Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	unknown amount spilled. unknown waste oil.
Remarks:	4/28/17 - Obligado - Desk Duty - I called Mr. Sharma. L left a message with Mr. Sharma. This is an OER site - 15-RHn387k. Doing excavation for the foundation. On 4/25 on the northern part of the property on the 25th they found a tank. Today they removed about 50 gallons of waste oil from the tank and cleaned and removed the tank. They found PID and odors in the eastern wall. No staining observed but elevated PID. Lower readings below the tanks. There is a OER RAP for the site. They plan to dig to 20 ft for the foundation. GW at 50 ft. In the next week or two they will excavate in the tank area to clean endpoints 4 sidewall 1 bottom and submit a closure letter. RXR 810 Fulton Street Owner LLC c/o RXR 625 RXR plaza Uniondale NY asharma@akrf.com Spil assigned to Piper. 5-2-17 - Obligado - Soil contamination letter sent. 7/27/17- DEC Piper received and reviewed closure report. Based on work to date, this spill is closed. Report in DEC Docs.

Updated By: RECURLEY
Site Description: Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features: The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940's, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with

805-825 ATLANTIC AVENUE (Continued) **S121796665**

variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA's guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at

805-825 ATLANTIC AVENUE (Continued) **S121796665**

	adjacent properties and was not able to obtain access.
Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Description: Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features: The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940's, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.
Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary

805-825 ATLANTIC AVENUE (Continued) **S121796665**

contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA's guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Description:	Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features: The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940's, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the

805-825 ATLANTIC AVENUE (Continued) **S121796665**

west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA's guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Code: 512855
Site Description: Location: The site is located in an urban area in the Clinton Hill

805-825 ATLANTIC AVENUE (Continued) **S121796665**

neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features: The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940's, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium

805-825 ATLANTIC AVENUE (Continued) **S121796665**

(459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA's guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940’s, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to

805-825 ATLANTIC AVENUE (Continued) **S121796665**

2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA's guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor

805-825 ATLANTIC AVENUE (Continued) **S121796665**

- Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Description: Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features:

805-825 ATLANTIC AVENUE (Continued) **S121796665**

The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940's, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is

805-825 ATLANTIC AVENUE (Continued) **S121796665**

400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA's guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Control Type: INST
Dt record added: 06/10/2022
Dt rec updated: 08/09/2022
Updated By: RECURLEY
Site Code: 512855
Site Description: Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features: The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940’s, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled

805-825 ATLANTIC AVENUE (Continued) **S121796665**

with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA's guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324

805-825 ATLANTIC AVENUE (Continued) **S121796665**

g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

DEC Memo:	speedy dry and pads put down, wont be able to clen up until tracks can be taken out of service. 516-369-4889 cell # for caller.
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 11/15/02 TJD On site at LIRR yard with Lew Wunderlick, LIRR Track workers and AB Oil to remediate impacts to track balast. Track mounted guzzler removed impacted ballast to a depth of approximately 18 inches. Material taken offsite by AB Oil for proper disposal. One confirmatory endpoint sampled required to determine background concentrations after ballast removal. 12/27/02 TJD Analytical data from sampling event reviewed. No TAGM exceedances. Spill closed.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many

MERIT ATLANTIC (Continued) **1000263803**

types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	TANK OVERFILL. UNKNOWN EXACT REASON. CLEAN UP CREW ENROUTE.
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 12/29/2003 Reassigned from Rommel to Sun. 07/31/09 - Received call from John Ronan 718-474-3400; 917 7636693. Preiously, John e-mail Robert Leung with the following: Hello Robert, The NYSDEC shows spill report 9607997 open for this gasoline service station. The report was created over ten (10) years ago and was for a tank overfill. We are currently before the NYC Board of Standards and Appeals seeking an extension of term for the zoning variance so that we may secure a new certificate of occupancy. Before granting our case, the BSA would like to know that the spill report can be closed out. Please advise us as to what steps we nust take to have the spill report closed out. Thank You, John Ronan Senior Project Manager Phone 1-718-474-3400 Cell 1-917-763-6693 Fax 1-718-945-5931 I requested submission of a spill closure report. (V. Brevdo) 02/02/2010 - I requested R. Austin that this 15 gallon tank overfill case be handled by Section of Spill Prevention and Response. V.Brevdo. 3/3/10 - Austin - Spill reassigned to Ketani, to investigate if tank overfill created any long term issues - end 3/5/10 - Raphael Ketani. The spill took place on 9/26/96. It was a tank overfill of 15 gals. of gasoline. It was unknown why the overfill took place. The spill was called in by Nitzan Neeman of Concord Trucking (718) 209-1155. The contact is Jeed (718) 399-3704. The PBS registration is #2-320420. There are 4 tanks on site. All are active. Three are 4,000 gal. and one is 550 gal. The first two large tanks have gasoline and the other large tank has diesel. The 550 gal. tank has some other type of liquid which isn't indicated on the PBS form. Mail goes to the Fulvan Corp. at 846 Fulton Street, 11238 to the attention of Javaid Jahangir (718) 399-0844. The owner is Paul Cassuto, 102 Jesse Place, East Meadow, NY, 11554. His phone is (516) 579-1793/(917) 494-0287. Property Shark lists the block and lot as 2010 and 5. The main address is 840 Fulton Street. The alternate addresses are: 838-846 Fulton Street; and 485 Vanderbilt Avenue. Photos from 3/28/07 show the CITGO station. ACRIS indicates that a deed transfer took place on 7/22/08 to 531-533 Vanderbilt LLC, 157-55 96th Street, Howard Beach, NY, 11414. There is no paper file, nor are there any E-docs. No other spill cases could be found for the site. On 3/3/10, Randall Austin, Chief of the Spills Unit, asked me to go to the site and see whether they have spill sumps. If they do have spill sumps, then I should check to see whether they are large enough to contain any spills that may occur. 3/19/10 - Raphael Ketani. I made an unannouced site visit. The site is an active COASTAL gas station and Fulton Auto Repairs

COASTAL GAS STATION (Continued) **S102662650**

service station. I met Jerry, the manager of the business. 3/29/10 - Raphael Ketani. I tried to contact Jerry today, but I could only leave a message. 3/31/10 - Raphael Ketani. I contacted Jerry. I asked him about the capacity of the spill containment/overfill containment vessels that he had on site. Jerry explained that this was too technical a question and so he couldn't answer me. He told me to call Mr. Cassuto, the owner of the property. I contacted Mr. Cassuto and asked him whether he had spill containment/overfill containment vessels on site. He said that he thought he did, but he wasn't sure about the details. He said that he will contact his technical people and have them talk to me about this. Charles Nalbon of CJN Consulting (917) 346-8976 called. He said that he was responding to Mr. Cassuto's call regarding spill containment equipment. He said that he was pretty sure that each tank had a 15 gal. spill bucket and an overfill alarm. However, he will go to the site and make sure that this equipment is present. He will call me later. 4/2/10 - Raphael Ketani. I spoke to Mr. Nalbon. He said that he is still trying to find the original overfill investigation report from 1996. He said that he took pictures of the typical spill bucket for a UST at the station. He said that each tank has a 15 gal. spill bucket. He will send me the report when he gets all of the paperwork together. 4/15/10 - Raphael Ketani. I spoke to Mr. Nalbon. He said that he found some of the paperwork regarding the spill at the site. He said that he will call me back to discuss the work that was performed. He added that he thought the paperwork indicated that the spill had been closed. I told him that the spill is open in our database. 4/26/10 - Raphael Ketani. I spoke to Mr. Nalbon (917) 346-8976 today. He said that the site investigation report was originally sent to Jennifer Rommel, Vadim Brevdo, and Joe Sun of DER Region 2 many years ago. I told him that Mr. Sun and Ms. Rommel had both left the Department. I added that Mr. Brevdo is still here, but I doubt that he could find the report now. I asked Mr. Nalbon to try and obtain another copy of the report from the consulting company that originally performed the investigation. He said that he will try. 4/27/10 - Raphael Ketani. I was told that Mr. Nalbon had additional questions regarding the site. I tried to reach him, but could only leave a message. Later, I talked to Mr. Nalbon. He said that he is going to try and get the investigation report from the consultants who had handled the project back in 2001. 5/24/10 - Raphael Ketani. I tried to contact Mr. Nalbon regarding whether he had found the 2001 report. However, I could only leave a message stating that either he send DEC the 2001 report or submit a new report indicating that the Coastal Gas Station has the overfill/spill containment equipment. 5/25/10 - Raphael Ketani. I spoke to Mr. Nalbon. He said that he found the 2001 remediation report for the site. He said that it was a surface spill. He will bring the report by hand to DEC today. I told him that I will review the report as soon as I get it. I received the 8/24/01 HydroEnvironmental Solutions Inc. UST Closure and Gasoline Tank Upgrade Report (with cover letter dated 9/10/09). The VOC and SVOC analyses for the 6 soil samples that were taken were mostly non-detect or well below TAGM 4046 RSCO standards, with the exception of the benzo series analytes and their combustion products from the boring number 2 and boring number 6 samples. However, there was historical fill at the site. So these analytes were likely elevated due to components of the historical fill. Groundwater was not encountered. I had no comments. I spoke to Mr. Nalbon and told him that the report demonstrated that there was no impact to the

COASTAL GAS STATION (Continued) **S102662650**

subsurface from the surface spill at the site. I asked him to send me the pictures of the 15 gal. overfill buckets. He said that he will. 6/7/10 - Raphael Ketani. I spoke to Mr. Nalbon. He said that he has the pictures, but that he forgot to send them. I told him that DEC needs the pictures. Otherwise, the spill case can't be closed. He said that he will send them soon. 7/1/10 - Raphael Ketani. Mr. Nalbon dropped off the two pictures of the spill buckets. The pictures depict four spill bucket locations. Based upon the data in the 8/24/01 HydroEnvironmental Solutions Inc. UST Closure and Gasoline Tank Upgrade Report, I have determined that there is no threat to the public or the environment from any spill which had taken place at the site. Therefore, I am closing the spill case.

DEC Memo:	during excavation tanks and staining were found
Remarks:	5/15/2015 - Feng - Duty Desk. Talked to Mohammad Abdeaal of NYCDEP HAZMAT (646-584-5527). DEP received a complaint from the residents regarding the fire alarm went off. He responded to the site and found the site is in construction phase. The gas station is no longer in use. Two tanks were exposed and he could smell a little bit of odor and saw stain in the soil around the tanks. He doesn't know if there is any Phase 1 or Phase 2 have been done. BA Environmental was onsite doing the excavation, but no contact information. The contractor told him that the site will be built into a residential building. He has no idea if there is any e-designation/OER project involved. Historical spill 96-07997, closed. PBS 2-320420 Discussed with K. Patel and Patel searched the NYCDOB website and found the site with Environmental Restriction: HAZMAT/NOICE. That means NYCOER should have the phase 1 and Phase 2 before they can start the work. Contacted OER Shaminder Chawla at 212-442-3007 and left a message. Contacted OER Hannah Moore 212-442-6372. This site is with OER now. Eric Ilijevich is the PM. They are doing the tank removal so far and OER has not approved their RAWP for the new development yet and Charlie Sosik is the consultant. Received Spill 15-01715 reported by EBC (Charlie Sosik's consulting firm) for address 840 Fulton Street. Assigned the spill to Kumar Patel for follow up. 05/19/15-Hiralkumar Patel. alternate address: 838-846 Fulton Street, 485 Vanderbilt Ave PBS #: 2-320420, 2-610481 as per PBS #: 2-320420, the site has following tanks: - two (2) 4,000 gal gasoline USTs, in-service, installed in Jun 1976 - one (1) 4,000 gal diesel UST, in-service, installed in Jun 1976 - one (1) 550 gal other product UST, in-service as per PBS #: 2-610481, the site has one (1) 275 gal waste oil AST on legs, in-service, installed in Jan. 2002 other spills : 9607997, 1501715 spill # 9607997 was reported on 09/26/1996 as 15 gal gasoline spilled due to overfill. case closed. spill # 1501715 is the duplicate of the subject spill. as per NYC DOB record, a permit application was filed for a new seven (7) story building. 840 Fulton LLC. **property owner** c/o Daten Group 444 Madison Avenue, Suite 510 New York, NY 10022 Attn.: Craig Rosenman Ph. (212) 421-3535 Fax (212) 421-3366 email: craig@datengroup.com Eric Ilijevich NYC OER PH. (212) 341-2034 (212) 788-8841 email: eilijevich@dep.nyc.gov VCP ID #: 15CVCP151K 3:23 PM:- spoke with Eric at NYC OER and asked him to submit all available environmental reports for DEC review. email copied to OER Shaminder and Charles (EBC). 05/21/15-Hiralkumar Patel. received email from Eric (at 4:236 PM on 05/19/15) including link to Phase I, RIR and RAWP reports from NYC OER. Eric mentioned that OER is reviewing RIR and RAWP and should be able to provide final comments/edits within next couple of days. abstract of Phase I: - dated 02/20/2014 - Block #: 2010 / Lot #: 25 - from 1887 to 1938, the site was developed with one (1) four-story commercial building

CONSTRUCTION SITE/ FORMER GAS STATION (Continued) **S117973384**

occupied by stores. in 1950, the site was developed with a commercial building occupied by a store. in 1969, the was developed in it's current configuration of one (1) single-story commercial building. from 1969 to 2007, the site was developed with a gasoline station and auto repair facility - the site was formerly equipped with one (1) 50 gal gasoline UST and one (1) 12,500 gal gasoline UST ---------- - one (1) in ground hydraulic lift was noted on site - three (3) pump stations for gasoline sales are located on the north side of the site - site is equipped with two (2) 275 gal waste oil ASTs, located on the west side of the site. ASTs were noted to be equipped with secondary containment. no staining was noted on the exterior or in the vicinity of the ASTs abstract of RIR: - proposed development includes a new 7-story mixed residential and commercial building with a cellar - the cellar level will consist of a recreational area, a laundry area, residential storage area, superintendent office, two bathrooms, 6 mechanical rooms, a trash compactor room, a bicycle storage room, two service corridors, an amenity area, a commercial storage area, a storage closet, three staircases and an elevator - first floor consists of the commercial space, residential lobby with a reception area, a package room, a mail room, three staircases and an elevator - floor 2 through 7 will consist of residential apartments - the elevation of the site is approx. 78 ft - groundwater flow is generally southwest - depth to bedrock is greater than 100 ft - the entire site will require excavcation to a depth of approx. 11 ft bg - installed five soil borings (SB1 through SB5) - stratigraphy of the site surrounding the existing foundation slab from the surface down consists of historic fill material to depths as great as 10-12 ft, underlain by native brown and coarse gravel - borings SB1, SB3 and SB4 were installed to 15 ft bg - borings SB2 and SB5 were installed to 10 ft bg, due to refusal - collected two soil samples from each boring: one from 0-2 ft depth and another from last two ft interval at the end of boring - installed one (1) 1-inch temporary groundwater monitoring well with 15 ft of screen, to a depth of 70 ft bg - groundwater was encountered at approx. 60 ft bg ------- - no free product was observed within the well - installed four soil gas implants (SG1 through SG4) - soil vapor probes SG1, SG2 and SG3 were installed to a depth of 14 ft bg - soil vapor probe SG4 was installed to a depth of 10 ft bg due to refusal - some VOC contamination (maximum: 910 ppb 1,2,4-Trimethylbenzene) noted in shallow soil, but lesser contamination (maximum: 240 ppb 1,2,4-Trimethylbenzene) noted in deeper soil - no contamination noted in groundwater sample - found some petroleum and chlorinated solvent contamination in soil gas soil-gas analyticals (ug/m3):
----------SG1-------SG2-------SG3-------SG4
TCE---------44----------13
PCE--------139--------11--------27--------30 abstact of RAWP:- - the entire property will be excavated to a depth of 11 ft bg and additional 5 ft within the area of the elevator pit - endpoint samples will be collected and analyzed - a vapor barrier and an active SSDS will be installed ---------- 1:39 PM:- spoke with Charles Sosik at EBC. informed him about wrong unit (ppm instead of ppb) in lab summary tables. asked him to submit corrected tables. 05/26/15-Hiralkumar Patel. received email from Shaminder (at 5:25 PM on 05/21/15) from OER including summary of proposed remedy. OER has reviewed RAWP and ready to issue approval. 11/19/15-Hiralkumar Patel. 11:53 AM:- left message for OER Hannah. 11/20/15-Hiralkumar Patel. 10:15 AM:- visited site. crew was installing security fence along

CONSTRUCTION SITE/ FORMER GAS STATION (Continued) **S117973384**

site perimeter. on-site buildings and canopy are still in place. noted tank excavation pit in middle of property. no petroleum odors noted at the site. 11:02 AM:- spoke with Kim Somers at EBC inquiring updates. she was out of office and will call back next week after reviewing file. 05/16/16-Hiralkumar Patel. received email from OER Shaminder (at 4:19 PM on 05/13/16). he mentioned that construction will begin in next few weeks. 05/24/16-Hiralkumar Patel. 10:25 AM:- received email from Chawinie Reilly from EBC. she mentioned that the site is getting ready to start up in a few weeks. Ms. Reilly included links for revised RIR and RAWP. RAWP states that 'this remedial action will consist of installation and monitoring of off-site groundwater wells as required and approved by NYSDEC'. but the department never asked for or approved off-site groundwater monitoring. Chawinie Reilly Environmental Business Consultants Ph. (631) 504-6000 ext. 123 (631) 827-5007 (C) Fax (631) 924-2870 email: creilly@ebcincny.com 11:32 AM:- spoke with Ms. Reilly and discussed proposal of off-site groundwater monitoring. informed Ms. Reilly that the department never asked for or approved off-site groundwater monitoring. she will submit revised RAWP. she mentioned that on-site buildings have been demolished. in few weeks, they will do additional investigation as required by OER. four additional soil borings and two additional soil gas implants will be installed. 11:45 AM:- sent email to Ms. Reilly and asked to submit revised RAWP and copy of Notice to Proceed from OER. also asked her to submit results of additional investigation, once available. email copied to OER Sarah. 12:10 PM:- received email from Ms. Reilly including revised RAWP. 12:14 PM:- received email from OER Sarah including copy of Notice to Proceed. 06/22/16-Hiralkumar Patel. 4:02 PM:- received email from Ms. Reilly. she mentioned that EBC will conduct additional soil and soil-gas sampling and waste characterization sampling for disposal on 06/27 and 06/28. 06/28/16-Hiralkumar Patel. 1:14 PM:- sent email to Ms. Reilly and asked her to submit sampling report, once available. email copied to OER Sarah. 06/30/16-Hiralkumar Patel. 8:04 AM:- received email from Ms. Reilly including daily status report for 06/27/16. four soil borings (SB6 through SB9) were advanced to 15 ft bg and two soil-gas implants (SG5 and SG6) were advanced to 14 ft bg. 07/11/16-Hiralkumar Patel. 2:43 PM:- received email from Ms. Reilly including results of waste characterization samples. 07/20/16-Hiralkumar Patel. received email from Ms. Reilly (at 9:03 AM on 07/19/16) including RAWP Addendum. abstract: - installed four soil borings (SB6 through SB9) and two soil-gas implants (SG5 and SG6) - soil borings were installed to a final depth of 14 ft bg - two soil samples were collected from each boring: one from 0-2 ft interval and another from 10-12 ft interval - soil-gas implants were installed to a depth of 14 ft bg - one soil-gas sample was collected from each soil-vapor probe - no contamination found in soil samples - found petroleum and chlorinated VOCs in soil-gas samples soil-gas analyticals (ug/m3): ----------SG5----------SG6

Contact Name: TONY MUSTO
DEC Memo: UPON EXCAVATION OF 12 (550) GAL TANKS SOIL CONTAMINATION WAS DISCOVERED. 200 CUBIC YARDS OF
IMPACTED SOIL WAS REMOVED AND POST EXCAVATION SAMPLING COMPLETED AND AWAITING DATA.
Remarks: Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 04/12/04 TRANSFERRED FROM ODOWD TO ROMMEL March 22, 2006, Jones, no recent work done on this site. Contacts provided in spill report unsuccessful. March 29, 2006, next step, establish contact with current site occupant. 5/22/2006 - Mike Scibel - Current Occupant is McDonalds, property shark reveals owner as an Mmb Associates, reverse phone directory has no listing for address given by property shark. Currently can not contact owner. From file DEC requested 3MW's, soil delineation and documentaion in 2000. Need to find if those tests were performed. Needs additional work. 2/23/10 - Austin - Reassigned to Ketani to followup and bring spill to closure - end 3/3/10 - Raphael Ketani. I restarted the management of the spill case. The spill was called in on 3/19/1998 due to the discovery of contaminated soil while removing gasoline tanks from this former gas station. The caller was Marc Godick of Lexicon Environmental Associates (516) 488-8742. Twelve 550 gal. gas tanks were removed. They appeared to be in good condition. The source of the gas was believed to be the pump island. Initially, 200 cubic yards of contaminated soil were removed by Lexicon. The site is at the intersection of Atlantic and Vanderbilt avenues (northern edge of Prospect Heights). From Property Shark, the block and lot are 1122 and 0001. The prime address is 547 Vanderbilt Avenue. The alternates are 850-852 Atlantic Avenue, 855-857 Pacific Street (the lot extends to the south side of the block). A DOB picture shows a TEXACO gas station. A 2006 picture shows a McDonalds with a paved area in front. ACRIS lists the ownership as follows: Janet H. Brooks sold the property to M&B Associates c/o Crosstown Management on 10/27/99 (she was a 1/4 owner of the property - M&B owned the other 3/4); in 2/2/2000 M&B assigned a lease to the McDonald's Corp; in 1/29/04 Musto of M&B sold the property to MMB Associates, LLC, 320 Heather Lane, Hewlett Harbor, NY, 11557 (MMB consists of the three people who always owned the property). An attempt was made to locate a PBS record for the site using all of the known addresses. However, nothing could be found. As the tanks were never registered, this is a violation of 6 NYCRR Part 612 and Part 613. The situation was referred to Leszek Zielinski, EE I of the PBS Unit, for action. The E-docs contains only one document file. This file contains the 6/2/98 Underground Storage Tank Closure Report, and the 8/21/98 Subsurface Investigation Report. The 6/2/98 Underground Storage Tank Closure Report was written by Lexicon Environmental Assessment for Yellowstone Industries (which has since gone out of business). The USTs were removed, but the piping was left in place. 200 to 300 cu. yds. of contaminated soil were removed. The tanks were in good condition with no holes. The excavation went down to 10' to 12', and to within 10' of the sidewalk. Groundwater was not encountered. End point samples ranged in total VOC concentration from 7 ppb to 1,149,000 ppb (bottom of pit). Four of the eight samples were above TAGM limits. No wells were installed. The end points were taken at 11.5' below grade. Samples 3 to 5 and 8 were below TAGM. Samples 1 and 2 had high VOCs above TAGM. Sample 6 had high VOC hits with 480,000 ppb total xylenes. Sample 7 had high VOC hits with 524,000 ppb total xylenes. The 8/12/98 Subsurface Investigation Report was

CON EDISON (Continued) **S103571868**

written by Lexicon. The site elevation was indicated as 70' to 75' above sea level. (From the USGS maps, groundwater is at about 15' above sea level.) Borings were drilled to 53' below grade. From 0' to 15' was natural fill. From 15' to 53' was cobbles and boulders with thin layers of natural fill. Nine (9) borings were performed in the vicinity of the former UST locations from 6/22-30/98. SB-3 at 12.5' to 13' was 42,946 total VOCs. SB-4 at 8.5' to 9' was 7,698,160 total VOCs. SB-4 at 12.5' to 13' was much lower, but above TAGM. SB-5 and SB-7 to SB-9 were drilled to 53' and there were no VOC concentrations above the DEC Alternative Guidance Value standards. SB-6 at 11.5' to 12' was drilled, according to the drawings, at the location of SS-7 of the UST Closure Report, but the results were non-detect for the soil sample. It is not known how the SS-7 sample with total VOCs of over one million parts per billion could have dropped to non-detect during a time interval of several months. The locations of the two borings must have been far enough removed from each other to be in separate geochemical regimes. There are no other spill cases associated with this site. 3/4/10 - Raphael Ketani. I reviewed the 5/19/99 Site Remediation Report that was produced by HydroScience, Inc. From the analytical results and figures contained in the report, it appears that all of the contamination that was above the TAGM RSCO limits was removed, except for the West Wall-3 location and the Southwest Bottom location. There were only 2 and 3 analytes, respectively, that had exceeded the TAGM limits at these locations. Given that 11 years have passed since the samples were taken, it is believed that natural attenuation and evaporation of the volatile components have reduced the concentrations further. The sampling at depth below 15' also showed that the contaminant concentrations were very far below the TAGM limits and would not have been a threat to the groundwater, which was about 60 feet below the site. Given the data in the HydroScience Site Remediation Report, I have determined that the residual contamination at the site is not a threat to the public or the environment. Therefore, I am closing the spill case. 6/24/10 - Raphael Ketani. Anthony Musto (718) 937-8100 called today. He said that he had been talking to Leszek Zielinski, acting head of the PBS Unit. Mr. Zielinski had referred him to me. He said that he had never known he was supposed to register the tanks that had been pulled. He said that he thought the contractor was going to do this 11 years ago. I told Mr. Musto that the contractors don't always do the PBS registrations unless they are asked to. He asked who he is supposed to talk to regarding registering the tanks. I told him that Mr. Zielinski is in charge of the PBS Unit here in Region 2. Mr. Musto said that he was given the telephone number of the PBS Bureau in Albany and that he saw the name John Urda on a piece of correspondence. I told him to talk to both parties in order to resolve the matter. He asked how much the registration will cost. I told him that it is relatively inexpensive, when compared to any fines or penalties. I added that since Mr. Urda is involved there may be fines and penalties as there are outstanding violations because the tanks were never registered. Mr. Musto said that he will talk to Albany PBS and Mr. Urda.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	gasoline found on land and in sewer - still investigating business owner uncooperative
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT Spoke to Stan Seibenberg of NYC DEP Haz Mat and Tom Thomas of NYC DEP IWCS. According to Thomas NYCFD said spill size was 40 - 50 gal but owner Singh said 4-5 gallons. Dan Clausen acutally was the IWCS responder. Spill diked by NYCFD but a gas station employed washed into catch basin while washing car. Violation issued by DEP. Spill caused by tank overfill.

DEC Memo:	DURING EXCAVATION TO REMOVE ABANDONED TANKS, CONTAMINATED SOIL WAS DISCOVERED:
Remarks:	5/3/07 - Raphael Ketani. CSL sent to property owner: Atlantic Yards Development LLC 1 MetroTech Center - North, 11th flr Brooklyn, NY 11201 Attn: Stacy Zegler 5/4/07 - Raphael Ketani. Andre Obligado met with me today regarding the case. He said that Atlantic Yards has many sites on it and the owners want all of the sites to be under the management of one DEC staff member. Mr. Obligado told me that he is willing to be assigned this spill case. He said he talked to Vadim Brevdo, EE III, Chief of Unit B DER Region 2, and Mr. Brevdo said he was willing to have the case transfered to the unit. Therefore, spill case #0701358 is being transfered to Mr. Obligado. 5/4/07 - Obligado - Received a phone call from Sin Senh and Darren Moss of Roux. Petroleum contamination was found while removing tanks from this site. 3 registered tanks were removed and petroleum contamination was found in soil so a spill number was called in. Additionally, 8 additional tanks were abandoned tanks were encountered and will be removed. They do not plan to complete contaminated soil removal during this mobilization. They gave not removed the conrete pad yet and there is probably contamination under the pad. Sheeting will be installed around the property as part of the AY development construction, and at that time complete excavation of all contaminated soil will occur. Sin requested that the spill be transferred to my name to streamline remediation process. I spoke with Vadim and Joe Sun and they agreed that spill should be to my name, as I am handling other spills for this construction project. 5/8/07 - Obligado - Spoke with Kim Powell and Blue Water Environmental. She received contaminated concrete from this site and the spill report said that the contamination was unknown petroleum . She wanted to confirm what the contamination was so she could know if she could accept it. I told her i didn't have any data but the

ATLANTIC YARDS (Continued) **S108636789**

contamination was from a gasoline station with gasoline USTs and Diesel USts. 5/9/07 - Obligado - Phone call from Shawn Healey from Tyree, who peformed excavation. He said they found 8 USTs that were abandoned with concrete, however the USTs were not properly cleaned so the concrete was covered in gasoline. He sent me a lab analysis that confirms that the contamination is gasoline so I updated the spill report accordingly. 5/23/07 - Oblgiado - Phone call from Darren Moss, he wanted to schedule a meeting to discuss this site. He will call back with some dates. 6/6/07 - Obligado - Meeting with Roux, FCR, DEC Sun to discuss the new spill. They plan to excavate shortly down to 30 ft bgs, to bring the site down to grade with the neighboring rail yard. They submitted data and a site plan. I told them the plan seemed acceptable to the DEC. I told them they would have to sign a STIP. According to Roux, based on waste charaterization and previous soil data the contamination is localized and ground water in 2 wells near the site were non detect for petroleum compounds. After meeting I reviewed the data. VOC soil contamination of 3700 ppb at depth of 20-22 ft bgs. SVOC contamination in one sample interval from 40-50 ft bgs. 6/11/07 - Obligado - Review IRM letter from ROUX which proposes excavation down to 30 ft bgs followed by endpoint sampling. Sent email approval of an Interim Remedial Measure with modification to add a Community Air Monitoring Plan. 10/26/07 - Obligado - Sent email to Daren Moss. 10/29/07 - Email from Daren Moss - We have excavated to 5 feet below grade to facilitate installation of piles for the support of excavation. Once the support of excavation (piles and lagging) have been installed, the bulk excavation will start. We estimate that the bulk excavation will begin in 3-4 weeks. I will call you with a specific date once we get closer to the start of that task. 1/8/08 - Obligado - Phone call from Darren Moss. They have done additional excavation at this site. Along the perimeter excavation is down to 8 ft to install sheeting, however the center of the site is not as deep so they have not encountered petroleum impacted soils yet. 3/17/08 - Obligado - Received a Community Air Monitoring Plan from Darren Moss. This CAMP address odor and dust and is in place for the entire AY project site. 3/18/08 - Obligado - Site visit met with Darren Roux and Sin Sen. They were in the process of excavating soils at the 524 vanderbilt site. During my site visit they were only excavating clean soils around the tank area. They will collect samples from the contaminated tank area for disposal characterization. Once results are in they will direct load contaminated material. 3/27/08 - Obligado - Called Darren Roux to get a site update. They collected the soil samples for laboratory analysis. They were waiting for results. In the meantime they stopped work at 524 Vanderbilt and moved to another part of the AY project. Darren will provide me with a site update. 3/27/08 - Obligado - After discussion with DEC Sun and Nagi, email Stipulation agreement to FCRC. 4/18/08 - Obligado - STIPULATION executed 4/18/08 12/29/08 - Obligado - Reviewed closure request. Documents soil sampling and soil removal. Require ground water sample at UST locations or immediately downgradient as per DER-10 Guidance. Require submission of workplan within 30 days. 10/21/09 - Obligado - Receive revised Spill Closure request report. Report contains result of soil boring investigation downgradient of USTs. One GW and one soil sample from the ground water interface was collected. Both samples were ND for VOCs and SVOCs. After approval from DEC Tibbe, this spill has been closed.

Tank Id: 220078
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

C01 - Pipe Location - Aboveground
G01 - Tank Secondary Containment - Diking (Aboveground)
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
J02 - Dispenser - Suction Dispenser
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring
E12 - Piping Secondary Containment - Double-Walled (AG only)
F06 - Pipe External Protection - Wrapped
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D05 - Pipe Type - Steel Encased in Concrete

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 04/22/2002
Capacity Gallons: 17000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number: 001

SECOND ATLANTIC TERMINAL (Continued) **A100361224**

Tank Id: 20912
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

E00 - Piping Secondary Containment - None
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
I04 - Overfill - Product Level Gauge (A/G)
H05 - Tank Leak Detection - In-Tank System (ATG)
J02 - Dispenser - Suction Dispenser
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location: Aboveground in subterranean vault with access for inspections.....
Tank in subterranean vault but accessible for inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - In Place
Pipe Model: Not reported
Install Date: 12/01/1975
Capacity Gallons: 25000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 02/03/2012
Register: True
Modified By: MJGRIFFI

Material Name: #2 fuel oil (on-site consumption)

Tank Number: 002
Tank Id: 244406
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
K00 - Spill Prevention - None
C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser
L00 - Piping Leak Detection - None
I04 - Overfill - Product Level Gauge (A/G)
E00 - Piping Secondary Containment - None
I02 - Overfill - High Level Alarm
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron

Tank Info:

Tank Number:	001

754 PACIFIC STREET (Continued) **A100356959**

Tank Id: 239765
Material Code: 0002
Common Name of Substance: #4 Fuel Oil (On-Site Consumption)

Equipment Records:

J00 - Dispenser - None
A00 - Tank Internal Protection - None
K00 - Spill Prevention - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
I00 - Overfill - None
D00 - Pipe Type - No Piping
L00 - Piping Leak Detection - None
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
G00 - Tank Secondary Containment - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 01/01/1950
Capacity Gallons: 300
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 09/17/2011

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	CALLER REMOVED TANK TO FIND A OIL OEAK UNDER THE TANK.
Remarks:	8/31/2011 - Sangesland spoke to Pete at Riteway. He said yesterday they pulled the tank and found contaminated soil. Today they are excavating as much soil as they can and will then take end point samples. Soil samples, photos and writeup will be submitted to DEC for review and closure. DEC Piper reviewed closure report. Based on work to date, this spill is closed. See edocs if warranted.

Tank Info:

Tank Number:	001
Tank Id:	28129
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	C01 - Pipe Location - Aboveground
	I04 - Overfill - Product Level Gauge (A/G)
	A00 - Tank Internal Protection - None
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	K00 - Spill Prevention - None
	E00 - Piping Secondary Containment - None
	G03 - Tank Secondary Containment - Vault (w/o access)
	L09 - Piping Leak Detection - Exempt Suction Piping
	B00 - Tank External Protection - None
	F00 - Pipe External Protection - None
	H04 - Tank Leak Detection - Groundwater Well
	J02 - Dispenser - Suction Dispenser
Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	04/02/1962
Capacity Gallons:	3000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	MJGRIFFI
Last Modified:	05/09/2022

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	1 PINT OIL ON 5 GALS OF WATER. NO TO ALL 5 QUESTIONS. SPILL COMING OFF 24 HR PROGRAM DUE TO LACK OF RESOURCES. CON ED REF # 156133.
Remarks:	e2mis no. 156133: 11/5/04 11:20 HRS ENV OPS C. LUGO #03594 ENV OPS REPORTS FINDING APPROX 1 PT OF UNKNOWN OIL ON APPROX 5 GAL OF WATER IN V4724. THIS WAS FOUND WHILE ATTEMPTING TO CLEAN STRUCTURE FOR BQE WHO WAS THERE TO REPLACE A SUMP PUMP ON ACCT#C3275. THE SOURCE AND CAUSE OF THE SPILL IS UNKNOWN. THERE WERE NO SUBSTANTIAL CRACKS IN THE STRUCTURE AND THE STANDING WATER HAD NO MOVEMENT. THERE DID NOT APPEAR TO BE ANY SEWER CONNECTIONS AND THERE IS A CONCRETE SUMP. ENV STOP TAG# 45119 WAS PLACED AND ONE LIQUID SAMPLE TAKEN ON E PRIORITY FOR PCB ANALYSIS ON CHAIN OF CUSTODY# DD11404. HISTORICAL RECORDS INDICATE PCB 1PPM DATED 11/29/01. THE BQE CREW ON LOCATION WAS ADVISED TO PRESSURE TEST THE UNIT. CLEANUP IS PENDING LAB RESULTS. UPDATE 11/5/04 12:59 HRS BQE J. GUARDARRAMA REPORTS THE UNIT PASSED THE PRESSURE TEST. Lab Sequence Number: 04-09232-001 TOTAL PCB: 83 ppm Saturday, November 06, 2004 9:12 PM An Environmental Crew made up of A. Gladowski, R. Vega and R. Esponda completed the cleanup of VS 4724 on 6 Nov 04. The structure was double washed with 5 gal. Biogen 760, 5 gal. of Biogen 715 and 5 gal. bulldog. 110 gal. of liquid were removed via Astoria >50 tanker. Three drums of debris were removed and brought to 3rd Ave Yard via the 'one trip rule'. The sump was found cemented. Environmental stop tag # 45119 was pulled from the structure.

Tank Info:

Tank Number:	001
Tank Id:	240509
Material Code:	0002
Common Name of Substance:	#4 Fuel Oil (On-Site Consumption)
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	2000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	07/20/2011
Register:	True
Modified By:	MJGRIFFI
Last Modified:	05/09/2022
Material Name:	#4 fuel oil (on-site consumption)

DEC Region:	2
DER Facility ID:	464975
DEC Memo:	7/16/15: J.Kann - called Chris Quintana who informed me that this was a dry leak. They are excavating around the tank. A temporary tank has been set up on site. He will forward the owner information. The tank was a 1080 gallon fuel oil tank. 7/17/15: Called Chris again to get the site owner's name. He did not respond, left a message. 7/20/15: J.Kann - received call back from Chris the owner is Jay Arno and his cell number is 347-563-1301. 7/22/15: J.Kann - spoke with Mr. Arno who indicated that the tank was repaired and contaminated soils removed. He said that endpoints samples were collected and that a tank retest was in the process of being done. I confirmed that he was the owner of 479 Clinton Avenue and his mailing address is: Jay Arno Downtown 2502 Avenue U Brooklyn, NY 11229 Informed the owner that the project Manager is Tim DeMeo and emailed him Tim's contact info at jay@downtownclothingstore.com. Placed spill in Tim's name because he was the responder on July 16, 2015. Added Spill/Owner info the TTF Mail Merge file. 9/15/15: As per Jeff, I contacted a consultant named Emily on 9/8/15 at 973-255-7526 who had left him a message regarding this spill. She did not answer and I left her a message. To date she has not called me back. 9/29/15 TJD File review. All Boro Tank has submitted a closure report detailing remedial activities at this property. Following a failed tank tightness test of a 1080 FO UST the tank was emptied, uncovered, cleaned and inspected. Contractor reports (2) pin holes were located approximately centerline of the UST - rolled 1/4 steel sheeting was welded in place to repair tank. Following repairs the fill and vent lines were replaced and the full tank system was reported to have been tested and passed. A total of (21) drums of petroleum contaminated soils were excavated and transported offsite under manifest for disposal. Endpoint samples were collected prior to backfill - all target analytes were within acceptable concentrations. All documentation has been uploaded to DECDOCS. No further action is required. Spill closed.
Remarks:	investigation, repair, retest pending

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters,

CON EDISON (Continued) **1019902210**

storers, and disposers of hazardous waste.

~~Click this hyperlink~~ while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Spiller Name:	Not reported
Spiller Company:	BLOCK 1129 PARKING LOT PROJECT
Spiller Address:	Not reported
Spiller Company:	999
Contact Name:	SIN SENH
DEC Memo:	found old ust, tank pulled /loss of product to soil/investigation underway
Remarks:	10/17/12- Zhune called Sin Seng. Could not find him and left message in his voice mail. 10/25/12-Zhune spoke to Sin. he said. They found a

NEW YORK NEWS (Continued) **U003178440**

tank with acid pH=2. It cwas classified as Hazardous that is becouse they call the spill. They are in the process to send the Closure Spill Report to request close the spill base on the remediation perfomed at this site. 11/21/12-Roux Associates emailed a spill closure letter dated November 15,2012. On August 24, 2012 a 1500-gallon acid UST was discovered durung excavation and grating activities for the contruction of a parking lot. During the removal, Roux Associates observed that the bottom of the UST had corroded away. Soil located beneath the UST and contined within the vault appeared to exhibit a chemical odor/staining, no evidence of petroleum contaminated soil was observed during the UST removal. Two soil samples were collected from the soil within the vault for waste characterization analysis. Soil was excavated and sockpilled. The waste Characterization analytical results indicated no exceedance of CP-51 with exception of few low-level of metal exceedance (lead, chromium, cooper and nickel). Also indicated that the excavated soil had a pH < 2. Roux collected endpoint samples along the west sidewall of the excavation, no samples were collected along the north, east and south sidewalls or bottom of the vault since this portion of the vault were intact and were to remain in place. The pH results were within accetables range. Spill Closed.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste

ULANO CORP (Continued) **1000123536**

Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	U031
Waste Description:	1-Butanol (I) (Or) N-Butyl Alcohol (I)
Waste Code:	U069
Waste Description:	1,2-Benzenedicarboxylic Acid, Dibutyl Ester (Or) Dibutyl Phthalate
Waste Code:	U080
Waste Description:	Methane, Dichloro- (Or) Methylene Chloride
Waste Code:	U112
Waste Description:	Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)
Waste Code:	U151
Waste Description:	Mercury

ULANO CORP (Continued) **1000123536**

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE

ULANO CORP (Continued) **1000123536**

EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DER Facility ID:	331605
DEC Memo:	05/30/07-Vought-Off hours responder. Dry portion leak. Spill assigned to DEC Falvey due to tank test failure. 6/14/07 Called ARTC (718)260-2933. I was told that Kurt Burns is the person I need to speak to re: tank failure. ph:(718)260-2912. Secretary took message for him to call me. sent ttf letter to: Kurt Burns ARTC 22 Chapel St. Brooklyn, NY 11201 Possoibly no PBS registration for this facility. Did search of data base for 937 Fulton and no hits. bf 6/28/07 On 6/26/07, received fax from Mark Salamack of Petroleum Tank Cleaners (PTC) sdtating that he is waiting for a sidewalk permit to access the tank and find the problem. He will advise me when the problem is identified. bf 09/26/08: Tank passed tightness test after re-test. TTT processed. (MA) 12/22/08 Received letter from PTC requesting closure of spill. Tank failed test because of fill and stick lines. Both lines were replaced. Contaminated soil was encountered. bf 10/28/09 Sampling reults had one exceedance of recommended soilcleanup objectives to protect gw quality: chrysene @ 508 ug/l. Recommended clean-up objective for chrysene is 400 ug/l. bf

DEC Region:	2
DER Facility ID:	443497
DEC Memo:	10/29/13- Zhune spoke to Christopher Steel 718-624-4842. He said they put a new boiler. They coverted to gas/oil. The tank failed the test with a dry leak. They will perform isolation test. Last test was in 2008. As per Christopher there is no oil spill. 01/03/14- Mark From Petroleum Tank Cleaner emailed the tank test results dated 12/26/13. As per Mark the tank was not conected to the boiler and that was the only reason that it failed. Apparently they were going to interruptible service and someone disconnected the line from the boiler and allowed to fail. Those lines were reconnected. it has been restested and it passed the test. As per Mark there is no contamination. The Test result in eDos. Based on the information from Petroleum Tank Cleaner the spill is closed.
Remarks:	Location is a drug treatment center. No known loss of product.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	unknown amount spill - cleanup pending - on concrete - also contact owner of building - BENNY - (718)789-6262 IN REGARDS TO GET INFO FOR PROPERTY
Remarks:	03/03/10- Zhune spoke to Diane from Petro. She said I told not to contact me call Benny 718-789-6262. 03/03/10- Zhune spoke to Scott from Petro. He said they called Petro for sevice after driver left they noticed spill in the tank room. The fill line which is under the sidewalk broke. spill is aproximatelly 20 gallons in the tank room in the basement. Floor is cement floor. Petro contained the spill with speedy-dry. They will removed the oil with the speedy dry and put it in bags. As per Benny there is not vapors in the buildings. No vapors in first floor The Environmental cleanup company will come tomorrow to continue with the cleanup. Administrator-ary Liberman 718-789-6262 03/3/10. Hassan responded. 6/14/2010- DEC Piper received closure report. No cracks or drains affected. Six yards of debris and speedy dry were removed. Borings through floor were non detect. Area powerwashed and vaccuumed. Closed. See edocs if warranted.

DEC Memo:	Fuel Oil spill due to leaky a leaky pipie. Filled bt petro yesterday. Unknown amt spilled and recovered.
Remarks:	DEC Piper spoke with PAul at Milro. Milro was kicked off job. They were called in to due to oil water seeping in though wall where fill enters building. The tank room is filled with unknown amount of oil and water. Petro said they were going to take care of it and it was less than 3 gal of oil though it doesnt explain why water is present. The story is awkward. DEC Zhune to respond. 02/01/11-Zhune responded to this site. Spoke to Benjamin Ramos 718-789-6262(Maintenance) and Gary Liebermen (Administrator) The fill line is leaking inside the builging in a former tank room. Aproximatelly 3 gallons of # 2 fuel oil on the concrete floor of the former tank room. There is a sump in this room but is closed. Spill is under contol. Petro is going to replace the line and clean the spill. 02/18/11 Gary Lieberman Administrator from New Carlton Rehabilitation Nursing Center sent the following e-mail: This is to verify our phone communication this morning. The Oil spill that we spoke about earlier today was immediately cleaned up. It was not a lot of oil and there was no seepage into the ground. The corroded pipe from the street that caused this small spill was replaced by our oil company (Petro). It was Petro who responded immediately to our call and performed the clean up. Spill Closed.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	U226

Hazardous Waste Summary:
Waste Code: F006

AYDC PHASE II DEVELOPMENT COMPANY LLC (Continued) **1000994315**

Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: P029
Waste Description: Copper Cyanide (Or) Copper Cyanide Cu(Cn)

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: P098
Waste Description: Potassium Cyanide (Or) Potassium Cyanide K(Cn)

Waste Code: P099
Waste Description: Argentate (1-), Bis(Cyano-C)-, Potassium (Or) Potassium Silver Cyanide

Waste Code: P106
Waste Description: Sodium Cyanide (Or) Sodium Cyanide Na(Cn)

Waste Code: U228
Waste Description: Ethene, Trichloro- (Or) Trichloroethylene

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name:	ATLANTIC TERRACE CORNERSTONE PROJECT
Address:	669 ATLANTIC AVENUE
City,State,Zip:	BROOKLYN, NY 11217
Program:	BCP
Site Code:	374758
Acres:	0.350
HW Code:	C224120
SWIS:	2401
Town:	New York City
Record Added Date:	12/12/2006
Record Updated Date:	04/10/2008
Update By:	SRHEIGEL
Site Description:	The remediation of this site is currently being proposed under the Brownfield Cleanup Program (BCP). The site is approximately 0.35 acres, located at 669 Atlantic Avenue, Borough of Brooklyn, Kings County and is part of the Atlantic Terminal Urban Renewal Area. The site is located on the northern side of Atlantic Avenue between South

ATLANTIC TERRACE CORNERSTONE PROJECT (Continued) **S113916481**

	Oxford Street and South Portland Avenue. It occupies the entirety of a C6-1 zone that is immediately surrounded by residential (R7-2), commercial (C6-4) and manufacturing (M1-1) zones. Current use is vacant, historical records indicate that it was utilized for automotive fuel storage and dispensing purposes. The Brownfield Cleanup Agreement was terminated in 2007 at the request of the Volunteer. The Site is associated with NYSDEC spill #0103681 and #9912465.
Env Problem:	The primary contaminants of concern at the site which are known or suspected to affect the soil, groundwater and soil gas are petroleum, chlorinated solvents, SVOC's, and metals. Investigations indicate concentrations of metal and PAHs that exceed RSCOs include barium, chromium, lead (14,200 on the South side of the property), mercury (up to 3 ppm), chrysene, benzo(a)anthracene, benzo(a) pyrene, and dibenz(a,h)anthracene. VOCs (ethylbenzene, toluene, trimethlybenzene, xylenes and naphthalene), SVOCs (including naphthalene) and metals have been measured in groundwater in concentrations that exceed their respective standards. In addition, soil gas exhibited elevated concentrations of petroleum-related compounds (i.e. 2,2,4 ? Trimethlypentane concentration of 28,471 g/m3). Also, a soil gas TCE concentration of 30 g/m3 has been reported.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

ENGINE CO. 219/LADD. CO. 105 FDNY -DDC (Continued) **S105055050**

DEC Region: 2
DER Facility ID: 270534
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND There was a second spill number which was closed for this same event: See notes on spill #0109974 Gregory Suhr of Fenley & Nicol said there was a gross failure of the Tank test. 600 gal in tank. Probably leaking to the soil. Tony Caggiano of Liro says tank will be pulled soon 11-08-2005 The site was handled under DDC CO. J. Kolleeny was a PM for the site. This spill was under S. Sangesland name. See spill 9705043. AZ 1-19-2006 There was a heating oil spill at the site which was never investigated. DDC refused to investigate the site under the existing contract but stated that the site will be investigated under the future contract. Site should be investigated as soon as new contract is in place. AZ 4-11-2006 The site was reclassified as P0 as per Koon Tang request. AZ 8-6-2010 Received SSIP prepared by LiRo on July 20, 2010. Discussed the site with S. Frank on 8-5-2010. Requested that 2 wells and 3 borings be installed around the tank. LiRo originally proposed 4 borings and 1 well. If soil is contaminated all borings should be converted into wells. The plan is approved. AZ 8-10-2010 Received an e-mail from S. Frank (LiRo): Alex, Thank you for your quick response to our SSIP submitted for the EC 219 heating oil tank spill. As we discussed during our phone conversation on August 5th, LiRo will add at least one more monitoring well to the boring/well program. If field screening results indicate contamination at other locations, LiRo will install additional wells. LiRo understands that additional wells may be required if laboratory analytical results indicate elevated contaminant levels at locations that were expected to be clean based on field screening results. LiRo will collect a minimum of two soil samples at each location for laboratory analysis. Deep borings will be sampled at the high PID interval and at the water table. Please call or email back if you have any additional questions or concerns. AZ 7-29-2011 Reviewed the Investigation Report dated January 7, 2011, and received on July 15, 2011. The following e-mail was sent to S. Frank/F. Ashkan/V. Brevdo: I have reviewed the Investigation Report dated January 7, 2011, and received on July 15, 2011. The report stated that the spill report was filed when 3,000 gal heating oil UST failed the tightness testing. The tank was closed in place in 2002 but not replaced. DEC approved the SSIP for this site on August 5, 2010. LiRo finished the field work in October 2010. Only one well out of two wells planned could be installed due to difficult drilling conditions. Five soil borings were advanced. None of the collected soil samples exhibited contamination. Groundwater sample was collected and the analytical results for VOC/SVOC were non-detect. Based on the documentation provided to date, spill case 0102628 has been closed. All monitoring wells associated with this project should be closed according to the Department's Groundwater Monitoring Well Decommissioning Procedures . The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was not addressed by this evaluation. II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval. III. Information received, in whole or in part, after the Department's spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; of the

ENGINE CO. 219/LADD. CO. 105 FDNY -DDC (Continued) **S105055050**

site; or IV. Fraud in obtaining this approval for inactivation.
Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department's files regarding this release may not be maintained indefinitely. AZ

DEC Region:	2
DER Facility ID:	508410
DEC Memo:	07/14/17 - Lakhani Milenium Tank Peter (718-678-0148) performed a tank test. The tank failed. He suspects a dry leak with an issue with either the manhole cover or line. The tank is a 2000 gallon #2 fuel oil UST. The customer is out of the office today. Peter will isolate the lines on Monday and will conduct another test to pinpoint the location of the leak. The client is John Foran (Spohia Storage, 212-873-3600, foranforan@gmail.com). PBS# 2-094528 John Sofia 491 Bergen St Corp 475 Amsterdam Ave New York, NY 10024 TTF sent to the above address. Uploaded to D2. 07/17/17 - Lakhani Spoke to John and informed him of the requirements. 07/19/17 - Lakhani Milenium Tank Pete called to inform that he isolated the lines and the tank failed. He informed that the top of the tank is rotted. The tank will be immediately emptied and soil samples will be taken from beneath the

PETER F REILLY STORAGE INC (Continued) **U001832434**

tank to determine if soils need to be excavated or the tank can be abandoned. The tank is located beneath the stairs and adjacent to the foundation wall, so it is difficult to remove. Soil samples results will be sent once returned. John is considering either installing an AST or converting to gas. 07/31/17 - Lakhani Peter provided an update regarding the remedial activities. Samples were taken from the bottom of the tank and are currently being analyzed. Samples will be sent to DEC Lakhani upon receiving them from the laboratory. John has decided to have a 2000 gallon AST installed on the property. 09/01/17 - Lakhani Two (2) samples were taken at the bottom of the rotten tank. There were no VOC or SVOC exceedances. The tank was abandoned by being filled with slurry. Pete will send pictures of the tank, a summary letter and disposal manifests. 10/10/17 - Lakhani Closure Letter (Millennium Tank Maintenance, 10/09/17) - Millennium Tank Maintenance emptied the tank, performed a tank cleaning and isolation test. The isolation test found that the tank had a high leak and all lines were tight. Millennium Tank core drilled through the bottom of the tank and retrieved two (2) soil samples. Results within regulatory limits. The tank was filled with concrete slurry and closed the tank. Spill is closed.

Remarks: 2000 gallon tank test failure.

DEC Memo:	10/27/04. S. Sagesland attempted to contact Mrs. Smith over the phone several times. However, the phone is busy. 10/28/04. J.Krimgold spoke to Petro Oil (Karen)@ (516)686-2027. She stated that the castomer complaint about no oil in the tank just a few days after delivery. 12/20/04. J.Krimgold attempted to contact the RP (Mrs. Smith). However, the phone is busy. J.Krimgold spoke to Petro Oil. According to their records a new AST was installed at this site on 11/26/04. No info regarding the old tank. J.Krimgold spoke with Mr. Ralph Litao (Trade Service) 917-881-5554. He stated that his co. excavated the top of the tank, pumped out about 450 gal of oil and then closed the tank in-place by filling it with concrete slurry after cleaning up

SMITH RESIDENCE (Continued) **S106971444**

the tank. The tank appear to be in a good condition with no apparent holes or bad seams. The problem was with a gloged product line. Mrs. Smith assumed that oil is not comming to the boiler because there are no product in the tank and that product was leaked out. NFA.

Spiller Company:	Not reported
Spiller Address:	Not reported
Spiller Company:	999
Contact Name:	DEBBIE RABBINO BHATT
DEC Memo:	Tank overfill on a 1080gal. UST.... impacted soil. One 55gal. drum of contaminated soil and absorbents were removed from the site. Clean up was believed to have been done that same day 6/6/07.
	Not reported
Remarks:	06/22/07-Vought-Off hours responder. Vought called Frank Cherena(631-232-2600) for more information. Vought left message to return call to DEC. Vought called Debbie Bhatt and left message to return call to DEC. 07/17/07-Vought-Received message from Bhatt (718-923-8651) and returned call and left message to return call. 9/1/10 - Raphael Ketani. The spill took place on 6/6/07, but was reported on 6/21/07. It consisted of an overfill of a 1,080 gal. UST. Twenty five gallons of #2 oil spilled onto the ground. Allegedly, the contaminated soil was dug up the day of the spill. The site is block and lot 1127 and 50. It was a private residence. It was sold on 9/5/06 by David Bijur of 123 7th Avenue, #216, Brklyn. to AY 473 Dean, LLC, c/o Forest City Ratner Companies, One Metrotech Center North, Brklyn, 11201. There is no paper file and there are no E-docs. Frank Cherena of ROUX Associates (631) 232-2600 was the environmental company contact. Debbie Rabbino Bhatt (718) 923-8400 was the contact for the owners. I tried calling Ms. Bhatt, but the phone number wasn't working. I did make contact with Mr. Cherena. Mr. Cherena said that ROUX did not do the cleanup themselves. He said that Ferrantino Oil was hired by the owners to do the work and came out immediately after the spill. The overfill resulted in oil coming out the vent pipe in the back and spilling onto the ground. The surface soil was removed, but end point samples weren't taken. Mr. Cherena went on to state that the building has since been demolished as part of a much large project involving Atlantic Yards. He said that this larger project involves several other sites which are all under the management of Andre Obligado of Unit B of DER. The tank is still in the ground and it will be removed, along with the contaminated soil, once the construction moves over to this part of the project. They will dig down 20 or 30 feet. The tank itself has been cleaned out and the sludge was hauled away. He said that he has the paper work for this part of the job and he will send it to me. 9/2/10 - Raphael Ketani. I called up Ferrantino Fuel Corp., 176 9th Street, Brooklyn, NY, 11215. I spoke to the dispatcher, Dennis Goldstein (718) 832-6700 about the spill and the cleanup of the contaminated soil. He couldn't find it in his computer system. So he will call me back later with the information. 11/23/10 - Raphael Ketani. I tried to contact Mr. Cherena of ROUX Associates (631) 232-2600 regarding the documentation for the cleaning of the fuel tank. I contacted Mr. Goldstein of Ferrantino Fuel and asked him for the documentation which indicates that the 25 gals. spill had been cleaned up. I gave him the site address, but he couldn't find it in his database. He will call me back with the information. 12/9/10 - Raphael Ketani. I spoke to Mr. Goldstein again. He said that he had given the task of looking for the cleanup documentation to a worker in his office. He said that he will talk to this person and get back to me. 12/14/10 - Raphael Ketani. Michael of Ferrantino Fuel called. He said that he remembered the job. He said that the overfill came out the vent and onto the soil and onto concrete. He added that Ferrantino did the entire

COMMERCIAL BUILDING (Continued) **S106868719**

cleanup. Michael also mentioned that two years after a new boiler was installed in the building, the owners had the building knocked down. Michael said that he will send the DEC a cover letter explaining what had happened and how the spill had been cleaned up, along with a diagram showing the spill area and a manifest for the contaminated materials that were removed. I told him that will be fine. 12/17/10 - Raphael Ketani. Mr. Cherena of ROUX Associates (631) 232-2600 called and said that he had the overfill soil spill report and the tank cleanout and removal report for the site. He will send them to me by e-mail. Mr. Cherena sent me an e-mail later today along with three documents (see e-docs): As discussed, here are the documents that you requested, along with a synopsis of work at the above spill Site. On June 6, 2007, Ferrantino Fuel Corporation overfilled the 1,080-gallon UST at 473 Dean Street, which resulted in the release of approximately 25 gallons of #2 fuel oil to soil located adjacent to the fill port of the UST. Ferrantino applied 10 bags of absorbent powder to soak up the released #2 fuel oil. Subsequently, one fifty-five gallon drum of waste (soil and oil-soaked absorbent powder) was removed from around the spill area and was transported to American Biomass located in Waterboro, South Carolina for proper disposal (Attachment 1). The proximity of the UST to the building prevented its removal prior to the building demolition; and therefore, in June 2010, ABC Tank Repair & Lining was contracted by Ferrantino to pump out and scrape clean the interior of the UST in order to prepare the site for demolition (Attachment 2). Following demolition of the building (August September 2010), Roux Associates contracted Brookside Environmental to complete the cleanup and removal of the UST. Brookside Environmental removed the UST from ground, accessed the tank interior for cleaning, and removed 2 drums of sludge/sediment for offsite disposal in October 2010. Following completion of this work, Brookside Environmental issued an New York City Fire Department Affidavit certifying final cleanout and removal of the UST. Copies of all manifests and affidavits associated with the work completed by Brookside Environmental are provided in Attachment 3. The tank was then removed off-site for scrap disposal by Breeze Demolition (Demo Contractors). Following removal of the tank, no visual soil contamination was observed in this area. 12/20/10 - Raphael Ketani. I reviewed the letters that Mr. Cherena had sent regarding the cleanup of the overfill in 2007 and the removal of the 1080 gal. fuel tank and the removal of the replacement 1000 gal. As the 06/18/07 Ferrantino letter and manifest indicated that the spill had been cleaned up, and as the ABC Tank and Brookside Environmental letters indicated that the two tanks had been removed, I have determined that the oil contamination had been successfully removed. Therefore, there is no threat to the public or the environment. So, I am closing the spill case.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER Sangesland spoke to Fire Chief at the site. He said the tank leaked in the basement. Spilled to a dirt floor and ran into a sump. Sangesland spoke to Charlie at NZ FuelOil 718 389-4249. He said that the tank sprang a leak on 5/20. NZ Fuel installed a magnet patch on the tank. ABC Tank was brought in on 5/21 to drain the tank. A new tank will be installed next week. Property Owner is George Baker 718 230 0098 7/7/04 - Sawyer - Inspected residence 5/21/04 and required NZ to do more work. NZ contracted ABC tank to pump out, clean tank and area around the tank as well as sent the Department documentation. No further Action required. Closed.
Remarks:	leak in the oil tank. the oil company is on location.

DEC Memo:	4/27/07 sent ttf letter to: Christopher Jenkins Phoenix House 34-14 9th St. Astoria, NY 11106 4/6/10 bf: Sent ttf letter to: Keith Gurnick Phoenix House 164 W. 74th St. New York, NY 10023 3/4/13 bf: Sent ttf letter to: Phoenix House 164 West 74th Street New York, NY 10023 4/5/13 Received response to ttf letter on 3/25/13. Tank failed at manhole neck. No contamination found. Tank passed ttt 10/2/12. However, gw determination did not meet Department requirements since the report did not state that gw was determined in excavation backfill. Sent ttr letter (see PBS file). Spill case is pending a satisfactory ttt report. bf 5/6/13 Sent e-mail to Christopher Jenkins cjenkins@phoenixhouse.org. Requested response to tt return letter and renewal of PBS registration. bf 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 02-22-2016 - V. Brevdo Reviewed the project file. Sufficient information / documents exist on file indicating that this was a dry leak on the manhole neck at the top of the tank, with no signs of soil contamination found. True Blue Environmental completed repairs and retested the tank on June 26, 2007. The retest showed the tank passed and is leak free. In addition, the tank passed a subsequent test conducted by Brother's Professional Tank Testing on October 2, 2012. During excavation to expose top of tank, no contaminated soil was encountered. Tank is currently registered with registration expiration date in March 2017, and next tank test due date in May 2020. The Department concluded that sufficient documentation has been submitted to demonstrate dry leak and no product escaped into the environment, no contamination of soil occurred. Based on available file information and verification

PHOENIX HOUSE (Continued) **S108639453**

from the potential site buyer that no petroleum odors have been noticed in the building, the Department made the decision to close this spill case effective February 22, 2016. Spill Case is closed effective February 22, 2016. VB VB

CINDERELLA 248 LLC (Continued) **S128906158**

Record Updated Date: 01/13/2023
Update By: DKMACNEA
Site Description: Site Location: The site is located at 248 Flatbush Avenue in Brooklyn, Kings County, and is Block 936 and Lot 12. The site is an approximately 0.05 acre. It is bounded to the east by Flatbush Avenue, to the south by a commercial building, to the west by a small courtyard and residences, and to the north by a liquor store and restaurant. Site Features: The site is a one-story building with a basement that encompasses the entire property. It is approximately 2,300 square feet in area and a fitness center is located in the basement floor. There is no parking associated with the site. The topography of the site is generally flat and the surrounding area slopes gradually to the northwest. The building is serviced by municipal water and sewer. The sewer connection is present in the southeast corner of the basement. The building was formerly heated via fuel oil-fired heating equipment located in the boiler room of the basement. An old 1,000-gallon fuel oil AST was emptied, cleaned, and properly abandoned in October 2005. Current Zoning/Use(s): The site is located in a R7A residential zone with a C2-4 commercial overlay. This zoning permits both residential and commercial uses. The Site is currently being used for commercial purpose. Historic Uses(s): The building was constructed between 1888 and 1906 and housed a dry cleaner and shoe repair facility for the last twenty years. Previous uses included a dry goods store, book store, closet/wardrobe business and a woodworker. In 2005, a soil and groundwater investigation focused on an historic leak of cooling water from the first floor dry cleaning machine into the basement boiler room. It was concluded that subsurface soil and groundwater beneath the boiler room were impacted by volatile organic compounds (VOCs). Contaminated soil was excavated to a depth of 5 feet below the basement floor, followed by confirmation sampling. Soil results were below the soil cleanup levels used at that time (TAGM 4046). Site Geology and Hydrogeology: The topographic elevation of the site vicinity is approximately 70 feet above mean sea level. Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The depth to groundwater beneath the site is approximately 52 feet below the basement level (basement level is approximately 10 feet below ground surface relative to Flatbush Avenue). Groundwater flow direction is generally to the northwest. No public water or other supply wells were identified within one-half mile of the site. The nearest body of water is the Gownaus Canal located approximately 0.67 miles west-northwest of the site.
Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor was analyzed for VOCs. Based on investigations conducted to date, the primary contaminant of concern is the VOC tetrachloroethene (PCE). Prior to Completion of Remediation - Soil - In 2013, soil sampling was conducted near the former dry cleaning machine and the sewer connection. Soil samples were collected from below the basement slab at depths of 5 to 10 feet, with the deeper borings concentrated in areas of potential contamination. All results for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and polychlorinated biphenyls (PCBs) are currently below the Part 375 restricted residential use

CINDERELLA 248 LLC (Continued) **S128906158**

SCOs. Groundwater - In 2014, groundwater samples were collected from new monitoring wells to further evaluate on-site groundwater conditions. PCE exceeded the NYS groundwater standard at each of the wells, ranging from 6.4 ppb to 25 ppb. The maximum PCE detection was from a location in the basement directly below the former dry cleaning machine. No SVOCs, PCBs, pesticides or site-related metals exceeded the NYS groundwater standards and guidance values. Soil Vapor and Indoor Air - In 2007, soil vapor samples that were collected from beneath the basement floor ranged from non-detect to 607,000 ug/m3. In 2011, an on-site and off-site soil vapor intrusion investigation included sub-slab vapor, indoor air and ambient air sampling. On-site, PCE concentrations in indoor air ranged from 1.7 g/m3 to 24.4 g/m3; and in the sub-slab samples, concentrations ranged from 4,010 g/m3 to 20,800 g/m3. At off-site locations, PCE in sub-slab samples ranged from 185 ug/m3 to 20,400 ug/m3; the maximum indoor air concentration for PCE was 30.3 ug/m3. According to the NYSDOH Matrix 2 for PCE, mitigation to minimize vapor intrusion and subsequent human exposures was recommended. In 2014, an off-site vapor investigation was conducted to further delineate any VOC impacts. At the adjacent court yard, the maximum concentration of PCE in soil vapor was 13 g/m3. Indoor air and sub-slab soil sampling was performed in the basements of two off-site locations southeast and northwest of the site at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab ranged from 3.2 ug/m3 to 440 ug/m3; and indoor air ranged from 3.6 ug/m3 to 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab ranged from ND to 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Further delineation of off-site vapor and groundwater impacts will be completed under the State Superfund Program. Post-Remediation - The source of PCE contamination has been excavated from soils and PCE in soil (1.3 ppm) does not exceed the soil cleanup objective (SCO) for groundwater protection. In addition, the depth to groundwater at the site is approximately 50 feet below grade and groundwater in the vicinity is not used for public water. Soil vapor containing PCE was present on-site and extended off-site. In 2015, a sub-slab depressurization system (SSDS) was installed to mitigate soil vapor intrusion at the site building and adjoining buildings. System monitoring was conducted on a monthly basis since startup and is currently conducted on a quarterly basis. Recent performance monitoring data collected to date demonstrates that the SSDS is no longer necessary and has been temporarily shut down pending additional soil vapor intrusion sampling results.

Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

CINDERELLA CLEANERS (Continued) **1000188071**

Site Description: Site Location: The site is located at 248 Flatbush Avenue in Brooklyn, Kings County, and is Block 936 and Lot 12. The site is an approximately 0.05 acre. It is bounded to the east by Flatbush Avenue, to the south by a commercial building, to the west by a small courtyard and residences, and to the north by a liquor store and restaurant. Site Features: The site is a one-story building with a basement that encompasses the entire property. It is approximately 2,300 square feet in area and a fitness center is located in the basement floor. There is no parking associated with the site. The topography of the site is generally flat and the surrounding area slopes gradually to the northwest. The building is serviced by municipal water and sewer. The sewer connection is present in the southeast corner of the basement. The building was formerly heated via fuel oil-fired heating equipment located in the boiler room of the basement. An old 1,000-gallon fuel oil AST was emptied, cleaned, and properly abandoned in October 2005. Current Zoning/Use(s): The site is located in a R7A residential zone with a C2-4 commercial overlay. This zoning permits both residential and commercial uses. The Site is currently being used for commercial purpose. Historic Uses(s): The building was constructed between 1888 and 1906 and housed a dry cleaner and shoe repair facility for the last twenty years. Previous uses included a dry goods store, book store, closet/wardrobe business and a woodworker. In 2005, a soil and groundwater investigation focused on an historic leak of cooling water from the first floor dry cleaning machine into the basement boiler room. It was concluded that subsurface soil and groundwater beneath the boiler room were impacted by volatile organic compounds (VOCs). Contaminated soil was excavated to a depth of 5 feet below the basement floor, followed by confirmation sampling. Soil results were below the soil cleanup levels used at that time (TAGM 4046). Site Geology and Hydrogeology: The topographic elevation of the site vicinity is approximately 70 feet above mean sea level. Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The depth to groundwater beneath the site is approximately 52 feet below the basement level (basement level is approximately 10 feet below ground surface relative to Flatbush Avenue). Groundwater flow direction is generally to the northwest. No public water or other supply wells were identified within one-half mile of the site. The nearest body of water is the Gownaus Canal located approximately 0.67 miles west-northwest of the site.

Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor was analyzed for VOCs. Based on investigations conducted to date, the primary contaminant of concern is the VOC tetrachloroethene (PCE). Prior to Completion of Remediation - Soil - In 2013, soil sampling was conducted near the former dry cleaning machine and the sewer connection. Soil samples were collected from below the basement slab at depths of 5 to 10 feet, with the deeper borings concentrated in areas of potential contamination. All results for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and polychlorinated biphenyls (PCBs) are currently below the Part 375 restricted residential use SCOs. Groundwater - In 2014, groundwater samples were collected from new monitoring wells to further evaluate on-site groundwater

CINDERELLA CLEANERS (Continued) **1000188071**

conditions. PCE exceeded the NYS groundwater standard at each of the wells, ranging from 6.4 ppb to 25 ppb. The maximum PCE detection was from a location in the basement directly below the former dry cleaning machine. No SVOCs, PCBs, pesticides or site-related metals exceeded the NYS groundwater standards and guidance values. Soil Vapor and Indoor Air - In 2007, soil vapor samples that were collected from beneath the basement floor ranged from non-detect to 607,000 ug/m3. In 2011, an on-site and off-site soil vapor intrusion investigation included sub-slab vapor, indoor air and ambient air sampling. On-site, PCE concentrations in indoor air ranged from 1.7 g/m3 to 24.4 g/m3; and in the sub-slab samples, concentrations ranged from 4,010 g/m3 to 20,800 g/m3. At off-site locations, PCE in sub-slab samples ranged from 185 ug/m3 to 20,400 ug/m3; the maximum indoor air concentration for PCE was 30.3 ug/m3. According to the NYSDOH Matrix 2 for PCE, mitigation to minimize vapor intrusion and subsequent human exposures was recommended. In 2014, an off-site vapor investigation was conducted to further delineate any VOC impacts. At the adjacent court yard, the maximum concentration of PCE in soil vapor was 13 g/m3. Indoor air and sub-slab soil sampling was performed in the basements of two off-site locations southeast and northwest of the site at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab ranged from 3.2 ug/m3 to 440 ug/m3; and indoor air ranged from 3.6 ug/m3 to 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab ranged from ND to 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Further delineation of off-site vapor and groundwater impacts will be completed under the State Superfund Program. Post-Remediation - The source of PCE contamination has been excavated from soils and PCE in soil (1.3 ppm) does not exceed the soil cleanup objective (SCO) for groundwater protection. In addition, the depth to groundwater at the site is approximately 50 feet below grade and groundwater in the vicinity is not used for public water. Soil vapor containing PCE was present on-site and extended off-site. In 2015, a sub-slab depressurization system (SSDS) was installed to mitigate soil vapor intrusion at the site building and adjoining buildings. System monitoring was conducted on a monthly basis since startup and is currently conducted on a quarterly basis. Recent performance monitoring data collected to date demonstrates that the SSDS is no longer necessary and has been temporarily shut down pending additional soil vapor intrusion sampling results.

Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Updated By: DGMCNALL
Site Code: 465470
Site Description: Site Location: The site is located at 248 Flatbush Avenue in Brooklyn, Kings County, and is Block 936 and Lot 12. The site is an approximately 0.05 acre. It is bounded to the east by Flatbush Avenue, to the south by a commercial building, to the west by a small courtyard and residences, and to the north by a liquor store and restaurant. Site Features: The site is a one-story building with a basement that encompasses the entire property. It is approximately 2,300 square feet in area and a fitness center is located in the basement floor. There is no parking associated with the site. The topography of the site is generally flat and the surrounding area slopes gradually to the northwest. The building is serviced by municipal water and sewer. The sewer connection is present in the southeast corner of the basement. The building was formerly heated via fuel oil-fired heating equipment located in the boiler room of the basement. An old 1,000-gallon fuel oil AST was emptied, cleaned, and properly abandoned in October 2005. Current Zoning/Use(s): The site is located in a R7A residential zone with a C2-4 commercial overlay. This zoning permits both residential and commercial uses. The Site is currently being used for commercial purpose. Historic Uses(s): The building was constructed between 1888 and 1906 and housed a dry cleaner and shoe repair facility for the last twenty years. Previous uses included a dry goods store, book store, closet/wardrobe business and a woodworker. In 2005, a soil and groundwater investigation focused on an historic leak of cooling water from the first floor dry cleaning machine into the basement boiler room. It was concluded that subsurface soil and groundwater beneath the boiler room were impacted by volatile organic compounds (VOCs). Contaminated soil was excavated to a depth of 5 feet below the basement floor, followed by confirmation sampling. Soil results were below the soil cleanup levels used at that time (TAGM 4046). Site Geology and Hydrogeology: The topographic elevation of the site vicinity is approximately 70 feet above mean sea level. Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The depth to groundwater beneath the site is approximately 52 feet below the basement level (basement level is approximately 10 feet below ground surface relative to Flatbush Avenue). Groundwater flow direction is generally to the northwest. No public water or other supply wells were identified within one-half mile of the site. The nearest body of water is the Gownaus Canal located approximately 0.67 miles west-northwest of the site.
Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor was analyzed for VOCs. Based on investigations conducted to date, the primary contaminant of concern is the VOC

CINDERELLA CLEANERS (Continued) **1000188071**

tetrachloroethene (PCE). Prior to Completion of Remediation - Soil - In 2013, soil sampling was conducted near the former dry cleaning machine and the sewer connection. Soil samples were collected from below the basement slab at depths of 5 to 10 feet, with the deeper borings concentrated in areas of potential contamination. All results for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and polychlorinated biphenyls (PCBs) are currently below the Part 375 restricted residential use SCOs. Groundwater - In 2014, groundwater samples were collected from new monitoring wells to further evaluate on-site groundwater conditions. PCE exceeded the NYS groundwater standard at each of the wells, ranging from 6.4 ppb to 25 ppb. The maximum PCE detection was from a location in the basement directly below the former dry cleaning machine. No SVOCs, PCBs, pesticides or site-related metals exceeded the NYS groundwater standards and guidance values. Soil Vapor and Indoor Air - In 2007, soil vapor samples that were collected from beneath the basement floor ranged from non-detect to 607,000 ug/m3. In 2011, an on-site and off-site soil vapor intrusion investigation included sub-slab vapor, indoor air and ambient air sampling. On-site, PCE concentrations in indoor air ranged from 1.7 g/m3 to 24.4 g/m3; and in the sub-slab samples, concentrations ranged from 4,010 g/m3 to 20,800 g/m3. At off-site locations, PCE in sub-slab samples ranged from 185 ug/m3 to 20,400 ug/m3; the maximum indoor air concentration for PCE was 30.3 ug/m3. According to the NYSDOH Matrix 2 for PCE, mitigation to minimize vapor intrusion and subsequent human exposures was recommended. In 2014, an off-site vapor investigation was conducted to further delineate any VOC impacts. At the adjacent court yard, the maximum concentration of PCE in soil vapor was 13 g/m3. Indoor air and sub-slab soil sampling was performed in the basements of two off-site locations southeast and northwest of the site at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab ranged from 3.2 ug/m3 to 440 ug/m3; and indoor air ranged from 3.6 ug/m3 to 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab ranged from ND to 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Further delineation of off-site vapor and groundwater impacts will be completed under the State Superfund Program. Post-Remediation - The source of PCE contamination has been excavated from soils and PCE in soil (1.3 ppm) does not exceed the soil cleanup objective (SCO) for groundwater protection. In addition, the depth to groundwater at the site is approximately 50 feet below grade and groundwater in the vicinity is not used for public water. Soil vapor containing PCE was present on-site and extended off-site. In 2015, a sub-slab depressurization system (SSDS) was installed to mitigate soil vapor intrusion at the site building and adjoining buildings. System monitoring was conducted on a monthly basis since startup and is currently conducted on a quarterly basis. Recent performance monitoring data collected to date demonstrates that the SSDS is no longer necessary and has been temporarily shut down pending additional soil vapor intrusion sampling results.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

At off-site locations, PCE in sub-slab samples ranged from 185 ug/m3 to 20,400 ug/m3; the maximum indoor air concentration for PCE was 30.3 ug/m3. According to the NYSDOH Matrix 2 for PCE, mitigation to minimize vapor intrusion and subsequent human exposures was recommended. In 2014, an off-site vapor investigation was conducted to further delineate any VOC impacts. At the adjacent court yard, the maximum concentration of PCE in soil vapor was 13 g/m3. Indoor air and sub-slab soil sampling was performed in the basements of two off-site locations southeast and northwest of the site at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab ranged from 3.2 ug/m3 to 440 ug/m3; and indoor air ranged from 3.6 ug/m3 to 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab ranged from ND to 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Further delineation of off-site vapor and groundwater impacts will be completed under the State Superfund Program. Post-Remediation - The source of PCE contamination has been excavated from soils and PCE in soil (1.3 ppm) does not exceed the soil cleanup objective (SCO) for groundwater protection. In addition, the depth to groundwater at the site is approximately 50 feet below grade and groundwater in the vicinity is not used for public water. Soil vapor containing PCE was present on-site and extended off-site. In 2015, a sub-slab depressurization system (SSDS) was installed to mitigate soil vapor intrusion at the site building and adjoining buildings. System monitoring was conducted on a monthly basis since startup and is currently conducted on a quarterly basis.

CINDERELLA CLEANERS (Continued) **1000188071**

	Recent performance monitoring data collected to date demonstrates that the SSDS is no longer necessary and has been temporarily shut down pending additional soil vapor intrusion sampling results.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 465470
Site Description: Site Location: The site is located at 248 Flatbush Avenue in Brooklyn, Kings County, and is Block 936 and Lot 12. The site is an approximately 0.05 acre. It is bounded to the east by Flatbush Avenue, to the south by a commercial building, to the west by a small courtyard and residences, and to the north by a liquor store and

CINDERELLA CLEANERS (Continued) **1000188071**

restaurant. Site Features: The site is a one-story building with a basement that encompasses the entire property. It is approximately 2,300 square feet in area and a fitness center is located in the basement floor. There is no parking associated with the site. The topography of the site is generally flat and the surrounding area slopes gradually to the northwest. The building is serviced by municipal water and sewer. The sewer connection is present in the southeast corner of the basement. The building was formerly heated via fuel oil-fired heating equipment located in the boiler room of the basement. An old 1,000-gallon fuel oil AST was emptied, cleaned, and properly abandoned in October 2005. Current Zoning/Use(s): The site is located in a R7A residential zone with a C2-4 commercial overlay. This zoning permits both residential and commercial uses. The Site is currently being used for commercial purpose. Historic Uses(s): The building was constructed between 1888 and 1906 and housed a dry cleaner and shoe repair facility for the last twenty years. Previous uses included a dry goods store, book store, closet/wardrobe business and a woodworker. In 2005, a soil and groundwater investigation focused on an historic leak of cooling water from the first floor dry cleaning machine into the basement boiler room. It was concluded that subsurface soil and groundwater beneath the boiler room were impacted by volatile organic compounds (VOCs). Contaminated soil was excavated to a depth of 5 feet below the basement floor, followed by confirmation sampling. Soil results were below the soil cleanup levels used at that time (TAGM 4046). Site Geology and Hydrogeology: The topographic elevation of the site vicinity is approximately 70 feet above mean sea level. Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The depth to groundwater beneath the site is approximately 52 feet below the basement level (basement level is approximately 10 feet below ground surface relative to Flatbush Avenue). Groundwater flow direction is generally to the northwest. No public water or other supply wells were identified within one-half mile of the site. The nearest body of water is the Gownaus Canal located approximately 0.67 miles west-northwest of the site.

Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor was analyzed for VOCs. Based on investigations conducted to date, the primary contaminant of concern is the VOC tetrachloroethene (PCE). Prior to Completion of Remediation - Soil - In 2013, soil sampling was conducted near the former dry cleaning machine and the sewer connection. Soil samples were collected from below the basement slab at depths of 5 to 10 feet, with the deeper borings concentrated in areas of potential contamination. All results for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and polychlorinated biphenyls (PCBs) are currently below the Part 375 restricted residential use SCOs. Groundwater - In 2014, groundwater samples were collected from new monitoring wells to further evaluate on-site groundwater conditions. PCE exceeded the NYS groundwater standard at each of the wells, ranging from 6.4 ppb to 25 ppb. The maximum PCE detection was from a location in the basement directly below the former dry cleaning machine. No SVOCs, PCBs, pesticides or site-related metals exceeded the NYS groundwater standards and guidance values. Soil

CINDERELLA CLEANERS (Continued) **1000188071**

Vapor and Indoor Air - In 2007, soil vapor samples that were collected from beneath the basement floor ranged from non-detect to 607,000 ug/m3. In 2011, an on-site and off-site soil vapor intrusion investigation included sub-slab vapor, indoor air and ambient air sampling. On-site, PCE concentrations in indoor air ranged from 1.7 g/m3 to 24.4 g/m3; and in the sub-slab samples, concentrations ranged from 4,010 g/m3 to 20,800 g/m3. At off-site locations, PCE in sub-slab samples ranged from 185 ug/m3 to 20,400 ug/m3; the maximum indoor air concentration for PCE was 30.3 ug/m3. According to the NYSDOH Matrix 2 for PCE, mitigation to minimize vapor intrusion and subsequent human exposures was recommended. In 2014, an off-site vapor investigation was conducted to further delineate any VOC impacts. At the adjacent court yard, the maximum concentration of PCE in soil vapor was 13 g/m3. Indoor air and sub-slab soil sampling was performed in the basements of two off-site locations southeast and northwest of the site at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab ranged from 3.2 ug/m3 to 440 ug/m3; and indoor air ranged from 3.6 ug/m3 to 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab ranged from ND to 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Further delineation of off-site vapor and groundwater impacts will be completed under the State Superfund Program. Post-Remediation - The source of PCE contamination has been excavated from soils and PCE in soil (1.3 ppm) does not exceed the soil cleanup objective (SCO) for groundwater protection. In addition, the depth to groundwater at the site is approximately 50 feet below grade and groundwater in the vicinity is not used for public water. Soil vapor containing PCE was present on-site and extended off-site. In 2015, a sub-slab depressurization system (SSDS) was installed to mitigate soil vapor intrusion at the site building and adjoining buildings. System monitoring was conducted on a monthly basis since startup and is currently conducted on a quarterly basis. Recent performance monitoring data collected to date demonstrates that the SSDS is no longer necessary and has been temporarily shut down pending additional soil vapor intrusion sampling results.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

In 2005, a soil and groundwater investigation focused on an historic leak of cooling water from the first floor dry cleaning machine into the basement boiler room. It was concluded that subsurface soil and groundwater beneath the boiler room were impacted by volatile organic compounds (VOCs). Contaminated soil was excavated to a depth of 5 feet below the basement floor, followed by confirmation sampling. Soil results were below the soil cleanup levels used at that time (TAGM 4046). Site Geology and Hydrogeology: The topographic elevation of the site vicinity is approximately 70 feet above mean sea level. Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The depth to groundwater beneath the site is approximately 52 feet below the basement level (basement level is approximately 10 feet below ground surface relative to Flatbush Avenue). Groundwater flow direction is generally to the northwest. No public water or other supply wells were identified within one-half mile of the site. The nearest body of water is the Gownaus Canal located approximately 0.67 miles west-northwest of the site.
Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor was analyzed for VOCs. Based on investigations conducted to date, the primary contaminant of concern is the VOC tetrachloroethene (PCE). Prior to Completion of Remediation - Soil - In 2013, soil sampling was conducted near the former dry cleaning machine and the sewer connection. Soil samples were collected from below the basement slab at depths of 5 to 10 feet, with the deeper borings concentrated in areas of potential contamination. All results for volatile organic compounds (VOCs), semi-volatile organic

CINDERELLA CLEANERS (Continued) **1000188071**

compounds (SVOCs), metals, pesticides and polychlorinated biphenyls (PCBs) are currently below the Part 375 restricted residential use SCOs. Groundwater - In 2014, groundwater samples were collected from new monitoring wells to further evaluate on-site groundwater conditions. PCE exceeded the NYS groundwater standard at each of the wells, ranging from 6.4 ppb to 25 ppb. The maximum PCE detection was from a location in the basement directly below the former dry cleaning machine. No SVOCs, PCBs, pesticides or site-related metals exceeded the NYS groundwater standards and guidance values. Soil Vapor and Indoor Air - In 2007, soil vapor samples that were collected from beneath the basement floor ranged from non-detect to 607,000 ug/m3. In 2011, an on-site and off-site soil vapor intrusion investigation included sub-slab vapor, indoor air and ambient air sampling. On-site, PCE concentrations in indoor air ranged from 1.7 g/m3 to 24.4 g/m3; and in the sub-slab samples, concentrations ranged from 4,010 g/m3 to 20,800 g/m3. At off-site locations, PCE in sub-slab samples ranged from 185 ug/m3 to 20,400 ug/m3; the maximum indoor air concentration for PCE was 30.3 ug/m3. According to the NYSDOH Matrix 2 for PCE, mitigation to minimize vapor intrusion and subsequent human exposures was recommended. In 2014, an off-site vapor investigation was conducted to further delineate any VOC impacts. At the adjacent court yard, the maximum concentration of PCE in soil vapor was 13 g/m3. Indoor air and sub-slab soil sampling was performed in the basements of two off-site locations southeast and northwest of the site at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab ranged from 3.2 ug/m3 to 440 ug/m3; and indoor air ranged from 3.6 ug/m3 to 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab ranged from ND to 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Further delineation of off-site vapor and groundwater impacts will be completed under the State Superfund Program. Post-Remediation - The source of PCE contamination has been excavated from soils and PCE in soil (1.3 ppm) does not exceed the soil cleanup objective (SCO) for groundwater protection. In addition, the depth to groundwater at the site is approximately 50 feet below grade and groundwater in the vicinity is not used for public water. Soil vapor containing PCE was present on-site and extended off-site. In 2015, a sub-slab depressurization system (SSDS) was installed to mitigate soil vapor intrusion at the site building and adjoining buildings. System monitoring was conducted on a monthly basis since startup and is currently conducted on a quarterly basis. Recent performance monitoring data collected to date demonstrates that the SSDS is no longer necessary and has been temporarily shut down pending additional soil vapor intrusion sampling results.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Update By:	DKMACNEA
Site Description:	This is an investigation off-site from the BCP site located at 248 Flatbush Avenue in Brooklyn, Kings County (Block 936, Lot 12). The following information pertains to the BCP site. Site Location: It is bounded to the east by Flatbush Avenue, to the south by NYCDDC's Eastern Parkway Project Resident Engineer's Field office, to the west by a courtyard for a restaurant, and to the north by a liquor store and restaurant. Site Features: The site is a one-story building with a full basement that encompasses the entire property. It is approximately 2,300 square feet and is currently vacant. There is no parking associated with the Site. The topography of the site is generally flat and the surrounding area slopes gradually to the northwest. Current Zoning/Use(s): The site was most recently used for commercial purposes. The buildings to the north appear to have

CINDERELLA 248 LLC - OFF-SITE (Continued) **S128906163**

residential apartments located on the floors above the businesses. Historical Uses(s): The building was constructed between 1888 and 1906 and most recently housed a dry cleaner and shoe repair facility for the last twenty years. Previous uses included clothing, book store and the sale of dry goods. Site Geology and Hydrogeology: Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The nearest body of water is the Gownaus Canal located approximately 3,400 feet to the west-northwest of the site that flows into the Gowanus Bay. The site is serviced by city water provided by NYC Municipal Water.

Env Problem:	Soil - Based on sampling conducted to date, all results for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and polychlorinated biphenyls (PCBs) are below the Part 375 residential use SCOs. Groundwater - In 2014, PCE exceeded the NYS groundwater standard at each of the three on-site wells, ranging from 6.4 to 25 parts per billion (ppb). The maximum PCE detection was from a location in the basement directly below the former dry cleaning machine. No SVOCs, pesticides, PCBs or metals exceeded the NYS groundwater standards. Soil Vapor - In August 2011, an on-site vapor intrusion investigation was conducted. PCE was detected in the indoor air, ranging from 1.7 ug/m3 to 24.4 ug/m3, and in the sub-slab, ranging from 4,010 ug/m3 to 20,800 ug/m3. In 2014, an off-site soil vapor, sub-slab soil vapor, and indoor air investigation was conducted at the adjacent court yard. The maximum concentration of PCE in soil vapor was 13 ug/m3. Indoor air and sub-slab soil sampling were performed at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab was 3.2 ug/m3 and 440 ug/m3; and indoor air was 3.6 ug/m3 and 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab was non-detect and 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Post-Remediation: In 2016, as part of the on-site remedy, an SSDS was installed to address soil vapor intrusion at 244, 248, 250, 252 and 254 Flatbush Avenue. Quarterly system monitoring shows that the SSDS is operating properly. On-site sub-slab and indoor air will be conducted in early 2018. Off-site soil vapor intrusion sampling will be conducted off-site by NYSDEC in 2018.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 10/10/95: This is additional information about material spilled from the translation of the old spill file: 75 YDS CONTAIM SOIL. 6/7/04 TIPPLE UPDATING///TRANSFERRED FROM TIBBE TO TIPPLE/// Ernesto Samuels property mgt agent (718-875-5040 ex.11) contacted. Investigation workplan to be forwarded for review. 8/30/06 - Austin - Received correspondence and 2 phtos from Alastiar James, treasurer of Lafayette Court Apartment Coop at 147c Lafayett Ave., Bronx. Letter requested closure of spill report. Reassigned from DeCandia in Albany to Ketani in Region 2 office, to review submittal and evaluate for closure. - end 8/31/06 - Raphael Ketani. I spoke to Alastair James, Treasurer, Lafayette Court Apartment Coop, 147C Lafayette Avenue, Brooklyn, NY, 11238. He explained that this was a very small spill when it took place. He said it was just an overfill and only a very small area was affected - maybe 5 by 5. Based upon my conversation with Mr. James, the pictures he has enclosed with his letter showing the that the garden has recovered, and the small (1 gal.) size of the spill, I am closing the spill case. Mr. James wrote that he would

141-147 LAFAYETTE AVE. (Continued) **S102672123**

like a closure letter. I will send one out today.

Remarks: OIL LEAKS FROM VENT TO BRICK PATHWAY & SOIL AREA & SHRUBS. ALMAR FUEL CO. RETURNED & APPLIED SPEEDI-DRI. APPROX. 1 WEEK LATER P/U & REMOVED & SAND WAS APPLIED. CHEMICAL CONSULTING CORP. TESTED SAMPLES

DEC Memo:	12/19/12 AFrischeisen TTF sent and upped to eDocs. 12/23/2015: Rashad Spill reassigned from DeMeo to Omar as per DeMeo. 307 Prospect Place does not have an alternate address. No additional spill report or PBS registration found. No documents found in D2. 12/30/2015: Rashad Sent email to Carrie from ATS: Spill#1206302 for 307 Prospect Place, Brooklyn NY 11238 received on 9/26/2012 has been reassigned to me. The previous notes state that there was a tank test failure at this location. If you have any documentation or information that you could provide me it would be appreciated. Carrie replied: I have reached out to our original customer to obtain permission to release the report and customer information. As soon as I receive a response, I will advise accordingly. If you have any questions, please do not hesitate to contact us. Carrie sent follow up email: I spoke to our original customer. At this time we do not have permission to release any information regarding this property. James Martin (treasurer) email - jmart1745@aol.com, Stephen Furnstahl (President) email - sfurnstahl@gmail.com. 1/17/2017 Austin This spill report is being transferred from Rashad Omar to Jennifer Kann end. 6/6/17: J.Kann - As per Austin, spill reassigned to Lakhani. 06/20/17 - Lakhani Spoke to ATS and they informed that after the initial failing test completed on 09/26/12 there was no follow up. 08/03/17 - Lakhani DEC Lakhani emailed Stephen Furnstahl and James Martin regarding the tank failure. 08/08/17 - Lakhani James Martin emailed a passing tightness test dated 10/17/2012 along with photos of the tank. Documents uploaded to D2. Due to tight tank and no evidence of discharge to the subsurface, spill is closed.
Remarks:	repair/retest pending

DEC Memo: Caller reporting a spill of approx 20 galoons of #2 fuel to concrete, possibly soil. Clean up pending.
Remarks: Flem Lee Shue,646-841-3100. Matthew Carroll. Custodian noticed drip from temp boiler. Turned off line, Speedy dry placed down. Spill to concrete. Borings will be conducted. DEC Piper recieved letter report. Spill has been partially cleaned. A cracked filter on the temp burner located in a trailer was the cause. It spilled to the trailer and dripped onto pavers. Three was also an uncovered 5 gal pail of oil next to tank that was displaced by rainwater. Speedy dry was placed down and picked up. 5/17/10= DEC Piper spoke with DREW PArdus. Additional work has been comleted though soil samples were never taken. Drew will schedule sampling and notify me. 3/10/11-DECPiper received closure request. Soil samples revealed VOC's below tagm and SVOCs slightly above. The SVOC were consistent troughout and believe to be derived from urban fill. Based on work to date, this spill is closed. see edocs if warranted.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 10/25/2002 Sangesland was on Desk Duty and sent out a tank test failure form letter 11/1/2002: RECEIVED FAX FROM FRANK DIANDREA WHICH INDICATE THAT THE TANK PASSED THE TEST TODAY. THEY FOUND 2 MANWAY GASKETS BAD. THEY WILL BE TESTING PIPING WHEN THEY CAN LOCATE BUILDING PLAN TO DETERMINE WHERE PIPING TRAVELS. FAX FILED WITH LETTER OF TANK TEST FAILURE. ARS. 1/30/2003-Vought-Duty Desk received message from Rich Baldwin (631-499-2222) inquiring about project manager. Vought called Baldwin and spoke with him. Baaldwin will be performing three soil borings along two parallel fill lines. If soil contamination is found lines will be replaced. Tipple will require work invoice, passing system test and soil samples if old fill line needs to be abandoned in place. 3/6/03 Tipple spoke with R. Baldwin and suggested staggering the borings along the piping run if the markouts show that it is feasable. If contaminated soil is encountered in the borings no analyticals need be tested at this point in the investigation if a digout is to follow. 4/8/03 Tipple spoke with R. Baldwin contamination found to a depth of approx.17 ft

HSBC BANK (Continued) **S105997119**

Remarks: Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 5/26/2004 Sangesland spoke to William Schlageter of Freudenthal & Elkowitz. He said he works for the property owner and finally got approval today to call in a spill that was discovered on May 18th. On May 18th, during a walk through of a subbasement, several puddles of fuel oil were found outside of an oil tank containment room. The room contains two 7,000 AST's that were probably installed around 1928. At some point in the history of the building, they believe the room was filled in with cement. This now means that the two tanks are totally encased in cement up to several feet thick around the tanks. The tanks were recently presure tested. One tank passed, the other tank had an inconclusive test result. This tank has been taken out of service and has been drained (except for the final 400 gal which can't be easily removed). Mr. Schlageter's company is coming up with a plan to completely clean out this inconclusive tank, clean up the site and then identify the extent of contamination on the site. Contaminated Soil Letter sent to: William Schlageter Freudenthal & Elkowitz 368 Veterans Memorial Hwy Commack, NY 11725 6/7/04 - Sawyer - Received a detailed work plan through e-mail from William of F&E. 1/21/05 - Sawyer - Met Richard Baldwin & Bill Schlaghter of Freudenthal & Elkowitz Consulting Group at the above address. Received basic tour of affected areas and witness working recovery system in basement. Checked outside to see how close to subway exterior wall is located. Rich and Bill proposed insitu remediation for the contaminated soil between the outside wall and the subway. They will send more information. Transferred to CO (MJSCIBEL) 5/30/2006 - Mike - Contacted Freudenthal & Elkowitz Consulting and asked for an update on the project. 7/26/06 - Mike - Left another message for an update with F+E. 3/30/07 - Austin - Trasferred to Patel for further review - end 04/10/07-Hiralkumar Patel. alternate addresses: 325-351 Ashland Place, 1-9 Hanson Place PBS #: 2-607998. as per PBS record, the site had one 7,000 gal AST on saddles and one 7,500 gal AST in subterranean vault with access. both tanks were used to store #2 oil and were closed-in-place. other spills: 8605094, 9710706, 0103988, 0207736, 0211355, 0412697 spill #: 8605094 was reported on 11/10/1986 as ethylene chloride was seeping into air conditioning system. case closed. spill #: 9710706 was reported on 12/19/1997 by ConEd, due to transformer oil leak into vault. case closed. spill #: 0103988 was reported on 07/14/2001 by ConEd, due to transformer oil leak into vault. case closed. spill #: 0207736 was reported on 10/25/2002 due to tightness test failure for two #2 oil tanks. during subsequent work, contamination was found along the two fill lines. case closed after reviewing investigation report. spill #: 0211355 was reported on 02/13/2003 due to transformer oil leak into vault. case closed. spill #: 0412697 was reported on 03/03/2005 by ConEd, due to oil in vault. case closed. the subject spill reported after findings of oil/water in crawl space under sub-basement.
----------**********----------********** ---------- review of available documents under spill #: 0207736: 1) 10/25/2002: Duty desk officer sent TTF to HSBC Bank. 2) 10/31/2002: fax from Island Pump and Tank Corp.: - after replacing bad manway gaskets, two tanks passeed test - will test piping 3) 03/04/2003: Site Investigation Plan: - work plan for subsurface investigation along leaking fill lines - fill line runs about 15 ft under sidewalk - proposed to install three borings: one at fill port, one in midway and one at the building wall 4) 04/02/2003: Soil

HSBC BANK (Continued) **S105997119**

Investigation Results: - ASTs are located in vaults in sub-basement level of the building - two sets of fill port piping and conduits located along the western side of the property - fill piping was probed (using fill port) utilizing a steel measuring tape and determined to elbow 90 degrees (from vertical to horizontal) towards the exterior building wall at a depth of 89 inches (7.4 ft) bgs less than ========== - two pipes were determined to occupy an area between 24 to 27 inches and the interior walls were determined to be aprpox. 6 to 8 inches apart - two subgrade natural gas lines were traced from connection boxes located within the sidewalk to the north of the location of the fill port piping. the natural gas lines were determined to transect the location of the fill lines in a north-south direction approx. 7.5 ft west of the exterior building wall less than ========== - building drawings indicate that a subway wall runs in a north-south direction at an unknown depth, approx. 8 ft from exterior building wall less than ========= - three soil borings (B-1, B-2 and B-3) were installed along fill lines - boring B-1 was installed 50 inches west of the exterior building wall, in order to avoid the building foundation which extended approx. 3 ft to the west of the building wall less than ======== - refusal encountered at a depth of 12 ft bg in boring B-1, in the form of brick and concrete debris believed to be potentially associated with the underlying subway system - boring B-2 was installed to a depth of 20 ft bg - no contamination noted in soil from 18-20 ft depth in boring B-2 - boring B-3 was installed to a depth of 10 ft bg where refusal encountered - petroleum-impacted soil was discovered in depth from aprpox. 6 to 17 ft bg - no samples were submitted for lab analysis 5) 06/25/2003: Summary of Spill Investigation: - installed 12 soil borings - the area of impact was estimated to be approx. 15.25 ft from north to south and extend the entire width of the concrete sidewalk (15 ft) along the western portion of the site - based upon field characteristics, four soil samples (B-5, B-11, B-13 and B-14) were collected from the edges of the area of impact less than ======= - soil samples were collected to be representative of the depth at which the most significant field characteristics of fuel oil impact (ranging from 7.5 to 11 ft bgs) were observed in borings with the area of impact - based upon a review of MTA drawings, the roof of the subway tunnel is situated at a depth of approx. 27 ft below the concrete sidewalk and approx. 20 ft below the fuel oil fill line less than ========== - based upon the vertical delineation of the area of impact (17 ft bg), the roof of the subway lines is 7 ft below the fuel oil-impacted soils 6) 06/26/2003: DEC Tipple issued no further action letter.

----------**********----------**********

---------- review of available documents for the subject spill:

--*-

HSBC BANK (Continued) **S105997119**

found Tank #2 (eastern side tank) tight and Tank #1 (western side tank) failed less than ---------- - area of fuel oil was observed within the crawl space beneath an out-of-service flash tank formerly associated with the building's steam boiler system - area of fuel oil is located outside the northwest corner of the bottom of tank vault, at the northern base of AST #1 - during tightness test on 10/25/2002, found both tanks tight but fill lines were leaking (spill #: 0207736) less than --------- - based upon following results of investigation after leaking fill line findings, spill # 0207736 was closed: * depth of fuel oil impacted soils below the concrete surface (6-17 ft bgs) was such that the underlying NYC subway line was not being impacted from same * relatively low concentrations of remnant fuel oil in subsurface soils * discountinued future use of the fuel lines * constraints due to subsurface features (subway line, natural gas utility) - groundwater is discharged, from area inside crawl space 30-40 ft away from fuel oil impacted area, by a sump pump system at over 100 gallon per minute to sewer system less than ---------- - based on tank chart on wall, the ASTs are 70 inches in diameter, 33 ft 4 inches long - based upon the reported depths of the sub-basement floor (40 ft bgs) and crawl space (45 ft bgs), and the dimensions of the ASTs (70 inches in diameter), the bottom of the ASTs and the associated vault, are at the same elevation of the crawl space and the fuel oil impacted area less than ========== 3) 07/14/2004: Interim Investigation Report, submitted by F&E: - fuel oil from AST #1 was removed - upon opening of the AST, several heating coils were observed within tank, likely utilized when the tank stored #4 or #6 fuel oil in the past less than ========== - total of 578 gal of remnant fuel oil and bottom sludges were removed - bottom of the tank was observed to be slightly deteriorated in some locations, but no holes were observed within the wall of the AST - 3/4 inch diameter exploratory holes were cut through the north end of the tank at heights of approx. 52 inches, 35 inches and 17 inches above the bottom of the tank - a 10 by 10 inch hole was cut in the north end cap at 7 inches above the bottom of the tank to allow for the evaluation in the bottom conditions of the tank vault - dry fine-grained sand was observed to immediately pour into the AST from holes - no evidence of fuel oil impacts was observed within any of sands entering AST - northern vault wall was approx. 3 ft off the end of AST #1 - backfill material (fine sand) was not observed under the southern end of the tank - bottom of AST lies approx. 33 inches above the base of concrete vault floor - top of the vault floor appears to occur several inches below the top of the crawl space floor less than ========== - based upon the water observed entering the weep hole in crawl space, the base of the vault may be constructed below the local water table. if correct, the groundwater is not entering into the vault indicating that vault is water tight. therefore, if oil had been released it would not likely have leaked through the water-tight vault less than ========== - after cleaning impacted area in crawl space, approx. 4 inch tall by 6 inch wide hole was observed within the western wall of the crawl space beneath the souther end of flash tank - hole is located at the base of the out-of-service elevator shaft and may be a weep hole for same less than ========== - mix of fuel oil and water enter the crawl space through the weep hole - conducted an initial mecahnical probe of the interior of the hole. it appears that the hole accesses a channel cut beneath the base of the out-of-service elevator shaft less than ========= - according to facility personnel, the former elevator equipment was pully driven

HSBC BANK (Continued) **S105997119**

and didn't utilized hydraulic-oil containing equipment - bottom of weep hole appeared to be at least 3 inches below the floor of the crawl space. pooled water with floating oil was observed in the bottom of weep hole less than ---------- 4) 07/30/2004: Investigation report and Proposed Remedial Action Plan, submitted by F&E: - subway line runs approx. 7.3 ft west of building wall and the top of the tunnel is at 27 ft bgs, base of tunnel is at approx. 52 ft bgs - did soil borings 2.5 ft away from building wall - five borings (B-1A, B-2A, B-3A, B-4A and B-5A) were installed - oil impacts were not observed in boring #s 1A, 4A and 5A - only minor fuel oil impacts were observed in the unsaturated soils, from approx. 20-24 ft bgs in boring # 2A - soil impacted by fuel oil were observed from 4 ft bg through the entire unsaturated soil column (40-42 ft bgs) in boring # 3A - impacted soils appears to be limited to a 15 ft area between boring 2A and 4 (boring in April 2003) in the north-south direction - extent of impact to west could not be confirmed due to the presence of burried utilities and NYC subway (as per letter from NYC Transit: NYCT could not approve the proposed boring locations associated with the installation of test product recovery well and bio-vent cluster wells proposed to be installed within the sidewalk adjacent to the exterior western wall of the building. letter was issued on 12/15/2004) less than ---------- - unsaturated soil in the area of concern were composed of fill materisl consisting of a heterogeneous mix of sand, silt, clay, gravel, concrete, brick, wood and other un-identifiable debris - native materials, consisting of gray fine and medium grained sand and/or silty sand, was encountered at approx. 40-42 ft bgs, coincident with the first occurrence of groundwater - groundwater was encountered in boring #s 1A, 2A, 3A and 5A (all borings terminated at depth of about 42 ft bgs) less than ---------- (borings done deeper than that done in 2003) - 0.5 inch to 1 inch of light non-aqueous-phase liquid (NAPL) was observed on water table in borings B-1A, B-2A, B-3A and B-5A - unmarked monitoring well observed in the sidewalk adjacent to Hanson Place. no NAPL was observed and groundwater was measured at 43.44 ft from the elevation mark on the well - groundwater was observed entering the crawl space of the building to the southeast of the oil impacted water in the weep hole. no odors were associated with this groundwater and no LNAPL or significant sheen. therefore, it does not appear that the LNAPL layer extends under the footprint of the building less than ========== - conclusion: neither of 7000 gal ASTs appeared to have leaked and contaminants are not present in the associated vault. fuel oil impacted soils area present from approx. 4 ft bgs to water table in the vicinity of boring 3A. 0.5 inch to 1 inch thick layer of NAPL is present along the western exterior of the building footprint less than ---------- 5) 12/15/2004: Update on Remedial Activities: - installation of LNAPL recovery system within the crawl space is scheduled of 12/20/04 - MTA indicated that wells could be installed within the sidewalk at the desired locations, however, the depth of the wells could only be completed to a depth within 5 ft of the roof of the underlying subway tunnel (which means wells allowed only to 22 ft bg) less than ====== 6) 09/29/2006: Project Update: - both ASTs have been abandoned-in-place less than --------- - F&E installed a concrete berm to contain the water/LNAPL mix entering the building's sub-basement through the weep hole less than ---------- - the containmnent berm is equipped with a product-only pump which has successfully removed 70-80 gal of oil - due to presence of the subway line, the NYCTA will only allow biovent

HSBC BANK (Continued) **S105997119**

test wells to be installed to a max depth of 20 ft bgs - new owner of site: CJUF - CJUF conducting major renovation activities within the building, which has included the removal of the majority of the former equipment associated with the building's heating system - part of the sub-basement activities, the immediate vicinity of the LNAPL-recovery system has been isolated from the remainder of the sub-basement area by newly-constructed walls lined with plastic sheeting (the floor area had also been lined with plastic sheeting) less than ----- - water level is well above the top of the weep hole through which the LNAPL had previously entered into building - elevated water level is likely attributable to the cessation of the high-capacity pumps formerly utilized to remove groundwater from the sub-basement crawl space area - F&E plan to seal the weep hole and remove any related equipment and accumulated groundwater from the containment area, if DEC approves it. - F&E requested closure of case based on following information: * primary potential route of exposure for LNAPL was through weep hole which is below water level now * extent of remnant fuel oil within the unsaturated zone underlying the sidewalk along Ashland Place is believed to be limited and present below 6 ft bgs, the invert elevation of the former product delivery lines * ongoing source of fuel oil (former leaking product lines) and two ASTs have been abandoned-in-place, thus no potential for future releases of fuel oil F&E recommended to conduct an exposure assessment to evaluate realistic potential exposure pathways before closing the case.

owner, HSBC will continue remediation at site. Ms. Neil will be contact person at new management. explained Ms. Neil that as part of remediation, the department may require installation of equipment inside building, which Ms. Neil agree with. 04/23/07-Hiralkumar Patel. received call from Liz from NYC Transit. they checked subway tunnel and found no oil leak or odors inside tunnel. 04/24/07-Hiralkumar Patel. received email from Mr. Baldwin with contact info for person in HSBC: Christopher Philipp Director, Environmental Health & Safety HSBC Bank USA, National Association 2700 Sanders Road Prospect Heights, IL 60070 ph. (847) 564-6634 fax (847) 205-7542 email: chris.c.philipp@us.hsbc.com sent letter to Mr. Philipp (previous owner and responsible party) and Ms. Neil (current owner) requiring Exposure Assessment and soil/groundwater delineation via monitoring wells. letter emailed to Mr. Philipp, Ms. Neil (kneil@dermotcompany.com), Mr. Baldwin at F&E and Ms. Deluca (Elizabeth.DeLuca@nyct.com) in NYC Trasit. 04/27/07-Hiralkumar Patel. received email from Mr. Baldwin requesting deadline extension for report submission. reason for extension is getting permits from city agencies for sidewalk borings. approved his request with condition of regular updates on the project. 05/10/07-Hiralkumar Patel. received call from Steven Kaplan (631-499-2222), who will handle this project as Mr. Baldwin no longer work with F&E. 06/14/07-Hiralkumar Patel. left message for Mr. Philipp. 06/20/07-Hiralkumar Patel. received message from Gregory Ernst (631-499-2222). left message for Mr. Ernst. 06/21/07-Hiralkumar Patel. received call from Mr. Ernst. he mentioned that site is currently under construction and have crane on sidewalk, where the department requires monitoring wells for delineation and as per construction manager, crane will be there for about nine months. and without site specific groundwater flow direction, Mr. Ernst can't do receptor survey. asked Mr. Ernst to send contact info for property owner and construction manager. Gregory Ernst Senior Project Manager Freudenthal & Elkowitz Consulting Group, Inc. Ph. (631) 499-2222 (O) (516) 815-5151 (C) Fax (631) 499-5928 email: gernst@fecg.us received email from Mr. Ernst. he spoke with property owner Ms. Neil. Ms. Neil mentioned that they have construction hoist on sidewalk, installed on concrete base and not possible to remove until project finish (at least 9-12 months). Mr. Ernst asked for site visit to locate sampling location. Kristin Neil **current owner's representative** Ph. (212) 488-1622 email: kneil@dermotcompany.com sent email back to Mr. Ernst informing that before any site visit, the department requires work plan submitted. asked Mr. Ernst to visit site with Ms. Neil and submit work plan with scaled site map including: all former boring/well locations, proposed new well locations and location of construction hoist. aksed Mr. Ernst to submit work plan by 06/29/07. 06/29/07-Hiralkumar Patel. received email from Mr. Ernst. he is preparing work plan and will submit by July 13, 2007. they will start exposure assessment once they get approval on work plan. Mr. Ernst mentioned that they can't install any monitoring wells for groundwater delineation as construction hoist is on sidewalk and drilling machine can't fit under scaffolding. based on construction schedule, monitoring well installation will be done after nine months. 07/10/07-Hiralkumar Patel. discussed with DEC Austin. he asked to start dewatering from crwal space again to bring water level down to remove free product. left message for Ms. Neil (property owner) to install pumping system for such oil recovery. spoke with Mr. Ernst and asked him to contact owner for such installation. Mr. Ernst will contact owner and will

HSBC BANK (Continued) **S105997119**

call back. 07/11/07-Hiralkumar Patel. received call from Ms. Neil. explained her that as monitoring well installation is not possible on sidewalk, the department wants pump installed (again) in basement to reduce water level, so oil can be recovered from basement area (as before). 07/13/07-Hiralkumar Patel. received email from Mr. Ernst. abstract: - the pumping system which previously operated in the building has been removed and the basement walls and drainage areas grouted up to seal-off further groundwater infiltration into the building. therefore will not be able to restart groundwater pumping to renew free product recovery in the weep hole along Ashland Place. - have identified an opportunity to install two groundwater monitoring wells along the exterior of the building adjacent to Ashland Place in the vicinity of former boring locations B-3A and B-4A. as part of the reconstruction activities, a new sewer line is schedule to be excavated and installed approximately 20 feet north of the abandoned elevator shaft where the previous soil borings were drilled. During the sewer line excavation, the adjacent scaffolding and access ramp to the construction hoist will be temporarily dismantled. - currently plan to gain access to the former boring locations immediately following backfilling the sewer line excavation and prior to re-assembling the scaffolding and access ramp. the current schedule for the sewer line excavation and installation is for that work to begin within the next couple weeks and is expected to take six weeks to complete, thereby allowing us access for drilling in roughly six to eight weeks. - Freudenthal & Elkowitz will: prepare a work plan as you requested to conduct an Exposure Assessment and install the groundwater monitoring/product recovery well; prepare an access request and drilling permit application and site plan to NYCTA to inspect the subway tunnel for indication of petroleum leakage and to install vibration monitoring equipment needed during drilling operations adjacent to the subway, and initiate Exposure Assessment activities of the surrounding properties. 07/19/07-Hiralkumar Patel. spoke with Mr. Ernst regarding boring locations (B-3A and B-4A) that he mentioned in last email. from site map, B-3A was located closed to old fill port (source area, south of weep hole) and B-4A was located north of weep hole. both boring locations are about 30 ft apart. Mr. Ernst mentioned that owner is installing sewer line about 20 ft north of elevator shaft (weep hole) and after backfilling excavated area for sewer line, they have opportunity to install wells at some boring locations. Mr. Ernst mentioned that they will install monitoring wells (if get permission from MTA due to subway running parallel to site) at B-3A (close to source site) and B-1A (close to weep hole). Mr. Ernst also mentioned that boring B-4A was terminated at 27 ft depth (could be because of subway structure) before groundwater. asked Mr. Ernst to install well at location B-4A also and if get refusal before groundwater, asked him to try other point around B-4A (to see any oil going north of weep hole). asked Mr. Ernst to check possibility for monitoring well installation on south of previous boring location B-5A (for delineation purpose). mentioned to Mr. Ernst that if it requires to go across the street (Hanson Place) then install well on sidewalk on other side of street, eventhough that location is far away (by considering that due to parellel subway line groundwater must be flowing either in north or in south direction, so oil can be detected in monitoring well across the street) spoke with Mr. Neil. she will meet at site at 1:30 PM. 07/20/07-Hiralkumar Patel. visited site. met Ms. Neil. went to basement. Ms. Neil mentioned that they have filled
