B-5 (0-2) (R0894-02C), recovery is below criteria for Decachlorobiphenyl on front column at 53% with criteria of (60-125).

B-1 (8-10) (R0894-09C), recovery is below criteria for Decachlorobiphenyl on front column at 44% with criteria of (60-125).

B-1 (18-20) (R0894-10C), recovery is below criteria for Decachlorobiphenyl on rear column at 49% with criteria of (60-125) and Decachlorobiphenyl on front column at 37% with criteria of (60-125).

B-2 (10-12) (R0894-11C), recovery is below criteria for Decachlorobiphenyl on rear column at 48% with criteria of (60-125) and Decachlorobiphenyl on front column at 41% with criteria of (60-125).

B-4 (0-2) (R0894-15C), recovery is above criteria for Decachlorobiphenyl on rear column at 145% with criteria of (60-125), recovery is below criteria for and Decachlorobiphenyl on front column at 41% with criteria of (60-125).

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: B-2 (13-15) (R0894-12CMS) and B-2 (13-15) (R0894-12CMSD).

Percent recoveries were within the QC limits with the following exceptions, due to a laboratory error it appears the MS/MDS were not spiked correctly:

B-2 (13-15) (R0894-12CMS), recovery is below criteria for Aroclor-1016 on rear column at 0% with criteria of (40-140), Aroclor-1016 on front column at 0% with criteria of (40-140), Aroclor-1260 on rear column at 0% with criteria of (60-130) and Aroclor-1260 on front column at 0% with criteria of (60-130).

B-2 (13-15) (R0894-12CMSD), recovery is below criteria for Aroclor-1016 on rear column at 0% with criteria of (40-140), Aroclor-1016 on front column at 0% with criteria of (40-140), Aroclor-1260 on rear column at 0% with criteria of (60-130) and Aroclor-1260 on front column at 0% with criteria of (60-130).

Replicate RPDs were within the advisory QC limits.

E. Dilutions:

No sample in this SDG required analysis at dilution.

F. Samples:

The lower concentration between the primary and confirmatory GC column concentrations is reported due to the presence of interferences unless otherwise indicated. P flags are assigned to compounds when D% between the two columns are greater than 40%.

No other unusual occurrences were noted during sample analysis.

G. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

· M1 peak tailing or fronting
· M2 peak co-elution
· M3 rising or falling baseline
· M4 retention time shift
· M5 miscellaneous - under this category, the justification is explained
· M6 software did not integrate peak
· M7 partial peak integration

The following samples were manually integrated:

AR12543HI Decachlorobiphenyl on front column due to M3

AR12543HJ Aroclor-1254 on front column , Tetrachloro-m-xylene on front column due to M3

AR16601I6 Decachlorobiphenyl on front column due to M3

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Eurofins Spectrum Analytical, Inc. RI, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Data Flag/Qualifiers (Page 1 of 2):

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Data Flag/Qualifiers (Page 2 of 2):

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Q Qualified Results. This compound has an associated Continuing Calibration Verification (CCV) with a %Difference or %Drift above the control limit.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

Data Flag/Qualifiers (Page 1 of 2):

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Data Flag/Qualifiers (Page 2 of 2):

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Q Qualified Results. This compound has an associated Continuing Calibration Verification (CCV) with a %Difference or %Drift above the control limit.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

SC26538 General Narrative

Eurofins Spectrum Analytical, Inc. submits the enclosed data package for the site characterization of Greenpoint Monitor Museum. Samples submitted for analysis by Eurofins Spectrum Analytical, Inc. - RI. Under this deliverable, analysis results are presented for one Aqueous sample and fifteen Soil samples submitted on September 29th, 2016. Data has been reported to the MRL. The report includes estimated concentrations detected below the RDL and above the MDL (J-Flag).

The analyses were performed according to USEPA SW846 method analytical guidelines and other methods. In addition the analyses were performed according to criteria dictated by National Environmental Laboratory Accreditation Conference (NELAC) and in accordance with project contract requirements and chain of custody forms.

Observations and/or deviations observed for specific analyses can be found in the analysis narrative:

1. Overall Observations:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual Integrations are coded to provide the data reviewer justification for such action. The codes are labeled on corresponding raw data for GC/MS and GC analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or failing baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Scanned copies of logbook pages are included, with the originals are archived within the laboratory.

The pages in this report have been numbered consecutively, starting with the general narrative and ending with the page labeled as "Last Page of data Report".

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this electronic data package, has been authorized by the laboratory director as verified by the following signature.

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception or a communication form is included in the addendum with this package.

II. HOLDING TIMES

All samples were prepared and analyzed within the method-specific holding time.

III. METHODS

Analyses were performed according to SW846 6010C.

IV. PREPARATION

Aqueous samples were prepared according to SW846 3005A.

Soil/Sediment samples were prepared according to SW846 3051A.

V. INSTRUMENTATION

The following equipment was used to analyze SW846 6010C:

ICAP details: Thermo ICAP 6000 series CETAC Autosampler

ICAP2 details: Thermo ICAP 6000 series CETAC Autosampler

All sample data within this SDG was generated after ICP-AES interelement corrections and background corrections were applied.

Samples are diluted when concentrations exceed the highest calibration standard in the associated curve, therefore Linear Ranges are not performed.

Client: Eurofins Spectrum Analytical, Inc. - RI

Project: Greenpoint Monitor Museum / R0894

SDG #: 26538

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception or a communication form is included in the addendum with this package.

II. HOLDING TIMES

All samples were prepared and analyzed within the method-specific holding time.

III. METHODS

Analyses were performed according to EPA 245.1/7470A, SW846 7471B.

IV. PREPARATION

Aqueous samples were prepared according to EPA200/SW7000 Series.

Soil/Sediment samples were prepared according to EPA200/SW7000 Series.

V. INSTRUMENTATION

The following equipment was used to analyze EPA 245.1/7470A, SW846 7471B:

Mercury4 details: Leeman Labs Hydra IIAA Mercury Analyzer

VI. ANALYSIS

A. Calibration:

All quality control samples were within the acceptance criteria with the following exceptions:

In sample S608764-CCV1:

Mercury in sequence S608764, sample S608764-CCV1: CCV1 was rerun as CCV2, which passed within method limits. It was also rerun as CCV3 for DoD compliance.

B. Blanks:

All blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Samples (LCS):

All method criteria were met.

2. Matrix Spike / Matrix Spike Duplicate Samples (MS/MSD):

A matrix spike and a matrix spike duplicate were analyzed:

In batch 1616950 from source sample FB-1 (SC26538-01).

In batch 1616953 from source sample B-2 (13-15) (SC26538-11).

All method criteria were met.

3. Post Spike Samples (PS):

A post spike was analyzed.

In batch 1616950 from source sample FB-1 (SC26538-01).

In batch 1616953 from source sample B-2 (13-15) (SC26538-11).

All method criteria were met.

4. Reference:

All method criteria were met.

D. Duplicates:

A duplicate was analyzed.

In batch 1616950 from source sample FB-1 (SC26538-01).

In batch 1616953 from source sample B-2 (13-15) (SC26538-11).

All method criteria were met with the following exceptions:

Mercury in batch 1616953, sample 1616953-DUP1 from source sample B-2 (13-15) (SC26538-11): Analyses are not controlled on RPD values from sample concentrations that are less than 5 times the reporting level. The batch is accepted based upon the difference between the sample and duplicate is less than or equal to the reporting limit.

E. Samples:

All method criteria were met with the following exceptions:

Mercury in batch 1616953, sample B-5 (0-2) (SC26538-02): Sample dilution required for high concentration of target analytes to be within the instrument calibration range.

Mercury in batch 1616953, samples B-4 (0-2) (SC26538-14), B-6 (8-10) (SC26538-04): The Reporting Limit has been raised to account for matrix interference.

Notes & Definitions

GS1 Sample dilution required for high concentration of target analytes to be within the instrument calibration range.

QC2 Analyte out of acceptance range in QC spike but no reportable concentration present in sample.

QM2 The RPD and/or percent recovery for this QC spike sample cannot be accurately calculated due to the high concentration of analyte inherent in the sample.

QM7 The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.

QM9 The spike recovery for this QC sample is outside the established control limits. The sample results for the QC batch were accepted based on LCS/LCSD or SRM recoveries within the control limits.

QR8 Analyses are not controlled on RPD values from sample concentrations that are less than 5 times the reporting level. The batch is accepted based upon the difference between the sample and duplicate is less than or equal to the reporting limit.

R01 The Reporting Limit has been raised to account for matrix interference.

R06 MRL raised to correlate to batch QC reporting limits.

Z-2 Analyte out of acceptance range in CCV but no reportable concentration present in sample.

Z-2a CCV1 was rerun as CCV2, which passed within method limits. It was also rerun as CCV3 for DoD compliance.

Z-2b Reporting limit has been raised to IFA.

BRL Below the reporting limit and also indicates there are no detections between the MDL and MRL

Form I 'Q' column

B The analyte was found in the associated blank as well as the sample

D All identified compounds in the analysis are at a secondary dilution factor

E The concentration for this analyte is an estimated value due to exceeding the calibration range or interferences resulting in a biased final concentration

J Indicates an estimated value. May indicate one of the following depending on the situation:

(1) Compound detected but below the reporting limit and above the minimum detection limit (MDL)
(2) Estimated concentration. Result indicates the presence of a compound that met the identification criteria.

N Included for TIC that indicates presumptive evidence of a compound

P Used for a Dual Column target analyte when the concentration difference between the two GC columns is greater than 40%.

U Compound was analyzed for but not detected. Samples were reported to the MRL.

Form IIa 'Method' column

This column refers to the instrument used for analysis

IR Iris ICP
MS Thermo ICP/MS
AV Mercury analyzer

Form VI 'Q' column

***** indicates that:
Mean RF is above the value in the LIMIT column, or
Linear COD is below the value in the LIMIT column, or
Quad COD is below the value in the LIMIT column

Form VII 'Type' column

A average of response factor
L linear regression
Q quadratic equation

Form VIII 'Q' column for Inorganics

E The dilution analysis is not within a control limit of 10%, therefore a chemical or physical interference effect must be suspected

SC26612 General Narrative

Eurofins Spectrum Analytical, Inc. submits the enclosed data package for the site characterization of Greenpoint Monitor Museum. Samples submitted for analysis by Eurofins Spectrum Analytical, Inc. - RI. Under this deliverable, analysis results are presented for two Aqueous samples and fifteen Soil samples submitted on October 3rd, 2016. Data has been reported to the MRL. The report includes estimated concentrations detected below the RDL and above the MDL (J-Flag).

The analyses were performed according to USEPA SW846 method analytical guidelines and other methods. In addition the analyses were performed according to criteria dictated by National Environmental Laboratory Accreditation Conference (NELAC) and in accordance with project contract requirements and chain of custody forms.

Observations and/or deviations observed for specific analyses can be found in the analysis narrative:

1. Overall Observations:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual Integrations are coded to provide the data reviewer justification for such action. The codes are labeled on corresponding raw data for GC/MS and GC analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or failing baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Scanned copies of logbook pages are included, with the originals are archived within the laboratory.

The pages in this report have been numbered consecutively, starting with the general narrative and ending with the page labeled as "Last Page of data Report".

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this electronic data package, has been authorized by the laboratory director as verified by the following signature.

SDG #: 26612

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception or a communication form is included in the addendum with this package.

II. HOLDING TIMES

All samples were prepared and analyzed within the method-specific holding time.

III. METHODS

Analyses were performed according to SW846 8260C.

IV. PREPARATION

Aqueous samples were prepared according to SW846 5030 Water MS.

Soil/Sediment samples were prepared according to SW846 5035A Soil (high level).

All VOC soils samples submitted and analyzed in methanol will have a minimum dilution factor of 50. This is the minimum amount of solvent allowed on the instrumentation without causing interference. Soils are run on a manual load instrument. 100ug of sample (MEOH) is spiked into 5ml DI water along with the surrogate and added directly onto the instrument. Additional dilution factors may be required to keep analyte concentration within instrument calibration range.

Method SW846 5035A is designed to use on samples containing low levels of VOCs, ranging from 0.5 to 200 ug/Kg. Target analytes that are less responsive to purge and trap may be present at concentrations over 200ug/Kg but may not be reportable in the methanol preserved vial (SW846 5030). This is the result of the inherent dilution factor required for the methanol preservation.

Soil/Sediment samples were prepared according to SW846 5035A Soil (low level).

The following analytes, Acetone, 2-Butanone (MEK), and 2-Hexanone (MBK), are flagged on Form VI – Initial Calibration Data, for ICAL 1609032, due to failing the minimum RF criteria. The following analyte, 2-Butanone (MEK), is flagged on Form VI – Initial Calibration Data, for ICAL 1609054, due to failing the minimum RF criteria. The following analytes, Acetone, Bromomethane, Bromodichloromethane, 2-Butanone (MEK), Cis-1,3-Dichloropropene, Tetrachloroethene, and Trichloroethene, are flagged on Form VI – Initial Calibration Data, for ICAL 16010011, due to failing the minimum RF criteria. Sensitivity is verified by evaluating Levels of Quantitation, with each new calibration. This is done by recalculating data points used for the calibration under the new method. Form IIc – Low-Concentration Calibration Verification summarizes the recoveries for all analytes at the level of quantitation.
