurance issue is resolved.

9:00 am laying down plywood and began digging up the telecom line.

10:30am - met with Joe Rodinger. He explained that the demarcation barrier is a caution that says the msw is approximately 1-4 feet below that.

Standard SOP (according to Joe) is that we can dig to depth, replace demarcation barrier with a new one and then sand, pipe, etc.

Demarcation barrier varies from 10"-24". Barrier closest to road has no shaping material on top.

13:15 - Called and spoke to Anthony of Bellisimo, was told I was not needed anymore today.

Remarks: N/A

DAILY FIELD OBSERVATION REPORT

M T W TH F SA SU **Weather:** Weather **Wind:** 0-5 mph **Humidity** (High Med Low)
Date: 9-5-2018 **Time:** 7:30 **Temp:** 90+

Name of Project: Trump Links Golf Course - Ferry Point **Municipality:** Bronx, NY **Job No:** 17002426C

Site Contractors: Bellisimo Masonry & Construction (Anthony)

Active Site Work Areas: Proposed Gas Main installation & excavation

Site Work Progress: Arrived on-site at 7:30am

Upon arrival, gas meter located in Chris' office was not working. Called Pine Environmental and had them deliver a new one.

7:45am - Began preliminary observations, asphalt in front on maintenance garage has been saw cut, had to offset in fron of bay door No. due to natural gas cap.

8:30am - ConEd arrived on-site.

9:15am - Orange Demarcation barrier is being laid down in trench (See attached map for location) (BLUE AREA)

9:20am - 3" of sand is being laid on top of orange demarcation barrier (Checking with measured broom stick handle)

10:00am - Anthony (Bellisimo) began removal asphalt layer from north and east side of the maintenance garage.
10:10am - Measured trench in asphalt - ranged from 36"-42"

Remarks: N/A

~~11:00am - Spoke to ConEd workers, they explained the bonding process. 20 min of intense heat (400-450 degrees)~~ to bond two sections together and 20 minutes for the pieces to cool down before they can be placed in trench.

11:15am - Anthony (Bellisimo) began trenching across golf cart path (See attached map, YELLOW AREA). Steel plate placed over trench.

11:40am - Pine Environmental delivered new gas meter

12:00pm - ConEd front loader broke down, need to replace with new one

13:30pm - New front loader arrives and bonding continues
14:30 - Anthony (Bellisimo) was trenching along east side of maintenance garage. Exposed current 4"gas line (See attached map, GREEN AREA)

15:40pm - Orange demarcation barrier has been laid with 3" of sand on top from Buttrick Avenue to where the trench first crosses the golf cart path (See attached map)

15:45pm - 8 sections of new 6" gas pipe has been bonded and placed in trench.

16:30pm - Trenching has ended for the day

M T W TH F SA SU **Weather: Sunny/Slightly Cloud** **Wind: light to mild** **Humidity**

Date: September 6, 2018 **Time: 0900 - 1630** High Med Low

Temp: 90 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426C**

Site Contractors: Bellisimo Masonry & Construction (Anthony), Con Edison, RECONN

Active Site Work Areas: Gas Main Installation pipeline: saw cutting, trenching, and backfilling in the maintenance area.

Piping welded from Buttrick & Schley Ave to the cart path on Fairway #6 for pipeline installation by Con Edison.

No PID or four gas meter measurements above background levels.

Site Work Progress: The trench on the northeastern and northwestern sides of the maintenance building were backfilled with a minimum of 3" of clean fill. Thickness of the fill measured every 10' throughout an estimated ~170 LF trench. Trench on the northwestern side was extended 10 – 20 LF by cutting asphalt and excavating soil material nearby.

Con Edison welding and installing plastic 6-inch pipe at the trench on the northside of the golf course . Note: Areas with <18" of soil above the pipe require steel section above the pipe.

Date: September 12, 2018 **Time: 0900 - 1700** High Med Low

Temp: 60 - 70 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426C**

Site Contractors: Bellisimo Masonry & Construction (Anthony)

Active Site Work Areas: Gas Main Installation pipeline - Backfilling in the Trenches North of Maintenance Garage

Piping welded around trench bends for installation by Con Edison.

No 4-gas meter measurements above background levels.

Site Work Progress: Trenches in various locations were backfilled north of the maintenance building. Toward the northern end of the course near Buttrick & Dewey Ave prior backfilling and near the maintenance building area, clean cover sand was backfilled to a minimum of 3" thick above the gas pipe and shaping material soil was covered over. Areas near the intersection of the golf course were backfilled with a minimum of 3" thick clean fill sand at the base of the trench. Thickness of the clean fill above and below pipes were measured every 10' throughout the trench.

79,500 lbs of clean cover fill from Ranco Sand & Stone was delivered to the site and stored at the maintenance building.

Con Edison welded and installed plastic 6-inch pipe at trench bends near the trail intersection of the gas installation .

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426C**

Site Contractors: Bellisimo Masonry & Construction (Anthony)

Active Site Work Areas: Gas Main Installation pipeline – Excavating Trenches South of Maintenance Garage toward clubhouse

Piping welded around trench bends for installation by Con Edison.

No 4-gas meter measurements above background levels.

Site Work Progress: Roughly 500' of trench south of the maintenance building from the rear entrance along the path to the clubhouse was excavated. Trench depth ranged from 30 – 40" below ground surface. Near the fence line of the trench, gravel, plastic piping, and plastic liner was encountered. Roughly 10' of perforated pipe was damaged during the disturbance. The contractor (Anthony) was notified to repair the drainage area. Unmarked utilities were also encountered, but were not damaged. All materials were stocked onto plywood panels adjacent to the trench. Shaping layer soil was placed on one side of the trench, while cover sand was placed on the oppostie side for later backfilling.

Excess shaping material from backfilling activities was stockpiled in the bin northwest end of the maintenance building.

Con Edison continued welding and installing plastic 6-inch pipe at trenches north of the maintenance building.

DAILY FIELD OBSERVATION REPORT – ENVIRONMENTAL

M T W TH (F) SA SU **Weather: Cloudy/Slightly Sunny** **Wind: light to mild** **Humidity**

Date: September 14, 2018 **Time: 0800 - 1500** High (Med) Low

Temp: 60 - 70 °F

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426C**

Site Contractors: Bellisimo Masonry & Construction (Anthony)

Active Site Work Areas: Gas Main Installation – Excavating Trenches South of Maintenance Garage toward clubhouse, Backfilling Trenches North of Maintenance Garage

Piping installed in southern trenches by Con Edison.

No 4-gas meter measurements above background levels.

Site Work Progress: Roughly 400' of trench south of the maintenance building along the western property line was excavated. Trench depth ranged from 30 – 40" below ground surface. Gravel, plastic piping, and plastic liner was encountered. Roughly 2' of perforated pipe was damaged during the disturbance. The contractor (Anthony) was notified to repair the drainage area. Portions of the trench were primarily composed of gravel from a drainage system and will be backfilled. Asphalt was cut and concrete was broken on the eastern rear gate prior to trenching. All materials were stocked onto plywood panels along the trench. Shaping layer soil was placed on one side while cover sand soil was placed on the other.

Roughly 20' of clean cover soil was backfilled over piping in trenches north of the maintenance building to a minimum thickness of 3". Caution tape was placed on top of the backfilled sand.

Con Edison performed a pressure tests on the pipeline sections near the automated gate located south of the maintenance garage. The test was successful with no leaks in the system. Plastic 6" pipe was installed in the trenches south of the maintenance building. The trench was not backfilled with 3" minimum of bedding. Anthony and Con Edison were notified that clean cover sand must be backfilled on the bedding of the trench either prior to installation or worked around the piping. Con Edison responded that the bedding will be installed.

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426C**

Site Contractors: Bellisimo Masonry & Construction (Anthony)

Active Site Work Areas: Gas Main Installation pipeline – Excavating Trenches South of Maintenance Garage toward clubhouse, Backfilling Trenches North of Maintenance Garage

Piping installed in southern trenches by Con Edison.

No 4-gas meter measurements above background levels.

Site Work Progress: Roughly 250' of trench south of the maintenance building was excavated. The trench was generally 36" below ground surface. Roughly 6' of perforated pipe was observed to be damaged during the trenching. The contractor (Anthony) was notified to repair the drainage areas prior.

Asphalt was cut and concrete was broken up near the rear gate prior to trenching. Broken up asphalt and concrete were stockpile separately for disposal. Remaining materials were stockpiled onto plywood panels along side the trench.

Clean cover soil was backfilled over 80 linear feet of piping in trenches north of the maintenance building to a minimum thickness of 3". Caution tape was placed on top of the backfilled sand.

Plastic 6" pipe at trenches south of the maintenance building were installed. The trenches were not initially backfilled with 3" minimum of bedding. Anthony and Con Edison are aware that clean cover sand must be backfilled on the bedding of the trench either prior to installation or worked around the piping. Con Edison responded that the bedding will be installed.

M T W TH F SA SU **Weather: overcast & warm** **Wind: calm** **Humidity**

Date: October 9, 2018 **Time: 1000 - 1500** **Temp: 70- 75** °F High Med Low

Name of Project: Trump Golf Links – Ferry Point Park **Municipality: Bronx, NY** **Job No: 17002426C**

Site Contractors: Bellisimo Masonry & Construction (Anthony), Con Edison, RECONN

Active Site Work Areas:Bellision Construction worked the gas pipeline route along side Fairway #6 adding sufficient cover material and grading. Additional landscaping work was conducted in from of the "Trump Links' sign. Con Edison workers were staged on the roadway north of the golf course-opening the roadway in preparation to make the connection with the gas main at Schley and Buttrick.

No 4-gas meter measurements above background levels.

Site Work Progress: Most of the cover material along side Fairway #6 was placed above the new gasline-elevating the area as per the design specifications. Excavations in the road north of the golf course were slow and meticulous due to the abundance of underground utilities.

HC Case Narrative

Client: Maser Consulting
Project: Trump Links

HC Project: 7092827

This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.

Volatile Organic Analysis:

The Method Blank Spike for batch 64307 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The MS/MSD RPD, Matrix Spike and Matrix Spike Duplicate for batch 64307 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

TCLP Volatile Organic Analysis:

The Method Blank Spike for batch 64316 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The MS/MSD RPD, Matrix Spike and Matrix Spike Duplicate for batch 64316 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

Base Neutral/Acid Extractable Analysis:

Sample AD00298-002 was analyzed at a dilution due to high concentration of target analytes.

The Method Blank Spike for batch 63050 and 63067 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The MS/MSD RPD, Matrix Spike and Matrix Spike Duplicate for batch 63050 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

PCB Analysis:

Data conforms to method requirements.

Pesticide Analysis:

The Matrix Spike and Matrix Spike Duplicate for batch 63043 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

Herbicide Analysis:

Data conforms to method requirements.

Metals Analysis:

Due to contamination in LCS/LCSMR, batch 62650 was reset for Ba.

The Matrix Spike and Matrix Spike Duplicate for batch 62650 had recoveries outside QC limits. Please refer to the applicable Form 5/7 for the recoveries.

The RPD between the QC sample and the Method Replicate had recoveries outside QC limits in batches 62644 and 62650. Please refer to the applicable Form 6/9 for the recoveries.

The MS/MSD RPD had recoveries outside QC limits in batch 62650. Please refer to the applicable Form 6/9 for the recoveries.

The serial dilution for batches 62644 and 62650 is outside QC limits for one or more analytes. Please refer to the applicable Form 6/9 for the recoveries.

TCLP Metals Analysis:

Data conforms to method requirements.

Wet Chemistry Analysis:

Sample AD00298-002 was analyzed for Reactivity using SW-846 7.3. SW-846 7.3 is not a NELAP accredited parameter.

Subcontracted Analysis:

Please refer to attached subcontracted laboratory report. Sample AD00298-001 submitted to eurofins for Dioxin Scan (1613) analysis, PCDD & PCDF (8290) analysis, and Organophosphorous Pesticides (8141) analysis.

Robin Cousineau Quality Assurance Director	Or	Jean Revolus Laboratory Director	10/30/2017 Date

HC Reporting Limit Definitions/Data Qualifiers

REPORTING DEFINITIONS

DF = Dilution Factor

MDL = Method Detection Limit

RL* = Reporting Limit

ND = Not Detected

RT = Retention Time

NA = Not Applicable

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

DATA QUALIFIERS

A- Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

B- Indicates analyte was present in the Method Blank and sample.

d- For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

E- Indicates the concentration exceeded the upper calibration range of the instrument.

J- Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

R- Retention Time is out.

Y- Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

Customer Information

1a) Customer: Prater Consulting
Address: 50 Chestnut Ridge Road, Montvale, NJ 07645
1b) Email/Cell/Fax/Ph: (201) 937-3515
1c) Send Invoice to: D. Keil
1d) Send Report to: D. Keil

Project Information

2a) Project: Trump Links
2b) Project Mgr: D. Keil
2c) Project Location (City/State): 475 Exterior, Bronx, NY
2d) Quote/PO # (If Applicable):

3) Reporting Requirements (Please Circle)

Turnaround	Report Type	Electronic Data Deliv.
When Available:	Summary	NJ Hazsite

Additional Notes

Comments, Notes, Special Requirements, HAZARDS

Indicate if low-level methods required to meet current groundwater standards (SPLP for soil):
- [ ] BN or BNA (8270D SIM)
- [ ] VOC (8260C SIM or 8011)
- [ ] SPLP (BN, BNA, Metals)
- [ ] 1,4 Dioxane

For NJ LSRP projects, indicate which standards need to be met:
- [ ] NJDEP GWQS
- [ ] NJDEP SRS
- [ ] NJDEP SPLP
- [ ] Other (specify):

Check if applicable:
- [ ] Project-Specific Reporting Limits
- [ ] High Contaminant Concentrations
- [ ] NJ LSRP Project (also check boxes above/right)

Cooler Temperature: 2-3

Please note NUMBERED items. If not completed your analytical work may be delayed.
A fee of $5/sample will be assessed for storage should sample not be activated for any analysis.

Internal use: sampling plan (check box) HC [ ] or client [ ] FSP#

PROJECT MODIFICATIONS

Client: MASER
Project: Trump Links

HC Project #: 7092827

---

csmith192.168.1.73
10/3/2017 12:04:19 PM

Per David Kiel, The Total VO and TCLP VO are grab samples; expedite all analysis possible to a 4 day TAT.

CONDITION UPON RECEIPT

Batch Number AD00298

Entered By: Ricardo
Date Entered 9/28/2017 4:04:00 PM

1	Yes	Is there a corresponding COC included with the samples?
2	Yes	Are the samples in a container such as a cooler or Ice chest?
3	NO	Are the COC seals intact?
4	T0056	<--- Thermometer ID. Please specify the Temperature inside the container (in degC). 2.3
5	Yes	Are the samples refrigerated (where required)/have they arrived on ice?
6	Yes	Are the samples within the holding times for the parameters listed on the COC? IF no, list parameters and samples:
7	Yes	Are all of the sample bottles intact? If no, specify sample numbers broken/leaking
8	Yes	Are all of the sample labels or numbers legible? If no specify:
9	Yes	Do the contents match the COC? If no, specify
10	Yes	Is there enough sample sent for the analyses listed on the COC? If no, specify:
11	Yes	Are samples preserved correctly?
12	Yes	Was temperature blank present (Place comment below if not)? If not was temperature of samples verified?
13	NA	Other comments ...Specify
14	NA	Corrective actions (Specify item number and corrective action taken).

Worksheet #: 439138

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration usea
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 12.5
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

7092827 0039

Method: EPA 8260C

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.

I1 =	Fluorobenzene	I4 =	I7 =	625/8270 Internal Standard concentration = 40 mg/L (in final extract)
I2 =	Chlorobenzene-d5	I5 =		624/8260 Internal Standard concentration = 30ug/L
I3 =	1,4-Dichlorobenzene-d4	I6 =		524 Internal Standard concentration =5ug/L

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 12.5
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Form 6
Initial Calibration

Method: EPA 8260C

Instrument: GCMS_3

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 9.45
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 9.45
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

7092827 0111

Method: EPA 8270D

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 10.7
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 10.7
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

I1 =	1,4-Dioxane-d8(INT)	I4 =	Acenaphthene-d10	I7 =	Perylene-d12	625/8270 Internal Standard concentration = 40 mg/L (in final extract)
I2 =	1,4-Dichlorobenzene-d4	I5 =	Phenanthrene-d10			624/8260 Internal Standard concentration = 30ug/L
I3 =	Naphthalene-d8	I6 =	Chrysene-d12			524 Internal Standard concentration =5ug/L

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.

Worksheet #: 439171

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 439173

Total Target Concentration 0.0082

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used

Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

ORGANICS HERBICIDE REPORT

Sample Number: AD00298-002
Client Id: 475 EXTERIOR NYRECYC
Data File: 12G14889.D
Analysis Date: 10/04/17 16:37
Date Rec/Extracted: 09/28/17-10/03/17
Column: DB-17/1701P 30M 0.32mm ID 0.25um film

Method: EPA 8151A
Matrix: Soil
Initial Vol: 50g
Final Vol: 10ml
Dilution: 1
Solids: 92

Units: mg/Kg

Cas #	Compound	RL	Conc	Cas #	Compound	RL	Conc
93-76-5	2,4,5-T	0.011	U	93-72-1	Silvex	0.011	U
94-75-7	2,4-D	0.011	U				

Worksheet #: 439202

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Flags

c - failed the initial calibration criteria(if applicable)

Note:

Col = Column Number
Mr = MultiPeak Analyte 0=single peak analyte, >0=multi peak analyte (i.e. pcb/chlordane etc.)
Fit = Indicates whehter Avg RF, Linear, or Quadratic Curve was used for compound.
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.

All Response Factors = Response Factors / 10000
Initial Calibration Criteria: either %RSD <=20 or Corr >= .995
Columns: Signal #1 db-1701 ; Signal #2 db-608

^Lvl: These compounds use a single pt calibration as specified by the method. The file used to update this calibration point is listed in the header under level #

Flags

c - failed the initial calibration criteria(if applicable)

Note:

Col = Column Number
Mr = MultiPeak Analyte 0=single peak analyte, >0=multi peak analyte (i.e. pcb/chlordane etc..)
Fit = Indicates whehter Avg RF, Linear, or Quadratic Curve was used for compound.
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.

All Response Factors = Response Factors / 10000
Initial Calibration Criteria: either %RSD <=20 or Corr >= .995
Columns: Signal #1 db-1701 : Signal #2 db-608

^Lvl: These compounds use a single pt calibration as specified by the method. The file used to update this calibration point is listed in the header under level #

Quality Control Summary

Client Name: Hampton-Clarke Veritech
Reported: 10/23/2017 14:39

Group Number: 1857935

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Subject: RE: TAT and Data Package Question

Hi Conrad- Please enter as N-8. We notified the client that we are unable to offer an expedited TAT at this time. I'm not certain about the DP, we will have to confirm with the client. Please enter with an SDG code, and we will update with the DP scans if the client determines one is needed.

Thanks,
Stacy

Subject: FW: TAT and Data Package Question

Hello,

Is the TAT correct for this? Also, does this require a data package?

Thanks,
Conrad

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mg**	milligram(s)
C	degrees Celsius	**mL**	milliliter(s)
cfu	colony forming units	**MPN**	Most Probable Number
CP Units	cobalt-chloroplatinate units	**N.D.**	non-detect
F	degrees Fahrenheit	**ng**	nanogram(s)
g	gram(s)	**NTU**	nephelometric turbidity units
IU	International Units	**pg/L**	picogram/liter
kg	kilogram(s)	**RL**	Reporting Limit
L	liter(s)	**TNTC**	Too Numerous To Count
lb.	pound(s)	**µg**	microgram(s)
m3	cubic meter(s)	**µL**	microliter(s)
meq	milliequivalents	**umhos/cm**	micromhos/cm

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Parks

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
1.1	8	Exterior Changes	Joe Roediger			Open
	Description: Ownership is responsible for getting all changes approved by City Hall and Parks Dept. CP suggests not to present PDC with piecemeal submissions but three separate packages: roof, exterior elevation, and kitchen. If the potential exterior awning for outside kitchen area is a temporary, seasonal structure, then it becomes a non-issue, does not need to be approved by PDC.					

DEC

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status

	Description: Has FP been release for new design? What is the timing on new bid docs?					
5.3	6	Vapor Pipe Locations	Ron Rainone **(Hart Howerton)**, Kevin Dwyer **(French & Parrello Associates)**	09/ 11/ 2017		Open
	Description: We need final direction on the elevations of the pipe sleeves and where we can penetrate the walls or haunch of the slab.					

Schedule

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
6.1	1	Two Week Look Ahead	Justin Shaw **(JCS Construction Group, Inc.)**			Open
	Description: Review two week look ahead.					
6.2	6	Delays	Ron Rainone **(Hart Howerton)**	09/ 11/ 2017		Open
	Description: At this time I am putting in writing that there will be a significant change forthcoming to the contractual completion dates and associated documents. The current contract states dates assuming a start date equal to the signing date of the contract. The actual start date was months later. we have also encountered delays relative to site conditions as well as delays in responses for remediation work. I will circulate an official memo for Rons review and approval per Article II of our contract.					
6.3	8	Permits	Ron Rainone **(Hart Howerton)**			Open
	Description: Ownership obtained a revised Earthwork permit reflecting change to Project Super.					

Civil

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
7.1	1	Drainage	Ron Rainone **(Hart Howerton)**			Open
	Description: We would like to look into bringing all building drainage to the existing system in the parking lot to avoid any disturbance to the Golf Course. We also have issues with the existing structures and their ability to implement the design intent.					
7.2	9	For Construction Drawings	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS has yet to receive Civil drawings For Construction.					

Change Orders

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
8.1	9	PCCO #003	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: JCS need PCCO #003 approved and signed for the changes to the SSDS system so it can be ordered and installed in the coming weeks. Any delay to that would potentially cause serious delays related to weather and the liquid boot. These changes are related to the 6/6/17 changes by DEC.

Parks

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
1.1	8	Exterior Changes	Joe Roediger			Open
	Description: Ownership is responsible for getting all changes approved by City Hall and Parks Dept. CP suggests not to present PDC with piecemeal submissions but three separate packages: roof, exterior elevation, and kitchen. If the potential exterior awning for outside kitchen area is a temporary, seasonal structure, then it becomes a non-issue, does not need to be approved by PDC.					

DEC

3.1	1	Submittals	Ron Rainone **(Hart Howerton)**			Open

	Description: Review Submittal Log					
3.6	1	Bluestone	Ron Rainone **(Hart Howerton)**			On Hold
	Description: Currently waiting on approved samples.					
3.7	7	Roof Trusses	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS requests additional securing detail on the wood stringers. JCS to send RFI about the Simpson ties that have a maximum impact of 5/16" JCS to send RFI regarding the detail shown on the truss shops calling for rigid insulation on the bottom of the trusses but there is no corresponding drawing or note in the plans to show this. JS: detail pertaining to through-bolts (versus welded bolts)					
3.9	9	Millwork	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS Millshop requires at least 2 weeks after reciept of control sample and final approved interior drawings in order to create the next round of shops for approval. Upon approval, fabrication will begin.					
3.10	10	SSDS	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS is doing the gravel and EAI North is doing the piping. Pipe is going to be set on top of the gravel and will dip for the pits. Pipe is on top of the knee walls and the only depression from there is for the pits, so JCS can set the grade now with the stone sumped for depressions. Start backfilling on Friday/Monday. SSDS work to start Wednesday (10/10) Chases for pipes are completed, all the sleeves for the SSDS are the black sleeves going through the haunches. Other sleeves that are trenched out on site are for the sewer lateral, which the plumbers are coming tomorrow (10/5) to start and the electricians are running their stuff now too. Most of the stuff after the electricians can go above the haunch walls.					
3.11	10	Beverages	Ron Rainone **(Hart Howerton)**			Open
	Description: Location of Beverages					

Structural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
4.1	10	Anchor Bolts				Open
	Description: On 9/27, per site walkthrough, JCS and RR of HH noticed that GGG was using the wrong plans. The correct plans were then given to them for a second time.

Parks

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
1.1	8	Exterior Changes	Joe Roediger			Open
	Description: Ownership is responsible for getting all changes approved by City Hall and Parks Dept.					
	Previous Meeting Minutes: **10/25/2017:** Parks has submittal package. Ron sent a description and explanation to Parks on why we had to do everything, along with Ownership's letter. Waiting on submittal status and response. Timing for response from Parks is unknown. Detailed Bid Set for bar grill roof, all revised i					

tems. All equipment is pretty much what was in the drawings that JCS has already received. Exception: the 6-burner stove stop has been replaced with a 4 burner. Size of the outside sink was condensed to accommodate decrease in size from 13 to 11 feet. Hand sink is known, but would we need a three-compartment sink? Engineer to advise but per RR, as long as all dishes are sterilized inside building only handwash is needed. JCS needs to know whether there is going to be a grease trap going outside, three-compartment. JG requests a call with Sam Tell to sort out issues, but ownership needs to determine the extent of their outside scope. Pair of cold plates, refrigeration unit for the island, storage, drain boards...

JCS needs to know whether the floor drain going into the grease line or not.

Per JR, there will not be a three-compartment sink in outdoor bar. Theoretically, being that there is cooking going on in that area, someone could dispose of grease in the handwash sink, but the ultimate determination is the engineer's call.

Sam Tell and JCS to put together some budgetary numbers for this scope.

Front stairs are built per the changed (and, as of yet, unapproved) drawings so if PDC decides that they don't like that, we are going to have to do something about that. Per JG, and embellished by RR in his submittal to PDC, these changes were made based on the abundance of safety concerns.

Driveway and Exterior Bar will require a formal submission, most likely in mid-November. Drainage changes and other smaller changes do not require formal submission review by Parks. Parks provide suggestions versus a flat no. There will be a formal letter/endorsement by Parks accompanying the submission. Ownership hopes to have something to give to Caitlin for the driveway in under a week. Per CP, be thorough in explanation because if changes are logical they are more likely to pass.

1.2	11	Earthwork	Dave Keil **(Maser Consulting P.A.)**			Open

Description:
Compaction tests and Soil test results

Previous Meeting Minutes:

10/25/2017:
JCS did receive the plumbing permit from the DOB. Backfilling is ongoing.
Regarding the Shaping layer test results, Maser is still waiting on the Dioxin and Furon analyses, which will be available on the 24th.

Maser has not yet released their final letter on Soil Compaction to F&P but anticipates doing so today. Nothing to worry about in Maser's opinion. Team to push for an approval because we are beyond the point of return when it comes to this stone. JG to get on a call with Joe Tierney at F&P after the meeting. 88% to 98% compaction results.

Maser requests documentation on the quality of the stone that is being shipped from the quarry.

DEC

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status

Architectural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
3.1	1	Submittals	Ron Rainone **(Hart Howerton)**			Open

Description:
Review Submittal Log

Previous Meeting Minutes:

10/25/2017:
Open architectural submittals to be returned by RR between 10/23 and 10/25.

Ejector pit, alternate grease trap submittals have been sent to engineers.

3.2	1	Bluestone	Ron Rainone **(Hart Howerton)**			Open

Description:

	Currently waiting on approved samples.					
	Previous Meeting Minutes: **10/25/2017:** Civil: JS to obtain 1'x1' samples of cleft bluestone so that JG can approve based on a "true representation of the color" in order to determine which supplier to use. JG wants the stone to come from a single quarry, so that the mineral makeup and size of the stone is uniform, the wear and tear/color and installation is consistent throughout. Final approval on stone to come from Eric.					
3.3	9	Millwork	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS Millshop requires at least 2 weeks after reciept of control sample and final approved interior drawings in order to create the next round of shops for approval. Upon approval, fabrication will begin.					
	Previous Meeting Minutes: **10/25/2017:** JG is anticipating the delivery of a wood stain control sample RR's only comment on Millwork drawings will be that the overall width of the bar to be in accordance with the size that he made the false-wall. Other than that, all Millwork is to be reviewed/signed off on by JG/GS. Where JF made the 60" ADA space at the bar, RR will provide a spec on the code-required knee space beneath so that the die-wall can be brought back a little further in that area.					
3.4	10	SSDS	Ron Rainone **(Hart Howerton)**			Closed
	Description: JCS is doing the gravel and EAI North is doing the piping. Pipe is going to be set on top of the gravel and will dip for the pits. Pipe is on top of the knee walls and the only depression from there is for the pits, so JCS can set the grade now with the stone sumped for depressions. Start backfilling on Friday/Monday. SSDS work to start Wednesday (10/10) Chases for pipes are completed, all the sleeves for the SSDS are the black sleeves going through the haunches. Other sleeves that are trenched out on site are for the sewer lateral, which the plumbers are coming tomorrow (10/5) to start and the electricians are running their stuff now too. Most of the stuff after the electricians can go above the haunch walls.					
	Previous Meeting Minutes: **10/25/2017:** *(None)*					

Structural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
4.1	13	Roof Trusses	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS requests additional securing detail on the wood stringers. JCS to send RFI about the Simpson ties that have a maximum impact of 5/16" JS: detail pertaining to through-bolts (versus welded bolts) JCS requires direction from F&P					

MEP

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status

Schedule

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status

6.1	1	Two Week Look Ahead	Justin Shaw **(JCS Construction Group, Inc.)**			Open
	Description: Review two week look ahead.					
	Previous Meeting Minutes: **10/25/2017:** Woodard and Curran conferenced in: SSDS pit is not yet on schedule. JCS just got the required information from the structural engineer and will put a schedule together. Schedule: JCS will redo two-week look ahead now that we have some structural direction from F&P. Backfilling, plumbing, electrical underground, drainage, concrete and anchor bolt repairs are ongoing; we will schedule surveyors and inspections as soon as possible					

Civil

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
7.2	9	For Construction Drawings	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS has yet to receive Civil drawings For Construction.					
	Previous Meeting Minutes: **10/25/2017:** Hernan has yet to respond to the question of DOB-approved electrical drawings. JCS is still waiting on civil, landscaping, structural, landscaping or electrical. The title block sheet still does not accurately reflect the current drawings. JG called Hernan during the meeting with no response.					
7.3	12	Front Driveway	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Additional/Changes to Design and Scope					
	Previous Meeting Minutes: **10/25/2017:** Front drive: JS would like to buy all hardscape material in one shot. JS requests entry driveway plans (based on potential exterior changes) to determine how to set up the site. Would be ideal to work our way out of the site so that after steel goes up we can set grades, JCS needs to know what height to set the grade. The proposed changes need to be approved by PDC, the cost needs to be approved by Eric. JG to do tissue sketch, for which Hart Howerton is not responsible because this is a landscape and civil drawing change and this all going to cost more money. No catch basins in the way if we open up the bottom. Bag drop, extra electrical and all of the stuff that is not currently on drawings, which JR and JG advised Eric would be an extra charge. JS inquired how we will be proceeding with these types of changes: are we doing drawings, are we doing RFIs, are we doing things on the fly? JG says that he will draw a tissue sketch to give to PDC prior to spending the money to reengineer. Per conversation between JS & F&P, JCS will submit based on plans and then modify the submittals based on site conditions. Submittals to be marked up after the fact.					
7.4	12	Pro Shop				Open
	Description: Interior Design					
	Previous Meeting Minutes: **10/25/2017:** Terry Young working between Gia and Tanya on the fixture and retail needs of the design of the Pro-Shop. The current floor plan is the only For Construction drawing of the Pro Shop, and Ownership bought JCS based on installing all the perimeter fixtures in the POS station. Plan is to have a combination of metal and millwork. The metal supplier is one that TY/GS have worked with previously on other Pro Shops. The concept involves freestanding millwork that anchors on the wall, going about 12' high, discussing potential of					

	a rolling ladder going across a fixed shelf at about 8' and another 4' of shelving on top of that. Fixture finish still to be determined. Per JG, we cannot go over the dollar value assigned to the Pro Shop without GS going in front of Eric and requesting additional funds. JCS' scope includes anything that would be attached to a wall and the cash wrap station. Free standing floor fixtures are predominantly metal with the exception of wooden tables. This metal is not in JCS' scope. Integrated millwork that attaches to the wall with some flexibility. TY can send drawings. TY had been working with JF at JCSMS, who has the original schematic drawings for the Pro Shop which was designed to look like the Bar. Interior design team to simplify the details but use the same wood. Would be ideal to have JCS build the millwork component. JF's perimeter drawings to be the driving force of design and construction, TY to insert what he wants into these Millwork shop drawings, rather than the opposite. JG to be cc'd on all correspondence. TY/GS' drawings for Interior Layout and elevations are almost complete for this. Eric would not want the mirrors cladded on the columns in the Pro Shop to obscure the view. Cladding Columns in white raised millwork panels. TY to provide JF with any details and dimensions that he would need to input into his drawings.

JCS Construction Group, LLC

Parks

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
1.1	8	Exterior Changes	Joe Roediger			Open
	Description: Ownership is responsible for getting all changes approved by City Hall and Parks Dept.					
	Previous Meeting Minutes: **10/25/2017:** *(None)*					
1.2	11	Earthwork	Dave Keil **(Maser Consulting P.A.)**			Open
	Description:					

	Compaction tests and Soil test results					
	Previous Meeting Minutes: **10/25/2017:** DK received the shaping materials test results during the meeting. Preliminary glance looks ok. JCS will get report from Maser and forward to W&C					
1.3	13	Landscape	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: JG brought Sponzilli's the first-round draft of landscape drawing, LP-1. New design will allow for functional, safer traffic flow and increased ADA compliance at driveway. Undecided where the bag drop will be. This drawing has been sent to Ron. On first glance, Joe Conforti of NYC Parks agrees that this is a more functional design but will need to bring it to PDC for formal approval. Trump to take one more step on their end then they will push it back to landscape architect to do a more formal presentation that will then go to PDC.					
	Previous Meeting Minutes: **10/25/2017:** *(None)*					

DEC

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status

Architectural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
3.1	1	Submittals	Ron Rainone **(Hart Howerton)**			Open
	Description: Review Submittal Log					
	Previous Meeting Minutes: **10/25/2017:** *(None)*					
3.2	1	Bluestone	Ron Rainone **(Hart Howerton)**			Open
	Description: Currently waiting on approved samples.					
	Previous Meeting Minutes: **10/25/2017:** Back paving area: JCS will not set the catch basin for now, will determine location later. Elevation issue is, as of yet, unresolved. Staging area for carts is undetermined. Exterior changes include: Grill, Bar, Back of Clubhouse/staging area, venting, roof changes and locations, grill is now going underneath the overhang, Horseshoe bar ties into the columns and has been approved by Eric Trump					
3.3	9	Millwork	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS Millshop requires at least 2 weeks after reciept of control sample and final approved interior drawings in order to create the next round of shops for approval. Upon approval, fabrication will begin.					
	Previous Meeting Minutes: **10/25/2017:** Exterior bar to be white painted Azek.					

	Wood Finish: Oak control sample provided by GS, Millshop can now provide samples for color selection, which will go to Eric Trump for final approval. • Fire retardant wood will change finish color. Does code for NYC require this? Per GS, she is legally required to write this in her specs, but it just has to abide by local code. Whoever is doing the case goods will figure that out. Per JS and JS, because the building is sprinklered this is unnecessary. • Interior designer no longer wants walnut, does not care what species it is, defers to JG Plain sawn white oak stained to match color of sample given to JCS, whichever species of wood doesn't matter to GS. GS wants full grain. Will not be going with full fill, so the specs provided will be revised and distributed by EOD. Once GS determines spec, this will be the control sample for all wood.					
3.5	13	Stone Tops	Giavona Sullivan **(The Trump Organization)**			Open
	Description: There is no extra material at Ivanka's. GS brought with her the Calcutta stone sample. Per JG, Breccia being held in Italy for the locker rooms. GS rejected the 2 synthetic marble samples provided by JG. Synthetic is a quartz material, considerably cheaper, durable, doesn't have the salt and peppering that one gets with Calcutta, considerably cheaper alternative. Outdoor stone/Marble spec would be used for front bar, back bar, cash wrap/check-in, all tops in pro-shop. JG's concern is the durability. GS suggests a protective membrane, but this will peel over time. GS will initial the Calcutta. Chip in marble is a safety/liability. GS prefers waterfall edge if she can get ET to approve.					
	Previous Meeting Minutes: **10/25/2017:** *(None)*					
3.6	13	Chandeliers/Fixtures				Open
	Description: GS received sections from HH and measured chandeliers to fit 18' ceilings. Ballroom ceilings and Grill Room ceilings are 18'. Hang chandeliers on highest coffer/beam of the ceilings Specified chandeliers are $15K per quote acquired by Melissa Noto and weigh 750 lbs. The trusses will not support this weight. The flat ceilings in the pro shop can support the weight but the ceilings in the other locations may not. 176 lbs (3x) Chandeliers will come with a threaded rod, secure with air craft cable to prevent the fixture from coming loose. Spread a Kindorf inside a gem box, threaded rod through the gem box and run the aircraft cable with the wires into the ceiling. GS spoke to Isabella at HH who confirmed that HH is not contracted to do any interior fit out work, as per plans and specs, so there are no RCPs. JF has created the roof and ceiling details. Interior columns are big enough to hang chandeliers, all they need to be is big enough to hold a gem box. Pro Shop chandeliers to be Schonbek. Need to have a section in the ceiling that is removable so that the HVAC equipment can be accessed as needed. Per JG, instead of an access panel, Justin will design something that can come apart fairly easily so that it doesn't impact the location of the fixtures. This fixture will be 60" by 60" by 60".					
	Previous Meeting Minutes: **10/25/2017:** *(None)*					
3.7	13	Coordination PLans	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Since HH isn't contracted to do elevations, the Millwork shop drawings show the locations and look of the crown moldings which were sent to GS for approval (still pending, as GS needs to set up Procore account to approve/markup submittals and access all drawings and RFIs). GS to markup Millwork bar shops to reflect the locations and coordination of GFI wired lamps. GS to provide a sample of bar lamp. Per GS/JG, electrical contractor to use millwork drawings as his plans for wiring the GFI at the bar. GS and JCS to create a laundry list of items that need to be specified, and what is needed from either side, as the coordination plans are not in anybody's scope and this has not been talked about. As per their previous experiences in Trump projects, it will fall on GS & JG to get the coordination issues squared away. Submittal workflow will move from RR to JG/GS. GS/JG to sign off on Millwork drawings. Markups to include every detail from epoxy, drink rail, USB ports, etc.					

	Previous Meeting Minutes: **10/25/2017:** *(None)*					
3.8	13	Carpet	Giavona Sullivan **(The Trump Organization)**, John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Carpet installation, GS and JG specify double stick.					
	Previous Meeting Minutes: **10/25/2017:** *(None)*					

Structural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
4.1	13	Roof Trusses	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS requests additional securing detail on the wood stringers. JCS to send RFI about the Simpson ties that have a maximum impact of 5/16" JS: detail pertaining to through-bolts (versus welded bolts) JCS requires direction from F&P					
	Previous Meeting Minutes: **10/25/2017:** Jim Falk sent out drawings for cupola trusses, which JS sent to RR for initial approval. After RR provides feedback, JS will send these out as official. Basically, if we remove the top chord and make them all a 3x8 and then extend it all the way through ad then scab on ½" plywood to make up the difference in the truss width and then gusset the two together then we have at least a full rafter tail on the entire thing, then we don't have to do different connections. Connection detail for plate locations and bolt locations is approximately 4000 holes, and would require framer to shoot the Hilti nails into the steel, mark it, countersink and drill a hole to put a bolt on it. RR said last week to countersink the plate but this is not a viable solution.					

MEP

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status

Schedule

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
6.1	1	Two Week Look Ahead	Justin Shaw **(JCS Construction Group, Inc.)**			Open
	Description: Review two week look ahead.					
	Previous Meeting Minutes: **10/25/2017:** Rebar guys didn't show up due to forecasted rain, which will potentially push back Maser's rebar inspection. Still waiting on F&P to release compaction approval. Friday plumbing inspections, Wednesday EAI is starting work					

Civil

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
7.2	9	For Construction Drawings	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS has yet to receive Civil drawings For Construction.					
	Previous Meeting Minutes: **10/25/2017:** Hernan has yet to respond to the question of DOB-approved electrical drawings. JCS is still waiting on civil, landscaping, structural, landscaping or electrical. The title block sheet still does not accurately reflect the current drawings. JG and JR called Hernan during 10/18 meeting with no response.					
7.3	12	Front Driveway	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Additional/Changes to Design and Scope					
	Previous Meeting Minutes: **10/25/2017:** Front drive: JS would like to buy all hardscape material in one shot. JS requests entry driveway plans (based on potential exterior changes) to determine how to set up the site. Would be ideal to work our way out of the site so that after steel goes up we can set grades, JCS needs to know what height to set the grade. The proposed changes need to be approved by PDC, the cost needs to be approved by Eric. JG to do tissue sketch, for which Hart Howerton is not responsible because this is a landscape and civil drawing change and this all going to cost more money. No catch basins in the way if we open up the bottom. Bag drop, extra electrical and all of the stuff that is not currently on drawings, which JR and JG advised Eric would be an extra charge. JS inquired how we will be proceeding with these types of changes: are we doing drawings, are we doing RFIs, are we doing things on the fly? JG says that he will draw a tissue sketch to give to PDC prior to spending the money to reengineer. Per conversation between JS & F&P, JCS will submit based on plans and then modify the submittals based on site conditions. Submittals to be marked up after the fact.					
7.4	12	Pro Shop				Open
	Description: Interior Design					
	Previous Meeting Minutes: **10/25/2017:** Millwork drawings to be reviewed and marked up for approval by GS and JG

Parks

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
1.1	8	Exterior Changes	Joe Roediger			Open
	Description: Ownership is responsible for getting all changes approved by City Hall and Parks Dept.					
	Previous Meeting Minutes: **11/01/2017:** Regarding outdoor grill, we will need to pipe to old location and new location in case PDC says no to proposed plans. Ron to forward files to F&P and then Hernan will get those plans approved by the City. JG does not want to wait for PDC approval before sending these to the city.					

1.2	11	Earthwork	Dave Keil **(Maser Consulting P.A.)**			Open
	Description: Compaction tests and Soil test results					
	Previous Meeting Minutes: **11/01/2017:** Everything for W&C has been satisfied. We have fill and compaction approvals, everything soil related has been approved Underslab SSDS piping scheduled for Thursday so if W&C wants to be here they need to have someone onsite to do witness. Maser is going to be present throughout the process. EAI is also laying the pipes. Maser to send out DFPs per usual for Parks & W&C to review. Shaping layer material: Material to be brought in as needed so as not to jam-up the site. Trucking manifest for each load of soil signed by driver, source generator, Maser to sign manifest stating that they did a PID scan and a visual scan. W&C to provide a manifest template to Maser.					
1.3	13	Landscape	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: JG brought Sponzilli's the first-round draft of landscape drawing, LP-1. New design will allow for functional, safer traffic flow and increased ADA compliance at driveway. Undecided where the bag drop will be. This drawing has been sent to Ron. On first glance, Joe Conforti of NYC Parks agrees that this is a more functional design but will need to bring it to PDC for formal approval. Trump to take one more step on their end then they will push it back to landscape architect to do a more formal presentation that will then go to PDC.

	Previous Meeting Minutes: **11/01/2017:** *(None)*					
3.2	1	Bluestone	Ron Rainone **(Hart Howerton)**			Open
	Description: Currently waiting on larger samples from the supplier					
	Previous Meeting Minutes: **11/01/2017:** *(None)*					
3.3	9	Millwork	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS Millshop requires at least 2 weeks after reciept of control sample and final approved interior drawings in order to create the next round of shops for approval. Upon approval, fabrication will begin.					

	Previous Meeting Minutes: **11/01/2017:** GS' sample is reddish while the inspiration pictures are a darker brown/mocha. Soffit Detail: JG provided a contact for Melton Classics who can cast corbels if necessary. Chuck Hicks: (770) 963-3060 mike@meltonclassics.com Typical Millshop Details: GS' comments Instead of beadboard GS wants V-Groove. Either MDF or poplar board. This can just be flipped over to show the V-Groove. Corbel rejected. JG to review submittals with GS today and get that back to JCS.					
3.5	13	Stone Tops	Giavona Sullivan **(The Trump Organization)**			Open
	Description: There is no extra material at Ivanka's. GS brought with her the Calcutta stone sample. Per JG, Breccia being held in Italy for the locker rooms. GS rejected the 2 synthetic marble samples provided by JG. Synthetic is a quartz material, considerably cheaper, durable, doesn't have the salt and peppering that one gets with Calcutta, considerably cheaper alternative. Outdoor stone/Marble spec would be used for front bar, back bar, cash wrap/check-in, all tops in pro-shop. JG's concern is the durability. GS suggests a protective membrane, but this will peel over time. GS will initial the Calcutta. Chip in marble is a safety/liability. GS prefers waterfall edge if she can get ET to approve.					
	Previous Meeting Minutes: **11/01/2017:** Final specification still needed.					
3.6	13	Chandeliers/Fixtures				Open
	Description: GS received sections from HH and measured chandeliers to fit 18' ceilings. Ballroom ceilings and Grill Room ceilings are 18'. Hang chandeliers on highest coffer/beam of the ceilings Specified chandeliers are $15K per quote acquired by Melissa Noto and weigh 750 lbs. The trusses will not support this weight. The flat ceilings in the pro shop can support the weight but the ceilings in the other locations may not. 176 lbs (3x) Chandeliers will come with a threaded rod, secure with air craft cable to prevent the fixture from coming loose. Spread a Kindorf inside a gem box, threaded rod through the gem box and run the aircraft cable with the wires into the ceiling. GS spoke to Isabella at HH who confirmed that HH is not contracted to do any interior fit out work, as per plans and specs, so there are no RCPs. JF has created the roof and ceiling details. Interior columns are big enough to hang chandeliers, all they need to be is big enough to hold a gem box. Pro Shop chandeliers to be Schonbek. Need to have a section in the ceiling that is removable so that the HVAC equipment can be accessed as needed. Per JG, instead of an access panel, Justin will design something that can come apart fairly easily so that it doesn't impact the location of the fixtures. This fixture will be 60" by 60" by 60".					
	Previous Meeting Minutes: **11/01/2017:** Final specification still needed.					
3.7	13	Coordination PLans	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Since HH isn't contracted to do elevations, the Millwork shop drawings show the locations and look of the crown moldings which were sent to GS for approval (still pending, as GS needs to set up Procore account to approve/markup submittals and access all drawings and RFIs). GS to markup Millwork bar shops to reflect the locations and coordination of GFI wired lamps. GS to provide a sample of bar lamp. Per GS/JG, electrical contractor to use millwork drawings as his plans for wiring the GFI at the bar. GS and JCS to create a laundry list of items that need to be specified, and what is needed from either side, as the coordination plans are not in anybody's scope and this has not been talked about. As per their previous experiences in Trump projects, it will fall on GS & JG to get the coordination issues squared away. Submittal workflow will move from RR to JG/GS. GS/JG to sign off on Millwork drawings. Markups to include every detail from epoxy, drink rail, USB ports, etc.					

	Previous Meeting Minutes: **11/01/2017:** *(None)*					
3.8	13	Carpet	John Gruber **(Trump Ferry Point LLC)**, Giavona Sullivan **(The Trump Organization)**			Open
	Description: Carpet installation, GS and JG specify double stick.					
	Previous Meeting Minutes: **11/01/2017:** Final specification still needed.					

Structural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
4.1	13	Roof Trusses	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS requests additional securing detail on the wood stringers. JCS to send RFI about the Simpson ties that have a maximum impact of 5/16" JS: detail pertaining to through-bolts (versus welded bolts) JCS requires direction from F&P					
	Previous Meeting Minutes: **11/01/2017:** Connection detail for the tube steel plate. As it is, we would have to shoot everything 12" on center, countersink, and then drill a main hole through the countersunk hole, which is 3 steps to do a one-step thing. The tops of the beams are okay—they will be bolted. JCS to issue an official RFI pertaining to the tube steel specifically. Staggered 12" on center (per details on S-500.00). JCS to obtain 2009 code compliant calculations for the cupula changes from the manufacturer. No one is providing the permanent bracing plan, this has not been requested as a submittal form the engineers.					

MEP

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
5.1	14	Plumbing Fixtures	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: JG is meeting with Kohler rep immediately after this meeting to discuss plumbing fixtures. Will be using floor mounted flush valve toilets.					
	Previous Meeting Minutes: **11/01/2017:** *(None)*					
5.2	14	Plumbing Drawings	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Amended Plumbing drawings need to be signed and sealed and submitted for processing by DOB. Design team needs to bubble changes.					

	Previous Meeting Minutes: **11/01/2017:** *(None)*

Schedule

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
6.1	1	Two Week Look Ahead	Justin Shaw **(JCS Construction Group, Inc.)**			Open
	Description: Review two week look ahead.					
	Previous Meeting Minutes: **11/01/2017:** Maser spoke to manufacturer of liquid boot who said that the boot can be poured at 35F and rising. JS might try to box the bar and kitchen areas because we need to have that inspected and we cant put the plumbing in for it now until the inspection on Friday so we cannot do the plumbing until Monday.					

Civil

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
7.2	9	For Construction Drawings	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS has yet to receive Civil drawings For Construction.					
	Previous Meeting Minutes: **11/01/2017:** Hernan Rojas brought a set of drawings stamped by the DOB. DOB does not require stamped electrical drawings onsite because the electrician files his own plans with the DOB and pulls his own permits with the city, which are then approved separately from the rest of the drawings/scope. Sprinkler, Public Assembly and Fire Alarm to be filed separately. Whatever civil drawings we may have were a part of the original drawings that included a basement. These plans have changed since we received approval from DOB, JG to determine how to go about having the revisions approved/submitted. Still need Structural and Civil from HR. Two-week turn around for drawings that have not been received by the DOB. Steel erection is scheduled for the 15th and inspections will need to be called in for the end of the month. Civil, structural, plumbing, electrical, sprinkler, HVAC. RR to print the full-sized set and bill JR from the electronic copy HR sent to JR.					
7.3	12	Front Driveway	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Additional/Changes to Design and Scope					
	Previous Meeting Minutes: **11/01/2017:** JR and JG to go over the exterior redesign one more time, incorporating ET's comments and then have Sponzilli redraw it. Need to create some kind of podium and determine the material (wood frame vs. masonry, canvas vs. hard roof?) and location. Need to bring power and communications out there, where IT closet is currently located, put two 2" adjacent to that and bring it out to podium from there for lighting, computer and maybe heating. Maybe need 2-3 circuits.					
7.4	12	Pro Shop				Open
	Description: Interior Design					

	Previous Meeting Minutes: **11/01/2017:** *(None)*

Parks

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
1.1	8	Exterior Changes	Joe Roediger			Open
	Description: Ownership is responsible for getting all changes approved by City Hall and Parks Dept.					
	Previous Meeting Minutes: **11/15/2017:** Final package of rear outside changes have been sent to Parks, the front has not been submitted to Parks.\					

1.2	11	Earthwork	Dave Keil **(Maser Consulting P.A.)**			Open
	Description: Compaction tests and Soil test results					
	Previous Meeting Minutes: **11/15/2017:** Maser to continue to send erosion control reports along with DFRs. W&C and Maser have not received the letter from F&P. W&C owes Maser templates for soil manifests. Soil not needed onsite at this time. Will be delivered as needed. Maser's reports on SSDS should continue to document any and all deviations from drawings, re3dline drawings/as-builts. Sign off on deviations from F&P as the original designer of the SSDS. This will be in the cert report but it is not something that Maser is certifying. JG and DK to coordinate this with F&P.					
1.3	13	Landscape	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: JG brought Sponzilli's the first-round draft of landscape drawing, LP-1. New design will allow for functional, safer traffic flow and increased ADA compliance at driveway. Undecided where the bag drop will be. This drawing has been sent to Ron. On first glance, Joe Conforti of NYC Parks agrees that this is a more functional design but will need to bring it to PDC for formal approval. Trump to take one more step on their end then they will push it back to landscape architect to do a more formal presentation that will then go to PDC.					
	Previous Meeting Minutes: **11/15/2017:** ET is going to be onsite on Friday. JS can meet with ownership and ET to discuss location of transformer in relation to the turning circle and associated elevations.					

DEC

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status

Architectural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
3.1	1	Submittals	Ron Rainone **(Hart Howerton)**			Open
	Description: Review Submittal Log					
	Previous Meeting Minutes: **11/15/2017:** Window shops have been resubmitted, should be a quick turnaround because there was only a minor change in the resubmission. Three egress doors (104B, 103C, 101A) need to have ADA sills and require 3rd party certification or leave it as is sign off on JCS not being responsible for wind loads. need to have ownership determine how to proceed with sills as often ADA sills present the hazard of rain water to enter building,					
3.2	1	Bluestone	Ron Rainone **(Hart Howerton)**			Open
	Description: Currently waiting on larger samples from the supplier					
	Previous Meeting Minutes: **11/15/2017:** *(None)*					
3.3	9	Millwork	Ron Rainone **(Hart Howerton)**			Open

	Description: JCS Millshop requires at least 2 weeks after reciept of control sample and final approved interior drawings in order to create the next round of shops for approval. Upon approval, fabrication will begin.					
	Previous Meeting Minutes: **11/15/2017:** Interior millwork sample of flat-sawn ash has an open cathedral grain and, per JG, looks similar to the furniture used throughout other Trump properties so will mostly be approved.					
3.5	13	Stone Tops	Giavona Sullivan **(The Trump Organization)**			Open
	Description: There is no extra material at Ivanka's. GS brought with her the Calcutta stone sample. Per JG, Breccia being held in Italy for the locker rooms. GS rejected the 2 synthetic marble samples provided by JG. Synthetic is a quartz material, considerably cheaper, durable, doesn't have the salt and peppering that one gets with Calcutta, considerably cheaper alternative. Outdoor stone/Marble spec would be used for front bar, back bar, cash wrap/check-in, all tops in pro-shop. JG's concern is the durability. GS suggests a protective membrane, but this will peel over time. GS will initial the Calcutta. Chip in marble is a safety/liability. GS prefers waterfall edge if she can get ET to approve.					
	Previous Meeting Minutes: **11/15/2017:** Final specification still needed.					
3.6	13	Chandeliers/Fixtures				Open
	Description: GS received sections from HH and measured chandeliers to fit 18' ceilings. Ballroom ceilings and Grill Room ceilings are 18'. Hang chandeliers on highest coffer/beam of the ceilings Specified chandeliers are $15K per quote acquired by Melissa Noto and weigh 750 lbs. The trusses will not support this weight. The flat ceilings in the pro shop can support the weight but the ceilings in the other locations may not. 176 lbs (3x) Chandeliers will come with a threaded rod, secure with air craft cable to prevent the fixture from coming loose. Spread a Kindorf inside a gem box, threaded rod through the gem box and run the aircraft cable with the wires into the ceiling. GS spoke to Isabella at HH who confirmed that HH is not contracted to do any interior fit out work, as per plans and specs, so there are no RCPs. JF has created the roof and ceiling details. Interior columns are big enough to hang chandeliers, all they need to be is big enough to hold a gem box. Pro Shop chandeliers to be Schonbek. Need to have a section in the ceiling that is removable so that the HVAC equipment can be accessed as needed. Per JG, instead of an access panel, Justin will design something that can come apart fairly easily so that it doesn't impact the location of the fixtures. This fixture will be 60" by 60" by 60".					
	Previous Meeting Minutes: **11/15/2017:** Final specification still needed.					
3.7	13	Coordination PLans	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Since HH isn't contracted to do elevations, the Millwork shop drawings show the locations and look of the crown moldings which were sent to GS for approval (still pending, as GS needs to set up Procore account to approve/markup submittals and access all drawings and RFIs). GS to markup Millwork bar shops to reflect the locations and coordination of GFI wired lamps. GS to provide a sample of bar lamp. Per GS/JG, electrical contractor to use millwork drawings as his plans for wiring the GFI at the bar. GS and JCS to create a laundry list of items that need to be specified, and what is needed from either side, as the coordination plans are not in anybody's scope and this has not been talked about. As per their previous experiences in Trump projects, it will fall on GS & JG to get the coordination issues squared away. Submittal workflow will move from RR to JG/GS. GS/JG to sign off on Millwork drawings. Markups to include every detail from epoxy, drink rail, USB ports, etc.					

	Previous Meeting Minutes: **11/15/2017:** *(None)*					
3.8	13	Carpet	Giavona Sullivan **(The Trump Organization)**, John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Carpet installation, GS and JG specify double stick.					
	Previous Meeting Minutes: **11/15/2017:** Final specification still needed.					

Structural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
4.1	13	Roof Trusses	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS requests additional securing detail on the wood stringers. JCS to send RFI about the Simpson ties that have a maximum impact of 5/16" JS: detail pertaining to through-bolts (versus welded bolts) JCS requires direction from F&P					
	Previous Meeting Minutes: **11/15/2017:** Cupula framing issue: everything aesthetic solution that JCS sends to design team as a means of remedying the off-center rafters is returned with an off-center structural review/notes. Original design didn't work, new designs work from a structural standpoint but not aesthetic. JCS submitted an on-center option. Truss manufacturer will not certify trusses that are not designed by their team.					

MEP

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
5.1	14	Plumbing Fixtures	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: JG is meeting with Kohler rep immediately after this meeting to discuss plumbing fixtures. Will be using floor mounted flush valve toilets.					
	Previous Meeting Minutes: **11/15/2017:** Plumbing fixtures will be left in warehouse and delivered to site in JCS' care as needed.					
5.2	14	Plumbing Drawings	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Amended Plumbing drawings need to be signed and sealed and submitted for processing by DOB. Design team needs to bubble changes.					
	Previous Meeting Minutes: **11/15/2017:** *(None)*					

JCS Construction Group, Inc.

Meeting #16

Schedule

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
6.1	1	Two Week Look Ahead	Justin Shaw **(JCS Construction Group, Inc.)**			Open

Description:
Review two week look ahead. 3-4 Weeks

Previous Meeting Minutes:

11/15/2017:
Liquid boot installation has begun.
Boot, pouring back slab and wall adjacent to the loading dock, steel tentatively still schedule for next week. Rest of the slab is still scheduled for next week as well, along with all stairs but pouring the ramps is on hold due to potential changes in elevations. Assume the back grade is not changing, although JR might want to change it, Grades still not established for cart paths to be installed per JG 11/14/17
Wood framing is ongoing.
There will potential hold ups if submittals are not reviewed and returned by the proper parties in a timely fashion.

Civil

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
7.2	9	For Construction Drawings	Ron Rainone **(Hart Howerton)**			Open

Description:
JCS has yet to receive Civil drawings For Construction.

Previous Meeting Minutes:

11/15/2017: *(None)*

7.3	12	Front Driveway	John Gruber **(Trump Ferry Point LLC)**			Open

Description:
Additional/Changes to Design and Scope

Previous Meeting Minutes:

11/15/2017:
JR and JG to go over the exterior redesign one more time, incorporating ET's comments and then have Sponzilli redraw it. Need to create some kind of podium and determine the material (wood frame vs. masonry, canvas vs. hard roof?) and location. Need to bring power and communications out there, where IT closet is currently located, put two 2" adjacent to that and bring it out to podium from there for lighting, computer and maybe heating. Maybe need 2-3 circuits.

Parks

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
1.1	8	Exterior Changes	Joe Roediger			Open

Description:
Ownership is responsible for getting all changes approved by City Hall and Parks Dept.

Previous Meeting Minutes:

11/29/2017:
Front entrance was discussed. RR to add his notes for JG to submit to ET. Sponzilli to provide an updated CAD drawing and F&P to modify grades. RR to coordinate.
RR to provide revised locations and details on railing, ramps, stairs based on PDC comments.

	Trump to determine how to screen windows, how to proceed with exterior bar glazing. Trump to determine access to septic tank, ejector pump					
1.2	11	Earthwork	Dave Keil **(Maser Consulting P.A.)**			Open
	Description: Compaction tests and Soil test results					
	Previous Meeting Minutes: **11/29/2017:** DK to send a copy of his working manifest to W&C for review and approval since it doesn't look like W&C will be able to provide in time.					
1.3	13	Landscape	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: JG brought Sponzilli's the first-round draft of landscape drawing, LP-1. New design will allow for functional, safer traffic flow and increased ADA compliance at driveway. Undecided where the bag drop will be. This drawing has been sent to Ron. On first glance, Joe Conforti of NYC Parks agrees that this is a more functional design but will need to bring it to PDC for formal approval. Trump to take one more step on their end then they will push it back to landscape architect to do a more formal presentation that will then go to PDC.					
	Previous Meeting Minutes: **11/29/2017:** *(None)*					

DEC

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
2.1	18	SSDS Update	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS needed to cut back and correct some areas of the anchor bolts, needed to cut and fold back the membrane in these locations. EAI to fold it back and respray at a later date. Smoke test to be done after steel.					
	Previous Meeting Minutes: **11/29/2017:** *(None)*					

Architectural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
3.1	1	Submittals	Ron Rainone **(Hart Howerton)**			Open
	Description: Review Submittal Log					
	Previous Meeting Minutes: **11/29/2017:** *(None)*					
3.2	1	Bluestone	Ron Rainone **(Hart Howerton)**			Open
	Description: Currently waiting on larger samples from the supplier					
	Previous Meeting Minutes: **11/29/2017:** All sandstone is from one lot.					

	How much is full color thermal vs full color cleft? How much is blue stone cleft vs bluestone thermal?					
3.3	9	Millwork	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS Millshop requires at least 2 weeks after reciept of control sample and final approved interior drawings in order to create the next round of shops for approval. Upon approval, fabrication will begin.					
	Previous Meeting Minutes: **11/29/2017:** *(None)*					
3.5	13	Stone Tops	Giavona Sullivan **(The Trump Organization)**			Open
	Description: There is no extra material at Ivanka's. GS brought with her the Calcutta stone sample. Per JG, Breccia being held in Italy for the locker rooms. GS rejected the 2 synthetic marble samples provided by JG. Synthetic is a quartz material, considerably cheaper, durable, doesn't have the salt and peppering that one gets with Calcutta, considerably cheaper alternative. Outdoor stone/Marble spec would be used for front bar, back bar, cash wrap/check-in, all tops in pro-shop. JG's concern is the durability. GS suggests a protective membrane, but this will peel over time. GS will initial the Calcutta. Chip in marble is a safety/liability. GS prefers waterfall edge if she can get ET to approve.					
	Previous Meeting Minutes: **11/29/2017:** Final specification still needed.					
3.6	13	Chandeliers/Fixtures				Open
	Description: GS received sections from HH and measured chandeliers to fit 18' ceilings. Ballroom ceilings and Grill Room ceilings are 18'. Hang chandeliers on highest coffer/beam of the ceilings Specified chandeliers are $15K per quote acquired by Melissa Noto and weigh 750 lbs: The trusses will not support this weight. The flat ceilings in the pro shop can support the weight but the ceilings in the other locations may not. 176 lbs (3x) Chandeliers will come with a threaded rod, secure with air craft cable to prevent the fixture from coming loose. Spread a Kindorf inside a gem box, threaded rod through the gem box and run the aircraft cable with the wires into the ceiling. GS spoke to Isabella at HH who confirmed that HH is not contracted to do any interior fit out work, as per plans and specs, so there are no RCPs. JF has created the roof and ceiling details. Interior columns are big enough to hang chandeliers, all they need to be is big enough to hold a gem box. Pro Shop chandeliers to be Schonbek. Need to have a section in the ceiling that is removable so that the HVAC equipment can be accessed as needed. Per JG, instead of an access panel, Justin will design something that can come apart fairly easily so that it doesn't impact the location of the fixtures. This fixture will be 60" by 60" by 60".					
	Previous Meeting Minutes: **11/29/2017:** Final specification still needed.					
3.8	13	Carpet	John Gruber **(Trump Ferry Point LLC)**, Giavona Sullivan **(The Trump Organization)**			Open
	Description: Carpet installation, GS and JG specify double stick.					

	Previous Meeting Minutes: **11/29/2017:** Final specification still needed.					
3.9	16	Doors and Hardware	Giavona Sullivan **(The Trump Organization)**	11/ 23/ 2017		Open
	Description: Interior Doors Hardware					
	Previous Meeting Minutes: **11/29/2017:** Final specification still needed on hardware.					

Structural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status

MEP

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
5.1	14	Plumbing Fixtures	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: JG is meeting with Kohler rep immediately after this meeting to discuss plumbing fixtures. Will be using floor mounted flush valve toilets.					
	Previous Meeting Minutes: **11/29/2017:** *(None)*					
5.2	14	Plumbing Drawings	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Amended Plumbing drawings need to be signed and sealed and submitted for processing by DOB. Design team needs to bubble changes.					
	Previous Meeting Minutes: **11/29/2017:** *(None)*					

Schedule

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status

WC CONTRACTS WITH GAI

SCHEDULE FOR FAI
REMINDER MID-FEB OR LATE FEB
SSDS

JCS | Construction Group, Inc.

Meeting #21

	JCS is no longer able to support another round of drafting without an approved change order for design costs as 6 revisions have already been provided. Finished fronts on equipment is not feasible. Ownership will be reusing the existing cash wraps. Requests that the liquor shelves be packed forward. Jim Falk to detail the base of column and how cash drawer will be integrated. JCS requests that the Interior Design team elect a single representative to be the point of contact for submittal review, RFI and design-related items. It was determined that GS would be this point of contact.					
3.4	13	Stone Tops	Giavona Sullivan **(The Trump Organization)**			Open

Parks

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
1.1	8	Exterior Changes	Joe Roediger			Open

Description:
Ownership is responsible for getting all changes approved by City Hall and Parks Dept.

Previous Meeting Minutes:

01/03/2018:
Per Joe Conforti, Sheena has no commitment on DEC submission.
No outright issues from Parks about changes
JC of DEC: Changes seem logical.

1.2	13	Landscape	John Gruber **(Trump Ferry Point LLC)**			Open
	Previous Meeting Minutes: **01/03/2018:** JCS has yet to receive these drawings for Construction/Pricing					

DEC

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
2.1	18	SSDS Update	Ron Rainone **(Hart Howerton)**			Open
	Previous Meeting Minutes: **01/03/2018:** EAI to remobilize at the end of February to do the rough piping of the SSDS JS confirmed with W&C that the changes to the SSDS determined during the construction of the Construction of the new Clubhosue will be picked up in the work done by EAI in other work thgroughout the Park. SL suggests coordinating mobilization of EAi . SL informs that the because there is no sitework or earth disturbance being done maser can scale down their presence onsite to one inspection per month if we put down hay mulch or tarp during the winter Less expensive to keep Maser on weekly and not put down temporary stabilization because hay mulch would destroy the course.					

Architectural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
3.1	1	Submittals	Ron Rainone **(Hart Howerton)**			Open
	Description: Review Submittal Log Ejector Pump drawings needs sign-off on in order to order basin and pump ASAP as this is a long lead time item.					
	Previous Meeting Minutes: **01/03/2018:** JG to follow up with F&P on ejector pump					
3.2	1	Bluestone	Ron Rainone **(Hart Howerton)**			Open
	Previous Meeting Minutes: **01/03/2018:** 24x24 samples have been shipped by supplier. JG will ask ET which stone he wants.					
3.3	9	Millwork	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS Millshop requires at least 2 weeks after receipt of control sample and final approved interior drawings in order to create the next round of shops for approval. Upon approval, fabrication will begin.					
	Previous Meeting Minutes: **01/03/2018:** RFI #19 is still open Samples, bar revisions and new pricing still open.					

3.4	13	Stone Tops	Giavona Sullivan **(The Trump Organization)**			Closed
	Previous Meeting Minutes: **01/03/2018:** *(None)*					
3.5	13	Chandeliers/Fixtures				Open
	Previous Meeting Minutes: **01/03/2018:** Supports in the coffers for chandelier, as of now we are working with non-structural coffers. In order to hang chandeliers in dining room JCS to add structural 2x laying on the bottom chord that we can run a threaded rod into it. Will need locations later but proceed with structural. Chandelier to hang from Cupola still open.					
3.6	13	Carpet	Giavona Sullivan **(The Trump Organization)**, John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Carpet installation, GS and JG specify double stick.					
	Previous Meeting Minutes: **01/03/2018:** Final specification and quantities still needed.					
3.7	16	Doors and Hardware	Giavona Sullivan **(The Trump Organization)**	11/ 23/ 2017		Open
	Description: Interior Doors Hardware					
	Previous Meeting Minutes: **01/03/2018:** Final specification still needed on hardware as well as the finish type for all door submittals					
3.8	12	Pro Shop				Open
	Description: Interior Design					
	Previous Meeting Minutes: **01/03/2018:** Pro-shop will remain as is until further notice and approved pricing based on ID concept renderings					
3.10	19	Drawings for Exterior Changes	Ron Rainone **(Hart Howerton)**			Open
	Previous Meeting Minutes: **01/03/2018:** JCS has yet to receive these drawings for Construction/Pricing and will be building the back bar as per drawings received to date					
3.11	19	Exterior Door Hardware	Giavona Sullivan **(The Trump Organization)**			Open

	Previous Meeting Minutes: **01/03/2018:** JCS has yet to receive these specs.					
3.12	20	Cash Drop	Joe Roediger	12/ 20/ 2017		Open
	Description: Jewelry store-style cash-drop at comptroller's office					
	Previous Meeting Minutes: **01/03/2018:** Ownership to provide detail for pricing					
3.13	20	Radar at Cupola	Joe Roediger	12/ 20/ 2017		Open
	Description: Requirements will be provided by 12/20/2018 (AV, LV and what the roofer needs)					
	Previous Meeting Minutes: **01/03/2018:** RFI #56 Cupola Items: These details will need to be provided by Owner and this RFI shall remain open until it is completed. L shaped bracket on underside of soffit coming off the rafter tail. Power: regular 1 10, Cable is regular CAT6 We will run the wire up exterior sleeve and hide it.					
3.14	21	Brick	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: JCS to obtain less uniform/more tumbled looking brick					
	Previous Meeting Minutes: **01/03/2018:** *(None)*					

Structural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status

RESPONSIBLE PARTY

THIS IS ALL TAKEN CARE OF.

WEEKLY EROSION CONTROL REPORT SENT WEEKLY

NO PLANS. ANYTHING TRUCKS

Architectural

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
3.1	1	Submittals	Ron Rainone **(Hart Howerton)**			Open
	Description: Review Submittal Log					
	Previous Meeting Minutes: **01/10/2018:** Ejector Pump needs to be signed off on by F&P Molding details provided, to be reviewed by GS on Friday. GS to determine location (highlight an RCP) and typical detail for all interior trim. Interactions of trim to be worked out in the field.					
3.2	1	Bluestone	Ron Rainone **(Hart Howerton)**			Open
	Description:					

TALK TO MARK ABOUT TWO WEEK LOOK AHEAD SCHEDULE.

	ET selected Bluestone thermal					
	Previous Meeting Minutes: **01/10/2018:** 24x24 samples were requested. To be presented to ET on Friday.					
3.3	9	Millwork	Ron Rainone **(Hart Howerton)**			Open
	Description: JCS Millshop requires at least 2 weeks after receipt of control sample and final approved interior drawings in order to create the next round of shops for approval. Upon approval, fabrication will begin.					
	Previous Meeting Minutes: **01/10/2018:** *(None)*					
3.5	13	Chandeliers/Fixtures				Open
	Description: Chandelier in Cupola: Logistics, cost, design: This was eliminated but JCS will still provide structural support in case Ownership wants a chandelier in the future. Decided on ballroom chandeliers, PCCO pending detail by ID/HH.					
	Previous Meeting Minutes: **01/10/2018:** In order to hang chandeliers in dining room JCS to add structural 2x laying on the bottom chord that we can run a threaded rod into it. Will need locations later but proceed with structural.GS to markup a RCP with locations of chandeliers Chandelier to hang from Cupola to be discussed with ET on Friday 1/12/18					
3.6	13	Carpet	John Gruber **(Trump Ferry Point LLC)**, Giavona Sullivan **(The Trump Organization)**			
	Previous Meeting Minutes: **01/10/2018:** Final specification and quantities still needed.					
3.7	16	Doors and Hardware	Giavona Sullivan **(The Trump Organization)**	11/ 23/ 2017		
	Description: Interior Doors Hardware					
	Previous Meeting Minutes: **01/10/2018:** Final specification still needed on hardware as well as the finish type for all door submittals Changes to door scope via 10/26/17 markups will be reviewed by JCS and presented as a CO.					
3.8	12	Pro Shop				
	Description: Interior Design: Pro-Shop shop drawings are rejected. Per ET the checkout cash-wrap will be m the right side, so as to protect direct line of site/view of the bridge.					
	Previous Meeting Minutes: **01/10/2018:** To be discussed with ET on Friday.					

3.10	19	Drawings for Exterior Changes	Ron Rainone **(Hart Howerton)**			Open
	Previous Meeting Minutes: **01/10/2018:** Exterior changes were approved by Parks but JCS has yet to receive these drawings for Construction/Pricing and will be building the back bar as per drawings received to date. The only change that Parks made was to the roof, which will be enclosed and have an inline fan because Parks didn't want to see the two vent holes. RR to provide updated drawings illustrating the exterior changes.					
3.11	19	Exterior Door Hardware	Giavona Sullivan **(The Trump Organization)**			Open
	Previous Meeting Minutes: **01/10/2018:** *(None)*					
3.12	20	Cash Drop	Joe Roediger	12/ 20/ 2017		Open
	Description: Jewelry store-style cash-drop at comptroller's office					
	Previous Meeting Minutes: **01/10/2018:** Ownership to provide detail for pricing					
3.13	20	Radar at Cupola	Joe Roediger	12/ 20/ 2017		Open
	Description: Requirements will be provided by 12/20/2018 (AV, LV and what the roofer needs)					
	Previous Meeting Minutes: **01/10/2018:** *(None)*					
3.14	21	Brick	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: JCS to obtain less uniform/more tumbled looking brick					
	Previous Meeting Minutes: **01/10/2018:** JCS to obtain less uniform/more tumbled looking brick to be presented to ET for approval					

Structural

Meeting #23

MEP

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
5.1	14	Plumbing Fixtures	John Gruber **(Trump Ferry Point LLC)**			Open
	Previous Meeting Minutes: **01/10/2018:** Final specifications still needed					
5.2	14	Plumbing Drawings	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Amended Plumbing drawings need to be signed and sealed and submitted for processing by DOB. Design team needs to bubble changes.					
	Previous Meeting Minutes: **01/10/2018:** Hernan to reiterate what he needs from Joe/F&P/HH/JCS: sprinkler hydraulic calculations from vendors. JCS was hoping to buy HVAC & Sprinkler together but all of the bids we have received show the expensive BMS system, which was VE'd. Drawings need to be revised by F&P to reflect the reduction and simplification of scope. Suggestion of conference call between F&P, TO, HH & JCS. Changes to HVAC venting on enclosed roof at exterior also needs to be detailed in drawings.					
5.3	20	Lighting	Giavona Sullivan **(The Trump Organization)**			Open
	Description: Lighting Plan					
	Previous Meeting Minutes: **01/10/2018:** GS to provide JG with specs on the additional 27 sconces who will then submit to F&P to ensure energy code compliance. If energy code is a non-issue, JCS may bring price down.					

Schedule

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
6.1	1	Two Week Look Ahead	Justin Shaw **(JCS Construction Group, Inc.)**			Open

Parks

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
1.1	8	Exterior Changes	Joe Roediger			Open

Description:
Approved by Parks:

1. Relocation of outdoor kitchen on North Terrace;
2. Addition of V-groove paneled screen wall, which will be 4'-6" tall across its length, and rectilinear in profile;
3. Addition of 4" x 12" subway tile, in white sample color submitted for review, on southern wall of outdoor kitchen;
4. Revision of dormer above outdoor kitchen to include intake and exhaust louvers.
5. Alteration of entry stairs at West Elevation to run straight instead of being accessible at an angle;

	6. Removal of plan bump-out at exterior wall behind Bar in Grill Room; 7. Change from Anderson A-Series windows to Pella Windows; 8. Change of operable doors (between gridlines F.5 and F.12, 5.1 and 5.5) to fixed units; 9. Introduction of interior "black-out" panels behind specified windows at Bar and in Mechanical and Electrical room					
	Previous Meeting Minutes: **01/31/2018:** JCS to obtain pricing on items 1-6, 8-9 Team discussed means by which the blacked out windows would be lit, which is necessary to know before blacking out the windows. JG/GS to issue this detail within the lighting package. Lighting consultant should be brought onto team. JCS to find out if Sam Tell will file for the ansel system on their own, or provide documents to Hernan to file JCS received subway tile control sample					
1.2	13	Landscape	John Gruber **(Trump Ferry Point LLC)**			Open
	Previous Meeting Minutes: **01/31/2018:** The front entry way is still not approved

Q: Fiona Rooney Sent Tue Feb 6, 2018 at 08:48 am EST
Please send the missing items in the plumbing schedule. This includes the water fountain, urinal and mop sink, and please go over the full package and make sure nothing else is missing.

Q: Fiona Rooney Sent Tue Feb 6, 2018 at 08:46 am EST
Please advise on the status of the lighting plan:

Interior:
Lighting detail for blacked out windows
Sconces
Ceiling-mounted fixtures

Exterior: Bollards
Uplighting on building facade

Q: Mark Smithson Sent Fri Jan 26, 2018 at 10:46 am EST
Please provide detail for the cross section in the 4 locations.

A: Ron Rainone (Hart Howerton) Responded Tue Jan 30, 2018 at 10:02 pm UTC
See attached sketches for the requested Dining Room Ceiling Details. Work these details with submittal package 46.2 provided by JCS.

Q: Justin Shaw Sent Fri Dec 8, 2017 at 12:03 pm EST
At yesterday's meeting a chandelier hanging from cupola was discussed as was mounting of a camera outside on the top. I believe both of these will need to be detailed and cleared by structural engineer.

A: Justin Shaw (JCS Construction Group, Inc.) Responded Fri Dec 8, 2017 at 10:59 pm UTC
These details will need to be provided by Owner and this RFI shall remain open until it is completed. Thanks

A: Ron Rainone (Hart Howerton) Responded Fri Dec 8, 2017 at 09:50 pm UTC
Please provide sketch of desired location of chandelier, hanging type and whether it will be on a motor (otherwise forget about changing bulbs). Also provide fixture product cut, dimensions and weight. The camera detailing is not our dicipline and needs to be done by A/V or security vendor.

Q: Justin Shaw Sent Tue Nov 7, 2017 at 04:05 pm EST
Please provide a connection detail from the C joists to the metal framing for the upper roof area.

A: Justin Shaw (JCS Construction Group, Inc.) Responded Wed Dec 6, 2017 at 06:23 pm UTC
I mean bar room ceiling.

A: Ron Rainone (Hart Howerton) Responded Fri Nov 10, 2017 at 05:26 pm UTC
See attached response from structural engineer.

Parks

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
1.1	8	Exterior Changes	Joe Roediger			Open

Description:
Approved by Parks:

1. Relocation of outdoor kitchen on North Terrace;
2. Addition of V-groove paneled screen wall, which will be 4'-6" tall across its length, and rectilinear in profile;
3. Addition of 4" x 12" subway tile, in white sample color submitted for review, on southern wall of outdoor kitchen;
4. Revision of dormer above outdoor kitchen to include intake and exhaust louvers.
5. Alteration of entry stairs at West Elevation to run straight instead of being accessible at an angle;

MEP

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
5.2	14	Plumbing Drawings	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Amended Plumbing drawings need to be signed and sealed and submitted for processing by DOB. Design team needs to bubble changes.					
	Previous Meeting Minutes: **02/21/2018:** JCS is still waiting on this.					
5.3	20	Lighting	Giavona Sullivan **(The Trump Organization)**			Open
	Description: Lighting Plan					
	Previous Meeting Minutes: **02/21/2018:** *(None)*					

Schedule

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
6.1	1	Two Week Look Ahead	Justin Shaw **(JCS Construction Group, Inc.)**			Open
	Description: Review two week look ahead.					
	Previous Meeting Minutes: **02/21/2018:** *(None)*					
6.2	26	Schedule Delay	John Gruber **(Trump Ferry Point LLC)**, Giavona Sullivan **(The Trump Organization)**	02/ 01/ 2018	High	Open
	Previous Meeting Minutes: **02/21/2018:**					

All open change orders and lack of approvals on the follow will incur corresponding schedule delays:
Interior doors package
Dining room ceiling
Bar
Lighting plan: JG to send comprehensive delineation of the lighting plan scope by TO and JCS. Including specs for recessed downlights. Which fixtures are by owner? Does the quantity stay the same? Added lights will be $105/recessed and $70/box labor if TO provides fixture.

According to JG, the plan is to hold all change orders until the team has one, comprehensive change order "package" (ie: HVAC, doors, millwork, PDC exterior package, lighting plan, etc) to present to ET for approval. As pointed out by JR, this desire to adhere to protocol will exacerbate delays in schedule

Civil

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
7.1	9	For Construction Drawings	Ron Rainone **(Hart Howerton)**			Open
	Previous Meeting Minutes: **02/21/2018:** Due to open Exterior PDC submission, JCS has yet to receive Civil drawings For Construction and final Grades are still not established					
7.2	12	Front Driveway	John Gruber **(Trump Ferry Point LLC)**			Open
	Description: Additional/Changes to Design and Scope					
	Previous Meeting Minutes: **02/21/2018:** Due to open Exterior PDC submission, JCS has yet to receive these drawings for Construction/Pricing.					
7.3	27	Telecom	John Gruber **(Trump Ferry Point LLC)**	02/ 21/ 2018		Open
	Description: Earthwork					
	Previous Meeting Minutes: **02/21/2018:** Backcharge for damage to conduit to be backcharged to Atlas. JCS received one of two invoices for the BC. Credit to be issued through PCCO. American Integrated Security Group was in attendance to discuss the radar at cupola and consult on suggested means of pricing, powering and installing this item. Lightning Protection is desired by TO and requires the use of the highest point, which is the desired location for the radar due to maximum visibility, but the lightning Protection is pointless if not at peak. Is threaded rod enough support for lightning protection?					

Change Orders

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
8.2	20	PCCO #012	John Gruber **(Trump Ferry Point LLC)**	01/ 02/ 2018	High	Open
	Description: Interior Lighting					

	Attachments: PCCO #012.pdf					
	Previous Meeting Minutes: **02/21/2018:** JCS received a partial lighting plan from TO showing desired locations. No energy calculations have been provided as of today because, per JG engineered lighting plan is not required if we are replacing in kind but we are not because there are additional lights at the bar, at the proshop ceiling, recessed downlights, window backlighting, etc.					
8.3	20	PCCO #011	John Gruber (**Trump Ferry Point LLC**)			Open
	Attachments: PCCO #011.pdf					
	Previous Meeting Minutes: **02/21/2018:** Millwork Bar Change Order to remain open for approval					
8.4	20	PCCO #010	John Gruber (**Trump Ferry Point LLC**)	01/ 02/ 2018	High	Open
	Description: Changes to Cupola Framing Materials					
	Attachments: PCCO #010.pdf					
	Previous Meeting Minutes: **02/21/2018:** Will remain open for approval.					
8.5	24	PCCO #014	John Gruber (**Trump Ferry Point LLC**)	01/ 23/ 2018	High	Open
	Description: PCCO for Door Changes					
	Previous Meeting Minutes: **02/21/2018:** Will remain open for further shop drawings review and potential reduction of scope.					
8.6	27	PCCO #15	Joe Roediger	02/ 21/ 2018		Open
	Description: APPROVED					
	Previous Meeting Minutes: **02/21/2018:** *(None)*					
8.7	27	PCCO #016	John Gruber (**Trump Ferry Point LLC**)	02/ 21/ 2018		Open
	Description: Changes to the Dormer per A3.02					

	Previous Meeting Minutes: **02/21/2018:** APPROVED

	Previous Meeting Minutes: **05/16/2018:** *(None)*					

TREX

RR to determine if the standard 36" Trex railings can be used instead of the specified 42" height. RR responded saying that the conditions as built do not require the 42" rail by code so the 36" stock railing kits are acceptable.

3.2	9	Millwork	Ron Rainone **(Hart Howerton)**			On Hold

Description:
JCS Millshop requires at least 2 weeks after receipt of control sample and final approved interior drawings in order to create the next round of shops for approval. Upon approval, fabrication will begin.

Previous Meeting Minutes:
05/16/2018: *(None)*

3.3	19	Exterior Door Hardware	Giavona Sullivan **(The Trump Organization)**			Open

Previous Meeting Minutes:
05/16/2018:
Exterior lanterns, shower seats, grab bars are all onsite. Plumbing trim not delivered but is avail. All Interior hardware by Omni including closers are due Thursday or Friday. Exterior is mainly push-pulls, mortise locks and closers and are being delivered in the next couple of days. Carpenters to install four hinges per the metal doors. JG to check on Von Dubran.

3.4	23	Attic Windows	Ron Rainone **(Hart Howerton)**	01/ 31/ 2018		Open

Description:
See RFI #64

Previous Meeting Minutes:
05/16/2018:
The window treatments for the blackout windows: curtains have been installed, JG to put up a temporary light to determine how to proceed with permanent fixtures but will likely proceed with porcelain socket.=. This item will remain open until Mock-up of Window Blackout detail is complete: there is no lighting behind the windows AS YET due to absence of any lighting plan, RCP, energy calculations etc.

Per JG, we can add the lights at a later date because we do not need the attic windows illuminated right away and once we get the approval we can proceed

3.5	39	Masonry	John Gruber **(Trump Ferry Point LLC)**			Open

Previous Meeting Minutes:
05/16/2018:
Bluestone Patio:
Exterior Landscape, siding grading, seams of the bluestone needs to get cut and ground down.
MC does not like the bluestone installation because of the irregular, thickness of the seams and surfaces, etc.; this couldn't be helped because of the nature of the source from which the stone was quarried. Seams need to be sawed down.
Masons to cut the thickness of the stone down (and hadn't been onsite due to 90% thunderstorms predicted).

3.6	39	Carpentry				Open

Description:
Window Trim detail: The reveal is approved, mockup was poor, lack of consistency on the trim dimensions look odd (1x4 all the way around and then a stool with the 1x2 and 1x6). The TO should provide a trim detail. Carpenters need to tighten up their miters.

Description:
Sprinkler and Duct are the only trades that need to be working overtime/making use of extended hours HVAC equipment to be delivered to site before 5/18/2018. Bentzi to do layout when equipment,
Regarding the hatch above the mezzanine, since this is not a coordinated design by the engineers, will need to be laid out on the mezzanine and lasered up to determine locations of mechanical equipment on roof.
Kitchen equipment can be delivered, preformed metal curbs to sit on EPDM
Hatch in Proshop (JCS doesn't have detail for this, how does TO want this done? Previously discussed option of not doing the roof hatch and cutting the roof as needed if we need to get equipment out. Need to cut a 4x5 hole to get the equipment in, so the same hole would serve to remove the equipment as needed later on, but this would also result in an enormous hole in the ceiling and they do not make 5x5 access panels that are attractive for this purpose.
Perhaps JCS can fabricate a custom access panel for the oversized hatch door?

Previous Meeting Minutes:
05/16/2018: *(None)*

Schedule

No	Meeting Origin	Title	Assignment	Due Date	Priority	Status
6.1	9	For Construction Drawings	Ron Rainone **(Hart Howerton)**			Open
	Previous Meeting Minutes: **05/16/2018:** *(None)*					
6.2	1	Two Week Look Ahead	Justin Shaw **(JCS Construction Group, Inc.)**			Open
	Description: Review two week look ahead.					
	Previous Meeting Minutes: **05/16/2018:** Sam Tell: Stainless Steel Fab, Refrigeration Electricians Ductwork Roofer: Shingling, Flashing Carpenters: Trim in grill/bar room, Taping Painting, framing for Proshop diffusers, closing up walls, back door trim Masonry: Belgium Block/Bluestone					
6.3	26	Schedule Delay	John Gruber **(Trump Ferry Point LLC)**, Giavona Sullivan **(The Trump Organization)**	02/ 01/ 2018	High	On Hold
	Previous Meeting Minutes: **05/16/2018:** Per the AOR, this is a 16 to 18 month project. Sam Tell: The stainless custom fabrication will be delivered Wednesday May 23rd 2018. There are critical path open items in TO's court that must be resolved, Hard to deliver a hardline schedule if we cant identify our sprinkler system.

Sample Summary

Client: Maser Consulting
Project: Trump Links

HC Project #: 8081617

Lab#	SampleID	Matrix	Collection Date	Receipt Date
AD05999-001	SS-1	Soil	8/15/2018	8/16/2018
AD05999-002	SS-2	Soil	8/15/2018	8/16/2018

HC Case Narrative

Client: Maser Consulting
Project: Trump Links

HC Project: 8081617

This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.

Volatile Organic Analysis:

Methylene chloride was recovered in sample AD05999-001 due to possible laboratory contamination.

The Method Blank Spike for batch 70991 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The Matrix Spike and Matrix Spike Duplicate for batch 70991 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

TCLP Volatile Organic Analysis:

The Method Blank Spike for batch 70993 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The MS/MSD RPD, Matrix Spike and Matrix Spike Duplicate for batch 70993 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

Base Neutral/Acid Extractable Analysis:

The Method Blank Spike for batch 69957 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The MS/MSD RPD, Matrix Spike and Matrix Spike Duplicate for batch 69957 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

PCB Analysis:

Data conforms to method requirements.

Pesticide Analysis:

Data conforms to method requirements.

Herbicide Analysis:

Data conforms to method requirements.

Metals Analysis:

The Matrix Spike and Matrix Spike Duplicate for batches 70604 and 70605 had recoveries outside QC limits. Please refer to the applicable Form 5/7 for the recoveries.

The RPD between the QC sample and the Method Replicate had recoveries outside QC limits in batch 70604. Please refer to the applicable Form 6/9 for the recoveries.

The serial dilution for batches 70604 and 70605 is outside QC limits for one or more analytes. Please refer to the applicable Form 6/9 for the recoveries.

TCLP Metals Analysis:

Data conforms to method requirements.

Wet Chemistry Analysis:

Data conforms to method requirements.

Subcontracted Analysis:

Please refer to attached subcontracted laboratory report. Sample AD05999-001 was submitted to Pace Analytical for TCDD Scan (1613) analysis and PCDD/PCDF (8290) analysis.

Please refer to attached subcontracted laboratory report. Sample AD05999-001 was submitted to TestAmerica for Parathion (8141) analysis.

Robin Cousineau Quality Assurance Director	Or	Jean Revolus Laboratory Director	9/17/2018 Date

HC Reporting Limit Definitions/Data Qualifiers

REPORTING DEFINITIONS

DF = Dilution Factor

MDL = Method Detection Limit

RL* = Reporting Limit

ND = Not Detected

RT = Retention Time

NA = Not Applicable

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

DATA QUALIFIERS

A- Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

B- Indicates analyte was present in the Method Blank and sample.

d- For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

E- Indicates the concentration exceeded the upper calibration range of the instrument.

J- Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

R- Retention Time is out.

Y- Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

Additional Notes

Comments, Notes, Special Requirements, HAZARDS

Indicate if low-level methods required to meet current groundwater standards (SPLP for soil):
- [ ] BN or BNA (8270D SIM)
- [ ] VOC (8260C SIM or 8011)
- [ ] SPLP (BN, BNA, Metals)
- [ ] 1,4 Dioxane

For NJ LSRP projects, indicate which standards need to be met:
- [ ] NJDEP GWQS
- [ ] NJDEP SRS
- [ ] NJDEP SPLP
- [ ] Other (specify):

Check if applicable:
- [ ] Project-Specific Reporting Limits
- [ ] High Contaminant Concentrations
- [ ] NJ LSRP Project (also check boxes above/right)

Cooler Temperature: 2.3°

Please note NUMBERED items. If not completed your analytical work may be delayed.
A fee of $5/sample will be assessed for storage should sample not be activated for any analysis.

Internal use: sampling plan (check box) HC [ ] or client [ ] FSP#

CONDITION UPON RECEIPT

Batch Number AD05999

Entered By: Frantz
Date Entered 8/16/2018 1:07:00 PM

1	Yes	Is there a corresponding COC included with the samples?
2	Yes	Are the samples in a container such as a cooler or Ice chest?
3	No	Are the COC seals intact?
4	T0056	<--- Thermometer ID. Please specify the Temperature inside the container (in degC). 3.3
5	Yes	Are the samples refrigerated (where required)/have they arrived on ice?
6	Yes	Are the samples within the holding times for the parameters listed on the COC? IF no, list parameters and samples:
7	Yes	Are all of the sample bottles intact? If no, specify sample numbers broken/leaking
8	Yes	Are all of the sample labels or numbers legible? If no specify:
9	Yes	Do the contents match the COC? If no, specify
10	Yes	Is there enough sample sent for the analyses listed on the COC? If no, specify:
11	Yes	Are samples preserved correctly?
12	Yes	Was temperature blank present (Place comment below if not)? If not was temperature of samples verified?
13	NA	Other comments ...Specify
14	NA	Corrective actions (Specify item number and corrective action taken).

Worksheet #: 477187

Total Target Concentration 0.0053

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration usea
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 7.36
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.
