DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 8/10/2001 - Tony Kloss from Impact Environmetal (office # 516-453-2790 cell phone 516-250-3187) Impact has been hired to remove two #4 oil tanks from sidewalk vaults on Jay St in front of PolyTech

NEW YORK UNIVERSITY - TANDON SCHOOL OF ENGINEERING (Continued) **1000442411**

University. Impact did some geoprobes and found contamination consistant with #4 oil. They also opened up the vaults and found 6 of floating product. The plan is to excavate the site and remove the tanks (probably in September 2001) At that time they will try to over excavate and remove as much as possible. If end point samples remain high, they will need to propose a remediation. 8/20/2001 - Sangesland spoke with Tony Kloss. Samples came back, some were high. Mr.Kloss is putting together a map with results and will mail it to the DEC. He also reconfirmed that the tanks will be pulled in September. 5/9/2002 - Sangesland received a Tank Closure Report from Impact Environmental dated 3/11/2002. The report details the removal of two - 7,500 gal heating oil UST. All contaminated soil around the tanks was removed (447.13 tons). Post-excavation soil samples were all below TAGM - Soil Clean Up Objectives for VOC's and SVOC's A new 7,500 gal double walled tank was installed in the space in Feb 2002. A new Vedeer Root monitoring system was installed and the tank was pressure tested on Feb 6, 2002. All work was complete at this site and the spill case is closed."

Remarks: "caller reportng a spill at the jacob's building at above closing 2 tanks and believe spill is from that one tank 001 and tank 002 nys pbs#2-158232 no clean up and spill is subsurface "

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
US EPA Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

NEW YORK UNIVERSITY - TANDON SCHOOL OF ENGINEERING (Continued) **1000442411**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Control Type:	ENG
Date Record Added:	10/18/2011
Date Rec Updated:	12/28/2017
Updated By:	LSZINOMA
Site Description:	Location: The 220 Water St. Site is located at 220 Water St., Brooklyn, N.Y. The site is bounded by Front St., Bridge St., and Water St. on the south, east and north, respectively. A vacant lot and another building are immediately west of the site. Site Features: The entire site is covered by a five-story building. Current Zoning and Land Uses: The site is officially zoned M1-4/R7A by New York City's Department of Planning, which allows for light industrial uses as well as commercial and residential use. The on-site building accommodates restricted residential and commercial reuse. Past Use of the Site: The site has been the home of several industries and businesses, as well as several artist studios/residences. Over the last several years, all occupants have vacated the building. The site was formerly the location of Union White Lead Works until approximately 1904. This smelting operation is thought to be the source of lead found on-site. The building was demolished in the early 1900's and replaced by the structure that exists today. More current uses included a PVC products manufacturer. Site Geology and Hydrogeology: Site soils are characterized as sands and silts mixed with historic fill materials to a depth of 12 feet, and sand and gravel with some cobbles below that depth (maximum boring depth was 57 feet). Groundwater is approximately 25 - 35 feet below the ground surface at the site, and flow is predominately to the north.
Env Problem:	Prior to remediation, the primary concerns were high levels of lead in soil, as well as the potential for volatile organic compounds in groundwater to enter the building via soil vapor intrusion. The site has been remediated. A large quantity of highly impacted soil was removed, however, some lead remains in soil at the site above 'Unrestricted' levels. Groundwater is marginally contaminated with Volatile Organic Compounds from an off-site source. This Remaining Contamination is managed through Institutional Controls and Engineering Controls, allowing for the site's intended use as a 'Restricted Residential' property.
Health Problem:	Direct contact with the soil is unlikely because the site is covered with buildings and pavement. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Sub-slab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings.

Site Code: 332140
Site Description: Location: The 220 Water St. Site is located at 220 Water St., Brooklyn, N.Y. The site is bounded by Front St., Bridge St., and Water St. on the south, east and north, respectively. A vacant lot and another building are immediately west of the site. Site Features: The entire site is covered by a five-story building. Current Zoning and Land Uses: The site is officially zoned M1-4/R7A by New York City's Department of Planning, which allows for light industrial uses as well as commercial and residential use. The on-site building accommodates restricted residential and commercial reuse. Past Use of the Site: The site has been the home of several industries and businesses, as well as several artist studios/residences. Over the last several years, all occupants have vacated the building. The site was formerly the location of Union White Lead Works until approximately 1904. This smelting operation is thought to be the source of lead found on-site. The building was demolished in the early 1900's and replaced by the structure that exists today. More current uses included a PVC products manufacturer. Site Geology and Hydrogeology: Site soils are characterized as sands and silts mixed with historic fill materials to a depth of 12 feet, and sand and gravel with some cobbles below that depth (maximum boring depth was 57 feet). Groundwater is approximately 25 - 35 feet below the ground surface at the site, and flow is predominately to the north.
Env Problem: Prior to remediation, the primary concerns were high levels of lead in soil, as well as the potential for volatile organic compounds in groundwater to enter the building via soil vapor intrusion. The site has been remediated. A large quantity of highly impacted soil was removed, however, some lead remains in soil at the site above 'Unrestricted' levels. Groundwater is marginally contaminated with Volatile Organic Compounds from an off-site source. This Remaining Contamination is managed through Institutional Controls and Engineering Controls, allowing for the site's intended use as a 'Restricted Residential' property.
Health Problem: Direct contact with the soil is unlikely because the site is covered with buildings and pavement. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may

220 WATER STREET (Continued) **S110047046**

move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Sub-slab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings.

Site Code: 332140
Site Description: Location: The 220 Water St. Site is located at 220 Water St., Brooklyn, N.Y. The site is bounded by Front St., Bridge St., and Water St. on the south, east and north, respectively. A vacant lot and another building are immediately west of the site. Site Features: The entire site is covered by a five-story building. Current Zoning and Land Uses: The site is officially zoned M1-4/R7A by New York City's Department of Planning, which allows for light industrial uses as well as commercial and residential use. The on-site building accommodates restricted residential and commercial reuse. Past Use of the Site: The site has been the home of several industries and businesses, as well as several artist studios/residences. Over the last several years, all occupants have vacated the building. The site was formerly the location of Union White Lead Works until approximately 1904. This smelting operation is thought to be the source of lead found on-site. The building was demolished in the early 1900's and replaced by the structure that exists today. More current uses included a PVC products manufacturer. Site Geology and Hydrogeology: Site soils are characterized as sands and silts mixed

220 WATER STREET (Continued) **S110047046**

with historic fill materials to a depth of 12 feet, and sand and gravel with some cobbles below that depth (maximum boring depth was 57 feet). Groundwater is approximately 25 - 35 feet below the ground surface at the site, and flow is predominately to the north.

Env Problem: Prior to remediation, the primary concerns were high levels of lead in soil, as well as the potential for volatile organic compounds in groundwater to enter the building via soil vapor intrusion. The site has been remediated. A large quantity of highly impacted soil was removed, however, some lead remains in soil at the site above 'Unrestricted' levels. Groundwater is marginally contaminated with Volatile Organic Compounds from an off-site source. This Remaining Contamination is managed through Institutional Controls and Engineering Controls, allowing for the site's intended use as a 'Restricted Residential' property.

Health Problem: Direct contact with the soil is unlikely because the site is covered with buildings and pavement. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Sub-slab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings.

Date Record Updated:	04/18/2022
Updated By:	SMQUANDT
Site Description:	Location: The Brooklyn Navy Yard Voluntary Cleanup Program site consists of 146.79 acres of the 353-acre Brooklyn Navy Yard Industrial Park. Site Features: The site is generally flat and

BROOKLYN NAVY YARD - NYC DEP (Continued) **1000446347**

bounded by the East River on the north, Flushing Avenue to the south, Kent Avenue to the east and Navy Street to the west. The main site features include piers surrounding large dry docks used for ship repair, many industrial and commercial use buildings, roadways and a movie studio and associated sound stages. Current Zoning and Land Use: The site is currently used as an industrial park and is zoned as M3-1. This zoning allows for heavy manufacturing, warehousing, office work and the making of films. The Navy Yard itself is an industrial/commercial area, while the property surrounding the Navy yard is mixed commercial and residential use. Past Use of the Site: The site was used as a ship building and repair facility from the 1800's to the mid-1900's. These activities included metal fabrication, painting and sand blasting, as well as various support activities including the maintenance of the electrical system. These functions resulted in the release of metals, petroleum products and PCBs. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) was created for the site-wide investigation in an effort to find discreet source areas throughout the BNY facility. OU2 was created in order to expedite the investigation at a portion of the site prior to building a new movie studio. OU 3 was created in order to expedite the investigation at a portion of the site that was to have a second studio built upon it. For administrative reasons, OU 3 was subsequently terminated, and the remedy was incorporated under the OU 1 remedy. All studies are now complete and the final remedy is in-place. Site Geology and Hydrogeology: Site soil is comprised of many feet of historic fill (e.g., soil mixed with coal ash and building rubble) that was placed in low-lying, marshy areas over a hundred years ago. Groundwater occurs at a depth of approximately four feet below ground surface, and it flows west/northwest towards the East River.

Env Problem: Post-Remediation: All remedies have been implemented. The site remedy requires that the site be covered with materials suitable for commercial use. The site is controlled via an Environmental Easement and is now managed under a Site Management Plan. Prior to Remediation: The primary contaminants of concern at the facility were metal, semi-volatile organic compounds and PCBs, as detailed below. Nature and Extent of Contamination: The majority of the Brooklyn Navy Yard is underlain by historic fill, and soil and groundwater quality at the site is reflective of this. Much of the low to moderate-level metal and Semi-Volatile Organic Compound (SVOC) contamination identified in soil during site investigations is attributable to coal ash, cinders, asphalt and other fill materials in the upper soil layer (0 ft-20ft below ground surface), with concentrations of contaminants typically elevated above state Unrestricted, Residential, and Restricted Residential Use Cleanup Objectives, but generally near the state s Restricted Commercial Use Cleanup Objectives (see 6 NYCRR Part 375-6). The metals and SVOC compounds detected in site soil/fill appear to be bound through physical and chemical processes, limiting the potential for ground water impacts, as well as curtailing pathways to environmental receptors (i.e., groundwater and down gradient surface waters). Groundwater contamination with metals and SVOCs is present at levels that are generally reflective of the historic fill present at the facility,

BROOKLYN NAVY YARD - NYC DEP (Continued) **1000446347**

with only one well showing SVOC levels appreciably above standards, and that well (MW-04) is thought to be impacted by contamination emanating from the nearby former manufactured gas plant at the adjacent K-Nassau Works MGP site (Site ID No. 224019B). That site is being addressed under a separate investigation, and the impacts to groundwater will be assessed under the remedy for that site. Metals in excess of groundwater standards appears to be largely an artifact of the sampling technique (i.e., soil particles became entrained in the water sample), as opposed to a wide-spread plume of dissolved contamination. Soil vapors were assessed at the facility and while certain contaminants were detected, the levels were not considered to be indicative of a potential threat to indoor air. Twenty-three electrical sub-stations located within the Brooklyn Navy Yard study area were found to be contaminated with polychlorinated biphenyls (PCBs). Twenty of those areas have been either remedied or are being actively managed under the Site Management Plan and are slated for remedy when taken out of service. Three areas (Building 297, Building 274 and Building 77) originally within the VCP study were excluded from the final VCP remedy and are being considered for further action under consent order with the NYSDEC. Special Resources Impacted/Threatened: Sediments contained several metals and SVOCs above screening criteria, however, the aquatic ecological evaluation shows the benthic and finfish communities to be of moderate diversity and population size, consistent with other similar settings in the New York City area. The investigation concluded that the ecological resources at the Brooklyn Navy Yard (Wallabout Basin) have not been significantly impacted by site contamination.

Health Problem:	People in the area around Brooklyn Navy Yard are not exposed to site contaminants in their drinking water since the area is served with public water. Any contamination that may remain in soil at the site following excavation and off-site disposal will be inaccessible since it will be under pavement, structures or one foot of clean soil over a demarcation layer. Data collected during investigations indicate that it is unlikely that people in the area of the site would be breathing any site-related contaminants.

DEC Region:	2
DER Facility ID:	227703
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 4/2/2002 Mark Califano from Galli Engineering called to find out status of spill closure. 631-271-9292 Reassigned from Sullivan to Sangesland. Site is a former gas station which failed a tank test in 1990. 4/11/2002 Sangesland ran a PBS for this site. File says 9 tanks had been removed in May 1994 and one waste oil tank remains. Sangesland called the facility operator (Pedro Mendez 718-628-7285) who said the tanks were not pulled, but filled with cement before he arrived at the property. Property owner is Mr. Barry (718-326-7265) Mr. Barry said the tanks were not pulled, but rather filled in place. Apparently the property is being sold and Mr. Barry would like this old spill closed out. PBS Application will need to be updated to identify that the status of the tanks is not Removed , but rather Abandoned in place 4/11/2002 Sangesland left a message with Joseph Martinez of Galli Engineering (734 Walt Whitman Rd. Suite 402A Melville, NY 11747) According to Mr. Barry, soil borings were drilled and tested. Review needs to confirm that soil samples were taken in appropriate locations and that samples were tested to EPA Method 8270 and 8021. Since this was a Tank Farm of several 550 gal UST's at least 1 ground water sample will also need to be run for VOC and SVOC's. 4/12/2002 Sangesland spoke with Mr.Martinez of Galli Engineering. Apparently a Phase I and Phase II report has been completed including soil borings. After a discussion of what was in the report, it was concluded that a well would be required and groundwater tested. Mr. Martinez will complete this work and incorportate the results into his report and resubmit. Sangesland also forwarded to Mr. Martinez a copy of Spill Closure Report Outline . 4/13/2002 Sangesland forwarded (fax) a request to identify the location/status of the waste oil 550 UST. Requested a soil boring tested to 8021, 8270 and RCRA Metals. 4/26/2002 Sangesland received a Sampling Investigation Work Plan from Galli Engineering which

58-02 FLUSHING AVE/QUEENS (Continued) **S105230168**

outlines 2 soil borings and 1 water sample - All as discussed above. Sangesland forwarded an OK back to Galli Engineering to go ahead with this work. 7/8/2002 Sangesland was on site for an additional round of soil borings and groundwater sampling. Specific boring and water sampling locations were selected on site with Galli. All samples appear clear. Galli will submit samples to the lab and will prepare a closure report. 8/15/2002 Sangesland reviewed a Spill Closure Report dated August 9, 2002. This report presents additional soil boring data from July 8 field work, results from 2 well samples (65'depth) and a section on the MTBE issue at the site. All of the soil results for the site are ND for VOC and SVOC. The groundwater samples were trace or ND for VOC and SVOC. MTBE was detected in both groundwater samples: (GW-7 = 1,106 ug/L) and (GW-8 = 2,543 ug/L). In the MTBE section of the report, Galli presented data to support their belief that the MTBE found was due to several documented MTBE releases within 1/2 mile upgradient of this site. Based on this analysis and the lack of any detection of MTBE, VOC or SVOC's in any of the soil samples above 65ft depth, the DEC is satisfied that this site is not causing any negative impact to the environment. Spill Closed "

Remarks: "(8) 550 GAL TANKS FAILED AN AIR PRESSURE TEST WITH AN UNDETERMINED LEAK RATE, UNKNOWN ACTION."

DEC Memo:	"10/21/05 - Raphael Ketani. I called up Jim Melnick of ProTest ((631) 321-4670) and asked him what happened as a result of the failed tank test. Mr. Melnick said that the tank was retested 1 week later and passed after Key Span did their own repairs. I spoke to Mike Calderon of Key Span at (718) 222-3479. He said that the vent line had been moved as a result of construction at the site (Marriot Hotel was having work done). He said that the construction crew had made a new vent pipe and had put a rubber cap on it. So this cap didn't hold the pressure during the tank test. However, once the cap was discovered, the pipe was retested and held the pressure, and the cap was replaced with a metal one. I contacted Mr. Calderon's supervisor, Ed Urban ((718) 389-4204, ext 17), regarding the tank test and he confirmed what Mr. Calderon had said. He added that the construction crew had hit the vent pipe and moved it and then trucks ran over the concrete cover and cracked the concrete. Mr. Urban added that water had leaked through the concrete and set off an alarm. So Key Span went to check out what happened and that's when they discovered the broken concrete and that the vent pipe had been moved. Mr. Urban added that the tank is registered with the PBS unit. The tank is registered with the Brooklyn Renaissance and the case # is 2-610012. 12/21/05 - Raphael Ketani. I tried calling up Mr. Urban, but the number had been disconnected with no forwarding number. I spoke to Mr. Melnick and he said he would FAX me a copy of the successful tank test. Mr. Melnick FAXed me a copy of the successful second tank test. As the rubber cap replacement and the repair of the moved vent line had been the only problems and had been corrected resulting in a successful tank test, I am closing the case."

DEC Memo:	"11/2/05, Dyber: No response from owner. Referred to Region. Next Step: Perform state-funded investigation. 8/30/05, Dyber: Sent letter to owner. 8/9/05, Dyber: Did not receive reports. Left message for Gulum. Contact owner if no return call. 7/21/05: Al Gulum found a file with several reports. He will make copies and send them to me. 7/14/05: Spoke with Al Gulum. He will check his records. 9/7/06 - Austin - Assigned from Albany to Region 2 staff for review and closure - end 10/20/06 - Raphael Ketani. The spill case was opened due to the discovery of a buried 275 gal. tank and associated contaminated. The soil was excavated and the lead hot spot was also removed. Reports and correspondences regarding the excavation work are in the file. The present owners of the property are: 1 Carlton Associates Inc. The site location is block 02031 and lot 0016. I found a letter in the file dated 11/5/97 and written by Anthony Sigona, the previous Spills case worker for the project. The letter states at the end that the spill case will be closed. Based upon the reports and other documentation in the file, and the 11/5/97 letter, I am closing he spill case and setting the closure date as 11/5/97. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE sent TTF letter Sangesland spoke with Phil Fazin Crown Leak Det. (516-939-2959) One of 2 - 10,000 gal tanks on site leaked and failed a tank test. PBS records show the PBS expired 7/14/2002. TTF Ltr (with PBS expired note) sent to: Arco-Wentworth Management 3646 Nostrand Ave - 4th Flr Brooklyn, NY 11229 Attn: Martin Marks 7.16.04 tipple sent letter requesting documentation.////////////////////// 2/15/06: CBN Called Martin Marks (718) 332-0777 and left a message but haven't received anything back. 9/22/06 called A-1 Crown Leak re: tank failure. left info. they will get back to me. bf 8/17/12 Spill re-assigned to T. Demeo as per RSE. bf 1/3/13 AFrischeisen intern Revious TTF letter mailed Dec 13, 2012 was returned as undeliverable. Resent TTF letter to revised address and upped to eDocs. 8/1/14 TJD File review - TTF (wet/dry leak) reported by A1- Crown Leak Detection associated with (2) 10K UST's manifolded. A review of PBS documents reveal the registration expired on 7/14/02. Multiple calls to contacts listed on PBS registration were made - all contact information is out of date. DeMeo was able to obtain information for the current management company FS Residential Management and the current management agent Ms. Miriam Stolin (718.875.9225). Teleconference with Ms. Stolin reveal that property is a co-op comprised of (5)building for a total of 292 units. Ms. Stolin states she has managed the property since 2009 and was unaware of any open spill file associated with this site - she further states that in April 2014 the complex converted to natural gas from dual fuel and will no longer be using oil - they will be abandonning the UST in place. DeMeo requested of all documentation available concerning the tank system at this property. 8/12/14 TJD File review - duplicate PBS numbers found for this facility 2-279617 & 2-608923. Property has had multiple management agents since reported tank test failure - historical records are unavailable. Facilty was able to produce records (work orders and invoices) for work associated with the

APARTMENT BUILDING - TTF (Continued) **S106124004**

(2)10K UST's registered at this facilty. The contractor Petroleum Tank Cleaners isolated the tanks and performed tank only tests with passing results in February 2004, a failed cross-over line was identified and replaced in May 2004, followed by passing system test in June 2004. There is no mention of any contamination discovered during the replacement of the failed cross-over line by PTC. Another passing system test was performed in January 2012. As per information obtained during discussions with the current property manager the facility has switched to a natural gas in April 2014 and will no longer be using the (2)10K UST's which they plan to close in place ASAP. Based upon the documentation available - no further action is required at this time. Spill is administratively closed. Due to the multiple PBS numbers associated withthis property Spills (DeMeo). referred the PBS discrepancies to PBS unit (Zielinski) for any necessary follow-up. All available documentation has been uploaded to DECDOCS."

any and records.Thank you and feel free to call me at 718-482-6752 or email me to discuss. As per Vought if no response to email received a formal letter will be sent to the owner requiring the same information. Response by Chris: Hello in response to the request for information about this property I can offer the following. I performed a tank test as a sub-contractor of S&J Fuel Oil Co. in Brooklyn which resulted in a failure. As a result of that test, I called in the failure and had no further interaction with S&J Fuel on this matter or anyone else. I assumed the were going to fix the problem and have me re-test but they never called me back in. If I can offer anything else please let me know. You can reach me on my cell at any time 347-397-8298. If I recall correctly this was a 2 oil system at the time of the test. 8/06/2015: Rashad Replied to Chris' email: Thank you for your help would you happen to have a contact (name, number & email) at S&J Fuel that would be able to help me with this case? 8/20/2015: Rashad Emailed Chris & SJ Fuel: I spoke with Jeff and we would like to know which parts failed the wet leak and which parts failed the dry leak referred to in the tank test report. If we know this information it may save the property owner (NYC HPD) a costly investigation. Note I have copied S&J Fuel above in case they have any additional information. Andrew from SJ Fuel called and reported the tank was removed and that there was no contamination. He will be emailing the documents he has. Chris emailed: The test performed on this tank was a full system test indicating two types of leaks. On the Mic a dry(hiss) was heard and a slight bubble. This tank was wrapped in concrete and no definitive cause of leak could be determined under my scope of testing. The failure was called in and no further work was performed by my company. SJ fuel emailed back with document, it was uploaded to D2 and indicated gas free certificate, and certificate of affidavit which insicates tank and all line removal (vent/fill/supply/return). Called Derek 917-559-4337 from spill report and PBS registration he indicated all piping was above ground and no contamination was found. Case can be prepared for closure as per Vought 8/21/2015: Rashad Uploaded closure report to D2. Email sent to Chris, Support@sjfuelco.com, and mpianelli@sjfuelco.com: We reviewed the data and attached is a standardized letter closing spill case#1214526 for 404 Albee Square, Brooklyn NY. The original letter was mailed to the current owner NYC HPD. "

Remarks: "Tank test failure"

Tank Type:	Steel/carbon steel
Tank Internal:	None
Tank External:	NONE
Pipe Location:	Aboveground
Pipe Type:	Steel/Iron
Pipe Internal:	None
Pipe External:	None
Secondary Containment:	None
Leak Detection:	None
Overfill Protection:	None
Dispensing Mthd:	Not reported
Test Date:	Not reported
Date Closed:	00/00
Status of Data:	Minor Errors
Capacity (gal):	2500
Lat/Long:	40|42|20 / 73|59|00
Federal ID:	Not reported
Inspected Date:	03/26/1997
Inspector:	AS
Renew Date:	11/27/2000
Inspected State:	Not reported
Pipe Flag:	True
Vessel ID:	Not reported
Reserve Flag:	True
Tank Status:	Abandoned/Removed
COI Date:	/ /
Date License Issued:	04/01/2001
Date License Application Received:	03/12/2001
Chemical Bulk Storage Number:	2-000064
Pollution Discharge Elimination System Num:	0-005151
Date Legal Agent Filed with Secretary of State:	09/84

DEC Memo:	"Keith Dewar #00245, 1/05/04 AT 18:20 Shift Supervisor Earl Rhem

HUDSON AVENUE GENERATING STATION (Continued) **S102633617**

discovered an oil spill in the Annex basement. The spill of 8 gallons was in the turbine reservoir oil conditioner system (Kaydon) moat. The spill was caused when excess water in Kaydon Unit was extracted to a waste drum causing the waste drum to overflow. The oil was cleaned up by Operating Mechanic Mike Slater using a shop vac and oil absorbant pads.Cleanup was completed @ 08:10. Report was filed by Keith Dewar #00245 on 1/05/04 @ 18:25"

Remarks: "8 GALLONS SPILLED FROM OVERFLOW-ALL CONTAINED IN A MOAT."

DEC Memo:	"02/12/21-Hiralkumar Patel. alternate address: 80-86 Willoughby St, 374-382 Bridge St no other spills found. PBS #: 2-359319. as per PBS record, the site has two (2) 3,000 gal #2 oil USTs, in-service, installed in Oct. 1946. Sisters of St. Joseph **property owner as per property tax bill** c/o Rocklyn Asset Corp. 243 Prospect Park W Brooklyn, NY 11215 Attn.: Colleen Ceriello **property manager** Ph. (718) 965-7375/7352 email: cceriello@diobrook.org cceriello@rocklynasset.org 1:14 PM:- left message for Ms. Ceriello. 02/16/21-Hiralkumar Patel. 10:01 AM:- left message for Tom Leddy at Protest. 11:09 AM:- sent TTF letter via email to Ms. Ceriello. email copied to DEC Zhune, Victoria and Tom. case assigned to DEC Zhune. 4/5/21 Zhune- Casey Martinez sent the following email. I m following up on your call to me on 3/30 about the status of the tank. To recap our conversation, we hired Riteway and they are performing a second test since the tank body passed on the first test. The second testing will be to test the lines and will commence on 4/6. We will keep you updated. 7/8/21-David Chan emailed the report dated July 6, 2021 On February 22,2021 Riteway was contracted by united American Land LLC.,

BROOKLYN PROSPECT CHARTER SCHOOL (Continued) **S127481832**

to investigate a tank test failure (performed by others). Riteway proceeded to troubleshoot the failed system. The tanks were isolated and all lines were tested. The suction/ return lines passed for both tanks, the vent failed for both tanks and the fill line failed for tank #1(please see enclosed line test reports).Through further investigation and testing, it was determined that the interior portion of the fill line was tight and passed a pressure test(please see enclosed passing line test report for tank #1). A tank only was performed on both the tanks (on 3/19/2021) which passed (pleas see enclosed tank only tests). Samples were taken from the small portion of the exterior fill line that failed. The escavated area was 20 x 20 and 10 deep. Both samples were taken at 10 from grade. Refusal was at 10 because of a concrete enclosure that contained electrical and fiber optic lines for the property. Samples were field screened via PID meter and both specimens were clean. Thre was no odor, nor contamination observed at the buried exterior portion of the lines (please see enclosed sitemap). The old fill lines were abandoned and relocated to the steel grating (Complete with spill containment box) adjacent to the building foundation wall (please see enclosed sitemap). Both tanks (001,002)and systems were re-tested on April 16, 2021, which passed (please see enclosed tank test results). The site is clean and free from contamination. Spill Closed."

Remarks: "2 tanks - 3000 ust tank test failure gross dry leak no product loss"

Site Description: Location: The Brooklyn Gas Light Works Manufactured Gas Plant (MGP) is located at 1 Hudson Avenue in Brooklyn, New York in Kings County. Site Features: An active generating station (Hudson Ave.), owned by Consolidated Edison, currently operates at the site. The site is covered by buildings, some asphalt parking areas and walkways. Current Zoning and Land Use: The site is currently an active generating station and is zoned for light manufacturing and commercial uses. The nearest residential area is 0.3 miles to the south. Past Use of the Site: The MGP plant operated from 1849 until

K - BROOKLYN GAS LIGHT A (Continued) **S111009485**

approximately 1900. The property was sold to Brooklyn Edison Company between 1922 and 1928. The MGP buildings and associated above-ground structures were subsequently removed and the generating station was built. Consolidated Edison purchased the property and generating station in approximately 1950. Site Geology and Hydrogeology: The general geology in the area is artificial fill and alluvial deposits ranging between 15-20 feet thick. The next layer consists of glacial deposits (clay, sand, gravel and boulders); then a layer of Gardiner's Clay; coarse sand and gravel; a clay and silty clay layer; a sand layer interbedded with gravel clay and silt; and finally a bedrock consisting of gneiss, schist and pegmatite. Overall groundwater ranges between 5 and 22 feet below ground surface (bgs), and generally flows to the north towards the East River. The site groundwater is tidally influenced.

Env Problem:	Environmental conditions at the site will be determined during the Site Characterization.
Health Problem:	The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

Spiller Phone:	(718) 852-1029
Spiller Extention:	207
DEC Region:	2
DER Facility ID:	434212
DEC Memo:	"2/15/13-Vought-Duty desk officer. Vought called Bob Urban (ProTest Ph:631-321-4670 Fax:631-539-0822) for more information. Tank was a 10,000-gallon #2 fuel oil UST and had a dry leak and had always been empty as it was a backup tank and was relined eight years ago. Tank passed test five years ago but had not had oil for at least eight years. Proposal to isolate and retest will be submitted to Brooklyn Friends School. Vought inspected PBS #2-252174 and noted site has two 10,000-gallon #2 fuel oil USTs. Spill addressed to DEC Demeo as TTF at PBS site. Owner of site as per PBS and addressee for TTF is: Brooklyn Friends School 375 Pearl Street Brooklyn, NY 11201 Attn: Michel Rimpel Ph:(718)852-1029 Vought called and spoke to site contact Michel Rimpel (Ph:718-852-1029) and told him that Vought to send TTF letter and also provided contact info for DEC Demeo in case of further questions. Vought prepared TTF letter for signature by DEC Demeo with above address. DEC Demeo signed TTF letter and Vought added to e-docs and sent to address above. 4/30/14 TJD File review. Out of service (empty) tank failed tightness test with a dry leak. Contractor (ProTest) responded to location to perform a tightness test on an out of service UST (10K). This tank is reported to have been empty and not in use since previous testing 5 years earlier. Initial failure was reported on 2/15/13 - reported as a dry leak. ProTest returned to the propertty on multiple occassions - uncovering top of UST to access manway and piping connections. Manhole was regasket and supply/return lines were isolated still resulting in a dry leak failure. On 3/17/14 Protest isolated the remote fill and vent piping associated with the tank - replaced the vent pipe and still had a failure on system test. On 3/19/14 the remote fill pipe was disconnected at elbow and the underground section of piping was tested and passed. With the remote fill plugged at elbow, the system then passed a tightness test - the remote fill remains plugged and tank remains empty and out of service. As per ProTest There was no evidence of visible contamination within the excavation . Tank will remain out of service and tank owner plans to abandon in place. Based upon the information provided, no further action is required. All documentation has been uploaded to DECDOCS. Spill closed. "
Remarks:	"10000 gallon tank failed test and tank has not been used and has been empty for past eight years"

Updated By:	LSZINOMA
Site Description:	Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial. Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium- to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to

388 BRIDGE STREET (Continued) **S116041493**

100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.

Env Problem: Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

Site Code: 410416
Site Description: Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial. Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium- to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5

388 BRIDGE STREET (Continued) **S116041493**

miles northeast of the site. Certificate of Completion issued on 12/19/2013.

Env Problem: Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

Site Code: 410416
Site Description: Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial. Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium- to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to

388 BRIDGE STREET (Continued) **S116041493**

regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.

Env Problem: Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

Site Description:	Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial. Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium- to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on

388 BRIDGE STREET (Continued) **S116041493**

	12/19/2013.
Env Problem:	Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.
Health Problem:	Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

DEC Memo:	"Obligado- I called Mark Salamac. He said he believes that the tank was empty at the time of the test. He said the tank failed probably due to the configuration of the fill port, which he said causes automatic failure. he has not been retained to do any more work at the site. Obligado - I called the DCAS Chief Engineer Joseph Wagner. He said he will have someone call me back with the particulars of the site. From PBS this is a 40,000 gallon #2 heating oil UST. I called back PTC to get mroe information. I spoke with Mr. Lara to confirm whether there was product in the tank. He said the tank had 32,000 gallons in it when it was tested. The leak was determined to be an above liquid leak . He thinks it is possibly a vent issue. He said this is a union site and they stick the tank daily to confirm the product levels. He doesn't suspect there was a release from the tank. Per Austin, spill will be assigned to Vadim Brevdo. 10-28-2014 - V. Brevdo Received a call from Darius Vasquez of Department of Citywide Administrative Services (212-386-0509), who requested extension to comply with the requirements of tank taseting and fixing the tank. Mr. Vasquea advised the Department that there was no actual release of product and that this is dry spill. I requested an e-mail with the extension request, provided an e-mail address to write to me. VB. Mr. Vasques said he will send an e-mail. VB. 11-06-2014 - V. Brevdo Department approved 45-day extension request from DCAS to investigate, make repairs to the tank and submit report to the Department for review. VB 01-21-2015 - V. Brevdo e-mail from Dario Vazquez of NYC Dept. of Citywide Administrative Services: Mr. Brevdo, Please see the attached pdf with the NYC DCAS purchase order to make repairs and retest Brooklyn Supreme Court (360 Adams Street, PBS # 2-217050) tank. I will inform your office once the contractor is schedule to be onsite to make repairs and retest tank. If any further information is needed please do not hesitate to contact me. Sincerely, Dario A. Vazquez, FMA,RPA - Executive Director of Facility Operations, Asset Management P: (212) 386-0509 - F: (212) 313-3384 - Dvazquez@dcas.nyc.gov 01-21-2015 - V. Brevdo e-mail response to NYC Dept. of Citywide Adminstrative Services: Mr. Vazquez: Thank you for the update. Yes, please inform me once the contractor is schedule to be onsite to make repairs and retest tank. V. Brevdo VB 02-20-2015 - V. Brevdo e-mail from Dario Vazquez of NYC Dept. of Citywide Administrative Services: Mr. Brevdo, Please see the above invoice and work tickets from Petroleum Tank Cleaners LTD indicating that the repairs and tightness testing was successful for Brooklyn Supreme Court. (Spill Case # 1406924) Once I receive the official statement from the contractor I will forward it to your office to close out

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"8/15/2016: Rashad 20 Jay Street has alternate addresses of 26-28 Jay Street, 22 John Street, 30 John Street, 19-37 Pearl Street, and 145-165 Plymouth Street. PBS 2-361429 found for site, there is a 5000 gallon #4 fuel oil AST, three 4000 gallons diesel UST closed prior to 1991, one 4000 gallon gasoline UST closed prior to 1991. Called and left message for Ricky. Spoke to Ricky he said leak is dry leak and that he is technician. Called managing company and they are planning to repair gaskets and have tank retested. Email: eespinosa@twotreesny.com. TTF emailed to property manager. Spill assigned to DEC Piper for follow up. 8/19/16- DEC Piper received and reviewed passing tightness test report along with repair summary. Based on work to date and passing results. This spill is closed. See report in DEC Docs if warranted. Closed. "
Remarks:	"PBS# 2-361429."

DEC Memo:	"2/25/19-Lin-Air leak. Tank was cleaned out and is out of service. Oil company contact info 7183679800 ext 219. 2/26/19-Lin-According to contractor, they cleaned out the tank and put coupon through the bottom of the tank and found concrete. The tank is vaulted and there was no visual indication of a spill or soil impacts. The system tightness test failed and they did not locate the leak. After discussion with DEC falvey, DEC require the all the lines to be tested to confirm there was no leak in the lines. 5/9/19-Lin-Received tank system tightness testing report. The tank failed the test while all the lines passed. The leak is believe to be a seal on top of the tank. Five openings were cut along the centerline in the bottom of each tank. Each opening showed solid clean cement with no signs of oil contamination. Therefore no oil was released into the environment. Tank is to be abandoned. "
Remarks:	"pbs 2-266248 two tank test failures"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 12/26/2001 - Tank test failure. DEC required the owner to file a new PBS form (signed by the owner) stating that the tank would be removed. Kevin O'Connor from Action Remediation (516-781-3000 ext 2421) stated that the tank would be pulled on Thursday Dec 27th, while the school is closed for Christmas vacation. Sangesland requested Action Remediation to take endpoint samples from the excavation and to take several color photos of the tank and excavation area. A proper Tank Closure report must be submitted to the DEC. 1/11/2002 - Sangesland received a Draft version of the report. Apparently only a single composite sidewall sample was taken along with a bottom endpoint sample. Sangesland called Kevin O'Connor to discuss the format and content of the Tank Closure report and requested several additional items. This Tank Closure report should include: 1) Discussion of what the tank problem was, what was done to solve/clean it, how the close out went. 2) Discuss the end point sampling - What was found, did it exceed limits (compare results to TAGM). 3) If anything exceeds limits, state how it will be

SACRED HEART CHURCH (Continued) **S105135425**

remediated, or justify why this level of contamination is acceptible to be left on site. 4) Photos of the excavation. 2/1/02 - Sangesland received another package of information from Kevin O'Connor at Action Remediation. This package included the same information submitted earlier, plus photos. MISSING FROM THIS REPORT WAS: 1) THE SPILL NUMBER 2) THE NARRATIVE OF WHAT HAS BEEN DONE ON THE SITE AND WHY 3) THE CONSULTANTS REVIEW AND INTERPRETATION OF THE LAB RESULTS 2/7/2002 Protest sent a letter dated 1/30/2002 (Mailed 2/4/2002) Which included the information listed above (1/2/02 notes). Minor contamination continues to exist, but structural problems limit the ability to excavate any further. (Use of biologicals was not suggested by Protest). Spill Status - No Further Action "

Description: The Navy Barracks are located in the County of Kings, Borough of Brooklyn, City of New York, State of New York. The site is bounded on the North by Flushing Avenue, on the South by Park Avenue, on the East by Vanderbilt Avenue and on the West by Clermont Avenue. The site was improved by a six story concrete building utilized as a military prison and three story brick building used as barrack and for administrative purposes. The NYC Department of Corrections is used as the Brooklyn Correctional Facility. The former military prison building and associated utilities are beneficially used by the present owner the New York City Department of Corrections. The former Navy barrack and administrative building is abandoned and owned by GSA. There are number of underground storage tanks, which were never used by the present owner.
History: As per Declaration of Taking dated 29 January 1941, the Department of the Navy obtained 2.638 acres fee. On 15 April 1975, the Department of the Navy conveyed 2.638 acres fee to GSA. As per quitclaim deed dated 4 June 1979, GSA conveyed 0.294 acre fee to the Department of Health and Hospitals Corporation (HHC) of the City of New York. Said deed did not contain any recapture or restoration clauses but did contain a restrictive clause (to be used public health purposes for a period of thirty years -from the date of conveyance). Updated By:	BXANDERS

Site Description: Location: Naval Station - Brooklyn is located in a flat industrial area within the New York Naval Shipyard in the Williamsburg section of Brooklyn, north of Flushing Avenue, between Clinton Avenue and Williamsburg Place. Site Features: The East River is 1500 feet west of the site. There are two working electrical substations at the site which have three transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls. They are located in the northern portion of the property, adjacent to the property line. Current Zoning/Use(s): Industrial Historic Use(s): A 1987 Phase I investigation showed that the PCB content of the dielectric fluid in the transformers ranged from 250 to 590 parts per million (ppm). Transformer spills stained slabs and soil located beneath the transformers, with soil contamination ranging from 0.5 to 870 ppm. The PCB containing transformers were subsequently retro-filled. Remedial work began in the summer of 1994 and concluded in 1995 and included power-washing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. Three monitoring wells were installed to determine whether PCBs had contaminated the groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. It was determined that further monitoring at this site was not warranted. In July 2012 NYSDEC placed an Environmental Notice on the Transformer Area which requires written approval from NYSDEC prior to any disturbance or excavation of the soil, proper management and/or disposal of any contaminated materials exposed or removed, and prior approval by NYSDEC for any change in use. The Transformer Area has been delisted from the Registry of Inactive Hazardous Waste Disposal Sites in New York State.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete, to extent that the Navy was able to work around the active transformers. The primary contaminants of concern at the site, PCB's, were addressed by the removal action completed in 1995. Due to the location in a walled transformer yard beneath the crushed stone site cover, and the limited amounts remaining in the soil, residual PCB contamination in the soils will not impact the East River. Three rounds of groundwater samples were non-detect for PCBs. Special Resources Impacted/ Threatened: None

NAVAL STATION-BROOKLYN, TRANSFORMER AREA (Continued) **S105586295**

Health Problem:	Since some contaminated soils remain at the site below concrete or clean backfill, people will not come in contact with contaminated soils unless they dig below the surface materials. In addition, the site is fenced, which restricts public access.

Site Description:	Location: Naval Station - Brooklyn is located in a flat industrial

NAVAL STATION-BROOKLYN, TRANSFORMER AREA (Continued) **S105586295**

area within the New York Naval Shipyard in the Williamsburg section of Brooklyn, north of Flushing Avenue, between Clinton Avenue and Williamsburg Place. Site Features: The East River is 1500 feet west of the site. There are two working electrical substations at the site which have three transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls. They are located in the northern portion of the property, adjacent to the property line. Current Zoning/Use(s): Industrial Historic Use(s): A 1987 Phase I investigation showed that the PCB content of the dielectric fluid in the transformers ranged from 250 to 590 parts per million (ppm). Transformer spills stained slabs and soil located beneath the transformers, with soil contamination ranging from 0.5 to 870 ppm. The PCB containing transformers were subsequently retro-filled. Remedial work began in the summer of 1994 and concluded in 1995 and included power-washing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. Three monitoring wells were installed to determine whether PCBs had contaminated the groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. It was determined that further monitoring at this site was not warranted. In July 2012 NYSDEC placed an Environmental Notice on the Transformer Area which requires written approval from NYSDEC prior to any disturbance or excavation of the soil, proper management and/or disposal of any contaminated materials exposed or removed, and prior approval by NYSDEC for any change in use. The Transformer Area has been delisted from the Registry of Inactive Hazardous Waste Disposal Sites in New York State.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete, to extent that the Navy was able to work around the active transformers. The primary contaminants of concern at the site, PCB's, were addressed by the removal action completed in 1995. Due to the location in a walled transformer yard beneath the crushed stone site cover, and the limited amounts remaining in the soil, residual PCB contamination in the soils will not impact the East River. Three rounds of groundwater samples were non-detect for PCBs. Special Resources Impacted/ Threatened: None

Health Problem: Since some contaminated soils remain at the site below concrete or clean backfill, people will not come in contact with contaminated soils unless they dig below the surface materials. In addition, the site is fenced, which restricts public access.

Updated By:	DJEATON
Site Description:	The Kent Avenue Generating Station Site is located in Brooklyn, NY. It is along the waterfront (Wallabout Channel, trib to East River) on the west side of Kent Avenue, south of the intersection with Division Avenue. The site is the location of the former Kent Avenue Generating Station, which has since been demolished. Excepting activities related to building demolition and property rehabilitation, with respect to current use the site is considered inactive. The uses of the surrounding parcels are varied: across Kent Avenue is a NYC Park (Roberto Clemente Ballfield); immediately to the south is the Brooklyn Navy Yard 13 Acre Parcel Site (NYSDEC Site No. 224019A); immediately to the north across Division Avenue are commercial uses; properties to the northeast and to the southeast appear to have residential uses. Prior uses that appear to have led to site contamination include discharges during the period of operation of the power plant and on-site re-use of prior demolished structures as fill material. A number of environmental investigations of the property have occurred including a Phase II (2000) and other investigations focused on particular issues or areas of the site from 2006 to present. Reclassified to N. See V00732 - Kent Avenue Station Site. Work to be done under VCA Amendment.
Env Problem:	This site has been successfully remediated. The information on the remedy is included under site V00732. The following description was true during the early stages of work at this site. The primary contaminants of concern at the site known at the time include PCBs, asbestos, various metals, petroleum constituents and PAHs. Investigations indicate SCG exceedances of PCB and petroeum compounds in sediments/ sludge contained in a large concrete structure (known as the ash pit); asbestos, metals and PAHs in subsurface soils/fill; and an area of groundwater petroleum contamination in the southwest corner of the property. The significance of the contamination needs to be determined.

Date Record Updated:	06/18/2021
Updated By:	DJEATON
Site Description:	Location: The site is located in a mixed-use area along the Brooklyn waterfront. It is bounded by Kent Avenue to the east, Wallabout Channel to the west, Division Avenue to the north, and the Brooklyn Navy Yard to the south. Site Features: The site has been sold to a developer but is still currently vacant and open. In the subsurface, a large concrete-lined pit is present in the northwest corner of the site and along the edge of the Wallabout Channel. A large concrete slab which is part of a former power plant foundation occupies the center of the site. The slab has been covered with clean fill. Current zoning/use. The site is zoned for industrial use but is currently vacant. It is surrounded by commercial buildings and multiple occupancy residences. Past Use of the Site: The site was previously an electrical generating station and substation from 1906 until the late 1990s. The site was razed from 2007 to 2009. The main sources of contamination were the concrete-lined ash pit storage area and by-products of the electrical generating process which are scattered across the site. Site Geology and Hydrogeology: The site is underlain by a 5 to 10 foot layer of fill material. Under the fill are intermingled layers of silt and sand down to roughly 100 feet

KENT AVENUE STATION SITE (Continued) **S102663001**

	below grade. Beneath the silt and sand is a clay confining unit. The water table lies roughly 8 feet below the ground surface. Based on the site s proximity to the Wallabout channel, groundwater levels are probably tidally influenced. The far western edge of the site is built out on piles over the bank of the Wallabout Channel.
Env Problem:	Active Remediation at the site is complete. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) in soil, volatile organic compounds (VOCs) in groundwater and polychlorinated biphenyls (PCBs) in the ash pit sediments.
Health Problem:	The site is completely fenced, which restricts public access. Persons who dig below the ground surface may come into contact with contaminants in the subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

Record Add:	11/18/1999
Record Upd:	04/14/2022
Updated By:	SMQUANDT

Site Description: Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin)on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes

BROOKLYN NAVY YARD 13 ACRE PARCEL (Continued) **S105586296**

	industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychloriinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds and PCBs in the soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site.

Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds and PCBs in the soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site.

Site Description:	Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin)on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychloriinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down

Site Code:	57818
Site Description:	Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin)on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychloriinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds and PCBs in the soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/22/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2023

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

PFAS 3: PFAS Environmental Site Remediation List

Per- and Polyfluoroalkyl Substances (PFAS) are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Fluoropolymer coatings are blends of resins and lubricants used in products such as water-repellent clothing, furniture, adhesives, paint and varnish, food packaging, heat-resistant non-stick cooking surfaces and insulation of electrical wires. Chemicals in this group include perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS).

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

West Map:	14317809 JERSEY CITY, NJ
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

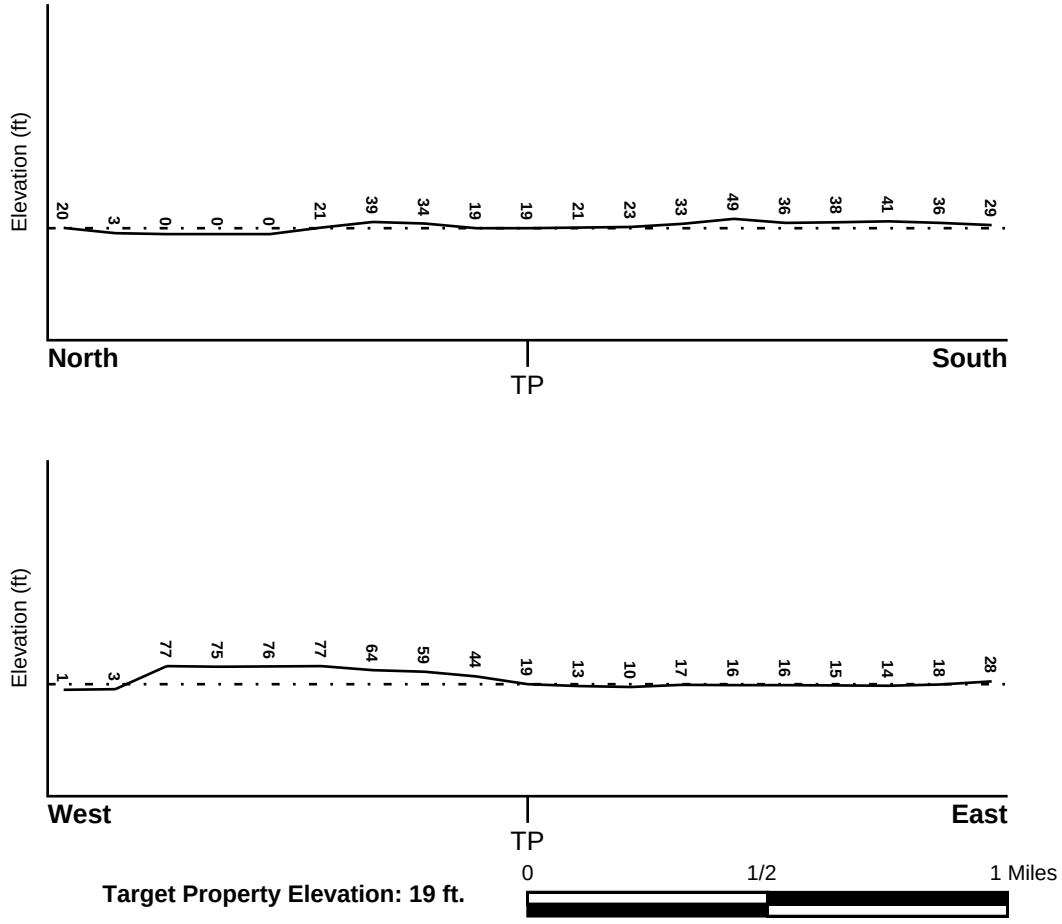
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 19 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970203F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

3604970204F	FEMA FIRM Flood data
3604970211F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile East
Site Name:	Naval Station Ny
Site EPA ID Number:	NY5170022250
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	14 feet in a well located 1 mile southeast of the site.
Hydraulic Connection:	Information is not available about the hydraulic connection between the surficial aquifer (upper glacial till) and underlying aquifer(s). Bedrock is present at an estimated depth of 100 feet.
Sole Source Aquifer:	A sole source aquifer is persent at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Ordovician
Code:	Oe *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Re: Freedom of Information Request
240 Nassau Street
Block 110, Lot 25
Brooklyn, New York
Langan Project No. 170789101

Dear Sir or Madam:

Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have.

The Subject Property is located at **240 Nassau Street** in Brooklyn, New York and identified as Brooklyn Tax **Block 110 Lot 25**. The Subject Property is bordered by Nassau Street followed by a multi-story residential building to the north, a school (PS287) to the east, and a park (Golconda Playground) to the south and west.

Please contact me at 212-479-5625 with any questions or send your response to my attention at bkoontz@langan.com or at the below address:

Langan Engineering and Environmental Services, P.C.
21 Penn Plaza
360 West 31st Street, 8th floor
New York, New York 10001-2727

Thank you in advance for your cooperation.

Sincerely,

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

FOIL Appeals Officer
Office of General Counsel
New York State Department of Environmental Conservation
625 Broadway, 14th Floor
Albany, NY 12233-1500

Your FOIL request is now closed. For further assistance, please call (718) 482-4912 and reference FOIL #W119445-080423, or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

Dear Philip Lynch,

The NYC Department of Health and Mental Hygiene is retuning your Freedom of Information Law request with the instructions for resubmitting it below. Please follow the instructions and we will be able to process the request. If you have any questions about these instructions, please contact the Records Access Officer at bodonnell1@health.nyc.gov

Phase I Environmental Site Assessment (ESA) Records
All data related to indoor environmental complaints is here. Before submitting a FOIL request for Environmental Site Assessment records, you must check this database to see if the site you are investigating has any entries.

1. If your site has no entries, then we have no indoor environmental complaint records and your ESA FOIL request should ***only*** concern well sites. Please see below for information on accessing other records that may be relevant to your ESA investigation.

2. If your site does have an entry or entries, you will need to provide the date(s) of the indoor environmental complaint(s) for us to locate the related records.

3. ***The Department will not process any ESA FOIL requests without the information required above.***

The following are some common environmental issues that are addressed by *other agencies* that may be relevant to your ESA investigation:

- Chemical spills that impact outdoor areas – NYS Department of Environmental Conservation (NYS DEC), NYS Department of Health, and NYC Department of Environmental Protection (NYC DEP)
- Underground storage tanks – NYS DEC and NYC DEP
- Community air impacts – NYC DEP
- Sewers – NYC DEP
- Environmental impacts to parkland – NYC Parks Department

Please contact these agencies for records. For other NYC agencies, you can submit FOIL requests here

Thank you,

FOIL Administration

New York City Fire Department Fuel Tank Special Report

The New York City Fire Department issues New York City Fire Code Fuel Tank Inspection Reports and issues violations for bulk fuel storage tanks within New York City. The FDNY does not maintain copies of Fuel Tank Inspection Report records for bulk fuel storage tanks located outside of New York City.

Where do I obtain a copy of my FDNY Fuel Tank Special Report?

- You can perform an on-line search for a summons, see a copy of the summons, find your NYC Office of Administrative Trials and Hearings (OATH) Environmental Control Board (ECB) hearing date, hearing results, and make payments. You can search for this information by name, address or the summons number. You can search for this information by name, address or the summons number by going to the Summons Finder.
- You may obtain copies from the FDNY Public Records Unit through the following methods,
    - In Person
    - By Mail
    - Online

If you are picking your Report up in person or want to request the records by mail, please either visit or mail requests to:

FDNY Public Records Unit
9 MetroTech Center- First Floor
Brooklyn, N.Y. 11201
Use the FLATBUSH AVENUE ENTRANCE
Hours of Operation: Monday - Friday 9:00am to 4:00pm (except Holidays)
(718) 999-1998 or 1999

Who is eligible to obtain a copy of a FDNY Fuel Tank Special Report?

- Anyone may obtain a copy of a FDNY Fuel Tank Special Report.

What is the fee for a copy of an FDNY Fuel Special Tank Report?

- The fee is $10.00 per Report.
- Payments for Mail or Online requests may be made by check or money order payable to the New York City Fire Department - **Do not send cash**.
    - *NOTE: Payments submitted from foreign countries must be made by a check drawn on a United States bank or by international money order.*

Appendix G

Resumes of Environmental Professionals

MIMI RAYGORODETSKY

PRINCIPAL/VICE PRESIDENT

ENVIRONMENTAL ENGINEERING

Ms. Raygorodetsky sources and directs large, complex environmental remediation and redevelopment projects from the earliest stages of pre-development diligence, through the remediation/construction phase, to long-term operation and monitoring of remedial systems and engineering controls. She has a comprehensive understanding of federal, state and local regulatory programs and she uses this expertise to guide her clients through a preliminary cost benefit analysis to select the right program(s) given the clients' legal obligations, development desires and risk tolerance. She is particularly strong at integrating the requirements of selected programs and client development needs to develop and design targeted and streamlined diligence programs and remediation strategies. Ms. Raygorodetsky is also highly skilled in integrating remediation with construction on large urban waterfront projects, which tend to more complex than landside projects.

In 2022, Bisnow honored Ms. Raygorodetsky with the Women Leading Real Estate Award and Crain's New York Business named her as a Notable Woman in Construction, Design & Architecture.

SELECTED PROJECTS

- 25 Kent Avenue, Due Diligence for Purchase of a Brownfields Location, Brooklyn, NY
- Ferry Point Waterfront Park, Redevelopment of a Former Landfill into a Park, Bronx, NY

GREGORY C. WYKA, PG, LEED AP

SENIOR PROJECT GEOLOGIST

ENVIRONMENTAL ENGINEERING

Mr. Wyka is a professional geologist with experience in regulatory government, brownfield redevelopment, and environmental liability consulting. His expertise includes due diligence, real estate development, site characterizations, remedial investigations, conceptual site modeling, remedial strategies and designs, remedial action implementation and management. Mr. Wyka maintains an understanding of how to integrate remediation with property redevelopment and he provides technical, regulatory, logistical, and risk management guidance to clients, including developers, owners, and environmental attorneys. Mr. Wyka manages construction projects and remediation projects in the New York State Inactive Hazardous Waste Disposal Site Program (State Superfund Program), New York State Spill Response Program, New York State Brownfield Cleanup Program, and the New York City E-Designation and Voluntary Cleanup Programs. Through many of these projects, Mr. Wyka has routine exposure to other real estate development services, including civil engineering, geotechnical engineering, surveying, natural resources and permits, land use planning, hazardous building materials, environmental compliance, landscape architecture, and waterfront engineering, that has shaped him into a resourceful and practical asset to his clients.

ELIZABETH MCCONNELL

SENIOR STAFF ENGINEER

ENVIRONMENTAL ENGINEERING

Ms. McConnell is an engineer with over six years of experience in the environmental industry. She has managed Voluntary Cleanup and Superfund sites as a regulator at the Texas Commission on Environmental Quality. She has extensive field experience ensuring compliance with construction specifications, including documenting field conditions and writing daily reports. In addition to her consulting and regulatory experience, her graduate program focused on data analysis applied to site remediation, culminating in her thesis forecasting behavior of groundwater plumes based on historical data. Her background combining geology, engineering, and data science enables her to take a comprehensive view of projects and communicate effectively with professionals from many disciplines.

Re: Phase I Environmental Site Assessment
50 Navy Street, Brooklyn, NY
AKRF Project Number 230938

Dear Mr. McCarty,

AKRF, Inc. (AKRF) is pleased to submit this Phase I Environmental Site Assessment for the above-referenced Subject Property. This report includes the findings of a reconnaissance of the Subject Property, and an evaluation of readily available historical information and selected environmental databases and electronic records. The report meets the requirements of ASTM International Standard E1527-21, unless noted otherwise in Section 7.0, "Limitations and Data Gaps."

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely,
AKRF, Inc.

Axel Schwendt
Vice President

J. Patrick Diggins

APRIL 2026

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by 240 Nassau Street Owner, LLC (the User and Client) to prepare a Phase I Environmental Site Assessment (ESA) of 50 Navy Street, identified as Brooklyn Borough Tax Block 111, Lot 1 (the "Subject Property"). The 1.28-acre Subject Property was developed with a three-story public school and an exterior courtyard containing a playground. The Subject Property location is shown in Figure 1 and a Subject Property detail map is provided as Figure 2.

This Phase I ESA was performed in conformance with ASTM International (ASTM) Standard E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Any exceptions to, or deletions from, the Standard are described in Section 7.0. The term "Recognized Environmental Condition" (REC) means: (1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historical REC (HREC), Controlled REC (CREC), and *De Minimis* Condition.

A Tier 1 Vapor Encroachment Screen was also conducted in accordance with ASTM Standard E2600-22, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*. The term "Vapor Encroachment Condition" (VEC) means the presence or likely presence of chemical of concern (COC) vapors in the subsurface of a property caused by the release of vapors and/or groundwater either on or near the property.

The assessment revealed the following:

Recognized Environmental Conditions (RECs)/Vapor Encroachment Conditions (VECs)

- Historical Underground Petroleum Bulk Storage (PBS) on the Subject Property – The Subject Property was registered in the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database as Facility No.: 2-354481 with two former 10,000-gallon underground storage tanks (USTs) [Tank 001 and Tank 002], which were reportedly closed-in-place in October 2022. Evidence of the former tanks, including a fill port and vent pipe, was observed during the renaissance. In addition, the Subject Property was listed in the NYSDEC Spills database (Spill No. 1903757) for a tank tightness test failure related to the former USTs. The former underground fuel oil storage and potential associated spill at the Subject Property constitutes a REC/VEC.
- Historical Uses on the Subject Property – Sanborn maps regulatory database listings identified historical uses at the Subject Property that included a filling station with three gasoline tanks, a metalworks and electroplating facility, a garage, and a printing shop. These former uses have the potential to have impacted subsurface conditions at the Subject Property.
- Historical Surrounding Property Uses – The area immediately surrounding the Subject Property was historically developed with a mix of industrial and manufacturing uses prior to 1887. These uses (included, but were not limited to, blacksmith services, painting, iron foundry services, electro-galvanizing works, glassworks services, auto repair, garages, filling stations, cork and paper processing, news printing, binding and publishing, livestock and slaughterhouses, and junk yards) have the potential to have impacted subsurface conditions at the Subject Property.

Business Environmental Risks

- Tank 003 (NYSDEC PBS Facility No. 2-354481) was a 4,000-gallon AST registered at the Subject Property and appeared to have been removed from the Subject Property without the proper regulatory administrative closure and constitutes a BER.

- Probable use of historic fill associated with historic Subject Property redevelopments with material of unknown origin constitutes a BER.
- The potential presence of polychlorinated biphenyls (PCBs), lead-based paint (LBP), and asbestos-containing material (ACM) in building materials at the Subject Property constitutes BERs.

De Minimis Conditions

- Small containers of building materials, cleaning chemicals, and paints associated with building maintenance were present at the Subject Property.
- Standing water, reportedly from minor leaks, and minor staining was observed in the boiler room and mechanical room of the Subject Property building cellar. A slight sheen (possibly a silt sheen) was observed within the sump pump in the mechanical room. No staining or floating petroleum like-product were noted.

Significant Data Gaps

- No significant data gaps.

Recommendations

Based on the conclusions of this Phase I ESA, AKRF recommends the following:

- A Subsurface (Phase II) Investigation should be conducted to assess the identified RECs/VECs. It is possible that a subsurface investigation or subsequent soil disturbance may uncover evidence of a petroleum spill or other situation reportable to NYSDEC and/or other regulatory agencies.
- During any future subsurface disturbance, excavated soil should be handled and disposed of properly in accordance with all applicable regulatory requirements. Any evidence of a petroleum spill must be reported to NYSDEC and addressed in accordance with applicable requirements. If any USTs are encountered, they should be properly assessed, closed, and removed in accordance with state and local regulations. Transportation of material leaving the site for off-site disposal should be in accordance with federal, state, and local requirements covering the licensing of haulers and trucks, placarding, truck routes, manifesting, etc. If dewatering is required during rehabilitation and/or construction activities, water should be discharged in accordance with New York City Department of Environmental Protection (NYCDEP) requirements.
- Prior to any renovation or demolition activities with the potential to disturb suspect ACM, an asbestos survey should be conducted. If these materials prove to contain ACM, they should be properly removed and disposed of in accordance with all federal, state, and local regulations prior to any renovation or demolition that would disturb those materials. ACM and assumed ACM must be maintained in good condition in accordance with applicable regulations.
- Unless there is labeling or test data that indicates that caulking, fluorescent lights, and other electrical and hydraulic equipment are not mercury- and/or PCB-containing, disposal (if required) should be performed in accordance with applicable federal, state, and local regulations and guidelines. Hydraulic elevators and associated underground pistons should closed and removed in accordance with applicable federal, state, and local regulations and guidelines. Other hazardous materials should be handled and maintained in accordance with applicable regulatory requirements.
- Any renovations or demolition activities with the potential to disturb LBP, or paint containing any detectable level of lead, should be performed in accordance with applicable regulations.
- Tank 003 (NYSDEC PBS Facility No. 2-354481) should be administratively closed with the NYSDEC with a proper letter of closure.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by 240 Nassau Street Owner, LLC (the User and Client) to prepare a Phase I Environmental Site Assessment (ESA) of the 1.28-acre property located at 50 Navy Street, located in the Vinegar Hill neighborhood of Brooklyn and identified as Block 111, Lot 1 (the "Subject Property"). At the time of the Phase I ESA, the Subject Property was improved with a three-story public school (P.S. 287 and Community Roots Charter School) and an exterior courtyard containing a playground. The Subject Property location is shown in Figure 1 and a Subject Property detail map is provided as Figure 2.

This assessment was performed in conformance with ASTM International (ASTM) Standard E1527-21 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process)* and incorporates the requirements of ASTM Standard E2600-22 (*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*). The purpose of this Phase I ESA was to identify, to the extent feasible pursuant to the processes described in the Standards, Recognized Environmental Conditions (RECs) in connection with the Subject Property. Any exceptions to, or deletions from, the Standards are described in Section 7.0. The scope included the following:

- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor, and/or groundwater) within, from, and onto the Subject Property.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical land use maps for the Subject Property and nearby sites were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Subject Property and other properties within the ASTM-defined radii: the National Priority List (NPL); Superfund Enterprise Management System (SEMS), including Superfund Enterprise Management System Archive (SEMS-ARCHIVE); Comprehensive Environmental Response, Compensation, and Liability Information System-No Further Remedial Action Planned (CERCLIS-NFRAP); Corrective Actions Report (CORRACTS); Resource Conservation and Recovery Information System (RCRIS); and Emergency Response Notification System (ERNS). Federal ASTM supplemental records reviewed included: Toxic Chemical Release Inventory System (TRIS); Superfund Consent Decrees (CONSENT); Records of Decision (ROD); National Priority List Deletions (Delisted NPL); and United States Brownfields.
- The following state regulatory databases were reviewed to determine the regulatory status of the Subject Property and other properties within a predetermined radii: petroleum and hazardous material spills (SPILLS); Leaking Underground Storage Tanks (LTANKs); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Waste Disposal Site Inventory (HSWDS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program (ERP); Voluntary Cleanup Program (VCP); New York Brownfield Cleanup Program (BCP); and LightBox Environmental Data Resources, Inc. (EDR) High Risk Historical Records including US Historic Auto Station Listings, Historic Cleaners, and Manufactured Gas Plant (MGP) Sites.
- Local agency reviews, including online Buildings and Finance Department records and City Environmental Quality Review (CEQR) E-Designation sites, were conducted for the Subject Property only.

1.1 Selected Definitions

The following terms are used throughout this report and, for the purpose of clarity, corresponding definitions are provided. These terms are fully defined in ASTM E1527-21 and ASTM E2600-22.

- *Recognized Environmental Condition (REC)* – (1) The presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment.
- *Controlled Recognized Environmental Condition (CREC)* – A REC affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).
- *Historical Recognized Environmental Condition (HREC)* – A previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meets unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the Subject Property to any controls (for example, activity and use limitations or other property use limitations).
- *Vapor Encroachment Condition (VEC)* – The presence or likely presence of chemical of concern (COC) vapors in the subsurface of a property caused by the release of vapors and/or groundwater either on or near the property.
- *Business Environmental Risk (BER)* – A risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated by the Standard.
- *De Minimis Condition* – A condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.
- *Significant Data Gap* – A data gap that affects the ability of the environmental professional to identify a REC.

2.0 SUBJECT PROPERTY DESCRIPTION

On December 30, 2025, Ms. Mackenzie Miller and Ms. Claire Winter of AKRF conducted a reconnaissance of the Subject Property. Site personnel accompanying AKRF included Ms. Jennifer Maldonado of the New York City Educational Construction Fund (ECF); and Mr. Lou Granato and Mr. David Perez, both custodial staff of the New York City (NYC) Department of Education (DOE), who answered pertinent questions. Neighboring properties were viewed from public rights-of-way. During the reconnaissance, the weather was clear and approximately 35 °F, the visibility good, and the premises adequately illuminated. Photographs from the reconnaissance are included in Appendix A.

2.1 Adjacent Land Use

The Subject Property was bounded to the north by Nassau Street followed by New York City Housing Authority (NYCHA) Farragut Houses building complex; to the south by Concord Street, followed by a Brooklyn Queens Expressway access ramp; to the west by a recreational facility and city-owned public park followed by Gold Street; and to the east by Navy Street followed by a Commodore Barry Park.

2.2 General Subject Property Description

At the time of the reconnaissance, the 1.28-acre Subject Property (Brooklyn Borough Tax Block 111, Lot 1) was developed with a 3-story public school building (P.S. 287, a.k.a. Dr. Bailey K. Ashford School and Community Roots Charter School) and an exterior courtyard containing a playground.

Exterior construction consisted of masonry brick and concrete block exterior walls. Roofing construction consisted of built-up roofing and flashing over a concrete roof deck. No elevators were present in the Subject Property building. Observed building materials were in good condition with minimal amounts of peeling and chipped paint. Roofing improvements consisted of heating, ventilation, and air conditioning (HVAC) equipment, solar panels, and two doorways located at the northern and southern portions of the roof. The building was heated via steam supplied by natural gas fired boilers.

Interior construction and finishes consisted of concrete floor slabs, masonry block walls, painted plaster and sheetrock walls and ceilings, and ceramic wall tiles. Vinyl floor tiles were located throughout the hallways, stairwells, and classrooms; and ceramic floor tiles were located in the kitchen and bathrooms. The Subject Property building floors 1 to 3 consisted of classrooms, hallways, storage closets, bathrooms, custodial closets with slop sinks, an auditorium, library, cafeteria, and kitchen. A science lab, located on the third floor, contained containers of chemicals less than one gallon in size and in marked retail packaging.

Cellar-level

The boiler room, located in the southern portion of the cellar, consisted of two natural gas-fired boilers. A sump pit and hot water heating system were located adjacent to the boiler. Standing water, reportedly from a minor leak, was observed on the slab of the room. Floor drains that reportedly discharged to the combined storm/sanitary sewer system were located throughout the boiler room. Minor staining was observed on floors throughout the boiler room.

A mechanical room containing HVAC equipment was located in the northern portion of the cellar. A sump pump and crawl space for piping were located adjacent to the equipment. Standing water, reportedly from a minor condensate leak, was observed on the concrete floor slab of the room. Standing water was also observed within the sump pit. A slight sheen, possibly a silt sheen, was observed within the sump pit, but no staining or floating petroleum product were noted. This sheen is considered a de minimis condition.

Additional mechanical and utility rooms in the cellar included a workshop that contained tools and supplies; electrical and gas meter rooms; and a fire sprinkler room; and multiple storage rooms with containers of paints, cleaning chemicals, and building supplies. Floor drains that reportedly discharged to the combined storm/sanitary sewer system were located throughout the cellar. Observed building materials in the cellar were in good to fair condition with minimal amounts of peeling and chipped paint along the concrete floors and walls. Some portions of the concrete floor slab were inaccessible for visual inspection in storage areas due to supplies storage. Minor staining and surficial cracking were observed on the concrete floor slabs throughout the cellar.

Subject Property Exterior

One remote fill port was identified in the Navy Street sidewalk located adjacent to the southeast portion of the Subject Property building. According to Mr. Granato and Mr. Perez, two 10,000-gallon fuel oil underground storage tanks (USTs) were installed in January 1953 and closed-in-place in October 2022 (further detailed in Section 2.4). The remote fill port was purportedly associated with the USTs and appeared to be filled with concrete. A vent pipe was observed on the southeastern portion of the Subject Property building.

According to Mr. Granato and Mr. Perez, an aboveground storage tank (AST) was temporarily used at the Subject Property while the boiler systems were switched from fuel oil to natural gas between 2019 to 2022. The tank was formerly located in a grassy area in the southeastern portion of the Subject Property lot. No staining or stressed vegetation was observed in the area described by the custodial staff.

The western portion of the Subject Property lot contained an exterior courtyard comprised of asphalt pavement, a playground, and basketball courts. Storm drains that reportedly discharged to the combined storm/sanitary sewer system were located throughout the exterior courtyard. General refuse and recyclables were located on concrete pavement on the southwestern portion of the Subject Property lot. Housekeeping was good through the exterior portions of the Subject Property.

Portions of the Subject Property were not accessed during the reconnaissance, as further detailed in Section 7.0.

The reconnaissance included noting whether the following items were present and their general condition:

Strong, Pungent, or Noxious Odors

No strong, pungent, or noxious odors indicative of a material release were observed at the Subject Property.

Standing Surface Water and Pools or Sumps Containing Liquid

Standing water, reportedly from a minor condensate leak, was observed on the concrete floor slab in the mechanical room located in the northern portion of the cellar. Standing water was also observed within the sump pump. A slight sheen (possibly a silt sheen) was observed within the sump pump; No staining or floating petroleum product were noted.

Drums, Totes, or Bulk Containers

One empty 55-gallon drum, reportedly used for household trash, was present in a mechanical room located in the northern portion of the Subject Property cellar; No staining was noted within or around the drum. No other drums, totes, or intermediate bulk containers were observed at the Subject Property.

Stains or Corrosion on Floors, Walls, or Ceilings

Minor staining and corrosion were observed at the Subject Property throughout the cellar level.

Pits, Ponds, or Lagoons

No pits, ponds, or lagoons were observed at the Subject Property.

Stained Soil or Pavement

Dark staining was noted on the concrete pavement in the general refuse and recyclables area. No evidence of stained soil was observed at the Subject Property.

Stressed Vegetation

No stressed vegetation was observed at the Subject Property.

Wells (including Dry Wells, Irrigation Wells, Injection Wells, Monitoring Wells, Abandoned Wells, or Other Wells)

No evidence of wells (including dry wells, irrigation wells, injection wells, monitoring wells, abandoned wells, or other wells) was observed at the Subject Property.

Septic Systems or Cesspools

No evidence of septic systems or cesspools was observed at the Subject Property.

Areas Graded by Non-Natural Causes/Fill of Unknown Origin

No areas graded by non-natural causes or fill of unknown origin was observed at the Subject Property.

2.3 Topography, Hydrogeology, Floodplains, and Wetlands

Based on the United States Geological Survey (USGS), Brooklyn, NY 2023 Quadrangle map and the New York City Planimetric Database[1], the Subject Property is between approximately 9 and 12 feet above the North American Vertical Datum of 1988 (NAVD88), an approximation of mean sea level.

Based on information provided in the regulatory database (Appendix C) and the United States Department of Agriculture (USDA) Soil Map, soil stratigraphy in the vicinity of the Subject Property is expected to consist of urban land/historic fill underlain by sand.

Based on nearby subsurface investigations noted in the regulatory database information, groundwater in the area is anticipated to be approximately 20 to 27 feet below grade. Based on information provided in the regulatory database (Appendix C) and the Subject Property's proximity to the East River, groundwater is expected to flow in a northeasterly direction. However, actual groundwater depth and flow direction may be influenced by other factors, including past pumping and/or subsurface obstructions such as building foundations, subway tunnels, and other utilities. Groundwater in Brooklyn is not used as a source of potable water.

The United States Fish and Wildlife National Wetlands Inventory Map was reviewed to determine whether federally regulated wetlands are located on or proximal to the Subject Property. Based on a review of the map and observations made during the reconnaissance, the Subject Property is not

[1] NYC Planimetric Database: Elevation Points | NYC Open Data

located within a federally regulated wetland area. A copy of the wetlands map is included in Appendix B.

The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) for the Subject Property (No. 3604970203F) was reviewed to assess whether the Subject Property is in a designated flood plain or flood zone. The Subject Property is in Zone X, within the 0.2% annual chance floodplain. A copy of the FEMA FIRM for the Subject Property is included in Appendix B.

2.4 Storage Tanks

The Subject Property was registered in the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database as Facility ID: 2-354481 with the following tanks:

2.4.1 Underground Storage Tanks (USTs)

- Tanks 001 and 002 - According to NYSDEC PBS database records, two 10,000-gallon No. 4 fuel oil tanks were installed in January 1953. The USTs were reportedly closed-in-place on October 4, 2022. Two Certificates of Occupancy (C of O) for the Subject Property, accessed through the New York City Department of Buildings (NYCDOB) records, dated March 2, 1953, and November 5, 1954, reference a "Fire Department" approval for fuel oil tank installation on October 28, 1953. According to Mr. Granato and Mr. Perez, the former tanks were closed-in place and located along the southeastern portion of the Subject Property, adjacent to the building. The remote fill port associated with the former USTs was observed during the reconnaissance along the Navy Street sidewalk and appeared to be filled in with concrete. A vent pipe was observed on the southeastern portion of the Subject Property building.

The former underground fuel oil storage and use at the Subject Property constitutes a REC/VEC.

Any off-site USTs pertinent to the conclusions of this report are discussed in Section 3.2.2.

2.4.2 Aboveground Storage Tanks (ASTs)

- Tank 003 – According to NYSDEC PBS database records, one in-service 4,000-gallon No. 4 fuel oil AST was installed on October 11, 2019. However, according to Mr. Granato and Mr. Perez, the tank was only temporarily used while the boiler systems were switched from fuel oil to natural gas until 2022 and removed thereafter. The tank was formerly located in a grassy area in the southeastern portion of the Subject Property lot. No staining or stressed vegetation was observed in the area described by the custodial staff.

The improper administrative closure of Tank 003 constitutes a BER.

Any off-site ASTs pertinent to the conclusions of this report are discussed in Section 3.2.2.

2.5 Utilities

According to Mr. Granato, the Subject Property was connected to the New York City (NYC) municipal water and sewer systems. Electricity was provided by Con Edison, and natural gas was provided by National Grid.

2.6 Waste Management and Chemical Handling

According to Mr. Granato, general refuse and recyclables generated at the Subject Property were removed by the NYC Department of Sanitation (DSNY).

2.7 Non-Scope Considerations

2.7.1 Polychlorinated Biphenyls (PCBs)

Until 1979, PCBs, which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Based on the age of the Subject Property building (constructed circa 1952), typical building components and equipment, such as, but not limited to, electrical equipment, caulk, compactor equipment, lighting fixtures, switches, thermostats and other equipment and materials, may contain PCB-containing components. PCBs may also be present in demolition debris from previous Subject Property structures.

The potential presence of PCBs in building materials and/or buried debris at the Subject Property constitutes a BER.

2.7.2 Lead-Based Paint (LBP)

LBP, which contains 0.5 percent (or greater) lead, was generally not used inside residential buildings after 1960 in NYC (after 1978 outside of NYC). LBP may still sometimes be used outdoors and for industrial applications. Based on the age and/or use of the Subject Property building (constructed circa 1952), LBP could be present on the Subject Property building components. LBP can present a hazard, particularly to children, and especially when it is in poor condition.

Peeling and chipping suspect LBP was observed on walls and ceilings throughout the Subject Property maintenance areas. According to Mr. Granato, routine inspections are performed by custodial staff for any peeling and chipping suspect LBP in areas occupied by children. Exterior painted surfaces appeared to be in good to fair condition.

The potential presence of in LBP in building materials and/or in buried debris at the Subject Property constitutes a BER.

Any activities (including interior renovations, demolition, etc.) with the potential to disturb LBP or paint containing any detectable level of lead must be performed in accordance with applicable regulatory agency requirements [e.g., United States Occupational Safety and Health Administration (USOSHA), United States Housing and Urban Development (USHUD), USEPA, New York State Department of Environmental Conservation (NYSDEC), New York State Department of Health (NYSDOH), New York City Department of Health and Mental Hygiene (NYCDOHMH), and New York City Department of Housing Preservation and Development (NYCHPD)] regarding tenant notification, contractor licensing, abatement procedures, etc. Additional requirements, even if no disturbance is planned (e.g., tenant notification, inspections, contractor licensing, and abatement), apply to occupied residential buildings and child-occupied facilities.

2.7.3 Asbestos-Containing Material (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Materials containing more than one percent asbestos are considered ACM. Typical ACM includes: flooring, thermal system insulation, fireproofing, plaster, joint compound, ceiling tiles, roofing materials, waterproofing mastics, caulks, mortars, vermiculite, and other building materials. ACM is classified as either friable (i.e., more

readily release fibers, such as spray-applied fireproofing or pipe insulation) or non-friable (such as floor tiles and roofing materials).

Suspect ACM was observed in the interior and on the exterior of the building, and included: electrical panels, spray-applied fireproofing, pipe and pipe elbow insulation, boiler insulation, brick and block mortar, roofing materials, vinyl flooring in the custodial office, and window caulk. Additional suspect ACM may be present above ceilings, in pipe chases, behind walls, below grade, or in other hidden or inaccessible areas.

Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintaining the material in good condition and, prior to any renovation or demolition, inspection, and sampling by an NYC-certified asbestos investigator to determine whether the scope of work will disturb ACM. Any such ACM must be removed prior to the renovation or demolition.

There is a potential for ACM in historic fill of unknown origin and/or buried demolition debris associated with former on-site structures. Any suspect ACM encountered during excavation should be sampled and disposed of in accordance with applicable requirements.

The potential presence of ACM in building materials/in buried debris at the Subject Property constitutes a BER.

The reconnaissance did not constitute and cannot substitute for an asbestos survey, which includes inspection and material sampling by a certified individual, and laboratory analysis.

2.7.4 Radon

Radon is a colorless, odorless, and tasteless radioactive gas produced by the natural radioactive decay of uranium. According to an EDR database review of 51 radon tests for Kings County (Appendix C), basements contained an average radon level of 1.370 picocuries/liter (pCi/L), below the USEPA recommended action level of 4 pCi/L. Therefore, radon is not anticipated to be a concern at the Subject Property.

2.8 Per- and Polyfluoroalkyl Substances (PFAS)

PFAS are a class of chemicals found in fire-suppression foam, fire and stain retardants, water repellant materials, non-stick coatings, cosmetics and personal care products, and many other common products. PFAS may discharge to the environment through releases during manufacturing, wastewater discharges from industrial and commercial processes involving PFAS-containing products, or the use of fire-suppression foam during an emergency response. In April 2024, the USEPA finalized a rule designating two widely used PFAS compounds [perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS)] as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

Current and historical uses of the Subject Property and adjoining/surrounding properties were reviewed to identify potential sources of PFAS at or around the Subject Property. The regulatory agency database report was also reviewed to determine whether the Subject Property or any nearby facilities potentially used and/or stored fire suppression foam. In addition, representatives of the Subject Property were interviewed to obtain information related to historical fires at and around the Subject Property.

Interviews with Subject Property representatives and the review of historical documentation and regulatory agency database reports did not reveal evidence that PFAS or PFAS-containing products were used or handled at the Subject Property or the nearby surrounding properties.

3.0 RECORDS REVIEW

3.1 Prior Ownership and Usage

3.1.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps from 1887, 1915, 1938, 1950, 1969, 1977, 1979-1982, 1984, 1986, 1987-1989, 1991-1993, 1995-1996, 2001-2007, were reviewed for indications of evidence suggesting hazardous materials generation, usage, or disposal on or near the Subject Property and surrounding properties. A review and interpretation of the maps is provided in the table below. Copies of the maps are provided in Appendix D.

Year	Comments
1887	**Subject Property:** The Subject Property was a historic block bound by Navy Street to the east, Concord Street to the south, Hudson Avenue to the west, Nassau Street to the north and bisected by Nassau Place. Subject Property uses included residential with commercial storefronts, a carpenter shop, and one school (P.S. 14). **Surrounding Properties:** The east-adjacent property was depicted as a park (present-day Commodore John Barry Park). The surrounding properties to the north consisted of residential properties, a school and an "industrial school." Surrounding properties to the south consisted of residential dwellings, vacant lots, and industrial use properties including a glassworks factory (Block 124), livestock and slaughterhouses, and a blacksmith and painting facility (Block 123), one glassworks and one cork and paper factory (Block 122), and an iron foundry (located at the southeast corner of Park Avenue and Hudson Avenue).
1915	**Subject Property:** The southwest portion of the Subject Property was developed with a "Garage for 10 cars." The Subject Property otherwise remained similar to the 1904 map. **Surrounding Properties:** The surrounding properties to the north, east, and west remained largely similar to the 1904 map. The surrounding properties to the south of Concord Street consisted of industrial use properties including a glassworks factory, a publishing and binding facility, auto shed, and an electro-galvanizing works on Block 124. Block 123 consisted of slaughterhouses and processing. A paper factory occupied the previous glass cutter and furnace and cork and paper factory on Block 122. The iron foundry was no longer depicted on the 1915 map.

Year	Comments
1938	**Subject Property:** The northwest portion of the Subject Property was developed as a filling station with three gasoline tanks, while the southwestern portion was improved with a Tubular & Cast Products Manufacturing facility with electroplating being conducted on the first floor. One printing shop was identified and Nassau Street. The rest of the Subject Property remained otherwise similar to the 1915 map. **Surrounding Properties:** By 1938, the proportion of industrial properties increased as the proportion of residential properties decreased. To the south, properties were developed for automotive, manufacturing and fabrication uses. On Block 124, one garage with one gasoline tank was identified, approximately 60 feet upgradient from the Subject Property. Specific uses on Block 124 included a junk yard, unspecified manufacturing fabrication, galvanizing works, and a decorative glassworks facility. The meat processing facility on Block 123 is noted to be "not in operation." One paper warehousing facility with two gasoline tanks, one garage with one gasoline tank, and one garage and automobile rental facility with three gasoline tanks and one unspecified fabrication manufacturing facility was observed on Block 122. The adjacent property north of Nassau Street was developed as filling station. Three gasoline tanks were identified on the southeastern portion of the property, approximately 60 feet north of Subject Property on Block 101. Block 101 also contained a garage with automobile repair facility with one gasoline tank.
1950	**Subject Property:** Several of the historic Subject Property lots appeared to be vacant. The filling station and cast manufacturing facility were no longer depicted. The building formerly used as P.S. 14 was relabeled as a New York City Housing Authority Relocation Center. **Surrounding Properties:** Properties to the north of Nassau Street were redeveloped into NYCHA Farragut Houses consisting of three apartment buildings and a play yard. Directly to the west on Block 110, one Scrap Iron Yard and one Automotive Parking facility were identified. One new automotive wrecking processing facility was observed on Block 123. The surrounding properties to the west and south continued to operate in a largely industrial nature. The property to the south of the Subject Property was redeveloped as an auto repair shop. Block 122 contained a motor freight facility with gasoline tank, and a news printing warehouse. The rest of the surrounding properties remained otherwise similar to the 1938 map.
1969	**Subject Property:** The former Subject Property lots were no longer depicted. The former Nassau Place laneway and former Hudson Avenue roadway were also not depicted. The Subject Property was developed into its current configuration - the Ashford School – P.S. No. 287 noted to have been built in 1952 with three floors and partial cellar. **Surrounding Properties:** The surrounding Blocks to the southwest of the Subject Property were redeveloped with the Brooklyn-Queens Connecting Highway (present-day Brooklyn-Queens Expressway). Block 122 remained otherwise similar to the 1950 map.

Year	Comments
1977-2007	**Subject Property:** The Subject Property remained similar to the 1969 map. **Surrounding Properties:** The west adjacent property on Nassau Street was depicted as The Navy Yard Boys Club noted to have been built in 1976. Residential properties appeared to have been developed at the Navy Yard to the northeast. The rest of the surrounding properties remained otherwise similar to the 1969 map.

In summary, historical Sanborn maps indicated that the Subject Property was first developed prior to 1887 with a mix of commercial storefronts, residential dwellings, public school No. 14, and a carpenter shop. By 1915 and to at least 1938, several industrial properties, including a filling station with three gasoline tanks, a metalworks and electroplating facility, a garage, and a printing shop existed on the Subject Property. Before 1950, the majority of the former Subject Property lots appeared vacant. By 1952, the Subject Property was developed into its current configuration as P.S. 287 – The Ashford School.

These historical Subject Property uses may have affected the Subject Property subsurface and are considered RECs.

Adjacent and surrounding property uses from at least 1887 to 2007 included automotive, industrial, manufacturing, and commercial uses, which may have affected the Subject Property subsurface and are considered RECs.

3.1.2 Historical Topographic Maps and Aerial Photographs

Historical USGS Topographic Maps and Aerial Photographs were reviewed for indications of evidence suggesting hazardous materials generation, usage, or disposal on or near the Subject Property and surrounding properties. No environmental concerns beyond information collected in the historical Sanborn Maps were identified. Copies of the Topographic Maps and Aerial Photographs are provided in Appendices E and F, respectively.

3.1.3 Tax Files and Zoning Records

Based on the NYC Department of City Planning's Zoning Map information, the Subject Property was zoned for residential use (R-6). Tax parcel information provided by the NYCDOB online Buildings Information System (BIS)/NYC's Zoning & Land Use Map (ZoLa) indicated that the occupancy code for the Subject Property building was W1 (Educational Structures – Public Elementary, Junior or Senior).

3.1.4 City Directory

A City Directory prepared by EDR was reviewed as part of this Phase I ESA. The City Directory consisted of the names of businesses located on-site and on nearby properties compiled from city and reverse telephone directories at approximately five-year intervals starting in 1928. A summary of the directory findings is as follows:

<u>On-site</u>

No historical on-site land uses were indicative of environmental concerns.

<u>Off-site</u>

Historical off-site land uses considered to be potential RECs include:

- 254 Concord Street (year 1949) - Associated Photo & Litho Supply Co
- 259 Nassau (year 1934) - Botts Roofing Co
- 260 Nassau (year 1928) - Klein WM C Tires & Batteries
- 260 Nassau (year 1928) - Liberty Battery & Tire Service
- 265 Nassau (year 1934) - Polward Gas Station Inc

On-site City Directory listings were not consistent with Sanborn Fire Insurance Map findings (Section 3.1.1). Historical on-site uses indicative of environmental concerns were identified in the Sanborn Maps but not within the City Directory listings.

The City Directory search results are included in Appendix G.

3.1.5 Interviews

Subject Property Owners/Operators/Occupants

Mr. Lou Granato and Mr. David Perez, the facilities custodians, were interviewed during the Subject Property reconnaissance and provided information summarized in Section 2.2. Mr. David McCarty, a representative of the Client, completed a User Questionnaire for the Subject Property, as discussed in Section 4.0.

Owners/Operators/Occupants of Adjacent Properties

Owners/operators/occupants of adjacent properties were not interviewed.

3.2 Regulatory Records Review

EDR was contracted to obtain information regarding the regulatory status of the Subject Property and the surrounding area. This information included records from databases maintained by the USEPA and NYSDEC, and proprietary databases compiled by EDR. AKRF reviewed these records to identify the use, generation, storage, treatment, and/or disposal of hazardous material and chemicals, or releases of such materials, which may have impacted the Subject Property. All applicable regulatory databases met ASTM guidelines requesting utilization of information within 90 days' receipt from the appropriate agency.

AKRF also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that cannot be plotted with confidence, but are identified as being located within the general area of the Subject Property based on the partial street address, city name, or zip code. In general, a listing cannot be mapped due to inaccurate or incomplete address information in the database that was supplied by the corresponding regulatory agency. Any listings from the unmappable summary which were identified by AKRF as a result of the area reconnaissance and/or cross-referencing to mapped listings are included in the corresponding database discussion within this section. A copy of the regulatory database report is included as Appendix C.

A summary of the regulatory agency databases reviewed and identified RECs/CRECs/HRECs/VECs is provided in the following table. This table does not include any orphans listings.

Database	Search Radius	No. of Sites within Search Radius	Subject Property Appears on List	RECs, CRECs, HRECs, VECs Identified
Federal ASTM Standard Records				
National Priority List (NPL) and Delisted NPL	1 mile	0/0	NO	NO
Superfund Enterprise Management System (SEMS) and SEMS-ARCHIVE	½ mile	1/8	NO	**YES**
Corrective Action Report (CORRACTS)	1 mile	0	NO	NO
Resource Conservation and Recovery Act (RCRA) - Treatment, Storage, and Disposal Facilities (TSDF)	½ mile	0	NO	NO
Resource Conservation and Recovery Act Generators (RCRA LQG/SQG/VSQG/ Non-Gen)*	⅛ mile	6/2/3/105	**YES**	**NO**
Emergency Response Notification System (ERNS)	Subject Property	0	NO	NO
Federal Institutional Control/Engineering Control Registries	½ mile	0/0	NO	NO

*Large quantity generators (LQGs), small quantity generators (SQGs), very small quantity generators (VSQG), and non-generators (Non-Gen).

Records pertinent to the conclusions of this report are discussed below.

3.2.1 Federal

Superfund Enterprise Management System (SEMS), including Superfund Enterprise Management System Archive (SEMS-ARCHIVE)

The SEMS [formerly known as Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)] list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites which are, or were, under investigation by USEPA but have not been elevated to the status of a Superfund (NPL) site. Former CERCLIS sites that have been granted the status of No Further Remedial Action Planned (NFRAP), currently known as Superfund Enterprise Management System Archive (SEMS-ARCHIVE) sites, are also included in this database.

The Subject Property is not included in the SEMS/SEMS-ARCHIVE database.

One property located 0.014 miles upgradient from the Subject Property, Tottenville Copper Co., (Site ID: 0206666) was documented in the database review to have performed battery/scrap metal/secondary smelting/lead smelting and metal recovery. While no evaluations or violations were documented for this site, it may have stored and/or used bulk chemicals and/or petroleum products that may have impacted the subsurface and is considered a REC.

The remaining listings identified at surrounding properties were not considered RECs to the Subject Property.

Resource Conservation and Recovery Information System (RCRIS)

This database lists sites that have filed notification forms regarding hazardous waste activity, including: treatment, storage, and disposal facilities (TSDF); very small quantity generators (VSQG); small quantity generators (SQG); large quantity generators (LQG); and non-generators regulated under RCRA.

The Subject Property, listed as NYC Dept Of Education – P.S. 287 K, was identified in the RCRA databases as Facility No. NYR000011288 and listed as a VSQG in 1995, non-

generator in 2006, 2007, and SQG in 2016, with the disposal of lead (D008) and undefined (D000) waste. No evaluations or violations were listed. Based upon the listing details and the absence of reported violations, these listings are not RECs.

The 115 RCRIS listings identified at surrounding properties were not considered RECs to the Subject Property.

Facility Index System/Facility Registry System (FINDS)

FINDS contains facility information from the following databases: Permit Compliance System (PCS), Aerometric Information Retrieval System (AIRS), Enforcement Docket (DOCKET) used to manage and track information on civil judicial enforcement cases for all environmental statutes, Federal Underground Injection Control, Criminal Docket System (C-DOCKET) used to track criminal enforcement actions for all environmental statutes, Federal Facilities Information System (FFIS), State Environmental Laws and Statutes (STATE), and PCB Activity Data System (PADS).

The Subject Property, listed as P.S. 287 Bailey K. Ashford School, was identified in the FINDS database as Facility No.110036017869. Based on the information included in the US EPA Facility Detail Report (accessed January 7, 2026), this listing was likely related to the SQG RCRIS entry. Based on the information available, the FINDS listing is not a REC.

Enforcement & Compliance History Information (ECHO)

ECHO provides integrated compliance and enforcement information for regulated facilities nationwide.

The Subject Property, listed as "P.S. 287 Bailey K. Ashford School," was identified in the ECHO database as Facility No. 110036017869. Based on the information included in the US EPA Facility Detail Report (accessed January 7, 2026), this listing is likely related to a SQG RCRIS entry. Based on the information available, the ECHO listing is not a REC.

3.2.2 State

New York State Spills Information Database (NY Spills)/Leaking Underground Storage Tanks (LTANKs)

This database includes releases reported to NYSDEC, including UST test failures and tank failures. The Subject Property was listed in the NY Spills/LTANKs databases for the following:

- The Subject Property was listed in the NYSDEC LTANKs database for NYSDEC Spill No. 1903757. The listing was reported July 12, 2019, in relation to a failed tank tightness test of a 10,000-gallon No. 4 fuel oil UST with a dry leak through the ventilation line. The database records included NYSDEC notes stating a UST Investigative Report was reviewed on July 21, 2020. On the same day, the LTANK listing was closed and a No Further Action Letter was issued (not supplied to AKRF). This listing is related to the historic underground petroleum storage at the Subject Property, and is therefore considered a REC.
- The Subject Property was listed as K287 School for NYSDEC Spills No. 2104867. The spill was reported on September 24, 2021, after a flood in the cellar resulted in a five-gallon pale of oil spilling into the flood waters. Remedial efforts included suctioning out 6,000 gallons of oily-water and cleaning the cellar with a degreaser.

Based on the minimal volume of oil associated with the spill and the prompt remediation of the spill, the listing is not a REC.

Based on the listing details, no NY Spills/LTANKs listings on surrounding properties were considered RECs.

Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the MOSF database. The Subject Property was identified in the PBS database under Facility 2-354481 for the following:

- Two 10,000-gallon USTs (Tank 001 and 002), which according to NYCDOB records were installed in October 1953 and were reportedly closed in place in October 2022. The former underground fuel oil storage at the Subject Property constitutes a REC/VEC.
- One 4,000-gallon AST (Tank 003) was listed as "active." However, the tank was reportedly temporary and was previously removed from the Subject Property. No ASTs were observed during the renaissance, and the tank appears not to have been administratively closed. The improper administrative closure constitutes a BER.

A description of the Subject Property from the reconnaissance is included in Section 2.2, and the PBS listing details are included in Section 2.4.

The surrounding PBS listings were not of environmental concern.

New York and New Jersey Facility and Manifest Data (NY MANIFEST and NJ MANIFEST)

The NY and NJ MANIFEST databases list and track hazardous waste from the generator through transporters to a TSDF facility.

The Subject Property was identified in two NY MANIFEST database listings as NYC Board of Education under Site No. NYR000011288. One manifest listing dated July 2016 was related to 272 kilograms of waste code B007 (PCB-containing material). The second listing dated August 1995 was related to 100 pounds of lead containing materials. Based on the volumes and types of waste disposal, these manifest listings are not indicative of RECs.

The surrounding 149 listings were not of environmental concern.

3.2.3 Local Agency File Review

Records available online from the NYC Buildings and Finance Departments were viewed for the Subject Property. While these records address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials (e.g., petroleum tank installation applications and permits) and records indicating prior uses. Copies of pertinent information are included in Appendix B.

NYC Buildings Department (NYCDOB)

Electronic NYCDOB records for the Subject Property were reviewed to determine whether there were any references to buildings, tanks or other structures, property usage, or inspection reports that may have indicated the presence, past use, or release of hazardous substances, wastes, or petroleum products within the Subject Property. The NYCDOB BIS electronic database included:

- The addresses for the Subject Property Block and Lot included 46-56 Navy Street and 237-253 Concord Street. Three building identification numbers (BIN) existed for the Subject Property, including BIN numbers: 3000203, 3822498, and 3809574. Two Certificates of Occupancy (C of O) for the Subject Property dated March 2, 1953, and November 5, 1954, reference a cellar-level boiler room. The "Fire Department" approved fuel oil installation on October 28, 1953. No further information related to the quantity or size of the fuel oil tanks was included in the C of Os. According to the NYSDEC PBS Database (Section 2.4), two 10,000-gallon No. 4 fuel oil USTs were installed in October 1953. Underground fuel oil storage and use at the Subject Property may have affected the subsurface at the Subject Property and is considered a REC/VEC.
- Two boiler permits for boilers were installed in 1952.
- Alteration/Demolition permits
- New building permits

Land Title Records and Tax Records

Copies of title records were not provided to AKRF for review. A review of computerized NYC Automated City Register Information System (ACRIS) records, which included records of financial transactions involving the Subject Property, identified no environmental liens or use restrictions for the Subject Property. No pertinent environmental information was included in the ACRIS files. The Subject Property owner was listed as NYC Department of Education.

Freedom of Information Law (FOIL) Requests

AKRF sent FOIL requests to NYCDOHMH, NYSDEC, NYCDEP, and NYSDOH on January 5, 2026. The USEPA and FDNY online databases was searched on January 5, 2026.

On January 6, 2026, the NYCDOHMH acknowledged the request. On January 7, 2026, NYCDOHMH responded to the request indicating no files were available for review.

On January 5, 2026, the NYCDEC acknowledged the request. On January 13, 2026, NYCDEC responded to the request indicating no files were available for review.

On January 6, 2026, the NYCDEP acknowledged the request. On January 7, 2026, NYCDEP responded to the request with a DERTA FOIL report. The Derta Document does not indicate any environmental concerns.

On January 5, 2026, the NYCDOH acknowledged the request. On January 16, 2026, NYCDOH responded to the request indicating no files were available for review.

According to the FDNY online database, one temporary 4,000-gallon fuel oil tank was used in connection with on-site construction. A second 10,000-gallon temporary tank was also noted. As the FDNY records showed the tanks as construction related, and as construction activities were not observed during the reconnaissance, it is assumed they were removed following the completion of construction activities. According to Mr. Granato and Mr. Perez, the tank was removed from the Subject Property in 2022.

On February 3, 2026, AKRF submitted a FOIL request to the NYSDEC for details pertaining to LTANK listing No. 1903757. As of the date of this report, responses have not been received from the NYSDEC. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

FOIL requests, acknowledgements, and responses are provided in Appendix B.

3.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in the judgment of the environmental professional, such records for the Subject Property or any adjoining properties would be reasonably ascertainable, useful, accurate, and complete in light of the objective of the records review. These records may include:

- Local Brownfields Lists
- Local Lists of Landfill/Solid Waste Disposal Sites
- Local Lists of Hazardous Waste/Contaminated Sites
- Local Lists of Registered Tanks
- Local Land Records (for property use limitations)
- Records of Emergency Release Reports
- Records of Contaminated Public Wells

Sources for these records include:

- Chain of Title Reports and Title Records
- Department of Health/Environmental Division
- Fire Department
- Building Permit/Inspection Department
- Local/Regional Pollution Control Agency
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

In AKRF's judgment, no other local records beyond those listed in Section 3.2.3 are pertinent for the Subject Property.

4.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that the Client provide any pertinent information regarding the Subject Property, specifically:

- Whether any environmental liens or activity and land use limitations (AULs) were in place or filed or recorded against the Subject Property.
- Whether they had any specialized knowledge or experience related to the Subject Property or nearby properties (e.g., specialized knowledge of any chemicals used on-site).
- Whether the (anticipated) purchase price reflected that the Subject Property is or could be contaminated.
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Subject Property.
- Whether they were aware of any obvious indicators of contamination at the Subject Property.
- Whether they were aware of any pending, threatened, ongoing, or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products.

Mr. David McCarty, a representative of the Client, completed a User Questionnaire for the Subject Property. Mr. McCarty was not aware/had no information on the status of any: environmental liens or activity use limitations on the Subject Property; Subject Property value reduction due to environmental issues; any pending, threatened, ongoing, or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products; or any obvious indicators of contamination on the Subject Property. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report. A copy of the User Questionnaire, which summarizes the User-provided information, is included in Appendix H.

5.0 PREVIOUS ENVIRONMENTAL REPORTS

No previous environmental reports were available for review. One Building Condition Assessment (BCA) for the Subject Property building was made available.

P.S. 287 – Brooklyn, 50 Navy Street Building Condition Assessment Survey 2022-2023, prepared by NYC Department of Education.

A Building Condition Assessment (BCA) Survey was completed within the Subject Property building in November 2022. The inspection report did not identify any conditions that would be germane to this Phase I ESA.

A copy of the report is included in Appendix I.

6.0 VAPOR ENCROACHMENT SCREENING

A Tier 1 Vapor Encroachment Screening (VES) was conducted in accordance with ASTM Standard E2600-22, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*. The term Vapor Encroachment Condition or VEC means the presence or likely presence of COC vapors in the subsurface of a property caused by the release of vapors and/or groundwater either on or near the property. The objective of the Tier 1 VES is to conduct a screen for vapor encroachment based on findings from the Phase I ESA to determine whether a possible VEC exists at the Subject Property.

Based on AKRF's review of historical and regulatory database records, the RECs, which are summarized in Section 8.0, are all potentially associated with releases of volatile organic compounds (VOCs) and as such represent VECs.

7.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of ASTM International as established by ASTM Standard E1527-21 at the time it was performed, with the following limitations:

- Results of the investigation are valid as of the dates on which the investigation was performed.
- Owners/tenants of adjoining properties were not interviewed as part of this assessment. However, sufficient information about the history of the surrounding properties was obtained from historical Sanborn maps and/or city directories and this data gap is not considered significant or likely to alter the conclusions of this report.
- The Subject Property area history was not conducted in five-year intervals. However, sufficient information about the history of the Subject Property and surrounding area could be obtained from the available historical Sanborn maps and/or city directories, and this limitation is not likely to alter the conclusions of this report.
- Agency file reviews for the Subject Property and adjacent properties consisted of a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 3.2), and FOIL requests submitted to NYSDEC, NYCDEP, NYSDOH, and NYCDOHMH. AKRF believes that this file review was sufficient in determining the potential for RECs or other environmental concerns at the Subject Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.
- Portions of the cellar storage areas were unable to be inspected due to the large quantity of supplies located on the ground.

No Significant Data Gaps (as defined in Section 3.2.78 of ASTM Standard E1527-21) were identified as part of the assessment.

8.0 FINDINGS AND CONCLUSIONS

AKRF, Inc. (AKRF) was retained by 240 Nassau Street Owner, LLC to prepare a Phase I Environmental Site Assessment (ESA) of 50 Navy Street, located in the Vinegar Hill neighborhood of Brooklyn, NY. The objective of this assessment was to identify any potential environmental concerns associated with the Subject Property resulting from past or current usage of the Subject Property or neighboring properties.

This Phase I ESA was performed in conformance with ASTM International (ASTM) Standard E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Any exceptions to, or deletions from, the Standard are described in Section 7.0. The term "Recognized Environmental Condition" (REC), as defined in the E1527-21 Standard, means: (1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historical REC (HREC), Controlled REC (CREC), and *De Minimis* Condition.

A Tier 1 Vapor Encroachment Screen was also conducted in accordance with ASTM Standard E2600-22, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.* The term "Vapor Encroachment Condition" (VEC) means the presence or likely presence of chemical of concern (COC) vapors in the subsurface of a property caused by the release of vapors and/or groundwater either on or near the property.

The assessment revealed the following:

Recognized Environmental Conditions (RECs)/Vapor Encroachment Conditions (VECs)

- Historical Underground Petroleum Bulk Storage (PBS) on the Subject Property – The Subject Property was registered in the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database as Facility No.: 2-354481 with two former 10,000-gallon underground storage tanks (USTs) [Tank 001 and Tank 002], which were reportedly closed-in-place in October 2022. Evidence of the former tanks, including a fill port and vent pipe, was observed during the reconnaissance. In addition, the Subject Property was listed in the NYSDEC Spills database (Spill No. 1903757) for a tank tightness test failure related to the former USTs. The former underground fuel oil storage and potential associated spill at the Subject Property constitutes a REC/VEC.
- Historical Uses on the Subject Property – Sanborn maps regulatory database listings identified historical uses at the Subject Property that included a filling station with three gasoline tanks, a metalworks and electroplating facility, a garage, and a printing shop. These former uses have the potential to have impacted subsurface conditions at the Subject Property.
- Historical Surrounding Property Uses – The area immediately surrounding the Subject Property was historically developed with a mix of industrial and manufacturing uses prior to 1887. These uses (included, but were not limited to, blacksmith services, painting, iron foundry services, electro-galvanizing works, glassworks services, auto repair, garages, filling stations, cork and paper processing, news printing, binding and publishing, livestock and slaughterhouses, and junk yards) have the potential to have impacted subsurface conditions at the Subject Property.

Business Environmental Risks

- Tank 003 (NYSDEC PBS Facility No. 2-354481) was a 4,000-gallon AST registered at the Subject Property and appeared to have been removed from the Subject Property without the proper regulatory administrative closure and constitutes a BER.

- Probable use of historic fill associated with historic Subject Property redevelopments with material of unknown origin constitutes a BER.
- The potential presence of polychlorinated biphenyls (PCBs), lead-based paint (LBP), and asbestos-containing material (ACM) in building materials at the Subject Property constitutes BERs.

De Minimis Conditions

- Small containers of building materials, cleaning chemicals, and paints associated with building maintenance were present at the Subject Property.
- Standing water, reportedly from minor leaks, and minor staining was observed in the boiler room and mechanical room of the Subject Property building cellar. A slight sheen (possibly a silt sheen) was observed within the sump pump in the mechanical room. No staining or floating petroleum-like product were noted.

Significant Data Gaps

- No significant data gaps.

9.0 RECOMMENDATIONS

Based on the conclusions of this Phase I ESA, AKRF recommends the following:

- A Subsurface (Phase II) Investigation should be conducted to assess the identified RECs/VECs. It is possible that a subsurface investigation or subsequent soil disturbance may uncover evidence of a petroleum spill or other situation reportable to NYSDEC and/or other regulatory agencies.
- During any future subsurface disturbance, excavated soil should be handled and disposed of properly in accordance with all applicable regulatory requirements. Any evidence of a petroleum spill must be reported to NYSDEC and addressed in accordance with applicable requirements. If any USTs are encountered, they should be properly assessed, closed, and removed in accordance with state and local regulations. Transportation of material leaving the site for off-site disposal should be in accordance with federal, state, and local requirements covering the licensing of haulers and trucks, placarding, truck routes, manifesting, etc. If dewatering is required during rehabilitation and/or construction activities, water should be discharged in accordance with New York City Department of Environmental Protection (NYCDEP) requirements.
- Prior to any renovation or demolition activities with the potential to disturb suspect ACM, an asbestos survey should be conducted. If these materials prove to contain ACM, they should be properly removed and disposed of in accordance with all federal, state, and local regulations prior to any renovation or demolition that would disturb those materials. ACM and assumed ACM must be maintained in good condition in accordance with applicable regulations.
- Unless there is labeling or test data that indicates that caulking, fluorescent lights, and other electrical and hydraulic equipment are not mercury- and/or PCB-containing, disposal (if required) should be performed in accordance with applicable federal, state, and local regulations and guidelines. Hydraulic elevators and associated underground pistons should closed and removed in accordance with applicable federal, state, and local regulations and guidelines. Other hazardous materials should be handled and maintained in accordance with applicable regulatory requirements.
- Any renovations or demolition activities with the potential to disturb LBP, or paint containing any detectable level of lead, should be performed in accordance with applicable regulations.
- Tank 003 (NYSDEC PBS Facility No. 2-354481) should be administratively closed with the NYSDEC.

10.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 Code of Federal Regulation (CFR) 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

11.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination, on the Subject Property, and to identify, to the extent feasible pursuant to the processes described in the report, *Recognized Environmental Conditions* as defined in ASTM Standard E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*, and *Vapor Encroachment Conditions* as defined in ASTM Standard E2600-22, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.*

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard(s), except as noted otherwise in Section 7.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the Subject Property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the Subject Property and to the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances that may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the Subject Property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than 240 Nassau Street Owner, LLC and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

FOIL Request :: W158578-010526

From New York DEC FOIL Center <newyorkdec@govqa.us>
Date Mon 1/5/2026 5:16 PM
To Derris Riveiro <driveiro@akrf.com>

Dear Derris:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 1/5/2026 and given the reference number FOIL #W158578-010526 for tracking purposes. You may expect the Department's response to your request no later than **2/3/2026**.

Record Requested: **Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for the site located at 46-50 Navy Street, Brooklyn, NY, 11201, Block 111, Lot 1.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Click here to login to the FOIL Center.

RE: PUBLIC RECORDS REQUEST of 1/5/2026, Reference # W158578-010526

Date: 01/13/2026

Dear Derris Riveiro,
In response to your Freedom of Information Law (FOIL) request seeking:

> *Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for the site located at 46-50 Navy Street, Brooklyn, NY, 11201, Block 111, Lot 1.*

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

> FOIL Appeals Officer
> Office of General Counsel
> New York State Department of Environmental Conservation
> 625 Broadway, 14th Floor
> Albany, NY 12233-1500

Your FOIL request is now closed. For further assistance, please call (718) 482-4912 and reference FOIL #W158578-010526, or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

FOIL Request :: W159894-020326

From New York DEC FOIL Center <newyorkdec@govqa.us>
Date Tue 2/3/2026 10:08 AM
To Derris Riveiro <driveiro@akrf.com>

RE: PUBLIC RECORDS REQUEST of 2/3/2026, Reference # W159894-020326

Date: 02/03/2026

Dear Derris Riveiro,

I write to acknowledge that Department of Environmental Conservation (DEC) has received your Freedom of Information Law (FOIL) request seeking:

> *Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for the site located at 46/50 Navy Street, Brooklyn, NY, 11201, Block 111, Lot 1.*
>
> *Requesting the tank tightness testing, UST Investigative Report, and No Further Action Letter associated with NYSDEC LTANK listing No. 1903757 (year 2020).*

DEC received your request in this office on 02/03/2026, assigned reference number W159894-020326 to the request for tracking purposes, and is processing the request. You may expect the Department's response to your request no later than 3/5/2026.

You can monitor the progress of your request at the link below, and DEC will send you an email when we have completed work on your request.

Please note that many of the DEC's records are available online and can be obtained by searching DEC's website and online databases. Conducting a search for the records you have requested may enable you to obtain the records you want before DEC responds to your FOIL request. In addition, a search of records already available online may give you information that will help to refine your FOIL request.

One of the most popular and useful tools to locate DEC information and records is **DECinfo Locator**. DECinfo Locator is an interactive map that lets you search for a location and access many DEC documents and other public data about the environmental quality of specific sites in New York State, as well as information about sites for outdoor recreation. It contains more than 90 data layers; see our layer description web page to see what is available and how often it is updated.

Information about other records available online and the most popular searches are listed at New York

State Freedom of Information Law (FOIL) - NYSDEC.

If you obtain the records or information you are seeking through one of these sources, then please inform DEC that you are withdrawing your FOIL request. Here is how: log into your Customer portal, click on the Details button for the FOIL request, click on the New Message button, and send a short message stating that you are withdrawing the request. To access the Customer portal, click on the following link: DEC FOIL Center Customer portal.

If you are requesting wetland information, be aware that processes have changed. Please read the Freshwater Wetland Jurisdictional Determination webpage to learn about new wetland regulations and how to request information about the property in question.

If you have any questions in the interim, please call me at: (718) 482-4912 and refer to FOIL request W159894-020326, or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

RE: FOIL Records Request of January 05, 2026, Reference # R000048-010526

Dear Derris Riveiro,

The NYS Department of Health received a FOIL request from you on January 05, 2026. You requested:

"Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for the site located at 46-50 Navy Street, Brooklyn, NY, 11201, Block 111, Lot 1."

Your request is acknowledged by the Records Access Office of the New York State Department of Health and, if appropriate, will be forwarded to the responsive program area(s) to identify documents that are responsive to your request.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days, on February 03, 2026. We will notify you in writing if the responsible program area(s) should require additional time to locate, assemble and review documents that may be responsive to your request.

Sincerely,

Signature
David J. Harvey, Records Access Officer

NYS Department of Health

RE: FOIL Records Request of January 05, 2026, Reference # R000048-010526

Dear Derris Riveiro,

The NYS Department of Health received a FOIL request from you on January 05, 2026. You requested:

"Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for the site located at 46-50 Navy Street, Brooklyn, NY, 11201, Block 111, Lot 1."

Please be advised that after conducting a diligent search, no records responsive to your request have been located.

Please note, this address is served by the New York City public water system (NY7003493). Any violation reports for the public water system can be found at the following website: [www.health.ny.gov/environmental/water/drinking/violations/previous_compliance_reports.htm]www.health.ny.gov/environmental/water/drinking/violations/previous_compliance_reports.htm

Should you feel that you have been unlawfully denied access to records, you may submit an appeal online within 30 days.

If you require additional information, you may respond directly to this e-mail.
Sincerely,

David J. Harvey, Records Access Officer
NYS Department of Health

To monitor the progress or update this request please log into the FOIL Records Access Center.

FOIL Control #: 2025FR00012

Dear Derris Riveiro,

The NYC Department of Health and Mental Hygiene (DOHMH) acknowledges receipt of your Freedom of Information Law request. It has been assigned the above-noted control number and has been forwarded to the following bureau for processing:

Environmental Health Services

Sheba Taylor-Medina, e-mail: staylor2@health.nyc.gov

Healthy Homes Program, Ben DelPercio, e-mail: bdelperc@health.nyc.gov

You should receive a response from the program/bureau within twenty(20) business days. Please note that as of January 1, 2019, the Department charges the statutorily allowable fee of 25¢ per page for FOIL responses of records maintained in hard copy format only. You will be advised by the program/bureau of the fee that is due and, upon receipt of your payment by check or money order, the copies will be forwarded to you.
All inquiries about the status of your request should be made with the program/bureau and control number noted above.

Thank you,

FOIL Administration

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 09/29/2025 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CON EDISON - FARRAGU	***89 JOHN ST***	***NNW 1/4 - 1/2 (0.478 mi.)***	***BL587***	***1782***

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has

determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/29/2025 has revealed that there are 8 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/30/2025 has revealed that there are 6 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/30/2025 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 11/30/2025 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/04/2025 has revealed that there are 9 NY SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/03/2025 has revealed that there are 51 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 22 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF UST site within approximately 0.5 miles of the target property.

NY ERP: In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

A review of the NY ERP list, as provided by EDR, and dated 08/04/2025 has revealed that there is 1 NY ERP site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/30/2025 has revealed that there are 105 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 21 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 7 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 11/30/2025 has revealed that there are 48 E MANIFEST sites within approximately 0.25 miles of the target property.

NY PFAS: DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

A review of the NY PFAS list, as provided by EDR, has revealed that there is 1 NY PFAS site within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 5 NY HSWDS sites within approximately 0.5 miles of the target property.

NY MGP: From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

A review of the NY MGP list, as provided by EDR, and dated 08/27/2025 has revealed that there are 4 NY MGP sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 7 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

DEC Memo:	8/24/21- The basement floated and tipped over a small bucket with oil. There are a sump pump it was shutted down right away. RiteWay on the way to clean the spill. 9/24/21-Zhune- David Chan from Riteway emailed the report dated September 23, 2021 The report stated that Riteway was contacted by the NYC Department of Education to address a water flood from a tropical storm in their tank/boiled which knocked over a 5 gallon bucket of oil. There was a sump pu,p in the room, however as soonas the flood occurred the custodian immediately shut the pump off, which resulted in the room floating instead of pumping out any contaminated liquids to public water way. Riteway immediately began to pump out the contents of tank/boiler room. After pumping out all the oily water, the room was scrubbed down with bio-degrade degreaser. The concrete floor was sound and solid, free from cracks and penetrations. A total of 6000 gallons of oily water was removed by way of vacuum truck . Additional remediation material, ie. White pads, light debris and other small objects were disposed of in 1x55 gallon drum. The site is clean and free from contamination. Spill closed.
Remarks:	Loss to flooded basement, c/u en rte

DEC Memo:	EMIS 284321 6/30/22 - Kim - On 4/5/22 Con Ed reported, while on location for identification of Fdr 1B59, discovering 1gal of unknown oil on 250gal of water in MH-60095. Con Ed reported the structure had water movement and containment was unknown. PCB and Oil ID samples were taken on JJ09412. Con Ed Lab Oil ID and analysis results (Con Ed approval date: 4/5/22) indicated substance similar to lubricating oil containing 3.00ppm PCB. Con Ed inspected equipment and found it in good working order. On 4/6/22, Con Ed had CFS load up two tankers 8,000 gal. On 4/7/22, Con Ed had CFS load up two tankers 10,000gal and ACV used ENVIRO VACTOR 535 to remove 300lb of solids. Cleanup was completed using Safe Wash. Generated waste was transported under EPA# NYR000114579 and MANIFEST# 007169695GBF, to CLEAN EARTH OF NORTH JERSEY (SOUTH KEARNY). See

MANHOLE (Continued) **S128661524**

document files for further
information Spill closed end
Remarks: Unknown source of spill into manhole - not into water Unknown petroleum Clean up - Sampling - Pending

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	3/26/21 - Kim - Con Ed reported a release of 10oz of an unknown oil discovered in a tidal manhole. The spill was also reported to the National Response Center under NRC#1301278. Con Ed was working on road improvements with NYC installing a street light. There was a retired Con Ed manhole, MH617, that was covered by a steel construction plate, which when lifted revealed water with a sheen on the surface. Con Ed has arranged for the spill cleanup. Con Ed classified this manhole as a tidal structure based on its location in the Brooklyn Navy Yard area and its proximity to the water. EMIS 279351 9/17/21 - Kim - Con Ed Lab Oil ID (Con Ed approval date: 3/30/21) indicated the presence of lubricating oil. On 5/24/21, Con Ed vendor ACV cleaned the excavation. Approximately 80,000gal of water was transported to Astoria for treatment. ACV removed wood

CONTAINMENT (Continued) **S127480760**

sheeting (20 pieces) from the
excavation for disposal as nonhazardous waste to Clean Earth. The excavation was sampled after the
water was removed. MH 83147 was not effected by the spill. See document files for further
information Spill closed end

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	242732
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
E00 - Piping Secondary Containment - None
L09 - Piping Leak Detection - Exempt Suction Piping
H00 - Tank Leak Detection - None
I02 - Overfill - High Level Alarm
K00 - Spill Prevention - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
F00 - Pipe External Protection - None
G02 - Tank Secondary Containment - Vault (w/access)
J02 - Dispenser - Suction Dispenser

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	08/04/2010

257 GOLD STREET (Continued) **A100360401**

Spiller Name:	MARK ROBINS
Spiller Company:	COMMERCIAL FACILITY
Spiller Address:	235-263 GOLD STREET
Spiller Company:	001
Contact Name:	MARK ROBINS
Latitude:	40.6974680
Longitude:	-73.9830430
DEC Memo:	Sangesland spoke with Mark Robbins: Property was a manufacturing facility which is now going to be used for residential. Any city property classification moving from Manufacturing to Residential requires an E Designation report to the DEP which reviews the toxic risks associated with the site. Mark believes the problems at this site are not major and will be solved with excavation. No schedule yet on when excavation work will be done. If the excavation work does NOT solve the environmental issues at the site, then the case will be transferred to Koon Tang's group. 05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 5/24/06 - Raphael Ketani. I have reviewed the Sept. 15, 2005 Remedial Action Plan produced by Hydro Tech Environmental, with the exception that they should drum the purge

COMMERCIAL FACILITY (Continued) **S107409518**

water that is generated prior to well sampling and not send it back down the wells. I talked to Mark Robbins, Vice President, (631) 462-5866 regarding the report and progress on the project. He said that another RAP has been written and sent to the client for approval. He said he will send this one to DEP also. I told him to send me the plan so that we're all on the same page. He said that the new RAP simply requires digging out everything and putting in a vapor barrier. Mr. Robbins said that he will contact Sharissa Singh, project manager, at the Brooklyn office (718) 636-0800 and have her send me the new RAP, and the contact information for the NYC DEP. Ms. Singh FAXed me a letter that DEP sent to Hydro Tech. We also discussed possibly digging down to the water table and vacuuming out the water to eliminate the contamination issue. We also discussed the position of the vapor barrier and the passive venting system. She said she will send me a copy of the latest RAP and to direct all correspondences to her. 6/29/06 - Raphael Ketani. I reviewed the 6/1/06 Remedial Action Plan and Construction Health and Safety Plan submitted by Hydro Tech Environmental Corp. I found the report to be acceptable with the comments: bottom soil sampling should be once every 900 square feet (not 900 linear feet); samples should be sent to an ELAP certified lab for 8260B and 8270C analysis; a summary table should be provided in the analytical report; groundwater that is encountered should be sampled; all groundwater that has a sheen should be vacuumed; all tanks encountered should be cleaned, removed, registered, and manifests provided as to who they are sent to. I will send a letter to Ms. Singh and to Julie Stein of DEP approving the report. 7/28/06 - Raphael Ketani. I talked to Ms. Singh. I asked her why I haven't heard of any work taking place. She said that DEP hasn't gotten back to her approving the DEC comments and giving the go-ahead to do the work. I asked her to try and get in contact with the DEP case manager and get the work started. She said she will. 8/8/06 - Raphael Ketani. I received the plans for the vapor barrier and passive venting system from Hydro Tech Environmental dated 8/7/06. 8/17/06 - Raphael Ketani. I tried to contact Ms. Singh, but could only leave a message. 9/7/06 - Raphael Ketani. I tried calling Ms. Singh, but she was no longer with the company. I tried to contact Mark Robbins (631) 462-5866. I talked to him and let him know what DEC's comments were regarding the RAP. He said that Ms. Yash Saha (718) 636-0800 is the new project manager in the Brooklyn office and that he is working with her to get her up to speed. Mr. Robbins said that, otherwise, he is still waiting for approval from DEP. 11/13/06 -

COMMERCIAL FACILITY (Continued) **S107409518**

Raphael Ketani. I spoke with Mr. Robbins and asked him why I have heard nothing regarding progress on the project. He said that the DEP approved the RAP and the DEC comments, but the site has multiple E designations. So there is a requirement for noise abating windows for the building that meet a certain specification. The architect involved has to submit the window specification to DEP before they will give the go-ahead. So Mr. Robbins and the DEP are waiting on the architect to make his submissions. 3/21/07 - Raphael Ketani. I received a call from Ms. Saha. She said she was waiting for an approval letter from DEC regarding the RAP and the DEC's comments. I told her that Mr. Robbins had received approval of these items from DEP back in November 2006. She said she wasn't aware of this. I told her to coordinate things with Mr. Robbins. I also asked her whether the window design from the architect was approved by DEP. She said she had an approval letter from January 2007. I asked her whether I could get a copy of this letter. She said she would send it. Lastly, I told her the project has been stagnating and to get it moving again. She said she would. 3/22/07 - Raphael Ketani. Mr. Robbins called to clarify that the work on the site is moving foreward. He said that the client is selling the property and that Hydro Tech has a notice to proceed from DEP. Some soil has already been removed. We discussed the case and agreed that the first step will be to have new groundwater wells installed and to take new water samples. This is being done as the last round of water samples were taken several years ago, according to Mr. Robbins. Then, if the groundwater is significantly contaminated, vacuum pumping will take place and resampling will be performed. I told him that once the building is gone, then the contaminated soil must be removed quickly. Otherwise, the rain may wash the contaminants into the water table. He agreed and said that they will move quickly to start digging once the building is down. I also asked for a quick site map showing any gas stations and apartment buildings in the area. Mr. Robbins said that he will send this with the well plan. 3/26/07 - Raphael Ketani. I received the following e-mail today from Mr. Robbins: Julie & Raphael: Attached please find the end point sample results from our recent soil excavation activity at the above property. We removed and disposed of soil from 2 locations prior to formal commencement of site construction/development. Future work associated with the property will be performed as specified in our Remedial Action Plan/Construction Health & Safety Plan - in general future excavation associated with the construction of foundations, the placement of the vapor barrier and

COMMERCIAL FACILITY (Continued) **S107409518**

the capping of all portions of
the property outside the building footprint with concrete or asphalt. Please review the attached
results and approve the course of action as outlined above. Thank you in advance for your attention
to this matter. Mark 3/28/07 - Raphael Ketani. I reviewed the soil analytical results (Table 1)
that were sent by e-mail by Mr. Robbins. The table didn't list the full suite of VOC analytes that
should be tested for. There were many SVOC hits for each sample with exceedences of the TAGM
standard for primarily the combustion by-product species (the benzo series). I spoke to Ms. Saha
about the table and she said that Mr. Robbins is the project manager now. I called Mr. Robbins and
asked him why he was the project manager. He said that there were so many people involved now, that
he has to act as the manager for the project. I asked him why there was an incomplete list of VOCs
for the table. He said that the table reflects everything that was a hit above the MDLs. I asked
him why there were so many and so high hits for SVOCs. He said he didn't know why. I asked him for
a description of the history of landfilling at the site before the buildings were constructed, the
boring logs, and the soil descriptions. He said all of these documents will definitely be in the
closure report. 3/30/07 - Raphael Ketani. I received the following e-mail today from Mr. Robbins:
Field Activities at Gold Street: 1/10/2007- Waste characterization sample was collected for Soil
safe parameters. Soil safe called back saying the sample had Lead contamination and would not be
accepted at their facility. Clean Earth of NJ was then contacted. We filed an application with the
EPA for an ID No on 2/14/2007 for hazardous soil waste. Refer diagram for AOC-2 and AOC-3
locations. * Soil excavation began on 3/3/2007 at AOC-2. Soil was temporarily stockpiled. *
Excavation at AOC-3 was done on 3/4/2007. Concrete too thick to break. Jackhammers were used to
break the concrete and continue excavation at AOC-3. Soil temporarily stockpiled on Site. *
Excavation and loading of trucks: 3/5/2007, a total of 6 trucks loaded (3 from each Lot). *
Loading of trucks continued: 3/7/2007,1 truck from the soil that was stockpiled at AOC 3 *
Collected a total of 10 end point samples EP-1 through EP-10 from the Site (5 from each AOC) *
Excavation continued along western sidewall of AOC-2 on 3/7/2007. * Loading of trucks: 3/7/2007, 3
trucks from AOC 2. * End point sample EP-11 was collected from AOC 2 at the end of excavation
activities. * All end point samples were analyzed for EPA 8260, EPA 8270 and TCLP Lead. *
Excavation pit at AOC-2 is 30 feet by 18 feet. Depth: 12 to 14 feet. * Excavation pit at AOC-3 is

COMMERCIAL FACILITY (Continued) **S107409518**

42 feet by 12 feet. Depth: 12 feet. * The total weight of the contaminated soil from the excavation area was 258.92 tons. * Attached is the End point sampling plan, End point sample characterization details,the Laboratory results and Pictures. Yash Saha Project Manager HydroTech Environmental, Corp 6/13/07 - Raphael Ketani. Eva of Hydro Tech called for Ms. Saha, as she was on vacation. She asked what DEC needed to close the case. I told her that DEC needed the boring logs and site history description. I told her that I had spoken to Mr. Robbins, and he told me that he will enclose these documents in the Closure Report. I added that I was told the report would be received soon and that without it, I can't tell why there are such high SVOC detections. 6/26/07 - Raphael Ketani. Ms. Saha called regarding the work plan dated April 2007. I told her I hadn't received the plan. She said she will send it. I also asked her for the boring log descriptions and a complete site history. Otherwise, I told her, I can't close the spill case. She said she understood. 6/27/07 - Raphael Ketani. Today I received the April 17, 2007 Groundwater Investigation Work Plan from Hydro Tech. I reviewed the plan and had questions regarding why there were only 2 wells planned. I left a message for Ms. Saha to call me back. 7/9/07 - Raphael Ketani. I spoke to Ms. Saha about the wells. She said she was just relaying information to me and to talk to Mr. Robbins about them. I spoke to Mr. Robbins and he said these wells are just for monitoring the groundwater before that area is excavated. He said that this was part of the plan for dealing with the groundwater contamination hotspot. This is the only hot spot and so wells are planned only for the northwest corner of the property. However, two more wells may also be installed later. I asked him again for the detailed soil descriptions in order to see whether something in the soil was generating the high SVOCs. He said he will send them. 7/10/07 - Raphael Ketani. Ms. Saha e-mailed me the summary report for the field activities that have taken place at the site so far. The report included pictures of the excavation work, figures depicting AOC-2 and AOC-3 and their respective soil sampling locations and soil analytical results tables. This is the same report that I had received on 3/30/07, except I now have the pictures to go along with it. 7/26/07 - Raphael Ketani. I sent out the letter regarding the groundwater well installation plan. 9/17/07 - Raphael Ketani. On 9/13/07, Yash Saha of Hydro Tech sent me an e-mail that the two wells that were requested by DEC were being installed today, instead of a few weeks ago. The delay was due to the need to get DOT permits. 10/18/07 - Raphael Ketani. I tried to contact Ms. Saha (718)

COMMERCIAL FACILITY (Continued) **S107409518**

636-0800, but could only
leave a message. I contacted Mark Robbins (631) 462-5866 and asked him to make sure Ms. Saha calls
me back. He said he will. 10/19/07 - Raphael Ketani. Ms. Saha called me back and left a message.
She said that the report with the groundwater analytical results from the two new wells was on Mr.
Robbins' desk. She said that DEC should receive it next week. 11/5/07 - Raphael Ketani. I received
the 10/19/07 Groundwater Investigation Report from Hydro Tech Environmental Corp. I began my review
of the report. Though there were a couple of exceedences of VOCs from the water sample from MW-1,
they were low (11 and 20 ppb). MW-2 had no exceedences. 11/6/07 - Raphael Ketani. I spoke to Yash
Saha regarding the report and the site. She said that excavation has not taken place, yet. She said
that the project involves just lot 13. I told her that DEC doesn't consider the two analyte hits to
be significant and will close its spill case. However, I told her that DEC never received the
analytical report for the soil samples from borings SP-1 to SP-8, nor the results from the
groundwater sample from GP-2. She said she will e-mail me the report. I also told her that DEC was
missing the investigation results for the test pits, and AOC-2 and AOC-3. She said she will send
this document, also. I received the May 2, 2005 Subsurface Investigation Report and the 9/4/07 test
pit and AOC investigation report. I am closing the spill case based upon the 8/7/06 Vapor Barrier
Specifications, the EP series soil analytical results from the 4/6/07 Memo to Julie Stein, the
9/4/07 test pit and Area of Concern soil excavation report, and the groundwater analytical results
from the 10/19/07 Groundwater Investigation Report. I sent a letter stating this basis for closing
the case to Ms. Saha and Ms. Stein.

DEC Memo:	E2MIS NO 153923 J. SANSONETTI FOUND APPROX. 1/2 GAL. UNKNOWN OIL ON APPROX. 300 GAL. WATER IN MH-64797. SPILL APPEARS TO BE CONTAINED. NO SEWERS OR WATERWAYS APPEAR TO BE AFFECTED. LIQUID SAMPLE TAKEN. CLEANUP PENDING PCB RESULTS. Lab Sequence Number: 04-06544-001: Analysis indicates the presence of a substance similar to a dielectric fluid. Lab Sequence Number: 04-06543-001: TOTAL PCB 2 ppm From: Hearns, Dennis J. Sent: Wednesday, August 18, 2004 6:15 AM To: Paretsky, Leon Cc: Neville, Christine Subject: Inc# 154916 Leon, We took this job yesterday from maintenance services and thought it was a distribution manhole, we put it on the 24 hr clock in Brooklyn Electric site. We sent a clean-up crew and supervisor to clean the structure and all they found were 2 oil static feeders. We removed it from B/E and put it into Brooklyn 138

MANHOLE 64797 (Continued) **S106698413**

Transmission as Spill Unknown
-----Original Message----- From: Schaefer, Vernon Sent: Wednesday, June 08, 2005 6:28 AM To:
Pillig, Michael E. Subject: MH 64797 Mike, MH 64797 was inspected on 5/10/05 as per Maximo W/O
0000251229. There was no indication of oil. This is one of the open manholes on your list. There is
a crew that will be going out today to check the rest of the manholes on your list. Vernon Based on
this inspection of the manhole, this spill will be submitted for closure.

Remarks: 1/2 GAL OF OIL ON 300 GALS OF WATER IN MANHOLE. NO TO ALL 5 QUESTIONS. CON ED REF #154923. 0615 THIS AM SPILL WAS TAKEN OFF 24-HR PROGRAM PENDING AVAIL OF CREW.

DEC Memo:	08/02/08-Zhune spoke to Steven Byrns (201) 406-6260 from USS Shipping. He said Spill Happened yesterday 08/01/08. Spill was contained to dry-dock. Cleanup was completed. He will sent letter. Zhune received the call of this spill 08/02/08. 08/04/08- The letter was received and it summmarize the following: The spill ocurred when the barge was in the process of deballasting in order to prepare for dry-docking on the blocks. At The same time the barge was deballasting, a small amount of slops was being pumped from the barge slop tank via a portable air pump into a 55 gallon drum which was located topside on deck. the 1 discharge hose from the portable pump was leftin the semi full 55 gallondrum and the pump was inadvertently turned on causing the drum to fill up and overflow before the pump could be turned off. The oil spilled on deck

DRY DOCK (Continued) **S109206811**

and flowed with the ballast
water over the side and into the dry-dock. The GMD dry-dock supervisor was notified and they were
hired by USS shipping to commence cleanup operations. GMD deployed spill response equipment to
isolate and cleanup all the oil. The NRC and COTP were notified by the Master. On August 2,2008 at
17:45 The USCG inspected the cleanup and was satisfied with the results.

Remarks: Material is 'slop', diesel, fuel oil and water. Pumping into drum, overflowed, and mixed with water. Cleanup is complete. Spill was contained to dry dock. Will be pumping out dry dock.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Emis #274895. 8/20/19-Zhune spoke to Richard Slote. Richard said spill in 3rd avenue yard. It was hydraulic fluid most to the asphalt. 3 quarts was already cleaned. They discovered few ounces in the catch basin. They called a contractor to clean the catch basin. 12/30/19 Kim Con Ed cleaned up the spill. 8/20/19: Con Ed reported all of the asphalt was cleaned with speedy dry, broom and shovels; 4 drums of oily debris was generated. The impacted catch basin was double washed and rinsed by Con Ed contractor ACV. All waste was brought to Clean Earth of North Jersey for disposal. See document files for further information Spill closed end

DEC Memo:	3/3/06 - Raphael Ketani. I arrived on site 2:15PM. Many Con Ed and DEP personnel on site already. Hose on east side of street running water at high volume down the street to the intersection of Navy St. and Park Ave. Many tank trailer trucks and 2 vacuum trucks on site. Problem is below the elevated BQE and doesn't affect traffic. Initial release is 2,000 gals with 150 gals. recovered. Jerry Mattarazzo is the Incident Commander for Con Ed. Spoke to Mr. Natale, Information Officer of Con Ed, at command post ((917) 417-7372). He said that 345,000 volt

FEEDER 63 (Continued) **S107657331**

feeder was compromised by water
main that crosses it. Feeder runs parallel and under the eastbound (northbound) side of BQE. Oil
does not contain PCBs. Water main crosses the line perpendicularly. Water main sprang a leak which
picked up the sand around the feeder pipe and sand blasted the feeder pipe until it cut the pipe
and released oil. At beginning of incident yesterday 3/2/06, all that was seen was water breaking
through cracks in pavement under the BQE. Con Ed dug up the intersection of the feeder and the
main. Yellow oil was seen floating and filling up the pit. Pressure was reduced in the feeder to
about 5 gal./min., but the water pressure was maintained. Con Ed kept pumping oil to keep the water
out and DEP kept pumping water to keep the oil out. Mike Pilig of Con Ed, Safety Officer (and
acting as Environmental Officer for Con Ed), told me that, initially, Con Ed thought that 2,000
gal. had been released, but because pumping never ceased in order to protect the feeder, much more
is suspected of having been released as a mix with water from the water main. There are cracks in
the pavement where the east side of Park Avenue is within 15' of the intersection of the feeder and
water main. Started pumping out excavation at 2:45PM. Empty hole with about an 8 hole on underside
of one feeder pipe. Oil is still coming out of pipe. Vacuuming is continuing and liquids are going
into portable 10,000 gal. roll off holding tank. However, tanker trucks are standing by. I pointed
out the cracks in the pavement to Mike Pilig and he said that once things are under control, Con Ed
will do soil borings to determine extent of soil contamination and oil migration. I asked David
Russo, DEP Environmental Health and Safety Officer, whether the water treatment plant has been
notified of the mix of water and oil heading to the plant. He said they had been notified and it's
up to them what they will do about it. The Ingersol Houses apartment buildings are about 50 feet
away from the site of the excavation. It's not clear whether any oil headed to or entered the
basements of the buildings as the great majority of the water from the water main escaped up and
out through cracks in the pavement under the BQE. 3/3/06 4:00 PM - LEAK LOCATED ON PARK AVE BET
NAVY AND POSTLAND. MET AT SITE WITH PILLIG AND NATALE. LEAK HAS BEEN EXCAVATED AND TEMPORARY CLAMP
IN PACE. SPOKE WITH RUSSO (NYCDEP) WHO IS SATISFIED WITH PROGRESS THUS FAR. WILL RETURN TO SITE ON
MONDAY 3/6 TO DISCUSS POST-EX SAMPLING WITH PILLIG. (JHO) 4/10/06
e-mail from Mike Pillig: Jane, I
wanted to update you on our cleanup activities on the subject feeder leak. As you will be able to
see from the results, we have one area of the excavation where the wall samples are still high,

FEEDER 63 (Continued) **S107657331**

that being the East wall (north corner). The reason you do not see more samples taken on the north wall is because we uncovered another feeder to inspect for damage and backfilled with sand so as to protect the feeder. While there was no visible contamination we did not take samples. If I were to take samples of the north wall, I would merely be sampling the clean sand that was put back in to protect the feeder. Lab results show high TPH results (23,200 ppm and 26,100 ppm) in northeast corner of excavation. (JHO) 4/19/06 - spoke with Pillig - told him to excavate north east corner area. He indicated that they were already planning to excavate additional soil and re-sample that area. Also, they will be conducting additional excavation to the north of the second feeder and collecting samples. He will send revised sketch showing excavation limits. (JHO) 5/4/06 - met on site with Mike Pillig. Additional excavation conducted to north and east approx. 5 feet, new samples collected - all results below 500 ppm TPH. OK to backfill. Also, he extended excavation to west approx. 5 feet and to a depth pf 2 feet due to visual observation of oil beneath asphalt during initial spill response. 11 samples collected, as well as 2 shallow soil borings immediately north of feeders 701/702 (which are located north of the original excavation). Results expected next week. When these excavations are backfilled, he will open excavation northeast to DEP valve basin, which was impacted during inital release. Total leak amount now calculated at approx. 5700 gallons. (JHO) 6/28/06: Mike Pillig e-mailed all lab results and site sketch showing sampling locations - see eDocs. All results below cleanup guidance values. Close out. (JHO)

Remarks: poss spill into east river btwn rainey substation and farragut sub station in Brooklyn. Feeder runs under water btwn sub stations. Equipment failure in feeder. Leaking 10 gallons per hour. 163167
