entire sub-basement/crawl space except part of weep hole area. there is no opportunity to install any pump for dewatering. Ms. Neil mentioned that they will remove scaffolding for sewer line installation. told Ms. Neil not to re-install scaffolding until they install monitoring wells on sidewalk. found one monitoring well in front of building entrance along Hanson Place. 07/23/07-Hiralkumar Patel. spoke with Mr. Ernst. asked him to install monitoring wells on south of previous boring B-5A also and asked him to check one well in front of building (that was observed during site visit). Mr. Ernst will submit all plan to MTA and once he hear from them, he will forward all to the department. 10/11/07-Hiralkumar Patel. left message for Mr. Ernst. spoke with Mr. Neil. they are still waiting for permit for sewer line installation. once they receive permit, they will remove scaffolding and will install require wells. 11/07/07-Hiralkumar Patel. spoke with Mr. Ernst. he has submitted all required plan and documents to MTA, but hasn't got final authorization from MTA. he will call once gets approval and schedule for work. 01/14/08-Hiralkumar Patel. spoke with Mr. Ernst. they are still waiting for approval from MTA. he mentioned that owner has changed plan to install sewer line. now they will not install sewer line where the department wants monitoring wells, in that case scaffolding will be removed only once project is finished. 03/20/08-Hiralkumar Patel. spoke with Mr. Ernst. they got verbal approval from MTA. asked him to submit copy of written approval from MTA, once available, alongwith copy of plan submitted to MTA. as per Mr. Ernst, scaffolding may be removed in July 2008. 12/01/08-Hiralkumar Patel. spoke with Mr. Ernst. he mentioned that scaffolding is still in place and according to owner, it will be removed in this month. left message for Mr. Krukis and Ms. Neil. 12/15/08-Hiralkumar Patel. received message from Mr. Krukis. he mentioned that as construction is still going on, they can't install monitoring wells. 12/17/08-Hiralkumar Patel. spoke with Mr. Krukis. he mentioned that sidewalk scaffolding will stay at the site for another four months, so they can't install wells that are required to delineate groundwater contamination. 06/22/09-Hiralkumar Patel. 4:32 PM:- received email from Mr. Ernst. he mentioned that scaffolding hasn't removed yet and trying to contact Mr. Krukis. he sent new office address for Christopher Philipp at HSBC. HSBC North America 26525 N. Riverwoods Blvd. Mettawa, IL 60045 Attn.: Christopher Philipp Ph. (224) 544-2838 Fax (224) 552-2838 email: chris.c.philipp@us.hsbc.com 07/06/09-Hiralkumar Patel. 1:47 PM:- spoke with Mr. Krukis. he is no longer involved with this project. he asked to contact Maria Stamolis. Maria Stamolis Canyon Capital Realty Advisors LLC. Ph. (310) 272-1568 email: mstamolis@canyonpartners.com 1:49 PM:- left message for Ms. Stamolis. 1:53 PM:- sent email to Mr. Ernst to contact Maria for updates. email copied to Mr. Philipp. 07/13/09-Hiralkumar Patel. 11:16 AM:- received message from Paul Jennings. Paul Jennings HRH Constructions Ph. (718) 622-4591 (O) (917) 567-5077 (C) email: pjennings@hrhllc.com 07/17/09-Hiralkumar Patel. 8:34 AM:- received message from Mr. Jennings. 1:14 PM:- spoke with Mr. Jennings. he is expecting to remove scaffolding by mid of Nov. 2009. sent email to Mr. Jennings. asked him to submit updates monthly. 12/01/09-Hiralkumar Patel. 1:05 PM:- spoke with Mr. Jennings. they removed half of scaffolding and remaining half will be removed by week of Dec. 28, 2009. 03/20/13-Hiralkumar Patel. passed by the site and found scaffolding still in-place. 03/21/13-Hiralkumar Patel. 10:04 AM:- left message for Ms. Stamolis. 11:47 AM:- spoke

HSBC BANK (Continued) **S105997119**

with Ms. Stamolis. she mentioned that the building is condominium and owned by many parties. there are 179 individual condo residences, a commerical condominium, a retail condominimum and an antenna condominium. she will send email with contact info for property manager. 12:31 PM:- received email from Ms. Stamolis. she mentioned that Cooper Square Realty, Inc. manages the property. Marc Kotler Vice President Cooper Square Realty, Inc. Ph. (212) 634-5420 Fax (646) 786-7106 email: marc.kotler@coopersquare.com Peter Kirschenbaum General Counsel Cooper Square Realty, Inc. email: peter.kirschenbaum@coopersquare.com 03/22/13-Hiralkumar Patel. discussed with DEC Austin. after reviewing available information, Austin agreed with well installation requirement. he mentioned that wells must be installed at previous boring locations for investigation/remediation. 2:40 PM:- left message for Anthony Milstein, property manager at Cooper Square. One Hanson Place Condominium **property owner** c/o Cooper Square Realty, Inc. 622 Third Avenue New York, NY 10017 Attn.: Anthony Milstein **property manager** Ph. (212) 634-5448 Fax (646) 786-7133 email: anthony.milstein@coopersquare.com 04/08/13-Hiralkumar Patel. 1:44 PM:- left message for Mr. Milstein. 1:58 PM:- left message for Mr. Philipp. 3:08 PM:- received call from Mr. Milstein. informed him about open case. Mr. Milstein was not aware of this open case. informed him that the department requires further investigation/remediation. tried phone number for Christopher Philipp, but that number is assigned to Capital One IT department and could not confirm Mr. Philipp's address. discussed with DEC legal and decided to send letter to current property owner only as could not find previous owner(s). Harvey Kreiswirth **condo board president** 1 Hanson Place, Unit 14D Brooklyn, NY 11248 email: harvey@usa.com Yury Vinokur **building super** email: rmhanson_place@yahoo.com 4:06 PM:- sent letter to Mr. Milstein and Mr. Kreiswirth requiring submission of investigation work plan for delineation and exposure assessment. asked them to submit work plan by the end of 07/08/13. letter emailed to Mr. Milstein and Mr. Kreiswirth. 4:29 PM:- received email from Mr. Kreiswirth confirming receipt of the letter. 04/12/13-Hiralkumar Patel. 1:50 PM:- received call from John Gear from Enviroscience. he was contacted by Mr. Milsteain. John inquired about available documents. informed him that documents will be sent to Mr. Milsteain. 1:52 PM:- sent email to Mr. Milsteain including copy of work plan/reports. 07/02/13-Hiralkumar Patel. 3:57 PM:- received call from Kevin Hogan, attorney representing HSBC. he mentioned that condo owners has provided the department's letter dated 04/08/13, to HSBC and HSBC took responsibility for required investigation/remediation. currently, HSBC is working with environmental consultant. Mr. Hogan requested time extension to submit work plan. based on available information, approved his request and asked to submit work plan by the end of 09/02/2013. during conversation, Mr. Hogan mentioned about scaffolding around the site. informed him that property owner must address environmental issue and department may not approve anymore extension due to scaffolding around site (since 2008). Kevin Hogan **attorney for HSBC** Phillips Lytle LLP. 3400 HSBC Center Buffalo, NY 14203 Ph. (716) 847-8331 Fax (716) 852-6100 email: khogan@phillipslytle.com Mr. Hogan mentioned that Christopher Philipp is the person in-charge at HSBC. Christopher Philipp **HSBC's representative** VP Environmental Health & Safety HSBC North America HSBC Technology and Services, Inc. 26525 N. Riverwoods Blvd Mettawa, IL 60045 Ph. (224) 880-7702 email: chris.c.philipp@us.hsbc.com 4:10

HSBC BANK (Continued) **S105997119**

PM:- left message for Mr. Milstein. informed him about extension for submission of work plan. also informed him that the department may not approve any extension due to scaffolding and case may be referred for enforcement if work does not begin soon. 4:15 PM:- sent email to Mr. Hogan. asked him to submit work plan by the end of 09/02/13. email copied to Mr. Milstein and Mr. Kreiswirth. 07/03/13-Hiralkumar Patel. 11:21 AM:- received call from Mr. Milstein. informed him about time extension approved for submission of investigation work plan. asked him to dicuss with HSBC and their contractor regarding scaffolding around site. informed him that environmental investigation must begin soon. 08/21/13-Hiralkumar Patel. 11:55 AM:- received call from Ernie Rossano and Nicole Reptti from Environmental Resources Management. Mr. Rossano mentioned that due to subway along side of the building, well installation may not be possible. he also mentioned about no impact in current building and sub-basement area is filled with at least 5 ft of concrete. informed Mr. Rossano that having no issue in on-site building does not mean no impact to other structures in area. as such, the department do require subsurface investigation. Mr. Rossano also mentioned about scaffolding around the building which can not be removed until building project is completed. asked Mr. Rossano to contact MTA regarding possiblity well installation, and building management to facilitate well installation. informed Mr. Rossano that response is due on 09/02/13. Ernie Rossano Environmentl Resources Management Ph. (631) 756-8917 email: ernie.rossano@erm.com Nicole Repetti Environmentl Resources Management Ph. (631) 756-8957 / 8900 (516) 315-4440 (C) email: nicole.repetti@erm.com 08/29/13-Hiralkumar Patel. 9:39 AM:- received email from Nicole from ERM, including letter in response to the department's letter dated 04/08/13. Nicole stated that ERM has submitted written request to NYCTA to review and copy the maps. Nicole requested time extension for the work plan submission until 11/18/13. 09/09/13-Hiralkumar Patel. 11:52 AM:- sent email to Nicole approving time extension for submission of investigation work plan until 11/18/13. email copied to Mr. Rossano, Mr. Philipp, Mr. Milstein and Mr. Kreiswirth. 12:28 PM:- received email from Mr. Kreiswirth. he requested that future correspondences should be sent to Kevin Jones, instead of him. Kevin Jones **condo board member** email: kevin_p_jones@hotmail.com 11/26/13-Hiralkumar Patel. 1:16 PM:- received email from Ms. Rossano including an investigation work plan. abstract: - current owner filled in the crawl space that was located beneath the entire building footprint with approx. 3,000 yards of concrete and a vapor barrier to seal the space beneath the building - since 2006, no LNAPL has been reportedly observed entering the building or the adjacent NYCTA subway tunnel - three (3) soil borings (B-3A, B-4A and B-5A) which were previously installed by F&E will be re-installed using a hollow stem auger drilling rig - boring B-3A will be installed directly north of the former northern fill line - boring B-4A will be installed approx. 35 ft north of the former northern fill line - boring B-5A will be installed approx. 15 ft south of the former southern fill line - approx. 10 ft of material will be removed from each boring location with a vacuum extraction system - soil samples will be collected continuously from 10 ft to at least two ft into the water table (approx. 40 ft bg) using 2 ft long split spoon - at a minimum, all soil borings will extend below the water table by at least 2 ft or the vertical extent of contamination or to 50 ft bg maximum ---------- - two samples (at highest PID and deepest dry) will be analyzed from each boring for VOCs and SVOCs -

HSBC BANK (Continued) **S105997119**

all three soil borings will be converted to 1 inch wells, with 10 ft of screen - will perform an exposure assessment - currently scaffolding along the entire length of the proposed investigation area and is scheduled to be removed in early 2014 - will submit investigation schedule once scaffolding removed discussed with DEC Austin and DEC Vought. due to no activities since 2007, Austin asked to check with MTA regarding impact to nearby subway tunnel and drawdown well of the subway system. 2:56 PM:- left message for Rajen Udeshi (646-252-3673) at NYC Transit. 5:42 PM:- received call from Dana from Mr. Udeshi's office. she asked to contact John Malvasio in MTA's Maintenance of Way. John Malvasio Maintenance of Way MTA Ph. (718) 694-1358 5:50 PM:- left message for Mr. Malvasio. 12/05/13-Hiralkumar Patel. 3:13 PM:- left message for Mr. Malvasio. 12/20/13-Hiralkumar Patel. 11:45 AM:- left message for Mr. Malvasio. 12:26 PM:- received call from Mr. Malvasio. he asked to contact William Detore in his section, who handles environmental issues. 12:28 PM:- left message for Bill. Bill Detore MTA Ph. (718) 694-1488 email: william.detore@nyct.com 01/28/14-Hiralkumar Patel. 4:09 PM:- left message for Bill. 01/29/14-Hiralkumar Patel. 8:34 AM:- received message from Bill. 2:37 PM:- left message for Bill. 01/30/14-Hialkumar Patel. 9:33 AM:- spoke with Bill at NYC Transit. informed him about ongoing spill investigation. asked him about any impact to nearby subway system. Bill will check available record and inspect the area. 10:30 AM:- sent email to Bill with site summary. asked him to provide following information: - any oil seepage into the tunnel in the area - the nearest water pumping well 02/24/14-Hiralkumar Patel. 2:03 PM:- left message for (and sent email to) Bill inquiring update. 05/14/14-Hiralkumar Patel. 3:55 PM:- sent email to Bill inquiring updates. 02/10/15-Hiralkumar Patel. 1:54 PM:- received email from Nicole from ERM inquiring about comments on proposed delineation work plan. 04/14/15-Hiralkumar Patel. 1:38 PM:- spoke with Bill. he confirmed no oil seepage into any subway tunnels nearby the subject site. he will provide location of nearest pumping well location. 1:55 PM:- sent email to Nicole requesting a call back. 04/15/15-Hiralkumar Patel. received message from Eugene Gabay (at 4:07 PM on 04/14/15) from ERM. 04/16/15-Hiralkumar Patel. 1:43 PM:- spoke with Eugene at ERM and informed him about case closure. Eugene Gabay ERM PH. (631) 756-8954 email: Eugene.Gabay@erm.com after discussing with DEC Austin and DEC DeMeo, case is being closed based on following: - elimination of the source (leaking fill lines) and conversion to gas heating system - sealing of sub-basement and crawl space at the site - no impact to nearby subway tunnels (confirmed twice - 2007 and 2015) which are closest sensitive receptors 04/27/15-Hiralkumar Patel. 3:22 PM:- sent spill closure letter to Mr. Philipp. letter emailed to Mr. Philipp, Mr. Milstein and Eugene.

Update By:	JHOCONNE
Site Description:	Site Location: The site is located at 130 Saint Felix Street in the Fort Greene Neighborhood of Brooklyn, NY. Residential, commercial, and institutional buildings characterize the surrounding area. The site is bounded by Lafayette Avenue to the north, Saint Felix Street to the east, and Ashland Place, Fourth Avenue, and Flatbush Avenue to the west and south of the site. Site Features: The site is developed with an asphalt-paved parking lot and is located on an L-shaped city lot bounded by two multi-story Brooklyn Academy of Music buildings to the north, multi-story residential buildings to the east, a multi-story mixed residential and commercial building and a multi-story church building to the south. New York City Transit (NYCT) subway tunnels are located beneath Lafayette Avenue to the north, Saint Felix Street to the east, and Ashland Place, Fourth Avenue, and Flatbush Avenue to the west and south of the Subject Property. The nearest body of water is the Gowanus Canal, which is approximately 0.57 miles southwest from the site. The site is not in a flood zone. Current Zoning and Land Use: The site is currently zoned C6-1 (commercial)and is currently used for intermittent rentals to movie productions for equipment storage. The surrounding properties include the Brooklyn Academy of Music building to the north, residential buildings to the east and mixed residential and commercial buildings and a church to the south. Past Use of the Site: According to the Phase I, auto repair or service activities may have taken place on the site. The Phase I Report concludes potential releases of petroleum products, solvents, and/or other hazardous materials from adjacent properties may have adversely impacted soil, groundwater, and/or soil vapor at the site. Site Geology and Hydrogeology: The geology of the site consists of the Hartland Formation, which consists of gray schist with quartz, biotite, and muscovite. Based on geotechnical investigations in the area, the depth to bedrock is greater than 90 feet below ground surface (bgs). Based on the general topography of the surrounding area, inferred groundwater flow is to the southwest toward the Gowanus Canal. Depth to groundwater is about 38 feet bgs.
Env Problem:	Nature and Extent of Contamination: Based on the investigations

130 SAINT FELIX STREET SITE (Continued) **S126218329**

	conducted to semi-volatile organic compounds (SVOCs) and metals (barium, lead and mercury) in soil and groundwater likely due to the presence of coal and slag in the historic fill on this Site. Soil - Volatile organic compounds (VOCs) Naphthalene and total xylenes were detected above Unrestricted Use SCOs in one soil sample location. Groundwater - the VOC chloroform exceeded its respective Ambient Water Quality Standard (AWQS), total metals concentrations of trivalent chromium, iron, and sodium were detected above AWQS and with the exception of sodium, dissolved (filtered) metals did not exceed their respective AWQS. Soil Vapor - multiple VOCs, including petroleum-related compounds (i.e., trimethylbenzenes, xylenes, and toluene, etc.) consisted with the history of former petroleum uses on and off-site, were detected near the north-central area of the site.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Region: 2
DER Facility ID: 402454
DEC Memo: 8/15/2012 TTF Spill Case transferred to DEC Tim DeMeo. 12/27/2012 - Sangesland spoke to Charlie from Environmental Business Co. Problem was with a 550 gal buried waste oil tank. Property was being sold, buyer ran a tank test and it failed. Later RP did a Phase 2 soil borings around the tank and they were clean. Another company did Another Phase 2 soil borings around the tank again and they also came up clean. Charlie from Environmental Business Co. will send an e-mail to DeMeo showing all the data and requesting a closure 1/16/13 TJD File review. Property owner is requesting closure of spill originally reported as a tank test failure associated with a 550 UST - currently storing waste oil at a vehicle repair facility. Owner of the property has performed a subsurface investigation as part of a planned redevelopment (mixed use - commercial/residential) of this property. Laboratory results of collected samples reveal exceedances to RSCO for SVOC's and metals in several samples. UST which failed tightness testing remains at site - it is unclear if the tank is in service based upon the documentation submitted. Owner's consultant current proposal includes request for spill closure followed by removal and managemnent of contaminated soils during redevelopment activities at this site and an unspecified later date. Consultant further recommends to owner that in lieu of the potentially costly tasks of conducting a required site assesment in accordance with applicable DEC regulations the tank should be removed and replaced with an aboveground tank. Owner of property has failed to provide DEC with passing tightness test associated with UST. Additionally, the owner's consultant recommends removal of contaminated soils identified during sub-surface investigation and removal of UST following the closure of open spill file. Based upon documentation submitted spill is not currently elidgible for closure. 4/4/13 TJD File review. In April 2011 Prestige Environmental performed (3) borings around in service 550 UST (Waste Oil) - no VOC's or SVOC's were identified which exceed RSCO, however tank had previously been tightness tested and failed (gross failure). In November 2012, Environmental Business Consultants (EBC) performed a second round of sampling (2 borings) around the in service waste oil tank with similar findings - no RSCO exceedances. A closure request was submitted to DEC - as the tank remains in service DEC required a second tightness test as the initial test performed on 4/12/11 failed. A second attempt at testing UST failed on 2/7/13, reported that vent pipe could not be located or isolated to perform test. The owner proceeded with a tank abandonment on 2/21/13 at which time (2) holes were cut in tank bottom following the removal of 400 gallons of product/sludge. Soil samples were then collected from directly beneath tank for laboratory analysis - all target analytes are reported below CP-51 and Part 375 allowable concentrations. An affadavid of proper abandonment has been provided by EBC as part of closure report dated 3/7/13. Based upon above investigation the reported spill associated with 550 waste oil tank is closed. All other environmental conditions identified during previous investigations, primarily consisting of minor elevated concentrations of SVOC's and metals attributed by current and previous consultants, are to be properly managed during redevelopment of property in coordination with and under direct oversight of NYC Office of

Contact Name:	KEVIN BRUSSEE
DEC Memo:	btex compound in soil
Remarks:	8/12/2020 - Feng - Desk Duty in office. Called EBC and left call back info. Environmental Business Consultants Kevin Brussee 631-504-6000 x114 KBrussee@EBCIncNY.com Zhune-Spoke to Kevin Brussee of Environmental Business Consultants. It is an OER project. They did a Phase 2 and found one soil sample of the boring at 0-2 feet sampling depth show exceedances of BTEX and related gasoline compounds. Additional delineation has been done around that boring and found only some minor exceedance and mainly naphthalene. The OER RAWP is not approved yet pending on the spill reporting. The RAWP calls for excavation of the soil down to 12 feet for 90% of the celler. They

CON EDISON (Continued) **S116043817**

will excavate down 4-5 feet and then 45 degree sloping for the rest of the depth excavation. The site is 200'x100' in size. They will submit spill closure report upon the completion of the excavation and collecting the endpoint samples. He will forward the link for the OER reports. Spill is assigned to V. Zhune. Kevin Brusee(cell) 631-338-1749 10/27/20- Kevin Brusee sen the following email The developer anticipates starting immediately after the DOB plans are approved. He is expecting the start date to be in January. 10/27/20 Kevin Brusee emailed the phase I and phase II Phase 1 ------- Environmental Planning & Management performed the phase I. The Phase I ESA Repor (dated February 13, 2015) identified the following Recognized Environmnental Conditions: Building cellar. Historic use. Vacant lot Off-site impacts. Ground Penetrating Radar (GPR) Survey ---------- No indication of a subsurface tank were identified in the area of the cellar. However, ananomaly with the approximate dimensions of a 10,000 gallon tank was found within the vacant lot in the location of the gasoline tank identified in the phase I ESA. Phase II ---------- On march 14, 2015, AARCO Environmental Services Corp. (AARCO) installed six (6)soil borings under the supervision of an Integral geologist. Soil Analytical Results and Analysis. The results from the soil samples were compared to the New York State Department of Environmental Conservation (NYSDEC) CP-51 Unrestricted Use Soil cleanup Objectives (SCOs). VOCs ------ No unrestricted Use SCOs were exceeded for VOCs in the soil samples. However, several VOCs were detected at lower concentrations: acetone, ethylbenzene, naphthalene (an SVOCs), xylene, and toluene. The detection of these compounds in the borings immediately adjacent to the suspected gasoline UST on the vacant lot (SB-3, SB-4 and SB-5)could indicate a historic release from the tank; however, it is likeky that, if a release had occurred, it was relatively minor in nature due to the low concentration in the samples. SVOCs ====== Seven (7)SVOCs were detected above unrestricted Use SCOs in the shallow soil samples (5-10 ft)below ground surface (BGS)of two borings SB-4 and SB-5 (both near the vacant lot gasoline UST). However, all concentrations were within one order of magnitude of its SCO. Low levels of SVOCs found within these two borings could be attributed to the placement of historic fill. Metals ======== Concentrations of lead, mercury, and nickel exceeded their respective SCOs in three of the borings advance on the local lot. Similarly to SVOCs the presence of low levels of these metals could be attributed to the placement of historic fill. PCBs ====== NO PCBs were detected in any of the soil samples. Please see attchedment B for the table of all detected compounds and attachment C for the full laboratory report. 3/5/21-Zhune - Kevin sent the following email Two crushed 275-gallon aboveground storage tanks and some other metal structure were found at 1010 Pacific Street, Brooklyn, NY in the hotspot area that high VOCs. Picture provided below. The hotspot is being excavated and loaded into trucks for transport to Clean Earth of North Jersey. Leszek I don t think either tank needs to be recorded with the DEC on a PBS Application or a Pre-Work Notification is required because they are both aboveground tanks that someone crushed and used as backfill, but I wanted to check to make sure. The VOC hotspot was previously delineated with insitu soil borings/samples and the hotspot will be excavated to at least the boundaries of the delineation samples, but we ll be collecting some soil samples from the area after it is excavated as a pre-caution . 4/9/21-Kevin Brusee emailed the Remedial Investigation Report A summary of the subsurface

CON EDISON (Continued) **S116043817**

Investigation performed by Integral Engineering P.C. in February of 2015 and the Remedial Investigation performed by EBC in January and February of 20920 is summarized below. Imtegral Engineering P greater than C greater than performed the following scope of work within the boundary of Site in May of 2015: 1. Installed six soil borings and collected eleven soil samples and one duplicate for chemical analysis from the soil borings to evaluate soil quality. 2. Performed a GPR survey. EBC performed the following scope of work within the boundary of Site in January and February of 2020. 1. Conducred a Site inspection to identify AOVs and physical obstructions (i.e. structures, building etc.): 2. Installed nine soil borings(SB1 through SB9) and collected eighteen soil samples and one duplicate for chemical analysis from the soil borings to evaluate soil quality; 3. Installed two groundwater monitoring wells, One of the monitoring wells was dry, and very little water was present in the second monitoring well. The third monitoring well was not attempted. Therefore, only one groundwater sample could be collected for chemical analysis of VOCs to evaluate groundwater quality; and 4. Installed one sub-slab soil gas implant (SG1) and collected one sub-slab soil gas sample, and installed seven soil vapor probes (SV1 through SV7) and collected seven soil vapor samples for chemical analysis. . Eight VOCs were detected above UUSCOs in one shallow soil sample (B6(0-2)) including acetone (maximum (max.)of 2,500 ug/kg), benzene (at 72 ug/kg), ethlylbenzene at (4,000 ug/kg), m&p-xylenes (max. of 17,000 ug/kg), Naphthalene (max. of 25000 ug/kg)o-Xylene (at 6,100 ug/kg), tetrachloroethene (at 1,500 ug/kg)and Toluene (max. 64,000ug/kg. Several additional VOCs were detected at trace concentrations within several soil samples; . Seven SVOCs including Benzo(a)anthracene (max.of 7,500ug/kg, Benzo(a) pyrene (max.of 12,000ug/kg,Benzo(b)fluoranthene (max.9,200 ug/kg), Benzo (K) fluoranthene (max. of 7,100 ug/kg), Chryzene (max. of 7,700 ug/kg), dibenz (a,h) anthracene (max. of 2,700 ug/kg), and indeno (1,2,3-cd) pyrene (max. 9,100 ug/kg)were detected above RRSCOs; . Two Pescticides including 4,4'-DDE (at 4.2 ug/kg and 4,4'DDT (max. of18 ug/kg) were detected above UUSCOs. No pestices were detected above RRSCOs. . On PCB, PCB-1254 (at 2,000 ug kg) was detected at the RRSCO of 2,000 ug/kg. . Seven metals including cadmium (max. 7.6 mg/kg), Chromium (max. 550 mg/kg), Copper (max of 104 mg/kg,lead (max.of 719 mg/kg)mercury (max.of 3,01 mg/kg), nikel (max.of 86.1 mg/kg)and zinc (max. of 1,310 mg/kg were detected above UUSCos. Of the detected metals, cadmium, lead, and mercury were detected exceeding RRCOs . Five PFA compounds were detected in the sample for a total of 1046 ug/kg Groundwater ---------- Groundwater samples results were compared to New York State 6 NYCRR Part 703.5 class GA groundwater quality standards (GQS) . Two VOCs, acetone (at 52 ug/L) and methylene chloride (at 54 ug/L) were detected above their respective GQS. Soil Vapor ---------- Figure 8 shows the location and posts the values for sub-slab soil gas and soil vapor samples with detected concentrations. The sub slab soil gas and soil vapor results collected during the Remedial Investigation were compared to the compounds listed in Table 3.1 Air Guidance Values derived by the New York State Department of health (NYSDOH) located in the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion, dated October 2006 and the revised NYSDOH Decision Matrices dated May 2017. . The sub slab soil gas and soil vapor results indicated low levlesl of petroleum related VOCs and low levels of chlorinated VOCs: . Total concentrations of petroleum-related VOCs (BTEX)within the eight soil

CON EDISON (Continued) **S116043817**

vapor /gas samples ranged from 0 ug/m3 to 1.81ug/m3. . The chlorinated solvents detected include 1,1,1,-trichloroethane (TCA)at a concentration of 2.20 ug/m3 in one of the eight samples, carbon tetrachloride ranged from 0.22 ug/m3 to 0.4 ug/m3, tetrachloroethene (PCE) at a concentration of 0.33 ug/m3; . The chlorinated VOs 1,1-dichloroethene, cis-1,2 dichloroethene, methylene chlorine, trichloroethene (TCE)and vinyl Chloride were not detected within any of the soil vapor samples . All chlorinated VOCs were detected below the monitoring level ranges established within the NYSDOH soil vapor guidance matrix. 3/31/21- Zhune- Kevin Brusee sent the RAWP dated April 2020 approved by the office of environmental Remediation. 5/8/21-Zhune-Kevin Brusee sent the Spill Closure Letter dated March 11, 2021. Conclusions ---------- Gasoline related VOCs were detected above Unrestricted Use SCOs within a surface (0-2 ft)soil sample collected in the northeast of the property. Delineation sampling indicated the impacted area was smaller than 20ft by 20ft area. On March 5,2021 a25ft by 45 ft area was over excavated and transported to Clean Earth North Jersey for proper off site disposal. No PID or olfactory evidence of petroleum soil was observed after the excavation was completed, and the laboratory results of endpoint soil samples collected after the excavation was completed indicate all of the petroleum impacted has been removed. Spill Closed.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Soil testing showing impacted soil. Further investigation and cleanup is pending. Caller requesting callback.
Remarks:	05/19/21-Hiralkumar Patel. 4:31 PM:- spoke with Joel. he mentioned that the site enrolled in NYC VCP and OER asked to report spill. asked Joel to submit available reports for review. Joel Kane Fleming-Lee Shue, Inc. Ph. (212) 675-3225 (406) 321-0586 Fax (212) 675-3224 email: joel@flemingleeshue.com 05/20/21-Hiralkumar Patel. received email from OER confirming access to EPIC folder for this project. briefly reviewed remedial investigation report dated May 2021, which shows presence of some VOC/SVOC contamination at the site. spoke with Joel regarding need to report spill. he mentioned that OER asked to report spill based on high PID readings (up to 5,000 ppm) and strong petroleum odors in borings B3 and B7 which were installed in the suspected UST area. Joel stated that these tanks were in use in 1930s. as part of site development, soil will be removed to a depth of 1 ft above groundwater depth, and any tanks found will be removed. a RAWP is being drafted at this point. asked Joel to include endpoint sampling from contaminated areas as per DER-10 and vapor mitigation plan in the RAWP. 1:27 PM:- received email from OER Shaminder. he mentioned that this 19,580 sf site is currently being used for mixed-use commercial residential properties and a large parking garage. the proposed future use of the Site will consist of a new 52-story mixed-use commercial/residential building with two subgrade parking floors (cellar and sub-cellar). groundwater was found at 27 ft bg. three lots (# 25, 26 and 29) on block # 2095 are included in this project. alternate address: 170-194 Ashland Place, 96-104 DeKalb Ave no PBS or other spills found. site has e designation for hazmat. Ashland Dekalb LLC. **property owner** c/o Rockrose Development LLC. 15 East 26th Street, 7th Floor New York, NY 10010 05/21/21-Hiralkumar Patel. 10:37 AM:- sent email to OER Shminder. informed him that the case will be managed by DEC Sekhon. asked Shaminder to provide EPIC folder access to Sekhon and send future correspondences to Sekhon. email copied to OER Shirley Chen, DOH Nathan, DEC Sekhon and Joel. case assigned to DEC Sekhon. 1/14/22 - Sekhon 9/28/21 - Sekhon forwarded draft RAWP send by OER reviewed and discussed with OER & send to RP by Shirley Chen as email - Good morning Joel, Thank you for addressing OER’s comments. Please see the attached document with minor edits to the text. As per DEC’s advisement, Volatile Organic Compounds must meet Protection of Groundwater Standards. Language has been added to Section 4.2 Soil

PARKING GARAGE (Continued) **S127584843**

Cleanup Objectives and Soil/Fill Management to reflect this. Additionally, the elevator pit detail drawing in the vapor barrier diagram (Figure 8) should be revised to show the vapor barrier installation along the bottom and up around the elevator pit. Currently, only the bottom of the elevator pit is shown. The foundation sidewall detail drawing (top left circle) is missing the 3 layer of aggregate and should be addressed to match the composite cover description. Please finalize the RAWP and submit a full PDF version with text, figures, and appendices. Also attached is a draft Stipulation letter. The vapor barrier figure should be revised and attached in the RAWP PDF. If not addressed in the RAWP, please attach the revised figure in the Stipulation letter. Lastly, OER will forward the draft RAWP to DEC Spills to coordinate any additional requirements for addressing the open spill. Any items requested by DEC may be included in the Stip Letter. Please let me know if you have any questions. Thank you, Shirley Chen Project Manager - Office of Environmental Remediation 100 Gold Street, 2nd Fl, New York, NY 10038 shchen@dep.nyc.gov 11/3/21 - Sekhon Remedial Investigative report & final Remedial Action Work Plan submitted. DECDOCS The proposed remedial action consist of: Performance of a Community Air Monitoring Program for particulates and volatile organic carbon compounds. Excavation and removal of soil/fill exceeding Track 2 Restricted Residential SCOs. The majority of the subcellar footprint will be excavated approximately 16 feet below the existing basement grade (i.e. 22-24 NAVD88) to a depth of approximately 5.6 (NAVD88) for development purposes. Within this area, the proposed elevator pit footprint will be excavated approximately an additional 9 feet to a final depth of approximately -3 4 (NAVD88). Additionally, the northwestern section of the Site in Lots 25 and 26 will be excavated to accommodate the proposed slab-on-grade parking ramp. Excavation depth will vary with maximum excavation expected to be approximately 12.7 below existing street grade (i.e. 29 NAVD88) to a maximum depth of 16.3 (NAVD88). Approximately 15,500 tons of soil/fill will be removed from the Site and properly disposed at an appropriately licensed or permitted facility. Screening of excavated soil/fill during intrusive work for indications of contamination by visual means, odor, and monitoring with a PID. Management of excavated materials including temporarily stockpiling and segregating in accordance with defined material types and to prevent co-mingling of contaminated material and non-contaminated materials. Removal of all known underground storage tanks and other USTs that are encountered during soil/fill removal actions, and bulk removal of petroleum contaminated soil from below each tank and from around each tank in accordance with applicable laws & regulations. Registration of tanks and reporting of any petroleum spills associated with USTs and appropriate closure of these petroleum spills in compliance with applicable local, State and Federal laws and regulations. Spill closure and any associated groundwater remediation will be managed under NYSDEC authority for Spill No. 2101542. RP will submit Spill closure report for closure. 8/26/22 - Sekhon Joel kane (Fleming Lee Shue) called and told that some light intrusive work for this project has begun and they have begun some UST removal. Contractor will remove the soil beneath UST to the areas to the planned development cut depth (approximately 14-20 feet below the tanks) and collect confirmation samples at that depth. 4/14/23 - Sekhon Updates from Joel Kane - Remedial Action As a reminder, the remedial investigation identified petroleum impacts in the southeastern section of the Site

PARKING GARAGE (Continued) **S127584843**

derived from suspected USTs in the parking garage basement. The proposed redevelopment of the Site included excavation of the bulk of the Site (including the impacted area) down approximately 20 below existing street level to make way for a sub-cellar parking garage. As such the proposed redevelopment would largely over-excavate the UST areas. Original Site elevation ranged from approximately 29 34 NAVD88. Water table is expected at approximately 5 to 8 NAVD88. Following demolition of the existing on-Site buildings support of excavation (SOE) piles were installed around the Site s perimeter. All drill cutting were screened with a photoionization detector (PID) and for visual and olfactory evidence of petroleum impacts. Evidence of petroleum impacts were isolated to the areas in the vicinity of suspected USTs in the southeastern area of the Site. Following SOE install, incremental Site excavation occurred. A total of seven (7) USTs found on Site were removed, cleaned and properly disposed of. Tanks are in the process of being registered and subsequently closed with NYSDEC. Following additional SOE installation, the bulk of the Site was excavated approximately 20 feet below street level to its current elevation of 10 NAVD88. All excavated soil was screened with a PID and two CAMP stations monitored VOC and particulate concentrations during all intrusive work. Again, the only remaining petroleum impacts appear isolated to the southeastern portion of the Site. All soil was managed according to the approved Soil Materials Management Plan (SMMP). Next Steps The remaining impacted area in the southeastern section of the Site will be hotspot excavated in conjunction with the planned pile cap install in the area. Pile cap excavation is expected to go to approximately groundwater depth (approximately 5-6 NAVD88). Endpoint samples in that area will be collected per DER-10 (i.e. 1 sidewall sample per 30 linear feet of hot-spot excavation and 1 bottom sample per 900 square feet of area). Additionally, per your request we will develop a separate NYSDEC spill closure report for your files summarizing all endpoint sample results. Thanks again, Joel Kane Director Fleming-Lee Shue 158 West 29th Street New York, NY, 10001 P: (212) 675-3225 F: (212) 675-3224 C: (406) 321-0586

DEC Region:	2
DER Facility ID:	28241
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 01/26/04 Transferred from Rommel to Austin 02/17/04: Reassigned from AUSTIN to KRIMGOLD. 11/05/2005 Left messages for Dean Peterson at new location at Community Living (718-855-4035). Did not receive a callback. Bishop 09/13/06 This case was transferred from Albany to Region 2. Zhune called Mr. Petersen several times. He never call back. A TTF letter was sent to: Mr. Dean Petersen 40 Rector Street New York, NY 10006 08/14/08-Zhune visited the site spoke to Tiffany Adams Office/Building Manager (718) 855-4035 ext. 1303. Tiffany called Crris Heighter the Director of the Institue of Community Living celll 347- 219-8991, office 718- 272-6046. He said by the time that the tank failed the test in 2001 he was not the Director of the Community Living. The 3000 gallons # 2 fuel tank was recently tested by ACR Mechanical and passed the test. He will be back from vacation on september and will search for papers work. A TTF lettter was sent to: The Institute of Community Living 2384 Atlantic Ave. Brooklyn NY 11233 Att: Chris Heighter 09/19/08 Chris Heighter sent the result for the last Tightness test. The 3000 gallons #2 fuel tank was tested on 05/07/08. The result indicates that the tank passed the test Therefore DEC is asking for information that happened in 2001. 09/30/08- Zhune called Chris and gave him the phone # of Crown Leak Detection which was the company that tested the tank on 07/30/2001. 11/26/08-Chris sent the 02/21/03 tank test results thst was done by Protest. 11/26/08-Zhune spoke to Bob from Protest. As per Bob the tank system was tested in December, 2002 and failed the test with a Ullage (dry) leak. They replaced the remote fill and the vent line. On 02/21/03 the system was restested and passed the test. He also said that he did not see any note about contamination at this site. Worker who did this job are no longer with Protest Spill closed.
Remarks:	caller found the tank that may be connected to an abandoned tank and he believes that is why the tank test failed

Site Description: Site Description The Gowanus Canal is a man-made navigational waterway in southeastern Brooklyn, Kings County NY. Nearly the entire canal is bounded by hard urban shorelines in the form of bulkheads, moorings, and retaining walls. The site definition includes only the canal and its attached barge slips, totaling slightly over 1.5 linear miles of waterway. Averaging 100 feet in width, the open water area defined as the site totals approximately 1,000,000 square feet or 29 acres. The canal also serves as a storm water drain for the surrounding area. Currently, approximately six square miles of highly urbanized land drains into the canal. Sanitary sewers no longer discharge directly; however, numerous combined sewer overflows (CSO) continue to discharge to the canal during storm events. Industrial discharges from a wide variety of industrial processes were also historically routed to the canal, via private discharge pipes or the municipal sewers. Stagnant water conditions have plagued the canal since its initial construction. To combat this, a flushing tunnel at the north end of the canal was constructed in 1911 to divert water from the Buttermilk Channel to maintain flow through the canal to Gowanus Bay. Operation of the flushing system has had numerous problems resulting in lengthy periods during which it was inoperable. Significant upgrades to this system are scheduled over the next few years to increase the volume of water flushing the canal. Currently the flushing tunnel has been de-activated to facillitate its upgrade and an qxygenation system has been installed at the upper end of the canal. Site History Prior to European settlement, this area formed a large tidal marsh, drained by Gowanus Creek and surrounded by higher ground to the west (present-day Carroll Gardens) and east (present-day Park Slope). In the mid 1800s, the Canal was constructed, more or less along the alignment of Gowanus Creek, by straightening and deepening the stream channel and dumping the excavated materials behind rows of timber piles along the shoreline. Combined with other urban filling activities in the surrounding area, the result was a large area of reclaimed land with a dendritic, dead-end canal providing barge access through the middle. The canal offered barge access far inland into Brooklyn, effectively increasing Brooklyn s available tidewater frontage for water-borne commerce. Development of the area was rapid, and by 1869, the layout of the canal and the local street network were essentially complete. Long term decline of the local manufacturing economy has led to a marked

GOWANUS CANAL SITE (Continued) **S110487590**

decrease in commercial use of the Canal, with only a handful of petroleum distributors and concrete batch plants as regular users. Roughly the northern half no longer hosts barge movements as a result of siltation due to the significant CSOs which discharge street waste and sewage solids. The canal has not been dredged in several decades, consequently, substantial amounts of sediment have been deposited in upstream areas, and water depths approach zero at low tide. The sediment consists largely of solids settled from stormwater and CSO discharges. Presumably, industrial discharges to the canal have diminished in line with the de-industrialization of the surrounding neighborhood, although this is difficult to verify directly due to a lack of historical records for comparison.

Env Problem: Water quality issues have plagued the Gowanus Canal almost since its construction. Tidal flushing is largely ineffective due to the length, narrowness, and circuitous layout of the canal channel. Operation of the flushing tunnel has improved the situation during the years when flushing was being conducted; however, the current tunnel requires significant upgrades and is likely to be off-line for a year or more as the upgrades are performed. The canal is currently classified by NYSDEC as Class SD water body, acknowledging that natural or man-made conditions limit attainment of higher standards. Even the SD standards are not currently met. Oily sheens are common on the water surface during low tides, dissolved oxygen levels are low and surface contamination has been identified. Sediment quality is also low. Ongoing CSO discharges have resulted in extensive deposits of settled solids, particularly in the more sheltered areas near the upper end. Some parts of the canal bottom are exposed at low tide. Another particularly important contributor to sediment quality problems is the presence of three former manufactured gas plant (MGP sites) along the length of the canal. Although all three MGPs have been closed for decades, coal tar-impacted sediments have been identified at numerous locations along the length of the canal. The three MGPs are all covered by cleanup agreements with NYSDEC, and are at various stages of investigation,remedy selection and implementation. The Fulton Works, immediately east of the canal at its northern extremity, is in the Remedial Investigation process. The Carroll Gardens site (also widely known as Public Place) is in the Brownfield Cleanup Program, and is slated for remediation and redevelopment as a mixed commercial/residential project. The former Metropolitan works, immediately south of the 9th Street bridge, was partially redeveloped under a Voluntary Cleanup Agreement in 2002-2003. However, more work remains to be done part of the MGP facility lies beneath an active retail building. A Remedial Investigation began in March 2010. Numerous oil storage and handling facilities, asphalt plants,manufacturing facilities and chemical, paint, fertilizer and plastic manufacturers have, or continue to, operate along the canal.

Health Problem: People using the canal for recreational purposes such as swimming and boating may come into direct contact with chemical contaminants and harmful biological organisms. People should avoid any activity that would result in swallowing or accidentally ingesting Canal water. Additionally, people using the canal for any purposes should wash their hands or shower after contacting the water, especially before eating and at the end of the day. Those people who are considering eating fish and shellfish caught in the Canal should follow the NYSDOH consumption advisory for fish and shellfish taken from the Upper Bay of New York Harbor. This advisory specifically includes:

GOWANUS CANAL SITE (Continued) **S110487590**

The NYSDOH recommends that women of childbearing age and children under the age of 15 not eat any fish from the Canal. Other people should eat no gizzard shad, white perch and crab hepatopancreas and crab cooking liquid. Also, other people should eat no more than one meal per month of American eel, Atlantic needlefish, bluefish, rainbow smelt and striped bass. People should eat no more than one (1/2 pound) meal per week of all other fish species except blue crab meat (six crabs per week).

FRS ID: 110001574314
Action Name: NORMANDY FRENCH CLEANERS
Facility Name: NORMANDY FREMCH CLEANERS
Facility Address: 195 PARKSIDE AVENUE
BROOKLYN, NY 11226
Enforcement Action Type: CAA 113A Admin Compliance Order (Non-Penalty)
Facility County: KINGS
Program System Acronym: ICIS
Enforcement Action Forum Desc: Administrative - Formal
EA Type Code: 113A
Facility SIC Code: 7216
Federal Facility ID: Not reported
Latitude in Decimal Degrees: 40.655102
Longitude in Decimal Degrees: -73.961316
Permit Type Desc: Not reported
Program System Acronym: 9718

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

FORMER O.Z. ELECTRICAL (Continued) **S108057803**

Record Add: 06/10/2011
Record Upd: 08/24/2012
Updated By: DPKAPLAN
Site Description: LOCATION: The Site is located at 198 Douglass Street in Brooklyn, between Bond Street and the Gowanus Canal. SITE FEATURES: The property is 0.18 acres and features a one-story warehouse building which is currently used for the storage of art and antique goods and furniture. CURRENT USE/ZONING: The property is currently used for the storage of antique goods. It is zoned for manufacturing use. HISTORICAL USES: The Site has historically been used for a variety of industrial purposes. Prior to its current use, the Site was owned and operated by Paramount Plumbing (approx. 1995 to 1998) and O.Z. Electrical Manufacturing Company Inc. (approx. 1960 to 1995). O.Z. also formerly owned and operated on the adjacent property (196 Douglass) as well as three buildings to the west, across Bond Street (262 Bond Street). Earlier owners/operators include P.H. Hughes Lime, Brick and Lath Yard (approx. 1887 to 1900); a gravel/crushed stone yard (approx. 1900 to 1930); and the Knickerbockers Ice Company, which included a machine shop (1930?s). SITE GEOLOGY AND HYDROGEOLOGY: Fill material consisting of sand, silt, gravel, and construction/demolition debris has been encountered to approximately 10 feet below ground surface (fbgs). Beneath the fill material (10 to 36 fbgs) is a sequence of inter-bedded silt, clay, sand, and peat layers atop fine to coarse-grained sand to a depth of approximately 48 fbgs. Groundwater has been encountered at depths ranging from 1.5 fbgs to 9 fbgs, during various investigations. USEPA Superfund investigations in the area of the Gowanus Canal have found that shallow groundwater flows toward the canal at both low and high tide. Intermediate groundwater generally flows upward toward the canal. Based on water chemistry measurements in surface water and groundwater (collected during Superfund investigations of the Gowanus Canal), it was concluded that infiltration from the canal controls water quality in shallow wells adjacent to the canal, with decreasing influence with distance from the canal. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.
Env Problem: NATURE AND EXTENT OF CONTAMINATION: A Site Investigation performed in April/May 2012 confirmed that tetrachloroethene (PCE) previously detected in groundwater was limited and not indicative of a release of hazardous waste. GROUNDWATER: In 2006, PCE was detected in groundwater at a concentration of 1,600 parts per billion (ppb) and benzene at 14 ppb, from one grab groundwater sample collected from one boring. In the 2012 Site Investigation, groundwater was sampled from four groundwater monitoring wells. Groundwater samples were analyzed for volatile organic compounds (VOCs). Several VOCs were detected; however, the only contaminants detected at concentrations that exceed standards were isopropylbenzene (detected at 5.1 ppb compared to the standard of 5.0 ppb) and methyl tertiary butyl ether (MTBE) (detected at 10.7 ppb compared to the standard of 10 ppb). The standards cited for groundwater are the NYS Ambient Water Quality Standards and Guidance Values for Water Class GA from NYSDEC Technical & Operational Guidance Series (TOGS) 1.1.1. SOIL: The 2012 Site Investigation included soil sampling from 7 soil borings and analysis for VOCs. The only contaminant detected above standards was isopropylbenzene, detected at 3.91 parts per million (ppm) compared to the CP-51 Supplemental Soil Cleanup Objective for protection of groundwater of 2.3 ppm. A few VOCs were detected on site in the 2006 soil boring, but at very low concentrations. SOIL

FORMER O.Z. ELECTRICAL (Continued) **S108057803**

VAPOR: In soil vapor, trichloroethene (TCE) was detected in two samples at a maximum concentration of 200 micrograms per cubic meter (ug/m3); however TCE was not detected above reporting limits in concurrent indoor air samples. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.

DEC Memo:	THERE WAS SOIL SAMPLE TESTING AND GROUND WATER TESTING. THERE WAS DIFFENENT MATERIAL THAT WAS FOUND AT THE SITE. THERE ARE TRACES OF VOLITALE ORGANIC COMPOUND, TETRACHLOROETHENE,ETHYLBENZENE, XYLENE WAS FOUND IN SOIL SAMPLE. THE WATER SAMPLE HAD BENZINE, TETRACHLOROETHENE. THEY WERE DIGGING AT THIS SITE.
Remarks:	DEC Piper contacted Caller Jeff Flannigan. He will copy report and analytical and send to DEC. 9/8/06- DEC Piper reviewed subsurface investigation report. AS per report, investigaestigation was due to the presence of petroleum vaprs inside work area. 1 boring was completed. Groundwater was encountrered at 9 feet bgs. A water sample was collected at 34 feet which contained elevated levels of benzene, PCE and a variety of SVOCs were above standards. A soil sample was collected at 36 feet bgs which indicated trace levels of clorinated solvents. Indoor air samples revesaled elevated levels of petroleum and clorinated solvents were detected above standards. Due to the soil and gw samples not being collected at the gw interface, the concentrations observed where collected, and indoor air quality, additional investigation is warranted. Case referred to remediation. 9/20/06- DEC Piper . Spill transpferred to remediation as per Austin on 9/8/06. 11/13/06 - reviewed site assessment report, found PERC in GW. Need to contact consultant to get more delineation of the GW contamination. - KST 4/11/08 - This spill has been transferred to D. Kaplan. Since previous reports were missing the representative of the site was contacted and the subsurface investigation report was obtained from the environmental consultant. 5/7/08 - Met the environmental consultant (Djamel Lekmine, AMEC), architect Jeff Flannigan who was acting as representative of the owner (was in charge of construction at the time the spill was reported), and attorney for the owner at the site. The entire lot is covered with a building with slab on grade finished floor. The building serves as a storage facility for fine art. It was explained that additional investigation was necessary. 5/19/08 - Environmental consultant sent a proposed work plan for additional investigation which was very

FORMER O.Z. ELECTRICAL (Continued) **S108057803**

incomplete (see edocs). 5/27/08 - A letter was sent to the environmental consultant describing additional requirements for a subsurface investigation. 8/26/08 - Attorney for the owner has been trying to work out a site access agreement with the owner of the adjacent property (196 Douglass St). Representative for the owner of 196 indicated that they are unwilling to grant site access. 9/26/08 - After negotiations with the owner of 196 Douglass for site access proved unsuccessful, DEC attorney (John Urda) sent a letter to the owner siting statutory authority for site access for investigation work. See edocs. 5/11/09- The work was performed February 10th and 11th. The report has not yet been received. 6/18/10-Vought-Received inquiry from DEC Austin as to whether Site should be transferred to Vought as P-Site . Vought discussed with DEC O'Connell and spill reassigned from Kaplan to Vought and entered into P-Site Tracking Spreadsheet. 2/8/11-Vought-Spill transferred from DEC Vought to DEC Kaplan for further action. 6/10/11 - Transferred to hazardous waste program as potential hazardous waste site (P site 224152) 3/30/21 - closed - cross-reference site no 224152. (JHO)

Record Updated Date: 04/19/2023
Update By: WBBENNET
Site Description: This site is identified as the offsite component of the current Brownfield project located at 473 President Street, site #C224220. Location: The on-site 473 President Street site is located in an urban area in Brooklyn, Kings County. It is located in the southern portion of Block 440 Lot 12. The Gowanus Canal is approximately 350

473 PRESIDENT STREET - OFF-SITE (Continued) **S101508966**

ft to the west of the site. Site is bounded by a shuffleboard club to the north, an e-waste recycler to the west, President Street to the south, and a casket company to the east. Fulton Works MGP site is 1 block to the north. Site Features: The site was comprised of a 1 story warehouse that was recently demolished. Current Zoning and Land Use: The site is an active warehouse for a bicycle company, a furniture maker, and a showroom for a light designer. It is currently zoned for M1-2, commerical to light industrial. The nearest residential area is across President Street. Past Use of the Site: The on-site has an industrial history back to the 1880s. In 1886 to 1928, the site was a sash and door factory and later a trim and planing mill with machine shop and boilers. In 1938 the Coca-Cola Bottling Co was the operator with two gasoline USTs. In 1969 to the 1990s, the site was occupied by Dolin Metal Manufacturing Co. From 1993 to 2007, the building was occupied by manufacturing and storage. Currently the site is occupied by a furniture maker, a lighting designer, and a bicycle retailer. There is an open spill from a failed tank test which may have resulted in BTEX-contaminated soils on-site. The spill number is 9412605. Site Geology and Hydrogeology: The soils of the area consist of urban fill for the top 10 feet. The groundwater is approximately 10 foot below ground surface at the site. Based on the topography of the land, the local groundwater flows in a westerly direction, towards the Gowanus Canal.

Env Problem: The on-site investigation yielded the following results: Soil was analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs)(only during the pre-application investigation), pesticides, and metals. Groundwater was analyzed for VOCs, SVOCs, pesticides, and metals. Based upon investigations conducted to date, the primary contaminants of concern for the site include TCE, BTEX (Benzene, Toluene, Ethylbenzene, Xylene), naphthalene, Polycyclic Aromatic Hydrocarbons (PAHs - a class of SVOCs), Lead, Mercury, and Arsenic. Soil Soil borings were installed and samples collected as part of the remedial investigation. Concentrations exceeding the Commercial SCOs were found for PAHs, arsenic, lead, and mercury. Primarily the top 10 foot of material, known as historic fill, exceeds the SCOs for PAHs, lead, mercury, and arsenic. Spatially, the native materials were most contaminated in the northern corner near a suspected gasoline tank with trichloroethene (TCE) and BTEX. Groundwater TCE and its associated degradation products are found in groundwater on the northern half of the site moderately exceeding groundwater standards (5 ug/L) with a maximum concentration of 1300 ug/L. Fuel breakdown products (i.e. BTEX and naphthalene) were found in groundwater on the northern portion of the site at concentrations exceeding the standard near the suspected gasoline tank. Soil Vapor TCE, tetrachloroethene (PCE), and cis-1,2-dichloroethene (DCE), were detected in sub-slab soil vapor at significantly elevated concentrations.

Health Problem: Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is potential concern for area buildings and investigations are underway.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/19/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

PFAS 3: PFAS Environmental Site Remediation List

Per- and Polyfluoroalkyl Substances (PFAS) are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Fluoropolymer coatings are blends of resins and lubricants used in products such as water-repellent clothing, furniture, adhesives, paint and varnish, food packaging, heat-resistant non-stick cooking surfaces and insulation of electrical wires. Chemicals in this group include perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS).

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

UTM Y (Meters):	4503819.5
Elevation:	69 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

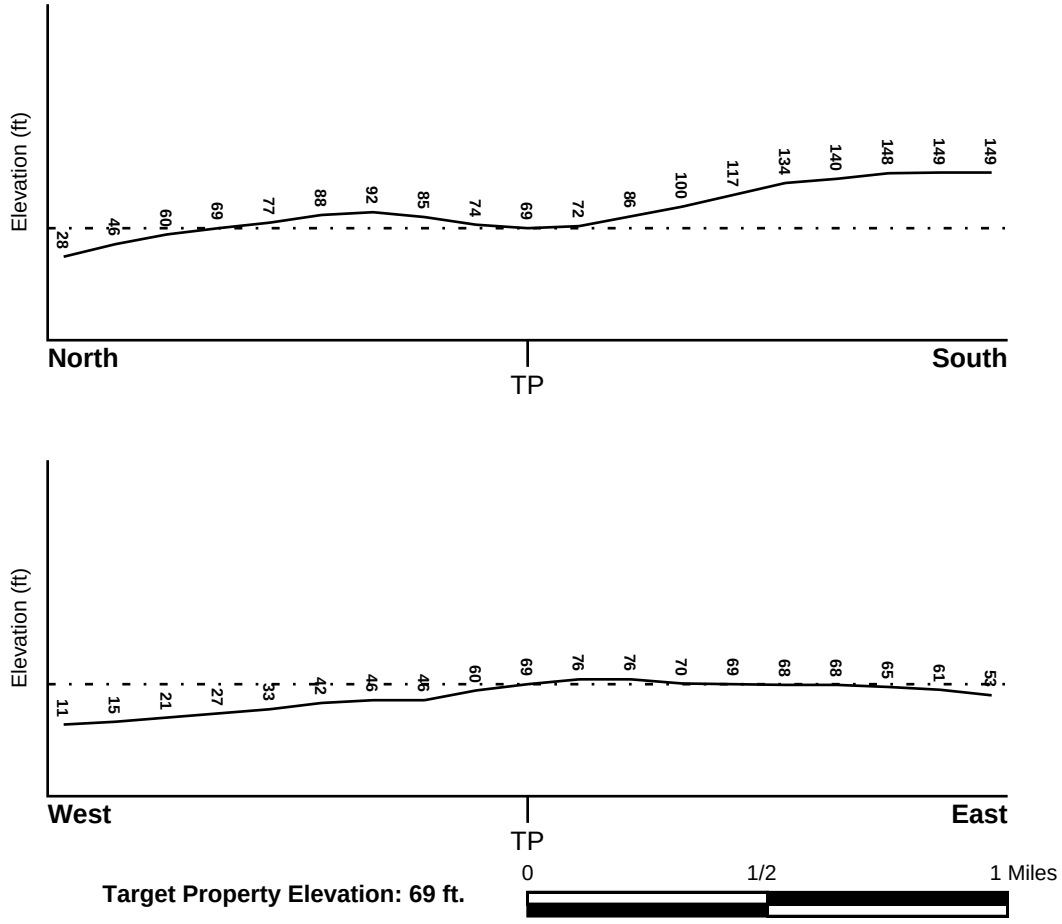
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 69 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970211F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

3604970073B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles North
Site Name:	Naval Station Ny
Site EPA ID Number:	NY5170022250
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	14 feet in a well located 1 mile southeast of the site.
Hydraulic Connection:	Information is not available about the hydraulic connection between the surficial aquifer (upper glacial till) and underlying aquifer(s). Bedrock is present at an estimated depth of 100 feet.
Sole Source Aquifer:	A sole source aquifer is persent at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Morristown, NJ 07962
Contact: CAROLINE.DAVIS

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by WSP USA, Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 09/19/2023 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 09/19/2023 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 18 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/07/2023 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 06/26/2023 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/07/2023 has revealed that there are 62 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 25 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS UST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there are 107 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/05/2023 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
FULTON WORKS	DEGRAW STREET AND NE	W 1/2 - 1 (0.621 mi.)	492	1499
FULTON MUNICIPAL WOR	NEVINS, DEGRAW AND S	W 1/2 - 1 (0.637 mi.)	CA498	1514

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 4 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE

GOWANUS CANAL (Continued) **1010782149**

LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DER Facility ID:	270534
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND There was a second spill number which was closed for this same event: See notes on spill #0109974 Gregory Suhr of Fenley & Nicol said there was a gross failure of the Tank test. 600 gal in tank. Probably leaking to the soil. Tony Caggiano of Liro says tank will be pulled soon 11-08-2005 The site was handled under DDC CO. J. Kolleeny was a PM for the site. This spill was under S. Sangesland name. See spill 9705043. AZ 1-19-2006 There was a heating oil spill at the site which was never investigated. DDC refused to investigate the site under the existing contract but stated that the site will be investigated under the future contract. Site should be investigated as soon as new contract is in place. AZ 4-11-2006 The site was reclassified as P0 as per Koon Tang request. AZ 8-6-2010 Received SSIP prepared by LiRo on July 20, 2010. Discussed the site with S. Frank on 8-5-2010. Requested that 2 wells and 3 borings be installed around the tank. LiRo originally proposed 4 borings and 1 well. If soil is contaminated all borings should be converted into wells. The plan is approved. AZ 8-10-2010 Received an e-mail from S. Frank (LiRo): Alex, Thank you for your quick response to our SSIP submitted for the EC 219 heating oil tank spill. As we discussed during our phone conversation on August 5th, LiRo will add at least one more monitoring well to the boring/well program. If field screening results indicate contamination at other locations, LiRo will install additional wells. LiRo understands that additional wells may be required if laboratory analytical results indicate elevated contaminant levels at locations that were expected to be clean based on field screening results. LiRo will collect a minimum of two soil samples at each location for laboratory analysis. Deep borings will

ENGINE CO. 219/LADD. CO. 105 FDNY -DDC (Continued) **S105055050**

be sampled at the high PID interval and at the water table. Please call or email back if you have any additional questions or concerns. AZ 7-29-2011 Reviewed the Investigation Report dated January 7, 2011, and received on July 15, 2011. The following e-mail was sent to S. Frank/F. Ashkan/V. Brevdo: I have reviewed the Investigation Report dated January 7, 2011, and received on July 15, 2011. The report stated that the spill report was filed when 3,000 gal heating oil UST failed the tightness testing. The tank was closed in place in 2002 but not replaced. DEC approved the SSIP for this site on August 5, 2010. LiRo finished the field work in October 2010. Only one well out of two wells planned could be installed due to difficult drilling conditions. Five soil borings were advanced. None of the collected soil samples exhibited contamination. Groundwater sample was collected and the analytical results for VOC/SVOC were non-detect. Based on the documentation provided to date, spill case 0102628 has been closed. All monitoring wells associated with this project should be closed according to the Department's Groundwater Monitoring Well Decommissioning Procedures . The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was not addressed by this evaluation. II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval. III. Information received, in whole or in part, after the Department's spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; of the site; or IV. Fraud in obtaining this approval for inactivation. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department's files regarding this release may not be maintained indefinitely. AZ

DER Facility ID:	508410
DEC Memo:	07/14/17 - Lakhani Milenium Tank Peter (718-678-0148) performed a tank test. The tank failed. He suspects a dry leak with an issue with either the manhole cover or line. The tank is a 2000 gallon #2 fuel oil UST. The customer is out of the office today. Peter will isolate the lines on Monday and will conduct another test to pinpoint the location of the leak. The client is John Foran (Spohia Storage, 212-873-3600, foranforan@gmail.com). PBS# 2-094528 John Sofia 491 Bergen St Corp 475 Amsterdam Ave New York, NY 10024 TTF sent to the above address. Uploaded to D2. 07/17/17 - Lakhani Spoke to John and informed him of the requirements. 07/19/17 - Lakhani Milenium Tank Pete called to inform that he isolated the lines and the tank failed. He informed that the top of the tank is rotted. The tank will be immediately emptied and soil samples will be taken from beneath the tank to determine if soils need to be excavated or the tank can be abandoned. The tank is located beneath the stairs and adjacent to the foundation wall, so it is difficult to remove. Soil samples results will be sent once returned. John is considering either installing an AST or converting to gas. 07/31/17 - Lakhani Peter provided an update regarding the remedial activities. Samples were taken from the bottom of the tank and are currently being analyzed. Samples will be sent to DEC Lakhani upon receiving them from the laboratory. John has decided to have a 2000 gallon AST installed on the property. 09/01/17 - Lakhani Two (2) samples were taken at the bottom of the rotten tank. There were no VOC or SVOC exceedances. The tank was abandoned by being filled with slurry. Pete will send pictures of the tank, a summary letter and disposal manifests. 10/10/17 - Lakhani Closure Letter (Millennium Tank Maintenance, 10/09/17) - Millennium Tank Maintenance emptied the tank, performed a tank cleaning and isolation test. The isolation test found that the tank had a high leak and all lines were tight. Millennium Tank core drilled through the bottom of the tank and retrieved two (2) soil samples. Results within regulatory limits. The tank was filled with concrete slurry and

PETER F REILLY STORAGE INC (Continued) **U001832434**

closed the tank. Spill is closed.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 10/3/03 tipple sent letter requesting documentation 3/1/04 TIPPLE SPOKE WITH HPD REP. BORINGS TO reveal subsurface conditions//if clean and tank registered for abandonment...nfa to follow/// 10/21/05 Second submission of spill closure request received and reviewed by Eaton in Albany. First submission received 09/04. 10/25/05 Eaton spoke with Stephen Arthur of TDX Construction, the contract manager, to clarify discrepencies in the request. The original tank had failed tank tightness test in October of 2001. In March of 2003 a new 1500 gallon underground storage tank and associated plumbing were installed. The old 1500 gallon above ground storage tank was cleaned, purged, and removed. PBS number 2-601145. 10/25/05 Spill closed. DE

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	10/27/04. S. Sagesland attempted to contact Mrs. Smith over the phone several times. However, the phone is busy. 10/28/04. J.Krimgold spoke to Petro Oil (Karen)@ (516)686-2027. She stated that the castomer complaint about no oil in the tank just a few days after delivery. 12/20/04. J.Krimgold attempted to contact the RP (Mrs. Smith). However, the phone is busy. J.Krimgold spoke to Petro Oil. According to their records a new AST was installed at this site on 11/26/04. No info regarding the old tank. J.Krimgold spoke with Mr. Ralph Litao (Trade Service) 917-881-5554. He stated that his co. excavated the top of the tank, pumped out about 450 gal of oil and then closed the tank in-place by filling it with concrete slurry after cleaning up the tank. The tank appear to be in a good condition with no apparent holes or bad seams. The problem was with a gloged product line. Mrs. Smith assumed that oil is not comming to the boiler because there are no product in the tank and that product was leaked out. NFA.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	coming off 24 hr program where they can't clean it up within that time. 2 pints of unknown oil is contained in the manhole.
Remarks:	e2mis no. 151592: 1/2/04 2006hrs - Charles Lugo, # 03594 Mech A Env. Ops reports while on routine flush Acct # 44557 found 2 pts unknown oil on 1 gallon water in corner of structure - MH2731. Sample taken. 1/3/04-0230HRS LAB RESULT RETURNED 110 PPM. UPDATE 03-JAN-2004 15:35 HRS. Environmental Operations crew removed 7 drums of debris, and Astoria tanker took 250 gallons of liquid from the structure. The structure was washed with 10 gallons of 760 biogen. Structure floor left soaking with bio-gen 760. 1/5/04 #9 inspected equipment in MH 2731 for leaks but did not find any. The crew cleaned and double washed the structure with safe wash, and 760 biogen.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Contact Name: DEBBIE RABBINO BHATT
DEC Memo: Tank overfill on a 1080gal. UST.... impacted soil. One 55gal. drum of contaminated soil and
absorbents were removed from the site. Clean up was believed to have been done that same day 6/6/07.
Not reported
Remarks: 06/22/07-Vought-Off hours responder. Vought called Frank Cherena(631-232-2600) for more information. Vought left message to return call to DEC. Vought called Debbie Bhatt and left message to return call to DEC. 07/17/07-Vought-Received message from Bhatt (718-923-8651) and returned call and left message to return call. 9/1/10 - Raphael Ketani. The spill took place on 6/6/07, but was reported on 6/21/07. It consisted of an overfill of a 1,080 gal. UST. Twenty five gallons of #2 oil spilled onto the ground. Allegedly, the contaminated soil was dug up the day of the spill. The site is block and lot 1127 and 50. It was a private residence. It was sold on 9/5/06 by David Bijur of 123 7th Avenue, #216, Brklyn. to AY 473 Dean, LLC, c/o Forest City Ratner Companies, One Metrotech Center North, Brklyn, 11201. There is no paper file and there are no E-docs. Frank Cherena of ROUX Associates (631) 232-2600 was the environmental company contact. Debbie Rabbino Bhatt (718) 923-8400 was the contact for the owners. I tried calling Ms. Bhatt, but the phone number wasn't working. I did make contact with Mr. Cherena. Mr. Cherena said that ROUX did not do the cleanup themselves. He said that Ferrantino Oil was hired by the owners to do the work and came out immediately after the spill. The overfill resulted in oil coming out the vent pipe in the back and spilling onto the ground. The surface soil was removed, but end point samples weren't taken. Mr. Cherena went on to state that the building has since been demolished as part of a much large project involving Atlantic Yards. He said that this larger project involves several other sites which are all under the management of Andre Obligado of Unit B of DER. The tank is still in the ground and it will be removed, along with the contaminated soil, once the construction moves over to this part of the project. They will dig down 20 or 30 feet. The tank itself has been cleaned out and the sludge was hauled away. He said that he has the paper work for this part of the job and he will send it to me. 9/2/10 - Raphael Ketani. I called up Ferrantino Fuel Corp., 176 9th Street, Brooklyn, NY, 11215. I spoke to the dispatcher, Dennis Goldstein (718) 832-6700 about the spill and the cleanup of the contaminated soil. He couldn't find it in his computer system. So he will call me back later with the information. 11/23/10 - Raphael Ketani. I tried to contact Mr. Cherena of ROUX Associates (631) 232-2600 regarding the documentation for the cleaning of the fuel tank. I contacted Mr. Goldstein of Ferrantino Fuel and asked him for the documentation which indicates that the 25 gals. spill had been cleaned up. I gave him the site address, but he couldn't find it in his database. He will call me back with the information. 12/9/10 - Raphael Ketani. I spoke to Mr. Goldstein again. He said that he had given the task of looking for the cleanup documentation to a worker in his office. He said that he will talk to this person and get back to me. 12/14/10 - Raphael Ketani. Michael of Ferrantino Fuel called. He said that he remembered the job. He said that the overfill came out the vent and onto the soil and onto concrete. He added that Ferrantino did the entire cleanup. Michael also mentioned that two years after a new boiler was

COMMERCIAL BUILDING (Continued) **S106868719**

installed in the building, the owners had the building knocked down. Michael said that he will send the DEC a cover letter explaining what had happened and how the spill had been cleaned up, along with a diagram showing the spill area and a manifest for the contaminated materials that were removed. I told him that will be fine. 12/17/10 - Raphael Ketani. Mr. Cherena of ROUX Associates (631) 232-2600 called and said that he had the overfill soil spill report and the tank cleanout and removal report for the site. He will send them to me by e-mail. Mr. Cherena sent me an e-mail later today along with three documents (see e-docs): As discussed, here are the documents that you requested, along with a synopsis of work at the above spill Site. On June 6, 2007, Ferrantino Fuel Corporation overfilled the 1,080-gallon UST at 473 Dean Street, which resulted in the release of approximately 25 gallons of #2 fuel oil to soil located adjacent to the fill port of the UST. Ferrantino applied 10 bags of absorbent powder to soak up the released #2 fuel oil. Subsequently, one fifty-five gallon drum of waste (soil and oil-soaked absorbent powder) was removed from around the spill area and was transported to American Biomass located in Waterboro, South Carolina for proper disposal (Attachment 1). The proximity of the UST to the building prevented its removal prior to the building demolition; and therefore, in June 2010, ABC Tank Repair & Lining was contracted by Ferrantino to pump out and scrape clean the interior of the UST in order to prepare the site for demolition (Attachment 2). Following demolition of the building (August September 2010), Roux Associates contracted Brookside Environmental to complete the cleanup and removal of the UST. Brookside Environmental removed the UST from ground, accessed the tank interior for cleaning, and removed 2 drums of sludge/sediment for offsite disposal in October 2010. Following completion of this work, Brookside Environmental issued an New York City Fire Department Affidavit certifying final cleanout and removal of the UST. Copies of all manifests and affidavits associated with the work completed by Brookside Environmental are provided in Attachment 3. The tank was then removed off-site for scrap disposal by Breeze Demolition (Demo Contractors). Following removal of the tank, no visual soil contamination was observed in this area. 12/20/10 - Raphael Ketani. I reviewed the letters that Mr. Cherena had sent regarding the cleanup of the overfill in 2007 and the removal of the 1080 gal. fuel tank and the removal of the replacement 1000 gal. As the 06/18/07 Ferrantino letter and manifest indicated that the spill had been cleaned up, and as the ABC Tank and Brookside Environmental letters indicated that the two tanks had been removed, I have determined that the oil contamination had been successfully removed. Therefore, there is no threat to the public or the environment. So, I am closing the spill case.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Spiller Name:	Not reported
Spiller Company:	BLOCK 1129 PARKING LOT PROJECT
Spiller Address:	Not reported
Spiller Company:	999
Contact Name:	SIN SENH
DEC Memo:	found old ust, tank pulled /loss of product to soil/investigation underway
Remarks:	10/17/12- Zhune called Sin Seng. Could not find him and left message in his voice mail. 10/25/12-Zhune spoke to Sin. he said. They found a tank with acid pH=2. It cwas classified as Hazardous that is becouse they call the spill. They are in the process to send the Closure Spill Report to request close the spill base on the remediation perfomed at this site. 11/21/12-Roux Associates emailed a spill closure letter dated November 15,2012. On August 24, 2012 a 1500-gallon acid UST was discovered durung excavation and grating activities for the contruction of a parking lot. During the removal, Roux Associates observed that the bottom of the UST had corroded away. Soil located beneath the UST and contined within the vault appeared to exhibit a chemical odor/staining, no evidence of petroleum contaminated soil was observed during the UST removal. Two soil samples were collected from the soil within the vault for waste characterization analysis. Soil was excavated and sockpilled. The waste Characterization analytical results indicated no exceedance of CP-51 with exception of few low-level of metal exceedance (lead, chromium, cooper and nickel). Also indicated that the excavated soil had a pH < 2. Roux collected endpoint samples along the west sidewall of the excavation, no samples were collected along the north, east and south sidewalls or bottom of the vault since this portion of the vault were intact and were to remain in place. The pH results were within accetables range. Spill Closed.

DEC Memo:	about 20 gallons of transformer oil spilled into about 180 gallons of water. the spill has been contained and is in the process of being cleaned up.no smoke,fire, seweres, or water ways were affected. historical records from 1997 state 1ppm.
Remarks:	e2mis 152478 Kelly Robertson #01173 OS, Networks reports while on location found 200 gallons of transformer oil in TM1112. No sewers or waterways appear to be affected. Unit is on B21 fdr. Historical records indicate 1 ppm dated 3/19/97. Sample will be taken when feeder is off system. Update - 3/12/ Ordered over 50 tanker for 3pm shift. EPA # NYP004118717. Update - 1433hrs - 3/12/ K. Robertson OS reports env. stop tag # 30067 placed. Took sample from stucture. Cannot get access to sample structure at this time. Revising estimate from 200 gallons of oil to 20 gallons of oil and 180 gallons water.

CONE ED STRUCTURE 1112 (Continued) **S106383730**

Will pressure test unit at this time. Checked other vaults which are TM2103 - There is no unit in structure. Structure was cleaned on 3/2/04 incident # 151799 unit was removed that date. There is water in this structure. No oil. TM2022 - structure is dry. TM1095 - water in this structure, no oil. Update - 3/12/04 1457hrs Checked mh records which indicates there is a drain to mh. Update - 3/12/04 1503hrs Kelly Robertson reports pressure tested unit and unit failed. In TM1095 it appears that there is a pint of oil on 200 gallons water which is coming thru weep hole. In TM2103 it appears that there is a sheen on 300 gallons water which is coming thru weep hole. Update - 1543hrs - 3/12/04 Ed Silano called and requested historical pcb count on TM1095 - found to be 1 ppm dated 3/1997. Update - 1549hrs - 3/12/04 TM2022 - structure is dry. (fdr 2B06 - historical records indicate 6ppm dated 10/00) LAB RESULTS RECEIVED. 04-01943. TM1112 - < 1.0 PPM TRANSFORMER IN TM1112 - < 1.0 PPM TM2130 - < 1.0 PPM TM1095 - 9 PPM K. HUFFORD REPORTS TM1095 & TM2130 WERE BOTH DOUBLE WASHED WITH BIO GEN 760. NO SUMPS OR DRAINS IN EITHER STRUCTURE. M. ADAMO - B.Q.E., REPORTS 330 GALS OF DIELECTRIC FLUID DRAINED FROM TRANSFORMER BY ASTORIA TANKER. PLATE ON TRANSFORMER READS CAPACITY OF 340 GALS OF DIELECTRIC FLUID. THIS LEAVES 10 GALS OF DIELECTRIC FLUID UNACCOUNTED FOR. On 3/13/04 at approximately 20:00 hrs Env crew washed floor of TM1112 with BioGen 760 after Astoria tanker removed oil from structure so that NW crew could drain unit. ENV. OPS., REPORTS 6 BARRELS OF OIL SOAKED DEBRIS REMOVED FROM STRUCTURE. STRUCTURE DOUBLE WASHED WITH BIO GEN 70. BARRELS BROUGHT TO 3RD AVE YD UNDER 1 TRIP RULE (NON HAZARDOUS PCB) FOR PROPER DISPOSAL. Environmental Ops employee J. Lipori cleaned the empty TM-2130 and Equipment Group installed a transformer. The transformer in TM-1112 (Feeder 2B21) has not been removed and the environmental tag remains in place pending the transformer removal. C. LALABERRA REPORTS, DOUBLE WASHED TM1112 AND V,1095,V20 USING SLICKS, REMOVED TAG# 30067 AND JOB IS 100% COMPLETED. PER FDR REP H. BROWN UNIT WAS REMOVED ON 4/6/04.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	F001

AYDC PHASE II DEVELOPMENT COMPANY LLC (Continued) **1000256070**

Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U226
Waste Description: Ethane, 1,1,1-Trichloro- (Or) Methyl Chloroform

Hazardous Waste Summary:

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: P029
Waste Description: Copper Cyanide (Or) Copper Cyanide Cu(Cn)

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: P098
Waste Description: Potassium Cyanide (Or) Potassium Cyanide K(Cn)

Waste Code: P099
Waste Description: Argentate (1-), Bis(Cyano-C)-, Potassium (Or) Potassium Silver Cyanide

Waste Code: P106
Waste Description: Sodium Cyanide (Or) Sodium Cyanide Na(Cn)

Waste Code: U228
Waste Description: Ethene, Trichloro- (Or) Trichloroethylene

BROWNFIELDS:

Name:	CINDERELLA 248 LLC - OFF-SITE
Address:	248 FLATBUSH AVENUE
City,State,Zip:	BROOKLYN, NY 11217
Program:	BCP
Site Code:	477008
Acres:	Not reported
HW Code:	C224160A
SWIS:	2401
Town:	New York City
Record Added Date:	12/21/2012
Record Updated Date:	01/13/2023
Update By:	DKMACNEA
Site Description:	This is an investigation off-site from the BCP site located at 248 Flatbush Avenue in Brooklyn, Kings County (Block 936, Lot 12). The following information pertains to the BCP site. Site Location: It is bounded to the east by Flatbush Avenue, to the south by NYCDDC's Eastern Parkway Project Resident Engineer's Field office, to the west by a courtyard for a restaurant, and to the north by a liquor store and restaurant. Site Features: The site is a one-story building with a full basement that encompasses the entire property. It is approximately 2,300 square feet and is currently vacant. There is no parking associated with the Site. The topography of the site is generally flat and the surrounding area slopes gradually to the northwest. Current Zoning/Use(s): The site was most recently used for commercial purposes. The buildings to the north appear to have

CINDERELLA 248 LLC - OFF-SITE (Continued) **S128906163**

residential apartments located on the floors above the businesses. Historical Uses(s): The building was constructed between 1888 and 1906 and most recently housed a dry cleaner and shoe repair facility for the last twenty years. Previous uses included clothing, book store and the sale of dry goods. Site Geology and Hydrogeology: Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The nearest body of water is the Gownaus Canal located approximately 3,400 feet to the west-northwest of the site that flows into the Gowanus Bay. The site is serviced by city water provided by NYC Municipal Water.

Env Problem:	Soil - Based on sampling conducted to date, all results for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and polychlorinated biphenyls (PCBs) are below the Part 375 residential use SCOs. Groundwater - In 2014, PCE exceeded the NYS groundwater standard at each of the three on-site wells, ranging from 6.4 to 25 parts per billion (ppb). The maximum PCE detection was from a location in the basement directly below the former dry cleaning machine. No SVOCs, pesticides, PCBs or metals exceeded the NYS groundwater standards. Soil Vapor - In August 2011, an on-site vapor intrusion investigation was conducted. PCE was detected in the indoor air, ranging from 1.7 ug/m3 to 24.4 ug/m3, and in the sub-slab, ranging from 4,010 ug/m3 to 20,800 ug/m3. In 2014, an off-site soil vapor, sub-slab soil vapor, and indoor air investigation was conducted at the adjacent court yard. The maximum concentration of PCE in soil vapor was 13 ug/m3. Indoor air and sub-slab soil sampling were performed at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab was 3.2 ug/m3 and 440 ug/m3; and indoor air was 3.6 ug/m3 and 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab was non-detect and 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Post-Remediation: In 2016, as part of the on-site remedy, an SSDS was installed to address soil vapor intrusion at 244, 248, 250, 252 and 254 Flatbush Avenue. Quarterly system monitoring shows that the SSDS is operating properly. On-site sub-slab and indoor air will be conducted in early 2018. Off-site soil vapor intrusion sampling will be conducted off-site by NYSDEC in 2018.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Update By:	DKMACNEA
Site Description:	Site Location: The site is located at 248 Flatbush Avenue in Brooklyn, Kings County, and is Block 936 and Lot 12. The site is an approximately 0.05 acre. It is bounded to the east by Flatbush Avenue, to the south by a commercial building, to the west by a small courtyard and residences, and to the north by a liquor store and restaurant. Site Features: The site is a one-story building with a basement that encompasses the entire property. It is approximately 2,300 square feet in area and a fitness center is located in the basement floor. There is no parking associated with the site. The topography of the site is generally flat and the surrounding area slopes gradually to the northwest. The building is serviced by municipal water and sewer. The sewer connection is present in the southeast corner of the basement. The building was formerly heated via fuel oil-fired heating equipment located in the boiler room of the basement. An old 1,000-gallon fuel oil AST was emptied, cleaned, and properly abandoned in October 2005. Current Zoning/Use(s): The site is located in a R7A residential zone with a C2-4 commercial overlay. This zoning permits both residential and commercial uses. The Site is currently being used for commercial purpose. Historic Uses(s): The building was constructed between 1888 and 1906 and housed a dry cleaner and shoe repair facility for the last twenty years. Previous uses included a dry goods store, book store, closet/wardrobe business and a woodworker. In 2005, a soil and

CINDERELLA 248 LLC (Continued) **S128906158**

groundwater investigation focused on an historic leak of cooling water from the first floor dry cleaning machine into the basement boiler room. It was concluded that subsurface soil and groundwater beneath the boiler room were impacted by volatile organic compounds (VOCs). Contaminated soil was excavated to a depth of 5 feet below the basement floor, followed by confirmation sampling. Soil results were below the soil cleanup levels used at that time (TAGM 4046). Site Geology and Hydrogeology: The topographic elevation of the site vicinity is approximately 70 feet above mean sea level. Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The depth to groundwater beneath the site is approximately 52 feet below the basement level (basement level is approximately 10 feet below ground surface relative to Flatbush Avenue). Groundwater flow direction is generally to the northwest. No public water or other supply wells were identified within one-half mile of the site. The nearest body of water is the Gownaus Canal located approximately 0.67 miles west-northwest of the site.

Env Problem:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor was analyzed for VOCs. Based on investigations conducted to date, the primary contaminant of concern is the VOC tetrachloroethene (PCE). Prior to Completion of Remediation - Soil - In 2013, soil sampling was conducted near the former dry cleaning machine and the sewer connection. Soil samples were collected from below the basement slab at depths of 5 to 10 feet, with the deeper borings concentrated in areas of potential contamination. All results for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and polychlorinated biphenyls (PCBs) are currently below the Part 375 restricted residential use SCOs. Groundwater - In 2014, groundwater samples were collected from new monitoring wells to further evaluate on-site groundwater conditions. PCE exceeded the NYS groundwater standard at each of the wells, ranging from 6.4 ppb to 25 ppb. The maximum PCE detection was from a location in the basement directly below the former dry cleaning machine. No SVOCs, PCBs, pesticides or site-related metals exceeded the NYS groundwater standards and guidance values. Soil Vapor and Indoor Air - In 2007, soil vapor samples that were collected from beneath the basement floor ranged from non-detect to 607,000 ug/m3. In 2011, an on-site and off-site soil vapor intrusion investigation included sub-slab vapor, indoor air and ambient air sampling. On-site, PCE concentrations in indoor air ranged from 1.7 g/m3 to 24.4 g/m3; and in the sub-slab samples, concentrations ranged from 4,010 g/m3 to 20,800 g/m3. At off-site locations, PCE in sub-slab samples ranged from 185 ug/m3 to 20,400 ug/m3; the maximum indoor air concentration for PCE was 30.3 ug/m3. According to the NYSDOH Matrix 2 for PCE, mitigation to minimize vapor intrusion and subsequent human exposures was recommended. In 2014, an off-site vapor investigation was conducted to further delineate any VOC impacts. At the adjacent court yard, the maximum concentration of PCE in soil vapor was 13 g/m3. Indoor air and sub-slab soil sampling was performed in the basements of two off-site locations southeast and northwest of the site at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab

CINDERELLA 248 LLC (Continued) **S128906158**

	ranged from 3.2 ug/m3 to 440 ug/m3; and indoor air ranged from 3.6 ug/m3 to 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab ranged from ND to 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Further delineation of off-site vapor and groundwater impacts will be completed under the State Superfund Program. Post-Remediation - The source of PCE contamination has been excavated from soils and PCE in soil (1.3 ppm) does not exceed the soil cleanup objective (SCO) for groundwater protection. In addition, the depth to groundwater at the site is approximately 50 feet below grade and groundwater in the vicinity is not used for public water. Soil vapor containing PCE was present on-site and extended off-site. In 2015, a sub-slab depressurization system (SSDS) was installed to mitigate soil vapor intrusion at the site building and adjoining buildings. System monitoring was conducted on a monthly basis since startup and is currently conducted on a quarterly basis. Recent performance monitoring data collected to date demonstrates that the SSDS is no longer necessary and has been temporarily shut down pending additional soil vapor intrusion sampling results.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description:	Site Location: The site is located at 248 Flatbush Avenue in Brooklyn, Kings County, and is Block 936 and Lot 12. The site is an approximately 0.05 acre. It is bounded to the east by Flatbush Avenue, to the south by a commercial building, to the west by a small courtyard and residences, and to the north by a liquor store and restaurant. Site Features: The site is a one-story building with a basement that encompasses the entire property. It is approximately 2,300 square feet in area and a fitness center is located in the basement floor. There is no parking associated with the site. The topography of the site is generally flat and the surrounding area slopes gradually to the northwest. The building is serviced by municipal water and sewer. The sewer connection is present in the

CINDERELLA CLEANERS (Continued) **1000188071**

southeast corner of the basement. The building was formerly heated via fuel oil-fired heating equipment located in the boiler room of the basement. An old 1,000-gallon fuel oil AST was emptied, cleaned, and properly abandoned in October 2005. Current Zoning/Use(s): The site is located in a R7A residential zone with a C2-4 commercial overlay. This zoning permits both residential and commercial uses. The Site is currently being used for commercial purpose. Historic Uses(s): The building was constructed between 1888 and 1906 and housed a dry cleaner and shoe repair facility for the last twenty years. Previous uses included a dry goods store, book store, closet/wardrobe business and a woodworker. In 2005, a soil and groundwater investigation focused on an historic leak of cooling water from the first floor dry cleaning machine into the basement boiler room. It was concluded that subsurface soil and groundwater beneath the boiler room were impacted by volatile organic compounds (VOCs). Contaminated soil was excavated to a depth of 5 feet below the basement floor, followed by confirmation sampling. Soil results were below the soil cleanup levels used at that time (TAGM 4046). Site Geology and Hydrogeology: The topographic elevation of the site vicinity is approximately 70 feet above mean sea level. Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The depth to groundwater beneath the site is approximately 52 feet below the basement level (basement level is approximately 10 feet below ground surface relative to Flatbush Avenue). Groundwater flow direction is generally to the northwest. No public water or other supply wells were identified within one-half mile of the site. The nearest body of water is the Gownaus Canal located approximately 0.67 miles west-northwest of the site.

Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor was analyzed for VOCs. Based on investigations conducted to date, the primary contaminant of concern is the VOC tetrachloroethene (PCE). Prior to Completion of Remediation - Soil - In 2013, soil sampling was conducted near the former dry cleaning machine and the sewer connection. Soil samples were collected from below the basement slab at depths of 5 to 10 feet, with the deeper borings concentrated in areas of potential contamination. All results for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and polychlorinated biphenyls (PCBs) are currently below the Part 375 restricted residential use SCOs. Groundwater - In 2014, groundwater samples were collected from new monitoring wells to further evaluate on-site groundwater conditions. PCE exceeded the NYS groundwater standard at each of the wells, ranging from 6.4 ppb to 25 ppb. The maximum PCE detection was from a location in the basement directly below the former dry cleaning machine. No SVOCs, PCBs, pesticides or site-related metals exceeded the NYS groundwater standards and guidance values. Soil Vapor and Indoor Air - In 2007, soil vapor samples that were collected from beneath the basement floor ranged from non-detect to 607,000 ug/m3. In 2011, an on-site and off-site soil vapor intrusion investigation included sub-slab vapor, indoor air and ambient air sampling. On-site, PCE concentrations in indoor air ranged from 1.7 g/m3 to 24.4 g/m3; and in the sub-slab samples, concentrations ranged from 4,010 g/m3 to 20,800 g/m3. At off-site locations, PCE in

CINDERELLA CLEANERS (Continued) **1000188071**

sub-slab samples ranged from 185 ug/m3 to 20,400 ug/m3; the maximum indoor air concentration for PCE was 30.3 ug/m3. According to the NYSDOH Matrix 2 for PCE, mitigation to minimize vapor intrusion and subsequent human exposures was recommended. In 2014, an off-site vapor investigation was conducted to further delineate any VOC impacts. At the adjacent court yard, the maximum concentration of PCE in soil vapor was 13 g/m3. Indoor air and sub-slab soil sampling was performed in the basements of two off-site locations southeast and northwest of the site at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab ranged from 3.2 ug/m3 to 440 ug/m3; and indoor air ranged from 3.6 ug/m3 to 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab ranged from ND to 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Further delineation of off-site vapor and groundwater impacts will be completed under the State Superfund Program. Post-Remediation - The source of PCE contamination has been excavated from soils and PCE in soil (1.3 ppm) does not exceed the soil cleanup objective (SCO) for groundwater protection. In addition, the depth to groundwater at the site is approximately 50 feet below grade and groundwater in the vicinity is not used for public water. Soil vapor containing PCE was present on-site and extended off-site. In 2015, a sub-slab depressurization system (SSDS) was installed to mitigate soil vapor intrusion at the site building and adjoining buildings. System monitoring was conducted on a monthly basis since startup and is currently conducted on a quarterly basis. Recent performance monitoring data collected to date demonstrates that the SSDS is no longer necessary and has been temporarily shut down pending additional soil vapor intrusion sampling results.

Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Updated By: DGMCNALL
Site Code: 465470
Site Description: Site Location: The site is located at 248 Flatbush Avenue in Brooklyn, Kings County, and is Block 936 and Lot 12. The site is an approximately 0.05 acre. It is bounded to the east by Flatbush Avenue, to the south by a commercial building, to the west by a small courtyard and residences, and to the north by a liquor store and restaurant. Site Features: The site is a one-story building with a basement that encompasses the entire property. It is approximately 2,300 square feet in area and a fitness center is located in the basement floor. There is no parking associated with the site. The topography of the site is generally flat and the surrounding area slopes gradually to the northwest. The building is serviced by municipal water and sewer. The sewer connection is present in the southeast corner of the basement. The building was formerly heated via fuel oil-fired heating equipment located in the boiler room of the basement. An old 1,000-gallon fuel oil AST was emptied, cleaned, and properly abandoned in October 2005. Current Zoning/Use(s): The site is located in a R7A residential zone with a C2-4 commercial overlay. This zoning permits both residential and commercial uses. The Site is currently being used for commercial purpose. Historic Uses(s): The building was constructed between 1888 and 1906 and housed a dry cleaner and shoe repair facility for the last twenty years. Previous uses included a dry goods store, book store, closet/wardrobe business and a woodworker. In 2005, a soil and groundwater investigation focused on an historic leak of cooling water from the first floor dry cleaning machine into the basement boiler room. It was concluded that subsurface soil and groundwater beneath the boiler room were impacted by volatile organic compounds (VOCs). Contaminated soil was excavated to a depth of 5 feet below the basement floor, followed by confirmation sampling. Soil results were below the soil cleanup levels used at that time (TAGM 4046). Site Geology and Hydrogeology: The topographic elevation of the site vicinity is approximately 70 feet above mean sea level. Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The depth to groundwater beneath

CINDERELLA CLEANERS (Continued) **1000188071**

the site is approximately 52 feet below the basement level (basement level is approximately 10 feet below ground surface relative to Flatbush Avenue). Groundwater flow direction is generally to the northwest. No public water or other supply wells were identified within one-half mile of the site. The nearest body of water is the Gownaus Canal located approximately 0.67 miles west-northwest of the site.

Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor was analyzed for VOCs. Based on investigations conducted to date, the primary contaminant of concern is the VOC tetrachloroethene (PCE). Prior to Completion of Remediation - Soil - In 2013, soil sampling was conducted near the former dry cleaning machine and the sewer connection. Soil samples were collected from below the basement slab at depths of 5 to 10 feet, with the deeper borings concentrated in areas of potential contamination. All results for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and polychlorinated biphenyls (PCBs) are currently below the Part 375 restricted residential use SCOs. Groundwater - In 2014, groundwater samples were collected from new monitoring wells to further evaluate on-site groundwater conditions. PCE exceeded the NYS groundwater standard at each of the wells, ranging from 6.4 ppb to 25 ppb. The maximum PCE detection was from a location in the basement directly below the former dry cleaning machine. No SVOCs, PCBs, pesticides or site-related metals exceeded the NYS groundwater standards and guidance values. Soil Vapor and Indoor Air - In 2007, soil vapor samples that were collected from beneath the basement floor ranged from non-detect to 607,000 ug/m3. In 2011, an on-site and off-site soil vapor intrusion investigation included sub-slab vapor, indoor air and ambient air sampling. On-site, PCE concentrations in indoor air ranged from 1.7 g/m3 to 24.4 g/m3; and in the sub-slab samples, concentrations ranged from 4,010 g/m3 to 20,800 g/m3. At off-site locations, PCE in sub-slab samples ranged from 185 ug/m3 to 20,400 ug/m3; the maximum indoor air concentration for PCE was 30.3 ug/m3. According to the NYSDOH Matrix 2 for PCE, mitigation to minimize vapor intrusion and subsequent human exposures was recommended. In 2014, an off-site vapor investigation was conducted to further delineate any VOC impacts. At the adjacent court yard, the maximum concentration of PCE in soil vapor was 13 g/m3. Indoor air and sub-slab soil sampling was performed in the basements of two off-site locations southeast and northwest of the site at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab ranged from 3.2 ug/m3 to 440 ug/m3; and indoor air ranged from 3.6 ug/m3 to 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab ranged from ND to 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Further delineation of off-site vapor and groundwater impacts will be completed under the State Superfund Program. Post-Remediation - The source of PCE contamination has been excavated from soils and PCE in soil (1.3 ppm) does not exceed the soil cleanup objective (SCO) for groundwater protection. In addition, the depth to groundwater at the site is approximately 50 feet below grade and groundwater in the vicinity is not used for public water. Soil vapor containing PCE was present on-site and extended off-site. In 2015, a sub-slab depressurization system (SSDS)

CINDERELLA CLEANERS (Continued) **1000188071**

	was installed to mitigate soil vapor intrusion at the site building and adjoining buildings. System monitoring was conducted on a monthly basis since startup and is currently conducted on a quarterly basis. Recent performance monitoring data collected to date demonstrates that the SSDS is no longer necessary and has been temporarily shut down pending additional soil vapor intrusion sampling results.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Soil Vapor and Indoor Air - In 2007, soil vapor samples that were collected from beneath the basement floor ranged from non-detect to 607,000 ug/m3. In 2011, an on-site and off-site soil vapor intrusion investigation included sub-slab vapor, indoor air and ambient air sampling. On-site, PCE concentrations in indoor air ranged from 1.7 g/m3 to 24.4 g/m3; and in the sub-slab samples, concentrations ranged from 4,010 g/m3 to 20,800 g/m3. At off-site locations, PCE in sub-slab samples ranged from 185 ug/m3 to 20,400 ug/m3; the maximum indoor air concentration for PCE was 30.3 ug/m3. According to the NYSDOH Matrix 2 for PCE, mitigation to minimize vapor intrusion and subsequent human exposures was recommended. In 2014, an off-site vapor investigation was conducted to further delineate any VOC impacts. At the adjacent court yard, the maximum concentration of PCE in soil vapor was 13 g/m3. Indoor air and sub-slab soil sampling was performed in the basements of two off-site locations southeast and northwest of the site at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab ranged from 3.2 ug/m3 to 440 ug/m3; and indoor air ranged from 3.6 ug/m3 to 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab ranged from ND to 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the

CINDERELLA CLEANERS (Continued) **1000188071**

ambient air location was 3.9 ug/m3. Further delineation of off-site vapor and groundwater impacts will be completed under the State Superfund Program. Post-Remediation - The source of PCE contamination has been excavated from soils and PCE in soil (1.3 ppm) does not exceed the soil cleanup objective (SCO) for groundwater protection. In addition, the depth to groundwater at the site is approximately 50 feet below grade and groundwater in the vicinity is not used for public water. Soil vapor containing PCE was present on-site and extended off-site. In 2015, a sub-slab depressurization system (SSDS) was installed to mitigate soil vapor intrusion at the site building and adjoining buildings. System monitoring was conducted on a monthly basis since startup and is currently conducted on a quarterly basis. Recent performance monitoring data collected to date demonstrates that the SSDS is no longer necessary and has been temporarily shut down pending additional soil vapor intrusion sampling results.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 465470
Site Description: Site Location: The site is located at 248 Flatbush Avenue in Brooklyn, Kings County, and is Block 936 and Lot 12. The site is an approximately 0.05 acre. It is bounded to the east by Flatbush Avenue, to the south by a commercial building, to the west by a small courtyard and residences, and to the north by a liquor store and restaurant. Site Features: The site is a one-story building with a basement that encompasses the entire property. It is approximately 2,300 square feet in area and a fitness center is located in the basement floor. There is no parking associated with the site. The topography of the site is generally flat and the surrounding area slopes gradually to the northwest. The building is serviced by municipal water and sewer. The sewer connection is present in the southeast corner of the basement. The building was formerly heated via fuel oil-fired heating equipment located in the boiler room of the basement. An old 1,000-gallon fuel oil AST was emptied, cleaned, and properly abandoned in October 2005. Current Zoning/Use(s): The site is located in a R7A residential zone with a C2-4 commercial overlay. This zoning permits both residential and commercial uses. The Site is currently being used for commercial purpose. Historic Uses(s): The building was constructed between 1888 and 1906 and housed a dry cleaner and shoe repair facility for the last twenty years. Previous uses included a dry goods store, book store, closet/wardrobe business and a woodworker. In 2005, a soil and groundwater investigation focused on an historic leak of cooling water from the first floor dry cleaning machine into the basement boiler room. It was concluded that subsurface soil and groundwater beneath the boiler room were impacted by volatile organic compounds (VOCs). Contaminated soil was excavated to a depth of 5 feet below the basement floor, followed by confirmation sampling. Soil results were below the soil cleanup levels used at that time (TAGM 4046). Site Geology and Hydrogeology: The topographic elevation of the site vicinity is approximately 70 feet above mean sea level. Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The depth to groundwater beneath the site is approximately 52 feet below the basement level (basement level is approximately 10 feet below ground surface relative to Flatbush Avenue). Groundwater flow direction is generally to the northwest. No public water or other supply wells were identified within one-half mile of the site. The nearest body of water is the Gownaus Canal located approximately 0.67 miles west-northwest of the site.
Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor was analyzed for VOCs. Based on investigations conducted to date, the primary contaminant of concern is the VOC tetrachloroethene (PCE). Prior to Completion of Remediation - Soil - In 2013, soil sampling was conducted near the former dry cleaning machine and the sewer connection. Soil samples were collected from

CINDERELLA CLEANERS (Continued) **1000188071**

below the basement slab at depths of 5 to 10 feet, with the deeper borings concentrated in areas of potential contamination. All results for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and polychlorinated biphenyls (PCBs) are currently below the Part 375 restricted residential use SCOs. Groundwater - In 2014, groundwater samples were collected from new monitoring wells to further evaluate on-site groundwater conditions. PCE exceeded the NYS groundwater standard at each of the wells, ranging from 6.4 ppb to 25 ppb. The maximum PCE detection was from a location in the basement directly below the former dry cleaning machine. No SVOCs, PCBs, pesticides or site-related metals exceeded the NYS groundwater standards and guidance values. Soil Vapor and Indoor Air - In 2007, soil vapor samples that were collected from beneath the basement floor ranged from non-detect to 607,000 ug/m3. In 2011, an on-site and off-site soil vapor intrusion investigation included sub-slab vapor, indoor air and ambient air sampling. On-site, PCE concentrations in indoor air ranged from 1.7 g/m3 to 24.4 g/m3; and in the sub-slab samples, concentrations ranged from 4,010 g/m3 to 20,800 g/m3. At off-site locations, PCE in sub-slab samples ranged from 185 ug/m3 to 20,400 ug/m3; the maximum indoor air concentration for PCE was 30.3 ug/m3. According to the NYSDOH Matrix 2 for PCE, mitigation to minimize vapor intrusion and subsequent human exposures was recommended. In 2014, an off-site vapor investigation was conducted to further delineate any VOC impacts. At the adjacent court yard, the maximum concentration of PCE in soil vapor was 13 g/m3. Indoor air and sub-slab soil sampling was performed in the basements of two off-site locations southeast and northwest of the site at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab ranged from 3.2 ug/m3 to 440 ug/m3; and indoor air ranged from 3.6 ug/m3 to 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab ranged from ND to 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Further delineation of off-site vapor and groundwater impacts will be completed under the State Superfund Program. Post-Remediation - The source of PCE contamination has been excavated from soils and PCE in soil (1.3 ppm) does not exceed the soil cleanup objective (SCO) for groundwater protection. In addition, the depth to groundwater at the site is approximately 50 feet below grade and groundwater in the vicinity is not used for public water. Soil vapor containing PCE was present on-site and extended off-site. In 2015, a sub-slab depressurization system (SSDS) was installed to mitigate soil vapor intrusion at the site building and adjoining buildings. System monitoring was conducted on a monthly basis since startup and is currently conducted on a quarterly basis. Recent performance monitoring data collected to date demonstrates that the SSDS is no longer necessary and has been temporarily shut down pending additional soil vapor intrusion sampling results.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

This zoning permits both residential and commercial uses. The Site is currently being used for commercial purpose. Historic Uses(s): The building was constructed between 1888 and 1906 and housed a dry cleaner and shoe repair facility for the last twenty years. Previous uses included a dry goods store, book store, closet/wardrobe business and a woodworker. In 2005, a soil and groundwater investigation focused on an historic leak of cooling water from the first floor dry cleaning machine into the basement boiler room. It was concluded that subsurface soil and groundwater beneath the boiler room were impacted by volatile organic compounds (VOCs). Contaminated soil was excavated to a depth of 5 feet below the basement floor, followed by confirmation sampling. Soil results were below the soil cleanup levels used at that time (TAGM 4046). Site Geology and Hydrogeology: The topographic elevation of the site vicinity is approximately 70 feet above mean sea level. Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The depth to groundwater beneath the site is approximately 52 feet below the basement level (basement level is approximately 10 feet below ground surface relative to Flatbush Avenue). Groundwater flow direction is generally to the northwest. No public water or other supply wells were identified within one-half mile of the site. The nearest body of water is the Gownaus Canal located approximately 0.67 miles west-northwest of the

CINDERELLA CLEANERS (Continued) **1000188071**

site.

Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor was analyzed for VOCs. Based on investigations conducted to date, the primary contaminant of concern is the VOC tetrachloroethene (PCE). Prior to Completion of Remediation - Soil - In 2013, soil sampling was conducted near the former dry cleaning machine and the sewer connection. Soil samples were collected from below the basement slab at depths of 5 to 10 feet, with the deeper borings concentrated in areas of potential contamination. All results for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and polychlorinated biphenyls (PCBs) are currently below the Part 375 restricted residential use SCOs. Groundwater - In 2014, groundwater samples were collected from new monitoring wells to further evaluate on-site groundwater conditions. PCE exceeded the NYS groundwater standard at each of the wells, ranging from 6.4 ppb to 25 ppb. The maximum PCE detection was from a location in the basement directly below the former dry cleaning machine. No SVOCs, PCBs, pesticides or site-related metals exceeded the NYS groundwater standards and guidance values. Soil Vapor and Indoor Air - In 2007, soil vapor samples that were collected from beneath the basement floor ranged from non-detect to 607,000 ug/m3. In 2011, an on-site and off-site soil vapor intrusion investigation included sub-slab vapor, indoor air and ambient air sampling. On-site, PCE concentrations in indoor air ranged from 1.7 g/m3 to 24.4 g/m3; and in the sub-slab samples, concentrations ranged from 4,010 g/m3 to 20,800 g/m3. At off-site locations, PCE in sub-slab samples ranged from 185 ug/m3 to 20,400 ug/m3; the maximum indoor air concentration for PCE was 30.3 ug/m3. According to the NYSDOH Matrix 2 for PCE, mitigation to minimize vapor intrusion and subsequent human exposures was recommended. In 2014, an off-site vapor investigation was conducted to further delineate any VOC impacts. At the adjacent court yard, the maximum concentration of PCE in soil vapor was 13 g/m3. Indoor air and sub-slab soil sampling was performed in the basements of two off-site locations southeast and northwest of the site at 254 Flatbush Avenue and 76 St. Marks Avenue. An ambient air sample was also collected from a location outside of 254 Flatbush Avenue. At 254 Flatbush Avenue, PCE in the sub-slab ranged from 3.2 ug/m3 to 440 ug/m3; and indoor air ranged from 3.6 ug/m3 to 5.7 ug/m3. At 76 St. Marks Avenue, PCE in the sub-slab ranged from ND to 8.4 ug/m3; and indoor air was 1.1 ug/m3. PCE at the ambient air location was 3.9 ug/m3. Further delineation of off-site vapor and groundwater impacts will be completed under the State Superfund Program. Post-Remediation - The source of PCE contamination has been excavated from soils and PCE in soil (1.3 ppm) does not exceed the soil cleanup objective (SCO) for groundwater protection. In addition, the depth to groundwater at the site is approximately 50 feet below grade and groundwater in the vicinity is not used for public water. Soil vapor containing PCE was present on-site and extended off-site. In 2015, a sub-slab depressurization system (SSDS) was installed to mitigate soil vapor intrusion at the site building and adjoining buildings. System monitoring was conducted on a monthly basis since startup and is currently conducted on a quarterly basis. Recent performance monitoring data collected to date demonstrates that the SSDS is no longer necessary and has been temporarily shut down pending additional soil vapor intrusion sampling results.

CINDERELLA CLEANERS (Continued) **1000188071**

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 465470
Site Description: Site Location: The site is located at 248 Flatbush Avenue in Brooklyn, Kings County, and is Block 936 and Lot 12. The site is an approximately 0.05 acre. It is bounded to the east by Flatbush Avenue, to the south by a commercial building, to the west by a small courtyard and residences, and to the north by a liquor store and restaurant. Site Features: The site is a one-story building with a basement that encompasses the entire property. It is approximately 2,300 square feet in area and a fitness center is located in the

CINDERELLA CLEANERS (Continued) **1000188071**

basement floor. There is no parking associated with the site. The topography of the site is generally flat and the surrounding area slopes gradually to the northwest. The building is serviced by municipal water and sewer. The sewer connection is present in the southeast corner of the basement. The building was formerly heated via fuel oil-fired heating equipment located in the boiler room of the basement. An old 1,000-gallon fuel oil AST was emptied, cleaned, and properly abandoned in October 2005. Current Zoning/Use(s): The site is located in a R7A residential zone with a C2-4 commercial overlay. This zoning permits both residential and commercial uses. The Site is currently being used for commercial purpose. Historic Uses(s): The building was constructed between 1888 and 1906 and housed a dry cleaner and shoe repair facility for the last twenty years. Previous uses included a dry goods store, book store, closet/wardrobe business and a woodworker. In 2005, a soil and groundwater investigation focused on an historic leak of cooling water from the first floor dry cleaning machine into the basement boiler room. It was concluded that subsurface soil and groundwater beneath the boiler room were impacted by volatile organic compounds (VOCs). Contaminated soil was excavated to a depth of 5 feet below the basement floor, followed by confirmation sampling. Soil results were below the soil cleanup levels used at that time (TAGM 4046). Site Geology and Hydrogeology: The topographic elevation of the site vicinity is approximately 70 feet above mean sea level. Soils underlying the site are classified as Urban Land and consist of brown silty fine sand and brown to medium sand with some cobbles and trace fine to medium and coarse gravel. The depth to groundwater beneath the site is approximately 52 feet below the basement level (basement level is approximately 10 feet below ground surface relative to Flatbush Avenue). Groundwater flow direction is generally to the northwest. No public water or other supply wells were identified within one-half mile of the site. The nearest body of water is the Gownaus Canal located approximately 0.67 miles west-northwest of the site.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	States unknown amount of oil.
Remarks:	Part of Atlantic Yards Redevelopment Project. Building is a former car repair garage (1 story tall) which is now shut down and vacant (owned by redevelopment corporation). Water standing in basement of garage with half an inch of floating oil. 4 ASTs in basement. Today contractor was hired to vac out the basement and tanks and will then remove the tanks. Once initial cleanup is done, the whole area is scheduled to be deeply excavated as part of the redevelopment project. 07/26/11 Roux associated performed remedial activities on behalf of AYDC Interim Developer, LLC.Four ASTs were observed during the site investigation.The spill and ASTs were discovered in a rear room of the basement of the one story building.The one story building is vacant and scheduled for demolition.On March 15/2011 Vacuum Truck was used to remove 5,626 gallons of oil water mixure from the basement and within the 10,000 gallon AST,which appeared to be the source of the spill.Petroleum contaminated sand and debris was also removed from the basement.The slab in the rear room appeared to be free of cracks and in good condition.Three soil samples were collected to delineate the subsurface contamination(0 to 2 ft) below the slab.ASTs will be removed after the demolition of the building has begun.No petroleum related contamination detected in the sub slab soil.Closure report in edocs.Case closed.(sr)

Tank Info:

Tank Number:	001
Tank Id:	239765
Material Code:	0002
Common Name of Substance:	#4 Fuel Oil (On-Site Consumption)

Equipment Records:

J00 - Dispenser - None
A00 - Tank Internal Protection - None
K00 - Spill Prevention - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
I00 - Overfill - None
D00 - Pipe Type - No Piping
L00 - Piping Leak Detection - None
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
G00 - Tank Secondary Containment - None

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	01/01/1950
Capacity Gallons:	300
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	SMOKE INVOLVED WITH SERVICE BOX. SAMPLE TAKEN-CLEANUP PENDING RESULTS. CON ED #133980
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY DEC Investigator Notes: Steve Zalloughi, Ron Cosentino, Ron James, Mark Rotundi (#9), and All State Power Vac on site. Pumping out manholes and power washing holes and street. Power washing service boxes in street as a precautionary measure. Will wash off cables and put them back in. Results of sample taken by Con Ed returned with a pH of 11. Caused burn out of cables. FDNY was asked to gain access to building since front door was locked. The Battalion Chief O'Connor returned and indicated that they could not gain access. Zalloughi and Foley attempted to gain access and found that the back gate to the loading dock was open. Foley and Zalloughi spoke to Joe Foster, Project Manager for Shaya B. Pacific LLC (917) 417-7357. Shaya B. Pacific is the owner builder (office location: 40 Fulton Ave). Large scale construction project being done at this site. Building is the old Daily News building. Foster claimed that one of the workers pumped water from the low points in the basement onto the street. Foster showed Foley and Con Ed EH&S Manager, Steve Zalloughi the basement. Found piles of debris and some puddles of water. No drums. Foster provided Foley and Zalloughi with copies of a site assessment completed for the owner which indicated that the site was clean. Neighboring businesses workers claimed that they have seen this happen before. Reportedly, there were incidents of burnt shoes and automotive tires. Foley filed a complaint with the Environmental Conservation Officers. Complaint was assigned to ECO Michael Jordan. (#200-766) Con Ed e2mis #133980 Notes: 10-17-00 While responding to a smoking service box, found 200gal unknown liquid. Reported to #9 who called OEM and Hazmat to respond. Chemist was called and took 2 samples, PCBs and pH. Hazmat reports their test showed corrosive scale liquid measures A-14 which is the highest. 2 more structures

SERVICE BOX #19206 (Continued) **S104790722**

with same liquid in it. 10-18-00 pH is 6.58. Chamist will take samples in other structures. Will treat as A-14 level. AllState cleaned all structures and neutralized any elevated pH. Cannot remove any secondary cable due to rain and potential contamination of cuts and removals and jet-rodding of ducts. To begin in AM. 10-19-00 AllState responded. First tested and cleaned manhole 2724. It had a neutral pH. After cleaning, Emergency was able to make their cuts and de-energize the service boxes 33248 and 33249. Those were the structures where the corrosive chemical was detected, and where it was suspected that the chemicals entered. After the structures were de-energized, AllState tested and cleaned service boxes. SB33248 tested at a pH of 11. SB33249 tested neutral. Duct lines were flushed. All readings neutral.

DEC Memo:	THE ADJACENT BUILDING AND THIS ONE HAVE A STRONG ODOR OF OIL : THEY BELIEVE IT MAY BE IN THE BASEMENT: NEED SOMEONE TO CHECK IT OUT, ITS BEEN SMELLING SINCE ABOUT SATURDAY:
Remarks:	1/27/05. J.Krimgold visit the site. Strong heating oil odor on the first floor and basement. Oil spill in the basement around 2x275 Gal ASTs. Probably due to a leak from a product line. Line was recently replaced (peaces of the old cooper pipe are still in the basement). However, the cleanup was not done. Some absorbent are still on the floor and staining on walls and concrete floor. Concrete floor covered with contaminated construction debris. Unable to check quality of the floor. However, there are evidence that oil went through cracks in the floor and open soil in some areas. 1/28/05. J.Krimgold called the owner Mr. Michael Luma. He stated the he has very little knowledge of what happened and thought that it was some overfill during delivery, but was not able to provide info. about delivery co. Promised to call back on 1/31/05 with more info. 1/31/05. J.Krimgold spoke to Mr. Luma he stated that oil spilled due to the tank overfill, but refused to provide the name of delivery co. Scheduled a site meeting on 2/1/05. 2/1/05. J.Kriomgold at the site mat Mr. Michael Luma and his father (homeowner) Nickel Luma. They took responsibility for this release and will perform a cleanup. CSL was given to the RP. They should report back in 5 days. JK. Also checked basement at 138 St Marks. No spill or oil odor was found. 2/9/05. Spoke to Mike Luma he informed that he cleaned up the basement and removed contaminated concrete. Will keep excavation open for Departmental inspection. JK. 3/3/05. J.Krimgold reinspected the site. Oil odor decreased at the first floor. However, more work should be done. More soil should be removed under tanks. Agreed that the owner will talk to the insurance and place a claim. 3/7/05. Mike Luma called and informed that Milro was retained by his insurance to completed the cleanup. JK. 3/23/05. Paul Basso (Milro) called. They relocate tanks and excavated ~6x6' to the depth of 5'. Also excavated area 3x3x2' next to the tank (this area is clean now). Majority of contamination was removed. However, some residual contamination is still in the soil. Agreed that they will use Bio to complete soil remediation, place vapor barrier, fill the excavation with clean sand and replace the concrete floor. JK. 9/26/05. J.Krimgold spoke to P. Basso. The job was completed in April 2005. NFA.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	275galust.found during excavation/loss of product/water and petrol in tank

EXXON GAS STATION (Continued) **S107522883**

Remarks: During construction on the site of a gas station, the contractor hit/found a buried 275 gal tank (unknown if heating oil or waste oil). Tank was damaged and leaked oil to the ground. Roux Associates will empty the tank, remove the tank and over excavate the contaminated soil. Soil end point samples will be taken and a closure report will be sent to Sharif Rahman. Site has an existing long term gasoline spill on the site being managed by Andre Obligado(0107438). 08/06/2013 - Tank removal affidavit in edocs. A 275 gallon heating oil UST was discovered during soil excavation for utility installation and infrastructure improvements related to Atlantic Yard Redevelopment projects. Brookside Environmental Inc. removed the tank. Soil contamination observed beneath the locations of UST.Soil excavation was proposed as way of remedy.As of today, 40,300 tons of soil has been excavated and disposed off as part of Barclays Center construction.Soil end point samples were taken, no exceedances of VOC/SVOCs above CP-51 detected.This spill case is closed. For details remedial activities at the site, see spill 0107438.(sr)

DEC Memo:	They discovered gas in the sump under the dispenser and a contractor is being dispatched.
Remarks:	10/4/04 Met with ExxonMobil (Melissa Winsor) and GSC (Dennis Shin) on site. Identified the proposed location of the VEGE system and two additional monitoring wells associated with the system. MW-8 is dry and will be redeveloped. This site is in the footprints of the future NJ Nets arena. 10/22/04 Approval to install two additional monitoring wells (MW-9 & 10) and redevelop or install an additional well to replace MW-8. 6/24/08 - Obligado - This case has been transferred to region 2, as it is in the footprint of the atlantic yards project. 8/8/08 - Obligado - Received 2Q08 monitoring report from Roux. LNAPL ranged from 0.08 to 0.55 ft thickness. Various VOCs above TOGs in all monitoring wells. There appears to be a perched ground water layer where the product and elevated dissolved concentrations are. The true water table aquifer does not appear to be greatly impacted. 9/8/08 - Obligado - Meeting with Forest City Ratner and Roux associates. They planned on excavating the USTs at this site, excavating the contaminated soil and perched layer, and chemical oxidation to treat dissolved at the true water table. They want to excavate USTs then do injection via cased wells into true aquifer, prior to removal of perched layer. DEC doesn't feel comfortable injecting through a contaminated perched layer. Agreed course of action was to just do excavation to remove USTs, contaminated soil gw and free product in the perched aquifer. 10/24/08 - Obligado - Update from Daren Moss. They have completed UST removals at this site. 5/27/09 - Obligado - Sent email to Daren requiring submittal of all overdue quarterly monitoring reports. 9/4/09 - Obligado -Sent email to Sin notifying him that I am drafting a Stipulation Agreement and Corrective Action plan for the site and requested following info: 1) Are off-site monitoring wells MW2, MR-3P, and MW7 from the Phase 2 ESA still existing and still accessible for monitoring and sampling? 2) Do you have an information regarding the depth of the NYC subway tunnel beneath Atlantic Avenue? The Department wants to confirm whether or not the tunnel intersects the perched zone and the ground water table. 3) Do you have a schedule for the start of excavation for the Arena? 4) Do you have soil boring logs, monitoring well construction logs, and soil sampling data for monitoring wells MW28 and MW29? This information was never provided to the Department. 9/9/09 - Obligado - After review of quarterly report, sent email to Sin requiring future reports to include hydrographs and historical gauging and sampling data. 10/1/09 - Obligado - I did not receive any response to above inquiries. I sent a Stipulation Agreement with a CAP to AY 195 Flatbush LLC, cc to FCR. Required signature within 21 days. 10/26/09 - Obligado - STIP not received by the due date. 10/30/09 - Obligado - Received alternate proposed CAP 11/10/09 - Obligado - Sent email to Forest City and Roux rejecting alternate proposed CAP. Required signature of original by November 16, 2009 or case would be refered to legal. 11/20/09 - Obligado - Received signed Stipulation. 12/1/09

EXXON GAS STATION (Continued) **S107522883**

- Obligado - STIP Executed by Mattei. RI due February 2010. 2/12/10 - Obligado - I received an email from Roux requesting a 45 day extension to submit the RI, because contamination was found in one of the new wells, and the propose installing two more before submitting the RI. I approved the extension. 4/16/10 - Obligado - RI submitted. 4/23/10 - Obligado - I called Sin to discuss the RI. I left a message to call back the DEC. 4/26/10 - Obligado - I called Sin again and left a message. 4/27/10 - Obligado - I called Sin again and was able to reach him. I requested additional data to supplement the RI. Specifically I asked for data and boring logs from borings F8, G8, and H9, and soil sample analytical results from MW29 and MW28. 5/10/10 - Obligado - I completed my review of the remedial investigation, including the additional soil sampling data. The contamination has been adequately delineated. There is a silt layer between 15 and 25 feet which forms a perched aquifer. This is where the bulk of the soil and ground water contamination and free product is. HOwever, MW31 was installed into the regional aquifer outside of the lense, and this well had high levels of MTBE in gw - 30,000 ug/L. the report recommends excavating the silt lense and associated contamination, and not remediating the regional ground aquifer. I sent a letter approving the RIR and the recommendation to excavate the silt lense. However, I disagreed with the recomendation to do nothing about the regional ground water contamination. I required a RAWP to address both within 60 days. In the letter I stated that soil removal at the site should not commence until a RAWP is approved by the Department. 5/12/10 - I received a call from Sin Senh. They requested to start installing piles and sheeting on the 195 Flatbush site tomorrow. I told him no soil removal should occur prior to RAWP approval. He asked if he could submit an IRM for these actions and I said I had no problem withem submitting the IRM but it must detail exactly would the work would entail, with detailed drawings of areas to be drilled and excavated, as well as a soil handling plan and CAMP. He said he probably couldn't get me all these things by tomorrow, but it would probably take a few days. I told him I had no objection to begin mobilizing to the site. 5/18/10 - Obligado - I reviewed an IRM for the soil excavation. The plan proposes installing timber and h-pile shoring and excavating to between 29 and 36 ft below grade. The exccavation would cover the northern half of the site where the tanks are located. HOwever, the excavation does not extend to the south boundary and does not cover boring location G11 where heavily contaminated soil was encountered between 5 and 29 ft bgs. The IRM also does not propose collecting any endpoint samples. I called Daren Moss to provide comments. I required the plan must have an endpoint sampling plan as per DER-10 technical guidance. I also recommended extending the excavation south to encompass G11 which had significant soil VOC exceedences. I advised Daren that if they don't remove this contamination now during the IRM excavation it will have to be addressed as part of the RAWP. He said he would discuss this issue with FCR. He will resubmit the IRM with the soil endpoint sampling plan. 8/27/10 - Obligado - I was notified by Frank Cherena that there was a spill at the site when excavator accidently broke unknown improperly abandoned UST. Fuel/water mixture spill to the ground. A vac truck recovered fuel at surface. See spill # 1005905. That spill has been closed and consolidated with this spill number since it is in the area of the IRM excavation. I also sent an email to Frank notifying him that FCR had potential violated PBS regulations and the IRM workplan which resulted in the spill. 9/12/10

EXXON GAS STATION (Continued) **S107522883**

- Obligado - I reviewed the RAWP for the site. The RAWP proposed to treat the ground water in the MW30 area with Nano-Ox, a calcium peroxide oxygen releasing product. The RAWP also proposed to excavate areas west of the sheeting during the construction of a second building (Building 2). The RAWP has a contingency plan if that building construction doesn't occur. The contingency is to build a SVE system if the excavation doesn't occur within 18 months. I sent a comment letter disapproving of the RAWP because: They only propose 1 injection and 1 monitoring event for the gw which is insufficient to remediate and monitor effectiveness of remediation. The SVE plans are vague and there is not enough soil quality data to design the system at this time. Also, if excavation doesn't occur and the silt isn't removed, there may be still a perched layer with perched contaminated gw, in which case the SVE design may not work. I required resubmission of the RAWP within 30 days. I also sent an email to Frank requesting a map showing location of the spill #1005905 and the location of the discovered UST 9/23/10 - Obligado - FRank sent the map with the information I requested. 9/27/10 - Obligado - I sent an email to Frank asking why the unknown UST was moved prior to emptying it. Frank replied that the excavation contractor failed to follow procedures and has been put on notice. 9/28/10 - Obligado - The UST violation has been referred to General Counsel 10/20/10 - Email from Frank Cherena requesting extension for RAP submission. 10/21/10 - Obligado - I approved extension request. 10/28/10 - Obligado - request update on Atlantic Yards activities 11-16-10 - Obligado - I received a revised Remedial Action Work Plan. 12-16-10 - obligad - Email from Frank Cherena - We have completed the third round of in-situ chemical oxidation injections at 622 Atlantic Avenue and 179 Flatbush Avenue Spill Sites. We are currently preparing to mobilize to the 195 Flatbush to begin injections of Nano-Ox chemical oxidation compound starting on Monday with preliminary baseline sampling being conducted tomorrow. Excavation has restarted at the 195 Flatbush Site, and foundation element installation is currently underway. To date, approximately 450 loads of soil have been removed from the approximate property boundary of the 195 Flatbush Avenue Site. Once excavation elevation is reached, the current plans will involve the installation of a unreinforced concrete working surface at the site to allow trade work (e.g. plumbing, forming) to proceed. 2/28/11 - Obligado - I sent a RAWP dissaoproval letter with comments. In edocs. 6/6/11 - Obligado - Approved the revised RAWP 10/5/2012 - Remedial Action Completion Report submitted - The 195 Flatush Arena portion of the site was excavated to 25 to 32 feet bgs. Following 2 ISCO injection events, no exceedances of the AWQSGVs were observed in any of the monitoring points with exception of one low-level exceedance of MTBE. Endpoint samples within the building footprint were below cleanup levles. A 15 mil STEGO Wrap vapor barrier was installed beneath the arena building. There are still impacts northeast of the arena which still need to be adressed. 4/1/13 - Obligado - At the request of the Department, Ruix submits a Remedial Alternatives Analysis and Feasibility Study - Egress Pad report. The Remedial Action Work Plan (RAWP), dated November 16, 2010, specified that the remaining soil within the Building 2 footprint would be excavated to a depth of 25 ft bls. However the construction of an Egress Pad for the Arena necessitated a change in the Building 2 footprint to accommodate the required 13 feet width of egress path from the Arena in this area, total area is 400 sq ft. An investigation was performed to determine the extent of impact within this area. Petroleum

EXXON GAS STATION (Continued) **S107522883**

contaminated soils were encountered between the depths of 12 to 22 ft bgs. Approximately 100 to 200 cubic yards of soil under the Egress Pad are petroleum-impacted. According to the report found it was infesible to excavate the soil beneath the egress pad beacuse, the egress area is necessary for emergency exit from the arena, and excavation would be dificult due to close proximity of the subway, and the need fro bracing. The report recommends to contain the soil in place with a cover and to install a vapor barrier along the B2 building wall. 5/2/14 - Obligado - REviewed RACR addendum - This report documents the completion of the remaining soil excavation of the site in conjuunction with the construction of tower B2. The B2 building area was excavated to 25 bgs. Endpoints beneath the B2 building were below Soil Cleanup Objectives. Maximum gw contamination at MW34 is 238 ug/L total VOCs. MW33 was below standard. While some soil contamination above CP51 cleanup levels remains beneath the egress pad area between inbetween B2 building and the Arena, the contamination is limited in volume and effectively contained within a silt layer between 13 and 22 ft. Below the silt layer at 32 ft bgs, soils met cleanup standards. Remediaion of the contamination beneath the egress pad infeasible. A vapor barrier was installed beneath the building and along the foundation walls. This spill has been cleaned up to the extent feasible and no longer apperas to be a threat to human health or environment. Spill closed.

DEC Memo:	crompcro en route to do a tank test. spoke to john grathwol at reg 2.
Remarks:	02/10/06. Feroze talked with Mr. John Tsao 718-783-0409. He told me taht they found oil in test well. They are trying to find out the cause of that problem. Contaminated Soil Letter is sent to: Exxon Molil Oil Corp. 12596 West Bayaud Ave, Suit 100 Lakewood, CO 80228 & John Tsao 195 Flat Bush Ave Brooklyn, N11217 03/02/06 Feroze received a letter that they hired Crompco Corp. for remedial work. 03/15/06. Spill is transferred from Feroze to Kumer Patel. 03/16/06-Hiralkumar Patel. Received report from GSC/Kleinfelder. as per letter, this site had oil spill back in 2001. they found some product in monitoring wells and old spill case is 0107438. this case is being handled by Grathwol John and was last updated by Mr. Tang. as they found oil in test well they reported to DEC and it was assigned new spill number 0513054. Abstract of report: - upon inspection, the dispenser pans and submersible turbine pump secondary containment sumps appeared dry, and no reported alars were observed on Veeder Root System - Tank test for USTs and piping system passed. - review of inventory reconciliation records indicated the product inventory calculations were consistent with the amount of product delivered and pumped. copy of records attached. - during fluid recory even, approx. 175 gal of total fluid wree recovered, including approx. 25 gal of LPH. - Conclusion: based on the tank testing, inventory verification sheets and physical inspection results it has been determined that the product is associated with the historic case at this location. tank test results and inventory sheets are included in report. test results shows each tank and systems were passed. as discussed with Randy Austin, this case is closed because the product was related to old spill. and as the old spill is open, Randy asked me not to send NFA letter. Please refer Spill # 0107438

DEC Memo:	Roux notified DEC that a spill occured while excavating a newly discovered UST. Product from tank spill to the ground after removal.
Remarks:	9/10/10 - Obligado - Excavation contractors encountered a previously improperly abandoned tank during excavation and damaged the tank. A product water mixture spilled out of the tank and accumulated at the surface. Remedial contractors used absorbants as well as a vacuum truck to recover the product. This spill occurred in an area that will be excavated as part of the RAP for Spill number 0107438. during the larger excavation endpoints will be collected. This spill is closed and consolidated with existing spill number 0107438.

DEC Memo:	less than 1 gallon spilled. no resources affected. clean up is pending.
Remarks:	6/27/17-Vought-During performance of weekly spill statistics, Vought noted this spill as Unassigned. Spill assigned to Con-Edison Unassigned due to spill reportedly being one gallon of dielectric fluid. August 6, 2021 Con Edison Appendix B Prospect Park & Flatbush Avenue, Brooklyn, Spill No. 1702902 Rationale for Closure of Spill No. 1702902 Review of available information associated with Spill No. 1702902 revealed the following: Spill case No. 1702902 involved one (1) gallon of dielectric liquid spill from a street transformer malfunction in the street intersection settings. Area is fully paved and is commercial/residential with 2-3 story buildings and businesses/enterprises on the first floor. Cleanup of one gallon of fluid appears to have been completed. Based on the facts that (1) area is paved thus preventing a significant infiltration of contaminants into soil and groundwater and that (2) 1.0 gallon is below a regulatory spill reporting requirement of 5.0 gallons, and (3) time that elapsed since the spill occurrence date 4 years ago, the Department concluded the spill site and associated spill case present no further threat to human health and the environment for use of the site as paved street intersection and sidewalk with paved surfaces. The Department further concluded that keeping this spill case open does not have any environmental or human health benefit, and that the closure of this spill case is an appropriate course of action at this time. The Department closed Spill No. 1702902 effective August 6, 2021. VB

DEC Memo:	SOIL CONTAMINATION FOUND ON A BOARDERING GASSTATION WITH AN OPEN SPILL NUMBER;
Remarks:	left message with sin, seems spill can be closed once other spill # is known. 6/11/08- DECPiper recieved closure report. We recieved a spill report (0800917) from Roux Assoc in which they encountered contamainted soil in a utility trench adjacent to 0107438. Approx 40 cubic yards of soil was removed. Analyical results (composite grab samples) indicated no VOCs and slightly elevated SVOC's. It appears based on the results that this is not related to the station. The report and analyticals will be e-doced .closed.

DEC Memo:	TOM BURA 212 863 6093 CONTAMINATED SOILS FOUND
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 9/6/00 Reassigned from Tomasello to Rommel. Site is located between South Portland Street and South Oxford Street, approximately 100 feet north of Atlantic Avenue, across South Portland Street from the large shopping mall. The 100 feet between this property and Atlantic Avenue is associated with Spill # 0103681 and was formerly occupied by two service stations. 7/29/99 Limited Phase II Site Assesment - nine test pits. Elevated SVOC, hottest TP-3 and in southeast corner, in vicinity of former service stations (formerly along commercial property along Atlantic Avenue. 1/24/01 Letter sent to HPD requiring delineation of found SVOC and Metal contamination and submit information regarding the planned footprint for building/excavation. 10/29/01 Additional subsurface investigation to delineate area of Test Pit (TP) 4, gasoline contamination associated with former neighboring s/s. 6/4/02 Additional sampling on May 22, 2002, in area of TP-3 which was collected at 10 ft bg. Subsequent excavation for foundation was to a depth of 12 ft. Soil to 19 feet below grade consisted of fill. Soils 19 feet to 23 feet (terminus of

ATLANTIC TERMINAL III (Continued) **S104650238**

test pit) sand (native soil). Two samples collected at 23 feet below grade were clean. Seven soil samples were collected from 1 foot below foundations. Since the semivolatile concentrations are most likely attributable to the indigenous fill material, no futher

DEC Memo: former gas station comp took tanks out from the site and discovered contaminated soil soil samples
taken nyc housing now ownes this property more investigation to be done
Remarks: Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL See also SPILL # 99-12465. 7 gasoline (may be diesel) TANKS REMOVED 7/5/01 Limited contract to just remove tanks. 1/24/01 Letter to HPD requiring proper registration and closure of 7 out-of-service gasoline tanks. 07/05/2001 TEST BORINGS ARE PLANNED TO DELINEATE THE CONTAMINATION AS PER NAT KEBEM OF GC ENVIRONMENTAL 08/22/01 Spoke to Nat. They attempted mud rotary, but were unsuccessful since the site is underlain with boulders from just about grade to at least 30 feet. Nat suggested that we install wells to test groundwater. He indicated that the tanks were removed in July (see 0103681) and the report will be complete soon. He said they found lots of contamination around the tanks. They did not break through the concrete slab. I indicated that they will need to install wells in the area of the former gas tanks. 3/30/2005 - Robert Walter of NYC HPD called. He is applying an EPA grant to conduct a site investigation at the site. He would like to have EPA accept the DEC reporting protocol for the EPA grant. He will arrange a meeting with EPA, DEC and HPD to discuss the concept. Transferred the project from Rommel to Koon Tang in the meantime- KST 07/25/2007: This spill case was transferred to A. Doronova. AD 07/30/2007: Reviewed submitted to DEC on July 12, 2007 Supplemental site investigation report and RAP, which includes UST removal plan and Post-remediation GW monitoring plan. The SSI report states that petroleum contaminated soils are located in the areas of soil vapor test pits (TP-1 and TP-6). Groundwater in wells MW-2 and MW-1 indicates elevated concentrations of VOCs and Naphthalene above TOGS. RAP proposes excavation of contaminated soil during redevelopment of the site, followed by annual groundwater monitoring. In addition, a vapor barrier and sub-slab venting system will be installed beneath the planned on-site building to prevent intrusion of any residual petroleum vapors. The UST removal plan includes excavation of an underground tank identified near soil vapor test pit TP-6 with collection of end-point soil samples. A UST closure report and remedial action summary report will be submitted to DEC. AD 08/02/2007: Sent a letter, addressed to Michelle de la UZ and Gretchen Maneval, approving the RAP and UST removal plan with the comment to perform and report post-remedial groundwater monitoring semi-annually rather than annually. AD 03/14/2008: Spoke with Eric Weinstock of CA Rich regarding UST removal. He said that they removed USTs and collected end-point samples on September 5th and 7th, 2007, one sample indicated elevated levels of VOCs and they plan to excavate deeper to chase contamination, after the shoring will be installed. They anticipated to continue the work in April, 2008. Asked him to send me a site diagram with former USTs locations. Project manager for the site from CA Rich is Victoria Whelen. AD 04/14/2008: Received an email from Victoriz Whelen of CaRich. They starting excavation today. She plans on being on-site today to collect final endpoint samples from the most recent tank pull, as these samples were not collected due to the maximum depth of the excavation had been reached before shoring was necessary. After the samples are collected on Monday, excavation will be restarted on

ATURA ATLANTIC TERMINAL III (Continued) **S105058696**

Tuesday April 15th, 2008. Spoke with Eric Weinstock of CaRich. He confirmed that Ms. Whelen will be at the site tomorrow. Will visit the site. AD 04/15/2008: Visited the site. Back in September 2007 CaRich excavated another tank, (appx 300-gallon)which was found near TP-3. Then excavation was stopped due some issues regarding dust control from neighboring apartment buildings' tenants. The whole site is an open excavation pit about 10 feet deep. Yesterday they excavated deeper in the vicinity of TP-3. Approximately 100 cubic yards of contaminated soil were removed from the site. The highest PID readings were 50 ppm at the 8' bgs. Soil was removed until ND PID readings were reached. Five end-point soil samples were collected. Monitoring wells will be sampled after the excavation will be completed. Ms Whelen said that complete excavation will be 25' deep. Suggested to collect end-point soil samples along all perimeter of the excavation. AD 06/06/2008: Received a phone call from E. Weinstock of CA Rich. They completed the excavation and plan to collect end-point soil samples from the excavation perimeter next week. Total number of the samples - 14. Tank excavation report will follow. Will visit the site to observe samples collection. AD 06/10/2008: Received a phone call from Mr. Weinstock of CA Rich. He confirmed, that collection of soil samples was scheduled on Thursday, June 12, 2008. AD 06/12/2008: Visited the site. Met with V. Whelen. Observed collection of 8 soil samples in total, along Atlantic Avenue and South Oxford Street. Soil samples along two other walls will be collected after slope to the bottom of the excavation pit will be relocated. Depth of the excavation pit range from 15 feet along South Portland Avenue to 20 feet along South Oxford Street. Between TP-1 and TP-2 there is 12 feet deep pit for building's elevator. Vapor barrier installation is scheduled for July, 2008. 07/15/2008: Received a phone call from E. Weinstock. He said that they are ready to collect remaining end-point soil samples. A Labdata for previously collected soil samples will be sent to me via email. Will possibly visit the site on Friday, July 18, 2008 to observe the samples collection. AD 07/17/2008; Received a call from E. Weinstock with conformation that soil collection scheduled for July 18, 2008. Will meet with him at the site on Friday. AD 07/18/2008: Visited the site. Met with E. Weinstock. Observed the collection of five end-point soil samples. Took pictures. Requested to re-sample on a deeper level the most contaminated spot near elevator pit. AD 08/18/2008: Received a Tank Closure Report. Will review. PDF copy is missing. AD 10/2008: Reviewed the report.The report summarizes the on-site remedial actions performed by CA Rich, including removal of six USTs and one buried drum, excavation of contaminated soil, and collection of end-point soil samples. According to the report, elevated levels of SVOCs were detected in all end-point soil samples. The consultant asserts that the SVOCs are attributable to a historic urban fill and were detected at similar levels across the property. The Conclusions and Recommendations section of the report states that CA Rich will perform post-remediation groundwater monitoring and submit the results as part of a Site Closure Report. No response is needed. AD 10/14/2008: Received an email from Mr. Weinstock saying: Hi Ainura, The project superintendent told me he expects to install the next phase of the venting system around the first week of November. I will be in touch with you before then to confirm an inspection date. Please let me know the status of your review of the Tank Closure Report. Our client would like to get an approval letter for this phase of the work. Thank you. Regards, Eric A. Weinstock, Vice

ATURA ATLANTIC TERMINAL III (Continued) **S105058696**

President Spoke with Mr. Weistock. Explained that the report does not contain any recommendation that needs our approval. Mr. Weinstock said that such letter was requested by the owner of the site. Will write a letter. AD 11/12/2008: Received an email from E. Weinstock saying: We are going to set the pipe tomorrow (weather permitting) and pour concrete on Tuesday. We will be out to inspect the liner Tuesday morning. If you want to meet us there Tuesday morning (Nov. 18th) we can show you the venting system before they pour the concrete. Let me know if that date works for you. Regards, Eric A. Weinstock, Vice President CA RICH Consultants, Inc. Scheduled the site visit for November 18, 2008. Victoria Whelen will be at the site. AD 11/18/2008: Visited the site. They completed partial installation of the sub-slab venting system. The pictures of the installation will be included in the Site closure report. Ms. Whelen told me that they plan to sample the monitoring wells in December, 2008. Asked her to survey the wells to indicate recent GW flow direction. Later in the day sent a letter to Heather Gershen of Fifth Avenue Committee, Inc. saying that the Department agrees with the course of action recommended by CA Rich in the tank Closure Report. DL to eDocs. AD 11/19/2008: Received an email from Mr. Weinstock of CA Rich saying: Ainura, For your information, we have scheduled December 2nd for the sampling of the wells at Atlantic Terrace. Regards, Eric A. Weinstock, Vice President CA RICH Consultants, Inc. AD 02/09/2009: Received Groundwater Monitoring report dated January 28, 2009. No PDF copy. Will review the report. To request e-copy. AD 02/10/2009: Reviewed the report submitted by CA Rich Consultants, Inc. on behalf of the Fifth Avenue Committee, Inc. The report presents a historical summary of groundwater sampling performed at the site, followed by an evaluation of subsurface conditions. According to the report, relatively low levels of VOCs were detected in all three site wells. Based on the data, CA Rich recommends closure of NYSDEC Spill Case No. 0103681 associated with the property. The submitted data indicate that more than 1,000 parts per billion of total VOCs, with nine compounds exceeding their state groundwater standards, remain in monitoring well MW-2. Discussed this spill with J. Kolleeny of DEC. AD 02/12/2009: Spoke with E. Weinstock of CA Rich, explained him why spill cannot be closed. Discussed measures to expedite remediation of GW contamination and frequency of the GW monitoring. AD 02/13/2009: Issued a letter, where disapproved spill closure at this time. Requested to continue post-remediation groundwater monitoring at the site to ensure the effectiveness of the performed remediation and to establish a clear decreasing trend of residual groundwater contamination. DL ecopy of the letter to eDocs. AD 06/2009: Called and spoke with E. Weinstock of CA Rich regarding GW monitoring report submission. I was informed that CA Rich recently have collected GW samples and is in a process of report preparation. It will be submitted shortly. AD 07/01/2009: Received an e-mail from CA Rich saying: Hi Ainura, Attached is a pdf copy of our June 2009 semi-annual groundwater monitoring report for the Atlantic Terrace site, (spill no. 01-03681). A paper copy will be sent to you by us mail. Regards, Eric A. Weinstock, Vice President CA RICH Consultants, Inc. 17 Dupont Street Plainview, NY 11803 Phone: (516) 576-8844 Fax: (516) 576-0093 DL the pdf copy to eDocs. Will review. AD 07/13/2009: Reviewed the Semi-Annual Groundwater Monitoring Report dated July 2009, submitted by CA Rich Consultants, Inc. on behalf of the Fifth Avenue Committee, Inc. The report presents a summary of recent and historical groundwater analytical data, followed by an evaluation of

ATURA ATLANTIC TERMINAL III (Continued) **S105058696**

subsurface conditions. According to the report, relatively low levels of VOCs were detected in one site well. Based on the data, CA Rich recommends closure of NYSDEC Spill Case 0103681 associated with the property. 07/15/2009: Discussed the site with J. Kolleeny of DER. Issued a letter disapproving the spill closure request at this time, stating that: although' VOC concentrations in well MW-2 have decreased since the previous sampling event, the submitted data indicate that more than 600 parts per billion of total VOCs, with eleven compounds exceeding their state groundwater standards, still remain in monitoring well MW-2. Requested that GW monitoring should continue at the site to ensure the effectiveness of the performed remediation and to establish a clear decreasing trend of residual groundwater contamination. AD 12/08/2009: Received an e-mail from E. Weinstock of CaRich saying: We plan to perform the next round of groundwater sampling at Atlantic Terrace on Monday, December 14th. Regards, Eric A. Weinstock, Vice President CA RICH Consultants, Inc. 17 Dupont Street Plainview, NY 11803 Phone: (516) 576-8844 Fax: (516) 576-0093 email: eweinstock@carichinc.com website: www.carichinc.com AD 01/07/2010: Received a phone call from Mr. Weinstock of CA Rich. Discussed the latest GW analytical results. The most contaminated well MW-2 indicated increase in VOCs. Mr. Weinstock submitted tables with lad data via e-mail. To review. A monitoring report will be submitted later. AD 01/21/2010: Received an e-mail from Mr. Weinstock saying: Hello Ainura, Attached is our Semi-Annual Monitoring Report for the Atlantic Terrace Site. As we discussed on the telephone, we will resample well MW-2 for VOCs this March. Regards, Eric A. Weinstock, Vice President CA RICH Consultants, Inc. 17 Dupont Street Plainview, NY 11803 DL the report to eDocs. AD 01/27/2010: Received a hard copy of the groundwater monitoring report dated January 21, 2010. The report presents a summary of recent and historical groundwater analytical data, followed by an evaluation of subsurface conditions. It states that on July 29, 2009 ORC sock was installed into well MW-2. According to the report, relatively low levels of VOCs still persist in one site well MW-2. Concentration of TVOCs has increased in well MW-2 after installation of ORC sock into the well, from 647ppb in June 10, 2009 to 1097ppb in December 14, 2009. CA Rich recommends to re-sample well MW-2 in March 2010. AD 02/25/2010: Received an e-mail from Mr. Weistock saying: Hi Ainura, We will resample well MW-2 at the Atlantic Terrace site on Wednesday, March 3rd. Please call me if you have any questions. Regards, Eric A. Weinstock, Vice President CA RICH Consultants, Inc. 17 Dupont Street Plainview, NY 11803 AD 03/24/2010: Received a groundwater monitoring report dated March 23, 2010. The report presents a summary of recent and historical groundwater analytical data, followed by an evaluation of subsurface conditions. According to the report, relatively low levels of VOCs still persist in one site well MW-2. Concentration of TVOCs has reduced in this well from 1097ppb in February 12, 2010 to 833.4ppb in March 3, 2010. Based on the data, CA Rich recommends closure of NYSDEC Spill Case 0103681 associated with the property. Discussed the site with J. Kolleeny of DEC. It was advised to CA Rich to continue GW monitoring to establish clear decreasing trend of VOCs in MW-2. AD 05/19/2010: Received an e-mail from Mr. Weinstock saying: The most recently groundwater monitoring report is attached. Regards, Eric A. Weinstock, Vice President CA RICH Consultants, Inc. 17 Dupont Street Plainview, NY 11803 DL to eDocs. AD 05/20/2010: Received a groundwater monitoring report dated May 18, 2010. Will review. Ad 05/21/2010: The report presents a summary of recent and historical

ATURA ATLANTIC TERMINAL III (Continued) **S105058696**

groundwater analytical data. According to the report, relatively low levels of VOCs still persist in one site well MW-2. Concentration of TVOCs has reduced in this well from 833.4ppb in March 3, 2010 to 550ppb in May 10, 2010, with no Benzene or Toluene; Trimethylbenzene - 240ppb; Ethylbenzene - 60ppb and Xylene - 66ppb. Based on the data, CA Rich concludes that decreasing trend of VOCs has been established and recommends closure of NYSDEC Spill Case # 0103681 associated with the property. Discussed the site with J. Kolleeny of DEC. It was advised to CA Rich to submit a sensitive receptor survey to DEC. Later received the requested survey. DL to eDocs. Will review. AD 06/10/1020: Reviewed the survey. Discussed with J. Kolleeny of DEC closure of this spill case. Entire property was excavated down up to 25 feet bgs. Vapor barrier and sub-slab depressurisation system were installed under the building. The building has a full basement. Depth to GW is approximately 50' bgs. There are no residential buildings downgradient from the site. A train depot is located across the Atlantic Avenue - downgradient from the site. Historical data for TVOC concentration show decreasing trend. No Benzene was detected in the GW samples. Based on the data, it was desided to close the case and to issue a Spill Closure Letter. AD 06/14/2010: Issued and sent Spill Closure Letter. DL pdf copy to eDocs. Case closed. AD

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
