DEC Memo:	contractor hit tank and broke line - caller did not know the contractor's name - but the reality company does
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 11/09/05 Called contact number and left a message to call me. J Lister 11/10/05 spoke with Brooke Phillips who gave me name of remediation compny who cleaned up spill. They are Milro Assoc. and a contact there is Paul Basso 516-379-1500. J Lister 9/7/06 - Austin - Assigned from Albany to Region 2 staff (Ketani) for review and closure - end 9/21/06 - Raphael Ketani. This was a broken fuel line. Contractor hit the tank and 200 gal. was lost. I tried calling Paul from MILRO, Fred Valenstein from Morania Oil (718) 444-3400, and Brooke Philips from MBS Realty (917) 767-6056, but could only leave messages. 9/22/06 - Raphael Ketani. Brian Mackee of Madison Oil (718) 444-3400 left a message. He said that Madison responded to the spill by putting down Drisorb. Then the owner called MILRO to finish the job. 1/11/07 - Raphael Ketani. I tried to call Ms. Brooke Philips, but could only leave a message that DEC hasn't heard anything from her since the last phone message was left, and that she has 3 weeks to respond or else legal action may be taken. I contacted Paul of MILRO. He said that he had a case record for 126 Prospect Place, but that he will have to search the attic for the file and send me copies of what MILRO has. I checked the ownership of the site. According to Property Shark and the NYC Property Tax databases, the site has alternate addresses of 122-126 Prospect Place and 307-309 Flatbush Avenue. There was a picture in Property Shark of 307 Flatbush Ave. which was taken by someone from the City of New York. It shows a wedge shaped (Flat Iron style) building. The block and lot are 01157/0015. The owners are listed as: MBS Realty, LLC, 307 Flatbush Avenue, Brooklyn, 11217-2813. I sent a CSL to Ms. Philips at MBS giving her 3 weeks to respond to the DEC or else legal action will be taken. The letter went out today. 1/18/07 - Raphael Ketani. Ms.

MBS REALITY (Continued) **S106015518**

Philips called today. She said she was FAXing over all of the documents that I needed. I received a FAXed document from Ms. Phillips. I received a package of documents containing copies of a record of fees paid by MBS Realty - a $5000 payment to MILRO made on 6/27/03 - , a letter from their insurance carrier, Harleysville, stating that they weren't covered for the spill, a check from Harleysville Worcester Insurance for $3978.61 made out to MBS and MILRO, and a copy of a check for the same amount made out to MILRO. 1/24/07 - Raphael Ketani. I called up Ms. Phillips and asked her for a cover letter explaining what happened to cause the spill, what was done to clean it up and what was the end result. She said she remembered nothing regarding the spill and to call MILRO. I called Paul at MILRO (516) 379-1500 and he said that he is still looking for the documentation regarding the case. He said he believes MILRO has the documentation somewhere. 1/25/07 - Raphael Ketani. Paul from MILRO FAXed me copies of the manifests for the contaminated soil that was removed. 1/29/07 - Raphael Ketani. I spoke to Paul and asked him what he meant by indicating that MILRO didn't finish the job. He said that MILRO responded as an emergency contractor and did removal work on 6/27, 7/14, and 7/15. He said that Morania Oil put out a contract to bid and another cleanup contractor took over on 7/17. I called up Rich Turchiano of Morania Oil (718) 444-3400 and asked him who finished the cleanup at the site. He said that he will have to research this and get back to me. Mr. Turchiano called back and said that they didn't have any documentation regarding the cleanup. He said that Castlton Environmental often does cleanup work for them. I called up Castlton (201) 727-9001 and spoke to a secretary. She said that she didn't have a file on the case, but would pass the request along to a project manager. 4/12/07 - Raphael Ketani. I called up Nicole, again, of Castlton. She said that my request was passed along in January 2007, but she said, Castlton had very few records from before 2004. She said that she will talk to her boss and see if he can come up with anything. 4/18/07 - Raphael Ketani. I called up Madison Oil and asked them what size oil tank MBS Realty had for the property. A woman at the oil company looked the size up in her computer and said two 275 gal. tanks. Based upon the package of documents sent to me by Brooke Philips of MBS Realty, and the soil manifests that MILRO had sent, I am closing the spill case.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	1C-01
Tank Id:	251025

Equipment Records:

H99 - Tank Leak Detection - Other
E00 - Piping Secondary Containment - None
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
F00 - Pipe External Protection - None
J01 - Dispenser - Pressurized Dispenser
G01 - Tank Secondary Containment - Diking (Aboveground)
G10 - Tank Secondary Containment - Impervious Underlayment
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
L99 - Piping Leak Detection - Other
D01 - Pipe Type - Steel/Carbon Steel/Iron
C03 - Pipe Location - Aboveground/Underground Combination

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	08/20/2012
Capacity Gallons:	3000
Tightness Test Method:	-
Date Test:	Not reported

DEC Memo:	tank was found, while removing it product was lost. Clean up in progress.
Remarks:	Construction work part of the Atlantic Yards major project in Brooklyn. They found an AST Tank in the basement of a building which was going to be demolished. They found oil in a hole near the tank. Vac truck is in now to drain the tank and to pump out the oil in the hole. Once the tank is removed, they will excavate out the contaminated soil and then take end point samples. Soil sample results will be sent to Patel for review. 05/14/10-Hiralkumar Patel. alternate address: 2-6 5th Avenue no PBS or other spills. property owner: AY 608-620 Atlantic, LLC. c/o Forest City Ratner Companies One Metrotech Center North Brooklyn, NY 11201 11:32 AM:- spoke with Sin at Roux. he mentioned that as part of Atlantic yard development (Mets arena), contractor demolished existing building without knowing a 1,080 gal AST in basement. during debris removal, found tank and some spill in basement. Roux removed that tank and removed contaminated material. they also collected endpoint sample below basement floor. will submit report in couple of weeks. asked Sin to provide property owner/incharge's name and number. 05/20/10-Hiralkumar Patel. DEC

BARCLAYS CENTER AT ATLANTIC YARDS (Continued) **S110308406**

Steve sent letter to owner on 05/17/10. 06/23/10-Hiralkumar Patel. 4:20 PM:- left message for Sin for updates. 07/07/10-Hiralkumar Patel. 4:20 PM:- left message for Sin for updates. 2:16 PM:- received call from Sin. he mentioned that this project is three city blocks wide, but the area where spill report is owned by Brooklyn Event Center LLC. he mentioned that tank has been removed and will submit report by end of 08/13/10. Brooklyn Events Center LLC. **property owner** 1 Metrotech Brooklyn, NY 11201 Attn.: David Berliner Ph. (718) 923-8400 08/24/10-Hiralkumar Patel. 4:50 PM:- received email from Roux associates including cleanup report. abstract: - at the time of Phase I in June 2004, the subject property consisted of an abandoned four-story residential/commercial mixed-use building that was most recently occupied by a restaurant supply and distribution business - historical sanborn maps show that the four-story building has existed on the property since 1888 - during Phase I, a fill cap was observed in the sidewalk to the northeast of the property and tank registration documentation was observed to be posted in the northeastern corner of the building's basement - a previous Phase I done in Jan. 2000 indicated that a 1,080 gal AST encased in concrete was present on the property - tank was uncovered during excavation in northeastern corner - while being uncovered, the tank was punctured by the excavator and began to leak into trench dug next to the tank - 750 gal of oil-water mixture was pumped from the tank - stained soil was observed adjacent to an approx. 1,000 gal tank - final excavation was in an irregular shape and was about 15 ft by 15 ft, with a depth of 20 ft - total of approx. 225 tons on soils removed - collected five endpoint samples: one from each sidewall and one from bottom - no contamination found in endpoint samples based on submitted report, case closed.

DEC Memo:	Diesel spilled when worker was filling the compressor tank, the diesel was spilled onto soil and due to ran made it to a utilities drainage ditch that is pumped into a fracture tank owned by the NYC DEP.
Remarks:	Atlantic yards project. Diesel spilled into a trench and made a sheen. Water/oil was pumped out. 1 Drum of soil removed. 1 soil sample. Roux will send a .pdf report to Sangesland to review. 10/14/11 - Raphael Ketani. I spoke to Frank Cherena of ROUX Associates. He will send the report to me via e-mail. I received the 8/3/11 cleanup letter report from ROUX. The report consisted of several pages for the letter and the raw data report from the laboratory. Table 1 showed the pre and post excavation analytical results. The post excavation analytical results were almost entirely below the CP-51 standards. Table 2 showed the analytical results for three background soil samples that were taken. The post-excavation results were very similar to the background soil results. The letter states that the site is underlain by historical fill. From the information in the letter report, I determined that the great majority of the contamination had been removed. Therefore, the residual contamination was not a threat to the public or the environment. I closed the spill case effective today.

DEC Memo:	contaminated soil found on site
Remarks:	10/2/20 - Kim - Desk Duty - This is an active construction site. During construction they excavated the site and found 5 USTs, which has been reported to DEC Zelinski. When these tanks were removed today, they discovered contaminated soil underneath the tanks. They approximate that the soil contamination goes down a few feet but they are unsure how many as they just started to excavate the contaminated soil. AKRF is the Environmental Consultant for TF Cornerstone, the property owner/developer. Brookside Environmental was called to the site to remove the tanks and they are removing the contaminated soil and stockpiling the contaminated soil on poly. The stockpiled contaminated soil has been sampled for lab analysis. Additional excavation is planned for Monday. The construction plans call for them to excavate 40 ft below grade so they expect that all contaminated soil will be removed before then. There was some free product in the tanks but there was no free product found in the soil up to this point. AKRF reported that they did not observe any exterior tank piping associated with the USTs. AKRF also stated in an email that multiple Phase Is and a large Phase II (comprehensive of multiple blocks surrounding our Site) were completed. Spill Case assigned to DEC Patel. 11/09/20-Hiralkumar Patel. 9:47 AM:- sent email to Pat inquiring updates. email copied to Marc Godick (AKRF), Brian Mills (Brian.Mills@tfcornerstone.com) and Ramon Garcia (Ramon.Garcia@tfcornerstone.com). 10:23 AM:- received email from Pat. he is working on closure report which will be submitted this week. he inquired if separate report needed for spill # 2006561 for an unrelated area of the subject site. 12:42 PM:- sent email to Pat and asked him to submit one report for both spill cases. 2:58 PM:- received email from Pat. he mentioned that the documentations are ready for the subject spill case, but there is still some excavation needs to be completed for the second spill # 2006561. the remaining contaminated soil in area of spill # 2006561 will be excavated tomorrow and endpoint samples will be collected afterwards. Pat will submit a combined report upon receipt of endpoint sample results from area of spill # 2006561. 11/24/20-Hiralkumar Patel. a new spill # 2007542 reported for the subject site. received email from Pat (at 4:51 PM on 11/23/20). he mentioned that fuel oil (appears to be #4 fuel oil) leaked from an approximately 1,000 gallon UST that was uncovered during excavation activities for redevelopment work. Brookside Environmental was called on-Site and evacuated the contents of the UST and the impacted soils have been segregated for waste characterization and disposal. AKRF plans to take post excavation samples this week from the tank grave. Pat inquired if they can

CONSTRUCTION SITE (Continued) **S126997522**

combine cleanup report for three spills (2005994, 2006561 and 2007542) reported at the site (all three spills are in different areas of the site). he stated that if combine report is acceptable, then the report will be submitted upon receipt of endpoint sample results for the spill # 2007542. 6:25 AM:- sent email to Pat. informed him that if spill # 2007542 is a minor spill as described in the email, and as this is part of one big project, a combine report can be submitted for all three spills. asked him to make sure that the report describes each area separately and has scaled map with all three spill areas. email copied to Brian Mills (Brian.Mills@tfcornerstone.com), Marc Godick (mgodick@akrf.com), Victor Chang (vchang@akrf.com) and DEC Sekhon. 12/21/20-Hiralkumar Patel. received email from Pat (at 4:31 PM on 12/18/20) including spill closure report for all three spills (2005994, 2006561 and 2007542). summary: - the development plan for the site includes new construction of two (East and West) tower buildings with a common below ground foundation/podium with parking, back of house areas, mechanical rooms and amenity space that will require excavation of the entire site down to depths ranging between 40 and 50 ft bg - area surrounding the site is approx. 60 to 80 ft above mean sea level - spill # 2005994 was assigned on 09/20/20 due to petroleum-contaminated soil associated with five (5) 275 gal gasoline USTs located in the western portion of the site - five USTs contained mixture of gasoline and water - total of 925 gal of gasoline/water mix was removed from five tanks - petroleum contaminated soil was encountered to a total depth of 12 ft bg - final excavation was 15 ft by 35 ft - total of eight (8) endpoint soil samples were collected: four sidewall samples at 6 ft bg and two bottom samples at 12 ft bg - no contamination was noted in endpoint samples - spill # 2006561 was assigned on 10/19/20 due to petroleum contaminated soil associated with one (1) 2,000 gal diesel UST located in the southeastern portion of the site - the UST contained diesel and water mix - approx. 360 gal of diesel/water mix removed from the tank - grossly contaminated soil was encountered at depths between 0 and 24 ft bg in an approx. 48 ft by 24 ft excavation surrounding the tank - total of eight (8) endpoint soil samples were collected: six sidewall samples at 20 ft bg and two bottom samples at 24 ft bg - no contamination was noted in endpoint samples, except sample UST-2E1 (3,700 ppb of Xylene) - spill # 2007542 was assigned on 11/23/20 due to petroleum contaminated soil associated with one (1) 1,000 gal #4 oil UST located on the southeastern portion of the site - small amount of UST contents was discharged onto the surrounding soil and fill during excavation activities - removed petroleum contaminated soil from the UST grave to a depth of 12 ft bg - total of five (5) endpoint soil samples were collected: four sidewall samples at 6 ft bg and one bottom sample at 12 ft bg - no contamination was noted in endpoint samples - groundwater was not encountered during excavation activities case closed based on review of the report. 9:18 AM:- sent email to Pat and informed him about spill closure. email copied to Brian Mills (Brian.Mills@tfcornerstone.com>), Marc Godick (mgodick@akrf.com) and Victor Chang (vchang@akrf.com).

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

BROWNFIELDS:

Name:	ATLANTIC TERRACE CORNERSTONE PROJECT
Address:	669 ATLANTIC AVENUE
City,State,Zip:	BROOKLYN, NY 11217
Program:	BCP
Site Code:	374758
Acres:	0.350
HW Code:	C224120
SWIS:	2401
Town:	New York City
Record Added Date:	12/12/2006
Record Updated Date:	04/10/2008
Update By:	SRHEIGEL
Site Description:	The remediation of this site is currently being proposed under the Brownfield Cleanup Program (BCP). The site is approximately 0.35 acres, located at 669 Atlantic Avenue, Borough of Brooklyn, Kings County and is part of the Atlantic Terminal Urban Renewal Area. The site is located on the northern side of Atlantic Avenue between South Oxford Street and South Portland Avenue. It occupies the entirety of a C6-1 zone that is immediately surrounded by residential (R7-2), commercial (C6-4) and manufacturing (M1-1) zones. Current use is

ATLANTIC TERRACE CORNERSTONE PROJECT (Continued) **S113916481**

	vacant, historical records indicate that it was utilized for automotive fuel storage and dispensing purposes. The Brownfield Cleanup Agreement was terminated in 2007 at the request of the Volunteer. The Site is associated with NYSDEC spill #0103681 and #9912465.
Env Problem:	The primary contaminants of concern at the site which are known or suspected to affect the soil, groundwater and soil gas are petroleum, chlorinated solvents, SVOC's, and metals. Investigations indicate concentrations of metal and PAHs that exceed RSCOs include barium, chromium, lead (14,200 on the South side of the property), mercury (up to 3 ppm), chrysene, benzo(a)anthracene, benzo(a) pyrene, and dibenz(a,h)anthracene. VOCs (ethylbenzene, toluene, trimethylbenzene, xylenes and naphthalene), SVOCs (including naphthalene) and metals have been measured in groundwater in concentrations that exceed their respective standards. In addition, soil gas exhibited elevated concentrations of petroleum-related compounds (i.e. 2,2,4 ? Trimethlypentane concentration of 28,471 g/m3). Also, a soil gas TCE concentration of 30 g/m3 has been reported.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY HOUSING AUTHORITY WILL NOTIFY KOLLEENY OF DEC BEFORE RE-TEST. 11/07/05: This spill transferred from J.Kolleeny to S.Kraszewski. 12/23/05: Tank has been removed and replaced (2004.) No tank closure assessment performed. - SK 07/07/06: NYCHA summary report states no recovery system and no MWs on-site. A site assessment is available and NYCHA recommends the Department review it. - SK 02/06/07 - J.Kann - site reassigned from S. Kraszewski to J.Kann. 7/22/10: J.kann - investigation work plan received on 7/15/10. 12/27/12: J.Kann - reviewed IWP. Emailed NYCHA requesting that the SAR referenced in the IWP be submitted for review before comments can be finalized on the IWP. 1/14/13: J.Kann - comments on the IWP sent to NYCHA on 1/9/13. 3/4/13: J.Kann - An addendum to the Work Plan and a revised Figure was received on February 27, 2013. The addendum and the revised figure were reviewed and the IWP with addendum approved on March 4, 2013. The SIR is due September 4, 2013. 1/28/14: J.Kann - a modification was approved to the SIR and edoced. 3/4/14: J.Kann - SIR received. 3/20/14: J.Kann - looked briefly at

ATLANTIC TERMINAL -NYCHA (Continued) **S102673219**

report. No groundwater sample collected at SB-3 as discussed (see email from 1/28). Spoke to Steve of JCB earlier this month and pointed that out to him. He said he would get back to me with a response. 6/13/14: J.Kann - sent an email to NYCHA indicating that a gw sample was supposed to be collected at the SB-3 location and was not. This information is necessary to consider the investigation complete and review the site for closure. 04/04/17: J.kann -Additional attempts were made to obtain groundwater in 2014. Refusal was met at each attempt. Based on the following: --Records indicate that one (1) 20,000-gallon, single-wall, steel underground storage tank (UST) was installed in 1976 that contained No. 4 and No. 6 fuel oil. This UST was replaced with one (1) 15,000-gallon, double wall, steel UST in 2004 that is currently in service and contains No. 2 fuel oil. Records also indicate that Gordon Environmental & Mechanical Corporation (Gordon) prepared a Site Assessment Report dated April 2005 that documents the closure activities associated with the 20,000-gallon UST. The report documented that the excavation for the UST removal/replacement extended to 19 feet below grade surface and that a total of 566 tons of soil was exported off-site. The report stated that no evidence of gross contamination was observed in the endpoint samples, and that the laboratory analysis revealed no contamination concentrations above the NYSDEC standards. --JCB prepared a Remedial Investigation Report dated February 2014 detailing the findings of the investigation. The report concluded that the soil samples collected indicated no significant impact from the former or current USTs. Although groundwater at the site could not be assessed through sample collection and analytical testing, based on the background information provided and the geology encountered at the site and the findings of the soil investigation performed, it is highly unlikely that contamination from the use of the USTs adversely impacted the groundwater beneath the subject site. Spill closed.

Remarks: TANK TEST FAILURE AT ABOVE LOCATION. TANK TO BE ISOLATED AND RETESTED.

Hazardous Waste Summary:

Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U031
Waste Description: 1-Butanol (I) (Or) N-Butyl Alcohol (I)

Waste Code: U069

ULANO CORP (Continued) **1000123536**

Waste Description: 1,2-Benzenedicarboxylic Acid, Dibutyl Ester (Or) Dibutyl Phthalate

Waste Code: U080
Waste Description: Methane, Dichloro- (Or) Methylene Chloride

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U151
Waste Description: Mercury

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U220
Waste Description: Benzene, Methyl- (Or) Toluene

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Toxic Release Inventory System (TRIS) is a publicly available EPA

ULANO CORP (Continued) **1000123536**

database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	001
Tank Id:	25538
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	H00 - Tank Leak Detection - None
	F00 - Pipe External Protection - None
	B00 - Tank External Protection - None
	C00 - Pipe Location - No Piping
	A00 - Tank Internal Protection - None
	I04 - Overfill - Product Level Gauge (A/G)
	D00 - Pipe Type - No Piping
	G00 - Tank Secondary Containment - None
Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	1500
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	09/01/1997

DEC Memo: LAB RESULT FROM TEST SOIL BORING SHOWED ELEVATEE READING-SITE REPORT TO FOLLOW.

622 ATLANTIC AVE (Continued) **U000416589**

Remarks: Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 4/12/04-Vought-Spill transferred from Mulqueen to Vought as per Rommel. 9/27/05 - Obligado - Spill transferred from Vought to Obligado 11/18/05 - Obligado - File Review: 9/9/93 - NOV letter dated reporting failed inspection for no registetration, no tank testing. 5/18/94 - Affadavit, B & M Service station maintenance reports no Stage 1 or Stage 2 vapor recovery systems in place. 5/27/94 - UST closure plan submitted by DAmes and MOore and approved by the department on 6/10/94. 12/94 - UHaul Corporation UST abandonment report. Ammended closure plan to abandon the USTs in place. Ammendment approved by DEC Krimgold. The site contained 1 4000 gallon gasoline undergaround storage tank. Piping was less then 15 feet and did not require samples collection. 1 dispenser pump was located on site. 4000 gallon gasoline UST was encased in concrete and could not be removed so it was closed in place under supervision of a NYC fire Department cerified tank installer. The condition of the tank was good, with no corrosion holes. A site assessment was completed at the tank location. Three soil borings performed, B1, B2, and B3 and a total of 5 soil samples colleced. NO impacts at B1 and B2 to 27 ft bgs. SOIL IMPACTS AT B3(20-23 ft) showing 25000 ppb ethylbenzene, 203000 ppb xylene, 15000 isopropylbenzene, 26000 n-propylbenznee, 130000 1,2,4 trimethlybenzene, 70000 1,3,5 trimethlybenzene, 59000 n-butlbenznee, 18000 napthalene. At B3 (26-27) show 5500 ppb ethylbenzene, 33000 xylene, 37000 trimethlybenzene, 18000 2,k3,5 trimethlybenzene, 21000 nbutlybenzene, 20000 sec-butylbenzene. Boring B3 advanced to 28 ft, showing up to 500 ppm with PID. Soil is brown medium sand and silt, GROUND WATER NOT ENCOUNTERED. Based on soil results spill number 9412191 was assigned. Based on site assessment boring results, remedial measures will be required. A supplemental site assessment plan should be submitted to the NYSDEC and remedial activities implemented after NYSDEC approval 12/12/05 - Obligado - Call Michael Morris at ATC, inquire as to site status. He said he will contact his client. From GIS parcel information: Site resident & owner: M & V RENTALS INC 622 ATLANTIC AVENUE BROOKLYN NY, 11217 Mortgage: U-HAUL CO OF NEW YORK PO BOX 29046 Apt# PHOENIX AZ, 85038-9046 5/11/06 - Obligado - Sent letter to Amerco Real Estate requiring additional site asssessment and submission of investigation workplan within 30 days of receipt of letter. 5/16/06 - Obligado - Phone call from Joey Peck (602-263-6555 ext.3957) of Amerco Real Estate. He said they had a 10 gallon spill in 1994 and asked what they needed to do to close the spill. I told them they needed to install monitoring wells to ensure ground water is clean inorder to close the spill. 5/22/06 - Obligado - Delivery confirmation - 5/15. Workplan due 6/15. 6/9/06 - Obligado - Extension request for workplan from Michael Morris. Granted extension workplan due 7/11. 6/29/06 - Obligado - received Workplan submitted by ATC via email. Proposed 3 soil borings and installation of 3 2 wells with Geoprobe. Called John Mascioli to discuss workplan. Sent ATC/RP email reply approving workplan however with recommendation to use more powerful drill rig due to boulders and depth to groundwater as reported in 1994 American High Tech Report. Due date for Remedial Investigation Report is 9/1/06. 8/30/06 - Obligado - Call from Pam at ATC. Required as to GW standards to be compared to. Told her it was TOGS. 9/11/06 - Obligado - Received Phase II Limited Subsurface Site Investigation,submitted by ATC Associates, dated August 31, 2006. Groundwater encountered at approximately 37 ft. Silt and fill underlatin by coarse grain sand with gravel. Six soil samples colelcted. 3 monitoring wells

622 ATLANTIC AVE (Continued) **U000416589**

installed. 3 GW samples collected. VOC soil impacts at MW1B at approximate water interface with 11,700 ppb 1,2,4-trimethylbenzene. Minor SVOC PAH impacts at 15 ft bgs. GW analyticals show impacts for VOCs at MW1 and MW2, also some minor SVOCs at MW1 and MW2. GW results in ppb: MW-1 (downgradient of former tank) - 16700 BTEX and 32000 total VOCS (2570 ethylbenzene, 13700 xylene, 1890 napthalene, 1290 n-proplybenzene, 9870 1,2,4 trimethlybenzene, 2710 1,3,5 trimethlybenzene) MW-2 - minor exceedences with 76.65 BTEX and 261 total VOCs MW-3 - ND Sent Stipulation agreement requiring additional delienation and submission of RAP. Due date for signed STIP is 9/2/06. 9/15/06 - Obligado - Spoke to Cecil Fleckton of Environmental Resource Management (ERM). She is the new consultant handling this site (315-445-2554 ext 27 and 315-506-9537). 9/29/06 - Obligado - Email from Rob Fraley. He had questions about the STIP and requested an extension. Called him and left a message to call the DEC. 10/10/06- Obligado - Called Rob Fraley (602) 263-6555 ext 4735. Left message to call DEC. 10/17/06 - Obligado - Emailed Fraley to inquire about Stipulation Agreement. 11/14/06 - Obligado - Called Rob Fraley to inquire about Stipulation Agreement. Left message with Joey Peck to have Rob Fraley call DEC. 11/17/06 - Obligado - Called Rob Fraley again. Left message to call back DEC. 11/20/06 - Obligado - Spoke to Rob Fraley. He said they sold the property to: AY 622 Atlantic, LLC c/o Forest City Ratner Companies One MetroTech Center North 11th Floor Brooklyn, NY 11201 Attn: General Counsel He Emailed me a copy of the sales agreement (not signed by purchaser) which said that the property has been sold at a reduce rate ($218,000 less) due to a failure to complete the Underground Tank Work . I will send a new Stipualtion to AY 622 Atlantic, LLC. 11/20/06 - Obligado - Spoke to Rob Fraley. He said they sold the property to: AY 622 Atlantic, LLC c/o Forest City Ratner Companies One MetroTech Center North 11th Floor Brooklyn, NY 11201 Attn: General Counsel He emailed me a copy of the sales agreement (not signed by purchaser) which said that the property has been sold at a reduce rate ($218,000 less) due to a failure to complete the Underground Tank Work . 12/5/06 - Obligado - Sent a new Stipualtion to AY 622 Atlantic, LLC. Signature by 12/26/06, with ISR in 60 days, RAP in 60 days. 12/6/06 - Obligado - Received additional contact information from Robert Fraley. Their point of contact was: Andy Zlotnick, Sr. VP, Real Estate Development Department 718.923.8467 azlotnick@fcrc.com Called Mr. Zlotnick, left message to call DEC 12/7/06 - Obligado - Emailed Mr. Zlotnick, attached copy of STipulation Agreement. 12/8/06 - Obligado - Received emial reply from Mr. Zlotnick, he will forward to the environmental team. 12/12/06 - Obligado - Received delivery confirmation - 12/7/06. 1/3/07 - Obligado - Called Mr. Zlotnick to follow up. Left message to call back DEC. 1/12/07 - Obligado - DEC meeting - Forest City Ratner, Rioux Environmental, DEC. They did a phase 2 investigation with several borings and one additional gw well. They plan to excavate the entire site down to 45 ft and treat water (gw at ~42 ft). They plan to excavated around July. In the meantime I will work with Rioux to develop a workplan for some additional ground water delineation. After discussion with Sin Senh next week (Roux - 631-232-2600) I will put together a CAP for a STIP for additional delineation and a RAP submittal. 1/17/07 - Obligado - Voice mail from Daren Moss from Roux. Called back and left message. 1/23/07 - Obligado - Spoke with Sin Senh from Roux. Told him I wanted one additional well to delineate west of MW13, due to elevated concentrations. Told him I would put together a new CAP. 2/26/07 - Obligado - Stipulation agreement with

622 ATLANTIC AVE (Continued) **U000416589**

new CAP sent to FCR by John Urda. Due date for signature is 3/16/07. 4/13/07 - Obligado - Phone message from DEC Urda who spoke with FCR attorney. Signed stips should be received by MOnday. 4/24/07 - Obligado - Spoke to Urda, STIPs not received. Called Sin Senh and Darren Moss to inquire about site, neither of them were in the office, left message to call DEC. 4/30/07 - Obligado - STIPULATION executed by Oliva. 5/3/07 - Obligado - Received executed Stip from Legal 5/4/07 - Obligado - Email stip to Roux. Due date for ISR is 6/15/07. 5/31/07 - Obligado - Received extension request for ISR to 7/6/07 7/6/07 - Obligado - Received Investigation Summary Report. The report summarizes additioanl investigation with regard to both this spill and spill 0611832, which is located across the street. The investigation revealed 2 separte ground water plumes, both of limited areal extent. No free product was encountered. The ground water plume has been addiquately delineated. Contamination does not appear to have migrated off-site from the formal UHaul site. Sent email requiring Remedial Action Plan within 60 days. 10/23/07 - Obligado - Reviewed a RAP, submitted by Roux, dated September 17, 2007. The RAP is similart to the RAP proposed for 179 Flatbush. Proposes Excavation down to 25 to 32 ft bgs followed by chemical oxidation using the product RegenOx. According to REgenOx literature, the mixing of regenox in subsurface generates minimal heat. Proposes 7 injection points and at least 2 applications, spaced 1 month apart. Baseline sampling will be performed prior to injection and performance monitoring 1 month after. Approved of the workplan with following modifications: 1) Soil endpoint samples will be collected in accordance with DER-10 in the area of concern subsequent to the soil excavation. 2) Foundation construction will not proceed in the area of concern until the Department has had a chance to review and approve the remedial evaluation report. 3) Due to adsorption and desorption equilibium in soil and ground water systems, contaminant concentrations in ground water often rebound subsequent to chemical oxidation treatment. Since long term ground water monitoring may not be feasible due to the proposed site construction, the Department may require confirmatory soil sampling to confirm contaminant mass reduction in the subsurface soils. 4) The soil management work plan and a RAP implementation schedule must be submitted to the Department within 30 days of receipt of this letter. RAP implementation due within 45 days. 11/29/07 - Obligado - Meeting with Roux and FCR. The project is delayed due to litigation holding up the project. They also had issues with some of the above modifications. They will submit a letter with concerns within 14 days. They want to modify the CAP as the 45 day implementation requirement is not possible due to litigation. They also were concerned about item 2. We agreed that the foundation could be poured as long as remediation can proceed via installation of injection and monitoring wells through the foundation slab to treat ground water. 1/15/08 - Obligado - Review Quarterly monitoring report. Combined, 11 ground wtaer monitoring wells were sampled from 622 Atlantic and 179 Flatbush on September 20, 2007. No LnAPL was detected. VOCs and SVOCs in excess of standards in 4 wells. BTEX ranged from ND to 7400 ug/L in MWATC1. GW Flow is to the northwest. Concludes no free product on site, VOC levels han not significantly changed. Roux plan s to implement the RAP for the site. Review letter dated December 14, 2007 in response to the RAP approval. DEC RAP modificaiton is #2 above is modified so that the foundation can be poured after excavation but ground water remediation and monitoring will proceed through foundation if

622 ATLANTIC AVE (Continued) **U000416589**

necessary. A Soil Management Plan was also submitted. I reviewed the plan and the only thing missing was a odor control and monitoring plan. I emailed Daren and requested he modify the plan as such. 3/17/08 - Obligado - Received Community Air MOnitoring Plan for this site. The CAMP is for the entire AY site and addresses odor and dust. 5/6/08 - Obligado - Review quarterly monitoring report for sp#9412191 and 0611832. VOCs in excess of standards in MW13, MW27, MWATC1, and MWATC3. SVOCs in excess of MW13, MW27, and MWATC3, and MWATC1. Max VOCs in MWATC1 (20,240 ug/L). Max SVOCs in ATC1 660 ug/L. 7/28/08 - Obligado - Review quarterly monitoring report for sp#9412191. Max total VOCs at the former UHAUL site are 16820 ug/L (MWATC1). Max SVOCs show 680 ug/L napthalene in MWATC1. Roux plans to implememnt the RAP. 9/8/08 - Obligado - Meeting with Forest City Ratner and Roux. They want to proceed with chem ox injection and UST removal prior to mass soil excavation. They will submit letter as such. 9/16/08 - Obligado - Received letter requesting start UST removal and chemox injection. ASked Daren to resubmit the letter to include compliance with EPA UIC program and implementation schedule. 9/25/08 - Obligado - Received revised letter. They will comply with EPA UIC program. The implemenation schedule was not detailed. Only that it would start within 2 weeks of UST removal. I called Daren to inquire about the timing of baseline sampling, well installation, injection, performance sampling, re-injection, and reporting. He said he wasn't sure about the scheduling and he would need to get back to me. But he requested permission to proceed with UST pull. I sent email to Daren approving UST pull but requirng more detailed implemenation scheduling for injecitons. 10/13/08 - Obligado - Received implemenation schedule for Regenox injections: * October 10, 2008 form received by EPA for UICP * November 10, 2008 Start of injection work (30 day notification after sending form to EPA) * We estimate 7 days to complete installation of injection points and inject at 622 Atlantic Avenue (Spill #94-12191) * We estimate 5 days to complete installation of injection points and inject at 179 Flatbush Avenue (Spill #06-11832) * The post injection monitoring will be performed approximately one month after the injections Once we receive the post injection monitoring results, we will provide another update as to the schedule for completion of the injections. ~11/10/08 - Obligado - Spoke to Daren Moss and Sin Senh about this project. They said that they have not received authorization to proceed with chemical oxidation. They wanted to request an extension until 2nd quarter 2009 to begin injections. They said there was another legal challenge and the development wouldn't start until 2009. I told him the chemical injections were not dependent on development and they should proceed as scheduled. I told him I would not approve the extension and they should start work as soon as possible. ~11/11/08 - Obligado - Spoke to Kate Bicknell. She basically reiterated the above. They did not want to start remediation because the development project was put on hold. I told her that if they didn't begin remediation FCR was in violation of Agreement. I informed her of penalties for violations. 11/24/08 - Obligado - spoke to Daren Moss. They have not gotten authorization to proceed with chemical injection. He will contact Kate. 12/4/08 - Obligado - Emailed Kate Bicknell and required start of remediation as per RAWP or case would be referred to Legal for enforcement. 12/5/08 - Obligado - Email from Kate that they will begin injections in Janaury. 1/15/09 - Obligado - Emailed Daren to inquire if remediation had begun. 1/21/09 - Obligado - Email from Sin: They mobilized to the site 1/12/09 but had difficulty drilling

622 ATLANTIC AVE (Continued) **U000416589**

due to boulders. They will switch to ODEX drilling and return to the site on 1/26/09. 5/27/09 - Obligado - Sent email to Daren requriing submission of overdue montioring reports. Required that going forward please submit the quarterly reports on a CD to the Department no later than 30 days after the end of the calendar quarter - i.e., the 1st Quarter report should be submitted by April 30, the 2nd Quarter report by July 30, etc. For sites undergoing chemical oxidation, the reports should include summary of any injection activities, and results of all performance sampling. 9/22/09 - Obligado - Reviewed quartelry reports - The concentration of VOCs decreased in MWATC1, MW13, and MW27. VOCs increased in MWATC3. According to the report the chemical oxidants have been consumed and the second phase of ISCO injections will be performed using the same injection points as the first injection event and began on June 1, 2009. Sent email to Daren requiring hydrographs for each well showing water table fluctuations, BTEX and MTBE concentration trends, and free product thickness (if present) over time. The graphs should show all data dating back to when the wells were first installed. The graphs should also indicate dates of any remedial actions, such as excavations or chemical injections. 1/6/10 - Obligado - Have not received 3Q09 quarterly report for 622 Atlantic and 179 Flatbush. I sent email to Sin Senh of Roux to submit reports ASAP. 1/8/10 - Obligado - I received the 3Q09 quarterly report. I emailed Frank Cherena to remind him that the 4Q09 report was due by the end of the month. 2/10/10 - Obligado - I received the January 2010 sampling report. Ground water concentrations rebounded sigificantly in the most recent sampling round. At 622 Atlantic, concentrations of total VOCs in MW13 increased to 10,689 ug/L. On 179 flatbush, MW27 was destroyed and could not be sampled. Recommends discussing these results at the next meeting. 2/11/10 - Obligado - Held a meeting with Roux Associates Sin Senh and Charlie McGuckin, and attorney Richard Leeland, all representing Forest City Ratner. DEC Brevdo, Obligado, and Tibbe attended. Roux presented revised drawings of the Arena development plan. The proposed foundation is not as deep as orinigally proposed in the RAP, aproximately 5 to 10 feet heigher. As a result, additional contamination soil at 622 Atlantic would be left un excavated. According to Roux the with the capping of these soils in additiona to the agressive ground water remedy, the vadose contaminated soils will not impact ground water. DEC pointed out that the effeciveness of the ground water remedy has not yet been demonstrated, as the recent samplign results showed significant rebound. Roux will do additional aggressive injections to treat the saturated zone. They will also submit more information about the levels and amount of the contamianted soil which will remain as a result of the change in plans. Only a small portion of 179 flatbush is in the arena footprint. The other areas will be a plaza with no building on top. Accoring to Sin, MW27 will be reinstalled concurrent with the delineation of the 195 Flatbush site. 2/18/14- Obligado - Completed REview of Remedial Action Completion Report (RACR) dated October 2012 and RACR Adendum Letter dated 2/10/14. Spill has been closed due to: 1) All USts (8 800 gallon gasoline USts, one previously closed in palce 4000 gallon USts,a nd one 550 gallon waste oil UST were closed and removed. 2) Contaminated soil excavated to depth 26 ft bgs. A total of 30,200 tons of soil was removed from teh 622 Atlantic AVenue property. 3) 7 endpoint samples were collected. No VOC or SVOC exceedences were found at the arena foundation endpoint depth. 4) 4 insitu chemical oxidation events were conducted

622 ATLANTIC AVE (Continued) **U000416589**

in February 2009, June 2009, March 2010, and December 2010 to try and address the residual saturated impacts at 45 ft depth. A total of 14,200 lbs of Regenox was injected to try and reduce groundwater contaminant levels. MW13 demonstrated a 49% reduction in groundwater contaminant levels from baseline in 2008 to January 2010 prior to the well being destroyed. MWATC1 demonstrated a 39 % reduction in gw contaminant levels prior to being destroyed. 5)The plume was delineated and appeared to be shrinking 6) Due to the depth of contamiantion and the presence of a vapor barrier beneath the arena and the size of the arena compared to the small size of the contaminant plume, vapor impacts are not a concern 7) The source of the spill has been removed and the spill has been remediated to the extent feasible. 8) This spill no longer appears to poses a threat to human health or the enviroment. Spill Closed. RACR filed in edocs under spill #0107438

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DER Facility ID:	329861
DEC Memo:	4/27/07 sent ttf letter to: Christopher Jenkins Phoenix House 34-14 9th St. Astoria, NY 11106 4/6/10 bf: Sent ttf letter to: Keith Gurnick Phoenix House 164 W. 74th St. New York, NY 10023 3/4/13 bf: Sent ttf letter to: Phoenix House 164 West 74th Street New York, NY 10023 4/5/13 Received response to ttf letter on 3/25/13. Tank failed at manhole neck. No contamination found. Tank passed ttt 10/2/12. However, gw determination did not meet Department requirements since the report did not state that gw was determined in excavation backfill. Sent ttr letter (see PBS file). Spill case is pending a satisfactory ttt report. bf 5/6/13 Sent e-mail to Christopher Jenkins cjenkins@phoenixhouse.org. Requested response to tt return letter and renewal of PBS registration. bf 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 02-22-2016 - V. Brevdo Reviewed the project file. Sufficient information / documents exist on file indicating that this was a dry leak on the manhole neck at the top of the tank, with no signs of soil contamination found. True Blue Environmental completed repairs and retested the tank on June 26, 2007. The retest showed the tank passed and is leak free. In addition, the tank passed a subsequent test conducted by Brother's Professional Tank Testing on October 2, 2012. During excavation to expose top of tank, no contaminated soil was encountered. Tank is currently registered with registration expiration date in March 2017, and next tank test due date in May 2020. The Department concluded that sufficient documentation has been submitted to demonstrate dry leak and no product escaped into the environment, no contamination of soil occurred. Based on available file information and verification from the potential site buyer that no petroleum odors have been noticed in the building, the Department made the decision to close this spill case effective February 22, 2016. Spill Case is closed effective February 22, 2016. VB VB

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is

CON EDISON (Continued) **1016454435**

used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	001
Tank Id:	38481
Material Code:	0002
Common Name of Substance:	#4 Fuel Oil (On-Site Consumption)

Equipment Records:

J02 - Dispenser - Suction Dispenser
C03 - Pipe Location - Aboveground/Underground Combination
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
I04 - Overfill - Product Level Gauge (A/G)
E00 - Piping Secondary Containment - None

PUBLIC SCHOOL 753 (OLD PS85/STERLING HS)- K085 (Continued) **U000411070**

L00 - Piping Leak Detection - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	06/07/1963
Capacity Gallons:	6000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	20912
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

E00 - Piping Secondary Containment - None
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
I04 - Overfill - Product Level Gauge (A/G)
H05 - Tank Leak Detection - In-Tank System (ATG)
J02 - Dispenser - Suction Dispenser
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location:	Aboveground in subterranean vault with access for inspections..... Tank in subterranean vault but accessible for inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - In Place
Pipe Model:	Not reported
Install Date:	12/01/1975
Capacity Gallons:	25000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	02/03/2012
Register:	True

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Caller advised did analysis on soil and found contamination of gasoline unk amount. Clean up is pending.
Remarks:	7/15/11-HRAHMED-Spoke to Jessica of Roux Associates(631) 232-2600. As

MARTINEZ SERVICE STATION INC (Continued) **1004758305**

per her, the site is a former gas station. They will begin to pull out the tanks. They already innert the tanks by filling with nitrogen. This is part of Atlantic Yards Redevelopment project. They did some soil boring utilizing Sonic Rig and collected soil samples. Based on the PID readings they called in the spill. Jessica will forward the analytical report as soon as it available. 10/31/11-Hiralkumar Patel. case transferred from DEC Hasan to DEC Patel. 01/13/12-Hiralkumar Patel. 1:00 PM:- received message from Frank Cherena from Roux. Frank Cherena Roux Associates Ph. (631) 232-2600 email: fcherena@rouxinc.com 1:31 PM:- spoke with Frank. he mentioned that the site is under redevelopment. it will a railroad yard. due to the location of existing rail yard, site will be excavated down to 50 ft bg for new yard. initially, they planned for removal of four 4,000 gal tanks, but during excavation found additional 550 gal tanks. all tanks are removed and has excavated down to 40 ft bg. during july 2011, Roux collected soil samples for waste characteriazation and found ocntamination. no formal report was made for waste characterization sampling. asked Frank to submit waste characterization sampling results and a site map. asked him to include waste characterization sample locations, tank locations and excavation boundaries on the site map. they have planned for endpoint sample collection on 01/23/12. Frank mentioned that as per previous study, groundwater is at 75 ft bg. asked Frank to follow DER-10 for number and location of endpoint samples. alternate address: 514-522 Vanderbilt Ave, 836 Atlantic Ave PBS #: 2-337501. as per PBS record, site had following tanks: - four 4,000 gal gasoline USTs - eleven (11) 550 gal gasoline USTs - one 550 gal waste oil UST all tanks were removed in Aug. 2011. other spill #: 0503961. about 1 gal gasoline spilled onto pavement due to failed shut-off valve on gas pump. case closed. 01/20/12-Hiralkumar Patel. 11:54 AM:- received email from Frank. they have postponed the drilling next week and will submit a site status letter next week. 02/10/12-Hiralkumar Patel. received email from Jessica Taylor (at 6:25 PM on 02/09/12) from AKRF including status update. abstract: - inn order to facilitate the disposal of excavated soil, Roux performed an in situ soil characterization investigation - site was divided into four grids - each grid consists of 8 ft deep cube shaped cells containing approx. 800 cubic yards of soil - site was a gas station - total of 16 tanks removed from the site: four (4) 4,000 gal USTs and twelve (12) 550 gal USTs - 550 gal tanks were unknown prior to excavation - majority of 550 gal tanks were encased in and filled with concrete with the exception of tanks 5, 6 and 16, which were situated in the soil <---------- - approx. 5,500 tons of soil was excavated from grids that displayed petroleum contamination through analytical data and field observations - majority of the site has been excavated to approx. 40 ft bls - six endpoint samples (EP-1 through EP-6) will be collected: one sample per 900 sq. ft. - endpoint sample locations will be biased toward former tank locations and areas previously exhibiting soil contamination - two additional samples (EP-7 and EP-8) will be collected from the location where UST # 16 was discovered - excavation sidewall samples are not proposed due to the presence of support of excavation in form of wood lagging - found very high contamination (e.g. 400,000 ppb Toluene) in soil (NEGS-2) from 11 to 35 ft bls from grid 2; found clean soil below 35 ft - found high contamination (e.g. 57,000 ppb 1,2,4-Trimehtylbenzene) in soil (NEGS-4) from 5-13 ft bls from grid 4; found clean soil below 13 ft - sample NEGS-2 was collected from grid 2 which contained eleven

MARTINEZ SERVICE STATION INC (Continued) **1004758305**

550 gal tanks (tank # 5 to 15) - sample NEGS-4 was collected from grid 4 which contained four 4,000 gal tanks (tank # 1 to 4) Jessica asked for approval for endpoint sample collection plan. Jessica Taylor AKRF, Inc. Ph. (631) 232-2600 (O) (631) 831-4205 (C) Fax (631) 232-9898 email: jtaylor@rouxinc.com 02/13/12-Hiralkumar Patel. 4:13 PM:- spoke with Jessica at AKRF. asked her to collect endpoint samples as per DER-10. as excavation is open for more than a week, asked her to collect endpoint bottom samples at least six inches below the excavation bottom surface. she mentioned that groundwater under the site is about 60 ft bg and they dug to 40 ft depth. she also mentioned that the rail tracks on north side of the property is about 35 ft bg and there was about 40 ft high concrete wall between the rail tracks and the site. based on these information, no investigation needed on north (concrete wall) and east side (no groundwater, which could spread contamination horizontally) of former 550 gal tank group, at this point. informed her that the department may require additional investigation after reviewing the endpoint sample results. asked her to provide work schedule. 4:53 PM:- sent email to Jessica and asked to collect endpoint samples as per DER-10. informed her that additional investigation may be needed. email copied to Frank. 02/17/12-Hirlakumar Patel. received email from Jessica (at 4:39 PM on 02/16/12). endpoint samples will be collected today. 03/02/12-Hiralkumar Patel. 1:44 PM:- received call from Frank from Roux. no contamination found in endpoint samples. asked him to submit final closure report. 03/23/12-Hiralkumar Patel. 4:34 PM:- spoke with Frank. he is waiting for ok from one of the owner's rep and will release report by end of next week. 04/23/12-Hiralkumar Patel. received email from Frank (at 6:37 PM on 04/20/12) including closure. total of eight endpoint bottom samples were collected. no PID or visual signs of contamination were observed at any of the endpoint sample locations. no contamination found in endpoint samples. based on available information, case closed.

DEC Memo:	Shut-off valve on gas pump (#9) failed, causing .5-1 gallon of gasoline to spill onto pavement. Not cleaned up as of yet.
Remarks:	7/5/05 Spoke to Brad Fuller, citizen who reported spill. His tank overflowed and now his gas gauge appears to be broken. He stated that he also reported it to the EPA. And he received a phonecall from the USCG. He said the station looked independently owned and wasn't sure if BP was responsible. PBS 2-337501 shows BP as operator. 7/6/05 Paula Skryja, BP Environmental Compliance Specialist (skryjapj@bp.com, 410-551-6074, 410-551-3686(f),443-310-2099 (c))will research and forward any information. 7/7/05 Email from Heidi Beatty, Compliance Coordinator Delta Environmental Consultants PO Box 14, 418 Wall St, Gibbstown, NJ 08027. Phone: (856) 423-3101, Fax: (856) 423-6593 The nozzle was replaced on the pump and the spill was cleaned up with absorbent by the site.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	UPON EXCAVATION OF 12 (550) GAL TANKS SOIL CONTAMINATION WAS DISCOVERED. 200 CUBIC YARDS OF IMPACTED SOIL WAS REMOVED AND POST EXCAVATION SAMPLING COMPLETED AND AWAITING DATA.
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 04/12/04 TRANSFERRED FROM ODOWD TO ROMMEL March 22, 2006, Jones, no recent work done on this site. Contacts provided in spill report unsuccessful. March 29, 2006, next step, establish contact with current site occupant. 5/22/2006 - Mike Scibel - Current

CON EDISON (Continued) **S103571868**

Occupant is McDonalds, property shark reveals owner as an Mmb Associates, reverse phone directory has no listing for address given by property shark. Currently can not contact owner. From file DEC requested 3MW's, soil delineation and documentaion in 2000. Need to find if those tests were performed. Needs additional work. 2/23/10 - Austin - Reassigned to Ketani to followup and bring spill to closure - end 3/3/10 - Raphael Ketani. I restarted the management of the spill case. The spill was called in on 3/19/1998 due to the discovery of contaminated soil while removing gasoline tanks from this former gas station. The caller was Marc Godick of Lexicon Environmental Associates (516) 488-8742. Twelve 550 gal. gas tanks were removed. They appeared to be in good condition. The source of the gas was believed to be the pump island. Initially, 200 cubic yards of contaminated soil were removed by Lexicon. The site is at the intersection of Atlantic and Vanderbilt avenues (northern edge of Prospect Heights). From Property Shark, the block and lot are 1122 and 0001. The prime address is 547 Vanderbilt Avenue. The alternates are 850-852 Atlantic Avenue, 855-857 Pacific Street (the lot extends to the south side of the block). A DOB picture shows a TEXACO gas station. A 2006 picture shows a McDonalds with a paved area in front. ACRIS lists the ownership as follows: Janet H. Brooks sold the property to M&B Associates c/o Crosstown Management on 10/27/99 (she was a 1/4 owner of the property - M&B owned the other 3/4); in 2/2/2000 M&B assigned a lease to the McDonald’s Corp; in 1/29/04 Musto of M&B sold the property to MMB Associates, LLC, 320 Heather Lane, Hewlett Harbor, NY, 11557 (MMB consists of the three people who always owned the property). An attempt was made to locate a PBS record for the site using all of the known addresses. However, nothing could be found. As the tanks were never registered, this is a violation of 6 NYCRR Part 612 and Part 613. The situation was referred to Leszek Zielinski, EE I of the PBS Unit, for action. The E-docs contains only one document file. This file contains the 6/2/98 Underground Storage Tank Closure Report, and the 8/21/98 Subsurface Investigation Report. The 6/2/98 Underground Storage Tank Closure Report was written by Lexicon Environmental Assessment for Yellowstone Industries (which has since gone out of business). The USTs were removed, but the piping was left in place. 200 to 300 cu. yds. of contaminated soil were removed. The tanks were in good condition with no holes. The excavation went down to 10’ to 12’, and to within 10’ of the sidewalk. Groundwater was not encountered. End point samples ranged in total VOC concentration from 7 ppb to 1,149,000 ppb (bottom of pit). Four of the eight samples were above TAGM limits. No wells were installed. The end points were taken at 11.5’ below grade. Samples 3 to 5 and 8 were below TAGM. Samples 1 and 2 had high VOCs above TAGM. Sample 6 had high VOC hits with 480,000 ppb total xylenes. Sample 7 had high VOC hits with 524,000 ppb total xylenes. The 8/12/98 Subsurface Investigation Report was written by Lexicon. The site elevation was indicated as 70’ to 75’ above sea level. (From the USGS maps, groundwater is at about 15’ above sea level.) Borings were drilled to 53’ below grade. From 0’ to 15’ was natural fill. From 15’ to 53’ was cobbles and boulders with thin layers of natural fill. Nine (9) borings were performed in the vicinity of the former UST locations from 6/22-30/98. SB-3 at 12.5’ to 13’ was 42,946 total VOCs. SB-4 at 8.5’ to 9’ was 7,698,160 total VOCs. SB-4 at 12.5’ to 13’ was much lower, but above TAGM. SB-5 and SB-7 to SB-9 were drilled to 53’ and there were no VOC concentrations above the DEC Alternative Guidance Value standards. SB-6 at 11.5’ to

CON EDISON (Continued) **S103571868**

12' was drilled, according to the drawings, at the location of SS-7 of the UST Closure Report, but the results were non-detect for the soil sample. It is not known how the SS-7 sample with total VOCs of over one million parts per billion could have dropped to non-detect during a time interval of several months. The locations of the two borings must have been far enough removed from each other to be in separate geochemical regimes. There are no other spill cases associated with this site. 3/4/10 - Raphael Ketani. I reviewed the 5/19/99 Site Remediation Report that was produced by HydroScience, Inc. From the analytical results and figures contained in the report, it appears that all of the contamination that was above the TAGM RSCO limits was removed, except for the West Wall-3 location and the Southwest Bottom location. There were only 2 and 3 analytes, respectively, that had exceeded the TAGM limits at these locations. Given that 11 years have passed since the samples were taken, it is believed that natural attenuation and evaporation of the volatile components have reduced the concentrations further. The sampling at depth below 15' also showed that the contaminant concentrations were very far below the TAGM limits and would not have been a threat to the groundwater, which was about 60 feet below the site. Given the data in the HydroScience Site Remediation Report, I have determined that the residual contamination at the site is not a threat to the public or the environment. Therefore, I am closing the spill case. 6/24/10 - Raphael Ketani. Anthony Musto (718) 937-8100 called today. He said that he had been talking to Leszek Zielinski, acting head of the PBS Unit. Mr. Zielinski had referred him to me. He said that he had never known he was supposed to register the tanks that had been pulled. He said that he thought the contractor was going to do this 11 years ago. I told Mr. Musto that the contractors don't always do the PBS registrations unless they are asked to. He asked who he is supposed to talk to regarding registering the tanks. I told him that Mr. Zielinski is in charge of the PBS Unit here in Region 2. Mr. Musto said that he was given the telephone number of the PBS Bureau in Albany and that he saw the name John Urda on a piece of correspondence. I told him to talk to both parties in order to resolve the matter. He asked how much the registration will cost. I told him that it is relatively inexpensive, when compared to any fines or penalties. I added that since Mr. Urda is involved there may be fines and penalties as there are outstanding violations because the tanks were never registered. Mr. Musto said that he will talk to Albany PBS and Mr. Urda.

Date Record Added:	06/10/2022
Date Rec Updated:	08/09/2022
Updated By:	RECURLEY
Site Description:	Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features: The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940's, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area

805-825 ATLANTIC AVENUE (Continued) **S121796665**

of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA's guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Description:	Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features: The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940’s, the lot was occupied by three auto repair facilities, and the

805-825 ATLANTIC AVENUE (Continued) **S121796665**

gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA's guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was

805-825 ATLANTIC AVENUE (Continued) **S121796665**

identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Description:	Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features:

805-825 ATLANTIC AVENUE (Continued) **S121796665**

The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940's, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem:

Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is

805-825 ATLANTIC AVENUE (Continued) **S121796665**

400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA's guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Description:	Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features: The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940's, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.
Env Problem:	Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in

805-825 ATLANTIC AVENUE (Continued) **S121796665**

the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA’s guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Code: 512855
Site Description: Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features: The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that

805-825 ATLANTIC AVENUE (Continued) **S121796665**

faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940's, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and

805-825 ATLANTIC AVENUE (Continued) **S121796665**

the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA's guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA’s guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at

805-825 ATLANTIC AVENUE (Continued) **S121796665**

adjacent properties and was not able to obtain access.
Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Code: 512855
Site Description: Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features: The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was

805-825 ATLANTIC AVENUE (Continued) **S121796665**

recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940's, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows

805-825 ATLANTIC AVENUE (Continued) **S121796665**

southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA's guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Updated By: RECURLEY
Site Code: 512855
Site Description: Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features: The site has been redeveloped as a mixed residential and commercial site. It was formerly occupied by three automotive related businesses, two restaurants and one vacant tenant space. The site occupies 2 tax lots forming an L-shaped area of 0.484 acres that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It was recently used for commercial purposes and is now vacant. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and was in use until 2018. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940’s, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant occupied the eastern portion of the lot along Clinton Avenue from 2010 to 2018. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site’s subsurface consists of a layer of historic fill material beneath the surface cover that extends to depths between 5 and 24 feet below ground surface (bgs). The fill consists of fine to medium sand with variable amounts of gravel,silt, clay, brick, concrete, and glass fragments. Below the fill is a layer of sand, then a gravel layer to approximately 35 feet bgs. Native soil consisting of fine to medium

805-825 ATLANTIC AVENUE (Continued) **S121796665**

sand is found below the gravel. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater is approximately 65 feet bgs. During the RI, an area of perched groundwater was found in the western part of the site at 30 feet bgs. Groundwater beneath the site was expected to flow to the west toward the East River, about 1.5 miles away. However, based on the data collected, groundwater flow is to the southwest toward Atlantic Avenue.

Env Problem: Post-Remediation: Remediation at the site is protective. Residual contamination is being addressed through active treatment. The primary contaminants of concern are petroleum compounds in soil and groundwater in the SE corner of the site. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Preliminary sampling was conducted in 2015 and 2016. The Remedial Investigation Results from 2018 are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- The primary contaminants in soil at this site are metals and petroleum-related volatile organic compounds. Lead, barium and mercury exceed the restricted residential soil cleanup objectives (RRSCOs). Mercury (1.21 parts per million (ppm) max compared to 0.81 ppm) and barium (459 ppm max compared to 400 ppm) slightly exceed the RRSCOs in spots and are located at depths between 2 and 8 feet. Lead in soil ranges up to 2570 ppm and is located 7-8 feet deep. The RRSCO for lead is 400 ppm. Volatile organic compounds were detected in soil between 30 and 38 feet deep in the area of the former gas station. 1,2,4 Trimethylbenzene (42-98 ppm) and xylene (41-110 ppm) exceeded the protection of groundwater SCOs (3.6 ppm and 1.6 ppm respectively) and the RRSCOs (42 and 100 ppm respectively). Data does not indicate any off-site soil impacts related to this site. Groundwater- Groundwater was located at approximately 65 feet bgs. Groundwater on site flows southwest toward Atlantic Avenue. Groundwater samples at the site indicate trimethylbenzenes (up to 2167 parts per billion (ppb)) and 1768 ppb of BTEX (benzene, toluene, ethylbenzene and xylene) in one of the wells in the former gas station area. The groundwater standards are 5 ppb and 1 ppb. PFAS were sampled in 4 wells associated with the site. The emerging contaminant perfluorooctanesulfonic acid (PFOS) was identified in two wells near the western portion of the site above EPA’s guidance value of 70 parts per trillion (ppt). The highest level was 150 ppt and was identified in the off-site well. The highest total PFAS in the three on-site wells was 224 ppt; the off-site well was 783 ppt. Soil Vapor - Soil vapor samples indicated the presence of BTEX compounds in soil vapor near the northwest corner of the site (7277 micrograms per cubic meter (g/m3)) and in the southeast corner of the site (9324 g/m3). For chlorinated compounds, the highest sample contained 360 ug/m3 tetrachloroethylene (PCE), a common dry-cleaning chemical, at a depth of 18 feet. To determine if off-site soil vapor impacts exist, the volunteer requested access for off-site soil vapor sampling at adjacent properties and was not able to obtain access.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

DEC Memo:	unknown amount spilled. unknown waste oil.
Remarks:	4/28/17 - Obligado - Desk Duty - I called Mr. Sharma. L left a message with Mr. Sharma. This is an OER site - 15-RHn387k. Doing excavation for the foundation. On 4/25 on the northern part of the property on the 25th they found a tank. Today they removed about 50 gallons of waste oil from the tank and cleaned and removed the tank. They found PID and odors in the eastern wall. No staining observed but elevated PID. Lower readings below the tanks. There is a OER RAP for the site. They plan to dig to 20 ft for the foundation. GW at 50 ft. In the next week or two they will excavate in the tank area to clean endpoints 4 sidewall 1 bottom and submit a closure letter. RXR 810 Fulton Street Owner LLC c/o RXR 625 RXR plaza Uniondale NY asharma@akrf.com Spil assigned to Piper. 5-2-17 - Obligado - Soil contamination letter sent. 7/27/17- DEC Piper received and reviewed closure report. Based on work to date, this spill is closed. Report in DEC Docs.

Remarks:	(718)789-6262 IN REGARDS TO GET INFO FOR PROPERTY 03/03/10- Zhune spoke to Diane from Petro. She said I told not to contact me call Benny 718-789-6262. 03/03/10- Zhune spoke to Scott from Petro. He said they called Petro for sevice after driver left they noticed spill in the tank room. The fill line which is under the sidewalk broke. spill is aproximatelly 20 gallons in the tank room in the basement. Floor is cement floor. Petro contained the spill with speedy-dry. They will removed the oil with the speedy dry and put it in bags. As per Benny there is not vapors in the buildings. No vapors in first floor The Environmental cleanup company will come tomorrow to continue with the cleanup. Administrator-ary Liberman 718-789-6262 03/3/10. Hassan responded. 6/14/2010- DEC Piper received closure report. No cracks or drains affected. Six yards of debris and speedy dry were removed. Borings through floor were non detect. Area powerwashed and vaccuumed. Closed. See edocs if warranted.

DEC Memo:	Fuel Oil spill due to leaky a leaky pipie. Filled bt petro yesterday. Unknown amt spilled and recovered.
Remarks:	DEC Piper spoke with PAul at Milro. Milro was kicked off job. They were called in to due to oil water seeping in though wall where fill enters building. The tank room is filled with unknown amount of oil and water. Petro said they were going to take care of it and it was less than 3 gal of oil though it doesnt explain why water is present. The story is awkward. DEC Zhune to respond. 02/01/11-Zhune responded to this site. Spoke to Benjamin Ramos 718-789-6262(Maintenance) and Gary Liebermen (Administrator) The fill line is leaking inside the builging in a former tank room. Aproximatelly 3 gallons of # 2 fuel oil on the concrete floor of the former tank room. There is a sump in this room but is closed. Spill is under contol. Petro is going to replace the line and clean the spill. 02/18/11 Gary Lieberman Administrator from New Carlton Rehabilitation Nursing Center sent the following e-mail: This is to verify our phone communication this morning. The Oil spill that we spoke about earlier today was immediately cleaned up. It was not a lot of oil and there was no seepage into the ground. The corroded pipe from the street that caused this small spill was replaced by our oil company (Petro). It was Petro who responded immediately to our call and performed the clean up. Spill Closed.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 10/25/2002 Sangesland was on Desk Duty and sent out a tank test failure form letter 11/1/2002: RECEIVED FAX FROM FRANK DIANDREA WHICH INDICATE THAT THE TANK PASSED THE TEST TODAY. THEY FOUND 2 MANWAY GASKETS BAD. THEY WILL BE TESTING PIPING WHEN THEY CAN LOCATE BUILDING PLAN TO DETERMINE WHERE PIPING TRAVELS. FAX FILED WITH LETTER OF TANK TEST FAILURE. ARS. 1/30/2003-Vought-Duty Desk received message from Rich Baldwin (631-499-2222) inquiring about project manager. Vought called Baldwin and spoke with him. Baaldwin will be performing three soil borings along two parallel fill lines. If soil contamination is found lines will be replaced. Tipple will require work invoice, passing system test and soil samples if old fill line needs to be abandoned in place. 3/6/03 Tipple spoke with R. Baldwin and suggested staggering the borings along the piping run if the markouts show that it is feasable. If contaminated soil is encountered in the borings no analyticals need be tested at this point in the investigation if a digout is to follow. 4/8/03 Tipple spoke with R. Baldwin contamination found to a depth of approx.17 ft bgs. to be delineated laterally and a work plan to be produced. 4/10/03 Summary of field activities submitted to DEC continued investigation planned. see file 6/26/03 tipple reviewed investigation report and nfa was issued

DEC Memo:	Above ground tank leak Jones Lang LaSalle also owns the buidling.
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 5/26/2004 Sangesland spoke to William Schlageter of Freudenthal & Elkowitz. He said he works for the property owner and finally got approval today to call in a spill that was discovered on May 18th. On May 18th, during a walk through of a subbasement, several puddles of fuel oil were found outside of an oil tank containment room. The room contains two 7,000 AST's that were probably installed around 1928. At some point in the history of the building, they believe the room was filled in with cement. This now means that the two tanks are totally encased in cement up to several feet thick around the tanks. The tanks were recently presure tested. One tank passed, the other tank had an inconclusive test result. This tank has been taken out of service and has been drained (except for the final 400 gal which can't be easily removed). Mr. Schlageter's company is coming up with a plan to completely clean out this inconclusive tank, clean up the site and then identify the extent of contamination on the site. Contaminated Soil Letter sent to: William Schlageter Freudenthal & Elkowitz 368 Veterans Memorial Hwy Commack, NY 11725 6/7/04 - Sawyer - Received a detailed work plan through e-mail from William of F&E. 1/21/05 - Sawyer - Met Richard Baldwin & Bill Schlaghter of Freudenthal & Elkowitz Consulting Group at the above address. Received basic tour of affected areas and witness working recovery system in basement. Checked outside to see how close to subway exterior wall is located. Rich and Bill proposed insitu

HSBC BANK (Continued) **S105997119**

remediation for the contaminated soil between the outside wall and the subway. They will send more information. Transferred to CO (MJSCIBEL) 5/30/2006 - Mike - Contacted Freudenthal & Elkowitz Consulting and asked for an update on the project. 7/26/06 - Mike - Left another message for an update with F+E. 3/30/07 - Austin - Trasferred to Patel for further review - end 04/10/07-Hiralkumar Patel. alternate addresses: 325-351 Ashland Place, 1-9 Hanson Place PBS #: 2-607998. as per PBS record, the site had one 7,000 gal AST on saddles and one 7,500 gal AST in subterranean vault with access. both tanks were used to store #2 oil and were closed-in-place. other spills: 8605094, 9710706, 0103988, 0207736, 0211355, 0412697 spill #: 8605094 was reported on 11/10/1986 as ethylene chloride was seeping into air conditioning system. case closed. spill #: 9710706 was reported on 12/19/1997 by ConEd, due to transformer oil leak into vault. case closed. spill #: 0103988 was reported on 07/14/2001 by ConEd, due to transformer oil leak into vault. case closed. spill #: 0207736 was reported on 10/25/2002 due to tightness test failure for two #2 oil tanks. during subsequent work, contamination was found along the two fill lines. case closed after reviewing investigation report. spill #: 0211355 was reported on 02/13/2003 due to transformer oil leak into vault. case closed. spill #: 0412697 was reported on 03/03/2005 by ConEd, due to oil in vault. case closed. the subject spill reported after findings of oil/water in crawl space under sub-basement.
----------**********----------********** ---------- review of available documents under spill #: 0207736: 1) 10/25/2002: Duty desk officer sent TTF to HSBC Bank. 2) 10/31/2002: fax from Island Pump and Tank Corp.: - after replacing bad manway gaskets, two tanks passeed test - will test piping 3) 03/04/2003: Site Investigation Plan: - work plan for subsurface investigation along leaking fill lines - fill line runs about 15 ft under sidewalk - proposed to install three borings: one at fill port, one in midway and one at the building wall 4) 04/02/2003: Soil Investigation Results: - ASTs are located in vaults in sub-basement level of the building - two sets of fill port piping and conduits located along the western side of the property - fill piping was probed (using fill port) utilizing a steel measuring tape and determined to elbow 90 degrees (from vertical to horizontal) towards the exterior building wall at a depth of 89 inches (7.4 ft) bgs less than ========== - two pipes were determined to occupy an area between 24 to 27 inches and the interior walls were determined to be aprpox. 6 to 8 inches apart - two subgrade natural gas lines were traced from connection boxes located within the sidewalk to the north of the location of the fill port piping. the natural gas lines were determined to transect the location of the fill lines in a north-south direction approx. 7.5 ft west of the exterior building wall less than ========== - building drawings indicate that a subway wall runs in a north-south direction at an unknown depth, approx. 8 ft from exterior building wall less than ========= - three soil borings (B-1, B-2 and B-3) were installed along fill lines - boring B-1 was installed 50 inches west of the exterior building wall, in order to avoid the building foundation which extended approx. 3 ft to the west of the building wall less than ======== - refusal encountered at a depth of 12 ft bg in boring B-1, in the form of brick and concrete debris believed to be potentially associated with the underlying subway system - boring B-2 was installed to a depth of 20 ft bg - no contamination noted in soil from 18-20 ft

HSBC BANK (Continued) **S105997119**

depth in boring B-2 - boring B-3 was installed to a depth of 10 ft bg where refusal encountered - petroleum-impacted soil was discovered in depth from aprpox. 6 to 17 ft bg - no samples were submitted for lab analysis 5) 06/25/2003: Summary of Spill Investigation: - installed 12 soil borings - the area of impact was estimated to be approx. 15.25 ft from north to south and extend the entire width of the concrete sidewalk (15 ft) along the western portion of the site - based upon field characteristics, four soil samples (B-5, B-11, B-13 and B-14) were collected from the edges of the area of impact less than ======= - soil samples were collected to be representative of the depth at which the most significant field characteristics of fuel oil impact (ranging from 7.5 to 11 ft bgs) were observed in borings with the area of impact - based upon a review of MTA drawings, the roof of the subway tunnel is situated at a depth of approx. 27 ft below the concrete sidewalk and approx. 20 ft below the fuel oil fill line less than ========== - based upon the vertical delineation of the area of impact (17 ft bg), the roof of the subway lines is 7 ft below the fuel oil-impacted soils 6) 06/26/2003: DEC Tipple issued no further action letter.
----------**********----------**********
---------- review of available documents for the subject spill:
-
-*-*-*-*-*-*-*-* 1) 05/26/2004: DEC Sangesland sent letter requiring subsurface investigation. 2) 06/07/2004: Investigation Work Plan, submitted by F&E: - subject property is situated at the northwest corner of the intersection of Hanson Place and Ashland Place - the property is currently improved with a commercial clock-tower building constructed circa 1927-1928 - two 7000 gal #2 ASTs are located within a vault in the sub-basement level adjacent to the west wall of the building along Ashland Place - floor of the sub-basement floor where the access hatch to the top of the AST vault is located, is at approx. 40 ft bgs - did tightness test on both tanks on 05/06/04: found Tank #2 (eastern side tank) tight and Tank #1 (western side tank) failed less than ---------- - area of fuel oil was observed within the crawl space beneath an out-of-service flash tank formerly associated with the building's steam boiler system - area of fuel oil is located outside the northwest corner of the bottom of tank vault, at the northern base of AST #1 - during tightness test on 10/25/2002, found both tanks tight but fill lines were leaking (spill #: 0207736) less than --------- - based upon following results of investigation after leaking fill line findings, spill # 0207736 was closed: * depth of fuel oil impacted soils below the concrete surface (6-17 ft bgs) was such that the underlying NYC subway line was not being impacted from same * relatively low concentrations of remnant fuel oil in subsurface soils * discountinued future use of the fuel lines * constraints due to subsurface features (subway line, natural gas utility) - groundwater is discharged, from area inside crawl space 30-40 ft away from fuel oil impacted area, by a sump pump system at over 100 gallon per minute to sewer system less than ---------- - based on tank chart on wall, the ASTs are 70 inches in diameter, 33 ft 4 inches long - based upon the reported depths of the sub-basement floor (40 ft bgs) and crawl space (45 ft bgs), and the dimensions of the ASTs (70 inches in diameter), the bottom of the ASTs and the associated vault, are at the same elevation of the crawl space and the fuel oil impacted area less than ========== 3) 07/14/2004: Interim Investigation Report, submitted by F&E: - fuel oil from AST

HSBC BANK (Continued) **S105997119**

#1 was removed - upon opening of the AST, several heating coils were observed within tank, likely utilized when the tank stored #4 or #6 fuel oil in the past less than ========== - total of 578 gal of remnant fuel oil and bottom sludges were removed - bottom of the tank was observed to be slightly deteriorated in some locations, but no holes were observed within the wall of the AST - 3/4 inch diameter exploratory holes were cut through the north end of the tank at heights of approx. 52 inches, 35 inches and 17 inches above the bottom of the tank - a 10 by 10 inch hole was cut in the north end cap at 7 inches above the bottom of the tank to allow for the evaluation in the bottom conditions of the tank vault - dry fine-grained sand was observed to immediately pour into the AST from holes - no evidence of fuel oil impacts was observed within any of sands entering AST - northern vault wall was approx. 3 ft off the end of AST #1 - backfill material (fine sand) was not observed under the southern end of the tank - bottom of AST lies approx. 33 inches above the base of concrete vault floor - top of the vault floor appears to occur several inches below the top of the crawl space floor less than ========== - based upon the water observed entering the weep hole in crawl space, the base of the vault may be constructed below the local water table. if correct, the groundwater is not entering into the vault indicating that vault is water tight. therefore, if oil had been released it would not likely have leaked through the water-tight vault less than ========== - after cleaning impacted area in crawl space, approx. 4 inch tall by 6 inch wide hole was observed within the western wall of the crawl space beneath the souther end of flash tank - hole is located at the base of the out-of-service elevator shaft and may be a weep hole for same less than ========== - mix of fuel oil and water enter the crawl space through the weep hole - conducted an initial mecahnical probe of the interior of the hole. it appears that the hole accesses a channel cut beneath the base of the out-of-service elevator shaft less than ========= - according to facility personnel, the former elevator equipment was pully driven and didn't utilized hydraulic-oil containing equipment - bottom of weep hole appeared to be at least 3 inches below the floor of the crawl space. pooled water with floating oil was observed in the bottom of weep hole less than ---------- 4) 07/30/2004: Investigation report and Proposed Remedial Action Plan, submitted by F&E: - subway line runs approx. 7.3 ft west of building wall and the top of the tunnel is at 27 ft bgs, base of tunnel is at approx. 52 ft bgs - did soil borings 2.5 ft away from building wall - five borings (B-1A, B-2A, B-3A, B-4A and B-5A) were installed - oil impacts were not observed in boring #s 1A, 4A and 5A - only minor fuel oil impacts were observed in the unsaturated soils, from approx. 20-24 ft bgs in boring # 2A - soil impacted by fuel oil were observed from 4 ft bg through the entire unsaturated soil column (40-42 ft bgs) in boring # 3A - impacted soils appears to be limited to a 15 ft area between boring 2A and 4 (boring in April 2003) in the north-south direction - extent of impact to west could not be confirmed due to the presence of burried utilities and NYC subway (as per letter from NYC Transit: NYCT could not approve the proposed boring locations associated with the installation of test product recovery well and bio-vent cluster wells proposed to be installed within the sidewalk adjacent to the exterior western wall of the building. letter was issued on 12/15/2004) less than ---------- - unsaturated soil in the area of concern were composed of fill materisl consisting of a heterogeneous mix of sand, silt, clay, gravel, concrete, brick, wood

HSBC BANK (Continued) **S105997119**

and other un-identifiable debris - native materials, consisting of gray fine and medium grained sand and/or silty sand, was encountered at approx. 40-42 ft bgs, coincident with the first occurrence of groundwater - groundwater was encountered in boring #s 1A, 2A, 3A and 5A (all borings terminated at depth of about 42 ft bgs) less than ---------- (borings done deeper than that done in 2003) - 0.5 inch to 1 inch of light non-aqueous-phase liquid (NAPL) was observed on water table in borings B-1A, B-2A, B-3A and B-5A - unmarked monitoring well observed in the sidewalk adjacent to Hanson Place. no NAPL was observed and groundwater was measured at 43.44 ft from the elevation mark on the well - groundwater was observed entering the crawl space of the building to the southeast of the oil impacted water in the weep hole. no odors were associated with this groundwater and no LNAPL or significant sheen. therefore, it does not appear that the LNAPL layer extends under the footprint of the building less than ========== - conclusion: neither of 7000 gal ASTs appeared to have leaked and contaminants are not present in the associated vault. fuel oil impacted soils area present from approx. 4 ft bgs to water table in the vicinity of boring 3A. 0.5 inch to 1 inch thick layer of NAPL is present along the western exterior of the building footprint less than ---------- 5) 12/15/2004: Update on Remedial Activities: - installation of LNAPL recovery system within the crawl space is scheduled of 12/20/04 - MTA indicated that wells could be installed within the sidewalk at the desired locations, however, the depth of the wells could only be completed to a depth within 5 ft of the roof of the underlying subway tunnel (which means wells allowed only to 22 ft bg) less than ====== 6) 09/29/2006: Project Update: - both ASTs have been abandoned-in-place less than --------- - F&E installed a concrete berm to contain the water/LNAPL mix entering the building's sub-basement through the weep hole less than ---------- - the containmnent berm is equipped with a product-only pump which has successfully removed 70-80 gal of oil - due to presence of the subway line, the NYCTA will only allow biovent test wells to be installed to a max depth of 20 ft bgs - new owner of site: CJUF - CJUF conducting major renovation activities within the building, which has included the removal of the majority of the former equipment associated with the building's heating system - part of the sub-basement activities, the immediate vicinity of the LNAPL-recovery system has been isolated from the remainder of the sub-basement area by newly-constructed walls lined with plastic sheeting (the floor area had also been lined with plastic sheeting) less than ----- - water level is well above the top of the weep hole through which the LNAPL had previously entered into building - elevated water level is likely attributable to the cessation of the high-capacity pumps formerly utilized to remove groundwater from the sub-basement crawl space area - F&E plan to seal the weep hole and remove any related equipment and accumulated groundwater from the containment area, if DEC approves it. - F&E requested closure of case based on following information: * primary potential route of exposure for LNAPL was through weep hole which is below water level now * extent of remnant fuel oil within the unsaturated zone underlying the sidewalk along Ashland Place is believed to be limited and present below 6 ft bgs, the invert elevation of the former product delivery lines * ongoing source of fuel oil (former leaking product lines) and two ASTs have been abandoned-in-place, thus no potential for future releases of fuel oil F&E recommended to conduct an exposure assessment to evaluate realistic potential exposure pathways before

HSBC BANK (Continued) **S105997119**

closing the case.

HSBC BANK (Continued) **S105997119**

Ernst. 06/21/07-Hiralkumar Patel. received call from Mr. Ernst. he mentioned that site is currently under construction and have crane on sidewalk, where the department requires monitoring wells for delineation and as per construction manager, crane will be there for about nine months. and without site specific groundwater flow direction, Mr. Ernst can't do receptor survey. asked Mr. Ernst to send contact info for property owner and construction manager. Gregory Ernst Senior Project Manager Freudenthal & Elkowitz Consulting Group, Inc. Ph. (631) 499-2222 (O) (516) 815-5151 (C) Fax (631) 499-5928 email: gernst@fecg.us received email from Mr. Ernst. he spoke with property owner Ms. Neil. Ms. Neil mentioned that they have construction hoist on sidewalk, installed on concrete base and not possible to remove until project finish (at least 9-12 months). Mr. Ernst asked for site visit to locate sampling location. Kristin Neil **current owner's representative** Ph. (212) 488-1622 email: kneil@dermotcompany.com sent email back to Mr. Ernst informing that before any site visit, the department requires work plan submitted. asked Mr. Ernst to visit site with Ms. Neil and submit work plan with scaled site map including: all former boring/well locations, proposed new well locations and location of construction hoist. aksed Mr. Ernst to submit work plan by 06/29/07. 06/29/07-Hiralkumar Patel. received email from Mr. Ernst. he is preparing work plan and will submit by July 13, 2007. they will start exposure assessment once they get approval on work plan. Mr. Ernst mentioned that they can't install any monitoring wells for groundwater delineation as construction hoist is on sidewalk and drilling machine can't fit under scaffolding. based on construction schedule, monitoring well installation will be done after nine months. 07/10/07-Hiralkumar Patel. discussed with DEC Austin. he asked to start dewatering from crwal space again to bring water level down to remove free product. left message for Ms. Neil (property owner) to install pumping system for such oil recovery. spoke with Mr. Ernst and asked him to contact owner for such installation. Mr. Ernst will contact owner and will call back. 07/11/07-Hiralkumar Patel. received call from Ms. Neil. explained her that as monitoring well installation is not possible on sidewalk, the department wants pump installed (again) in basement to reduce water level, so oil can be recovered from basement area (as before). 07/13/07-Hiralkumar Patel. received email from Mr. Ernst. abstract: - the pumping system which previously operated in the building has been removed and the basement walls and drainage areas grouted up to seal-off further groundwater infiltration into the building. therefore will not be able to restart groundwater pumping to renew free product recovery in the weep hole along Ashland Place. - have identified an opportunity to install two groundwater monitoring wells along the exterior of the building adjacent to Ashland Place in the vicinity of former boring locations B-3A and B-4A. as part of the reconstruction activities, a new sewer line is schedule to be excavated and installed approximately 20 feet north of the abandoned elevator shaft where the previous soil borings were drilled. During the sewer line excavation, the adjacent scaffolding and access ramp to the construction hoist will be temporarily dismantled. - currently plan to gain access to the former boring locations immediately following backfilling the sewer line excavation and prior to re-assembling the scaffolding and access ramp. the current schedule for the sewer line excavation and installation is for that work to begin within the next couple weeks and is expected to take six weeks to complete, thereby allowing us access for

HSBC BANK (Continued) **S105997119**

drilling in roughly six to eight weeks. - Freudenthal & Elkowitz will: prepare a work plan as you requested to conduct an Exposure Assessment and install the groundwater monitoring/product recovery well; prepare an access request and drilling permit application and site plan to NYCTA to inspect the subway tunnel for indication of petroleum leakage and to install vibration monitoring equipment needed during drilling operations adjacent to the subway, and initiate Exposure Assessment activities of the surrounding properties. 07/19/07-Hiralkumar Patel. spoke with Mr. Ernst regarding boring locations (B-3A and B-4A) that he mentioned in last email. from site map, B-3A was located closed to old fill port (source area, south of weep hole) and B-4A was located north of weep hole. both boring locations are about 30 ft apart. Mr. Ernst mentioned that owner is installing sewer line about 20 ft north of elevator shaft (weep hole) and after backfilling excavated area for sewer line, they have opportunity to install wells at some boring locations. Mr. Ernst mentioned that they will install monitoring wells (if get permission from MTA due to subway running parallel to site) at B-3A (close to source site) and B-1A (close to weep hole). Mr. Ernst also mentioned that boring B-4A was terminated at 27 ft depth (could be because of subway structure) before groundwater. asked Mr. Ernst to install well at location B-4A also and if get refusal before groundwater, asked him to try other point around B-4A (to see any oil going north of weep hole). asked Mr. Ernst to check possibility for monitoring well installation on south of previous boring location B-5A (for delineation purpose). mentioned to Mr. Ernst that if it requires to go across the street (Hanson Place) then install well on sidewalk on other side of street, eventhough that location is far away (by considering that due to parellel subway line groundwater must be flowing either in north or in south direction, so oil can be detected in monitoring well across the street) spoke with Mr. Neil. she will meet at site at 1:30 PM. 07/20/07-Hiralkumar Patel. visited site. met Ms. Neil. went to basement. Ms. Neil mentioned that they have filled entire sub-basement/crawl space except part of weep hole area. there is no opportunity to install any pump for dewatering. Ms. Neil mentioned that they will remove scaffolding for sewer line installation. told Ms. Neil not to re-install scaffolding until they install monitoring wells on sidewalk. found one monitoring well in front of building entrance along Hanson Place. 07/23/07-Hiralkumar Patel. spoke with Mr. Ernst. asked him to install monitoring wells on south of previous boring B-5A also and asked him to check one well in front of building (that was observed during site visit). Mr. Ernst will submit all plan to MTA and once he hear from them, he will forward all to the department. 10/11/07-Hiralkumar Patel. left message for Mr. Ernst. spoke with Mr. Neil. they are still waiting for permit for sewer line installation. once they receive permit, they will remove scaffolding and will install require wells. 11/07/07-Hiralkumar Patel. spoke with Mr. Ernst. he has submitted all required plan and documents to MTA, but hasn't got final authorization from MTA. he will call once gets approval and schedule for work. 01/14/08-Hiralkumar Patel. spoke with Mr. Ernst. they are still waiting for approval from MTA. he mentioned that owner has changed plan to install sewer line. now they will not install sewer line where the department wants monitoring wells, in that case scaffolding will be removed only once project is finished. 03/20/08-Hiralkumar Patel. spoke with Mr. Ernst. they got verbal approval from MTA. asked him to submit copy of written approval from

HSBC BANK (Continued) **S105997119**

MTA, once available, alongwith copy of plan submitted to MTA. as per Mr. Ernst, scaffolding may be removed in July 2008. 12/01/08-Hiralkumar Patel. spoke with Mr. Ernst. he mentioned that scaffolding is still in place and according to owner, it will be removed in this month. left message for Mr. Krukis and Ms. Neil. 12/15/08-Hiralkumar Patel. received message from Mr. Krukis. he mentioned that as construction is still going on, they can't install monitoring wells. 12/17/08-Hiralkumar Patel. spoke with Mr. Krukis. he mentioned that sidewalk scaffolding will stay at the site for another four months, so they can't install wells that are required to delineate groundwater contamination. 06/22/09-Hiralkumar Patel. 4:32 PM:- received email from Mr. Ernst. he mentioned that scaffolding hasn't removed yet and trying to contact Mr. Krukis. he sent new office address for Christopher Philipp at HSBC. HSBC North America 26525 N. Riverwoods Blvd. Mettawa, IL 60045 Attn.: Christopher Philipp Ph. (224) 544-2838 Fax (224) 552-2838 email: chris.c.philipp@us.hsbc.com 07/06/09-Hiralkumar Patel. 1:47 PM:- spoke with Mr. Krukis. he is no longer involved with this project. he asked to contact Maria Stamolis. Maria Stamolis Canyon Capital Realty Advisors LLC. Ph. (310) 272-1568 email: mstamolis@canyonpartners.com 1:49 PM:- left message for Ms. Stamolis. 1:53 PM:- sent email to Mr. Ernst to contact Maria for updates. email copied to Mr. Philipp. 07/13/09-Hiralkumar Patel. 11:16 AM:- received message from Paul Jennings. Paul Jennings HRH Constructions Ph. (718) 622-4591 (O) (917) 567-5077 (C) email: pjennings@hrhllc.com 07/17/09-Hiralkumar Patel. 8:34 AM:- received message from Mr. Jennings. 1:14 PM:- spoke with Mr. Jennings. he is expecting to remove scaffolding by mid of Nov. 2009. sent email to Mr. Jennings. asked him to submit updates monthly. 12/01/09-Hiralkumar Patel. 1:05 PM:- spoke with Mr. Jennings. they removed half of scaffolding and remaining half will be removed by week of Dec. 28, 2009. 03/20/13-Hiralkumar Patel. passed by the site and found scaffolding still in-place. 03/21/13-Hiralkumar Patel. 10:04 AM:- left message for Ms. Stamolis. 11:47 AM:- spoke with Ms. Stamolis. she mentioned that the building is condominium and owned by many parties. there are 179 individual condo residences, a commerical condominium, a retail condominimum and an antenna condominium. she will send email with contact info for property manager. 12:31 PM:- received email from Ms. Stamolis. she mentioned that Cooper Square Realty, Inc. manages the property. Marc Kotler Vice President Cooper Square Realty, Inc. Ph. (212) 634-5420 Fax (646) 786-7106 email: marc.kotler@coopersquare.com Peter Kirschenbaum General Counsel Cooper Square Realty, Inc. email: peter.kirschenbaum@coopersquare.com 03/22/13-Hiralkumar Patel. discussed with DEC Austin. after reviewing available information, Austin agreed with well installation requirement. he mentioned that wells must be installed at previous boring locations for investigation/remediation. 2:40 PM:- left message for Anthony Milstein, property manager at Cooper Square. One Hanson Place Condominium **property owner** c/o Cooper Square Realty, Inc. 622 Third Avenue New York, NY 10017 Attn.: Anthony Milstein **property manager** Ph. (212) 634-5448 Fax (646) 786-7133 email: anthony.milstein@coopersquare.com 04/08/13-Hiralkumar Patel. 1:44 PM:- left message for Mr. Milstein. 1:58 PM:- left message for Mr. Philipp. 3:08 PM:- received call from Mr. Milstein. informed him about open case. Mr. Milstein was not aware of this open case. informed him that the department requires further investigation/remediation. tried phone number for Christopher

HSBC BANK (Continued) **S105997119**

Philipp, but that number is assigned to Capital One IT department and could not confirm Mr. Philipp's address. discussed with DEC legal and decided to send letter to current property owner only as could not find previous owner(s). Harvey Kreiswirth **condo board president** 1 Hanson Place, Unit 14D Brooklyn, NY 11248 email: harvey@usa.com Yury Vinokur **building super** email: rmhanson_place@yahoo.com 4:06 PM:- sent letter to Mr. Milstein and Mr. Kreiswirth requiring submission of investigation work plan for delineation and exposure assessment. asked them to submit work plan by the end of 07/08/13. letter emailed to Mr. Milstein and Mr. Kreiswirth. 4:29 PM:- received email from Mr. Kreiswirth confirming receipt of the letter. 04/12/13-Hiralkumar Patel. 1:50 PM:- received call from John Gear from Enviroscience. he was contacted by Mr. Milstein. John inquired about available documents. informed him that documents will be sent to Mr. Milsteain. 1:52 PM:- sent email to Mr. Milsteain including copy of work plan/reports. 07/02/13-Hiralkumar Patel. 3:57 PM:- received call from Kevin Hogan, attorney representing HSBC. he mentioned that condo owners has provided the department's letter dated 04/08/13, to HSBC and HSBC took responsibility for required investigation/remediation. currently, HSBC is working with environmental consultant. Mr. Hogan requested time extension to submit work plan. based on available information, approved his request and asked to submit work plan by the end of 09/02/2013. during conversation, Mr. Hogan mentioned about scaffolding around the site. informed him that property owner must address environmental issue and department may not approve anymore extension due to scaffolding around site (since 2008). Kevin Hogan **attorney for HSBC** Phillips Lytle LLP. 3400 HSBC Center Buffalo, NY 14203 Ph. (716) 847-8331 Fax (716) 852-6100 email: khogan@phillipslytle.com Mr. Hogan mentioned that Christopher Philipp is the person in-charge at HSBC. Christopher Philipp **HSBC's representative** VP Environmental Health & Safety HSBC North America HSBC Technology and Services, Inc. 26525 N. Riverwoods Blvd Mettawa, IL 60045 Ph. (224) 880-7702 email: chris.c.philipp@us.hsbc.com 4:10 PM:- left message for Mr. Milstein. informed him about extension for submission of work plan. also informed him that the department may not approve any extension due to scaffolding and case may be referred for enforcement if work does not begin soon. 4:15 PM:- sent email to Mr. Hogan. asked him to submit work plan by the end of 09/02/13. email copied to Mr. Milstein and Mr. Kreiswirth. 07/03/13-Hiralkumar Patel. 11:21 AM:- received call from Mr. Milstein. informed him about time extension approved for submission of investigation work plan. asked him to dicuss with HSBC and their contractor regarding scaffolding around site. informed him that environmental investigation must begin soon. 08/21/13-Hiralkumar Patel. 11:55 AM:- received call from Ernie Rossano and Nicole Reptti from Environmental Resources Management. Mr. Rossano mentioned that due to subway along side of the building, well installation may not be possible. he also mentioned about no impact in current building and sub-basement area is filled with at least 5 ft of concrete. informed Mr. Rossano that having no issue in on-site building does not mean no impact to other structures in area. as such, the department do require subsurface investigation. Mr. Rossano also mentioned about scaffolding around the building which can not be removed until building project is completed. asked Mr. Rossano to contact MTA regarding possiblity well installation, and building management to facilitate well installation. informed Mr. Rossano that response is due on 09/02/13. Ernie Rossano Environmentl Resources Management Ph. (631) 756-8917

HSBC BANK (Continued) **S105997119**

email: ernie.rossano@erm.com Nicole Repetti Environmentl Resources Management Ph. (631) 756-8957 / 8900 (516) 315-4440 (C) email: nicole.repetti@erm.com 08/29/13-Hiralkumar Patel. 9:39 AM:- received email from Nicole from ERM, including letter in response to the department's letter dated 04/08/13. Nicole stated that ERM has submitted written request to NYCTA to review and copy the maps. Nicole requested time extension for the work plan submission until 11/18/13. 09/09/13-Hiralkumar Patel. 11:52 AM:- sent email to Nicole approving time extension for submission of investigation work plan until 11/18/13. email copied to Mr. Rossano, Mr. Philipp, Mr. Milstein and Mr. Kreiswirth. 12:28 PM:- received email from Mr. Kreiswirth. he requested that future correspondences should be sent to Kevin Jones, instead of him. Kevin Jones **condo board member** email: kevin_p_jones@hotmail.com 11/26/13-Hiralkumar Patel. 1:16 PM:- received email from Ms. Rossano including an investigation work plan. abstract: - current owner filled in the crawl space that was located beneath the entire building footprint with approx. 3,000 yards of concrete and a vapor barrier to seal the space beneath the building - since 2006, no LNAPL has been reportedly observed entering the building or the adjacent NYCTA subway tunnel - three (3) soil borings (B-3A, B-4A and B-5A) which were previously installed by F&E will be re-installed using a hollow stem auger drilling rig - boring B-3A will be installed directly north of the former northern fill line - boring B-4A will be installed approx. 35 ft north of the former northern fill line - boring B-5A will be installed approx. 15 ft south of the former southern fill line - approx. 10 ft of material will be removed from each boring location with a vacuum extraction system - soil samples will be collected continuously from 10 ft to at least two ft into the water table (approx. 40 ft bg) using 2 ft long split spoon - at a minimum, all soil borings will extend below the water table by at least 2 ft or the vertical extent of contamination or to 50 ft bg maximum ---------- - two samples (at highest PID and deepest dry) will be analyzed from each boring for VOCs and SVOCs - all three soil borings will be converted to 1 inch wells, with 10 ft of screen - will perform an exposure assessment - currently scaffolding along the entire length of the proposed investigation area and is scheduled to be removed in early 2014 - will submit investigation schedule once scaffolding removed discussed with DEC Austin and DEC Vought. due to no activities since 2007, Austin asked to check with MTA regarding impact to nearby subway tunnel and drawdown well of the subway system. 2:56 PM:- left message for Rajen Udeshi (646-252-3673) at NYC Transit. 5:42 PM:- received call from Dana from Mr. Udeshi's office. she asked to contact John Malvasio in MTA's Maintenance of Way. John Malvasio Maintenance of Way MTA Ph. (718) 694-1358 5:50 PM:- left message for Mr. Malvasio. 12/05/13-Hiralkumar Patel. 3:13 PM:- left message for Mr. Malvasio. 12/20/13-Hiralkumar Patel. 11:45 AM:- left message for Mr. Malvasio. 12:26 PM:- received call from Mr. Malvasio. he asked to contact William Detore in his section, who handles environmental issues. 12:28 PM:- left message for Bill. Bill Detore MTA Ph. (718) 694-1488 email: william.detore@nyct.com 01/28/14-Hiralkumar Patel. 4:09 PM:- left message for Bill. 01/29/14-Hiralkumar Patel. 8:34 AM:- received message from Bill. 2:37 PM:- left message for Bill. 01/30/14-Hialkumar Patel. 9:33 AM:- spoke with Bill at NYC Transit. informed him about ongoing spill investigation. asked him about any impact to nearby subway system. Bill will check available record and inspect the area. 10:30 AM:- sent email to Bill with site summary.

HSBC BANK (Continued) **S105997119**

asked him to provide following information: - any oil seepage into the tunnel in the area - the nearest water pumping well 02/24/14-Hiralkumar Patel. 2:03 PM:- left message for (and sent email to) Bill inquiring update. 05/14/14-Hiralkumar Patel. 3:55 PM:- sent email to Bill inquiring updates. 02/10/15-Hiralkumar Patel. 1:54 PM:- received email from Nicole from ERM inquiring about comments on proposed delineation work plan. 04/14/15-Hiralkumar Patel. 1:38 PM:- spoke with Bill. he confirmed no oil seepage into any subway tunnels nearby the subject site. he will provide location of nearest pumping well location. 1:55 PM:- sent email to Nicole requesting a call back. 04/15/15-Hiralkumar Patel. received message from Eugene Gabay (at 4:07 PM on 04/14/15) from ERM. 04/16/15-Hiralkumar Patel. 1:43 PM:- spoke with Eugene at ERM and informed him about case closure. Eugene Gabay ERM PH. (631) 756-8954 email: Eugene.Gabay@erm.com after discussing with DEC Austin and DEC DeMeo, case is being closed based on following: - elimination of the source (leaking fill lines) and conversion to gas heating system - sealing of sub-basement and crawl space at the site - no impact to nearby subway tunnels (confirmed twice - 2007 and 2015) which are closest sensitive receptors 04/27/15-Hiralkumar Patel. 3:22 PM:- sent spill closure letter to Mr. Philipp. letter emailed to Mr. Philipp, Mr. Milstein and Eugene.

DER Facility ID:	464975
DEC Memo:	7/16/15: J.Kann - called Chris Quintana who informed me that this was a dry leak. They are excavating around the tank. A temporary tank has been set up on site. He will forward the owner information. The tank was a 1080 gallon fuel oil tank. 7/17/15: Called Chris again to get the site owner’s name. He did not respond, left a message. 7/20/15:

479 CLINTON AVE LLC (Continued) **S117975730**

J.Kann - received call back from Chris the owner is Jay Arno and his cell number is 347-563-1301. 7/22/15: J.Kann - spoke with Mr. Arno who indicated that the tank was repaired and contaminated soils removed. He said that endpoints samples were collected and that a tank retest was in the process of being done. I confirmed that he was the owner of 479 Clinton Avenue and his mailing address is: Jay Arno Downtown 2502 Avenue U Brooklyn, NY 11229 Informed the owner that the project Manager is Tim DeMeo and emailed him Tim's contact info at jay@downtownclothingstore.com. Placed spill in Tim's name because he was the responder on July 16, 2015. Added Spill/Owner info the TTF Mail Merge file. 9/15/15: As per Jeff, I contacted a consultant named Emily on 9/8/15 at 973-255-7526 who had left him a message regarding this spill. She did not answer and I left her a message. To date she has not called me back. 9/29/15 TJD File review. All Boro Tank has submitted a closure report detailing remedial activities at this property. Following a failed tank tightness test of a 1080 FO UST the tank was emptied, uncovered, cleaned and inspected. Contractor reports (2) pin holes were located approximately centerline of the UST - rolled 1/4 steel sheeting was welded in place to repair tank. Following repairs the fill and vent lines were replaced and the full tank system was reported to have been tested and passed. A total of (21) drums of petroleum contaminated soils were excavated and transported offsite under manifest for disposal. Endpoint samples were collected prior to backfill - all target analytes were within acceptable concentrations. All documentation has been uploaded to DECDOCS. No further action is required. Spill closed.

Remarks: investigation, repair, retest pending

SWIS:	2401
Town:	New York City
Record Added Date:	02/06/2020
Record Updated Date:	06/07/2021
Update By:	JHOCONNE
Site Description:	Site Location: The site is located at 130 Saint Felix Street in the Fort Greene Neighborhood of Brooklyn, NY. Residential, commercial, and institutional buildings characterize the surrounding area. The site is bounded by Lafayette Avenue to the north, Saint Felix Street to the east, and Ashland Place, Fourth Avenue, and Flatbush Avenue to the west and south of the site. Site Features: The site is developed with an asphalt-paved parking lot and is located on an L-shaped city lot bounded by two multi-story Brooklyn Academy of Music buildings to the north, multi-story residential buildings to the east, a multi-story mixed residential and commercial building and a multi-story church building to the south. New York City Transit (NYCT) subway tunnels are located beneath Lafayette Avenue to the north, Saint Felix Street to the east, and Ashland Place, Fourth Avenue, and Flatbush Avenue to the west and south of the Subject Property. The nearest body of water is the Gowanus Canal, which is approximately 0.57 miles southwest from the site. The site is not in a flood zone. Current Zoning and Land Use: The site is currently zoned C6-1 (commercial)and is currently used for intermittent rentals to movie productions for equipment storage. The surrounding properties include the Brooklyn Academy of Music building to the north, residential buildings to the east and mixed residential and commercial buildings and a church to the south. Past Use of the Site: According to the Phase I, auto repair or service activities may have taken place on the site. The Phase I Report concludes potential releases of petroleum products, solvents, and/or other hazardous materials from adjacent properties may have adversely impacted soil, groundwater, and/or soil vapor at the site. Site Geology and Hydrogeology: The geology of the site consists of the Hartland Formation, which consists of gray schist with quartz, biotite, and muscovite. Based on geotechnical investigations in the area, the depth to bedrock is greater than 90 feet below ground surface (bgs). Based on the general topography of the surrounding area, inferred groundwater flow is to the southwest toward the Gowanus Canal. Depth to groundwater is about 38 feet bgs.
Env Problem:	Nature and Extent of Contamination: Based on the investigations conducted to semi-volatile organic compounds (SVOCs) and metals (barium, lead and mercury) in soil and groundwater likely due to the presence of coal and slag in the historic fill on this Site. Soil - Volatile organic compounds (VOCs) Naphthalene and total xylenes were detected above Unrestricted Use SCOs in one soil sample location. Groundwater - the VOC chloroform exceeded its respective Ambient Water Quality Standard (AWQS), total metals concentrations of trivalent chromium, iron, and sodium were detected above AWQS and with the exception of sodium, dissolved (filtered) metals did not exceed their respective AWQS. Soil Vapor - multiple VOCs, including petroleum-related compounds (i.e., trimethylbenzenes, xylenes, and toluene, etc.) consisted with the history of former petroleum uses on and off-site, were detected near the north-central area of the site.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 01/07/04 ALso refer to Spill #04-07082 9/27/04-Reassinged from Rommel to sun. 9/28/04 File Update by Sun: On 9/29/04, Joe Sun conducted a site visit. Sun spoke to Mark Turoff of Environmental System Group (Tel: 917-750-1483) about the site investigation he has recently performed. Per Turoff, his company had installed twelve soil temporary wells on 9/27/04 and had collected soil and groundwater samples from eleven wells except one which contained one foot of free phase product. He will send me the invstigation report after the laboratory report is complete. 10/7/04 Sun received an e-mail from Lauren Gallagher, Project Manager from NYCDEP on 10/7/04 for this Little E Restricted site. She will fax to me a copy of Phase II testing and accompanying HASP which they approved on 9/8/04. 04/08/05-File Update by Sun: The Stipulation Agreement was signed by the owner and executed by the Department on 12/15/04. -On April 6, 2005, DEC received an Investigation Summary Report from owner's consultant, Advanced Site Restoration, LLC. Joe Sun called the owner (Paul Rigas)on 04/08/05, informing him that the Department disapproved the report, since it does not delineate the off-site contamination. A meeting is scheduled for April 19, 2005 at the site between the DEC and the owner to discuss the location of off-site wells. -WJS 04/25/05-File Update by Sun: On 5/25/05, Sun sent a letter to the property owner (George Rigas), informing him that the Department has reviewed and approved the Investigation Summary Report with the incorporation of the following items: 1. Install two (2) two-inch (minimum) off-site monitoring wells in sidewalk east of Butler Street between 3rd Avenue and 4th Avenue in Brooklyn, New York. The monitoring wells should be selected at locations down-gradient of the existing monitoring wells TMW-16 and TMW-17. The new wells will provide the additional off-site delineation of dissolved groundwater contamination plumes. Pursuant to the Stipulation Agreement signed and dated effective December 15, 2004, the Department requires a Remedial Action Plan (RAP) be submitted by

126 4TH AVENUE - MISC (Continued) **S118953804**

June 24, 2005. THe Department requires that the RAP shall detail the work proposed to remediate all contaminated media (groundwater and soil) and provide a detailed descriptions of a vapor mitigation efforts used in the construction of the residence including the installation of vapor barriers and sub-foundation venting systems. (WJS) 06/29/05 File Update by Sun: On 06/29/05, Sun sent a letter to the property owner (George Rigas), informing him that the Department has reviewed and approved the Remedial Action Plan, prepared by Advanced Cleanup Technologies, Inc., with the incorporation of the following items: 1. The OMMP shall describe and tabulate the operation, maintenance and monitoring schedule (frequency) for system equipment and their performance, influent and effluent water sample, system influent and effluent air emission, all monitoring wells and soil vapor monitoring points. EPA Method TO-14A, not TO-02 as stated in Reference 1, shall be used to sample and analyze air stream before and after carbon treatment. 2. Soil Vapor Extraction System (SVES) Data sheet and Air Stripper Data Sheet shall be completed and submitted to the Department by November 15, 2005 for review. The Blank SVES and Air Stripper Data sheets are attached here for your reference. 3.Measurements of groundwater levels in all area are to be conducted monthly for the first three months, and then quarterly. Collection and analysis of groundwater and soil vapor samples shall be conducted monthly for all monitoring wells and soil vapor monitoring points. (Sun) 12/09/05-Sun: Sun received an email from Paul Stewart of ACT, Inc., informing the Department on the current status of the projec: The owner modified development plans for the property to include a full basement with elevator room and underground parking rather than a partial basement with elevator room only. The NYCDEP required modifications to the work plan approved by the NYSDEC to account for the full basement. The modified work plan was approved by the NYCDEP and includes a vapor barrier under the entire property and a more extensive subslab ventilation system. A supplemental soil and ground water investigation is currently being performed and should be completed by Friday. The existing cased wells were surveyed and a flow direction to the west was calculated. The results of the supplemental investigation will be used to size and locate the soil vapor extraction and ground water recovery systems. (Sun) 01/11/06-Sun: Sun sent a letter to the property owner, Paul Bregianos of Arc Electrical and Mechanical, approving the revised Remedial Action Plan prepared by Advanced Cleanup Technologies, Inc. dated 01/04/06, as noted below: Soil Vapor Extraction System (SVES) data sheet and Air Stripper Data Sheet shall be completed and submitted to the Department by March 31, 2006 for review, (2)The owner must notify the Department of site status change from Closed-In Place to Closed-Removed for seven (7) 550-gallon gasoline underground storage tanks (USTs) within 30 days prior to sustantially modifying a facility. (Sun) 03/27/06-Sun received an email from Paul Stewart of ATC on 03/06/06 informing DEC that they are planning to issue to DEC a formal report on the extent of free product and dissolved gasoline in ground water beneath the site. It will also contain a summary of underground storage tank closure activities as requested in DEC's correspondence to the property owner. We should have the report to DEC by the end of this week. (Sun) 03/27/06-Sun sent an email to Paul Stewart of ATC stating that DEC is still waiting to receive a report from ATC on the extent of free product and dissolved gasoline in ground water beneath the siteand a summary of underground storage tank closure activities as requested in DEC's correspondence to the

126 4TH AVENUE - MISC (Continued) **S118953804**

property owner. (Sun) 06/16/06-Sun: Paul Stewart of ACT (Consultant for RP) informed the Department that installation of the recovery well, monitoring wells and vapor monitoring points is complete. The horizontal ventilation screens and piping associated with the vapor extraction wells is also complete. Tomorrow,we will be overseeing installation of the vapor extraction wells. We will also be connecting those wells to piping leading to the location of the treatment system. Next week we will be installing the remaining sections of the 20 mil HDPE liner. The concrete foundation floor will be poured soon after that. Once the first floor parking garage has been completed, we will perform a ground water pump test and a pilot soil vapor extraction test to size a treatment system. Installation of the treatment system will depend upon the construction schedule and access to the alleyway where it will be located. We expect that will take place this fall. (Sun) 09/06/06-Sun: Sun received an email dated 09/04/06 from Paul Stewart of ACT (Consultant for RP)as follows: All wells and subsurface piping have been installed. We are waiting for completion of the first floor so we can install a pilot system and perform a pilot SVE and ground water pump test. I expect that should take place in October . (Sun) 12/13/06-Sun: Sun received an email from Paul Stewart on 10/30/06, stating taht All of the wells and piping for a pump and treat system, vapor extraction system and subslab depssurization system have been installed. He is currently waiting for completion of the first floor of the building so he can install a pilot system and perform a pilot SVE and ground water pump test. He spoke with Paul Bregianos who said the first floor would be completed after the steel was installed which should be this winter. (Sun) 03/23/07-Sun: On 03/23/07 Sun received the following email from Paul Stewart: We completed piping the soil vapor extraction and recovery well conduits to the western portion of the utility room and the concrete floor was installed. We are now awaiting installation of electric service to the utility room in order to perform a pilot SVE and pump test. I will notify you when the pilot tests are scheduled. (Sun) 10/19/07-Sun: On 10/18/07 Sun received the following email from Paul Stewart of ACT for the status of this projec We performed a pilot test of the soil vapor extraction system and a pump test on the recovery well last week and plan to have a pilot test report issued next week. The full scale remedial system should be installed before Thanksgiving . (Sun) 12/18/07-Sun: Sun received the following email from Paul Stewart of ACT, A pump test performed on the recovery well indicated that ground water could not be recovered at a flow rate that could contain the ground water plume. Therefore, we will rely upon two 15 Hp regenerative blowers to remediate soil and ground water in the 6 SVE wells installed beneath the site. A 5.5 Hp regenerative blower for a sub-slab depressurization system is also being installed as a precaution to protect building occupants. The remedial system is being delivered this week and will be installed and put into operation the first week of January, 2008. I will forward a startup report to you and the NYCDEP once the remedial system has been rendered operational. (Sun) 2/25/08-Sun: Sun received the following email from Paul Stewart of ACT, the consultant for the RP, The remedial system has been completely installed and is ready for full scale operation. We are waiting for the owner to provide us with an active telephone line to permit unattended operation. The telephone line should be installed within 10 days at which time the remedial system will be turned on. A Startup Report and an Operation, Maintenance and Monitoring Plan will be forwarded to your attention

126 4TH AVENUE - MISC (Continued) **S118953804**

in approximately 2 weeks. A Closure Report will also be submitted to the NYCDEP with a copy to you. (Sun) 3/12/08-Sun: Sun visited the site to witness the start-up of the remedial system. (Sun) 4/2/08-Sun; Sun received the Remedial System Operation, Maintenance and Monitoring Plan (OMMP) from Paul Stewart of ACT, Inc. (Phone # 631-293-4992). (Sun) 4/11/08: Sun sent the following email to Paul Stewart: Hi, Paul, While I was reviewing the Remedial System OMMP, submitted by you, dated April 1, 2008 for the above referenced site, I found the following documents are missing in the OMMP report: 1. Figure 1: Remedial System Layout 2. Figure 2: Treatment Room Equipment Layout 3. Table 1: Troubleshooting Guidance Table I also noticed that P&ID was not included in the OMMP. The P&ID is a very important document which shows all the equipment, and instrumentation and control. Please revise your OMMP to include P&ID. I have reviewed SVES Data Sheet and found one error on Item #12 (Contaminant). Based on 33 ft of Stack Height and 250 CFM of Air Flow Rate, the Permissible Air Output Concentration for Benzene is 0.02206 LBS/HR, NOT 0.00494 LBS/HR as indicated in your SVES Data Sheet. (Please note that 0.00494 LBS/HR is based on 15 ft of Stack Height). Please address the above comments and resubmit. (Sun) 4/22/08-Sun: Sun reviwed the Remedial System Operation, Maintenance and Monitoring Plan (OMMP), dated 3/31/08, submitted by RP's consultant, Advanced Cleanup Technologies, Inc. (ACT). The Department also reviewed the supplemental documents submitted by ACT on April 16, 2008, including Figure 1 through 3 and Table 1 which were missing in Reference 1 and a revised SVES Data Sheet indicating the correct Permissible Air Output Concentration for Benzene as 0.002206 LBS/HR. The Department approved the OMMP with the condition that a third Pressure gauge & sampling port be installed on inter-connection between two Vapor Carbon Filters. (Sun) 6/24/08-Sun: Sun received the following email from Paul Stewart of ACT, Operation, maintenance and monitoring of the remedial system is being performed on a monthly basis. A quarterly monitoring report will be prepared for submittal in August. (Sun) 8/1/2008 - Project reassigned to Feng. 1/21/2009 - Quarterly Monitoring Report, 4/2008 - 7/2008, 10/3/2008, by ACT. The site is occupied by a ten-story residential apartment building. A remdial program was started 3/12/2008 consisting of an active SVE and treatment system and an active sub-slab depressurization system and treatment system. There are 3 vacuum probes VP-1 to VP-3 for monitoring sub-slab vacuum monthly and Groundwater monitoring wells MW-01 and MW-03 for quarterly monitoring, are located in the cellar floor. Additional monitoring well RW-01 is located in the first floor treatment room. A circuit breaker malfunctioned on the B-200 SVE blower causing it to remain off since 5/30/2008. The two SVE manifolds were joined together. Increased pressure in the B-100 carbon units required the B-100 SVE blower to be shut down unitl the problem could be resolved. Average DTW 11.71 feet. 4 wells were sampled on 4/28/2008. BTEX range 600 ug/L in MW-01 to 9,842 ug/L in MW-02. MTBE range from 23.1 ug/L in MW-01 to 229 ug/L in MW-02. (RJF) 1/26/2009 - Letter to Paul Bregianos (Arc Electrical and Mechanical). DEC requires 1) explanation of the reason why groundwater treatment is missing, 2)surrounding map, 3) delineation work plan for offsite. Investigation work plan include addressing the above comments by 3/16/2009. (RJF) 10/1/2009 - Site Status Report for 2/2009 to 7/2009, dated 9/2/2009, by Advanced Cleanup Technology. On July 16, 2009, a low flow pump test was performed on RW-01. Groundwater recharge is relatively fast. On July 22, 2009, the configuration of the SSD and

126 4TH AVENUE - MISC (Continued) **S118953804**

SVE piping was modified by connecting the casing to RW-01 and the influent piping from the SSD system to the influent piping for SVE Blower B-100. The modified configuration was operated for a few days when high room temp required shut down of the B-100 blower. The ball valves for the SSD piping were re-directed to the 5.5 Hp B-300 blower which was turned on. The B-100 blower was turned off until ambient temp decrease this fall. DTW 13.53' in MW-02 to 14.05' in MW-01. DTW in RW-01 was 22.84'. Groundwater was sampled on 7/22/2009. BTEX range 177 ug/L in MW-01 to 7,200 ug/L in MW-03. MTBE range 15 ug/L in MW-01 to 76 ug/L in MW-03. Will continue monthly system operation, maintenance and monitoring and quarterly groundwater sampling. (RJF) 5/19/2010 - received inquiry regarding the two monitoring wells in front of the 355 Butler Street. The two wells were installed back in 5/2005, sampled once during installation, but no included in the quarterlys. 6/1/2010 - email to Paul Steward (ACT) for information on these two wells, and required site plan with all the wells, their monitoring data and contour map in the next quarterly. 11/4/10. Site Status Report was due in early September 2010. Breen 11/20/10. Sent e-mail to Paul Steward asking for status reports subsequent to 9-2-09. 06/28/2012 - V. Brevdo - Discussed project with Paul Stuart of ATC Environmental via telephone(Phone # 631-293-4992). Sent the following e-mail to Mr. Stuart: June 28, 2012 Dear Mr. Stuart: Thank you for discussing status of the project with me earlier today. It is my understanding that the project has undergone investigation, remediation and is currently in operations, maintenance and monitoring stage with groundwater monitoring ongoing. I also appreciate your thoughts regarding further course of action for the project. It is my understanding that you will be preparing a Project Status Update report and you intend to submit status update report to the Department for review within 30 days . You also agreed to e-mail me a synopsis /briefing describing main highlights of the project and its current status and accomplishments. We agreed that you and I will further evaluate whether current site conditions and remedial progress at this project may advance it into a spill closure status. In evaluation of spill closure potential I would like you to be cognizant of the main criteria which we, in the Division of Environmental Remediation, Region 2 office are looking at when making a spill closure decision. These spill closure criteria are as follows: free product must be removed, grossly contaminated soil with visible staining must be removed, source of contamination must be removed, concentrations of contaminants in soil and groundwater are either at the levels of cleanup guidance values or higher but within acceptable range to DEC, no migration of contaminant off site occurs, remaining contamination is contained, no threat of exposure to vapors from remaining contamination exists, and site poses no further threat to human health and environment. We also use engineering controls such as vapor barriers and SSDS system where necessary. Please note that it is DEC's strong preference that SSDS system remain in operation and be maintained and functioning as an engineering control after spill case is closed . The system must be monitored and maintained in accordance with the procedures set forth in the future Spill Closure Report (when DEC agrees that spill closure is appropriate), including all system equipment such as piping, fans, vacuum gauge and low vacuum visual alarm. Furthermore, the Department strongly recommends the performance of an annual inspection of the system and requires notification of significant operational and maintenance related issues. I look forward to receiving a project

126 4TH AVENUE - MISC (Continued) **S118953804**

synopsis via e-mail as well as Project Status Update report. Please note that I need one hard copy and one electronic PDF copy on CD of all the submissions (except e-mails). Please contact me at 718-482-4928 or via e-mail if you have questions regarding this matter. Respectfully, Vadim Brevdo 01/11/2013 - V. Brevdo Left telephone voice mail to Paul Stuart, requested a return call to discuss project's status. Paul Stuart returned call and said will submit report within a week. V. Brevdo 01/17/2013 - V. Brevdo E-mail from consultant, submitted spill closure request report dated January 17, 2013 with the following e-mail: Vadim, Attached please find an electronic copy of our report for the above-referenced property entitled Request for Spill Closure. Please contact me if you would like a CD or hard copy of our report or if you require further information concerning remedial activities at the subject property. Thank you for your assistance and cooperation in this matter. Regards, Paul P. Stewart, President Advanced Cleanup Technologies, Inc. 960 South Broadway, Suite 100 Hicksville, New York 11801 Phone: (516) 933-0655 x 12 Cell: (516) 840-8197 Fax: (516) 933-0659 Email: pauls@actenvirons.com 01/18/2013 - V. Brevdo Reviewed January 17, 2013 Spill Closure Report and spill closure request. The site consists of a ten-story residential apartment building surrounded by commercial and residential properties. The site was utilized as a gasoline service station from 1963 to 2000 which resulted in impacted soil and ground water beneath the site. Remedial activities have taken place at the site from 2005 through the current date. Petroleum storage facilities and impacted soil were removed from the site during construction of the existing building and below grade parking garage. Residual soil and ground water contamination have been remediated through the installation and operation of a pump and treat system, soil vapor extraction and sub-slab depressurization (SVE/SSD) system that has continually operated from March 2008 to date. Recent ground water quality data indicate that asymptotically low levels of petroleum constituents have been attained in ground water beneath the site. Advanced Cleanup Technologies, environmental engineering consultant for the responsible party, submitted January 17, 2013 remediation report and requested closure of spill case. SSD component of the remedial system will remain in operation as an engineering control to ensure that there is no threat of exposure to vapors from the remaining residual contamination. The Department reviewed remediation report, including analytical data for the site, and concluded that closure of the spill case is appropriate based on the following: 1) Free-phase product has not been identified at the site since underground storage tanks were removed and petroleum impacted soil was excavated during construction of the existing building. 2) All underground storage tanks and petroleum-impacted soil were removed and properly disposed of during site development as indicated in ACT s March 31, 2008 Closure Report. 3) A review of historical ground water quality data demonstrates an asymptotic improvement in water quality beneath the site. 4) Air beneath building remains under negative pressure due to the active SSD system and as a result no migration of vapors from remaining contaminants into the building will occur. 5) Tthe site poses no further threat to human health and the environment. Spill is closed effective January 18, 2013. Spill Closure Letter sent to Paul Stuart of ACT with the following e-mail: January 17, 2013 Dear Mr. Stuart: The Department reviewed Spill Closure Report and request for spill closure dated January 17, 2013. Based on the review of the report, investigative and remedial

126 4TH AVENUE - MISC (Continued) **S118953804**

activities completed to date, analytical data presented in the report, and Conclusions/Recommendations section of the Report, the Department agree that the closure of this spill case is appropriate at this time. Therefore, spill case is closed effective January 17, 2013. Spill closure letter is attached for your file. It is my understanding that the SSD system will remain in operation at the site as an engineering control to prevent possibility of exposure to potential vapors from remaining residual contamination beneath the site. If you have questions regarding this matter, please contact me. Respectfully, Vadim Brevdo

DEC Memo:	12/19/12 AFrischeisen TTF sent and upped to eDocs. 12/23/2015: Rashad Spill reassigned from DeMeo to Omar as per DeMeo. 307 Prospect Place does not have an alternate address. No additional spill report or PBS registration found. No documents found in D2. 12/30/2015: Rashad Sent email to Carrie from ATS: Spill#1206302 for 307 Prospect Place, Brooklyn NY 11238 received on 9/26/2012 has been reassigned to me. The previous notes state that there was a tank test failure at this location. If you have any documentation or information that you could provide me it would be appreciated. Carrie replied: I have reached out to our original customer to obtain permission to release the report and customer information. As soon as I receive a response, I will advise accordingly. If you have any questions, please do not hesitate to contact us. Carrie sent follow up email: I spoke to our original customer. At this time we do not have permission to release any information regarding this property. James Martin (treasurer) email - jmart1745@aol.com, Stephen Furnstahl (President) email - sfurnstahl@gmail.com. 1/17/2017 Austin This spill report is being transferred from Rashad Omar to Jennifer Kann end. 6/6/17: J.Kann - As per Austin, spill reassigned to Lakhani. 06/20/17 - Lakhani Spoke to ATS and they informed that after the initial failing test completed on 09/26/12 there was no follow up. 08/03/17 - Lakhani DEC Lakhani emailed Stephen Furnstahl and James Martin regarding the tank failure. 08/08/17 - Lakhani James Martin emailed a passing tightness test dated 10/17/2012 along with photos of the tank. Documents uploaded to D2. Due to tight tank and no evidence of discharge to the subsurface, spill is closed.
Remarks:	repair/retest pending

DEC Memo:	05/30/07-Vought-Off hours responder. Dry portion leak. Spill assigned to DEC Falvey due to tank test failure. 6/14/07 Called ARTC (718)260-2933. I was told that Kurt Burns is the person I need to speak to re: tank failure. ph:(718)260-2912. Secretary took message for him to call me. sent ttf letter to: Kurt Burns ARTC 22 Chapel St. Brooklyn, NY 11201 Possoibly no PBS registration for this facility. Did search of data base for 937 Fulton and no hits. bf 6/28/07 On 6/26/07, received fax from Mark Salamack of Petroleum Tank Cleaners (PTC) sdtating that he is waiting for a sidewalk permit to access the tank and find the problem. He will advise me when the problem is identified. bf 09/26/08: Tank passed tightness test after re-test. TTT processed. (MA) 12/22/08 Received letter from PTC requesting closure of spill. Tank failed test because of fill and stick lines. Both lines were replaced. Contaminated soil was encountered. bf 10/28/09 Sampling reults had one exceedance of recommended soilcleanup objectives to protect gw quality: chrysene @ 508 ug/l. Recommended clean-up objective for chrysene is 400 ug/l. bf

DER Facility ID:	443497
DEC Memo:	10/29/13- Zhune spoke to Christopher Steel 718-624-4842. He said they put a new boiler. They coverted to gas/oil. The tank failed the test with a dry leak. They will perform isolation test. Last test was in 2008. As per Christopher there is no oil spill. 01/03/14- Mark From Petroleum Tank Cleaner emailed the tank test results dated 12/26/13. As per Mark the tank was not conected to the boiler and that was the only reason that it failed. Apparently they were going to interruptible service and someone disconnected the line from the boiler and allowed to fail. Those lines were reconnected. it has been restested and it passed the test. As per Mark there is no contamination. The Test result in eDos. Based on the information from Petroleum Tank Cleaner the spill is closed.
Remarks:	Location is a drug treatment center. No known loss of product.

DEC Memo:	removing a 10,000 gallon heating oil tank. under the tank there was some trapped water that had a petroleum sheen on it. less than 10 gallons are visible.
Remarks:	12/14/05: This spill transferred from J.Kolleeny to S.Kraszewski. 03/14/06: This spill reassigned to K.Tang. - SK 12/3/07: J.Kann - spill reassigned to J.Kann. Investigative Work Plan submitted on 11/5/07. 5/25/12: J.kann - spill priority assigned as P0 as a part of monthly reporting. 7/22/14: J.Kann - reviewed work plan. 3 permanent wells should be installed. Comments sent to NYCHA in an email today. 12/30/14: J.Kann - part of multi site stip. SIR due 3/14/15 6/3/15: J.Kann - The SIR was submitted on 4/3/15. The SIR was reviewed. 6 borings were advanced and 12 soil samples collected. Minor exceedences of PAHs in 2 locations but attributable to historic fill. 3 groundwater wells were installed and water samples collected and analyzed. Groundwater concentrations were all below TOGS 1.1.1. Site visit made today. Wells were gauged. Water only in wells. Spill closed. NFA.

BROWNFIELDS:

Name:	164 4TH AVE
Address:	164 4TH AVENUE
City,State,Zip:	BROOKLYN, NY 11217
Program:	BCP
Site Code:	637074
Acres:	0.310
HW Code:	C224368
SWIS:	2401
Town:	New York City
Record Added Date:	06/03/2022
Record Updated Date:	03/27/2023
Update By:	HMDUDEK
Site Description:	Location: The site's application to the Brownfield Cleanup Program (BCP) was terminated at the request of the owner. The site is located at 164 4th Avenue, Brooklyn, New York (Site). The site is identified as Tax Block 420, Lot 37 in Kings County. Site Features: The proposed BCP site boundary is equivalent to the parcel s tax map metes and bounds. The total surface area of the site is 13,480-square feet. The site is currently used as a BP-branded gasoline filling station with a convenience store. The building used as the convenience store is a one-story, masonry and steel building that does not contain a basement. The building was constructed in 1988 and is approximately 1,300 square feet in surface area. The existing surface improvements at the site consist of asphalt parking areas and concrete walkways. There are three active underground storage tanks (USTs) existing on-site (one 12,000-gallon and two 10,000-gallon gasoline, double wall, fiberglass, installed in 1997), one inactive UST (550-gallon fuel oil, installed in 1997), and six gasoline fuel dispensers. Current Zoning and Land Use: The current zoning designation of the site is C4-4D. The current land use is commercial. Properties adjacent to the Site and respective land uses are summarized as follows: to the north, Douglass Street and mixed residential/commercial buildings across the street; to the south, commercial warehouses; to the east, 4th avenue and an underground MTA subway (N, R and D lines), across 4th Avenue are multi-family residential lots, one mixed-use residential and commercial lot, and a vacant parcel; and, to the west, a commercial office building and industrial/manufacturing warehouses. Past Use of the Site: The Phase I Environmental Site Assessment Report (ESA) prepared by Impact Environmental in 2011 summarizes the past uses and ownership of the site. According to the Phase I ESA, the site was first developed in 1906 with two residential dwellings. As of 1926, the western portion of the site maintained lumber storage, the eastern portion of the site maintained a gasoline filling station with at least three gasoline USTs, and the northern portion of the site was used for automobile repair and sales. From 1951 to 1980 the southern and western portion of the site were used for truck sales, and the northeastern portion of the site maintained a gasoline filling station with at least four USTs. By 1965, the USTs associated with

HERON FOURTH AVENUE LLC - 164 4TH AVE (Continued) **1004572334**

the gas station were located further north than the previous USTs documented in 1926. In 1988, the site continued to be used for truck sales and as a gasoline filling station, with the addition of a metal canopy in the central portion of the site. Since 1926, the site has maintained at least four generations of USTs. In 1998, 14 inactive USTs were removed from the site including four (4) 4,000-gallon gasoline USTs; two (2) 550-gallon waste oil USTs; several abandoned 550-gallon gasoline USTs; and associated piping. No documentation was available regarding the proper decommission of structures and/or chemicals associated with former automotive repair activities (e.g., oil/water separators, lifts, solvents). A total of 1,498 tons of petroleum-impacted soil were removed from the site between March 23 and April 8, 1998, by Baltec on behalf of BP (Impact, 2011). The material was transported by Indian Valley Bulk Carriers and disposed of by Soil Safe Incorporated located in Salem, New Jersey. Endpoint samples collected from the 1998 UST removal excavation detected the presence of volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) above the guideline criteria (concentrations detected and criteria used for data comparison is unknown) and a spill incident was reported to the New York State Department of Environmental Conservation (NYSDEC). The spill was recorded by NYSDEC as spill #97-13442 for the release of unknown quantities of gasoline and methyl-tert-butyl ether (MTBE) from historical USTs. The spill was open at the site from 1998 to 2017, during which several environmental investigations occurred including subsurface hydrocarbon assessments (2004-2005) and quarterly groundwater monitoring (2005-2010, 2012-2014, and 2017) performed by Delta Environmental Consultants, Inc (Delta), EnviroTrac Environmental Services (EnviroTrac), and Antea Group. Several off-site confirmed or potential contamination sources were identified during previous investigations, including a historical Manufactured Gas Plant (MGP) that was maintained approximately 350 feet northwest of the site. A gasometer tower associated with the MGP was located on the western end of Block 420 (same block as the Site), along 3rd Avenue. Upon rezoning of the site and the Gowanus neighborhood at the end of 2021, E-Designations for hazardous materials and noise were assigned to the site through New York City Office of Environmental Remediation (NYCOER). Since the end of 2021, Heron Fourth Avenue LLC and Roux have worked with NYCOER to investigate the site through the E Designation Program. A Remedial Investigation (RI) was performed at the site by Roux in 2021 for the characterization of environmental conditions. Site Geology and Hydrogeology: The existing grade of the site varies from approximately elevation 24.1 to elevation 27.5 feet [North American Vertical Datum of 1988]. The site slopes slightly to the east/southeast towards 4th Avenue with an approximate gradient of 2 to 4 percent. The stratigraphy of the site observed during the Remedial Investigation from the surface to depths ranging from 10 to 26 ft bls consists of urban fill containing fine to coarse sand and silt with some brick, concrete, asphalt, and traces of other inorganic fill materials. The average depth of the bottom of the urban fill layer is approximately 17 ft bls. Below the fill is native soil consisting of primarily of sand and gravel, with some silt lenses. An ash layer was identified within the urban fill later beneath the mid to western portions of the site at thicknesses ranging from 1 to 9 feet. The ash layer was considered a separate and distinct layer from the typical urban fill observed in the other areas and depths at the site. Bedrock was not encountered in any of

HERON FOURTH AVENUE LLC - 164 4TH AVE (Continued) **1004572334**

	the RIR or geotechnical soil borings. The deepest geotechnical soil boring advanced at the site was 102 ft. The average depth to groundwater at the site is 18 ft bls and the range in depth is approximately 15 ft bls to 21 ft bls. Groundwater beneath the site generally flows from the north to the south-southwest.
Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	2/19/08 bf: Sent ttf letter to: Pietro Ruggiero 25 Lafayette Assoc. 104 South Central Ave., Rm. 10 Valley Stream, NY 11580 2/26/08 bf: Letter returned and marked RETURN TO SENDER, ATTEMPTED - NOT KNOWN, UNABLE TO FORWARD. Called Pierto Ruggiero of 25 Lafayette Assoc., which is the contact on application. They no longer own the property. They gave me new owner as 25 Lafayette Investor LLC and phone number is (212)262-1220. Called there and was given this number (212)488-1770. Spoke to Irvan Daniel. He said person handling tank tests is on vacation this week(Carmen Santingo - he was unsure of the last name). Told him I will email a letter to him explaining what needs to be done. TTF letter sent to: Irvan Daniel The Dermot Company 25 Lafayette Investor, LLC 320 West 57th St. New York, NY 10019 3/27/08 Received fax from Ted Dros of ProTest on 3/18/08. They were hired as the contractor to make repairs. bf 9/04/08: Received TTT via fax from Pro Test on behalf of property owner. Pro Test performed on Feb. 6, 2008 tankk & system TT and it failed with a dry leak. On April 11, 2008 Pro Test technicians regasketed and rebolted the manhole cover and the tank & system passed second test. Technician reports that no visible sign of any contamination was found. TTT results reviewed and processed. Spill case is closure. (MA)

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 10/10/95: This is additional information about material spilled from the translation of the old spill file: 75 YDS CONTAIM SOIL. 6/7/04 TIPPLE UPDATING///TRANSFERRED FROM TIBBE TO TIPPLE/// Ernesto Samuels property mgt agent (718-875-5040 ex.11) contacted. Investigation workplan to be forwarded for review. 8/30/06 - Austin - Received correspondence and 2 phtos from Alastiar James, treasurer of Lafayette Court Apartment Coop at 147c Lafayett Ave., Bronx. Letter requested closure of spill report. Reassigned from DeCandia in Albany to Ketani in Region 2 office, to review submittal and evaluate for closure. - end 8/31/06 - Raphael Ketani. I spoke to Alastair James, Treasurer, Lafayette Court Apartment Coop, 147C Lafayette Avenue, Brooklyn, NY, 11238. He explained that this was a very small spill when it took place. He said it was just an overfill and only a very small area was affected - maybe 5 by 5. Based upon my conversation with Mr. James, the pictures he has enclosed with his letter showing the that the garden has recovered, and the small (1 gal.) size of the spill, I am closing the spill case. Mr. James wrote that he would like a closure letter. I will send one out today.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 3/11/03 - SAMUEL- File available in active unassigned spill files. 1/14/2004 Reassigned from O'Dowd to Sun. Also refer to Spill # 8911007 for this site. 01/22/04 Sun sent a letter to Rendel Forbes, the Respondent requiring the following: 1) A subsurface investigation to adequately characterize site hydrogeology and to completely delineate the full extent of petroleum contamination both on-site and off-site must be performed. The investigation at a minimum must include installation of borings/well: south of MW-DG in the vicinity of sidewalk of Fulton Street about mid-point between MW-UPG and MW-D, 2) Re-sample the two previously installed wells, and 3) A surrounding property sketch. 06/4/04 Letter from Andrew Rudko of AKRF to Joe Sun of DEC with an attachment of subsurface investigation report: The investigation revealed that elevated levels of VOCs were detected in the soil sample collected from the groundwater interface, sample MW-DG (35'-37'). Low levels of SVOCs were detected below the NYSDEC TAGM 4046 Recommended Soil Cleanup Objectives. NO VOCs or SVOCs were detected in the sample from MW-UG. Elevated level of VOCs were detected in MW-DG above the NYSDEC groundwater quality standards. NO SVOCs were detected in MW-DG. Based on the test results, MW-DG had BTEX concentration of 14,710 ug/l, including 130 ug/l of Benzene concentration, 2300 ug/l of Ethylbenze concentration, 680 ug/l of Toluene concentration, 3700 ug/l of o-Xylene concentration and 7900 ug/l of m&p-Xylene concentration. The above concentrations are in excess of NYSDEC Water Quality standards. 06/25/04-File Update by Sun: On 06/22/04 Sun sent a letter and Stipulation Agreement to Rendel Forbes, the property owner requiring complete delineation of soil and groundwater contamination, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of July 13, 2004 for signing the Stipulation Agreement by

620 FULTON ST. (Continued) **S100879265**

the Respondent. 07/21/04-File Update by Sun: Om 07/21/04 Sun sent a letter to Rendle Forbes (Property Owner) and Andrew Rudko (Consultant with AKRF) informing them that the Department has reviewed and approved the remediation method proposed by AKRF, dated June 4, 2004. The Department approves the use of the Oxygen Release Compound (ORC) bioremediation technology for the remediation of the contaminated groundwater in the area of the former gasoline tanks. 12/19/05-File Update by Sun: AKRF submitted a letter report dated 10/17/05. The report indicated that Oxygen REleasing Compound (ORC) was injected into the spill area in August/September 2004. THe two wells on the site were sampled on 9/25/05 following low-flow sampling procedures. No gasoline-related compounds were detected in the upgradient we (MWUPG). Concentrations of gasoline-related compounds in the downgradient well (MWDG) have declined since the baseline sampliong was performed in April 2004. Analytical results of MWDG well showed the following concentrations: ND (benzene), 1400 ug/l (ethylbenzene), 38 ug/l toluene). 130 ug/l (o-xylene), 1000 ug/l (m, p-xylene), 120 ug/l (naphthalene), ND (MTBE), 400 ug/l (n-propylbenzene), 940 ug/l (sec-butylbenzene), 110 ug/l (1,3,5-triethylbenzene), 1100 ug/l (1,2,4-triethylbenzene), 350 ug/l (n-butylbenzene). (Sun) 12/28/05-Sun: Sun received a letter report dated 12/27/05 from AKRF. The report is based on the samples taken on 12/4/2005. (sun) 02/21/06-Sun: On 02/17/06, Sun received a report from AKRF for assessment of potential impacts of the residual groundwater contamination on the 620 Fulton Street on the adjacent subway tunnels. Review of this report is pending. (Sun) 04/21/06-Sun: A NFA letter was issued based on assessment of potential impacts of the residual groundwater contamination, performed by AKRF in their letters dated 02/17/06 and 03/15/06. The NFA was based on the following: 1)The gasoline tanks and all associated gasoline-impacted soil down to a depth of 22 feet below grade were removed in 1994; 2)Groundwater contamination in the source area under the former tank location has now been significantly reduced. Overall concentrations have been reduced by about 90 percent; 3) Groundwater is at a depth of 37 feet below grade within a dense glacial till with low permeability. There is a subway line directly to the west of the site which further restricts any groundwater movement off-site. 4) The residual concentrations are much too low to have any impact on the adjacent subways; and 5) For totalm.o.and p-xylene, the DEC Div. of Air Resource Short-term Guidance Concentration (SGC)is 4300 ug/m3, which is over ten times the estimated maximum concentration (340 ug/m3) in the tunnel. (Sun)

DEC Memo:	09/30/10 - LZ Reviewed correspondence (eDocs) from Bethlehem Lutheran Church concerning repairs done to the tank after it failed the tightness test. After the fill line had been replaced, the tank passed the tightness test. Obviously, the tank is located in a subterranean vault without access, but the UIS shows the tank as aboveground (see cross-reference). Sent out a spill closure letter that contains a requirement for tank information correction. The spill case is closed. 11/24/2009 TTF letter sent to: Rev. Paul Knudsen Bethlehem Lutheran Church 490 Pacific Street Brooklyn, NY 11217
Remarks:	TANK TEST FAILURE ON A 1500 GALLON UST.

Record Updated Date:	09/19/2022
Update By:	JLHATHAW
Site Description:	Site Location The 556 Baltic Street Site s address is 151-169 Third Avenue, Brooklyn, NY 11217. The Site is located in Kings County, and is Brooklyn Block 407, Lot 1. It is approximately 0.27-acres in size (11,800 square feet). The Site is currently improved with a one-story building formerly used as a car wash, a one-story office building, and three pump islands associated with the former gas station. The Site is bound to the north by Baltic Street followed by multi-story residential buildings, to the east by multi-story residential buildings and a self-storage warehouse, to the south by Butler Street followed by a hotel and an industrial building, and to the west by Third Avenue followed by a one-story warehouse. The Site is located within an urban area of Gowanus, Brooklyn and the Gowanus Canal is located approximately 1,500 feet southwest of the Site. Site Features The Site is a 0.27-acre irregular-shaped lot, is paved with an impervious surface (concrete) and is secured with a 10-foot-high locked construction fence. The Site is currently vacant and developed with a one-story office building on the southern portion of the Site, a one-story building formerly used as a car wash on the northern portion of the Site, and three pump islands associated with the former gas station. Current Zoning and Land Use The Site is located within a residential and manufacturing zoning district. As part of the Gowanus Rezoning, the Site also has a Mandatory Inclusionary Housing (MIH) requirement. The proposed development of the property is consistent with the current zoning. Block 407, Lot 1 was assigned an environmental E-Designation for hazardous materials, noise, and air quality effective March 2019. Requestor will be required to comply with the E-Designation requirements and to obtain a Notice to Proceed (NTP) and/or a Notice of No Objection (NNO) prior to obtaining building permits. Past Site Use Based on the findings of the Phase I ESA, dated September 2021 completed by GEI Consultants, the Site was initially developed with multiple four-story commercial stores in the 1920s. By 1978, a car wash was constructed on the northern portion of the Site. The Site operated as a gasoline service station, auto rental, and car wash from the 1970s until the cessation of operations in 2022. There are two 4,000-gallon underground storage tanks (USTs) containing gasoline installed in 1972 present on the Site. Additionally, a 550-gallon UST, installed in 1974, was reportedly closed and removed in 1997. Currently the Site is vacant. Site Geology and Hydrogeology The Site is underlain by fill predominantly consisting of brown to dark brown, coarse to medium

556 BALTIC STREET SITE (Continued) **S129112354**

sand with varying amounts of gravel, concrete, brick, and silt, from surface grade to depths of approximately 8 to 10 feet below ground surface. The fill is underlain by brown fine silty sand. The topography of the Site and the surrounding area slopes gently downward from north to west southwest towards the Gowanus Canal. The ground level elevation on the property is approximately 21 feet above mean sea level. Groundwater is located at 14-16 feet below grade.

Env Problem: The findings from the 2021 Phase II ESI and 2022 RI performed by Haley & Aldrich, and submitted with the BCP application are summarized below. Soil and groundwater samples were collected for VOCs, SVOCs, total metals, PCBs, pesticides, and emerging contaminants: 1,4-dioxane and PFAS. Soil vapor samples were analyzed for VOCs only. Soil Multiple semi volatile organic compounds (SVOCs) were identified sitewide in shallow soil samples (to 4 ft below ground surface (bgs)), and in one location to 14 ft bgs. Concentrations exceeded the restricted residential soil cleanup objectives (RRSCOs). The maximum concentration was benzo(b)fluoranthene at 12 parts per million (ppm) compared to an RRSCO of 1 ppm. Metals were identified sitewide above RRSCOs. The highest level was lead at 5,930 ppm compared to the RRSCO of 400 ppm. Arsenic, barium, copper and mercury also exceeded RRSCOs. VOCs, PCBs, Pesticides and three other metals in soil exceeded unrestricted soil cleanup objectives (UU SCOs), but did not exceed RRSCOs. Groundwater Several SVOCs were detected above the AWQS in multiple groundwater samples collected during the Phase II and RI The maximum concentrations was benzo(b)fluoranthene (0.05 parts per billion (ppb) compared to a water quality standard of 0.002 ppb. 1,4-dioxane was detected at concentrations ranging from 0.168 ppb in MW-1 to a maximum concentration of 0.69 ppb in TW-3. PFOA and PFOS were detected in groundwater. The highest value of PFOA was ( ) parts per trillion (ppt) and PFOS ( ). The drinking water standard for these compounds is 10 ppt Total PFOA/PFOS concentrations ranged from 6.1 ppt in MW-1 to a maximum concentration of 16.3 ppt in TW-2. Six (6) metals were detected above the AWQS in groundwater samples collected during the January 2022 RI including arsenic (27.1 ?g/L), iron (maximum 22,700 ?g/L), lead (maximum 1,325 ?g/L), manganese (maximum 1,002 ?g/L), mercury (1 ?g/L), and sodium (maximum 279,000 ?g/L). Iron, manganese and sodium are not associated with site operations. The other metals may be related to suspended material in the groundwater and were not detected as dissolved contaminants. Soil Vapor Total VOC concentrations in soil vapor samples ranged from 58.75 ?g/m3 in SV-5 collected during the 2022 RI to a maximum concentration of 5,168,000 ?g/m3 in SV-2 collected during the 2021 Phase II. CVOCs were detected throughout the Site at relatively low levels. The maximum concentration of Tetrachloroethene (PCE) detected was 14.5 micrograms per cubic meter (?g/m3). TCE was detected in one sample at 1.38 ?g/m3. VOCs related to petroleum compounds were significantly higher. The highest compound detected was 2,2,4-trimethylpentane at a maximum concentration of 3,260,000 ?g/m3 (SV-2). Additional compounds included hexane 920,000 ?g/m3, cyclohexane 325,000 ?g/m3 and heptane 635,000 ?g/m3. These extremely elevated values indicate potential source material near SV-2

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	need to send TTF letter no PBS for this address. 4/28/05. J.Krimgold reviewed a letter report submitted by Mercury Tank & Pump dated April 25, 2005. According to the report a 550 gal #2 oil tank failed the test due to disconnected pipe fittings on the top of the tank. The tank was empty at the time of test. Tank top was excavated,tank was cleaned up and filled with concrete slurry. Before this a hole was drilled through the bottom of the tank to obtain a soil sample. All analytes were found below TAGMs objectives. NFA letter.
Remarks:	Doing a tank test on an old heating tank that no one knew was there. No contamination found or evidence of a leak. Ullage failure... unsure of any removal of tank.

DEC Memo:	removal of under ground tanks-poss soil contamination
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 01/23/2004-Sun-File Review by Sun: Site Status Update Report, Aprip 2003 through August 2003, by Geological Services Corp (GSC), dated 10/16/2003: Six (6) monitorin wells were gauged and sampled on July 17, 2003. A soil vaplr extraction well (SVE-1) was installed on July 30, 2003 and pilot test on SVE-1 was conducted on August 8, 2003. No LPH was detected. The groundwater depth ranged from 11.74 feet to 15.68 feet, and groundwater flow was in northwest direction. MW-2 has the maximum BTEX concentration of 11,400 ug/l and maimum MTBE concentration of 1,800 ug/l. Work performed during this period included repair and patch leak from wall in oil closet located in the subway, installation of three additional wells. A remedial action plan will be submitted by GSC based on the results of the pilot test. Per Hess' letter to DEC dated 10/28/2003, Hess is working with the New York City Transit Authority (NYCTA) to address an apparent hydrocarbon sheen in conjunction with groundwater seepage within a subsurface subway station utility closet. (Sun) 01/22/2004- Site visit by Joe Sun and Mark Tibbe on 1/22/2004. Inspection with Mike Matri of Hess and William Schaefer of GSC showed that some slight infiltration of groundwater continues where the urethane grout waterproofing did not adhere to the concrete. GSC has recommended a second waterproofing event utilizing a hydraulic concrete product. The product is now waiting for NYCTA's approval. (Sun) SEE Also Spill Nos. 0104798/0201876. 05/05/04-File Update by Sun: On 05/05/04 Sun

HESS STATION 32530 (Continued) **S104276740**

sent a letter to Hess requiring complete delineation of soil and groundwater contamination, submittal of an Investigation Summary report followed by a Remedial Action Plan. The Department set a deadline of May 28, 2004 for signing the Stipulation Agreement. (Sun) 06/06/05 File Update by Sun: On 06/06/05, Sun sent a letter to Hess' Project Manager, Mike Matri, informing him that the Department approves Hess proposed plan to take the opportunity of station renovation commencing in June, 2005 to install below ground environmental remediation infrastructure for future remediation of petroleum impacted soil and groundwater. Specifically, the Department approves the following planned installations at the station: 1. Installation of three additional SVE wells (PMW-8 through PMW-10). 2. Modification of existing 2-inch well FW-7 to include a 1-inch injection line which will be piped to the proposed remediation system location, The piping will potentially be used in the future for injection purposes (e.g., Biosolve, chemical oxidation and/or bioremediation). 3. Monitoring wells SVE-1, MW-2, and the three proposed SVE wells (PMW-8 through PMW-10) will have environmental piping installed from the wells to the proposed system location area. The Department requires a formal Remedial Action Plan (RAP) in conjunction with the station redevelopment activities be submitted by Hess during the third quarter of 2005. (Sun) 10/19/2005: Project reassigned from Sun to Andersen 10/19/2005: Reviewed hydrogeologic groundwater report dated 8/29/2005. Report indicated liquid phase hydrocarbons and BTEX concentrations of up to 19,520 ppb. Report indicated that informal proposed remedial action plan discussed in abovementioned 6/6/05 entry is delayed and possibly canceled. The report states Amerada Hess Corporation will either request an extension to submit the currently proposed Remedial Action Plan or to submit a revised Remedial Action Plan . The next triannual sampling event is scheduled for November 2005. Additionally, a Stip was sent out on 5/5/04, which was never signed due to Hess waiting for a Consent Order. 10/25/05: Mailed a failure to sign Stip letter. Stip signature due on 11/15/2005. 1/26/06: 1/25/06 meeting between Quantum, NYSDEC, and GSC/Kleinfelder. The site in under redevelopment. An RAP will be prepared. Delineation will be investigated on the other side of 4th avenue. 3/1/06: Signed stipulation agreement, effective date 2/23/06. Investigation plan due 4/24/06. 4/24/06: Reviewed the site status update report/investigation plan dated 4/21/06. Report indicates that additional delineation on the east side of 4th avenue is not feasible due to utilites. Max BTEX 28,587 ppb (SVE1) and max MTBE 1,710 ppb (MW2). Depth to water 10-15 ft. RAP due 6/22/06. 5/25/06: Pilot testing on 5/25/06 6/29/2006: Meeting with Hess, NYSDEC, Quantum, EnviroTrac and GSC on 6/28/2006. RAP in progress. Endpoint sampling will be submitted for spill bucket replacement excavation. 7/28/06: RAP submission deadline extended to 9/21/06. 8/9/06: Conference call with Hess, Quantum, and GSC/Kleinfelder. The ROI during SVE pilot testing was only 10 ft. A Hivac pilot test will be performed on 8/10/06 to try to increase the ROI. If it fails an extension will be required to perform additional testing prior to RAP submittal. 8/11/06: Received phone call from Gail Helfrick. A HVAC test was performed which did not result in a significant increase in the RIO. An RAP will be submitted on 9/21/06 as planned, but will require additional sampling to improve the ROI. 8/15/06: See spill 06-02980. The RAP should include remediation for the soil contamination from spill 06-02980. 9/12/06: Received RAP. SVE proposed. Pilot testing

HESS STATION 32530 (Continued) **S104276740**

was conducted on May 25, 2006 and August 10, 2006. Two existing wells (MW-3 and SVE-1), and six proposed wells (SVE-2 - SVE-7) wil be used as extraction points to be connected to a SVE remediation system. The ROI varies from 10 to 50 feet throughout the site. Soil samples will be collected during installation of the new SVE wells, as well as from a soil boring proposed adjacent to MW-6. During system startup operation and maintenance visits will be conducted daily for three days, followed by weekly for the first monthy, followed by monthly. Based on start-up testing, a determination will be made as to whether emission treatment is necessary. Contamination from spill 06-02980 addressed, spill 06-02980 closed and consolidated with 9605719. Numerous sensitive receptors: subway, utilities, basements, schools, Gowanus Canal. AS not proposed due to the proximity of the subway, which runs parrallel and adjacent to the site. RAP conditionally approved, with additional groundwater treatment required. 9/21/06: Received phone call from Gail Helfrick (Quantum) and Al Tonn (GSC-K) requesting that the RAP be approved without additional gw treatment. Confirmed that additional gw treatment is required for MW-2, SVE-1, and FW-8. 10/3/06: Received email from gail helfrick: This email is to confirm our conversation on Tuesday, September 26, 2006 regarding the Remedial Action Plan (RAP) for Hess Station # 32530 in Brooklyn, New York. In the RAP, Hess proposed the installation and operation of a Soil Vapor Extraction system at the site. The NYSDEC approved the proposal for SVE, and also requested groundwater remediation. Based on our conversations, it was agreed that Hess would install underground piping for groundwater treatment during the installation of the SVE system. It was further agreed that Hess would operate the SVE system for 1 full year, and during that year, Hess would 1) evaluate the performance of the SVE system on a monthly basis, 2) continue to monitor roundwater quality (March, July and November), and 3) submit progress reports to the NYSDEC (May, September and January). If after that 1 year period, the data demonstrates that groundwater remediation is necessary, alternative remedial technologies will evaluated and discussed with the NYSDEC. 10/4/06: Received update report dated 9/27/06. Groundwater samples collected on 7/27/06. BTEX 38,200 ppb (SVE1), mtbe 208 ppb (SVE1). SVE implementation required. 12/11/06: Sent email to Hess to followup on implementation schedule. 12/18/06: Received email from Hess: We still hope to be able to obtain the MTA permits needed to complete the subsurface intrusive work by January 10, 2007. Once these permits are obtained, we will provide the NYSDEC a schedule for system installation. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. SVE implementation in progress. 3/26/07: Reviewed update report. Wells sampled on 12/26/06. Max BTEX 30,720 ppb (SVE1). Max MTBE 1,000 ppb (MW2). SVE implementation in progress. 5/31/07: Reviewed site status report. Wells sampled on 3/16/07. Max BTEX 25,280 ppb (SVE1). Max MTBE 410 ppb (MW2). SVE installation in progress. 9/20/07: Reviewed site status report. Wells sampled in July 2007. LNAPL in MW 2 (0.03 ft).Max BTEX 30,370 ppb (SVE1). SVE startup planned for November 2007. Sent letter requiring RAP addendum for groundwater treatment (pipes for water removal are planned on being installed as a back-up plan). And increased sampling frequency to quarterly sampling. 5/14/08 - Carlson: Meeting on May 7th 2008 - Hess/Envirotrac will submit a RAP addendum. Reviewed First Quarterly 2008 Update Report. Wells sampled on 2/5/08. Max BTEX concentration 24,220 ppb (SVE1), max MTBE concentration 71 ppb (SVE1). MW-2 was dry. 8/7/08 - Carlson: Reviewed July 2008 Update Report. Wells

HESS STATION 32530 (Continued) **S104276740**

sampled on 5/22/08. Maximum BTEX concentration 43,693 ppb (SVE1). Maximum MTBE concentration 554 ppb (MW2). RAP Addendum will be submitted under a separate cover. Emailed Hess/Envirotrac requiring submission of RAP Addendum by 9/8/08. Received email from Ed Russo stating that 9/8/08 deadline can probably be met. 9/8/08 - Carlson: The Department approved an extension until 10/1/08 to submit an RAP Addendum. 10/22/08 - Carlson: Meeting with Hess/Envirotrac. RAP Addendum will be submitted by 12/15/08. 11/20/08 - Carlson: Reviewed October 2008 Update Report. Wells sampled on 8/14/08. Maximum BTEX concentration 41,837 ppb (SVE1). RAP Addendum not received. Sent failure to comply letter. Start legal proceedings if RAP Addendum not submitted by 12/5/08. 12/23/08 - Carlson: Received Remedial Action Plan Addendum. Two SVE system, two wells strippers, and monthly dual phase extraction events proposed. Revised RAP Addendum required with following modifications: 1) removal of two wells from SVE system, 2) relocation of two of the proposed monitoring wells, 3) startup report must be submitted, 4) inclusion of more detailed information about the well strippers. 2/19/09 - Carlson: Received email from Ed Russo in response to 12/23/08 letter. Monthly O&M visits requiring monthly WS water effluent testing, monthly SVE air discharge testing by PID, and quarterly SVE air discharge testing by laboratory. Revised letter addendum required. 3/11/09 - Carlson: Reviewed update report dated January 2009. Wells gauged and sampled on 11/5/08. LNAPL at depth of 0.02 ft in MW2. Maximum BTEX concentration 12,672 ppb (SVE1). 3/18/09 - Carlson: Meeting with Hess/Envirotrac. Revised addendum due in April 2009. 5/7/09 - Carlson: Reviewed April 2009 Update Report. Revised addendum letter overdue. Emailed John Schenkewitz about overdue letter/report. 5/11/09 - Carlson: Received revised RAP Addendum letter. Issued approval letter. 5/28/09 - Carlson: Well installation scheduled for 6/22/09. 8/7/09 - Carlson: Reviewed update report. Monthly EFR IRM ongoing. What is status of RAP implementation? 8/19/09 - Carlson: Meeting with Hess. RAP addendum will be submitted to include air sparge on the eastern portion on the site. 10/21/09 - Carlson: Reviewed RAP addendum. Issued approval letter. SVE/AS will be installed, except in sidewalk (because of subway). SVE in sidewalk with HVAC events to treat impacted groundwater. 11/17/09 - Carlson: Reviewed update report. Monthly HVAC events from sidewalk wells ongoing. SVE/AS system installation in progress. 1/27/2010 - Carlson: Meeting with Hess. 2/5/2010 - Carlson: Reviewed update report. EFR conducted in September and October. SVE/AS installation not begun yet. 5/20/2010 - Carlson: Meeting with Hess. They are working with MTA because the property is adjacent to the subway. 5/27/2010 - Carlson: Reviewed April 2010 Update Report. Six AS wells and one MW installed. HVAC was not conducted this quarter. 7/22/2010 - Carlson: Reviewed wastewater UST closure report. Tank abandoned in place with concrete slurry. Endpoint samples collected from the east wall (clean) and north wall (trace VOCs/sVOCs detected). West wall/south wall were not accessible for sample collection. 8/13/2010 - Carlson: Reviewed July 2010 Update Report. EFR events ongoing. System construction pending NYCTA permits. 5/9/11 - Obligado - This spill transferred to Obligado as per Brevdo. I reviewed the 4Q10 update report. Free product (0.03 ft) was found in MW2. MAx BTEX 17674 ug/L in SVE1. They are still waiting for MTA permits. 8/30/11 - Obligado - I reviewed the 2Q11 update report. They are still waiting on NYCTA permits. Max BTEX is 9800 ug/L. No product detected this quarter. 11/14/11 - Carlson: Reviewed October 2011 update report. System construction pending NYCTA permits. Monthly EFR

HESS STATION 32530 (Continued) **S104276740**

ongoing. 3/13/2012 - The site has SVE/AS system operation pending on the NYCTA's permission. Spoke to the consultant who works for the property owner next door in the Union Street. Groundwater contamination was identified during their Phase 2 investigation. Advised to call in for a spill number and prove to DEC it is from Hess site as they believe. 8/23/2012 - 1Q2012, 4/30/2012, by EnviroTrac. The groundwater was sampled on 2/13/2012. DTW 9.98 to 15.70 feet. Flows to north. No LNAPL. The remediation system construction is pending permit approval by NYCTA. CW-9, 560.1 BTEX, 182 MTBE. MW-7, 7.52J BTEX, 22.8 MTBE. MW-2, 5,529 BTEX, 162 MTBE. FW-7, 24.5 BTEX, MTBE ND. SVE-1, 6,369 BTEX, 6.7J MTBE. FW-8, 270.2 BTEX, 1.3J MTBE. FW-9, 570.6 BTEX, 2.5 MTBE. 10/12/2012 - 2Q2012, 7/31/2012, by EnviroTrac. The groundwater was sampled on May 14, 2012. DTW 10.87 to 16.05. Flows to north. CW-9, 43 BTEX, 106 MTBE. MW-7, 0.44J BTEX, 19.7 MTBE. MW-2, 1,626.9 BTEX, 100 MTBE. FW-7, 67.4 BTEX, 0.24J MTBE. HESS STATION 32530 (Continued) **S104276740**

STREs on SVE-6/AS-1. 8/27/2015, gauged 15 monitoring wells and sampled 14 monitoring wells. DTW 10.25 to 15.46 feet. Flows to north. MW-2, 9,914 BTEX, 78.3 MTBE. MW-7, 47.7 BTEX, 12.1 MTBE. FW-7, 596.1 BTEX. SVE-1, 4,550 BTEX. FW-8, 339.7 BTEX. FW-9, 691.9 BTEX. 1/28/2016 - 4Q2015, 1/28/2016. 9/16, 10/9, 11/4/2015, EFR on SVE-1 and STREs on SVE-6/AS-1. 11/10/2015, gauged 13 and sampled 12 monitoring wells. NO LNAPL. DTW 9.51 to 15.94 feet. Flows to north. CW-9, 53.9 BTEX, 55.7 MTBE. MW-2, 2,189.5 BTEX, 34.6 MTBE. FW-9, 426.1 BTEX. SVE-1, 1,161.4 BTEX. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J. Vought. 3/30/16 - Raphael Ketani. This spill case has been assigned to me effective today. According to ACRIS, the block and lot are 434 and 35. The latest deed is dated 4/24/14. The property owner is HESS Retail Stores, LLC, 1 HESS Plaza, Woodbridge, NJ, 07095. The PBS record is #2-297666. The owner is Speedway #7835. Seven USTs were closed and removed from 6/1/92 to 8/1/96. Thirty seven USTs (mostly gasoline 550 gallon tanks) were closed in place on 12/1/79. There are 5 active 4000 gallon USTs - 4 gasoline and 1 diesel. These tanks were installed on 8/1/96. The contacts are as follows: Speedway/Hess contact: Matthew Butler, (732) 738-2924, MButler1@Speedway.com Consultants: Edward Russo (EnviroTrac), (631) 924-3001, EDR@EnviroTrac.com Joseph Rennie (EnviroTrac), (631) 924-3001, JoeR@EnviroTrac.com 4/26/16 - Raphael Ketani. Today I received the EnviroTrac 4/25/16 Quarterly Update Report. On 12/9/15, 1/28/16 and on 2/1/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 2/11/16 MW-2 to 6, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were gauged. MW-2 to 6, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were sampled on 2/11/16. Product was not measured in any of the wells. Groundwater was measured at 6.79' and 15.66' below grade and was determined to be flowing northerly. Total BTEX was 2968.1 ppb (856 ppb) at MW-2, non-detect at MW-3 to MW-6 and MW-8 and FW-7, 138.7 ppb (15 ppb benzene) at FW-8, 201.7 ppb (8 ppb benzene) at FW-9, 3.6 ppb at CW-8, 22.1 ppb (13.2 ppb benzene) at CW-9 and 450.3 ppb (12 ppb benzene) at SVE-1. 7/26/16 - Raphael Ketani. Today I received the EnviroTrac July 2016 Quarterly Update Report dated 7/26/16 for the period March to May 2016. On 3/1/16, 4/20/16 and on 5/6/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 5/13/16 MW-1 to 8, FW-7, CW-8, CW-9, SVE-1 and SVE-7 were gauged. MW-1 to 8, FW-7, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 5/13/16. Product was not measured in any of the wells. Groundwater was measured at 8.76' and 16.03' below grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1, 929.9 ppb (254 ppb) at MW-2, non-detect at MW-3 to MW-8, 143.8 ppb (non-detect benzene) at FW-7, non-detect at CW-8 and at CW-9, 427 ppb (62.9 ppb benzene) at SVE-1 and non-detect at SVE-7. 10/24/16 - Raphael Ketani. I reviewed the EnviroTrac August 2016 Quarterly Update Report dated 10/24/16 for the period June to August 2016. On 6/8/16, 7/13/16 and on 8/9/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 8/10/16 MW-1 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged. MW-1 to 8, FW-7 to FW-9, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 8/10/16. Product was not measured in any of the wells. Groundwater was measured at 9.09' and 15.67' below grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1 and MW-4 to MW-8. MW-2 was 568.5 ppb (247 ppb benzene). FW-7 had 469.5 ppb (20.2 ppb benzene). FW-8 had 180.8 ppb (19.9 ppb benzene). FW-9 had 231.2 ppb (23 ppb benzene). CW-8 had 4.4 ppb. CW-9 had 2.3

HESS STATION 32530 (Continued) **S104276740**

ppb. SVE-1 had 373.8 ppb (15.9 ppb benzene). SVE-7 had 4.2 ppb BTEX. 12/19/16 - Raphael Ketani. Today I received an email as a c-c from Ryan Piper, Engineering Geologist I at DEC Region 2, concerning a new spill (#1608842)at the site. The spill concerned oil contaminated surface water flowing off of the site and onto the street in front due to a clogged drain at the northern end of the property. There was an odor complaint as a result. I sent an email to Mr. Fleming, the representative of Speedway, stating that they faced possible fines and legal action for violating the SPDES regulation, 6 NYCRR Part 750.1.3. I also stated that the subject northern drain must be cleaned out immediately and that Speedway must check the drains at its other stations and make sure they can receive precipitation. Mr. Ryan's original email to Mr. Fleming is as below: A neighbor complained about a diesel spill/ condition at the station that is affecting the surrounding neighborhood. I performed a site visit on Sunday Dec 18th in which I observed the condition. Apparently, there are a number of storm drains on the premises, particularly the drain on the north side of the property, that are clogged with sediment causing large puddles to run off into and down the street to a NYCDEP storm drain. Combined with poor housekeeping and minor spilling at the Diesel pump island on the North side of the property, this is causing a nuisance odor and adverse condition down the road. Therefore I am directing you to take the appropriate action to address this issue as follows. Control of Storm Water Emanating from 204-222 4th Ave, Brooklyn, NY: As per 6 NYCRR Part 750.1.3, The following discharges into the waters of the State are hereby prohibited, and no SPDES or other permit shall be issued authorizing any such discharge: (d) any discharge from a point source, which is in conflict with a plan or amendment thereto approved pursuant to section 208(b) of the Act and 40 CFR part 35 (see section 750-1.24 of this Part), or any other discharge not permitted by this Part, ECL Article 17, other rules and regulations adopted or applicable pursuant thereto or to the Act, or the provisions of an SPDES permit. During the site visit referenced above, evidence was observed of storm water flowing from 204-222 4th Ave, Brooklyn, NY to the street. As such the Department requires that the storm water from 204-222 4th Ave be directed to onsite drainage systems. Documentation of catch basin cleaning must be submitted to the Department no more than 1 month from the date of this email. Mr. Fleming responded back quickly by email stating that the problem will be immediately corrected. 1/19/17 - Raphael Ketani. Today I received an email from Mr. Russo [(631) 924-3001, EDR@EnviroTrac.com] regarding the plugged drains at the site (spill #1608842). The email had attachments consisting of a site plan showing the 6 catch basin locations, photos of the basins taken on 12/20/16 and photos of the basins taken on 1/17/17. Mr. Russo explained in his email that 3 of the catch basins were noted as not draining during EnviroTrac's 12/20/16 inspection. All of the catch basins were cleaned of debris and jetted for 70 feet by a Speedway contractor on 12/31/16. On 1/17/17, the site was inspected again. This time only CB-3 was not draining properly. Mr. Russo stated that this drain will be addressed again by Speedway's contractor. He stated that he will send the DEC an update regarding the re-establishment of drainage at CB-3. 2/2/17 - Raphael Ketani. I reviewed the EnviroTrac January 2017 Quarterly Update Report dated 1/31/17 for the period September to November 2016. On 9/2/16, 10/17/16 and on 11/8/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 11/23/16 MW-1 to

HESS STATION 32530 (Continued) **S104276740**

6, MW-8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged. MW-1 to 6, MW-8, FW-7, FW-9, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 11/23/16. Product was not measured in any of the wells. Groundwater was measured at 7.55' and 15.55' below grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1, 3 to 6, 8 and SVE-7. The samples for FW-9, CW-8, CW-9 and SVE-1 had 1 to 3 low hits. MW-2 was 1091.1 ppb (487 ppb benzene). FW-7 had 899.6 ppb (45.6 ppb benzene). 4/28/17 - Raphael Ketani. Today I received an email from Mr. Butler that he is leaving Speedway. He stated that John Engdahl [jjengdahl@speedway.com (732) 738-2923] will take over his duties. 5/2/17 - Raphael Ketani. I reviewed the EnviroTrac April 2017 Quarterly Update Report dated 4/28/17 for the period December to February 2017. On 12/7/16, 1/11/17 and on 2/2/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 2/7/17, MW-1 to 6, MW-8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product was not measured in any of the wells. Groundwater was measured at 7.57' and 15.48' below grade and was determined to be flowing northerly. BTEX was non-detect at MW-3 to 6, 8 and CW-9. The samples for MW-1, FW-7 to FW-9, CW-8 and SVE-7 had 1 to 4 low hits. MW-2 was 3876.1 ppb (991 ppb benzene). SVE-1 was 1329.4 ppb (38.3 ppb benzene). The PID effluent concentration a SVE-6/AS-1 was 665.3 ppm, 405.6 ppm and 290.8 ppm on 12/7/16, 1/11/17 and 2/2/17, respectively. I approved the report with a comment to Mr. Rennie asking him to explain the extremely high benzene concentration in the groundwater at MW-2. 8/1/17 - Raphael Ketani. I reviewed the EnviroTrac July 2017 Quarterly Update Report dated 7/28/17 for the period March to May 2017. On 3/7/17, 4/7/17 and on 5/3/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 5/30/17, MW-1 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.00' to 18.42' below grade and was determined to be flowing northerly. BTEX was non-detect or low at MW-1, 3 to 6, 8, FW-8, CW-8, CW-9 and SVE-7. MW-2 was 2699.1 ppb (563 ppb benzene). MW-7 was 110.6 ppb (90 ppb benzene). FW-7 was 252.5 ppb (non-detect for benzene). FW-9 was 81.1 ppb (30.8 ppb benzene). SVE-1 was 5475.7 ppb (48.7 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 324.1 ppm and 175.5 ppm on 3/7/17 and 4/7/17, respectively. 10/31/17 - Raphael Ketani. I reviewed the EnviroTrac October 2017 Quarterly Update Report dated 10/30/17 for the period June to August 2017. On 6/14/17, 7/12/17 and on 8/15/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 8/23/17, MW-1 to 3, 5 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.44' to 15.08' below grade and was determined to be flowing northerly. BTEX was non-detect or low at MW-1, 3 to 6, 8, FW-8, CW-8, CW-9 and SVE-7. MW-2 was 2269.9 ppb (481 ppb benzene). MW-7 was 129.5 ppb (115 ppb benzene). FW-7 was 122 ppb (non-detect for benzene). FW-9 was 126.3 ppb (48 ppb benzene). SVE-1 was 1558.1 ppb (83.1 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 95.3 ppm, 165.4 ppm and 131.2 ppm on 6/14/17, 7/12/17 and 8/15/17, respectively. EnviroTrac requested permission to abandon upgradient and side-gradient wells MW-1, 4, 5, 6, and SVE-7 based upon historical and current analytical data results. I reviewed the data for these wells and determined that their abandonment would not impact the monitoring of the site. 1/31/18 - Raphael Ketani. I reviewed the EnviroTrac January 2018

HESS STATION 32530 (Continued) **S104276740**

Quarterly Update Report dated 1/31/18 for the period September to November 2017. On 9/14/17, 10/30/17 and on 11/6/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 11/21/17, MW-2, 3, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.25' to 15.64' below grade and was determined to be flowing northerly. Wells MW-1, 4 to 6 and SVE-7 were abandoned on 11/6/17. BTEX was non-detect or low at MW-3, 8, FW-7 to 9, CW-8 and CW-9. MW-2 was 3550.6 ppb (791 ppb benzene). MW-7 was not sampled. SVE-1 was 1126.5 ppb (69.5 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 408.1 ppm, 77.7 ppm and 360.9 ppm on 9/14/17, 10/30/17 and 11/6/17, respectively. 05/01/2018: This spill case was transferred to A. Doronova - AD. AD Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com DL the report to DDocs. Will review. AD 05/29/2018: Reviewed the report. It states that the spill case was reported when petroleum-impacted soil were encountered during underground storage tank (UST) upgrade activities in August 1996. This report covers monitoring period from December 2017 to February 2018. On December 11, 2017, January 16, and February 1, 2018 - EnviroTrac conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. On February 6, 2018 - the consultant gauged ten (10) and sampled eight (8) monitoring wells. On April 12, 2018 EnviroTrac sampled three (3) monitoring wells. Wells Gauged: MW-2, 3, 7, 8; FW-7, 8, 9; CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.68 feet- 18.58 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 355 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 30.6 ug/L (MW-2) BTEX: highest concentrations are in well MW-2 (900ppb) EnviroTrac will continue quarterly groundwater sampling, with the next sampling event scheduled for May 2018. An Update Report summarizing these activities will be submitted to NYSDEC in July 2018. Monthly EFR and STRE events to continue. AD 07/18/2018: Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 07/26/2018: Reviewed the report. This report covers monitoring period from March 2018 May 2018. On March 5, April 11, and May 3, 2018 - the consultant conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. - April 12, 2018 four (4) wells were gauged and three (3) monitoring wells were sampled. - May 8, 2018 nine (9) wells were gauged and eight (8) monitoring wells were sampled. Wells Gauged: MW-2, 3, 8; FW-7, 8, 9; CW-8, 9, and SVE-1. Wells Containing LPH (feet): None Groundwater Depth: 8.32 feet - 15.32 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 620 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 56.7 ug/L (MW-2) BTEX concentrations ranged in the site wells from ND in MW-3, MW-8, CW-9 to 2,600ppb in the most contaminated site well MW-2. Current Plans/Proposals: Continue

HESS STATION 32530 (Continued) **S104276740**

quarterly groundwater sampling, with the next sampling event scheduled for August 2018. An Update Report summarizing these activities will be submitted to NYSDEC in October 2018. Continue monthly EFR and STRE events. AD 10/29/2018: Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joe Rennie Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 11/23/2018: Reviewed the report for the monitoring period: June 2018 August 2018. Work Performed: - June 13, July 24, & August 7, 2018 - Conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. - August 30, 2018 Gauged and sampled ten (10) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1. Wells Containing LPH (feet): None. Groundwater Depth: 8.19 feet - 15.02 feet. Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1. Maximum Benzene Concentration: 802 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 44.1 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 4,440.2 ug/L Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for November 2018. An Update Report summarizing these activities will be submitted to NYSDEC in January 2019. Continue monthly EFR and STRE events. AD 01/29/2019: Received the following e-mail from Ed Russo: Ainura attached is the most recent update report for your review/files. Let us know if you have any questions or comments. Thanks. Edward Russo - Senior Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - 516.523.6714 (Cell) - edr@envirotrac.com Will review. AD 02/15/2019: Reviewed the report. It states that for the monitoring period: September 2018 November 2018, the following work was performed at the site: - September 4 & November 6, 2018 - Conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. - October 11, 2018 Conducted EFR on monitoring well SVE-1. - November 12, 2018 Gauged and sampled ten (10) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.11 feet - 15.23 feet. Groundwater Flow: Northerly. Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1. Maximum Benzene Concentration: 640 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 33.8 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 2,656.8 ug/L Recommendations: the consultant will continue quarterly groundwater sampling, with the next sampling event scheduled for February 2019. An Update Report summarizing these activities will be submitted to NYSDEC in April 2019. EnviroTrac will continue monthly EFR and STRE events. AD 04/18/2019: Received the following e-mail from Mr. Rennie: Please find attached the most recent Update Report for the above referenced location. Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 05/01/2019: Reviewed the report. It states that for the monitoring period: December 2018 February 2019 the following work was performed at the site: - December 4, 2018 and January 16 & February 7, 2019 - Conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short-term remediation events (STREs) on SVE-6/AS-1. - February 26, 2019 Gauged and sampled ten (10) monitoring wells.

HESS STATION 32530 (Continued) **S104276740**

Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1. Wells Containing LPH (feet): None Groundwater Depth: 6.71 feet 15.62 feet. Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 694 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 37.6 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 4,116.0 ug/L Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for May 2019. An Update Report summarizing these activities will be submitted to NYSDEC in July 2019. Continue monthly EFR and STRE events. AD 05/07/2019: I had an internal meeting with DEC BCP regarding this site, and was informed that they received an application for this spill case to enter into BCP. If their application will be approved, this spill case will be transferred to BCP section. AD 07/31/2019: Received the following e-mail from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager phone: 631.924.3001 - email: joer@envirotrac.com EnviroTrac Ltd., 5 Old Dock Road Yaphank, NY 11980 Will review, AD 08/02/2019: Reviewed the report. It states that for the monitoring period: March May 2019, the following work was performed: at the site: - March 29, April 5, & May 2, 2019 - Conducted EFR events on monitoring well SVE-1 and STREs on SVE-6/AS-1. - May 15, 2019 Gauged and sampled ten (10) monitoring wells. GW monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.67 feet 15.24 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 719 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 37.4 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 3,439.5 ug/L Recommendations: This site will potentially be approved into the New York State Brownfields Program. Until the site is approved into this program, Speedway will continue quarterly groundwater sampling, with the next sampling event scheduled for August 2019. An Update Report summarizing these activities will be submitted to NYSDEC in October 2019. Continue monthly EFR and STRE events. AD 08/23/2019: Received the following e-mail from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com Will review. AD 09/19/2019: Reviewed the report. It states that the site is now active gas station. The spill was reported when petroleum-impacted soils were encountered during UST upgrade activities in August 1996. Site Remediation Activities: - June and September 2004 BioSolve injection events were completed in select on-site wells. - October 2008 Monthly Enhanced Fluid Recovery (EFR) events commenced on select wells. - December 2014 Monthly Soil Vapor Extraction (SVE)/Air Sparge (AS) Short-Term Remediation Events (STREs) events commenced on select wells. For the reported monitoring Ppriod: June - August 2019, the following work was performed at the site: - June 6, July 10, & August 1, 2019 - Conducted EFR events on monitoring well SVE-1 and STREs on SVE-6/AS-1. - August 12, 2019 Gauged ten (10) and sampled nine (9) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.48 feet 15.33 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 489 ug/L (MW-2) Maximum MTBE Concentration: 28.8 ug/L (MW-2) Total VOCs Range:

HESS STATION 32530 (Continued) **S104276740**

Non-detect (ND) 3,901.3 ug/L (MW-2) GW data: Well 08/2018 08/2019 (TVOCs in ppb) MW-2 4440 3900 MW-3 26 ND MW-7 37 19 MW-8 ND ND FW-7 468 52 FW-8 75 NS FW-9 139 1020 CW-8 69 148 CW-9 116 ND SVE-1 4035 863 Recommendations: This site will potentially be approved into the New York State Brownfields Program for a redevelopment project. Speedway is scheduled to complete divestment/UST system removal activities in September 2019. UST system closure reporting and future monitoring/reporting related to this site, if needed, will be conducted by the new property owner (assuming the site is approved into the Brownfields Program). AD 04/21/2020: Received the following email from Mr. Morley of PWG: ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails. Ainura, Please find attached the 1st Quarter 2020 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan -- Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 05/12/2020: Reviewed the report. It states that The property ownership changed in November 2019 and PWGC was retained to continue groundwater monitoring at the site. A Supplemental Remedial Investigation (SRI) was performed as part of the sites enrolment into the New York State Department of Environmental Conservation s (NYSDEC s) Brownfield Cleanup Program (BCP) which included groundwater sampling. The groundwater sampling performed during the SRI substituted for the fourth quarter 2019 monitoring event. The subject property is a former retail gasoline fueling station, fueling operations ceased in October 2019. The lot measures approximately 19,000 square-feet and is bounded by Sackett Street to the north, commercial properties to the west, 4th avenue to the east, and Union Street to the south. The property is improved with a 360-square foot at-grade storage building, and a cashier s kiosk. In October 2019, four (4) 4,000-gallon gasoline USTs, one (1) 4,000-gallon diesel UST, and one (1) 550-gallon wastewater UST were closed and removed from the property. An abandoned 2,000-gallon fuel oil UST near the storage building at the northwest corner of the Site was partially exposed, however the UST was not removed due to nearby utilities and potential for undermining the sidewalk and onsite storage building. Upon completing UST removal, associated product and vent lines were exposed and removed. During the October 2019 UST removal activities, monitoring well MW-3, which was located near the storage building, was destroyed. During the November 2019 SRI, GW018 was installed on the northwest corner of the site. Based on information documented in previous monitoring events, regional groundwater flow is towards the north. GW sampling: PWGC mobilized to the site on Monday, March 9, 2020 to perform quarterly groundwater monitoring activities. Groundwater analytical results were compared to the NYSDEC Ambient Groundwater Quality Standards (AWQS). Samples were collected from 7 wells: CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. Monitoring wells FW-8 and FW-9 were dry and were not sampled. Analytical results for samples collected at CW-8, MW-8, GW018, FW-7, MW-2, MW-7 and CW-9 were compared to AWQS. MBTE was detected in MW-2, GW018, FW-7, MW-7, and CW-9 and BTEX was detected in MW-2, CW-8, FW-7, and MW-7. The highest concentration of MBTE was detected in CW-9 (11.0 ug/L). The lowest detectable concentration of MBTE was in GW018 (1.9 ug/L). The highest concentration of BTEX was detected in MW-2 (117.47 ug/L). The lowest detectable concentration of BTEX was in MW-7 (0.16 ug/L). Additionally, the highest concentrations of

HESS STATION 32530 (Continued) **S104276740**

isopropylbenzene were detected at MW-2, FW-7, and CW-8. Based on these results, the highest degree of impact appears to be located adjacent to the former UST locations located in the central and western portions of the property. Generally, these concentrations were similar to previous sampling events. GW data: Well 08/2018 08/2019 03/2020 (TVOCs in ppb) MW-2 4440 3900 248 MW-3 26 ND destr MW-7 37 19 ND MW-8 ND ND ND FW-7 468 52 49.5 FW-8 75 NS NS dry FW-9 139 1020 NS dry CW-8 69 148 67 CW-9 116 ND 11 SVE-1 4035 863 NS GW018 ND Removal of the sourse of contamination significantly decreased TVOCs in the most contaminated site well MW-2 from 3900 ppb in August 2019 to 248 ppb in march of 2020. The consultanr states that based on analytical data, it appears that the highest levels of residual impact are located adjacent to the former UST areas located in the central and western portions of the site. Analytical results were generally consistent with previous monitoring events performed by Envirotrac. At this time, PWGC offers the following recommendations for the site: - Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for May 2020. AD 08/21/2020: Received the following email from Mr. Morley: Ainura, Please find attached the 2nd Quarter 2020 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 09/23/2020: Reviewed the 2nd quarter 2020 report. It states that PWGC mobilized to the site on Thursday, June 18, 2020 to perform quarterly groundwater monitoring activities. Groundwater monitoring consisted of measuring depth to water and total well depth measurements for the nine monitoring wells at the site. Groundwater analytical results were compared to the NYSDEC Ambient Groundwater Quality Standards (AWQS). Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring wells FW-7, FW-8 and FW-9 were observed to be dry at the time of field activities and could not be sampled. The samples were analyzed for the presence of: Volatile Organic Compounds (VOCs) by USEPA method 8260 NYSDEC CP-51 List. Monitoring Well Sampling Results: Analytical results for samples collected at CW-8, MW-8, GW018, MW-2, MW-7, and CW-9 were compared to AWQS. Samples collected from MW-8, GW018, MW07, and CW-9 yielded concentrations of VOCs less than AWQS. MBTE was detected in CW-8, GW018, MW-2 and MW-7, with the concentrations of each under the AWQS of 10 ug/L. The highest concentration of MBTE was detected in MW-7 (9.6 ug/L). The lowest detectable concentration of MBTE was in CW-8 (0.75 ug/L). Detectable concentrations of MBTE were less than AWQS at each sampling location. Benzene was detected at concentrations greater than AWQS at monitoring wells MW-2 and CW-8 with the highest concentration, 35 ug/L, detected at MW-2. Ethylbenzene was detected at a concentration grater than AWQS at MW-2 with a concentration of 11 ug/L. The highest BTEX (benzene, toluene, ethylbenzene, and xylene) was detected in MW-2 (46 ug/L). Additionally, isopropylbenzene and n-propylbenzene was detected above AWQS in samples from MW-2 and CW-8 (11 ug/L and 13 ug/L : 20 ug/L and 15 ug/L, respectively). 1,2,4-trimethylbenzene was detected at a concentration of 77 ug/l at MW-2. 1,2,4-trimethylbenzene, isopropylbenzene, and n-propylbenzene are common compounds associated with petroleum impact. Based on these results, the highest degree of impact appears to be located adjacent to the former UST locations located in the central and western portions of the property.

HESS STATION 32530 (Continued) **S104276740**

Generally, these concentrations were similar to previous sampling events. At this time, PWGC offers the following recommendations for the site: Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for September 2020. AD 11/10/2020: Received the following email from Mr. Morley: Ainura, Please find attached the 3rd Quarter 2020 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 12/11/2020: Reviewed the report. It states that The property ownership changed in November 2019 and PWGC was retained to continue groundwater monitoring at the site. The subject property is a former retail gasoline fueling station, fueling operations ceased in October 2019. The lot measures approximately 19,000 square-feet and is bounded by Sackett Street to the north, commercial properties to the west, 4th avenue to the east, and Union Street to the south. The property is improved with a 360-square foot at-grade storage building, and a cashier s kiosk. PWGC mobilized to the site on Wednesday, September 23, 2020 to perform quarterly groundwater monitoring activities. Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring wells FW-7, FW-8 and FW-9 were observed to be dry at the time of field activities and could not be sampled. Total BTEX was detected in MW-2 at a concentration of 1,015 ug/L. Minimal concentrations or non-detectable concentrations of total were observed in the remaining monitoring wells. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. At this time, PWGC offers the following recommendations for the site: - Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for December 2020. 04/22/2021: Received the following email from Mr. Morley: Ainura, Please find attached the first quarter 2021 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 05/26/2021: Reviewed the report. It states that PWGC mobilized to the site on Wednesday, March 17, 2021 to perform quarterly groundwater monitoring activities. Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring well FW-7 was observed to be dry at the time of field activities and could not be sampled. The samples were analyzed for the presence of: Volatile Organic Compounds (VOCs) by USEPA method 8260 NYSDEC CP-51 List Monitoring Well Sampling Results: Analytical results for samples collected at CW-8, MW-8, GW018, MW-2, MW-7, and CW-9 were compared to AWQS. Samples collected from wells MW-8, GW018, and CW-9 indicated VOCs less than AWQS. MBTE was detected in MW-2 at 11 ug/L, which is slightly more than the AWQS of 10 ug/L. Sample results from the five other wells yielded concentrations of MBTE that were below AWQS or below the laboratory detection limit. Benzene was detected in the sample collected from MW-7 at 6.9 ug/L. Sample results from the five other wells for benzene were below AWQS or below the laboratory detection limit. Concentrations of total BTEX comprised of solely the detections of Benzene, as the other three compounds were not detected at any of the six monitoring wells. Additionally, isopropylbenzene was detected at a concentration

HESS STATION 32530 (Continued) **S104276740**

greater than AWQS in the sample collected from CW-8 with a result of 5.3 ug/L. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. Analytical results were generally consistent with previous monitoring events in terms of which locations exhibited the highest degree of impact, however the concentrations of VOCs were significantly lower than concentrations reported during previous sampling events. Recommendations: At this time, PWGC offers the following recommendations for the site: - Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for June 2021. AD 11/05/2021: Received the following email from Mr. Morley: Ainura, Please find attached the third quarter 2021 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 12/02/2021: Reviewed the 3rd quarter 2021 report. It states that PWGC mobilized to the site on Monday September 13, 2021 to perform quarterly groundwater monitoring activities. Groundwater monitoring consisted of measuring depth to water and total well depth measurements for the nine monitoring wells at the site. Water levels were collected using a Solinst Oil / Water Interface Probe. Groundwater analytical results were compared to the NYSDEC Ambient Groundwater Quality Standards (AWQS). Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring well FW-7 was observed to be dry at the time of field activities and could not be sampled. The samples were analyzed for the presence of: Volatile Organic Compounds (VOCs) by USEPA method 8260 NYSDEC CP-51 List Monitoring Well Sampling Results: Analytical results for samples collected at CW-8, MW-8, GW018, MW-2, MW-7, and CW-9 were compared to NYSDEC s AWQS. Samples collected from wells MW-2, MW-8, and GW018 indicated VOCs less than AWQS. MBTE was detected below the AWQS of 10 ug/L in all six samples. Benzene was detected in the samples collected from MW-7, CW-8, and CW-9 at concentrations of 22 ug/L, 12 ug/L, and 5.7 ug/L, respectively, which are greater than the AWQS of 1 ug/L. Sample results from the three other wells yielded concentrations of benzene below the laboratory detection limit. Concentrations of BTEX comprised of solely the detections of Benzene, as the other three compounds were not detected at any of the six wells. Isopropylbenzene was detected in the samples collected from MW-7, CW-8, and CW-9 at of 95 ug/L, 110 ug/L and 6.2/L, respectively, which are greater than the AWQS of 5 ug/L. N-proplybenzene was detected in MW-7 and CW-8 at 150 ug/L and 140 ug/L, respectively, which are greater than the AWQS of 10 ug/L. Sec-butylbenzene was detected in MW-7 and CW-8 at 23 ug/L and 9.5 ug/L, respectively, which are greater than the AWQS of 5 ug/L. Napthalene was detected in the sample collected from CW-8 at a concentration of 12 ug/L which is greater than the AWQS of 5 ug/L. N-butylbenzene was detected in the sample collected from CW-8 at 6.2 ug/L which is greater than the AWQS of 5 ug/L. VOs levels have increased when compared to last quarter s sampling event but overall show decreasing concentrations when compared to previous sampling events. Hydrographs have been developed for each of the seven monitoring wells illustrating the trends in

HESS STATION 32530 (Continued) **S104276740**

BTEX and MBTE concentrations over time compared to groundwater elevations dating back to May 2016. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. Analytical results were generally consistent with previous monitoring events in terms of which locations exhibited the highest degree of impact, however the concentrations of VOCs were generally lower than concentrations reported during previous sampling events. At this time, PWGC offers the following recommendations for the site: Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for December 2021. Given that BTEX ranges in the site well s from ND to 27 ppb in well MW-7, his site is a good candidate for a case closure in the future. AD 12/8/21 - Spill transferred to Steven Wu for tracking under BCP site no. C224295. JHO

Record Added Date:	04/29/2019
Record Updated Date:	06/07/2021
Update By:	JHOCONNE
Site Description:	Location The site is located in an urban area in the Gowanus neighborhood of Brooklyn. The Site is bounded by Sackett Street to the north, Union Street to the south, 4th Avenue to the east, and commercial properties to the west. Site Features The site was a gasoline filling station and was improved with a 360 square foot at grade storage building, a cashier s kiosk, and a canopy covering the pump islands. The site is no longer being used as a filling station and the kiosk has been removed. Current Zoning and Land Use The site is zoned M1-2 for light manufacturing and is surrounded by similarly zoned properties and residential zoned properties to the east. Past Use of the Site Based on information gathered as part of the February 2019 Phase I ESA, the site was first developed in approximately 1906 and used for residential/commercial purposes from approximately 1906 to 1961. In the early 1960s, the residential/commercial buildings were demolished, and a gasoline station was constructed in 1965. The site has been used as a gasoline station since then. Site Geology and Hydrogeology The stratigraphy of the site, from the surface down, consists of primarily historic urban fill, characterized by loosely compacted fine to coarse sand with fragments of brick and concrete, to depths ranging from 12 to 21 feet below grade across the site. Historic urban fill material is underlain by silty light brown sand, underlain by a layer of grey sandy clay material with organic matter (wood, roots) present in the matrix. Groundwater at the site is approximately 14 feet below grade and generally flows towards the north/northwest.
Env Problem:	Nature and extent of contamination Based upon investigations conducted to date, the primary contaminants of concern for the site include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Soil - VOCs including 1,2,4-Trimethylbenzene was found in soil at concentrations of 2,100 parts per million (ppm) compared to restricted residential soil cleanup objective (RRSCO) of 52 ppm and the protection of groundwater SCO (PGSCO) of 3.9 ppm. Xylenes was found at concentrations of 3,600 ppm (RRSCO is 100 ppm, PGSCO is 1.6 ppm). SVOCs including benzo(a)anthracene was found at concentrations of 120 ppm (RRSCO is 1 ppm). Benzo(b)fluoranthene was found at concentrations of 110 ppm (RRSCO is 1 ppm). Metals including lead was found at concentrations of 3,170 ppm (RRSCO is 400 ppm), arsenic was found at 542 ppm (RRSCO is 16 ppm). Groundwater - VOCs including benzene was found in groundwater at concentrations of 9.6 parts per billion (ppb) compared

204 4TH AVENUE (Continued) **S125298840**

	to Ambient Water Quality Standards (AWQS) of 1 ppb. 1,2,4,5-Tetramethylbenzene was found at concentrations of 61 ppb (AWQS is 5 ppb). SVOCs including acenaphthene was found at concentrations of 64 ppb (AWQS is 20 ppb). Metals including arsenic was found at concentrations of 33.61 ppb (AWQS is 25 ppb). Soil Vapor - VOCs including 2,2,4-Trimethylpentane was found throughout the site but at highest concentration at the north-east portion of the site at concentrations of 509,000 micrograms per cubic meter (ug/m3).
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	Excavating and found a waste oil tank with holes in it estimating a 1000 gallon tank
Remarks:	DEC spoke with Brookside Env. Estimated 1000 gal waste oil UST uncovered during excavation. tank had holes in bottom. Brookside arrived on site and pumped out tank . Tank was partially removed from ground and spilled oil floating was observed on groundwater.

204 4TH AVENUE (Continued) **S125298840**

Additional excavation will be needed. PW Grosser is env consultant.
PBS 2-297666 Open Spill - 9605719 BCP - C224295 Summary email with contacts will be sent by Brookside. ----------
Spill area over-excavated to 16 feet under BCP program. Sidewall and bottom samples had no VOC exceedances above protection of groundwater SCOs, some SVOCs were detected, very likely due to historic fill.
Will be closing out spill - SW 3/7/23

DEC Region:	2
DER Facility ID:	28241
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 01/26/04 Transferred from Rommel to Austin 02/17/04: Reassigned from AUSTIN to KRIMGOLD. 11/05/2005 Left messages for Dean Peterson at new location at Community Living (718-855-4035). Did not receive a callback. Bishop 09/13/06 This case was transferred from Albany to Region 2. Zhune called Mr. Petersen several times. He never call back. A TTF letter was sent to: Mr. Dean Petersen 40 Rector Street New York, NY 10006 08/14/08-Zhune visited the site spoke to Tiffany Adams Office/Building Manager (718) 855-4035 ext. 1303. Tiffany called Crris Heighter the Director of the Institue of Community Living celll 347- 219-8991, office 718- 272-6046. He said by the time that the tank failed the test in 2001 he was not the Director of the Community Living. The 3000 gallons # 2 fuel tank was recently tested by ACR Mechanical and passed the test. He will be back from vacation on september and will search for papers work. A TTF lettter was sent to: The Institute of Community Living 2384 Atlantic Ave. Brooklyn NY 11233 Att: Chris Heighter 09/19/08 Chris Heighter sent the result for the last Tightness test. The 3000 gallons #2 fuel tank was tested on 05/07/08. The result indicates that the tank passed the test Therefore DEC is asking for information that happened in 2001. 09/30/08- Zhune called Chris and gave him the phone # of Crown Leak Detection which was the company that tested the tank on 07/30/2001. 11/26/08-Chris sent the 02/21/03 tank test results thst was done by Protest. 11/26/08-Zhune spoke to Bob from Protest. As per Bob the tank system was tested in December, 2002 and failed the test with a Ullage (dry) leak. They replaced the remote fill and the vent line. On 02/21/03 the system was restested and passed the test. He also said that he did not see any note about contamination at this site. Worker who did this job are no longer with Protest Spill closed.
Remarks:	caller found the tank that may be connected to an abandoned tank and he believes that is why the tank test failed

DEC Memo:	Soil testing showing impacted soil. Further investigation and cleanup is pending. Caller requesting callback.
Remarks:	05/19/21-Hiralkumar Patel. 4:31 PM:- spoke with Joel. he mentioned that the site enrolled in NYC VCP and OER asked to report spill. asked Joel to submit available reports for review. Joel Kane Fleming-Lee Shue, Inc. Ph. (212) 675-3225 (406) 321-0586 Fax (212)

PARKING GARAGE (Continued) **S127584843**

675-3224 email: joel@flemingleeshue.com 05/20/21-Hiralkumar Patel. received email from OER confirming access to EPIC folder for this project. briefly reviewed remedial investigation report dated May 2021, which shows presence of some VOC/SVOC contamination at the site. spoke with Joel regarding need to report spill. he mentioned that OER asked to report spill based on high PID readings (up to 5,000 ppm) and strong petroleum odors in borings B3 and B7 which were installed in the suspected UST area. Joel stated that these tanks were in use in 1930s. as part of site development, soil will be removed to a depth of 1 ft above groundwater depth, and any tanks found will be removed. a RAWP is being drafted at this point. asked Joel to include endpoint sampling from contaminated areas as per DER-10 and vapor mitigation plan in the RAWP. 1:27 PM:- received email from OER Shaminder. he mentioned that this 19,580 sf site is currently being used for mixed-use commercial residential properties and a large parking garage. the proposed future use of the Site will consist of a new 52-story mixed-use commercial/residential building with two subgrade parking floors (cellar and sub-cellar). groundwater was found at 27 ft bg. three lots (# 25, 26 and 29) on block # 2095 are included in this project. alternate address: 170-194 Ashland Place, 96-104 DeKalb Ave no PBS or other spills found. site has e designation for hazmat. Ashland Dekalb LLC. **property owner** c/o Rockrose Development LLC. 15 East 26th Street, 7th Floor New York, NY 10010 05/21/21-Hiralkumar Patel. 10:37 AM:- sent email to OER Shminder. informed him that the case will be managed by DEC Sekhon. asked Shaminder to provide EPIC folder access to Sekhon and send future correspondences to Sekhon. email copied to OER Shirley Chen, DOH Nathan, DEC Sekhon and Joel. case assigned to DEC Sekhon. 1/14/22 - Sekhon 9/28/21 - Sekhon forwarded draft RAWP send by OER reviewed and discussed with OER & send to RP by Shirley Chen as email - Good morning Joel, Thank you for addressing OER's comments. Please see the attached document with minor edits to the text. As per DEC's advisement, Volatile Organic Compounds must meet Protection of Groundwater Standards. Language has been added to Section 4.2 Soil Cleanup Objectives and Soil/Fill Management to reflect this. Additionally, the elevator pit detail drawing in the vapor barrier diagram (Figure 8) should be revised to show the vapor barrier installation along the bottom and up around the elevator pit. Currently, only the bottom of the elevator pit is shown. The foundation sidewall detail drawing (top left circle) is missing the 3 layer of aggregate and should be addressed to match the composite cover description. Please finalize the RAWP and submit a full PDF version with text, figures, and appendices. Also attached is a draft Stipulation letter. The vapor barrier figure should be revised and attached in the RAWP PDF. If not addressed in the RAWP, please attach the revised figure in the Stipulation letter. Lastly, OER will forward the draft RAWP to DEC Spills to coordinate any additional requirements for addressing the open spill. Any items requested by DEC may be included in the Stip Letter. Please let me know if you have any questions. Thank you, Shirley Chen Project Manager - Office of Environmental Remediation 100 Gold Street, 2nd Fl, New York, NY 10038 shchen@dep.nyc.gov 11/3/21 - Sekhon Remedial Investigative report & final Remedial Action Work Plan submitted. DECDOCS The proposed remedial action consist of: Performance of a Community Air Monitoring Program for particulates and volatile organic carbon compounds. Excavation and removal of soil/fill exceeding Track 2 Restricted Residential SCOs. The majority of the subcellar footprint

PARKING GARAGE (Continued) **S127584843**

will be excavated approximately 16 feet below the existing basement grade (i.e. 22-24 NAVD88) to a depth of approximately 5.6 (NAVD88) for development purposes. Within this area, the proposed elevator pit footprint will be excavated approximately an additional 9 feet to a final depth of approximately -3 4 (NAVD88). Additionally, the northwestern section of the Site in Lots 25 and 26 will be excavated to accommodate the proposed slab-on-grade parking ramp. Excavation depth will vary with maximum excavation expected to be approximately 12.7 below existing street grade (i.e. 29 NAVD88) to a maximum depth of 16.3 (NAVD88). Approximately 15,500 tons of soil/fill will be removed from the Site and properly disposed at an appropriately licensed or permitted facility. Screening of excavated soil/fill during intrusive work for indications of contamination by visual means, odor, and monitoring with a PID. Management of excavated materials including temporarily stockpiling and segregating in accordance with defined material types and to prevent co-mingling of contaminated material and non-contaminated materials. Removal of all known underground storage tanks and other USTs that are encountered during soil/fill removal actions, and bulk removal of petroleum contaminated soil from below each tank and from around each tank in accordance with applicable laws & regulations. Registration of tanks and reporting of any petroleum spills associated with USTs and appropriate closure of these petroleum spills in compliance with applicable local, State and Federal laws and regulations. Spill closure and any associated groundwater remediation will be managed under NYSDEC authority for Spill No. 2101542. RP will submit Spill closure report for closure. 8/26/22 - Sekhon Joel kane (Fleming Lee Shue) called and told that some light intrusive work for this project has begun and they have begun some UST removal. Contractor will remove the soil beneath UST to the areas to the planned development cut depth (approximately 14-20 feet below the tanks) and collect confirmation samples at that depth. 4/14/23 - Sekhon Updates from Joel Kane - Remedial Action As a reminder, the remedial investigation identified petroleum impacts in the southeastern section of the Site derived from suspected USTs in the parking garage basement. The proposed redevelopment of the Site included excavation of the bulk of the Site (including the impacted area) down approximately 20 below existing street level to make way for a sub-cellar parking garage. As such the proposed redevelopment would largely over-excavate the UST areas. Original Site elevation ranged from approximately 29 34 NAVD88. Water table is expected at approximately 5 to 8 NAVD88. Following demolition of the existing on-Site buildings support of excavation (SOE) piles were installed around the Site s perimeter. All drill cutting were screened with a photoionization detector (PID) and for visual and olfactory evidence of petroleum impacts. Evidence of petroleum impacts were isolated to the areas in the vicinity of suspected USTs in the southeastern area of the Site. Following SOE install, incremental Site excavation occurred. A total of seven (7) USTs found on Site were removed, cleaned and properly disposed of. Tanks are in the process of being registered and subsequently closed with NYSDEC. Following additional SOE installation, the bulk of the Site was excavated approximately 20 feet below street level to its current elevation of 10 NAVD88. All excavated soil was screened with a PID and two CAMP stations monitored VOC and particulate concentrations during all intrusive work. Again, the only remaining petroleum impacts appear isolated to the southeastern portion of the Site. All soil was managed according to the approved Soil Materials

PARKING GARAGE (Continued) **S127584843**

Management Plan (SMMP). Next Steps The remaining impacted area in the southeastern section of the Site will be hotspot excavated in conjunction with the planned pile cap install in the area. Pile cap excavation is expected to go to approximately groundwater depth (approximately 5-6 NAVD88). Endpoint samples in that area will be collected per DER-10 (i.e. 1 sidewall sample per 30 linear feet of hot-spot excavation and 1 bottom sample per 900 square feet of area). Additionally, per your request we will develop a separate NYSDEC spill closure report for your files summarizing all endpoint sample results. Thanks again, Joel Kane Director Fleming-Lee Shue 158 West 29th Street New York, NY, 10001 P: (212) 675-3225 F: (212) 675-3224 C: (406) 321-0586

Site Description: Site Description The Gowanus Canal is a man-made navigational waterway in southeastern Brooklyn, Kings County NY. Nearly the entire canal is bounded by hard urban shorelines in the form of bulkheads, moorings, and retaining walls. The site definition includes only the canal and its attached barge slips, totaling slightly over 1.5 linear miles of waterway. Averaging 100 feet in width, the open water area defined as the site totals approximately 1,000,000 square feet or 29 acres. The canal also serves as a storm water drain for the surrounding area. Currently, approximately six square miles of highly urbanized land drains into the canal. Sanitary sewers no longer discharge directly; however, numerous combined sewer overflows (CSO) continue to discharge to the canal during storm events. Industrial discharges from a wide variety of industrial processes were also historically routed to the canal, via private discharge pipes or the municipal sewers. Stagnant water conditions have plagued the canal since its initial construction. To combat this, a flushing tunnel at the north end of the canal was constructed in 1911 to divert water from the Buttermilk Channel to maintain flow through the canal to Gowanus Bay. Operation of the flushing system has had numerous problems resulting in lengthy periods during which it was inoperable. Significant upgrades to this system are scheduled over the next few years to increase the volume of water flushing the canal. Currently the flushing tunnel has been de-activated to facillitate its upgrade and an qxygenation system has been installed at the upper end of the canal. Site History Prior to European settlement, this area formed a large tidal marsh, drained by Gowanus Creek and surrounded by higher ground to the west (present-day Carroll Gardens) and east (present-day Park Slope). In the mid 1800s, the Canal was constructed, more or less along the alignment of Gowanus Creek, by straightening and deepening the stream channel and dumping the excavated materials behind rows of timber piles along the shoreline. Combined with other urban filling activities in the surrounding area,

GOWANUS CANAL SITE (Continued) **S110487590**

the result was a large area of reclaimed land with a dendritic, dead-end canal providing barge access through the middle. The canal offered barge access far inland into Brooklyn, effectively increasing Brooklyn s available tidewater frontage for water-borne commerce. Development of the area was rapid, and by 1869, the layout of the canal and the local street network were essentially complete. Long term decline of the local manufacturing economy has led to a marked decrease in commercial use of the Canal, with only a handful of petroleum distributors and concrete batch plants as regular users. Roughly the northern half no longer hosts barge movements as a result of siltation due to the significant CSOs which discharge street waste and sewage solids. The canal has not been dredged in several decades, consequently, substantial amounts of sediment have been deposited in upstream areas, and water depths approach zero at low tide. The sediment consists largely of solids settled from stormwater and CSO discharges. Presumably, industrial discharges to the canal have diminished in line with the de-industrialization of the surrounding neighborhood, although this is difficult to verify directly due to a lack of historical records for comparison.

Env Problem: Water quality issues have plagued the Gowanus Canal almost since its construction. Tidal flushing is largely ineffective due to the length, narrowness, and circuitous layout of the canal channel. Operation of the flushing tunnel has improved the situation during the years when flushing was being conducted; however, the current tunnel requires significant upgrades and is likely to be off-line for a year or more as the upgrades are performed. The canal is currently classified by NYSDEC as Class SD water body, acknowledging that natural or man-made conditions limit attainment of higher standards. Even the SD standards are not currently met. Oily sheens are common on the water surface during low tides, dissolved oxygen levels are low and surface contamination has been identified. Sediment quality is also low. Ongoing CSO discharges have resulted in extensive deposits of settled solids, particularly in the more sheltered areas near the upper end. Some parts of the canal bottom are exposed at low tide. Another particularly important contributor to sediment quality problems is the presence of three former manufactured gas plant (MGP sites) along the length of the canal. Although all three MGPs have been closed for decades, coal tar-impacted sediments have been identified at numerous locations along the length of the canal. The three MGPs are all covered by cleanup agreements with NYSDEC, and are at various stages of investigation,remedy selection and implementation. The Fulton Works, immediately east of the canal at its northern extremity, is in the Remedial Investigation process. The Carroll Gardens site (also widely known as Public Place) is in the Brownfield Cleanup Program, and is slated for remediation and redevelopment as a mixed commercial/residential project. The former Metropolitan works, immediately south of the 9th Street bridge, was partially redeveloped under a Voluntary Cleanup Agreement in 2002-2003. However, more work remains to be done part of the MGP facility lies beneath an active retail building. A Remedial Investigation began in March 2010. Numerous oil storage and handling facilities, asphalt plants,manufacturing facilities and chemical, paint, fertilizer and plastic manufacturers have, or continue to, operate along the canal.

Health Problem: People using the canal for recreational purposes such as swimming and boating may come into direct contact with chemical contaminants and harmful biological organisms. People should avoid any activity that

GOWANUS CANAL SITE (Continued) **S110487590**

would result in swallowing or accidentally ingesting Canal water. Additionally, people using the canal for any purposes should wash their hands or shower after contacting the water, especially before eating and at the end of the day. Those people who are considering eating fish and shellfish caught in the Canal should follow the NYSDOH consumption advisory for fish and shellfish taken from the Upper Bay of New York Harbor. This advisory specifically includes: The NYSDOH recommends that women of childbearing age and children under the age of 15 not eat any fish from the Canal. Other people should eat no gizzard shad, white perch and crab hepatopancreas and crab cooking liquid. Also, other people should eat no more than one meal per month of American eel, Atlantic needlefish, bluefish, rainbow smelt and striped bass. People should eat no more than one (1/2 pound) meal per week of all other fish species except blue crab meat (six crabs per week).

DEC Memo:	btex compound in soil
Remarks:	8/12/2020 - Feng - Desk Duty in office. Called EBC and left call back info. Environmental Business Consultants Kevin Brussee 631-504-6000 x114 KBrussee@EBCIncNY.com Zhune-Spoke to Kevin Brussee of Environmental Business Consultants. It is an OER project. They did a

CON EDISON (Continued) **S116043817**

Phase 2 and found one soil sample of the boring at 0-2 feet sampling depth show exceedances of BTEX and related gasoline compounds. Additional delineation has been done around that boring and found only some minor exceedance and mainly naphthalene. The OER RAWP is not approved yet pending on the spill reporting. The RAWP calls for excavation of the soil down to 12 feet for 90% of the celler. They will excavate down 4-5 feet and then 45 degree sloping for the rest of the depth excavation. The site is 200'x100' in size. They will submit spill closure report upon the completion of the excavation and collecting the endpoint samples. He will forward the link for the OER reports. Spill is assigned to V. Zhune. Kevin Brusee(cell) 631-338-1749 10/27/20- Kevin Brusee sen the following email The developer anticipates starting immediately after the DOB plans are approved. He is expecting the start date to be in January. 10/27/20 Kevin Brusee emailed the phase I and phase II Phase 1 ------- Environmental Planning & Management performed the phase I. The Phase I ESA Repor (dated February 13, 2015) identified the following Recognized Environmnental Conditions: Building cellar. Historic use. Vacant lot Off-site impacts. Ground Penetrating Radar (GPR) Survey ---------- No indication of a subsurface tank were identified in the area of the cellar. However, ananomaly with the approximate dimensions of a 10,000 gallon tank was found within the vacant lot in the location of the gasoline tank identified in the phase I ESA. Phase II ---------- On march 14, 2015, AARCO Environmental Services Corp. (AARCO) installed six (6)soil borings under the supervision of an Integral geologist. Soil Analytical Results and Analysis. The results from the soil samples were compared to the New York State Department of Environmental Conservation (NYSDEC) CP-51 Unrestricted Use Soil cleanup Objectives (SCOs). VOCs ------ No unrestricted Use SCOs were exceeded for VOCs in the soil samples. However, several VOCs were detected at lower concentrations: acetone, ethylbenzene, naphthalene (an SVOCs), xylene, and toluene. The detection of these compounds in the borings immediately adjacent to the suspected gasoline UST on the vacant lot (SB-3, SB-4 and SB-5)could indicate a historic release from the tank; however, it is likeky that, if a release had occurred, it was relatively minor in nature due to the low concentration in the samples. SVOCs ====== Seven (7)SVOCs were detected above unrestricted Use SCOs in the shallow soil samples (5-10 ft)below ground surface (BGS)of two borings SB-4 and SB-5 (both near the vacant lot gasoline UST). However, all concentrations were within one order of magnitude of its SCO. Low levels of SVOCs found within these two borings could be attributed to the placement of historic fill. Metals ======== Concentrations of lead, mercury, and nickel exceeded their respective SCOs in three of the borings advance on the local lot. Similarly to SVOCs the presence of low levels of these metals could be attributed to the placement of historic fill. PCBs ====== NO PCBs were detected in any of the soil samples. Please see attchedment B for the table of all detected compounds and attachment C for the full laboratory report. 3/5/21-Zhune - Kevin sent the following email Two crushed 275-gallon aboveground storage tanks and some other metal structure were found at 1010 Pacific Street, Brooklyn, NY in the hotspot area that high VOCs. Picture provided below. The hotspot is being excavated and loaded into trucks for transport to Clean Earth of North Jersey. Leszek I don t think either tank needs to be recorded with the DEC on a PBS Application or a Pre-Work Notification is required because they are both aboveground tanks that someone crushed

CON EDISON (Continued) **S116043817**

and used as backfill, but I wanted to check to make sure. The VOC hotspot was previously delineated with insitu soil borings/samples and the hotspot will be excavated to at least the boundaries of the delineation samples, but we ll be collecting some soil samples from the area after it is excavated as a pre-caution . 4/9/21-Kevin Brusee emailed the Remedial Investigation Report A summary of the subsurface Investigation performed by Integral Engineering P.C. in February of 2015 and the Remedial Investigation performed by EBC in January and February of 20920 is summarized below. Imtegral Engineering P greater than C greater than performed the following scope of work within the boundary of Site in May of 2015: 1. Installed six soil borings and collected eleven soil samples and one duplicate for chemical analysis from the soil borings to evaluate soil quality. 2. Performed a GPR survey. EBC performed the following scope of work within the boundary of Site in January and February of 2020. 1. Conducred a Site inspection to identify AOVs and physical obstructions (i.e. structures, building etc.): 2. Installed nine soil borings(SB1 through SB9) and collected eighteen soil samples and one duplicate for chemical analysis from the soil borings to evaluate soil quality; 3. Installed two groundwater monitoring wells, One of the monitoring wells was dry, and very little water was present in the second monitoring well. The third monitoring well was not attempted. Therefore, only one groundwater sample could be collected for chemical analysis of VOCs to evaluate groundwater quality; and 4. Installed one sub-slab soil gas implant (SG1) and collected one sub-slab soil gas sample, and installed seven soil vapor probes (SV1 through SV7) and collected seven soil vapor samples for chemical analysis. . Eight VOCs were detected above UUSCOs in one shallow soil sample (B6(0-2)) including acetone (maximum (max.)of 2,500 ug/kg), benzene (at 72 ug/kg), ethlylbenzene at (4,000 ug/kg), m&p-xylenes (max. of 17,000 ug/kg), Naphthalene (max. of 25000 ug/kg)o-Xylene (at 6,100 ug/kg), tetrachloroethene (at 1,500 ug/kg)and Toluene (max. 64,000ug/kg. Several additional VOCs were detected at trace concentrations within several soil samples; . Seven SVOCs including Benzo(a)anthracene (max.of 7,500ug/kg, Benzo(a) pyrene (max.of 12,000ug/kg,Benzo(b)fluoranthene (max.9,200 ug/kg), Benzo (K) fluoranthene (max. of 7,100 ug/kg), Chryzene (max. of 7,700 ug/kg), dibenz (a,h) anthracene (max. of 2,700 ug/kg), and indeno (1,2,3-cd) pyrene (max. 9,100 ug/kg)were detected above RRSCOs; . Two Pescticides including 4,4'-DDE (at 4.2 ug/kg and 4,4'DDT (max. of18 ug/kg) were detected above UUSCOs. No pestices were detected above RRSCOs. . On PCB, PCB-1254 (at 2,000 ug kg) was detected at the RRSCO of 2,000 ug/kg. . Seven metals including cadmium (max. 7.6 mg/kg), Chromium (max. 550 mg/kg), Copper (max of 104 mg/kg,lead (max.of 719 mg/kg)mercury (max.of 3,01 mg/kg), nikel (max.of 86.1 mg/kg)and zinc (max. of 1,310 mg/kg were detected above UUSCos. Of the detected metals, cadmium, lead, and mercury were detected exceeding RRCOs . Five PFA compounds were detected in the sample for a total of 1046 ug/kg Groundwater ---------- Groundwater samples results were compared to New York State 6 NYCRR Part 703.5 class GA groundwater quality standards (GQS) . Two VOCs, acetone (at 52 ug/L) and methylene chloride (at 54 ug/L) were detected above their respective GQS. Soil Vapor ---------- Figure 8 shows the location and posts the values for sub-slab soil gas and soil vapor samples with detected concentrations. The sub slab soil gas and soil vapor results collected during the Remedial Investigation were compared to the compounds listed in Table 3.1 Air Guidance Values derived by the New

CON EDISON (Continued) **S116043817**

York State Department of health (NYSDOH) located in the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion, dated October 2006 and the revised NYSDOH Decision Matrices dated May 2017. . The sub slab soil gas and soil vapor results indicated low levlesl of petroleum related VOCs and low levels of chlorinated VOCs: . Total concentrations of petroleum-related VOCs (BTEX)within the eight soil vapor /gas samples ranged from 0 ug/m3 to 1.81ug/m3. . The chlorinated solvents detected include 1,1,1,-trichloroethane (TCA)at a concentration of 2.20 ug/m3 in one of the eight samples, carbon tetrachloride ranged from 0.22 ug/m3 to 0.4 ug/m3, tetrachloroethene (PCE) at a concentration of 0.33 ug/m3; . The chlorinated VOs 1,1-dichloroethene, cis-1,2 dichloroethene, methylene chlorine, trichloroethene (TCE)and vinyl Chloride were not detected within any of the soil vapor samples . All chlorinated VOCs were detected below the monitoring level ranges established within the NYSDOH soil vapor guidance matrix. 3/31/21- Zhune- Kevin Brusee sent the RAWP dated April 2020 approved by the office of environmental Remediation. 5/8/21-Zhune-Kevin Brusee sent the Spill Closure Letter dated March 11, 2021. Conclusions ---------- Gasoline related VOCs were detected above Unrestricted Use SCOs within a surface (0-2 ft)soil sample collected in the northeast of the property. Delineation sampling indicated the impacted area was smaller than 20ft by 20ft area. On March 5,2021 a25ft by 45 ft area was over excavated and transported to Clean Earth North Jersey for proper off site disposal. No PID or olfactory evidence of petroleum soil was observed after the excavation was completed, and the laboratory results of endpoint soil samples collected after the excavation was completed indicate all of the petroleum impacted has been removed. Spill Closed.

Site Description: LOCATION: The Site is located at 198 Douglass Street in Brooklyn, between Bond Street and the Gowanus Canal. SITE FEATURES: The property is 0.18 acres and features a one-story warehouse building which is currently used for the storage of art and antique goods and furniture. CURRENT USE/ZONING: The property is currently used for the storage of antique goods. It is zoned for manufacturing use. HISTORICAL USES: The Site has historically been used for a variety of industrial purposes. Prior to its current use, the Site was owned and operated by Paramount Plumbing (approx. 1995 to 1998) and O.Z. Electrical Manufacturing Company Inc. (approx. 1960 to 1995). O.Z. also formerly owned and operated on the adjacent property (196 Douglass) as well as three buildings to the west, across Bond Street (262 Bond Street). Earlier owners/operators include P.H. Hughes Lime,

FORMER O.Z. ELECTRICAL (Continued) **S108057803**

Brick and Lath Yard (approx. 1887 to 1900); a gravel/crushed stone yard (approx. 1900 to 1930); and the Knickerbockers Ice Company, which included a machine shop (1930?s). SITE GEOLOGY AND HYDROGEOLOGY: Fill material consisting of sand, silt, gravel, and construction/demolition debris has been encountered to approximately 10 feet below ground surface (fbgs). Beneath the fill material (10 to 36 fbgs) is a sequence of inter-bedded silt, clay, sand, and peat layers atop fine to coarse-grained sand to a depth of approximately 48 fbgs. Groundwater has been encountered at depths ranging from 1.5 fbgs to 9 fbgs, during various investigations. USEPA Superfund investigations in the area of the Gowanus Canal have found that shallow groundwater flows toward the canal at both low and high tide. Intermediate groundwater generally flows upward toward the canal. Based on water chemistry measurements in surface water and groundwater (collected during Superfund investigations of the Gowanus Canal), it was concluded that infiltration from the canal controls water quality in shallow wells adjacent to the canal, with decreasing influence with distance from the canal. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: A Site Investigation performed in April/May 2012 confirmed that tetrachloroethene (PCE) previously detected in groundwater was limited and not indicative of a release of hazardous waste. GROUNDWATER: In 2006, PCE was detected in groundwater at a concentration of 1,600 parts per billion (ppb) and benzene at 14 ppb, from one grab groundwater sample collected from one boring. In the 2012 Site Investigation, groundwater was sampled from four groundwater monitoring wells. Groundwater samples were analyzed for volatile organic compounds (VOCs). Several VOCs were detected; however, the only contaminants detected at concentrations that exceed standards were isopropylbenzene (detected at 5.1 ppb compared to the standard of 5.0 ppb) and methyl tertiary butyl ether (MTBE) (detected at 10.7 ppb compared to the standard of 10 ppb). The standards cited for groundwater are the NYS Ambient Water Quality Standards and Guidance Values for Water Class GA from NYSDEC Technical & Operational Guidance Series (TOGS) 1.1.1. SOIL: The 2012 Site Investigation included soil sampling from 7 soil borings and analysis for VOCs. The only contaminant detected above standards was isopropylbenzene, detected at 3.91 parts per million (ppm) compared to the CP-51 Supplemental Soil Cleanup Objective for protection of groundwater of 2.3 ppm. A few VOCs were detected on site in the 2006 soil boring, but at very low concentrations. SOIL VAPOR: In soil vapor, trichloroethene (TCE) was detected in two samples at a maximum concentration of 200 micrograms per cubic meter (ug/m3); however TCE was not detected above reporting limits in concurrent indoor air samples. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.

Spiller Address:	Not reported
Spiller Company:	999
Contact Name:	JEFFERY FLANNIGAN
DEC Memo:	THERE WAS SOIL SAMPLE TESTING AND GROUND WATER TESTING. THERE WAS DIFFENENT MATERIAL THAT WAS FOUND AT THE SITE. THERE ARE TRACES OF VOLITALE ORGANIC COMPOUND, TETRACHLOROETHENE,ETHYLBENZENE, XYLENE WAS FOUND IN SOIL SAMPLE. THE WATER SAMPLE HAD BENZINE, TETRACHLOROETHENE. THEY WERE DIGGING AT THIS SITE.
Remarks:	DEC Piper contacted Caller Jeff Flannigan. He will copy report and analytical and send to DEC. 9/8/06- DEC Piper reviewed subsurface investigation report. AS per report, investigaestigation was due to the presence of petroleum vaprs inside work area. 1 boring was completed. Groundwater was encountrered at 9 feet bgs. A water sample was collected at 34 feet which contained elevated levels of benzene, PCE and a variety of SVOCs were above standards. A soil sample was collected at 36 feet bgs which indicated trace levels of clorinated solvents. Indoor air samples revesaled elevated levels of petroleum and clorinated solvents were detected above standards. Due to the soil and gw samples not being collected at the gw interface, the concentrations observed where collected, and indoor air quality, additional investigation is warranted. Case referred to remediation. 9/20/06- DEC Piper . Spill transpferred to remediation as per Austin on 9/8/06. 11/13/06 - reviewed site assessment report, found PERC in GW. Need to contact consultant to get more delineation of the GW contamination. - KST 4/11/08 - This spill has been transferred to D. Kaplan. Since previous reports were missing the representative of the site was contacted and the subsurface investigation report was obtained from the environmental consultant. 5/7/08 - Met the environmental consultant (Djamel Lekmine, AMEC), architect Jeff Flannigan who was acting as representative of the owner (was in charge of construction at the time the spill was reported), and attorney for the owner at the site. The entire lot is covered with a building with slab on grade finished floor. The building serves as a storage facility for fine art. It was explained that additional investigation was necessary. 5/19/08 - Environmental consultant sent a proposed work plan for additional investigation which was very incomplete (see edocs). 5/27/08 - A letter was sent to the environmental consultant describing additional requirements for a subsurface investigation. 8/26/08 - Attorney for the owner has been trying to work out a site access agreement with the owner of the adjacent property (196 Douglass St). Representative for the owner of 196 indicated that they are unwilling to grant site access. 9/26/08 - After negotiations with the owner of 196 Douglass for site access proved unsuccessful, DEC attorney (John Urda) sent a letter to the owner siting statutory authority for site access for investigation work. See edocs. 5/11/09- The work was performed February 10th and 11th. The report has not yet been received. 6/18/10-Vought-Received inquiry from DEC Austin as to whether Site should be transferred to Vought as P-Site . Vought discussed with DEC O'Connell and spill reassigned from Kaplan to Vought and entered into P-Site Tracking Spreadsheet. 2/8/11-Vought-Spill transferred from DEC Vought to DEC Kaplan for further action. 6/10/11 - Transferred to hazardous waste

Update By:	WBBENNET
Site Description:	This site is identified as the offsite component of the current Brownfield project located at 473 President Street, site #C224220. Location: The on-site 473 President Street site is located in an urban area in Brooklyn, Kings County. It is located in the southern portion of Block 440 Lot 12. The Gowanus Canal is approximately 350 ft to the west of the site. Site is bounded by a shuffleboard club to the north, an e-waste recycler to the west, President Street to the south, and a casket company to the east. Fulton Works MGP site is 1 block to the north. Site Features: The site was comprised of a 1 story warehouse that was recently demolished. Current Zoning and Land Use: The site is an active warehouse for a bicycle company, a furniture maker, and a showroom for a light designer. It is currently zoned for M1-2, commerical to light industrial. The nearest residential area is across President Street. Past Use of the Site: The on-site has an industrial history back to the 1880s. In 1886 to 1928, the site was a sash and door factory and later a trim and planing mill with machine shop and boilers. In 1938 the Coca-Cola Bottling Co was the operator with two gasoline USTs. In 1969 to the 1990s, the site was occupied by Dolin Metal Manufacturing Co. From 1993 to 2007, the building was occupied by manufacturing and storage. Currently the site is occupied by a furniture maker, a lighting designer, and a bicycle retailer. There is an open spill from a failed tank test which may have resulted in BTEX-contaminated soils on-site. The spill number is 9412605. Site Geology and Hydrogeology: The soils of the area consist of urban fill for the top 10 feet. The groundwater is approximately 10 foot below ground surface at the site. Based on the topography of the land, the local groundwater

473 PRESIDENT STREET - OFF-SITE (Continued) **S101508966**

	flows in a westerly direction, towards the Gowanus Canal.
Env Problem:	The on-site investigation yielded the following results: Soil was analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs)(only during the pre-application investigation), pesticides, and metals. Groundwater was analyzed for VOCs, SVOCs, pesticides, and metals. Based upon investigations conducted to date, the primary contaminants of concern for the site include TCE, BTEX (Benzene, Toluene, Ethylbenzene, Xylene), naphthalene, Polycyclic Aromatic Hydrocarbons (PAHs - a class of SVOCs), Lead, Mercury, and Arsenic. Soil Soil borings were installed and samples collected as part of the remedial investigation. Concentrations exceeding the Commercial SCOs were found for PAHs, arsenic, lead, and mercury. Primarily the top 10 foot of material, known as historic fill, exceeds the SCOs for PAHs, lead, mercury, and arsenic. Spatially, the native materials were most contaminated in the northern corner near a suspected gasoline tank with trichloroethene (TCE) and BTEX. Groundwater TCE and its associated degradation products are found in groundwater on the northern half of the site moderately exceeding groundwater standards (5 ug/L) with a maximum concentration of 1300 ug/L. Fuel breakdown products (i.e. BTEX and naphthalene) were found in groundwater on the northern portion of the site at concentrations exceeding the standard near the suspected gasoline tank. Soil Vapor TCE, tetrachloroethene (PCE), and cis-1,2-dichloroethene (DCE), were detected in sub-slab soil vapor at significantly elevated concentrations.
Health Problem:	Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is potential concern for area buildings and investigations are underway.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	muddy waters going into waterway (NY bight). Unknown source Update: ECO Currey (929) 505-6868 and ECO Kortz (929) 598-5860 responding to location for investigation.
Remarks:	1/27/23 - Ye - DDO - Spoke with DEP Okali on 1/26, who said that they received a report of muddy water entering the Gowanus Canal near 420 Carroll Street. He was currently heading to the site and has some people on location to investigate the source. They had received a similar complaint via email on 1/20, around 3pm. They do not believe the discharge has a sheen or contains petroleum. I said that we will

CONSTRUCTION SITE (Continued) **S128901808**

probably not be sending anyone unless they would like someone there, because it seems like a non-petroleum sewer discharge issue, but to keep us updated if they find anything otherwise. I offered to report the discharge to the water body to NRC/Coast Guard, since Okali was driving. I provided DEP Okali's contact to NRC Incident Report 1358618. The Coast Guard called me shortly to confirm material was not petroleum/non-hazardous. I said it is likely not, but they can get updates from the DEP, who is onsite. They said they will probably not be investigating. When speaking with DEC Dispatch about another spill, they mentioned that ECO Currey and ECO Kortz will stop by the site on their way home. Spoke with ECO Currey, who said they are on site and met some other people from DEP; DEP Okali was still on the way. They were unable to see much because the site was gated off, but they saw some photos and the discharge looked murky, with no sheen. They were going to see if they could see anything on the other side of the canal. I said that Spills will not be responding, but to keep us posted if they find anything. There was a recent spill that was closed by DEC Patel on 1/13, Spill #2204170. 1 550-gallon tank and 1 2000-gallon tank were removed, with no contamination noted in endpoint samples. DEC Patel recommended briefing OER Chawla. Emailed OER Chawla and CC'ed DEP Okali, saying that Spills will not be investigating any further. OER Chawla notified their consultant, saying: We received a report of discharges from this Site to Gowanus. Your daily report from 1/24 does not mention any discharges. DEC inspected this site, but were not able to enter property as it was gated. See DEC email below. Please look into this and let us know. Spill forwarded to the Water Division (DEC Southwell). Spill closed.

DEC Memo:	TANK REMOVAAL. 1X 3000 GAL UST AND 1-550 GAL UST. UNK AMOUNT. RELEASED. CLEAN UP IN PROGRESS.
Remarks:	8/11/22 - Kim - Desk Duty - The tanks that were discovered were unknown and unregistered tanks that contained a water and slurry mix that had some sheen. Miller stated that the liquid in the tanks was mostly water. This site is a NYCDEP OER site in the Voluntary Cleanup Program, Project #22EH-A153K, 22CVCP045K, 420-430 Carroll Street, under OER Case Manager Yolanda. One tank was pulled and a vac truck removed liquids from both tanks. The 550gal tank was removed, put on poly, and cleaned. The 3,000gal tank had concrete piles driven through during previously completed construction and has not been removed. Roux is deciding whether to pull the whole mass up or to cut and remove the tank. Roux will have the tanks registered with NYSDEC PBS unit. rmiller@rouxinc.com 08/12/22-Hiralkumar Patel. alternate address: 404-440 Carroll Street 420 Carroll LLC. **property owner** 11 Park Place New York, NY 10007 Attn.: Stephen Ohnemus Ph. (914) 263-2378 email: s.ohnemus@vorea.com 08/16/22-Hiralkumar Patel. 10:04 AM:- spoke with Rachel. she mentioned that both tanks have been removed and they have collected endpoint samples. she will send sample results next week. 09/22/22-Hiralkumar Patel. 10:35 AM:- spoke with Rachel about spill closure report. she mentioned that OER project manager has approved to include spill cleaning details in a final report to OER upon completion of the project. informed Rachel that the department requires submission of spill closure report, if cleanup has completed. 10:38 AM:- sent email to Rachel and asked her to submit a spill closure report. email copied to OER Shaminder. 10/07/22-Hiralkumar Patel. 9:48 AM:- spoke with Rachel and inquired her about spill closure report. she asked if they could submit spill closure as part of final report to OER upon completion of project. informed her that as spill cleanup is completed, the department requires submission of a spill closure report. asked her to submit report by COB 10/21/22. 9:50 AM:- sent email to Rachel and asked her to submit spill closure report by 10/21/22. email copied to OER Shaminder. 12/15/22-Hiralkumar Patel. 12:52 PM;- sent email to Wendy Shen at Roux inquiring updates on spill closure report. email copied to Rachel. Wendy Shen Roux Associates PH. (631) 232-2600 / (631) 630-2331 (718) 913-6240 Email: wshen@rouxinc.com 01/05/23-Hiralkumar Patel. received email from Wendy (at 3:19 PM on 01/04/23) including a

CONSTRUCTION SITE (Continued) **S128901808**

spill closure report. - one (1) 550 gal UST (UST-1) and one (1) 2,000 gal UST (UST-2) were removed during site development - total of 1,410 gal of oil-water mixture were pumped out from both tanks - UST-1 was 6 ft long and 4 ft wide and tank top was at elevation of 3.67 ft - UST-2 was 13 ft long and 5 ft side and tank top was at elevation of 4.58 ft - total area that was excavated for UST-1 was 18 ft long by 15 ft wide and 5 ft deep - total area that was excavated for UST-2 was 25 ft long by 23 ft wide and 6 ft deep - total of approx. 60 cubic yard of soil removed from both excavations - five endpoint samples (one bottom and four sidewalls) were collected from UST-1 excavation - six endpoint samples (two bottom and four sidewalls) were collected from UST-2 excavation - no contamination noted in endpoint samples the report includes confusing details about depth of tank top and excavation bottom. 01/10/23-Hiralkumar Patel. 1:18 PM:- sent email to Wendy and asked her to provide final depth of excavation for both tanks and depth of each endpoint sample. email copied to OER. 01/13/23-Hiralkumar Patel. 8:58 AM:- received email from Wendy including a site sketch. as per the sketch, site grade elevation was +5.5 ft. based on this, top of UST-1 was 1.83 ft below site grade and UST-2 was 0.92 ft below site grade. 8:59 AM:- received call from Wendy. she mentioned that on-site structure was demolished prior to Roux's involvement in the project and site may have been re-graded after building demolition and this could be a reason for having tank tops within 1-2 ft of the site grade. she confirmed that bottom of excavation for UST-1 was 5-6 ft below top of the tank and for UST-2 was 7 ft below top of the tank. case closed based on available information.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	001
Tank Id:	287328

Equipment Records:

H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L99 - Piping Leak Detection - Other
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
K01 - Spill Prevention - Catch Basin
I02 - Overfill - High Level Alarm
J07 - Dispenser - Loading Rack/Transfer Pump
C01 - Pipe Location - Aboveground
F00 - Pipe External Protection - None
E12 - Piping Secondary Containment - Double-Walled (AG only)
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	11/01/2018
Capacity Gallons:	8400
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent

PATTERSON CHEMICAL CO INC (Continued) **1000403436**

Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F010
Waste Description: Quenching Bath Residues From Oil Baths From Metal Heat Treating Operations In Which Cyanides Are Used In The Process.

Waste Code: F012
Waste Description: Quenching Wastewater Treatment Sludges From Metal Heat Treating Operations In Which Cyanides Are Used In The Process.

Waste Code: F017
Waste Description: Not Defined

Waste Code: F018
Waste Description: Not Defined

Waste Code: K086
Waste Description: Solvent Washes And Sludges, Caustic Washes And Sludges, Or Water Washes And Sludges From Cleaning Tubs And Equipment Used In The Formulation Of Ink From Pigments, Driers, Soaps, And Stabilizers Containing Chromium And Lead.

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: U101
Waste Description: 2,4-Dimethylphenol (Or) Phenol, 2,4-Dimethyl-

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/19/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 09/25/2023

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Data Release Frequency: Varies

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

PFAS 3: PFAS Environmental Site Remediation List

Per- and Polyfluoroalkyl Substances (PFAS) are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Fluoropolymer coatings are blends of resins and lubricants used in products such as water-repellent clothing, furniture, adhesives, paint and varnish, food packaging, heat-resistant non-stick cooking surfaces and insulation of electrical wires. Chemicals in this group include perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS).

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

AAMUP SITE-DEAN PLAYGROUND
500 DEAN ST
BROOKLYN, NY 11217

TARGET PROPERTY COORDINATES

Latitude (North):	40.68105 - 40° 40' 51.78''
Longitude (West):	73.97316 - 73° 58' 23.38''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	586776.8
UTM Y (Meters):	4503647.0
Elevation:	60 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

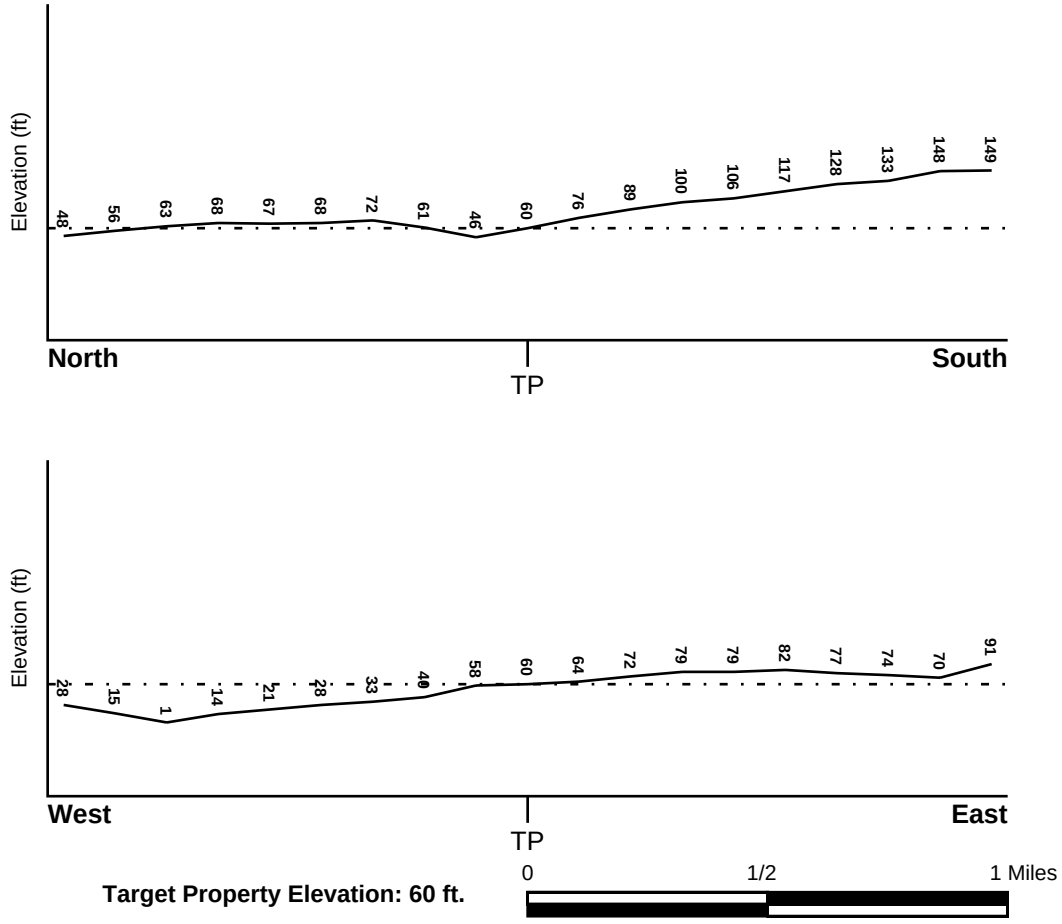
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 60 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970211F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970203F	FEMA FIRM Flood data
3604970204F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile West
Site Name:	Vidan Auto Salvage
Site EPA ID Number:	NYD986961167
Groundwater Flow Direction:	SW TOWARD THE NARROWS.
Inferred Depth to Water:	approximately 38 feet.
Hydraulic Connection:	The surficial aquifer and underlying aquifer are hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey
