Sample and Data Qualifiers Relating to This Work Order

S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
S-08	The recovery of this surrogate was outside of QC limits.
QR-02	The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
P	This qualifier indicates the compound detected exhibited greater than 40% between the quantitation and confirmatory columns.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Re: Data Usability Summary Report
For 40 Quay Street
July 2023 Soil Samples
Langan Project No.: 100964201

This memorandum presents the findings of an analytical data validation from the analysis of soil samples collected in July 2023 by Langan Engineering and Environmental Services at 40 Quay Street. The samples were analyzed by York Analytical Laboratories, Inc. (NYSDOH NELAP registration #10854 and 12058) for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), per- and polyfluoroalkyl substances (PFAS), herbicides, polychlorinated biphenyls (PCBs), pesticides, metals, cyanide (CN), hexavalent chromium (CrVI), and trivalent chromium (CrIII) by the methods specified below.

- VOCs by SW-846 Method 8260C
- SVOCs by SW-846 Method 8270D
- PFAS by USEPA Method E1633
- Herbicides by SW-846 Method 8151A
- PCBs by SW-846 Method 8082A
- Pesticides by SW-846 Method 8081B
- Metals by SW-846 Method 6010D/6020B/7470/7473
- Hexavalent Chromium by SW-846 Method 7196A
- Cyanide by SM Method 4500
- Trivalent Chromium (calculated)

Table 1, attached, summarizes the laboratory and client sample identification numbers, sample collection dates, level of data validation, and analytical parameters subject to review.

Validation Overview

This data validation was performed in accordance with the following guidelines, where applicable:

- USEPA Region II Standard Operating Procedures (SOPs) for Data Validation
- USEPA Contract Laboratory Program "National Functional Guidelines for Organic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020)
- USEPA Contract Laboratory Program "National Functional Guidelines for Inorganic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020), and
- published analytical methodologies.

The following acronyms may be used in the discussion of data-quality issues:

%D	Percent Difference	MB	Method Blank
CCV	Continuing Calibration Verification	MDL	Method Detection Limit
FB	Field Blank	MS	Matrix Spike
FD	Field Duplicate	MSD	Matrix Spike Duplicate
ICAL	Initial Calibration	RF	Response Factor
ICV	Initial Calibration Verification	RL	Reporting Limit
ISTD	Internal Standard	RPD	Relative Percent Difference
LCL	Lower Control Limit	RSD	Relative Standard Deviation
LCS	Laboratory Control Sample	TB	Trip Blank
LCSD	Laboratory Control Sample Duplicate	UCL	Upper Control Limit

Tier 1 data validation is based on completeness and compliance checks of sample-related QC results including: sample receipt documentation; analytical holding times; sample preservation; blank results (method, field, and trip); surrogate recoveries; MS/MSD recoveries and RPDs values; field duplicate RPDs, laboratory duplicate RPDs, and LCS/LCSD recoveries and RPDs. Four (4) SDGs underwent Tier 1 validation review.

As a result of the review process, the following qualifiers may be assigned to the data in accordance with the USEPA guidelines and our best professional judgment:

R – The sample results are unusable because certain criteria were not met when generating the data. The analyte may or may not be present in the sample.

J – The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The analyte was not detected at a level greater than or equal to the reporting limit; however, the reported reporting limit is approximate and may be inaccurate or imprecise.

U – The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

NJ – The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

If any validation qualifiers are assigned, these qualifiers should supersede any laboratory-applied qualifiers. Data that is not qualified as a result of this data validation is considered acceptable on the basis of the items specified for review. Data that is qualified as "R" are considered invalid and are not technically usable for data interpretation. Data that is otherwise qualified because of minor data-quality anomalies are usable, as qualified in Table 2 (attached).

MAJOR DEFICIENCIES:

Major deficiencies include those that grossly impact data quality and necessitate the rejection of results. No major deficiencies were identified.

MINOR DEFICIENCIES:

Minor deficiencies include anomalies that directly impact data quality and necessitate qualification, but do not result in unusable data. The section below describes the minor deficiencies that were identified.

VOCs by SW-846 Method 8260C

23G0963

The sample SB03_3-5 exhibited a percent recovery above the UCL for the surrogate p-bromofluorobenzene (140%). The associated results are qualified as J because of potential high bias.

The LCS/LCSD for batch BG30853 exhibited percent recoveries below the LCL for tert-butylbenzene (77.8%, 75.8%) and tetrachloroethylene (72.6%, 70.8%). The associated results in samples SB01_2-4, SB01_7.5-9.5, SB02_3-5, SB03_3-5, SB04_0-2, and SB04_6-8 are qualified as UJ because of potential low bias.

The LCS for batch BG30853 exhibited a percent recovery below the LCL for 1,1-dichloropropylene (76.7%). The associated results in samples SB01_2-4, SB01_7.5-9.5, SB02_3-5, SB03_3-5, SB04_0-2, and SB04_6-8 are qualified as UJ because of potential low bias.

The LCS for batch BG30863 exhibited a percent recovery below the LCL for tetrachloroethylene (79.4%). The associated results in sample SB03_0-2 are qualified as UJ because of potential low bias.

The LCS/LCSD for batch BG30863 exhibited a percent recovery below the LCL for trichlorofluoromethane (60.3%, 61.1%). The associated results in sample SB03_0-2 are qualified as UJ because of potential low bias.

23G1244

The MB for batch BG30861 exhibited a detection of acetone (0.0065 mg/kg). The associated detected results in samples SB05_6-8 and SB07_8-10 are qualified as U at the reporting limit because of potential blank contamination.

The TB (TB02_071923) exhibited detections of acetone (7.17 ug/l) and methylene chloride (0.87 ug/l). The associated detected results in samples SB05_6-8, SB05_1-3, SB07_1-3, SB07_3-5, SB07_8-10, SB08_1-3, SB08_3-5, and SB08_7-9 are qualified as J or U at the reporting limit because of potential blank contamination. Non-detect results did not require qualification.

The LCS/LCSD for batch BG30860 exhibited a percent recovery below the LCL for tetrachloroethylene (79.5%, 78.8%). The associated results in samples SB08_7-9, SB05_1-3, SB07_1-3, SB07_3-5, SB08_1-3, and SB08_3-5 are qualified as UJ because of potential low bias.

The LCSD for batch BG30860 exhibited a percent recovery below the LCL for trichlorofluoromethane (60.9%). The associated results in samples SB08_7-9, SB05_1-3, SB07_1-3, SB07_3-5, SB08_1-3, and SB08_3-5 are qualified as UJ because of potential low bias.

The LCS/LCSD for batch BG30861 exhibited a percent recovery below the LCL for tetrachloroethylene (72.4%, 73.4%). The associated results in samples SB05_6-8 and SB07_8-10 are qualified as UJ because of potential low bias.

23G1308

The sample SB6_0-2 exhibited a percent recovery below the LCL for the surrogate 1,2-dichloroethane-d4 (20.2%). The associated results are qualified as J or UJ because of potential low bias.

The LCS/LCSD for batch BG30862 exhibited a percent recovery below the LCL for tetrachloroethylene (75.6%, 75%). The associated results in sample SB6_3-5 are qualified as UJ because of potential low bias.

The LCS/LCSD for batch BG30864 exhibited a percent recovery below the LCL for tetrachloroethylene (76.2%, 68.5%). The associated results in sample SB6_0-2 are qualified as UJ because of potential low bias.

The LCSD for batch BG30864 exhibited percent recoveries below the LCL for styrene (85.4%), tert-butylbenzene (74%), and trichloroethylene (81.6%). The associated results in sample SB6_0-2 are qualified as UJ because of potential low bias.

The LCS/LCSD for batch BG30864 exhibited RPDs above the control limit for bromomethane (30.6%), chloroethane (37.3%), chloromethane (60.9%), dichlorodifluoromethane (113%), trichlorofluoromethane (35.7%), and vinyl chloride (51.7%). The associated results in sample SB6_0-2 are qualified as UJ because of potential indeterminate bias.

23G1202

The TB (TB03_072023) exhibited a detection of acetone (7.12 ug/l) and methylene chloride (0.93 ug/l). The associated results in samples DUP02_072023, SB09_0-2, SB09_3-5, SB10_1-3, SB10_5-7, SB11_3-5, and SB11_7-9 are qualified as J because of potential blank contamination. Associated results that are >10X the contamination or non-detect requiere no qualification.

The LCS/LCSD for batch BG30859 exhibited a percent recovery below the LCL for tetrachloroethylene (76.3%, 73.7%). The associated results in samples SB09_0-2, SB09_3-5, SB10_1-3, SB10_5-7, SB11_3-5, and SB11_7-9 are qualified as UJ because of potential low bias.

The LCS/LCSD for batch BG30862 exhibited a percent recovery below the LCL for tetrachloroethylene (75.6%, 75%). The associated results in sample DUP02_072023 are qualified as UJ because of potential low bias.

SVOCs by SW-846 Method 8270D

23G0963

The LCS for batch BH30066 exhibited a percent recovery below the LCL for 4-nitroaniline (0%). The associated results in samples SB01_7.5-9.5, SB03_0-2, and SB04_6-8 are qualified as UJ because of potential low bias.

23G1244

The sample SB05_1-3 exhibited percent recoveries below the LCL for the surrogates 2,4,6-tribromophenol (0%), phenol-d6 (21.1%), and 2-fluorophenol (1.68%). The associated results are qualified as UJ because of potential low bias.

The LCS for batch BH30120 exhibited a percent recovery below the LCL for 4-nitroaniline (0%). The associated results in samples SB08_7-9, SB07_1-3, SB07_3-5, and SB08_3-5 are qualified as UJ because of potential low bias.

The sample SB05_1-3 exhibited an exceedance of the recommended holding time for SVOCs (5 days). The associated results in sample SB05_1-3 are qualified as J or UJ because of potential low bias.

23G1308

The sample SB6_3-5 exhibited percent recoveries below the LCL for the surrogates phenol-d6 (15.8%) and 2-fluorophenol (16.8%). The associated results are qualified as UJ because of potential low bias.

23G1202

The LCS for batch BH30120 exhibited a percent recovery below the LCL for 4-nitroaniline (0%). The associated results in sampled SB09_3-5 and SB11_7-9 are qualified as UJ because of potential low bias.

The sample SB10_1-3 exhibited percent recoveries below the LCL for the surrogates 2-fluorophenol (12%), phenol-d6 (16.5%), nitrobenzene-d5 (3%), and 2,4,6-tribromophenol (0%). The associated results from the second reanalysis are qualified as J because of potential low bias.

PFAS by USEPA Method E1633

23G0963

The sample SB01_2-4 exhibited percent recoveries below the LCL for the isotope dilution standard 13C4-perfluorobutanoic acid (3.21%), 13C5-perfluoropentanoic acid (21.3%), and sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-octane sulfonate (6:2) (272%). The associated results are qualified as UJ because of potential low bias.

The sample SB01_7.5-9.5 exhibited percent recoveries below the LCL for the isotope dilution standard 13C4-perfluorobutanoic acid (0.566%) and 13C5-perfluoropentanoic acid (1.46%). The associated results are qualified as UJ because of potential low bias.

The sample SB02_3-5 exhibited percent recoveries below the LCL for the isotope dilution standard 13C5-perfluorohexanoic acid (168%), 13C8-perfluorooctanesulfonate (151%), 13C9-perfluorononanoic acid (156%), n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (221%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (255%), M2-4:2 FTS (281%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-octane sulfonate (6:2) (414%), and sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-decane sulfonate (8:2) (301%). The associated results are qualified as UJ because of potential low bias.

The sample SB03_0-2 exhibited percent recoveries below the LCL for the isotope dilution standard 13C4-perfluorobutanoic acid (0.776%) and 13C5-perfluoropentanoic acid (6.28%). The associated results are qualified as UJ because of potential low bias.

The sample SB03_3-5 exhibited percent recoveries below the LCL for the isotope dilution standard 13C3-perfluorohexanesulfonic acid (164%), n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (154%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (194%), M2-4:2 FTS (238%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13C2]-octane sulfonate (6:2) (281%), and perfluoro[2,3,4-13c3]butanesulfonic acid (M3PFBS) (162%). The associated results are qualified as UJ because of potential low bias.

The sample SB04_0-2 exhibited percent recoveries below the LCL for the isotope dilution standard 13C5-perfluorohexanoic acid (154%), n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (214%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (276%), M2-4:2 FTS (266%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-octane sulfonate (6:2) (351%), and sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-decane sulfonate (8:2) (315%). The associated results are qualified as UJ because of potential low bias.

The sample SB04_6-8 exhibited percent recoveries below the LCL for the isotope dilution standard 13C4-perfluorobutanoic acid (0.688%) and 13C5-perfluoropentanoic acid (2.8%). The associated results are qualified as UJ because of potential low bias.

The LCS for batch BG31064 exhibited percent recoveries below the LCL for perfluoro-1-decanesulfonic acid (PFDS) (28.1%), 11CL-PF3OUdS (24.5%), 9CL-PF3ONS (40.6%), perfluorododecanesulfonic acid (PFDoS) (30.1%), 3-perfluoroheptyl propanoic acid (FHpPA)

(11.3%, 7.65%), and perfluoro-4-oxapentanoic acid (PFMPA) (34.6%). The associated results in samples SB02_3-5, SB03_3-5, and SB04_0-2 are qualified as UJ because of potential low bias.

The LCS for batch BG31400 exhibited percent recoveries outside of control limits for the majority of analytes (28.2 - 948%). All associated results in sample SB01_2-4 are qualified as J or UJ because of potential low bias.

The LCS for batch BH30145 exhibited percent recoveries below the LCL for perfluoro-4-oxapentanoic acid (PFMPA) (15.1%, 10.8%), 11CL-PF3OUdS (48.3%, 40.1%), 9CL-PF3ONS (47.8%, 43.1%), and perfluoro-n-butanoic acid (PFBA) (32.4%). The associated results in samples SB01_7.5-9.5, SB03_0-2, and SB04_6-8 are qualified as UJ because of potential low bias.

23G1244

The sample SB05_1-3 exhibited percent recoveries below the LCL for the isotope dilution standard 13c4-perfluorobutanoic acid (0.934%) and 13c5-perfluoropentanoic acid (23.9%). The associated results are qualified as UJ because of potential low bias.

The sample SB07_1-3 exhibited percent recoveries below the LCL for the isotope dilution standard 13c4-perfluorobutanoic acid (0.724%) and 13c5-perfluoropentanoic acid (2.1%). The associated results are qualified as UJ because of potential low bias.

The sample SB07_3-5 exhibited percent recoveries below the LCL for the isotope dilution standard 13c4-perfluorobutanoic acid (0.876%) and 13c5-perfluoropentanoic acid (19.3%). The associated results are qualified as UJ because of potential low bias.

The sample SB07_8-10 exhibited percent recoveries above the UCL for the isotope dilution standard 13c3-perfluorohexanesulfonic acid (150%), 13c5-perfluorohexanoic acid (174%), 13c5-perfluoropentanoic acid (157%), 13c6-perfluorodecanoic acid (152%), 13c8-perfluorooctanesulfonamide (161%), 13c8-perfluorooctanesulfonate (165%), n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (243%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (285%), M2-4:2 FTS (238%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-octane sulfonate (6:2) (417%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-decane sulfonate (8:2) (310%), and perfluoro[2,3,4-13c3]butanesulfonic acid (M3PFBS) (161%). The associated results are qualified as UJ because of potential high bias.

The sample SB08_1-3 exhibited percent recoveries above the UCL for the isotope dilution standard 13c5-perfluorohexanoic acid (171%), 13c5-perfluoropentanoic acid (163%), 13c6-

perfluorodecanoic acid (155%), n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (184%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (225%), M2-4:2 FTS (254%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-octane sulfonate (6:2) (396%), and sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-decane sulfonate (8:2) (280%). The associated results are qualified as UJ because of potential high bias.

The sample SB08_3-5 exhibited percent recoveries below the LCL for the isotope dilution standard 13c4-perfluorobutanoic acid (0.823%) and 13c5-perfluoropentanoic acid (14.5%). The associated results are qualified as UJ because of potential low bias.

The sample SB08_7-9 exhibited percent recoveries below the LCL for the isotope dilution standard 13c4-perfluorobutanoic acid (0.704%) and 13c5-perfluoropentanoic acid (3.6%). The associated results are qualified as UJ because of potential low bias.

The LCS for batch BG31426 exhibited percent recoveries below the LCL for 3-perfluoroheptyl propanoic acid (FHpPA) (22.2%, 20.6%), N-EtFOSA (5.67%), and N-EtFOSAA (44.5%). The associated results in samples SB05_6-8, SB07_8-10, and SB08_1-3 are qualified as UJ because of potential low bias.

The LCS for batch BH30145 exhibited percent recoveries below the LCL for perfluoro-4-oxapentanoic acid (PFMPA) (15.1%, 10.8%), 11CL-PF3OUdS (48.3%, 40.1%), 9CL-PF3ONS (47.8%, 43.1%), and perfluoro-n-butanoic acid (pfba) (32.4%). The associated results in samples SB05_1-3, SB07_1-3, SB07_3-5, SB08_3-5, and SB08_7-9 are qualified as UJ because of potential low bias.

<u>23G1308</u>

The sample SB6_0-2 exhibited percent recoveries above the UCL for the isotope dilution standard n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (200%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (240%), M2-4:2 FTS (241%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-octane sulfonate (6:2) (357%), and sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-decane sulfonate (8:2) (326%). The associated results are qualified as UJ because of potential high bias.

The sample SB6_3-5 exhibited percent recoveries below the LCL for the isotope dilution standard 13C4-perfluorobutanoic acid (0.75%), 13C5-perfluoropentanoic acid (8.34%), and n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (153%). The associated results are qualified as UJ because of potential low bias.

The LCS for batch BG31553 exhibited percent recoveries generally outside control limits for the majority of analytes (24.9 - 415%). All associated results in sample SB6_0-2 are qualified as J because of potential bias.

The LCS for batch BH30145 exhibited percent recoveries below the LCL for perfluoro-4-oxapentanoic acid (PFMPA) (15.1%, 10.8%), 11CL-PF3OUdS (48.3%, 40.1%), 9CL-PF3ONS (47.8%, 43.1%), and perfluoro-n-butanoic acid (PFBA) (32.4%). The associated results in sample SB6_3-5 are qualified as UJ because of potential low bias.

23G1202

The sample DUP02_072023 exhibited percent recoveries above the UCL for the isotope dilution standard 13C5-perfluoropentanoic acid (153%), n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (163%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (205%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13C2]-octane sulfonate (6:2) (272%), and sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-decane sulfonate (8:2) (280%). The associated results are qualified as UJ because of potential high bias.

The sample SB09_0-2 exhibited percent recoveries above the UCL for the isotope dilution standard 13C4-perfluoroheptanoic acid (158%), 13C5-perfluorohexanoic acid (171%), 13C5-perfluoropentanoic acid (167%), 13C8-perfluorooctanesulfonate (157%), n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (206%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (235%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13C2]-octane sulfonate (6:2) (244%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13C2]-decane sulfonate (8:2) (293%), and m3-hexafluoropropylene oxide dimer acid (M3HFPO-DA) (152%). The associated results are qualified as J or UJ because of potential high bias.

The sample SB09_3-5 exhibited percent recoveries below the LCL for the isotope dilution standard 13C5-perfluoropentanoic acid (5.78%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (161%), and 13C4-perfluorobutanoic acid (0.939%). The associated results are qualified as UJ because of potential low bias.

The sample SB10_1-3 exhibited percent recoveries below the LCL for the isotope dilution standard 13C4-perfluorobutanoic acid (15.8%), M2-4:2 FTS (191%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13C2]-octane sulfonate (6:2) (361%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13C2]-decane sulfonate (8:2) (290%), and perfluoro[2,3,4-13c3]butanesulfonic acid (M3PFBS) (152%). The associated results are qualified as UJ because of potential low bias.

The sample SB10_5-7 exhibited percent recoveries below the LCL for the isotope dilution standard 13C4-perfluorobutanoic acid (0.735%) and 13C5-perfluoropentanoic acid (1.44%). The associated results are qualified as UJ because of potential low bias.

The sample SB11_3-5 exhibited percent recoveries above the UCL for the isotope dilution standard 13C5-perfluorohexanoic acid (151%), 13C6-perfluorodecanoic acid (169%), n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (170%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (185%), and M2-4:2 FTS (165%). The associated results are qualified as UJ because of potential high bias.

The sample SB11_7-9 exhibited percent recoveries below the LCL for the isotope dilution standard 13C4-perfluorobutanoic acid (0.648%) and 13C5-perfluoropentanoic acid (1.41%). The associated results are qualified as UJ because of potential low bias.

The LCS for batch BG31426 exhibited percent recoveries below the LCL for 3-perfluoroheptyl propanoic acid (FHpPA) (22.2%, 20.6%) and N-EtFOSA (44.5%). The associated results in samples DUP02_072023, SB09_0-2, SB10_1-3, and SB11_3-5 are qualified as UJ because of potential low bias.

The LCS for batch BH30145 exhibited percent recoveries below the LCL for perfluoro-4-oxapentanoic acid (PFMPA) (15.1%, 10.8%), 11CL-PF3OUdS (48.3%, 40.1%), 9CL-PF3ONS (47.8%, 43.1%), and perfluoro-n-butanoic acid (PFBA) (32.4%). The associated results in samples SB09_3-5, SB10_5-7, and SB11_7-9 are qualified as J or UJ because of potential low bias.

Herbicides by SW-846 Method 8151A

23G1244

The sample SB05_1-3 exhibited a percent recovery below the LCL for the surrogate 2,4-dichlorophenylacetic acid (1.4%). The associated results are qualified as UJ because of potential low bias.

23G1202

The sample SB09_0-2 exhibited a percent recovery below the LCL for the surrogate 2,4-dichlorophenylacetic acid (18.8%). The associated results are qualified as UJ because of potential low bias.

Pesticides by SW-846 Method 8081B

23G1244

The sample SB05_1-3 exhibited a RPD above the control limit between the primary and secondary GC columns for 4,4'-DDT (40.99%). The associated results are qualified as J because of potential indeterminate bias.

23G1308

The sample SB6_0-2 exhibited a percent recovery below the LCL for the surrogate 2,4,5,6-tetrachloro-meta-xylene (23.6%). The associated results are qualified as UJ because of potential low bias.

The sample SB6_3-5 exhibited a percent recovery below the LCL for the surrogate 2,4,5,6-tetrachloro-meta-xylene (24.5%). The associated results are qualified as UJ because of potential low bias.

The sample SB6_0-2 exhibited a percent recovery below the LCL for the surrogate 2,4,5,6-tetrachloro-meta-xylene [2C] (21.4%). The associated results are qualified as UJ because of potential low bias.

The sample SB6_3-5 exhibited a percent recovery below the LCL for the surrogate 2,4,5,6-tetrachloro-meta-xylene [2C] (23.9%). The associated results are qualified as UJ because of potential low bias.

23G1202

The sample SB10_1-3 exhibited a percent recovery below the LCL for the surrogate 2,4,5,6-tetrachloro-meta-xylene (22.2%). The associated results are qualified as J or UJ because of potential low bias.

The sample SB11_3-5 exhibited a RPD above the control limit between the primary and secondary GC columns for 4,4'-DDT (109.53%). The associated results are qualified as J because of potential indeterminate bias.

The sample SB10_1-3 exhibited a RPD above the control limit between the primary and secondary GC columns for gamma-chlordane (169.11%). The associated results are qualified as J because of potential indeterminate bias.

The sample SB09_3-5 exhibited a RPD above the control limit between the primary and secondary GC columns for 4,4'-DDT (71.1%). The associated results are qualified as J because of potential indeterminate bias.

The sample SB10_1-3 exhibited a percent recovery below the LCL for the surrogate 2,4,5,6-tetrachloro-meta-xylene (2C) (20.8%). The associated results are qualified as J or UJ because of potential low bias.

The sample SB09_0-2 exhibited a percent recovery below the LCL for the surrogate 2,4,5,6-tetrachloro-meta-xylene (2C) (25.9%). The associated results are qualified as UJ because of potential low bias.

The sample DUP02_072023 exhibited a percent recovery below the LCL for the surrogate 2,4,5,6-tetrachloro-meta-xylene (2C) (28.3%). The associated results are qualified as UJ because of potential low bias.

Metals by SW-846 Method 6010D/6020B/7470/7473

23G0963

The FB (FB01_071823) exhibited a detection of magnesium (0.0863 mg/l), nickel (0.0178 mg/l), potassium (0.0631 mg/l), zinc (0.0278 mg/l), and calcium (0.298 mg/l). The associated detected results in samples SB01_2-4, SB01_7.5-9.5, SB02_3-5, SB03_0-2, SB03_3-5, SB04_0-2, and SB04_6-8 are qualified as J because of potential blank contamination. Sample results greater than 10x blank concentration do not require qualification.

The LCS for batch BG31408 exhibited a percent recovery below the LCL for selenium (65.7%). The associated results in samples SB01_2-4, SB02_3-5, SB03_3-5, and SB04_0-2 are qualified as UJ because of potential low bias.

The LCS for batch BH30315 exhibited a percent recovery below the LCL for selenium (60.1%). The associated results in samples SB01_7.5-9.5, SB03_0-2, and SB04_6-8 are qualified as UJ because of potential low bias.

23G1244

The LCS for batch BG31576 exhibited a percent recovery above the UCL for copper (129%). The associated results in samples SB05_6-8, SB07_8-10, and SB08_1-3 are qualified as J because of potential high bias.

The LCS for batch BH30315 exhibited a percent recovery below the LCL for selenium (60.1%). The associated results in samples SB05_1-3, SB07_1-3, SB07_3-5, SB08_3-5, and SB08_7-9 are qualified as UJ because of potential low bias.

23G1308

The MB for batch BG31668-BLK1 exhibited a detection of sodium (71.8 mg/kg). The associated results in sample SB6_0-2 are qualified as J because of potential blank contamination.

The LCS for batch BG31668 exhibited a percent recovery below the LCL for selenium (62.6%). The associated results in sample SB6_0-2 are qualified as UJ because of potential low bias.

The LCS for batch BH30315 exhibited a percent recovery below the LCL for selenium (60.1%). The associated results in sample SB6_3-5 are qualified as UJ because of potential low bias.

23G1202

The laboratory duplicate and parent sample (SB09_0-2) exhibited RPDs above the control limit for arsenic (35.9%), calcium (47.2%), iron (46.1%), magnesium (40.2%), manganese (59.1%), and thallium (73.2%). The associated results are qualified as J because of potential indeterminate bias.

The MS performed on sample SB09_0-2 exhibited percent recoveries above the UCL for vanadium (148%), arsenic (132%), barium (135%), beryllium (140%), cadmium (131%), chromium (146%), cobalt (137%), copper (165%), and nickel (153%). The associated results in sample SB09_0-2 are qualified as J because of potential high bias.

The MS performed on sample SB09_0-2 exhibited percent recoveries below the LCL for silver (44.7%) and antimony (19.6%). The associated results in sample SB09_0-2 are qualified as J or UJ because of potential low bias.

The LCS for batch BG31522 exhibited a percent recovery above the UCL for copper (130%). The associated results in samples SB09_0-2, SB10_1-3, and SB11_3-5 are qualified as J because of potential high bias.

The LCS for batch BG31576 exhibited a percent recovery above the UCL for copper (129%). The associated results in sample DUP02_072023 are qualified as J because of potential high bias.

The LCS for batch BH30315 exhibited a percent recovery below the LCL for selenium (60.1%). The associated results in samples SB09_3-5, SB10_5-7, and SB11_7-9 are qualified as J or UJ because of potential low bias.

OTHER DEFICIENCIES:

Other deficiencies include anomalies that do not directly impact data quality and do not necessitate qualification. The section below describes the other deficiencies that were identified.

VOCs by SW-846 Method 8260C

23G1202

The FB (FB02_072023) exhibited a detection of chloroform (0.69 ug/l). The associated results are non-detect. No qualification is necessary.

SVOCs by SW-846 Method 8270D

23G0963

The sample SB01_7.5-9.5 exhibited a percent recovery above the UCL for the surrogate 2,4,6-tribromophenol (152%). No more than one surrogate from a single was fraction recovered outside of the control limits. No qualification is necessary.

The LCS for batch BH30066 exhibited a percent recovery above the UCL for 4,6-dinitro-2-methylphenol (159%). The associated results are non-detect. No qualification is necessary.

The MSD performed on sample SB04_6-8 exhibited a percent recovery below the LCL for benzoic acid (9.92%). Organic results are not qualified on the basis of MSD recoveries alone. No qualification is necessary.

The MS/MSD performed on sample SB04_6-8 exhibited a percent recovery below the LCL for aniline (0%). Organic results are not qualified on the basis of MS/MSD recoveries alone. No qualification is necessary.

The MS/MSD performed on sample SB04_6-8 exhibited RPDs above the control limit for 2-methylphenol (60.7%) and benzoic acid (34.6%). Organic results are not qualified on the basis of MS/MSD recoveries alone. No qualification is necessary.

The sample SB01_2-4 (RE1) exhibited a percent recovery below the LCL for the surrogate terphenyl-d14 (0%). The sample was diluted >10X. No qualification is necessary.

The sample SB01_2-4 (RE2) exhibited percent recoveries below the LCL for the surrogates 2-fluorophenol (0%), nitrobenzene-d5 (0%), 2,4,6-tribromophenol (0%), and terphenyl-d14 (0%). The sample was diluted >10X. No qualification is necessary.

The sample SB02_3-5 exhibited a percent recovery above the UCL for the surrogate 2,4,6-tribromophenol (157%). No more than one surrogate from a single fraction was recovered outside of the control limits. No qualification is necessary.

The sample SB01_2-4 (RE2) exhibited percent recoveries below the LCL for the surrogates phenol-d6 (0%), nitrobenzene-d5 (8%), and 2,4,6-tribromophenol (8%). The sample was diluted >10X. No qualification is necessary.

23G1244

The sample SB07_8-10 exhibited a percent recovery above the UCL for the surrogate nitrobenzene-d5 (124%). No more than one surrogate from a single fraction was recovered outside of the control limits. No qualification is necessary.

The sample SB07_8-10 exhibited a percent recovery above the UCL for the surrogate 2,4,6-tribromophenol (114%). The sample was diluted >10X. No qualification is necessary.

The LCS for batch BG31567 exhibited percent recoveries above the UCL for 1,2,4,5-tetrachlorobenzene (140%), 2,4,5-trichlorophenol (120%), and 4,6-dinitro-2-methylphenol (150%). The associated results are non-detect. No qualification is necessary.

The sample SB08_1-3 exhibited a percent recovery above the UCL for the surrogate 2,4,6-tribromophenol (210%). No more than one surrogate from a single fraction was recovered outside of the control limits. No qualification is necessary.

The LCS for batch BH30120 exhibited a percent recovery above the UCL for 4,6-dinitro-2-methylphenol (156%). The associated results are non-detect. No qualification is necessary.

The sample SB05_6-8 exhibited a percent recovery above the UCL for the surrogate 2,4,6-tribromophenol (172%). No more than one surrogate from a single fraction was recovered outside of the control limits. No qualification is necessary.

The sample SB07_8-10 exhibited percent recoveries above the UCL for the surrogates nitrobenzene-d5 (124%) and 2,4,6-tribromophenol (253%). No more than one surrogate from a single fraction was recovered outside of the control limits. No qualification is necessary.

The sample SB05_1-3 (dilution) exhibited percent recoveries below the LCL for the surrogates 2-fluorophenol (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), and 2,4,6-tribromophenol (0%). The sample was diluted >10X. No qualification is necessary.

23G1308

The sample SB6_3-5 exhibited percent recoveries below the LCL for the surrogates phenol-d6 (0%), 2-fluorophenol (500%), and 2,4,6-tribromophenol (0%). The sample was diluted >10X. No qualification is necessary.

23G1202

The FB (FB02_072023) exhibited a detection of bis(2-ethylhexyl) phthalate (2.97 ug/l). The associated results are non-detect. No qualification is necessary.

The sample SB10_1-3 exhibited a percent recovery below the LCL for the surrogate 2,4,6-tribromophenol (8.94%). No more than one surrogate from a single was fraction recovered outside of the control limits. No qualification is necessary.

The sample SB11_3-5 exhibited a percent recovery above the UCL for the surrogate 2,4,6-tribromophenol (128%). No more than one surrogate from a single was fraction recovered outside of the control limits. No qualification is necessary.

The LCS/LCSD for batch BG31567 exhibited percent recoveries above the UCL for 1,2,4,5-tetrachlorobenzene (140%), 2,4,5-trichlorophenol (120%), and 4,6-dinitro-2-methylphenol (150%). The associated results are non-detect. No qualification is necessary.

The LCS for batch BH30120 exhibited a percent recovery above the UCL for 4,6-dinitro-2-methylphenol (156%). The associated results are non-detect. No qualification is necessary.

The sample SB10_1-3 (reanalysis) exhibited a percent recovery below the LCL for the surrogate 2,4,6-tribromophenol (2.1%). No more than one surrogate from a single fraction was recovered outside of the control limits. No qualification is necessary.

PFAS by USEPA Method E1633

23G0963

The FB (FB01_071823) exhibited a detection of perfluorobutanoic acid (0.357 ng/l). The associated results are non-detect. No qualification is necessary.

The LCS for batch BG31064 exhibited a percent recovery above the UCL for 3-perfluoropropyl propanoic acid (FPrPA) (246%, 330%). The associated results are non-detect. No qualification is necessary.

The LCS for batch BH30145 exhibited percent recoveries above the UCL for perfluoroundecanoic acid (PFUnA) (159%), 1h,1h,2h,2h-perfluorodecanesulfonic acid (8:2 FTS) (152%), N-MeFOSA (156%), perfluoro-5-oxahexanoic acid (PFMBA) (429%, 310%), and perfluoro-1-pentanesulfonate (PFPeS) (164%). The associated results are non-detect. No qualification is necessary.

23G1244

The LCS for batch BG31426 exhibited percent recoveries above the UCL for 1h,1h,2h,2h-perfluorodecanesulfonic acid (8:2 FTS) (293%, 187%), perfluoro-1-pentanesulfonate (PFPeS) (170%), 3-perfluoropropyl propanoic acid (FPRPA) (305%, 396%), and perfluoroundecanoic acid (PFUnA) (163%). The associated results are non-detect. No qualification is necessary.

The LCS for batch BH30145 exhibited percent recoveries above the UCL for perfluoroundecanoic acid (PFUnA) (159%), 1h,1h,2h,2h-perfluorodecanesulfonic acid (8:2 FTS) (152%), perfluoro-5-oxahexanoic acid (PFMBA) (429%, 310%), perfluoro-1-pentanesulfonate (PFPeS) (164%), and N-MeFOSA (156%). The associated results are non-detect. No qualification is necessary.

23G1308

The LCS for batch BH30145 exhibited percent recoveries above the UCL for perfluoroundecanoic acid (PFUnA) (159%), 1h,1h,2h,2h-perfluorodecanesulfonic acid (8:2 FTS) (152%), perfluoro-5-oxahexanoic acid (PFMBA) (429%, 310%), perfluoro-1-pentanesulfonate (PFPeS) (164%), and N-MeFOSA (156%). The associated results are non-detect. No qualification is necessary.

23G1202

The FB (EB03_072023) exhibited a detection of perfluorotridecanoic acid (PFTriA/PFTrDA) (2.64 ng/l). The associated results are non-detect. No qualification is necessary.

The FB (FB02_072023) exhibited detections of perfluorobutanoic acid (0.367 ng/l) and perfluorononanoic acid (PFNA) (2.33 ng/l). The associated results are non-detect. No qualification is necessary.

The LCS for batch BG31426 exhibited percent recoveries above the UCL for 1h,1h,2h,2h-perfluorodecanesulfonic acid (8:2 FTS) (293%, 187%), perfluoro-1-pentanesulfonate (PFPeS) (170%), 3-perfluoropropyl propanoic acid (FPrPA) (305%, 396%), and perfluoroundecanoic acid (PFUnA) (163%). The associated results are non-detect. No qualification is necessary.

The LCS for batch BH30145 exhibited percent recoveries above the UCL for perfluoroundecanoic acid (PFUnA) (159%), 1h,1h,2h,2h-perfluorodecanesulfonic acid (8:2 FTS) (152%), perfluoro-5-oxahexanoic acid (PFMBA) (429%, 310%), perfluoro-1-pentanesulfonate (PFPeS) (164%), and n-mefosa (156%). The associated results are non-detect. No qualification is necessary.

Herbicides by SW-846 Method 8151A

23G1202

The MS/MSD performed on sample SB09_3-5 exhibited RPDs above the control limit for 2,4,5-T (43%), 2,4,5-TP (41%), and 2,4-D (52.6%). Organic results are not qualified on the basis of MS/MSD recoveries alone. No qualification is necessary.

Metals by SW-846 Method 6010D/6020B/7470/7473

23G0963

The MB for batch BG31408 exhibited a detection of potassium (10.4 mg/kg). The associated results are >10X the contamination. No qualification is necessary.

23G1244

The MB for batch BG31576-BLK1 exhibited a detection of potassium (15.4 mg/kg). The associated results are >10X the contamination. No qualification is necessary.

23G1202

The MB for batch BG31576 exhibited a detection of potassium (15.4 mg/kg). The associated results are >10X the contamination. No qualification is necessary.

The FB (FB02_072023) exhibited detections of potassium (0.191 mg/l) and calcium (0.158 mg/l). The associated results are >10X the contamination. No qualification is necessary.

The MS performed on sample SB09_0-2 exhibited percent recoveries outside of control limits for aluminum (0%), calcium (0%), iron (0%), lead (177%), magnesium (0%), manganese (0%), potassium (592%), and sodium (140%). The associated results in the parent sample are >4X the spiked amount. No qualification is necessary.

FIELD DUPLICATES:

One field duplicate and parent sample pair was collected and analyzed for all parameters. For results less than 5X the RL, analytes meet the precision criteria if the absolute difference is less than ±2X the RL. For results greater than 5X the RL, analytes meet the precision criteria if the RPD is less than or equal to 50% for soil. The following field duplicate and parent sample pair was compared to the precision criteria:

- DUP02_072023 and SB09_0-2

The field duplicate and parent sample (DUP02_072023 and SB09_0-2) exhibited RPDs above the control limit for magnesium (84.1%) and manganese (63.8%). The associated results are qualified as J because of potential indeterminate bias.

The field duplicate and parent sample (DUP02_072023 and SB09_0-2) exhibited absolute differences above the RL for fluoranthene (3.16 mg/kg), phenanthrene (3.327 mg/kg), pyrene (2.22 mg/kg), and thallium (5.26 mg/kg). The associated results are qualified as J because of potential indeterminate bias.

CONCLUSION:

On the basis of this evaluation, the laboratory appears to have followed the specified analytical methods with the exception of errors discussed above. If a given fraction is not mentioned above, that means that all specified criteria were met for that parameter. All of the data packages met ASP Category B requirements.

All data are considered usable, as qualified. In addition, completeness, defined as the percentage of analytical results that are judged to be valid, is 100%.

Technical Memorandum

To: Amanda Forsburg, Langan Associate

From: Joe Conboy, Langan Senior Staff Chemist

Date: August 23, 2023

Re: Data Usability Summary Report
For 40 Quay Street
July 2023 Groundwater Samples
Langan Project No.: 100964201

This memorandum presents the findings of an analytical data validation from the analysis of groundwater samples collected in July 2023 by Langan Engineering and Environmental Services at 40 Quay Street. The samples were analyzed by York Analytical Laboratories, Inc. (NYSDOH NELAP registration #10854 and 12058) for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), per- and polyfluoroalkyl substances (PFAS), herbicides, polychlorinated biphenyls (PCBs), pesticides, total and dissolved metals, cyanide (CN), hexavalent chromium (CrVI), and trivalent chromium (CrIII) by the methods specified below.

- VOCs by SW-846 Method 8260C
- SVOCs by SW-846 Method 8270D/8270DSIM
- PFAS by USEPA Method 1633
- Herbicides by SW-846 Method 8151A
- PCBs by SW-846 Method 8082A
- Pesticides by SW-846 Method 8081B
- Total and Dissolved Metals by SW-846 Method 6010D/6020B/7470
- Cyanide by Standard Method SM4500
- Hexavalent Chromium by SW-846 Method 7196A
- Trivalent Chromium (Calculated)

Table 1, attached, summarizes the laboratory and client sample identification numbers, sample collection dates, level of data validation, and analytical parameters subject to review.

Validation Overview

This data validation was performed in accordance with the following guidelines, where applicable:

- USEPA Region II Standard Operating Procedures (SOPs) for Data Validation

- USEPA Contract Laboratory Program "National Functional Guidelines for Organic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020)
- USEPA Contract Laboratory Program "National Functional Guidelines for Inorganic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020), and
- published analytical methodologies.

The following acronyms may be used in the discussion of data-quality issues:

%D	Percent Difference	MB	Method Blank
CCV	Continuing Calibration Verification	MDL	Method Detection Limit
FB	Field Blank	MS	Matrix Spike
FD	Field Duplicate	MSD	Matrix Spike Duplicate
ICAL	Initial Calibration	RF	Response Factor
ICV	Initial Calibration Verification	RL	Reporting Limit
ISTD	Internal Standard	RPD	Relative Percent Difference
LCL	Lower Control Limit	RSD	Relative Standard Deviation
LCS	Laboratory Control Sample	TB	Trip Blank
LCSD	Laboratory Control Sample Duplicate	UCL	Upper Control Limit

Tier 1 data validation is based on completeness and compliance checks of sample-related QC results including: sample receipt documentation; analytical holding times; sample preservation; blank results (method, field, and trip); surrogate recoveries; MS/MSD recoveries and RPDs values; field duplicate RPDs, laboratory duplicate RPDs, and LCS/LCSD recoveries and RPDs. 1 SDG underwent Tier 1 validation review.

As a result of the review process, the following qualifiers may be assigned to the data in accordance with the USEPA guidelines and our best professional judgment:

R – The sample results are unusable because certain criteria were not met when generating the data. The analyte may or may not be present in the sample.

J – The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The analyte was not detected at a level greater than or equal to the reporting limit; however, the reported reporting limit is approximate and may be inaccurate or imprecise.

U – The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

NJ – The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

If any validation qualifiers are assigned, these qualifiers should supersede any laboratory-applied qualifiers. Data that is not qualified as a result of this data validation is considered acceptable on the basis of the items specified for review. Data that is qualified as "R" are considered invalid and are not technically usable for data interpretation. Data that is otherwise qualified because of minor data-quality anomalies are usable, as qualified in Table 2 (attached).

MAJOR DEFICIENCIES:

Major deficiencies include those that grossly impact data quality and necessitate the rejection of results. No major deficiencies were identified.

MINOR DEFICIENCIES:

Minor deficiencies include anomalies that directly impact data quality and necessitate qualification, but do not result in unusable data. The section below describes the minor deficiencies that were identified.

VOCs by SW-846 Method 8260C

23G1449

The FB (FB01_072523) exhibited a detection of chloroform (0.700 ug/l). The associated detected results in samples DUP01_072523, MW01_072523, MW02_072523, MW03_072523, and MW04_072523 are qualified as J because of potential blank contamination. Non-detect results did not require qualification.

The LCS/LCSD for batch BH30198 exhibited percent recoveries below the LCL for bromodichloromethane (75.8%, 77.8%), bromoform (69.9%, 70.6%), cyclohexane (45.4%, 48.8%), and trans-1,3-dichloropropylene (74.1%, 74.7%). The associated results in samples MW01_072523 (dilution), MW02_072523, and MW04_072523 are qualified as J or UJ because of potential low bias.

The LCSD for batch BH30198 exhibited a percent recovery below the LCL for hexachlorobutadiene (62.7%). The associated results in samples MW01_072523 (dilution), MW02_072523, and MW04_072523 are qualified as UJ because of potential low bias.

The LCS/LCSD for batch BH30199 exhibited percent recoveries below the LCL for bromodichloromethane (75.8%, 74.5%), bromoform (64.2%, 63.6%), cyclohexane (48.2%,

46.8%), dibromochloromethane (77.2%, 75.3%), hexachlorobutadiene (62.2%, 64.3%), and trans-1,3-dichloropropylene (74.6%, 71.7%). The associated results in samples DUP01_072523 and MW03_072523 are qualified as UJ because of potential low bias.

SVOCs by SW-846 Method 8270D/8270DSIM

23G1449

The MB for batch BG31686 exhibited a detection of bis(2-ethylhexyl) phthalate (0.580 ug/l) and naphthalene (0.0500 ug/l). The associated detected results in samples DUP01_072523, MW01_072523, MW02_072523, MW03_072523, and MW04_072523 are qualified as J because of potential blank contamination. Sample results greater than 10x the blank concentration or non-detect did not require qualification.

The FB (FB01_072523) exhibited detections of fluorene (0.141 ug/l) and naphthalene (0.0541 ug/l). The associated detected results in samples DUP01_072523, MW01_072523, MW02_072523, MW03_072523, and MW04_072523 are qualified as U at the sample concentration because of potential blank contamination. Sample results greater than 10x the blank concentration or non-detect did not require qualification.

The LCS for batch BG31686 exhibited percent recoveries below the LCL for 4-nitroaniline (0%), benzoic acid (0%, 10.2%), caprolactam (0%), and n-nitrosodimethylamine (0%). The associated results in samples DUP01_072523, MW01_072523, MW02_072523, MW03_072523, and MW04_072523 are qualified as UJ because of potential low bias.

The LCS/LCSD for batch BG31686 exhibited RPDs above the control limit for benzoic acid (26%), benzyl alcohol (20.5%), and pyridine (26.8%). The associated results in samples DUP01_072523, MW01_072523, MW02_072523, MW03_072523, and MW04_072523 are qualified as UJ because of potential indeterminate bias.

PFAS by USEPA Method 1633

23G1449

The sample DUP01_072523 exhibited percent recoveries outside of control limits for the isotope dilution standards 13C4-perfluorobutanoic acid (9.84%), 13C4-perfluoroheptanoic acid (180%), 13C5-perfluorohexanoic acid (194%), 13C5-perfluoropentanoic acid (194%), 13C8-perfluorooctanesulfonate (176%), 13C9-perfluorononanoic acid (158%), M2-4:2 FTS (235%), and M3-hexafluoropropylene oxide dimer acid (M3HFPO-DA) (153%). The associated results are qualified as J or UJ because of potential high or low bias.

The sample MW01_072523 exhibited percent recoveries outside of control limits for the isotope dilution standards 13C4-perfluorobutanoic acid (1.68%), 13C5-perfluorohexanoic acid (185%), 13C8-perfluorooctanesulfonamide (167%), 13C8-perfluorooctanoic acid (152%), 13C8-perfluorooctanesulfonate (189%), 13C9-perfluorononanoic acid (157%), n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (222%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (253%), M2-4:2 FTS (390%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-octane sulfonate (6:2) (414%), and sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-decane sulfonate (8:2) (378%). The associated results are qualified as J or UJ because of potential high or low bias.

The sample MW02_072523 exhibited percent recoveries outside of control limits for the isotope dilution standards 13C4-perfluorobutanoic acid (9.83%), 13C4-perfluoroheptanoic acid (156%), 13C5-perfluorohexanoic acid (171%), 13C5-perfluoropentanoic acid (174%), 13C8-perfluorooctanoic acid (164%), and M2-4:2 FTS (270%). The associated results are qualified as J or UJ because of potential high or low bias.

The sample MW03_072523 exhibited percent recoveries outside of control limits for the isotope dilution standards 13C4-perfluorobutanoic acid (2.65%), 13C5-perfluorohexanoic acid (199%), 13C8-perfluorooctanesulfonamide (164%), 13C8-perfluorooctanoic acid (172%), 13C8-perfluorooctanesulfonate (163%), 13C9-perfluorononanoic acid (160%), n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (226%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (217%), M2-4:2 FTS (469%), sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-octane sulfonate (6:2) (418%), and sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-decane sulfonate (8:2) (239%). The associated results are qualified as J or UJ because of potential high or low bias.

The sample MW04_072523 exhibited percent recoveries outside of control limits for the isotope dilution standards 13C5-perfluorohexanoic acid (203%), 13C5-perfluoropentanoic acid (176%), 13C8-perfluorooctanesulfonamide (154%), 13C8-perfluorooctanoic acid (156%), 13C8-perfluorooctanesulfonate (171%), n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (158%), n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (181%), M2-4:2 FTS (493%), and sodium 1h,1h,2h,2h-perfluoro-1-[1,2-13c2]-octane sulfonate (6:2) (312%). The associated results are qualified as J or UJ because of potential high or low bias.

The LCS for batch BH30021 exhibited percent recoveries outside of control limits for the majority of analytes (32 - 239%). All PFAS results in samples DUP01_072523, MW01_072523,

MW02_072523, MW03_072523, and MW04_072523 are qualified as J or UJ because of potential indeterminate bias.

Herbicides by SW-846 Method 8151A

23G1449

The LCS/LCSD for batch BG31518 exhibited RPDs above the control limit for 2,4-d (dichlorophenoxyacetic acid) (31.2%), acetic acid, (2,4,5-trichlorophenoxy)- (31.7%), and silvex (2,4,5-tp) (35.6%). The associated results in samples DUP01_072523, MW01_072523, MW02_072523, MW03_072523, and MW04_072523 are qualified as UJ because of potential indeterminate bias.

Metals by SW-846 Method 6010D/6020B/7470

23G1449

The laboratory duplicate and parent sample (MW04_072523) exhibited a RPD above the control limit for dissolved selenium (31%). The associated results are qualified as J because of potential indeterminate bias.

OTHER DEFICIENCIES:

Other deficiencies include anomalies that do not directly impact data quality and do not necessitate qualification. The section below describes the other deficiencies that were identified.

VOCs by SW-846 Method 8260C

23G1449

The TB (TB01_072523) exhibited a detection of methylene chloride (0.660 ug/l). The associated results are non-detect. No qualification is necessary.

The LCS/LCSD for batch BH30198 exhibited a percent recovery above the UCL for vinyl acetate (113%, 121%). The associated results are non-detect. No qualification is necessary.

The LCS/LCSD for batch BH30199 exhibited a percent recovery above the UCL for vinyl acetate (112%, 110%). The associated results are non-detect. No qualification is necessary.

SVOCs by SW-846 Method 8270D/8270DSIM

23G1449

The LCS for batch BG31686 exhibited a percent recovery above the UCL for hexachloroethane (284%). The associated results are non-detect. No qualification is necessary.

PCBs by SW-846 Method 8082A

23G1449

The sample MW04_072523 exhibited a percent recovery above the UCL for the surrogate decachlorobiphenyl (PCB 209) (174%). The associated results are non-detect. No qualification is necessary.

Metals by SW-846 Method 6010D/6020B/7470

23G1449

The MB for batch BG31755 exhibited a detection of dissolved potassium (0.195 mg/l). The associated results are non-detect. No qualification is necessary.

The FB (FB01_072523) exhibited detections of total potassium (0.0779 mg/l), total sodium (1.06 mg/l), and total calcium (0.153 mg/l). The associated results are >10X the contamination. No qualification is necessary.

The LCS for batch BG31751 exhibited a percent recovery above the UCL for total beryllium (125%). The associated results are non-detect. No qualification is necessary.

FIELD DUPLICATES:

One field duplicate and parent sample pair was collected and analyzed for all parameters. For results less than 5X the RL, analytes meet the precision criteria if the absolute difference is less than ± the RL. For results greater than 5X the RL, analytes meet the precision criteria if the RPD is less than or equal to 30% for groundwater. The following field duplicate and parent sample pair was compared to the precision criteria:

- DUP01_072523 and MW02_072523

The field duplicate and parent sample (DUP01_072523 and MW02_072523) exhibited absolute differences above the RL for bis(2-ethylhexyl) phthalate (0.88 ug/l) and anthracene (0.0589 ug/l). The associated results are qualified as J because of potential indeterminate bias.

CONCLUSION:

On the basis of this evaluation, the laboratory appears to have followed the specified analytical methods with the exception of errors discussed above. If a given fraction is not mentioned above, that means that all specified criteria were met for that parameter. All of the data packages met ASP Category B requirements.

All data are considered usable, as qualified. In addition, completeness, defined as the percentage of analytical results that are judged to be valid, is 100%.

Signed:

Joe Conboy

Re: Data Usability Summary Report
For 40 Quay Street
July 2023 Soil Vapor Samples
Langan Project No.: 100964201

This memorandum presents the findings of an analytical data validation of the data generated from the analysis of air samples collected in July 2023 by Langan Engineering and Environmental Services at the 40 Quay Street site. The samples were analyzed by York Analytical Laboratories, Inc. (NYSDOH NELAP registration # 10854 and 12058) for volatile organic compounds (VOCs) by the methods specified below.

- VOCs by USEPA Method TO-15

Table 1, attached, summarizes the laboratory and client sample identification numbers, sample collection dates, and analytical parameters subject to review.

Validation Overview

This data validation was performed in accordance with the following guidelines, where applicable:

- USEPA Region II Standard Operating Procedure (SOP) #HW-31, "Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15" (September 2016, Revision 6),
- USEPA Contract Laboratory Program "National Functional Guidelines for Organic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020), and
- published analytical methodologies.

Validation includes review of the analytical data to verify that data are easily traceable and sufficiently complete to permit logical reconstruction by a qualified individual other than the originator.

Tier 1 data validation is based on completeness and compliance checks of sample-related QC results including: sample receipt documentation; analytical holding times; sample preservation; blank results (method, field, and trip); surrogate recoveries; MS/MSD recoveries and RPDs

values; field duplicate RPDs, laboratory duplicate RPDs, and LCS/LCSD recoveries and RPDs. One SDG underwent Tier 1 validation review.

As a result of the review process, the following qualifiers may be assigned to the data in accordance with the USEPA's guidelines and best professional judgment:

- **R –** The sample results are unusable because certain criteria were not met when generating the data. The analyte may or may not be present in the sample.
- **J –** The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
- **UJ –** The analyte was not detected at a level greater than or equal to the reporting limit; however, the reported reporting limit is approximate and may be inaccurate or imprecise.
- **U –** The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.
- **NJ –** The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

If any validation qualifiers are assigned these qualifiers should supersede any laboratory-applied qualifiers. Data that is not qualified as a result of this data validation is considered acceptable on the basis of the items specified for review. Data that is qualified as "R" are considered invalid and are not technically usable for data interpretation. Data that is otherwise qualified due to minor data quality anomalies are usable, as qualified in Table 2 (attached).

The following acronyms may be used in the discussion of data-quality issues:

%D	Percent Difference	MB	Method Blank
CCV	Continuing Calibration Verification	MDL	Method Detection Limit
FB	Field Blank	MS	Matrix Spike
FD	Field Duplicate	MSD	Matrix Spike Duplicate
ICAL	Initial Calibration	RF	Response Factor
ICV	Initial Calibration Verification	RL	Reporting Limit
ISTD	Internal Standard	RPD	Relative Percent Difference
LCL	Lower Control Limit	RSD	Relative Standard Deviation
LCS	Laboratory Control Sample	TB	Trip Blank
LCSD	Laboratory Control Sample Duplicate	UCL	Upper Control Limit

MAJOR DEFICIENCIES:

Major deficiencies include those that grossly impact data quality and necessitate the rejection of results. The section below describes the major deficiencies that were identified.

VOCs by USEPA Method TO-15:

23G1356

The sample SV01_072423 exhibited a laboratory-measured receipt pressure above -2 in. Hg (0.73 in. Hg") and the chain of custody noted the final vacuum upon sampling as -5 in. Hg. Neither laboratory nor field personnel indicated improperly functioning equipment. Based on professional judgement, the associated results in sample SV01_072423 are qualified as R because of potential indeterminate bias from sources not representative of the sampling location.

MINOR DEFICIENCIES:

Minor deficiencies include anomalies that directly impact data quality and necessitate qualification, but do not result in unusable data. No minor deficiencies that were identified.

OTHER DEFICIENCIES:

Other deficiencies include anomalies that do not directly impact data quality and do not necessitate qualification. The section below describes the other deficiencies that were identified.

VOCs by USEPA Method TO-15:

23G1356

The MB for batch BG31478-BLK1 exhibited detections of 1,2,4-trichlorobenzene (0.89 ug/m3) and isopropanol (0.88 ug/m3). The associated results are either non-detect or >10X the contamination. No qualification is necessary.

FIELD DUPLICATE:

While one field duplicate and parent sample pair was collected and analyzed for all parameters (SV01_072423 and DUP01_072423), the parent sample was rejected as stated in the sections above. Since the parent sample data is considered unusable, assessment of precision criteria could not be performed.

CONCLUSION:

On the basis of this evaluation, the laboratory appears to have followed the specified analytical methods with the exception of errors discussed above. If a given fraction is not mentioned above,

that means that all specified criteria were met for that parameter. All of the data packages met ASP Category B requirements.

All data are considered usable, as qualified, with the exception of the rejected results. In addition, completeness, defined as the percentage of analytical results that are judged to be valid, is 75%.

Executive Summary

The Greenpoint Monitor Museum is developing an environmentally beneficial design for shoreline stabilization/protection, related flood control, and public access at the site of the future Greenpoint Monitor Museum (the Museum) and public space within for the future USS Monitor Park. The subject property is located at 56 Quay Street, adjacent to the Bushwick Creek and the East River. As part of the proposed redevelopment of the property, a Phase II Limited Site Investigation (LSI) was conducted to assist in evaluating potential contamination within the soil and sediment that will need to be removed and redeveloped as part of the proposed restoration of the shoreline and the raising of the land to assist in flood control efforts.

The Phase II LSI fieldwork was conducted on September 22 and 23, 2016. AECOM advanced seven soil borings at the subject property and collected two soil samples from each bring along with a quality assurance duplicate sample.

Soil analytical results were compared to the NYSDEC Part 375 unrestricted, residential, and commercial, SCOs. The results indicated no VOCs were present were detected in the soil samples with PAHs and metals being the primary compounds that were detected above the applicable SCOs. These results are consistent with the previous environmental investigations conducted on the site and in the adjacent waters along the northern shoreline of the Bushwick Creek in 2006. The presence of these compounds, along with others that were detected but below the SCOs, suggest that the majority of the contamination detected is likely from the historic operations at the subject property. Additional sources of non-hazardous contamination within the Bushwick Creek may be a result of contaminants in historic fill material used to backfill portions of the creek, surface water runoff containing contaminants, and undocumented non-hazardous discharges from historic industrial activities along the East River. The soils and sediment are considered a non-hazardous contaminated material if offsite disposal was required and appropriate remedial measures would be necessary. The actual measures to manage and control the non-hazardous contaminated soil and sediments during the construction and final use of the park will be based upon permit requirements, the final architectural design and the construction activities required.

In general, the remedial measures will be to include remove removing any soils and sediments required under permit guidelines and that are not needed at the park as part of the final design. This material will need to be properly disposed at a facility that is certified to accept the material. This could be at a landfill, recycling facility, or at some other location where the material can be reused as backfill so long as it meets the approval of the appropriate regulatory agencies. As the site will be raised for flood protection, this will also serve as a means to cap any non-hazardous contaminated soil remaining once the construction of the park has been completed.

As to the risk to the surrounding environment, one of the tasks will be to control any suspended material that is excavated at the site so that it does not enter Bushwick Creek and/or the East River. It may be necessary to install sheet piling around the shoreline of the site and then pump out the water between the shoreline and the sheet piling in order to excavate the necessary amount of soil and sediment and remove eroded shoreline materials. The other risk will be to avoid having any direct contact to any non-hazardous contaminated soil left behind. This is typically mitigated by placing a cap of clean fill or an impervious material above any non-hazardous contaminated soil that is left behind which will also raise the site for flood protection. The type of cap to be utilized at the site would be based upon the final design of the park and the approval by the NYSDEC and possibly the Army Corp of Engineers. The final design will also need to control both the erosion of the shoreline so that any non-hazardous contaminated material left behind does not enter either the East River or Bushwick Creek, and the possible introduction of hazardous contaminants to the site's shoreline from any unknown sources.

A Site Management Plan (SMP) will also need to be prepared to monitor the effectiveness of the institutional controls such as clean fill, and shoreline erosion controls. The SMP will also identify the protective measures that any construction worker needs

1.0 Introduction

The Greenpoint Monitor Museum is developing an environmentally beneficial design for shoreline stabilization/protection, related flood control, and public access at the site of the future Greenpoint Monitor Museum (the Museum) and public space within for the future USS Monitor Park. The subject property is located at 56 Quay Street, adjacent to the Bushwick Creek and the East River. As part of the proposed redevelopment of the property, a Phase II Limited Site Investigation (LSI) was conducted to assist in evaluating potential contamination within the soil and sediment that will need to be removed and redeveloped as part of the proposed restoration of the shoreline and the raising of the land to assist in flood control efforts.

The subject property is the location where the historic civil war ironclad, the USS Monitor was launched from in 1862 by the Continental Iron Works located in Greenpoint section of Brooklyn. The ship is well known for its battle with the CSS Virginia off of Hampton Roads, Virginia in 1862. The battle made history in naval warfare because, while iron ships existed before the Monitor, this was one of the first times that ironclads fought each other. Though not particularly impressive to look at - it was called a “cheese-box on a raft,” - it marked a turning point in ship design as the sail powered wooden ships were clearly unable to withstand battle with the iron hulled steam powered ships. The shipbuilding operations of the Continental Iron Works continued at the subject property until 1889.

The field investigation was conducted on September 22 and 23, 2016 and consisted of the advancement of seven soil borings along the shoreline of the subject property. Two soil samples were collected from each of the soil borings submitted to a New York State Department of Health (NYSDOH) approved laboratory for analyses.

The investigation was performed in general accordance with New York State Department of Environmental Conservation (NYSDEC) DER-10 Technical Guidance for Site Investigation and Remediation dated May 2010. The investigation findings were evaluated based on the soil cleanup objectives (SCO) as presented in 6 NYCRR Part 375, Environmental Remediation Programs

Sections 1.0 and 2.0 of this report provide an introduction and discussion of the background, historical information, area geology/hydrogeology and technical approach for the project. Section 3.0 and 4.0 provide the nature and extent of contamination, conclusions, and recommendations.

1.1 Site Investigation Objectives and Scope

As previously stated, the objective of this investigation was to assist in evaluating potential contamination within the soil and sediment that may need to be removed and redeveloped as part of the proposed restoration of the shoreline and the raising of the land to assist in flood control efforts.

1.2 Site Description

The subject property is a vacant parcel situated in a mixed residential and commercial area at the end of Quay Street in the Greenpoint section of Brooklyn, New York (Latitude: 40° 43’ 32.36 North; Longitude: 73° 57’ 36.07”). The Site consists of an easement area consisting of 47,387.29 square feet (1.0879 acres) and parcel area (subject property) of 51,028 square feet (1.17143 acres). The subject property is identified by the City of New York Department of Finance as Block 2590, Lot 25. The purpose of the easement is for constructing, maintaining, and using a dock for the loading and unloading of passengers visiting the

premises by boat or ferries, for constructing and maintaining a viewing deck for the benefit of the premises and for ingress and egress from the East River.

The site is border to the south by the Bushwick Inlet, to the west by the East River, and to the north and east by residential properties currently under construction. The subject property contains fill material consisting of ash, cinders, brick, concrete, and wood fragments, along with other miscellaneous debris.

Figure 1 provides a site location map for the property. Figure 2 provides a site plan for the property.

1.2.1 Current Use of Property

The subject property is mostly vacant. Though not currently occupied by any permanent structure, the subject property contains a flag pole, a storage trailer with picnic tables benches, site maintenance equipment and materials for Museum events and educational purposes on the site, a USS Monitor Trail Marker installed by the National Oceanic and Atmospheric Administration to connect to other USS Monitor historic sites, and a large Museum entrance sign was installed by the Museum including the history of the USS Monitor with photos of Museum events held at the site. An entrance gate was installed into the original closed fence for site access at the time of the donation.

1.2.2 Surrounding Property Use

The uses of adjacent properties identified during the site visit are as follows:

- North: Former warehouses recently razed and is currently used for equipment and materials storage.
- South: Bushwick Creek.
- East: Metropolitan Transit Authority - Division of Station Operations garage.
- West: East River.

1.2.3 Site History

A review of the Sanborn Fire Insurance Maps and historic aerial photographs dating back to 1916 depict the area as vacant, undeveloped land with several small structures until approximately 1942. The subject property was developed with several partial structures and two floating dry docks associated with “Liberty Dry Dock, Inc.” between 1942 and 1954. During this period of time, the subject property included two box docks, a mill gallery, lumber and general storage buildings, and a machine shop. The onsite structures no longer appear on the 1965 maps and photographs. The subject property appears as vacant, undeveloped land from 1965 to the present. The City of New York Department of Finance identified the owner of the subject property in 1986 as Texaco, Inc. By 1988 the property owner was identified as Star Enterprise (a joint venture between Texaco and Saudi Refining) and in 2002 as Motiva Enterprises LLC (a joint venture between the Shell Oil Company and Saudi Refining). In 2003 Motiva donated the subject property to the Greenpoint Monitor Museum.

1.3 Physical and Environmental Setting

The shoreline topography of the Site ranges from flat to a moderate slope towards the Bushwick Creek. The shoreline of the Site is covered with material including rip-rap and overgrown vegetation.

1.3.1 Regional and Local Geology

The Cretaceous-age Atlantic Coastal Plan physiographic province is found in the extreme southeast portion of New York State (Kings, Queens, and Richmond Counties). The geology of this province is unique, in that it is not made up of rock, but consists of unconsolidated sediments. Bedrock is not exposed anywhere at the ground surface within the Coastal Plain; however, it is exposed immediately to the west and northwest on Staten Island and in the Bronx.

The surficial deposits overlying the Coastal Plain are, in order of greatest to least coverage: outwash sand and gravel, till moraine, till, kame moraine and Barrier Island. The following deposits account for approximately 1% each of the total coverage: ice contact deposits, beach, swamp and lucustrine delta.

Outwash sand and gravel covers approximately two-thirds of the south shore of Long Island, extending as far east as the Hither Hills Walking Dunes in the Town of East Hampton and westward to the border of Nassau and Queens Counties. The thickness of the outwash varies between 6 and 66 ft.

Till moraine, which accounts for approximately 20% of the areal extent of the surficial deposits, is the second most prevalent surficial deposit on Long Island. The vertical thickness of the moraines on Long Island varies from 33 to 99 feet.

Glacial till accounts for approximately 10% of the surficial deposits on Long Island. It covers the northwest coast of Nassau County, on the peninsulas and underlying the bays. It continues this pattern eastward across the county line into the north coast of Suffolk County for about six miles, and then give way to the Harbor Hill Moraine. The thickness of glacial till on Long Island is generally from 3 to 164 feet thick.

Kame moraine deposits account for approximately 10% of the total surficial deposits on Long Island. Kame moraine is the constituent material of the Ronkonkoma Moraine for approximately the western 37 miles of its length, unit it joins up with the Harbor Hill moraine near the Huntington Station. These deposits vary from 33 to 99 feet thick.

Barrier island deposits, the most extensive non-glacial sediment, account for about 5% of the total surficial deposits of the area. These Coastal Plain islands comprise nearly the entire chain of barrier islands that outline the southern coast of Long Island, from Coney Island in the west to Southampton in the east. These deposits consist of sand and gravel of variable thickness deposited under near-shore marine conditions. Their thickness is variable.

Extensive tidal wetlands are located on the leeward side of the line of barrier islands that stand off the south shore of Long Island. Swamp deposits are the last of the non-glacial surficial sediments, consisting of peat muck, organic silt and sand. They create potential land instability and are generally from 6 to 66 feet thick.

The Subsurface Exploration Geotechnical Report prepared for the subject property by AECOM (September 2016) summarized the subsurface soil conditions as follows:

- First/top layer (from the ground surface): 3-7 feet of fill material. The fill material generally consisted of medium dense medium to coarse sand, silty sand with some concrete, brick, cinders, wood, cobbles and gravel;
- Second layer: loose sand, trace gravel and silt (thickness: 6-30 feet). In some locations this was followed by a 10 feet layer of very loose gravel and little sand;
- Third layer: very soft organic clay / soft silty clay / clayey silt (thickness: 6-20 feet). In some locations this was followed by a layer of very stiff organic clay (thickness: 3 to 45 feet);

- Fourth layer: 2- 37 thick layer of dense silty sands. In some locations a 12 thick layer of medium dense clayey sand was present.
- One soil boring was advanced to encountered lower layers of a stiff clayey silt and a dense silty sand.

1.3.2 Regional Hydrogeology

Physiographically, Kings County is part of the Long Island Hydrogeologic System. In a roughly north-south cross section, the geology can be characterized as a wedge shaped layer of Cretaceous and Pleistocene age unconsolidated sediments, thickening to the south-southeast. Several impermeable clay layers are found within this sediment package, generally creating three distinct aquifers. Potable water is primarily withdrawn from the deepest of the aquifers in southeastern Kings County; groundwater is the sole source of drinking water in Nassau and Suffolk Counties and is protected as such in Kings County. Consolidated bedrock is of Precambrian and Paleozoic age. The thickness of the unconsolidated sequence ranges from zero to approximately 1,300 feet below ground surface from north to south. The uppermost unconsolidated unit consists of Pleistocene glacial till and moraine deposits in the northern portion of Kings County and glaciofluvial sediments derived from melt-water of the retreating glacier to the south. These deposits constitute the Upper Glacial Aquifer.

The overlying Cretaceous age sediments are characterized by three period of deposition separated by period of erosion. The lowermost unit, known as the Raritan Formation, was deposited by streams and coalescing delta deposits. The formation has been divided into two units, the Lloyd Sand Member and a conformable overlying clay unit.

After the period of erosion, the Magothy Formation was deposited in an environment dominated by streams and coalescing deltas. The coarse basal unit indicates an environment of high energy that decreases rapidly, resulting in deposition of finer sands and silts that make up the majority of the formation.

Several episodes of Pleistocene glaciations by a southward advance from New England and the Hudson River valley eroded the Cretaceous deposits. The unconformity extends across most of Kings County between the Cretaceous deposits and the overlying sediment, represents glacial scouring and glaciofluvial activity. Evidence of ice contact with the underlying Cretaceous deposits is absent in the southern portion of Kings County, indicating the southernmost limit of the advancing ice sheets.

The oldest Pleistocene deposit, represented only on western Long Island and Kings County is Jameco Gravel (Jameco Aquifer). It is a channel filling of gravel and coarse sands which may represent a paleo Hudson River.

The terminal moraine of the last glacial advance is represented by the Harbor Mill Moraine. The Moraine trends southwest to northeast through central Kings County. The moraine deposits consist of poorly sorted silts, clays, sands and boulders and form the topographic highs in the area.

The first unconfined aquifer encountered is the upper glacial aquifer. The depth to the water table varies but generally follows topography. In areas of higher topography associated with glacial moraine deposits, the water table is as great as 100 feet below sea level. Closer to sea level, groundwater can occur at depths of 5 to 10 feet below sea level. Generally, groundwater flow follows topography, with flow from higher to lower elevations. The terminal moraine deposits act as a groundwater divide with regional flow to the north, north of the moraine and to the south, south of the moraine.

The Subsurface Exploration Geotechnical Report prepared for the subject property by AECOM (September 2016) indicated that the groundwater table is estimated to be at 7 feet below ground surface (bgs), according to the water level and soil samples observed. However, since the adjoining East River is a tidal body of water the groundwater level will fluctuate with the tide.

2.0 NYSDEC Soil Cleanup Objectives

The analytical data obtained by AECOM through its investigation along with our evaluation of previous analytical data was compared to the current NYSDEC Soil Cleanup Objectives (SCOs), known as CP-51 / Soil Cleanup Guidance dated October 21, 2010. The NYSDEC has a number of different remedial programs that were developed over time based on separate and distinct authorities. These programs use different procedures to determine the extent of soil cleanup necessary to satisfy the remedial program goals. The purpose of creating SCOs was to set forth how soil cleanup levels are selected for the different programs.

Legislation required the NYSDEC, in consultation with the New York State Department of Health (NYSDOH), to develop an approach for the remediation of contamination at brownfield sites. The resulting regulation developed several sets of SCOs for various physical and environmental settings. For the purposes of the proposed redevelopment of the subject property, the analytical results only needed to be compared with the SCOs developed for the protection of public health for all land uses and for the protection of public health for different land uses. These SCOs are as follows:

Unrestricted Use SCOs

These SCOs are used without imposed restrictions, such as environmental easements or other land use controls and represent the most stringent criteria. The data presented in this report was compared to these SCOs for general information only.

Restricted Use SCOs

There are four sets of restricted use SCOs which are used with imposed restrictions, such as environmental easements, which as part of the remedy selected for the site require a site management plan which relies on institutional controls or engineering controls to manage exposure to contamination remaining at a site. Restricted uses SCOs include:

- Residential SCOs which is a land use category which allows a site to be used for any use other than raising livestock or producing animal products for human consumption. Restrictions on the use of ground water are allowed but no other institutional or engineering control, such as a site management plan, would be allowed. This is the land use category which will be considered for single family housing;

- Restricted-residential SCOs which is a land use category which shall only be considered when there is common ownership or a single owner/managing entity of the site. Restricted-residential use:

    - shall, at a minimum, include restrictions which prohibit:

        - any vegetable gardens on a site, although community vegetable gardens may be considered with Department approval; and

        - single family housing; and

  - includes active recreational uses, which are public uses with a reasonable potential for soil contact;

- Commercial use SCOs which is a land used for the primary purpose of buying, selling or trading of merchandise or services. Commercial use includes passive recreational uses, which are public uses with limited potential for soil contact; and

- Industrial use SCOs which is a land used for the primary purpose of manufacturing, production, fabrication or assembly process and ancillary services. Industrial uses do not include any recreational component.

For the purposes of this report the analytical results from the previous and current investigation activities were not compared to the industrial use SCOs as any soils found to exceed the commercial SCOs would be removed from the site or managed onsite to avoid any future direct contact.

Limited Phase II Subsurface Investigation – Greenpoint Monitor Museum

The Greenpoint Monitor Museum provided AECOM with limited information pertaining to a subsurface investigation that was conducted by Emteque Corporation in early 2006. Five borings were advanced at the site. One composite sample was collected from each boring (depth of 0 to 9 feet below ground surface) was obtained from five of the borings (identified in this document as BE-1 through BE-5). In addition, the report contains the results of two soil samples that were split by Metcalf & Eddy (now AECOM) during their investigation of the area on behalf of the City of New York Department of Design & Construction (DDC). The two samples (BC-7: 13-15 ft and BC-8:33-35 ft) were analyzed for VOCs, SVOCs, and Priority Pollutant Metals (PPM).

The conclusions presented by Emteque using the NYSDEC SCOs used in 2006 (Technical and Administrative Guidance Memorandum [TAGM] No. 4046, Recommended Soil Cleanup Objectives [RSCO]) suggested possible subsurface contamination consisting of VOCs and metals. Prior use as a ship yard suggests possible contamination from anti-fouling paints, petroleum and solvents typically used at that time.

It should be noted that even though the Emteque report evaluated the data using the TAGM 4046 RSCO, the NYSDEC permit that was issued to the Greenpoint Monitor Museum (Permit No. 2-6101-01229/00001) for site grading, placement of clean fill, top soil, and grass and replace trees for passive waterfront access area) was issued based upon the comparison of the Emteque data to the current NYSDEC SCOs.

AECOM has reviewed the available Emteque data and compared the results with the current SCOs. Table 1 presents a summary of the data. No VOCs were detected above the current SCOs. Polyaromatic Hydrocarbons (PAHs) associated with SVOCs were detected above either the residential and/or commercial SCOs in samples collected from borings BE-1 through BE-3 but less the respective unrestricted SCOs. The compounds detected were benzo(a)anthracene (BE-1 through BE-3), benzo(a)pyrene (BE-1 and BE-2), benzo(b)fluoranthene (BE-1 through BE-3), benzo(k)fluroanthene (BE-2), chrysene (BE-1 through BE-3), dibenzo(a,h)anthracene (BE-2), and indeno (1,2,3-cd)pyrene (BE-1 through BE-3). Four PPMs were detected at levels above the unrestricted SCOs in borings BE-1 through BE-5. These metals were copper (BE-3), lead (BE-1 through BE-5), mercury (BE-2 through BE-5) and zinc (BE-1 and BE-2). Figure 3 summarizes the results based upon the location of the borings.

For the purpose of waste classification, the elevated compounds detected in the soil samples suggest that the soils are a non-hazardous contaminated material that is typically associated with historic fill; though the contaminants detected may also be due to the subject property's historic use as a shipyard.

Site Investigation Report – Motiva Enterprises LLC / Bushwick Creek Inlet

In November 2006, Metcalf & Eddy (now AECOM) submitted the results of its subsurface site investigation performed on behalf of the DDC at property identified by the New York City Office of Environmental Coordination (OEC) as the Bushwick Creek Inlet (BCI). The investigation was performed as part of a regional environmental assessment to determine the lateral and vertical extent of potential contamination in subsurface soil and sediment that may exist from the historic and current on-site and off-site operations for the proposed construction of the Williamsburg Park.

The primary scope of the services provided on behalf of the DDC was:

- The advancement of eight soil borings along the shoreline of the BCI, using hollow stem auger (“HSA") methods to depths ranging between 45 to 72 feet bgs, and the collection of 18 soil samples;

- The advancement of 11 sediment borings within the BCI using rotary drilling methods with a drill rig mounted on a barge. The borings depths ranging between 35 to 54 feet below the mud line which was located approximately 11 to 24 feet below the deck of the barge, and the collection of 22 sediment samples;

- Field screening, consisting of visual and olfactory indicators and photoionization detector (PID) readings determined the selection of soil samples for laboratory analysis based on contaminant indicators. Laboratory analysis of the grab soil and sediment samples consisted of VOCs, SVOCs, PCBs, inorganic compounds, and cyanide.

Two of the soil borings (BC-7 and BC-8), and four of the sediment borings (BCS-7 through BCS-10) advanced during this investigation are located in the general vicinity of the subject property. While the 2006 report compared the results to the TAGM RCSOs, AECOM reevaluated the results of these samples by comparing them to the current SCOs as presented in 6 NYCRR Part 375. Tables 2 and 3 summarizes the results of the analysis of these samples.

None of the compounds analyzed for in the soil samples collected from BC-7 and BC-8 were detected above the current SCOs.

The analytical results of the sediment data indicated the following:

- Two VOCs were detected above the unrestricted SCOs. These compounds were 2-Butanone (BCS-7: 10-12 ft bgs and BCS-9: 16-18 ft bgs) and 4-Methyl-2-pentanone (BCS-7: 10-12 ft bgs, BCS-8: 24-26 ft bgs, and BCS-9: 16-18 ft bgs).

- Six PAHs were detected above either the residential or commercial SCOs. These compounds were benzo(a)anthracene (BCS-9: 16-18 ft bgs), benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluroanthene, and chrysene (BCS-8: 24-26 ft bgs, BCS-9: 16-18 ft bgs, and BCS-10: 12-14 ft bgs), and indeno (1,2,3-cd)pyrene (BCS-10: 12-14 ft bgs).

- Ten inorganic compounds were detected above either the unrestricted, residential, or commercial SCOs. Compounds detected above the unrestricted were nickel, selenium, silver, and zinc (BCS-7: 10-12 ft bgs, BCS-8: 24-26 ft bgs, BCS-9: 16-18 ft bgs, and BCS-10: 12-14 ft bgs).Compounds detected above either the residential and/or commercial SCOs were arsenic, cadmium, chromium, copper, lead, and mercury (BCS-7: 10-12 ft bgs, BCS-8: 24-26 ft bgs, BCS-9: 16-18 ft bgs, and BCS-10: 12-14 ft bgs), and barium (BCS-8: 24-26 ft bgs, BCS-9: 16-18 ft bgs, and BCS-10: 12-14 ft bgs).

- Cyanide was detected in one sample above the commercial SCOs (BCS-7: 44-46 ft bgs)

Figure 4 and 5 summarizes the results based upon the location of the soil and sediment borings.

The results of the soil samples indicate that while various organic and inorganic compounds were detected in the samples, all were detected below the unrestricted SCOs and as such no contamination as defined by the NYSDEC is present in those samples collected and analyzed this site investigation.

The results of the sediment samples indicate that the majority of the contamination detected is likely from petroleum releases from historic operations at the subject property and in the surrounding area. Additional sources of contamination may be a result of contaminants in historic fill material used to backfill portions of the creek, surface water runoff containing contaminants, and undocumented discharges from historic industrial activities along the East River. This sediment would be considered a non-hazardous contaminated material if offsite disposal was required and would require appropriate remedial measures along the shoreline to avoid direct contact. Any dredging and/or removal of sediments as part of the redevelopment activities may pose a risk to the surrounding environment and, therefore, appropriate remedial measures would be necessary to reduce or removal any potential environmental exposure.

Letter Report – Results of Post Excavation Sampling

On October 21, 2011Emteque LLC submitted a letter to the Greenpoint Monitor Museum presenting the results of post excavation samples collected from a shallow excavation which had contained elevated levels of arsenic. The excavation to remove the elevated levels of arsenic was requested by the NYSDEC. The dimension of the excavation was 10 feet by 10 feet by 1 foot deep (Figure 6). The results of four post excavation samples did not detect any arsenic above the unrestricted SCOs. This information was submitted to the NYSDEC in a letter from the Greenpoint Monitor Museum dated October 25, 2011. The NYSDEC subsequently Permit No. 2-6101-01229/00001 for site grading, placement of clean fill, top soil, and grass and replace trees for passive waterfront access area.

4.0 Site Investigation Scope of Work

The Phase II LSI fieldwork was conducted on September 22 and 23, 2016. AECOM utilized the information presented in the previous environmental investigations to determine the number of samples to be collected, the depth of sampling locations, and the laboratory analyses.

The following sections describe the methods used for the sampling in accordance with the SI Work Plan. Detailed field procedures are provided in the Work Plan. The following subcontractors were utilized to perform the field investigation activities:

- Utility Clearance – Dig Safely, East Syracuse, New York.
- Drilling – Cascade Drilling and Technical Services, Lynbrook, New York.
- Analytical Laboratory Services – Eurofins Spectrum Analytical, North Kingstown, Rhode Island.
- Geophysical Survey – Advanced Geological Services, Malvern, Pennsylvania.

4.1 Field Activities

The field activities consisted of the following tasks:

- Clear overgrown vegetation located in the western portion of the subject property in order to perform a geophysical survey to clear the proposed boring locations of any underground utilities and to allow access of the drill rig;
- Perform a geophysical survey to clear the proposed boring locations of any underground utilities;
- Advancement of seven soil borings using direct push drilling techniques for the collection of 15 subsurface soil samples (two from each boring and a field duplicate sample).
- Containment of drill cuttings in a 55-gallon drum.
- The collection of one composite soil sample for the purposes of waste classification.

4.2 Field Methods

The Phase II LSI consisted of the collection of soil samples obtained from the seven soil borings advanced at the subject property. The locations of the soil borings are shown on Figure 6. All relevant field data were recorded in the field log and soil boring logs. The soil boring logs are provided in Appendix B.

4.2.1 Clearance of Vegetation

AECOM's drilling subcontractor performed brush clearing operations within a portion of the west end of subject property that was overgrown with weeds and brush. This was necessary to perform the underground utility clearance activities and to allow the drill rig to access the proposed boring locations.

4.2.2 Underground Utility Clearance / Geophysical Survey

Prior to the start of intrusive fieldwork, clearance of underground utilities was performed. The drilling subcontractor contacted Dig Safely New York to arrange for the location and marking of underground utilities in the vicinity of the proposed soil boring locations.

In addition to these efforts, AECOM obtained the services of Advanced Geological Services to perform utility geophysical clearance in the location of the soil borings. In areas cleared for work, all subsurface sampling locations were initially hand cleared to a depth of 5 feet before the direct drilling equipment was used.

4.2.3 Subsurface Soil Sampling

Seven soil borings were advanced to assess the geologic and environmental conditions of the soils. The location of the soil borings are shown on Figure 7. The soil boring locations were hand-cleared to a depth of five feet bgs in order to verify that no underground utilities or subsurface structures were present. Upon completion of the hand clearing activities, each soil boring was advanced using a direct-push drill rig (commonly known as a Geoprobe). Continuous samples were collected from each boring to a depth between 15 to 20 feet bgs. The depth at which soil samples were collected for laboratory analyses was based upon visual observations and soil vapor readings using a photoionization detector (PID).

Upon completion of the sampling activities the borings were grouted using bentonite slurry. Residual soils generated during the drilling activities were placed in a 55 gallon drum.

It should be noted that upon completion of the site survey it was discovered that borings B-1 and B-2 advanced by AECOM were located in an area of the subject property which is sometimes underwater due to tidal fluctuation and thus deviate from the requirements of the NYSDEC Permit No. 2-6101-01229/00001 for site grading, placement of clean fill, top soil, and grass and replace trees for passive waterfront access area.

4.3 Quality Assurance

Sample labeling, handling, and Chain of Custody (COC) requirements were consistent with the protocol as described in DER-10. Compliance with these procedures was monitored by the AECOM field geologist. Samples were collected in containers compatible with the intended analysis and properly preserved. Typical requirements for analytical parameters utilized on the project with respect to the type of container, preservation method, and maximum holding time between collection and analysis were specified by the analytical method and the analytical laboratory.

QA/QC samples were collected as part of this investigation. One duplicate sample and one field blank sample were collected during the field investigation activities. Internal laboratory QA/QC samples included method blanks, surrogate spikes, laboratory duplicates, and laboratory control spikes, and matrix spike/matrix spike duplicates. The laboratory selected matrix spike and matrix spike duplicate samples from among the field samples for QA/QC analysis.

4.4 Waste Management

Soil cuttings and miscellaneous trash generated during the field activities were placed in USDOT approved 55-gallon drums and stored on-site for testing and future disposal.

4.5 Laboratory Analysis

The analytical parameters for the soil samples collected were selected based upon previous environmental investigations and an evaluation of materials that could have been discharged into the environment. The following parameters and corresponding analytical methods were selected for analysis of subsurface soil samples during the initial field sampling activities:

- Volatile organic compounds (VOCs) via United States Environmental Protection Agency (USEPA) Methods 5035 A / 8260 C;
- Semivolatile organic compounds (SVOCs) via USEPA Method 8270 D;
- Pesticides via USEPA Method 8081B;
- Polychlorinated biphenyls (PCBs) via USEPA Method 8082 A;
- Inorganic compounds via USEPA Methods 6010 C and 7471 B; and
- Total Cyanide via USEPA Method 9012 B

In addition AECOM collect a composite soil sample from the soil borings for waste characterization. The sample was analyzed for:

- Total Metals by USEPA Method 6010 C / 7471 B;
- Total Petroleum Hydrocarbons (DRO and GRO) by USEPA Methods 8015 Modified / 8015 D;
- PCBs by USEPA 8082 A;
- TCLP ZHE Extraction – U.S. EPA Method 1311;
- TCLP VOC – USEPA Method 8260 C;
- TCLP SVOC – USEPA Method 8270 D;
- TCLP RCRA Metals – USEPA Method 6010B (Mercury 7470A);
- Corrosivity – USEPA Method 9045 D;
- Ignitability/Flashpoint – USEPA SW-846 Method 1010A;
- Reactive Cyanide and Reactive Sulfide by USEPA Methods 7.3.3.2 / 7.3.4.2; and
- Total Organic Halogens – USEPA SW-846 Method 9023.

5.0 Field and Analytical Results

5.1 Geology

Two major stratigraphic units were identified during the Phase II LSI investigation which include, in order of increasing depth, fill and native soil. Ground water was encountered at a depth between 5 to 10 feet bgs and was tidally influenced. Bedrock was not encountered during this investigation.

3.1.1 Fill Material

The subsurface consists of a layer of fill material ranging from a depth of 8 to 16 feet below grade. The fill generally consists of sand and silty sand with gravel, wood, concrete, ash, coal fragments, glass, and brick. Fill was encountered in each of the soil borings. Petroleum odors and/or petroleum sheens were encountered in borings B-1, B-2, and B-6.

3.1.2 Native Soils

Along the shoreline, the fill is underlain by gray and brown organic silty clay and /or silty fine sand. This material was encountered in all borings advanced at the site.

5.2 Analytical Results

The analytical results of the soil samples were compared to NYSDEC Part 375 unrestricted, residential, and commercial SCOs. The analytical results are presented in Table 4 and are graphically shown on Figures 8 and 9. The full analytical data packages are provided in Appendix B for reference.

5.2.1 Volatile Organic Compounds

Acetone was the only VOC detected above the unrestricted SCOs in eight of the soil samples (B-1: 8-10 ft bgs; B-1: 18-20 ft bgs; B-2: 13-15 ft bgs; B-3: 11-13 ft bgs; B-3 : 13-15 ft bgs; B-3 Duplicate: 13-15 ft bgs; B-6 8-10 ft bgs; B-7: 8-10 ft bgs). Acetone is a common laboratory cleaning solvent and it's detection in the samples may be the result cross-contamination. The previous soil samples collected by Emteque and Metcalf & Eddy did not detect any VOCs.

5.2.2 Semi-Volatile Organic Compounds

Several SVOCs, in the form of PAHs were detected above either the residential or commercial SCOs in seven of the soil samples. The compounds detected were benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene in samples B-1: 8-10 ft bgs; B-1: 18-20 ft bgs; B-4: 0-2 ft bgs; B-5: 0-2 ft bgs; B-6 8-10 ft bgs. Indeno(1,2,3-cd)pyrene was detected above the residential SCO in boring B-2: 10-12 ft bgs. Benzo(b)fluoranthene and indeno(1,2,3-cd)pyrene were detected above the residential SCOs in boring B-7: 8-10 ft bgs.

3.2.3 Pesticides and Polychlorinated Biphenyls (PCBs)

No pesticides or PCBs were detected above the SCO in any of the soil samples collected during the Phase II LSI.

5.2.3 Metals

Six metals were detected above the SCOs in six soil samples collected from the subject property. Arsenic was detected above the commercial SCO from samples B-1: 8-10 ft bgs and B-2: 10-12 ft bgs. Chromium was detected above the residential SCO from soil sample B-1: 8-10 ft bgs. Copper was detected above the unrestricted SCO soil samples B-2: 10-12 ft bgs, B-5: 0-2 ft bgs and B-6: 8-10 ft bgs and above the commercial SCO in soil sample B-1: 8-10 ft bgs. Lead was above the unrestricted SCO soil samples B-1: 8-10 ft bgs, B-2: 10-12 ft bgs, B-4: 0-2 ft bgs and B-6: 8-10 ft bgs and above the residential SCO in soil sample B-5: 0-2 ft bgs. Mercury was detected above the unrestricted SCOs in soil samples B-1: 8-10 ft bgs, B-1: 18-20 ft bgs; B-2: 10-12 ft bgs, B-4: 0-2 ft bgs and above the residential SCO in soil sample B-5: 0-2 ft bgs and B-6: 8-10 ft bgs. Zinc was detected above the unrestricted SCOs in soil samples B-1: 8-10 ft bgs, B-1: 18-20 ft bgs; B-2: 10-12 ft bgs, B-4: 0-2 ft bgs and B-5: 0-2 ft bgs.

5.2.4 Waste Classification Samples

The results of the waste classification sample (Table 5) indicate that the soils are not considered hazardous waste.

6.0 Conclusions and Recommendations

The purpose of this Phase II LSI at the subject property was to evaluate the potential environmental concerns encountered during the development of an environmentally beneficial design for shoreline stabilization/protection, related flood control, and public access for the future USS Monitor Park and Museum. Consequently, by understanding environmental concerns that might need to be addressed for site development, this report can assist the architects and engineers in their design of the park along with developing a more accurate estimate of the construction costs. To that end, AECOM advanced seven soil borings at the subject property and collected two soil samples from each boring for laboratory analysis

Soil analytical results were compared to the NYSDEC Part 375 unrestricted, residential, and commercial, SCOs. The results indicated no VOCs were detected in the soil samples with PAHs and metals being the primary compounds that were detected above the applicable SCOs. These results are consistent with the previous environmental investigations conducted on the site and in the adjacent waters along the northern shoreline of the Bushwick Creek in 2006. The presence of these compounds, along with others that were detected but below the SCOs, suggest that the majority of the contamination is likely from the historic operations at the subject property. Additional sources of non-hazardous contamination within the Bushwick Creek may be a result of contaminants in historic fill material used to backfill portions of the creek, surface water runoff containing contaminants, and undocumented non-hazardous discharges from historic industrial activities along the East River.

The soils and sediment are considered a non-hazardous contaminated material if offsite disposal was required and appropriate remedial measures would be necessary. The actual measures to manage and control the non-hazardous contaminated soil and sediments during the construction and final use of the park will be based upon permit requirements, the final architectural design and the construction activities required.

In general, the remedial measures include removing any soils and sediments required under permit guidelines and that are not needed at the park as part of the final design. This material will need to be properly disposed at a facility that is certified to accept the material. This could be at a landfill, recycling facility, or at some other location where the material can be reused as backfill so long as it meets the approval of the appropriate regulatory agencies. As the site will be raised for flood protection, this will also serve as a means to cap any non-hazardous contaminated soil remaining once the construction of the park has been completed.

Regarding the risk to the surrounding environment, one of the tasks will be to control any suspended material that is excavated at the site so that it does not enter Bushwick Creek and/or the East River. It may be necessary to install sheet piling around the shoreline of the site and then pump out the water between the shoreline and the sheet piling in order to excavate the necessary amount of soil and sediment and remove eroded shoreline materials. The other risk will be to avoid having any direct contact to any non-hazardous contaminated soil left behind. This is typically mitigated by placing a cap of clean fill or an impervious material above any non-hazardous contaminated soil that is left behind which will also raise the site for flood protection. The type of cap to be utilized at the site would be based upon the final design of the park and the approval by the NYSDEC and possibly the Army Corp of Engineers. The final design will also need to control both the erosion of the shoreline so that any non-hazardous contaminated material left behind does not enter either the East River or Bushwick Creek, and the possible introduction of hazardous contaminants to the site’s shoreline from any unknown sources.

A Site Management Plan (SMP) will also need to be prepared to monitor the effectiveness of the institutional controls such as clean fill, and shoreline erosion controls. The SMP will also identify the protective measures that any construction worker needs

Notes:
Original identification for Emteque soil borings were B-1, B-2, etc. Identification was changed for this report to avoid confusion with AECOM soil borings collected in 2016.
* - Split samples were obtained by representatives of the Greenpoint Monitor Museum during an environmental investigation conducted by Metcalf Eddy in 2006 on behalf of the DDC.
ug/Kg - micrograms per kilogram
mg/Kg - milligrams per kilogram
ND = Compound not detected above the laboratory's detection limit
NL = Not Listed
NA = Not Analyzed
Bold indicates compound detected at a concentration greater than the laboratory's minimum detection limit.
Blue shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Unrestricted Use Soil Cleanup Objective (SCO) value.
Green shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Residential Use SCO value.
Orange shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Commercial Use SCO value.

Cyanide (mg/kg)	57-12-5	27	27	27	ND	ND	ND	ND

Notes:
ug/Kg - micrograms per kilogram
mg/Kg - milligrams per kilogram
ND - Compound not detected above the laboratory's detection limit
J - Indicates an estimated value.
NL - Not Listed
NA - Not Analyzed
B1 - Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference.
M2 - The MS and/or MSD were below the acceptance limits due to sample matrix interference.
MHA - Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information.
Bold indicates compound detected at a concentration greater than the laboratory's minimum detection limit.
Blue shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Unrestricted Use Soil Cleanup Objective (SCO) value.
Green shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Residential Use SCO value.
Orange shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Commercial Use SCO value.

Notes:
ug/Kg - micrograms per kilogram
mg/Kg - milligrams per kilogram
ND - Compound not detected above the laboratory's detection limit
J - Indicates an estimated value
NL - Not Listed
NA - Not Analyzed
B1 - Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
M2 - The MS and/or MSD were below the acceptance limits due to sample matrix interference.
MHA - Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information.
Bold indicates compound detected at a concentration greater than the laboratory's minimum detection limit.
Blue shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Unrestricted Use Soil Cleanup Objective (SCO) value.
Green shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Residential Use SCO value.
Orange shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Commercial Use SCO value.

Notes:
ug/Kg - micrograms per kilogram
mg/Kg - milligrams per kilogram
U - Compound not detected above the laboratory's detection limit
J - Indicates an estimated value
P - This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. The difference typically indicates interference, causing one value to be unusually high.
NL - Not Listed
NA - Not Analyzed
Bold indicates compound detected at a concentration greater than the laboratory's minimum detection limit.
Blue shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Unrestricted Use Soil Cleanup Objective (SCO) value.
Green shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Residential Use SCO value.
Orange shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Commercial Use SCO value.

FLOOD HAZARD NOTE

THE PARCEL SURVEYED IS COMPRISED OF AREAS DESIGNATED AS ZONE X (LESS THAN 0.2% CHANCE OF FLOODING) AND ZONE AE (EL 10 NGVD 1929, EL 8.9 NAVD 88) AS PER FLOOD INSURANCE RATE MAP OF THE NATIONAL FLOOD INSURANCE PROGRAM
FLOOD INSURANCE RATE MAP
COMMUNITY PANEL NUMBER 3604970 0202 F
EFFECTIVE DATE SEPTEMBER 5, 2007

PRELIMINARY FLOOD HAZARD NOTE

THE PARCEL SURVEYED IS COMPRISED OF AREAS DESIGNATED AS ZONE AE (EL 10 NAVD 1988) BY THE FEDERAL EMERGENCY MANAGEMENT AGENCY
NATIONAL FLOOD INSURANCE PROGRAM
FLOOD INSURANCE RATE MAP
COMMUNITY PANEL NUMBER 3604970202 G
PRELIMINARY DECEMBER 5, 2013

GENERAL NOTES

1. ELEVATIONS AND ESTABLISHED GRADES SHOWN HEREON REFER TO MEAN HIGH WATER (MHW) AND MEAN LOW WATER (MLW) DATUM.
2. ESTABLISHED GRADES SHOWN HEREON REFER TO TOP OF CURB. IF ESTABLISHED GRADES VARY SUBSTANTIALLY WITH EXISTING ELEVATIONS CONSULT WITH THE HIGHWAY DEPARTMENT BEFORE DESIGNING IMPROVEMENTS.
3. LOCATIONS OF WATER MAINS SHOWN HEREON AS SUPPLIED BY THE DEPARTMENT OF WATER SUPPLY, BOROUGH OF QUEENS. LOCATIONS OF WATER SUPPLY MANHOLES, HYDRANTS AND WATER VALVES AS OBTAINED FROM FIELD MEASUREMENT.
4. SIZES AND TYPES OF SEWERS SHOWN HEREON AS OBTAINED FROM THE BOROUGH OF QUEENS. LOCATIONS OF SEWER MANHOLES, RIM AND INVERT ELEVATIONS SHOWN HEREON OBTAINED BY FIELD MEASUREMENTS UNLESS INDICATED (*) WHICH DENOTES INVERT INACCESSIBLE OR MANHOLE NOT FOUND IN FIELD. INFORMATION SHOWN IN THIS MANNER IS AS OBTAINED FROM THE BOROUGH OF QUEENS SEWER MAPS AND RECORDS.
5. ELECTRIC INFORMATION SHOWN HEREON AS SUPPLIED BY THE CONSOLIDATED EDISON COMPANY OF NEW YORK.
(CONSOLIDATED EDISON COMPANY DOES NOT PROVIDE UNDERGROUND ELECTRIC INFORMATION).
6. TELEPHONE INFORMATION SHOWN HEREON AS SUPPLIED BY THE NEW YORK TELEPHONE COMPANY, AERIAL TELEPHONE SERVICES.
7. FIRE ALARM INFORMATION SHOWN HEREON AS SUPPLIED BY THE NEW YORK CITY FIRE DEPARTMENT.
8. CABLE TELEVISION INFORMATION SHOWN HEREON AS SUPPLIED BY THE CABLE VISION COMPANY OF NEW YORK, AERIAL CABLE TV SERVICES.
9. GAS INFORMATION SHOWN HEREON AS SUPPLIED BY NATIONAL GRID.
10. LOCATIONS OF ALL UTILITIES AND SUBSTRUCTURES ARE APPROXIMATE. EXISTENCE OF ALL UTILITIES AND SUBSTRUCTURES ON THE SURVEY PERTAINING TO UTILITIES AND SUBSTRUCTURES SHOWN ON THE SURVEY OR LEGACY OR COMPLETENESS, CONSULT WITH THE APPROPRIATE COMPANY OR AGENCY BEFORE DESIGNING IMPROVEMENTS.
11. THE OWNER, CONTRACTOR AND/OR HIS AGENTS MUST NOTIFY THE APPROPRIATE UTILITY COMPANIES AND/OR AGENCIES AT LEAST 72 HOURS PRIOR TO EXCAVATION IN ACCORDANCE WITH INDUSTRIAL CODE RULE 753.
12. NO EVIDENCE OF EXISTING STREAMS, CREEKS, DITCHES OR WATER COURSES ON/OR CROSSING PROPERTY SURVEYED, OTHER THAN THOSE SHOWN.
13. NOT ALL SUBSURFACE INFORMATION PLOTTED.
14. LOCATION OF BCS-13 SHOWN HEREON AS PER "AECOM" BORING LOCATION MAP AND CROSS SECTION (FIGURE 3).
15. ALL COORDINATES ARE IN NEW YORK STATE PLANE COORDINATE SYSTEM OF 1983 (NAD83), LONG ISLAND ZONE.

NOTE:
MEAN HIGH WATER ELEVATION IS EQUIVALENT TO 1.8
MEAN LOW WATER ELEVATION IS EQUIVALENT TO −2.38

BROOKLYN HIGHWAY DATUM
BROOKLYN SEWER DATUM 0.84'
MEAN SEA LEVEL 0.00 (NAVD 1988) 2.65
MEAN SEA LEVEL 0.00 (NGVD1929) 1.81

NAVD 1988 DATUM IS 1.46 FEET BELOW THE BROOKLYN HIGHWAY DATUM

Notes:

* - These are split samples collected by Metcalf Eddy in 2006 who conduct work an investigation on behalf of the DDC. Emteque collected the remaining samples as part of an independent study on behalf of the Greenpoint Monitor Museum.

ug/Kg - micrograms per kilogram

mg/Kg - milligrams per kilogram

Blue shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Unrestricted Use Soil Cleanup Objective (SCO) value.

Green shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Restricted Use SCO value.

Orange shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Commercial Use SCO value.

Notes:

ug/Kg - micrograms per kilogram
mg/Kg - milligrams per kilogram
ND - Compound not detected above the laboratory's detection limit
J - Indicates an estimated value.
NL - Not Listed
NA - Not Analyzed
B1 - Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference.
M2 - The MS and/or MSD were below the acceptance limits due to sample matrix interference.
MHA - Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information.

No compounds were detected above applicable SCOs.

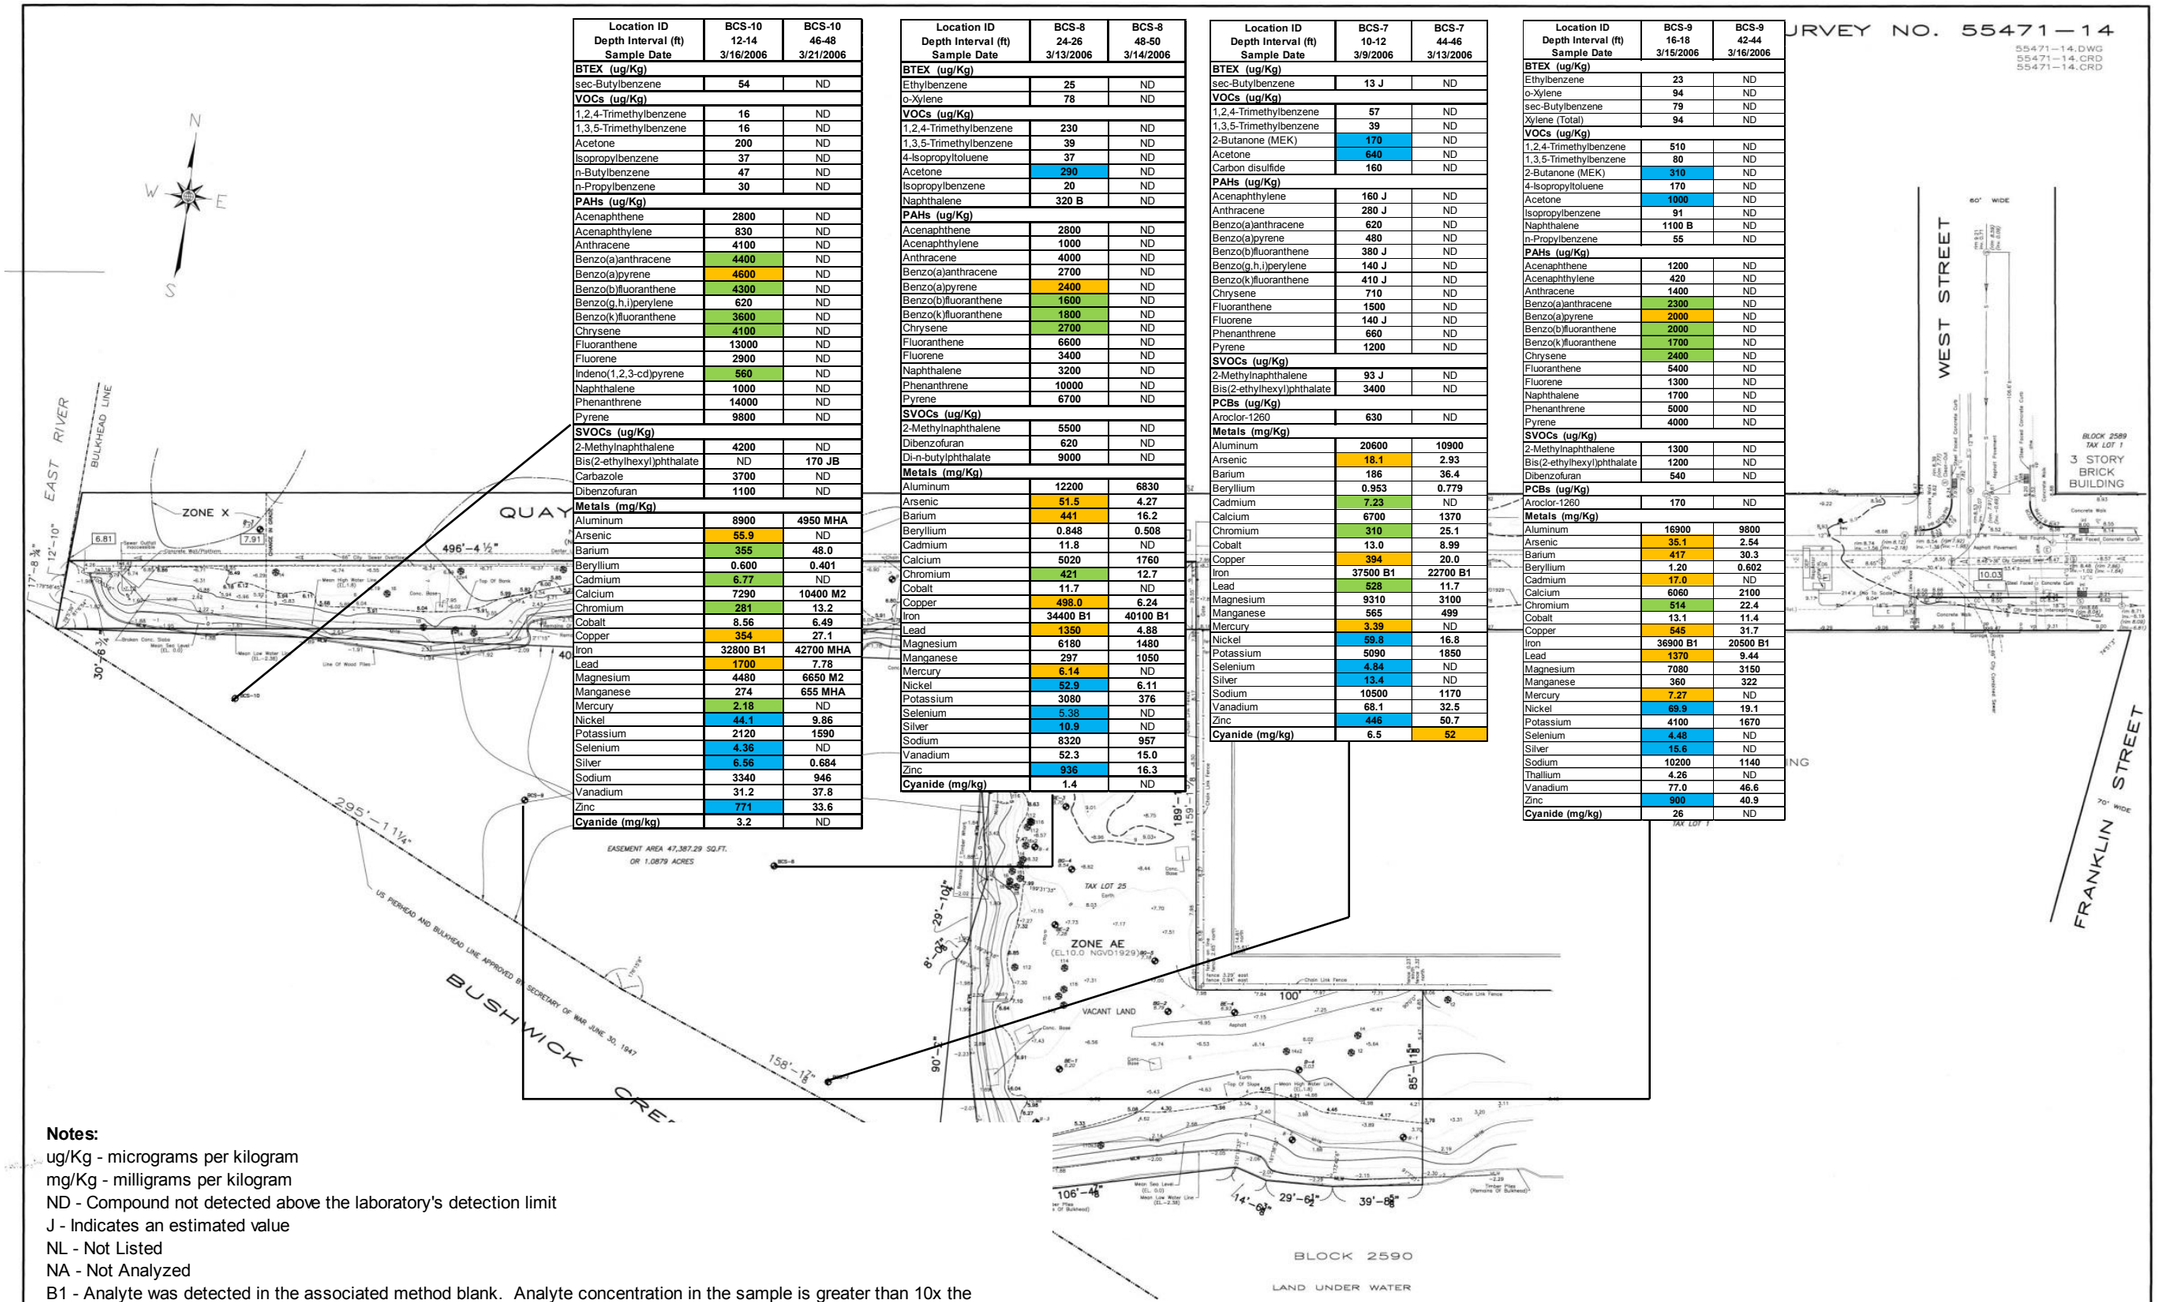
Vanadium	77.0	46.6
Zinc	900	40.9
Cyanide (mg/kg)	26	ND



Notes:

ug/Kg - micrograms per kilogram
mg/Kg - milligrams per kilogram
ND - Compound not detected above the laboratory's detection limit
J - Indicates an estimated value
NL - Not Listed
NA - Not Analyzed
B1 - Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
M2 - The MS and/or MSD were below the acceptance limits due to sample matrix interference.
MHA - Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information.

Blue shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Unrestricted Use Soil Cleanup Objective (SCO) value.
Green shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Restricted Use SCO value.
Orange shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Commercial Use SCO value.

GENERAL NOTES

1.ELEVATIONS AND ESTABLISHED GRADES SHOWN HEREON REFER TO NAVD 1988 WHICH IS 1.46 FEET BELOW THE BROOKLYN HIGHWAY DATUM.
2.ESTABLISHED GRADES SHOWN HEREON REFER TO TOP OF CURB. IF ESTABLISHED GRADES VARY SUBSTANTIALLY WITH EXISTING CONDITIONS, CONTACT THE HIGHWAY DEPARTMENT BEFORE DESIGNING IMPROVEMENTS.
3.SIZES AND LOCATIONS OF WATER MAINS SHOWN HEREON AS SUPPLIED BY THE NEW YORK CITY BUREAU OF WATER SUPPLY. SIZES AND LOCATIONS OF WATER SUPPLY MANHOLES, HYDRANTS AND WATER VALVES AS OBTAINED FROM FIELD MEASUREMENTS.
4.SIZES AND LOCATIONS OF SEWERS SHOWN HEREON AS OBTAINED FROM THE BOROUGH OF QUEENS SEWER DEPARTMENT RECORDS. SEWER MANHOLE RIM AND INVERT ELEVATIONS SHOWN HEREON OBTAINED BY FIELD MEASUREMENTS UNLESS INDICATED (*) WHICH DENOTES INVERT INACCESSIBLE OR MANHOLE NOT FOUND IN FIELD. INFORMATION SHOWN HEREON AS SUPPLIED BY THE NEW YORK CITY DEPARTMENT OF QUEENS SEWER DEPARTMENT RECORDS.
5.ELECTRIC AND GAS INFORMATION SHOWN HEREON AS SUPPLIED BY THE NEW YORK CITY FIRE DEPARTMENT. **CONSOLIDATED EDISON COMPANY DOES NOT PROVIDE UNDERGROUND ELECTRIC & GAS INFORMATION.**
6.TELEPHONE INFORMATION SHOWN HEREON AS SUPPLIED BY THE NEW YORK TELEPHONE COMPANY. AERIAL TELEPHONE SERVICES.
7.FIRE ALARM INFORMATION SHOWN HEREON AS SUPPLIED BY THE NEW YORK CITY FIRE DEPARTMENT.
8.CABLE TELEVISION INFORMATION SHOWN HEREON AS SUPPLIED BY THE NEW YORK CITY FIRE DEPARTMENT. CABLE TELEVISION TV.
9.LOCATIONS OF ALL UTILITIES AND SUBSTRUCTURES ARE APPROXIMATE ONLY. THE INFORMATION GIVEN ON THE SURVEY PERTAINING TO UTILITIES IS NOT GUARANTEED. IT IS THE RESPONSIBILITY OF CONTRACTOR OR COMPLETENESS. CONSULT WITH THE APPROPRIATE COMPANY OR AGENCY BEFORE DESIGNING IMPROVEMENTS.
10.PRIOR TO EXCAVATION, CONTRACTOR OR AGENTS MUST NOTIFY THE APPROPRIATE UTILITY COMPANIES AND/OR AGENCIES AT LEAST 72 HOURS PRIOR TO ANY CONSTRUCTION IN ACCORDANCE WITH INDUSTRIAL CODE RULE 753.
11.NO EVIDENCE OF EXISTING STREAMS, CREEKS, DITCHES OR WATER COURSES OR ANY OTHER ENCROACHMENTS OBSERVED OTHER THAN THOSE SHOWN.
12.NOT ALL SUBSURFACE INFORMATION PLOTTED.

NOTE:
MEAN HIGH WATER ELEVATION IS EQUIVALENT TO 1.8
MEAN LOW WATER ELEVATION IS EQUIVALENT TO –2.36

Cyanide (mg/kg)	ND	ND

Notes:

ug/Kg - micrograms per kilogram

mg/Kg - milligrams per kilogram

U - Compound not detected above the laboratory's detection limit

J - Indicates an estimated value

P - This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. The difference typically indicates interference, causing one value to be unusually high.

NA - Not Analyzed

Blue shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Unrestricted Use Soil Cleanup Objective (SCO) value.

Green shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Restricted Use SCO value.

Orange shaded value: Exceedance of the NYSDEC Part 375-6.8(b) Commercial Use SCO value.

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Eurofins Spectrum Analytical, Inc.

All applicable NELAC or USEPA CLP requirements have been met.

Use of the NELAP logo does not insure that Eurofins Spectrum Analytical is currently accredited for the specific test method or analyte. Please refer to our Quality page of our web site at www.EurofinsUS.com for the current list of certifications and fields of accreditation.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

REPORT NARRATIVE

Eurofins Spectrum Analytical, Inc.

Client : AECOM Technical Services, Inc.

Project: Greenpoint Monitor Museum

Laboratory Workorder / SDG #: R0894

SW846 8270D, SVOA by GC-MS

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times with the following exceptions:
The re-extraction for FB-1 (R0894-01BRE) exceed by 19 Days

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 8270D

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C
Soil Samples were prepared following procedures in laboratory test code: SW3550B

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: S3
Instrument Type: GCMS-SEMI
Description: HP6890 / HP5973
Manufacturer: Hewlett-Packard
Model: 6890 / 5973
GC Column used: 30 m X 0.25 mm ID [0.25 um thickness] ZB-Semi capillary column.

Instrument Code: S6
Instrument Type: GCMS-Semi
Description: HP7890A
Manufacturer: Agilent
Model: 7890A/5973
GC Column used: 30 m X 0.25 mm ID [0.25 um thickness] ZB-Semi capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits with the following exceptions. Please note that the acceptance criteria allow one surrogate recovery outside of the QC limits per fraction.

FB-1 (R0894-01B), recovery is below criteria for 2,4,6-Tribromophenol at 21% with criteria of (40-125), 2-Fluorophenol at 7% with criteria of (20-110) and Terphenyl-d14 at 48% with criteria of (50-135).

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits with the following exceptions. Please note that most test procedures allow for several compounds outside of the QC limits for the LCS.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: B-2 (13-15) (R0894-12CMS) and B-2 (13-15) (R0894-12CMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

The following samples were analyzed at dilution:

B-5 (0-2) (R0894-02C) : Dilution Factor: 5
B-1 (8-10) (R0894-09C) : Dilution Factor: 5
B-1 (18-20) (R0894-10C) : Dilution Factor: 5
B-2 (10-12) (R0894-11C) : Dilution Factor: 5
B-4 (0-2) (R0894-15C) : Dilution Factor: 5
B-4 (0-2) (R0894-15CDL) : Dilution Factor: 20

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

· M1 peak tailing or fronting
· M2 peak co-elution
· M3 rising or falling baseline
· M4 retention time shift
· M5 miscellaneous - under this category, the justification is explained
· M6 software did not integrate peak
· M7 partial peak integration

Manual integrations were performed on the following:

B-5 (0-2) (R0894-02C) Benzo(k)fluoranthene due to M2

B-7 (8-10) (R0894-07C) Benzo(k)fluoranthene due to M2

B-1 (18-20) (R0894-10C) Benzo(k)fluoranthene due to M2

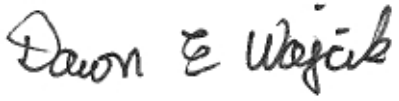
SSTD025AJ Pentachlorophenol due to M6

SSTD040AJ Pentachlorophenol due to M6

SSTD060AJ Pentachlorophenol due to M6

SSTD080AJ Pentachlorophenol due to M6

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Eurofins Spectrum Analytical, Inc. RI, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.



Signed:_____

Date:_____11/3/16_____

Data Flag/Qualifiers (Page 1 of 2):

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Data Flag/Qualifiers (Page 2 of 2):

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Q Qualified Results. This compound has an associated Continuing Calibration Verification (CCV) with a %Difference or %Drift above the control limit.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount Below Limit Of Quantitation(BLOQ).
A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
H - Operator selected an alternate compound hit.

Method   : \\US39FIVP001\organics\S3.I\161013.B\s3_8270C_N.m
Meth Date : 01-Nov-2016 13:13 svanable Quant Type: ISTD
Cal Date : 06-OCT-2016 16:22 Cal File: S3J7682.D
Als bottle: 16
Dil Factor: 1.00000
Integrator: HP RTE Compound Sublist: OLM4_SVOA.sub
Target Version: 4.14
Processing Host: US39PCC00022

Concentration Formula: Amt * DF * Uf*(Vt/Vi)*(1/Ws)*(100/(100-M)) * CpndVariabl

Name	Value	Description
DF	1.000	Dilution Factor
Uf	1.000	GPC correction factor
Vt	1000.000	Volume of final extract (uL)(1000 low, 2
Vi	1.000	Volume injected (uL)
Ws	15.200	Weight of sample extracted (g)
M	0.00000	% Moisture
Cpnd Variable		Local Compound Variable

ISTD	RT	AREA	AMOUNT
* 12 1,4-Dichlorobenzene-d4	3.820	664995	40.000
* 64 Phenanthrene-d10	8.072	1093570	40.000
* 76 Chrysene-d12	10.386	1045509	40.000

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

Meth Date : 04-Oct-2016 07:57 svanable Quant Type: ISTD
Cal Date : 01-OCT-2016 17:55 Cal File: S3J7562.D
Als bottle: 7 QC Sample: LCS
Dil Factor: 1.00000
Integrator: HP RTE Compound Sublist: allnew.sub
Target Version: 4.14
Processing Host: US39PCC00022

Concentration Formula: Amt * DF * Uf*(Vt/Vi)*(1/Vo) * CpndVariable

Name	Value	Description
DF	1.000	Dilution Factor
Uf	1.000	GPC Correction Factor
Vt	1000.000	Volume of final extract (uL)
Vi	1.000	Volume injected (uL)
Vo	1000.000	Volume of sample extracted (mL)
Cpnd Variable		Local Compound Variable

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.

QC Flag Legend

T - Target compound detected outside RT window.
a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

REPORT NARRATIVE

Eurofins Spectrum Analytical, Inc.

Client : AECOM Technical Services, Inc.

Project: Greenpoint Monitor Museum

Laboratory Workorder / SDG #: R0894

SW846 8081B, Organochlorine Pesticides by GC-ECD (DOD5)

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times with the following exceptions:

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 8081B

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C
Soil Samples were prepared following procedures in laboratory test code: SW3550B

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: E5
Instrument Type: GC-ECD
Description: HP6890
Manufacturer: Hewlett-Packard
Model: 6890
GC Column used: 30 m X 0.53 mm ID [0.50 um thickness] CLPPest capillary column.
GC Column used: 30 m X 0.53 mm ID [0.42 um thickness] CLPPestII capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits with the following exceptions. Please note that the acceptance criteria allow one surrogate recovery outside of the QC limits per fraction.

FB-1 (R0894-01B), recovery is below criteria for Decachlorobiphenyl on rear column at 13% with criteria of (30-135) and Decachlorobiphenyl on front column at 15% with criteria of (30-135).

B-5 (0-2) (R0894-02C), recovery is below criteria for Decachlorobiphenyl on rear column at 45% with criteria of (55-130) and Decachlorobiphenyl on front column at 49% with criteria of (55-130).

B-5 (10-12) (R0894-03C), recovery is below criteria for Decachlorobiphenyl on front column at 47% with criteria of (55-130).

B-6 (8-10) (R0894-04C), recovery is below criteria for Decachlorobiphenyl on rear column at 46% with criteria of (55-130) and Decachlorobiphenyl on front column at 44% with criteria of (55-130).

B-6 (15-17) (R0894-05C), recovery is below criteria for Decachlorobiphenyl on front column at 49% with criteria of (55-130).

B-7 (3-5) (R0894-06C), recovery is below criteria for Decachlorobiphenyl on front column at 52% with criteria of (55-130).

B-7 (8-10) (R0894-07C), recovery is below criteria for Decachlorobiphenyl on rear column at 45% with criteria of (55-130) and Decachlorobiphenyl on front column at 51% with criteria of (55-130).

B-1 (8-10) (R0894-09C), recovery is below criteria for Decachlorobiphenyl on front column at 46% with criteria of (55-130).

B-1 (18-20) (R0894-10C), recovery is below criteria for Decachlorobiphenyl on rear column at 25% with criteria of (55-130) and Decachlorobiphenyl on front column at 37% with criteria of (55-130).

B-2 (10-12) (R0894-11C), recovery is below criteria for Decachlorobiphenyl on rear column at 32% with criteria of (55-130) and Decachlorobiphenyl on front column at 28% with criteria of (55-130).

B-2 (13-15) (R0894-12C), recovery is below criteria for Decachlorobiphenyl on front column at 42% with criteria of (55-130).

B-2 (13-15) (R0894-12CMS), recovery is below criteria for Decachlorobiphenyl on rear column at 42% with criteria of (55-130) and Decachlorobiphenyl on front column at 23% with criteria of (55-130).

B-2 (13-15) (R0894-12CMSD), recovery is below criteria for Decachlorobiphenyl on front column at 48% with criteria of (55-130).

B-3 (11-13) (R0894-13C), recovery is below criteria for Decachlorobiphenyl on front column at 45% with criteria of (55-130).

B-3 (13-15) (R0894-14C), recovery is below criteria for Decachlorobiphenyl on front column at 51% with criteria of (55-130).

B-4 (0-2) (R0894-15C), recovery is above criteria for Decachlorobiphenyl on rear column at 426% with criteria of (55-130)Decachlorobiphenyl on front column at 485% with criteria of (55-130).

B-4 (10-12) (R0894-16C), recovery is below criteria for Decachlorobiphenyl on rear column at 38% with criteria of (55-130) and Decachlorobiphenyl on front column at 53% with criteria of (55-130).

DUP-1 (R0894-17C), recovery is below criteria for Decachlorobiphenyl on front column at 48% with criteria of (55-130).

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits with the following exceptions. Please note that most test procedures allow for several compounds outside of the QC limits for the LCS, although this may indicate a bias for this specific compound.

LCS-85778 in batch 85778, recovery is above criteria for Endosulfan I on rear column at 150% with criteria of (15-135), Endrin on rear column at 173% with criteria of (60-135), recovery is below criteria for 4,4´-DDE on rear column at 52% with criteria of (70-125) and alpha-Chlordane on rear column at 62% with criteria of (65-120).

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: B-2 (13-15) (R0894-12CMS) and B-2 (13-15) (R0894-12CMSD).

Percent recoveries were within the QC limits with the following exceptions:

B-2 (13-15) (R0894-12CMS), recovery is below criteria for 4,4´-DDE on rear column at 31% with criteria of (70-125), 4,4´-DDE on front column at 30% with criteria of (70-125), 4,4´-DDT on front column at 25% with criteria of (45-140), Aldrin on rear column at 34% with criteria of (45-140), Aldrin on front column at 30% with criteria of (45-140), alpha-BHC on rear column at 32% with criteria of (60-125), alpha-BHC on front column at 27% with criteria of (60-125), alpha-Chlordane on rear column at 39% with criteria of (65-120), alpha-Chlordane on front column at 30% with criteria of (65-120), beta-BHC on rear column at 52% with criteria of (60-125), beta-BHC on front column at 31% with criteria of (60-125), delta-BHC on rear column at 38% with criteria of (55-130), delta-BHC on front column at 26% with criteria of (55-130), Dieldrin on rear column at 49% with criteria of (65-125), Dieldrin on front column at 30% with criteria of (65-125), Endosulfan II on front column at 13% with criteria of (35-140), Endosulfan sulfate on rear column at 58% with criteria of (60-135), Endosulfan sulfate on front column at 29% with criteria of (60-135), Endrin on front column at 46% with criteria

of (60-135), Endrin aldehyde on front column at 33% with criteria of (35-145), Endrin ketone on rear column at 47% with criteria of (65-135), Endrin ketone on front column at 28% with criteria of (65-135), gamma-BHC (Lindane) on rear column at 42% with criteria of (60-125), gamma-BHC (Lindane) on front column at 32% with criteria of (60-125), gamma-Chlordane on rear column at 45% with criteria of (65-125), gamma-Chlordane on front column at 28% with criteria of (65-125), Heptachlor on rear column at 48% with criteria of (50-140), Heptachlor on front column at 31% with criteria of (50-140), Heptachlor epoxide on rear column at 46% with criteria of (65-130), Heptachlor epoxide on front column at 32% with criteria of (65-130), Methoxychlor on rear column at 52% with criteria of (55-145) and Methoxychlor on front column at 33% with criteria of (55-145).

B-2 (13-15) (R0894-12CMSD), recovery is above criteria for Endosulfan I on rear column at 168% with criteria of (15-135), Endrin on rear column at 182% with criteria of (60-135), recovery is below criteria for 4,4´-DDE on rear column at 65% with criteria of (70-125), 4,4´-DDE on front column at 67% with criteria of (70-125) and gamma-Chlordane on front column at 63% with criteria of (65-125).

Replicate RPDs were within the advisory QC limits with the exception of the following:

B-2 (13-15) (R0894-12CMSD), Relative Percent Difference is greater than RPD limit for Endosulfan I on rear column, Endrin on rear column, 4,4´-DDD on rear column, 4,4´-DDD on front column, 4,4´-DDE on rear column, 4,4´-DDE on front column, 4,4´-DDT on rear column, 4,4´-DDT on front column, Aldrin on rear column, Aldrin on front column, alpha-BHC on rear column, alpha-BHC on front column, alpha-Chlordane on rear column, alpha-Chlordane on front column, beta-BHC on rear column, beta-BHC on front column, delta-BHC on rear column, delta-BHC on front column, Dieldrin on rear column, Dieldrin on front column, Endosulfan I on front column, Endosulfan II on rear column, Endosulfan II on front column, Endosulfan sulfate on rear column, Endosulfan sulfate on front column, Endrin on front column, Endrin aldehyde on rear column, Endrin aldehyde on front column, Endrin ketone on rear column, Endrin ketone on front column, gamma-BHC (Lindane) on rear column, gamma-BHC (Lindane) on front column, gamma-Chlordane on rear column, gamma-Chlordane on front column, Heptachlor on rear column, Heptachlor on front column, Heptachlor epoxide on rear column, Heptachlor epoxide on front column, Methoxychlor on rear column, Methoxychlor on front column.

E. Dilutions:

No sample in this SDG required analysis at dilution.

F. Samples:

The lower concentration between the primary and confirmatory GC column concentrations is reported due to the presence of interferences unless otherwise indicated. P flags are assigned to compounds when D% between the two columns are greater than 40%.

No other unusual occurrences were noted during sample analysis.

G. Manual Integration

Where needed manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

· M1 peak tailing or fronting
· M2 peak co-elution
· M3 rising or falling baseline
· M4 retention time shift
· M5 miscellaneous - under this category, the justification is explained
· M6 software did not integrate peak
· M7 partial peak integration

The following samples were manually integrated:

INDC1E5 4,4´-DDE on rear column , 4,4´-DDT on rear column , Endosulfan I on rear column due to M6

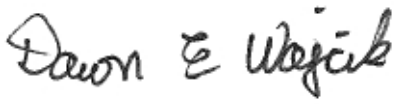
INDC3E5 4,4´-DDE on front column , alpha-Chlordane on front column , Dieldrin on front column , Endosulfan I on front column , Endosulfan sulfate on front column , Heptachlor on front column , Methoxychlor on front column , 4,4´-DDE on rear column , Endosulfan I on rear column due to M6

PEME5 Methoxychlor on front column due to M6

TOXAPH3I5 Toxaphene on rear column due to M6

TOXEPH3KI Toxaphene on front column , Toxaphene on front column due to M3

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Eurofins Spectrum Analytical, Inc. RI, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.



Signed:_____

Date:_____11/4/16_____

Data Flag/Qualifiers (Page 1 of 2):

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Data Flag/Qualifiers (Page 2 of 2):

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Q Qualified Results. This compound has an associated Continuing Calibration Verification (CCV) with a %Difference or %Drift above the control limit.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses
