DEC Memo:	1/27/25-Zhune spoke to Jada. She said the site is in the BCP Program. On the construction site they have equipment called payloader it was taking up a piece of concrete and the concrete hit the hydraulic line and spilled approximately 5 gallons of hydraulic oil into soil. The contractor excavated the soil contaminated put it in a bug and is going to transferred it into a drum. They are in the process to find an environmental company to come and pick it up. 3/27/25- called several times to Jada 347-673-3020 to find out about the name of the company that remove the drum but she never picked up the phono. 3/28/25- Zhune spoke to Jada. Jada said the subcontractor Ruttura they took the drum to their yard. There is not manifest. Spill closed.
Remarks:	Cleanup complete

BROWNFIELDS:

Name:	236-246 GOLD STREET
Address:	236-246 GOLD STREET
City,State,Zip:	BROOKLYN, NY Brooklyn
Program:	BCP
Site Code:	668421
Acres:	0.250
HW Code:	C224413
SWIS:	2401
Town:	New York City
Record Added Date:	06/05/2024
Record Updated Date:	10/24/2024
Update By:	DRGARDNE
Site Description:	Location: The Site, located at 236-246 Gold Street, Brooklyn, New York (Tax Block 121, Lots 33, 35, 36, and 37), is a rectangular shaped parcel located on the western side of Gold Street, between Concord Street and Tillary Street. The Site is approximately 11,054 SF and has approximately 125 feet of frontage along Gold Street and is approximately 88 feet deep. Site Features: The Site is currently unimproved with any structures and vacant. Current Zoning and Land Use: All four Site lots are zoned R6B, denoting a built-up, medium-density residential area. Past Uses of the Site: The Site was developed as early as 1887 with a two-story commercial building identified as the Brooklyn Fire Department and a tin smith at Lot 33 on the northeastern portion of the Site. Five two- to four-story residential buildings, a three-story structure, and a shed were identified on the remainder of the Site. By 1904, the three-story structure has been identified as a residential property. The fire department and tin smith were reidentified as a wagon house. By 1915, the wagon house had been labelled as a wagon builder. Additionally, the southernmost residential building had been identified as commercial, and in 1938 the building had been demolished. BY 1950, the wagon builder had been identified as rags . By 1969, all buildings at the Site had been demolished and the lot remained unchanged until 2003, when parking had been identified throughout the Site. City directory listings document historic use of the Site for a blacksmith, a wagon builder, a waste materials corporation, and residential use. Contamination detected onsite is likely due to the presence of historic fill across the Site, as well as historic use of the Site for metalworking. Site Geology and Hydrogeology: The subject property is located at an average elevation of approximately 31 feet above mean sea level (ft-amsl) and is relatively flat. The Site is underlain by a continuous layer of historic fill consisting of brown, silty sand with gravel, concrete fragments, brick fragments, coal fragments, ash, glass, and wood ranging in thickness from five to ten feet. The fill layer is underlain by a native layer of brown, fine- to coarse-grained sand to at least 15 feet below sidewalk grade (ft-bsg). Groundwater at the Site was measured at approximately 24 to 27 ft-bsg. Groundwater is assumed to flow northeast, towards the East River.
Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

9-12-02 03:45HRS E. WILLIAMS
REPORTS, TRANSFERED ALL OVERFLOW FROM TRUCK 60504 TO TRUCK 60563.
CLEANUP ON CEMENT AND ASHFALT
COMPLETED. NO VISABLE OIL BUT DOUBLE WASHED AS A REGULAR OIL CLEANUP.
TAG WAS LEFT IN PLACE, JOB
INCOMPLETED BECAUSE ONE TRUCK WAS DOWN AND THE OTHER WAS FILLED UP .
JOB WILL COMPLETED IN THE
MORNING. UPDATE 0505 FROM EDGAR CORTES 01:15 - Received a call from
Environ. desk S. Pace reporting
a 2 gal. spill from Environ. veh. #60504 onto basketball court and
into sewer at the above location
02:00 - Arrived at location to find Environ. supervisor and crew in
the process of cleaning the
area of the spill Supv. - E. Williams Crew - K. Hufford #74294 R. Vega
#04005 support employee
using veh. #60563 to assist in clean up and take some water from
veh.#60504 on location The job was
to complete an under 50 PPM clean up at this location, while in the
process of taking water from MH
#723 The cut off switch to the vehicle failed allowing approximately 2
gal. of water to be spill
from the vehicle onto the basketball court, and approximately 1/2 gal.
of this water flowed into
sewer drain When I looked in the sewer drain I found that the drain

MANHOLE #723 (Continued) **S106007405**

was dry, and one side of the
pit was wet, I saw no pools of water in the drain nor found any indication of oil in the drain as
well At this point the plan was for the crew complete cleaning the court and then to wash, and
clean the sewer drain I requested that the vehicle be turned into transportation and that the cause
of the switch failure be identified and repairs made, I also requested that either employee K.
Hufford or supv. E. Williams ensure to get some documentation identifying the problem and the
repairs to this vehicle for the record 03:00 - DEP Andrew Kelly arrived at location, at this point
the crew had just completed the clean up of the court and the sewer drain, Mr. Williams and I
explained to him what had occurred and what the crew had just completed - I offered to open the
drain for his inspection but he did not request to do so - we informed him that this was a under 50
PPM clean and that the Lab results indicated a 27 PPM of PCB in the structure - I also repeated
that no visible oil had come from the structure onto the court or the drain - he appeared to
satisfied with the explanation and the clean 03:10 - DEP A. Kelly left location 03:25 - I left
location job was completed and the Environ. crew was headed back to the yard as well END of UPDATE
UPDATE 9-12-02 1145 HRS L. MERCADO MECH A FLUSH DEPT REPORTS WHILE CLEANING STRUCTURE HE FOUND AND
EARTHEN THAT HAD BEEN CEMENT HE ALSO FOUND 3 FDR THAT HAVE 35' OF OIL SOAK ASBESTOS ARC PROOFING ON
EACH ONE (TOTAL OF 105') HE ALSO FOUND UNCAPPED 3C CABLE ENDS. HE REMOVED ALL LIQUIDS AND SOLID
WITH HIS VACTOR. E.S.TAG WAS LEFT IN PLACED. THIS WILL HAVE TO COME OFF THE 24 HRS DEMINIMIS
PROGRAM DUE TO THE ABATMENT JOB AND UNCAPPED CABLE ENDS. REQUESTED SERV BUR TO CAPPED END. CIG T.

IT IS NOW OFF THE CLOCK. UPDATE: 10/10/04 - 0006 E. WILLIAMS - O.S. - ENV. OPS., REPORTS 150 GALS OF LIQUIDS REMOVED BY ASTORIA TANKER. STRUCTURE WAS DOUBLE WASHED WITH BIO GEN 760. SUMP FOUND SEALED. TAG REMAINS PENING SODA BLAST. Sunday, October 10, 2004 12:06 AM Incident 155751 the correct location is E/S Navy St 240' N/O Sands St; at this location in MH-642 all liquids were removed then double washed with 760 biogen; 150 gallons of liquid was picked by Astoria tanker. There was no debris in the structure the sump was found sealed. The environmental stop tag was left in place pending post cleanup of Soda Blasting. UPDATE: 10/13/04 - 0841 The following Environmental Operations crew A. Glodowski, J. Glodowski, P. Rosado, and J. Middleton were assigned to Soda Blasting structure; while they were working the suction pump broke on the Astoria tanker; the job was shut down. Update 11/02/04 21:00hrs. O.S. B.Bamonte reports on location with Trinidad, Vega, & Esponda. Env. Ops. crews double washed structure using 5 gallons of bio-gen 715 & 5 gallons of safety clean detergent. Sump was found cemented. After structure was washed, Env. Ops. crews began cleaning structure by soda blasting. An >500 Astoria tanker removed 470 gallons of wash liquids out of structure. One drum was generated consisting of PCB solids, lead,

MANHOLE 642 (Continued) **S106007381**

PPE, & zone material. Drum was
picked up by Astoria transportation. An Astoria chemist was called to location to take 17 PCB
wipes. Env. stop tag was left in place at this time pending the results from PCB wipes. UPDATE
11/5/04 THE RESULTS FOR THE WIPE SAMPLES ARE AS FOLLOWS: SEQ# TEST PT (UG/100CM) 04-09087-001 1 2
002 2 4 003 3 10 004 4 44 005 5 3 006 6 21 007 7 14 008 8 1 009 9 4
010 10 3 011 11 1 012 12 4 013
13 3 014 14 7 015 15 4 016 16 8 017 17 3 08:00 Hrs = 11/11/04 = Env Ops Supv C. Fernandez reports
that structure was steam cleaned, double washed using 5 gallons each of BioGen 760 and A1 Hydro.
Structure was then soda blasted. An Astoria tanker removed a total of 100 gallons of liquid. One
drum of debris will be picked up by Astoria and wipe samples will be done by an Astoria Chemist
tonight. Tag remains in place pending wipe results. - 11/13/04 1825HRS
O.S.GENE WILLIAMS REPORTS 3
WIPE SAMPLES RETURNED. SAMPLE#4 - < 1.PPM; #6 - 2 PPM; #7 < 1 PPM (Lab Sequence Number:
04-09425-001) ENVIR TAG #43923 WAS REMOVED.

DEC Memo: 12/2/16-On 12/01/16 at 2:20am while doing off hours I received notice of spill at Kings County Distillery. The nature of the spill was the deliberate dumping of methanol down a drain at the factory. Fallowing notification I reported the spill to the region 2 office of the Division of Law and Enforcement (Investigator Eric Dowling 845-784-6045) and NYCDEP. I spoke to Ms. Gilmore at DEP and she gave me the DEP reference # 186261831. As per the direction of my supervisor Jeff Vought this spill is administratively closed..
Remarks: The following information was received through the DEC website "Report an Environmental Violation Online" or sent directly

KINGS COUNTY DISTILLERY (Continued) **S119028403**

by the complainant to an OPP dispatch mailbox: Who Did It: Kings County Distillery routinely disposes methanol and other hazardous wastes created from alcohol distillation into drains that connect to the municipal water supply. The distillers are the ones disposing of the waste but it is likely they are unaware that this is illegal. The owner Colin Spoelman has made no effort to properly train his employees in waste disposal or properly dispose of waste. What Occurred: Kings County Distillery is a beverage alcohol production facility. During the production of beverage alcohol, the initial output of the distillation still is a hazardous mix of waste products including methanol and acetone. This waste is routinely collected twice a day in gallon jugs marked with a skull and crossbones and dumped into an ordinary sink drain. The time of collection is usually between 8 to 10 AM and 4 to 6 PM. This has been occurring daily since the facility has been in operation. The liquid is a neon blue color due to copper salts present from the copper still. When Did It Occur: This is a daily occurrence, happening between 8 to 10 AM and 4 to 6 PM. Times may vary from day to day. This happens on weekdays as well as weekends and has been going on since the facility began operating more than two years ago. County: New York Municipality: Brooklyn Location Or Address: 299 Sands Street in the Brooklyn Navy Yard. Violations occurring on the main production floor, in the room with the stills. How Did It Occur: It happens by employees manually filling jugs from an outlet valve and physically dumping the waste into a sink. Additional Details: The violations do not occur when the facility is open to the public, although the back door to the facility is regularly left open, allowing a view into the area the violations occur. The distillery is open for tours in the late afternoon on weekdays, and all day on weekends. It may be possible to witness this activity during a Saturday morning tour or through looking into the back door of the facility. This is likely happening to save money on proper waste disposal. This will certainly happen again as it is routine policy. No other agency is involved. Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	W/O 1
Tank Id:	208293
Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

I02 - Overfill - High Level Alarm
K00 - Spill Prevention - None
L09 - Piping Leak Detection - Exempt Suction Piping
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
C01 - Pipe Location - Aboveground
E10 - Piping Secondary Containment - Impervious Underlayment
J02 - Dispenser - Suction Dispenser
G01 - Tank Secondary Containment - Diking (Aboveground)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	10/01/1994

Waste Description: Cyclohexanone (I)

Waste Code: U058
Waste Description: 2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide

Waste Code: U061
Waste Description: Benzene, 1,1'-(2,2,2-Trichloroethylidene)Bis[4-Chloro- (Or) Ddt

Waste Code: U069
Waste Description: 1,2-Benzenedicarboxylic Acid, Dibutyl Ester (Or) Dibutyl Phthalate

Waste Code: U080
Waste Description: Methane, Dichloro- (Or) Methylene Chloride

Waste Code: U081
Waste Description: 2,4-Dichlorophenol (Or) Phenol, 2,4-Dichloro-

Waste Code: U082
Waste Description: 2,6-Dichlorophenol (Or) Phenol, 2,6-Dichloro-

Waste Code: U102
Waste Description: 1,2-Benzenedicarboxylic Acid, Dimethyl Ester (Or) Dimethyl Phthalate

Waste Code: U108
Waste Description: 1,4-Diethyleneoxide (Or) 1,4-Dioxane

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

WEGMANS FOOD MARKET 111 (Continued) **1025887786**

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U134
Waste Description: Hydrofluoric Acid (C,T) (Or) Hydrogen Fluoride (C,T)

Waste Code: U149
Waste Description: Malononitrile (Or) Propanedinitrile

Waste Code: U150
Waste Description: L-Phenylalanine, 4-[Bis(2-Chloroethyl)Amino]- (Or) Melphalan

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U161
Waste Description: 4-Methyl-2-Pentanone (I) (Or) Methyl Isobutyl Ketone (I) (Or) Pentanol, 4-Methyl-

Waste Code: U169
Waste Description: Benzene, Nitro- (Or) Nitrobenzene (I,T)

Waste Code: U170
Waste Description: P-Nitrophenol (I,T) (Or) Phenol, 4-Nitro-

Waste Code: U188
Waste Description: Phenol

Waste Code: U196
Waste Description: Pyridine

Waste Code: U205
Waste Description: Selenium Sulfide (Or) Selenium Sulfide Ses2 (R,T)

Waste Code: U210
Waste Description: Ethene, Tetrachloro- (Or) Tetrachloroethylene

Waste Code: U211
Waste Description: Carbon Tetrachloride (Or) Methane, Tetrachloro-

Waste Code: U220
Waste Description: Benzene, Methyl- (Or) Toluene

Waste Code: U227
Waste Description: 1,1,2-Trichloroethane (Or) Ethane, 1,1,2-Trichloro-

Waste Code: U228
Waste Description: Ethene, Trichloro- (Or) Trichloroethylene

Waste Code: U239

WEGMANS FOOD MARKET 111 (Continued) **1025887786**

Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

Waste Code: U247
Waste Description: Benzene, 1,1'-(2,2,2-Trichloroethylidene)Bis[4-Methoxy- (Or) Methoxychlor

Waste Code: U248
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenyl-Butyl)-, & Salts, When Present At Concentrations Of 0.3% Or Less (Or) Warfarin, & Salts, When Present At Concentrations Of 0.3% Or Less

Waste Code: U353
Waste Description: Benzenamine, 4-Methyl- (Or) P-Toluidine

DEC Memo:	01/17/06: This spill transferred from J.Kolleeny to S.Kraszewski. Recovery system installed after tank pull. Only one recovery well, not known if any site assessment was done or any post-exc samples analyzed. - SK 9/22/06: Spill transferred from Kraszewski to Kann. 8/30/07: WP submitted 8/27/07 and following email sent to NYCHA on 8/29 The Department has reviewed the work plans listed below and finds them acceptable provided a schedule of work is submitted to the Department (i.e. for field work and report submittal, as discussed in previous meetings). This can be done through a one page addendum submitted as an attachement to each report. The reports reviewed are as follows: Site Specific Field Investigation Supplemental Work Plan, East River Houses, March 2007 Site Specific Field Investigation Work Plan, Ingersoll Houses, June 2007 Site Specific Field Investigation Work Plan, Marlboro Houses, June 2007 Site Specific Field Investigation Work Plan, Isaacs Houses, June 2007 2/25/16: J.Kann - spoke with Yelena Tkach from NYCHA. She indicated that boiler replacement work will be performed in the area of the potentially contaminated soils. I informed her that the Department is okay with that work being done as long as proper measures are taken in the event that contaminated soils are encountered and that soils are disposed of propertly. NYCHA does not need to investigate the area first. Department must be notified when excavation work is scheduled. 06/05/17: J.Kann - GSIP for

INGERSOLL HOUSES -NYCHA (Continued) **S100560313**

investigation at this site was approved
in 2016. As per NYCHA at May 31, 2017 meeting, contractor has been selected for this work and will
start work in summer 2017. Spill reassigned to Andre Obligado. 9/28/18 - Obligado - I reviewed the
Phase II report. 11 soil borings were advanced in the vicinity of the USTs and fill lines. Only one
soil boring had any evidence of petroleum impact (SB4). Analytical results show only one petroleum
compound in one soil sample slightly above SCOs (1100 ppb chrysine over the standard of 1000 ppb).
This spill does not appear to be a threat to human health or the environment. This spill is closed.

Remarks: DISCOVERED SOIL IN TANK PULL WOULD LIKE CALL BACK.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY This site has been combined with the adjacent 84th Precinct for purposes of remediation. LiRo is currently operating a multi-phase extraction system with branches at both facilities to address soil and groundwater remediation. (See also Spill #9512589 at 84th Precinct.) - JK 1/19/04. 6-2-2005 Reviewed a Monitoring Report for the above referenced site. The report presented remedial system performance and groundwater monitoring data. The data show that wells adjacent to Gold Street showed increasing contaminant concentrations. In the report LiRo proposed to discontinue groundwater sampling at wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-12 and MW-13. The Department concurred with this proposal. However, the Department recommended that LiRo should take steps to address the increases in dissolved-phase VOC levels in the wells adjacent to Gold Street.AZ

ENGINE 207 / LADDER 110 (Continued) **U003241861**

8-28-2005 Reviewed a Monitoring Report for June 2005. The report presented remedial system performance and groundwater monitoring data. Groundwater contaminant levels appear to be falling along the west side of Gold Street. In the report LiRo proposed to install ORC socks at wells MW-15, MW-17, 84MW-2 and 84MW-6. The Department concurred with this proposal. AZ 2/9/2006 Reviewed a Monitoring Report received in November 2005. The system was down for 26 days in September due to clogged lines. Franklin has been directed to make necessary repairs to increase induced vacuum in the 84th Pct. driveway area. AZ 5/15/2006 Reviewed a Monitoring Report for October - December 2005. Recent groundwater analytical results showed total VOC concentrations up to 11.070 ppb in MW-7. The current sampling results showed increase in VOC levels at extraction wells EW-6/MW-7 in the portion of EC 207. AZ 12/01/2006 Reviewed a Monitoring Report for April - June 2006. Flow meter is broken, therefore the system's efficiency in removing VOCs in gw is unknown. The MPE system needs rebalancing to ensure maximum vacuum and fluid extraction rates in EW-6, EW-8, EW-12, PD-BW-6, and PD-BW-2. In a telephone conversation with Brian Morissey I concurred with removing 84-MW-5 from gw the sampling program because VOCs and SVOCs were not detected for two consecutive monitoring events. The total VOC concentrations in MW-20 sharply increased. MW-2 has 10,450 ppb total VOCs. AZ 12/22/2006 At the meeting with DDC/Greyhawk on 12/12/2006 DEC inquired about the remedial progress at this site. The system must be rebalanced. Greyhawk will issue a change order. AZ 5-11-2007 Reviewed a Monitoring Report for July - September 2006 dated January 5, 2007. MPE system had an uptime of 9%. because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase floe extraction and vacuum at extraction wells EW-11,EW-12,PD-BW-02 and PD-BW-05. The MPE system needs adjustment. Roux recommended inspection of the water flow meter, removal of several monitoring wells from the sampling program, removal of SVOCs from the sample schedule, inclusion of several bioremediation parameters in the sampling program. E-mail was sent to DDC/Roux/Greyhawk: MPE system at this site had an uptime of 9% because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the

ENGINE 207 / LADDER 110 (Continued) **U003241861**

extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18
monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the
previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the
MPE system and making adjustments to increase flow extraction and vacuum at extraction wells EW-11,
EW-12, PD-BW-02 and PD-BW-05. The MPE system needs adjustment. Al these tasks should be performed
without delay.Roux recommended inspection of the water flow meter, removal of SVOCs from the
sampling schedule and inclusion of several bioremediation parameters in the sampling program. All
these recommendations are approved. Sampling of wells MW-06 and 84MW-05 could be discontinued. AZ
7-23-2007 Reviewed a Monitoring Report for October 2006 - March 2007 and dated May 24, 2007. Total
VOC concentrations ranged from non-detect to 6,458 ppb in 84MW-03. Total VOC concentrations
significantly increased in downgradient well MW-20 (from 601 ppb to 1777 ppb). The MPE system had
an uptime of only 13%. Roux proposed that only seven extraction wells should remain online. DEC
concurs with the following addition: extraction well EW-12 should also remain online.
Bioremediation program proposed by Roux should be implemented without delay. Roux proposed removing
six monitoring wells from the groundwater sampling program. DEC concurs. Roux proposed removing
SVOCs from the sampling program. DEC previously concurred to this proposal in an e-mail dated
5-11-2007. An e-mail was sent to DDC/Roux/Greyhawk: I have reviewed a Monitoring Report for the
above site for the period of October 2006 - March 2007 and dated May 24, 2007. Total VOC
concentrations ranged at the site from non-detect to 6,458 ppb in 84MW-02. Total VOC concentrations
significantly increased in downgradient monitoring well MW-20 (from 601 ppb to 1777 ppb). The MPE
system had an uptime of only 13%. Roux proposed that only seven extraction wells should remain
online. DEC concurs with the following addition: extraction well EW-12 should also remain online.
Bioremediation program proposed by Roux should be implemented without delay. Roux proposed removing
six monitoring wells from the groundwater sampling program. DEC concurs. Roux proposed removing
SVOCs from the sampling program. DEC previously concurred to this proposal in an e-mail dated
5-11-2007. AZ 3-25-2008 An e-mail was sent to Greyhawk/DDC/ROux/V.Brevdo: I have reviewed a
Monitoring Report for the above site for the period of April - September 2007 dated December 21,
2007. Total VOC concentrations ranged at the site from non-detect to 5,712 ppb in 84MW-03. Total
VOC concentrations significantly increased in monitoring wells 84MW-6

ENGINE 207 / LADDER 110 (Continued) **U003241861**

and MW-07/EW06 . The MPE system is offline. Roux proposed restart of the MPE system. MPE system restart should be performed without delay. Bioremediation program proposed by Roux should be implemented without delay. AZ 1-16-2009 An e-mail was sent to Roux/DDC/Greyhawk/V. Brevdo: I have reviewed Quarterly Monitoring Report for the above site for the period of October 2007 - September 2008 dated November 5, 2008. Total VOC concentrations ranged at the site from 228 ppb to 3,972 ppb in 84MW-06. Total VOC concentrations have been on the rise during the last reporting period. DEC approved enhanced bioremediation plan on July 23, 2007. The injection was performed in October 2008. The MPE system is offline. In March 2008 DEC requested restart of the MPE system. But the system has not been started. Following evaluation of the bioremediation program, the MPE system should be resumed if needed. AZ 10-8-09 An e-mail was sent to Roux/Fatemeh Ashkan: I have reviewed Quarterly Monitoring Report for the above site for the period of October 2008 - January 2009 dated April 23, 2009. ORC injections were performed in 2003. In December 2008 sampling event two wells MW-10 and MW-19 were inaccessible. MW-01 and 84-MW-01 have been paved over and are no longer accessible. The injection work started on August 6, 2008, but could not continue due to extremely low-flow conditions at the site. Wells have difficulty taking the required NutriMax solutions. PermeOx Injection Plus and NutriMax injections were completed in October 2008 due to the low-flow conditions. MPE system is still off-line. Total VOC concentrations after injections ranged from 126 ppb to 3,557 ppb in 84MW-03. The highest levels of groundwater contamination remains in the southern portion of the site. Roux proposed a round of confirmatory soil borings. This proposal is approved. MPE system should be repaired, modified and restarted. Also, I contacted Brian Morrissey. Wells MW-04, MW-05 and MW-06, MW-12, MW-13,and MW-15 had no access on December 17, 2008 sampling event. I requested that if wells MW--01 and 84-MW-01 had been previously contaminated than they should be re-installed. If the wells which were not accessed in December 2008 event were not accessible in October 2009 they should should be re-sampled. AZ 12-20-2010 An e-mail was sent to DDC/V. Brevdo, S. Frank (LiRo): Dear Steve, I have reviewed a quarterly monitoring report and site turn-over status. The report proposed advancement of five borings and installation of one well. These proposals are approved. Also, the report stated that a number of diesel/gasoline tanks were closed in place. These tanks could be a continued source of contamination. Excavation of these tanks

ENGINE 207 / LADDER 110 (Continued) **U003241861**

should be considered as one of the remedial options, if feasible. The Responsible Party and
Contractors are responsible for the safe execution of the Work Plan. AZ 5-4-2011 Reviewed a QMR
dated Jan-20-2011. LiRo proposed implementation of the additional site investigation that was
previously approved by DEC and quarterly sampling. AZ 1-9-12 Reviewed a QMR 10/31/11. ISCO will be
implemented at the site. It was approved by DEC in October 2011. AZ 6-18-2012 LiRo will investigate
the feasibility of removal of the four USTs located within the station house apparatus floor in the
Engine Company. Soil is heavily contaminated northwest of tanks 004, 005, 007 and 008. AZ 7-5-2013
LiRo identified a concrete patch in the western most bay area, approximately 19' by 4'. This area
is assumed to be centered over the four closed in-place 550-gallon USTs. The bay area has
approximately 10 feet of overhead clearance and the tanks can be assessed through the bay door to
the north. LiRo recommended completion of geophysical survey to determine location of the tanks and
other utilities. LiRo also recommended feasibility study to determine if tank removal will address
contamination at the site. I contacted S. Frank over the phone. He confirmed that LiRo will perform
a geophysical survey and the tanks removal feasibility study. AZ 12-9-2013 Six injection wells were
installed along the driveway area, south of the 84th Precinct in May 2012. Soil contamination is
present at and below the groundwater level at depths ranging 21'-28'. Increased VOC levels indicate
rebounding levels. Monitoring well PD-BW-06 has exhibited 19, 970 ppb in groundwater. Nuisance
odors were reported, therefore, the fourth injection event will be completed and potential
off-gassing issues will be addressed in the third quarter 2013. AZ 12-22-2014 Reviewed a monitoring
report December 2013 - April 2014 dated June 19, 2014. Groundwater sampling was completed in
February 2014 and April 2014. Dissolved phase VOC impacts at EC 207 facility remain in the vicinity
of wells MW-A, EW-05 and MW-07/ew-06 (up to 3,022 ppb). AZ 4-2-2015 Reviewed a monitoring report
May 2014 - July 2014 dated September 5, 2014. Soil data collected indicates that soil contamination
is present at and below the groundwater table, in the saturated zone along the driveway area of 84
Precinct. The fourth ISCO injection event was completed in July 2014. Groundwater sampling was
completed in May 2014. Dissolved phase VOC impacts were recorded in 14 wells. The total VOC
concentrations above AWQSGV's ranged from 41 ppb to 13,948 ppb. AZ 1-11-2016 Reviewed a monitoring
report November 2014 - February 2015 dated May 26, 2015. Soil data collected indicates that soil
contamination is present at and below the groundwater table, in the

ENGINE 207 / LADDER 110 (Continued) **U003241861**

saturated zone along the
driveway area of 84 Precinct. The fourth ISCO injection event was completed in July 2014.
Groundwater sampling was completed in January 2015. Dissolved phase VOC impacts were recorded in 11
wells. The total VOC concentrations above AWQSGV's ranged from 6 ppb to 10.996 ppb. Six wells on
the Engine 207 portion of the site were inaccessible since they were covered with construction
trailers. AZ 2-12-2016 Reviewed a QMR report dated December 7, 2015. The report recommended
implementation of a modified ISCO injection plan. A total four ISCO injection events have been
completed so far. According to LiRo, it appears that the injection well radius of influence was
reduced and the well locations were no longer effective. LiRo performed a soil investigation in the
alleyway. Six borings were advanced to 30'-40'. Petroleum impacted soil was identified from 25' to
30' bgs. Also, petroleum impacted soil was identified outside the injection area, within the
sidewalk, along Gold Street. The total VOC concentrations in six soil samples ranged from 48,420
ppb to 806,400 ppb (26'-27'). Some of 2015 sampling data does not have a similar sampling interval
as the historical data. This is because in the June 2015 data, there were generally no indicators
(i.e., elevated PID readings, odors, staining, etc.) of petroleum impacts within the corresponding
depth intervals, therefore no samples were collected. Multiple wells were not sampled due to site
construction trailers locking access. The total VOC concentrations in 10 samples ranged from 31 ppb
to 15,295 ppb. Five wells reported increases in VOC concentrations. All three wells within ISCO
injection area reported increases in total VOC concentrations compared to the May 2015 sampling
event and two wells reported decreases. Two USTs remain close in place, one at each site: EC 207
and 84th Precinct. I left a message for S. Frank. AZ 1-31-2017 Reviewed a QMR report dated August
8, 2016. VOC concentrations ranged from 3,630 ppb in the wells associated with Engine Company 207.
LiRo will continue EFR and use of ORC socks. LiRo will conduct GPR survey in the alleyway (84th
Pct.) to determine possible location of the piping for the closed-in-place UST. Additionally, LiRo
evaluate excavating test pits to determine if piping source areas are present. I have contacted S.
Frank over the phone and approved the test pits. I have also requested more aggressive treatment of
this spill, including excavation if feasible. AZ 7-17-2017 Reviewed a QMR report dated January 27,
2017. Based on the Geophysical Investigation results performed in August 2016, there is no evidence
of remaining piping or tanks in the 84th Precinct alleyway. However, due to persistent elevated

ENGINE 207 / LADDER 110 (Continued) **U003241861**

contaminant levels in that area, LiRo will conduct a several test pits in the alleyway to better determine if piping/lines are present. AZ 3-5-2018 Reviewed a QMR report dated September 28, 2017. Petroleum impacts remain mainly within the apparatus floor and Monitoring wells MW-A, EW-05, MW--10/MW-10R, EW-09/MW-11. EFR will be continued. AZ 6-3-2019 Reviewed a QMR report dated November 13, 2018. Petroleum impacts remain mainly within the apparatus floor and monitoring wells MW-A, EW-05, MW--10/mw-10R, EW-09/MW-11. EFR will be continued. Soil samples were collected from seven soil borings. Total VOCs in soil ranged from 7,623 ppb to 868,200 ppb in LBR-27 (25'-27' bgs). Total VOCs in groundwater were up to 2,961 ppb in MW-10R. DEC approved on Nov. 18, 2018, removal of five monitoring wells from the groundwater sampling program. AZ 10-15-2019 Reviewed a QMR report dated February 28, 2019. Of nine wells sampled, four wells reported VOCs at concentrations above the standards. Petroleum impacts remain mainly within the apparatus floor and monitoring wells MW-A, EW-05, MW--10/MW-10R, EW-09/MW-11. EFR will be continued. Total VOCs in groundwater ranged from 262 ppb to 1,042 ppb in well MW-A. AZ 2-10-2020 Reviewed a QMR report dated November 26, 2019. The report contained a Work Plan for proposed S-ISCO injection. The proposed S-ISCO program utilizes Ethical Chem's of South Windsor, Connecticut, patented S-ISCO technology to address VOCs in soil and groundwater. This technology combines delivery of surfactant and oxidant into the subsurface, where surfactant blend desorbs and emulsifies the contaminants in aqueous phase, increasing contaminants surface area exposure to the oxidant. I left a message from S. Frank regarding the proposed technology (adverse effects and previous applications). AZ 2-12-2020 Discussed the site with S. Frank over the phone. The submitted report will be revised and resubmitted. Information regarding adverse effects and previous applications will be included in the report. AZ 4-1-2020 Reviewed a report dated March 20, 2020.During the current monitoring period (September 2019 through November 2019), the following activities were performed EFR was completed on select wells on September 30, 2019, October 30, 2019, and November 26, 2019. Routine groundwater gauging and sampling was completed October 7-11, 2019.A total of 14,214-gallons of groundwater have been removed since February 2016 and a total of 881-gallons of groundwater were removed during this monitoring period. No free-phase product was measured in any well during any of the EFR events. The total VOC concentrations in these ten samples from the 84th Precinct ranged from 7 micro grams per liter (?g/L) in well MW-15 to 10,304 ?g/L in well PD-BW-06. Five wells

ENGINE 207 / LADDER 110 (Continued) **U003241861**

reported increases in total
VOC concentrations, five wells reported decreases in total VOC concentrations, and two wells
reported no change compared to the July 2019 or most recent sampling event. AZ 6-24-2020 Reviewed a
report dated June 1, 2020. Routine groundwater sampling was completed in January 2020.
Dissolved-phase VOC concentrations greater than NYSDEC standards are evident at the Engine Company
207 facility in wells MW-A, EW-05, and EW-09/MW-14. Groundwater samples from the 84th Precinct
parcel along the driveway/alleyway/sidewalk, reported dissolved-phase VOC concentrations greater
than NYSDEC standards in wells 84MW-02, 84MW-03, 84MW-06, EW-12, MW-16, MW-17, MW-20R, and PD-BW-
06. Dissolved-phase concentrations at the Site have shown high degrees of variability. ORC socks
are utilized in wells MW-10R, MW-16, MW-17, MW-18, MW-20R, 84MW-02, 84MW-06, PD-BW-05, PD-BW-06,
EW-12, 84MW-03, EW-05, and MW-A. The ORC socks were replaced in numerous wells in January 2020.LiRo
will continue EFR as an IRM on the following wells at the Engine Company 207 facility: MWA, MW-10R,
and EW-05. At the 84th Precinct facility IRM will continue in wells 84MW-06, PD-BW-06, 84MW-02,
EW-12, MW-18, and MW-20R. LiRo will replace monitoring well MW-10R. AZ 1-25-2021 Reviewed a report
dated November 25, 2021. Dissolved-phase VOC concentrations greater than NYSDEC standards are
evident at the Engine Company 207 facility in wells MW-A, EW-05, and EW- 09/MW-14. Petroleum
impacts remain at the Engine Company 207 facility mainly within the apparatus floor and monitoring
wells MW-A, EW-05, and EW- 09/MW-14. Of the five groundwater samples collected from the Engine
Company 207 facility, three wells reported one or more VOCs at concentrations above AWQSGVs. These
included wells EW-05, EW-09/MW-14, and MW-A. The total VOC concentrations in these three wells were
3,379 ?g/L (EW-05), 35 ?g/L (EW-09/MW-14), and 413 ?g/L (MW-A). Three wells reported a decrease in
total VOC concentrations and two wells reported an increase in total VOC concentrations when
compared to the most recent sampling event. ORC socks are utilized. LiRo will continue EFR as an
IRM on the following wells at the Engine Company 207 facility: MWA, MW-10R, and EW-05. AZ 3-18-2021
Reviewed a report dated January 27, 2020. Of the five groundwater samples collected from the Engine
Company 207 wells, VOC concentrations above AWQSGVs were reported in four samples. These include
wells EW-05, EW-09/MW-14, MW-10R, and MW-A. The total VOC concentrations in these four samples from
Engine Company 207 ranged from 81 ?g/L in well MW-10R to 1,178 ppb in well MW A. The total VOC
concentrations reported were within historical ranges. Of the five groundwater samples collected

ENGINE 207 / LADDER 110 (Continued) **U003241861**

from Engine Company 207 wells, two wells reported decreases in total VOC concentrations and three wells reported increases in total VOC concentrations when compared to the previous sampling event (July 2020). URS will continue EFR (quarterly) as an IRM on the following wells at the Engine Company 207 facility: MW- A, MW-10R, and EW-05. AZ 8-11-2021 Reviewed a report dated April 30, 2021.During the current monitoring period (December 2020 through February 2021.Of the five groundwater samples collected from the Engine Company 207 wells, VOC concentrations above AWQSGVs were reported in two samples. These include well EW-09/MW-14 and MW-A. The total VOC concentrations in these two samples from Engine Company 207 were 41 ppb and 613 ppb, respectively. The total VOC concentrations reported were within historical ranges. Of the five groundwater samples collected from Engine Company 207 wells, all five wells reported decreases in total VOC concentrations when compared to the previous sampling event (September 2020). ORC socks are utilized in the following wells: MW-10R, EW-05, and MW-A. LiRo has submitted a work plan and NYSDEC has approved the use of Surfactant Enhanced In-Situ Chemical Oxidation (S-ISCO) at the site. In September 2020, LiRo was informed by NYCDCC of revisions to the FY2021 budget (covering period of July 2020 through June 2021). As a result, EFR at the site has been reduced to quarterly (free-phase product is not present) and only one round of S-ISCO injections is anticipated for completion in 2Q2021. AZ 12-15-2021 Reviewed a report dated August 16, 2021, for the period of March 2021 through May 2021. Of the five groundwater samples collected from the Engine Company 207 wells, VOC concentrations above AWQSGVs were reported in three samples. These three wells are: EW-09/MW-14, MW-10R, and MWA. The total VOC concentrations in these three samples from Engine Company 207 were 198 ppb, 29 ppb, and 251 ppb, respectively. The total VOC concentrations reported were within historical ranges. Of the five groundwater samples collected from Engine Company 207 wells, four wells reported slight increases in total VOC concentrations, and one well reported a decrease in total VOC concentrations when compared to the previous sampling event (December 2020). ORC socks are utilized in the following wells:MW-10R, EW-05, and MW-A. Based on analytical data, it appears that soil contamination is a continuing factor in groundwater dissolved phase VOC concentrations. AZ 4-7-2022 Reviewed a report dated December 1, 2021, for the period of June 2021 through August 2021. Of the five groundwater samples collected from the Engine Company 207 wells, VOC concentrations above AWQSGVs were reported in four samples. These four wells are: EW-05,

ENGINE 207 / LADDER 110 (Continued) **U003241861**

EW-09/MW-14, MW-10R, and MW-A.
The total VOC concentrations in these four samples from Engine Company 207 were 13 ppb, 1,254 ppb,
141 ppb, and 700 ppb, respectively. The total VOC concentrations reported were within historical
ranges. Of the five groundwater samples collected from Engine Company 207 wells, four wells
reported increases in total VOC concentrations, and one well reported a decrease in total VOC
concentrations when compared to the previous sampling event (March 2021). ORC socks are utilized in
the following wells:MW-10R, EW-05, and MW-A. AZ 12-16-2022 Reviewed a report for the period of
March 2022 through May 2022.Groundwater sampling was completed for this monitoring period on March
14, 2022, and March 16, 2022. Of the five groundwater samples collected from the Engine Company 207
wells, VOC concentrations above AWQSGVs were reported in two of the five samples. The groundwater
sample concentrations were 117 g/L (MW-A) and 319 g/L (EW-05). Of the five groundwater samples
collected from Engine Company 207 wells, all five wells reported a decrease in total VOC
concentrations when compared to the previous sampling event (January 2022) ORC socks are utilized
in the following wells: Engine Company 207: EW-05 and MW-A. AZ 7-21-2023 Reviewed a report for the
period of June 2022 through September 2022. Petroleum impacts remain at the Engine Company 207
facility mainly within the apparatus floor and monitoring wells MW-A, EW-05, EW-09/MW-14,
EW-06/MW-07, and MW-10R.In this monitoring period between August 2022 and September 2022, LiRo
installed a total of 13 soil borings to evaluate current soil conditions, post S-ISCO injections.
The borings were advanced to depths ranging from 17 ft. bgs to 45 ft. bgs and were placed within
the S-ISCO injection areas. A total of 87 soil samples were collected and submitted for laboratory
analysis of CP-51 list VOCs and SVOCs. The soil data indicates that no petroleum impacts were
identified in borings advanced in the Engine Company 207injection area. LiRo will continue use of
ORC socks in wells. AZ 9-13-2023 Reviewed a report for the period of October 2022 through December
2022. ORC socks are utilized in wells EW-05 and MW-A. Of the four groundwater samples collected
from Engine Company 207 wells, three wells reported a decrease in total VOC concentrations, and one
well reported an increase in total VOC concentrations when compared to the previous sampling event
(September 2022). During the June 2022 sampling event, well EW-05 reported the highest total VOC
concentration (2,058 ppb) since at least 2019. The concentration returned to historical conditions
in the September 2022 sampling event, then spiked again during this November/December 2022 sampling

ENGINE 207 / LADDER 110 (Continued) **U003241861**

event. AZ 11-20-2023 Reviewed a report for the period of January 2023 through March 2023.Petroleum impacts (groundwater) remain at the Engine Company 207 facility mainly within the apparatus floor and monitoring wells MW-A and EW-05. Dissolved-phase VOC concentrations reported above AWQSGVs in Engine Company 207 facility wells this monitoring period include MW-A, MW-10R, and EW-05. LiRo will continue use of ORC socks in wells. ORC socks will be changed per manufacturer s recommendations. LiRo will install ORC socks in well 84MW-06 and MW-16R. AZ 1-10-2024 Reviewed a report for the period of April 2023 through June 2023.No groundwater samples were collected from wells MW-17 (84th Precinct side) and EW-06/MW-07 (Engine Company 207) because these wells were inaccessible. Of the four groundwater samples collected from the Engine Company 207 wells, VOC concentrations above AWQSGVs were reported in all four samples. The four groundwater sample total VOC concentrations were 11EW-05 and MW-A 3,406 ug/L (EW-05), 260 ug/L (MW-10R), 1,552 ug/L (EW-06/MW-14), and 398 ug/L (MW-A). AZ 3-13-2024 Reviewed a report for the period of July 2023 through September 2023. The four groundwater sample total VOC concentrations were 759 ug/L (EW-05), 253 ug/L (MW-10R), 1,230 ug/L (EW-06/MW-14), and 170 ug/L (MW-A). Of the five groundwater samples collected from Engine Company 207 wells, one well reported an increase in total VOC concentrations, and four wells reported decreases in total VOC concentrations when compared to the previous sampling event (June 2023). ORC socks are used in EW-05 and MW-A. AZ 8-20-2024 Reviewed a report for the period of October 2023 through December 2023. Of the five groundwater samples collected from the Engine Company 207 wells, VOC concentrations above AWQSGVs were reported in three samples. The three groundwater sample total VOC concentrations were 905 ug/L (EW-05), 30 ug/L (MW-10R), and 2,751 ug/L (EW-06/MW-14). Of the five groundwater samples collected from Engine Company 207 wells, two wells reported an increase in total VOC concentrations, and three wells reported decreases in total VOC concentrations when compared to the previous sampling event (September 2023). EFR as an IRM began in February 2016. The analytical results are somewhat variable between sampling events. Dissolved-phase TVOC concentrations in some Site wells have shown significant variations but in general all are continuing to show decreasing trends. Eleven groundwater sampling events have been conducted, post S-ISCO injections. Typically, groundwater concentrations report a short duration (several months) increase following S-ISCO injections. Several wells at both facilities followed this pattern following injections. During this monitoring period, the dissolved

ENGINE 207 / LADDER 110 (Continued) **U003241861**

phase TVOC in Site wells have shown some variation but continue to show an overall decrease in TVOC trends. AZ 8-20-2024 Reviewed a report for the period of January 2024 through March 2024.Of the five groundwater samples collected from the Engine Company 207 wells, VOC concentrations above AWQSGVs were reported in four samples. Total VOC concentrations in the wells with exceedances were 4,638 ug/L (EW-05), 34 ug/L (MW-10R), 4,239 ug/L (EW-09/MW-14), and 51 ug/L (MW-A). On October 31, 2023, the ORC socks were changed in the following wells, MW-17, MW-18, 84MW-02, 82MW-03, 84MW-06, PD-BW-06, EW-12, EW-05 and MW-A. The ORC sock was removed from well MW-20R and the ORC sock could not be replaced in well MW-16R as the well was inaccessible at that time. AZ 12-23-2024 Reviewed a Monitoring Report for April 2024 through June 2024. Of the four groundwater samples collected from the Engine Company 207 wells, VOC concentrations above AWQSGVs were reported in three samples. Total VOC concentrations in the three wells with exceedances were 2,737 ug/L (EW-05), 41 ug/L (MW-10R), and 63 ug/L (MW-A). ORC socks are or historically have been utilized in the following wells: EW-05 and MW-A. The NYSDEC approved LiRo s Work Plan for use of S-ISCO as a remedial technology for the Site and SISCO injections were completed in June 2021. A total of 13 temporary S-ISCO injection points were advanced with four points (TIP-01 through TIP-04) advanced within the area of Engine Company 207 and the remaining points (TIP-05 through TIP-13) installed on the 84th Precinct side of the Site. The injections consisted of a mixture of Sodium Persulfate, E-Mulse 3 (surfactant), Sodium Hydroxide and water. Injection depths ranged from 21 to 27 ft. bgs depending on the injection point location. AZ 4-4-2025 Reviewed a Monitoring Report for July 2024 through September 2024.Of the five groundwater samples collected from the Engine Company 207 wells, VOC concentrations above AWQSGVs were reported in four samples. Total VOC concentrations in the four wells with exceedances were 2,666 ?g/L (EW-05), 86 ug/L (EW-09/MW-14), 80 ug/L (MW-10R), and 21 ug/L (MW-A). Of the five groundwater samples collected from Engine Company 207 wells, two wells (EW06/MW07, EW-09/MW-14) reported an increase in total VOC concentrations, and three wells (EW-05, MW-10R, MW-A) reported a decrease in total VOC concentrations when compared to the previous sampling event (June 2024). ORC socks are or historically have been utilized in the following wells: EW-05 and MW-A AZ

Remarks: LABORATORY RESULTS TAKEN DURING A SUB-SURFACE INVESTIGATION INDICATE SOIL CONTAMINATION.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Record Updated Date:	01/13/2025
Update By:	DRGARDNE
Site Description:	Location: The 0.5883-acre site is located at 67 Prince Street (a.k.a. 202-208 Tillary Street) in downtown Brooklyn and is comprised of tax parcel Block 2050, Lot 100. BCA Amendment No.2 merged Lot 98 and Lot 100 into single Lot 100. The site is in a mixed-use area with surrounding property uses including several residential apartment complexes, restaurants, stores, and municipal buildings. Tillary Street, an apartment complex, and an entrance ramp to Route 278 are located north of the site. The NYC Housing Authority Ingersoll House apartment complex is located east and south of the site. The Tillary Street Woman's Shelter, Prince Street, the NYC 84th Precinct Police Department, and a NYC Fire Department Station, are located west of the site. Site Features: The site has been vacant since August 2021. Lot 98 is currently developed as an outdoor, atgrade asphalt paved parking lot. A six-foot chain-link perimeter fence encloses the outdoor parking lot. The entire footprint of lot 100 is a basement foundation slab associated with five-story self-storage building that is now demolished. Current Zoning and Land Use: The site is currently located in the C6-4 Commercial and the Special Downtown Brooklyn (DB) Districts, which allows for commercial and residential uses. The surrounding property uses include several residential apartment complexes, restaurants, stores, and municipal buildings. The closest residential buildings to the site are the apartment complexes located on the adjacent Lot 1. The B Subway line is located approximately a tenth of a mile to the west of the site. Past Use of the Site: In 1887, the footprint of Lot 100 was occupied by stores, dwellings, and stables. Maps from 1904 and 1915 show a hides and tallow factory, and a wool factory were located north of the site. By 1938, many of the dwellings and stores were demolished. Four dwellings were present on the western side of the site along Prince Street. In 1948, a manufacturing building was constructed which had various operators including an electronic company known as PRD Electronics, a garage, headwear/curtain/textile companies, a binding company, wholesalers/traders, a beverage company, a vegetable company, and a self-storage facility. By 2001, the usage had changed to include commercial space on the first floor. The second floor appears vacant in maps from 2001 to 2007. Site Geology and Hydrogeology: The site is located approximately 20 feet above mean sea level and is generally flat. Groundwater at the site is encountered at approximately 15 feet below ground surface (ft-bgs) and flows in the northerly direction from beneath the site towards the East River. The stratigraphy of the

PRD ELECTRONICS MANUFACTURING SITE (Continued) **S127990287**

site, from the surface down, consists of approximately 16 feet of urban historic fill overlying native fine to medium grained sand. The urban historic fill layer consists of brown silty sand with varying amounts of gravel, concrete, and brick fragments. The site is located approximately 0.44 miles from the Navy Yard Basin, which connects to Wallabout Bay and the East River.

Env Problem: Post Remediation - Remaining Contamination (Track 2 RRSCOs Achieved up to 15 ft bgs)include: Residual contamination in soil that remains above UUSCOs including VOCs, SVOCs, pesticides, and metals. Specific contaminants include benzene,toluene, ethylbenzene, total xylenes, acetone, sec-Butylbenzene, n-Propylbenzene, 1,2,4-trimethylbenzene, 2-methylphenol, 3- methylphenol/4-methylphenol, 4,4 -DDE, 4,4 -DDD, 4,4 -DDT, lead, mercury, nickel, zinc, and trivalent chromium. Groundwater remedial action was not proposed or required. Site contaminants remaining in groundwater above the NYSDEC AWQS are limited to sec-butylbenzene, 1,4-dioxane, beryllium (total), lead (total), nickel (total), selenium(total), PFOA, PFOS, along with naturally occurring metals. Soil vapor remedial action was not proposed or required by the NYSDEC. As per the March 2023 Decision Document, a soil vapor intrusion evaluation (SVE) will be implemented following the completion of the soil remedial action and vapor barrier installation to confirm that the remedy meets the requirements of the NYDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006. Nature and Extent of Contamination: Prior to Completion of Remediation - Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs (primarily PAHs), and metals. Soil: Exceedances of the Restricted Residential Use Soil Cleanup Objectives (RRSCOs) were only found in two of the eight samples across the site at varying depths. The highest concentrations of VOCs were detected in a single sample, SB-1 at the sample interval depths of 12 14 and 16 18 ft. The highest concentrations of SVOCs were found outside the building footprint in SB-8 at the surface from 0 2 ft. VOCs detected at levels exceeding RRSCOs include: benzene up to 16 mg/kg (RRSCO of 4.8 mg/kg), ethylbenzene up to 190 mg/kg (RRSCO of 41 mg/kg), toluene up to 540 mg/kg (RRSCO of 100 mg/kg), 1,2,4-trimethylbenze up to 110 mg/kg (RRSCO of 52 mg/kg), and xylenes up to 300 mg/kg (RRSCO of 100 mg/kg). SVOCs detected at levels exceeding RRSCOs from 0 2 ft. bgs. include: benzo(a)anthracene up to 6.4 mg/kg (RRSCO of 1 mg/kg), benzo(a)pyrene up to 6.8 mg/kg (RRSCO 1 mg/kg), benzo(b)fluoranthene up to 8.7 mg/kg (RRSCO of 1 mg/kg), chrysene up to 5.3 mg/kg (RRSCO of 3.9 mg/kg), dibenzo(a,h)anthracene up to 0.8 mg/kg (RRSCO of 0.33 mg/kg), and indeno(1,2,3-cd)pyrene up to 3.8 mg/kg (RRSCO of 0.5 mg/kg). No metals, pesticides, or PCBs exceeded their RRSCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater: VOCs detected above Class GA Ambient Water Quality Standards (AWQS) include: sec-butylbenzene at 7.4 ppb and 1,2,4,5-Trimethylbenzene at 12 ppb, both with a AWQS value of 5 ppb. Both VOCS were detected in TWP-1. No SVOCs, metals, pesticides, or PCBs were detected above their AWQS. For PFAS compounds, PFOA and PFOS were reported at concentrations up to 55.1 parts per trillion (ppt) and 67.1 ppt respectively, exceeding the Maximum Contaminant Levels (MCLs) (drinking water standard) of 10 ppt each in

PRD ELECTRONICS MANUFACTURING SITE (Continued) **S127990287**

	groundwater. The compound 1,4- dioxane was not detected. There are no public water supply wells within a half a mile and there is a municipal prohibition for use of groundwater at the site. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: Chlorinated-related VOCs including, vinyl chloride (max 598 [micrograms per cubic meter] ug/m3), methylene chloride (max 184 ug/m3), cis-1,2-dichloroethene (max 1,300 ug/m3), trichloroethene (TCE) (max 3.97 ug/m3), and tetrachloroethene (PCE) (max 54.9 ug/m3) were detected in several soil vapor samples. Concentrations of vinyl chloride (598 ug/m3) and cis-1,2-dichloroethene (1,300 ug/m3) were detected above the mitigate action level established by the NYSDOH in soil vapor sample SV-1. Methylene chloride (184 ug/m3) was detected above the monitor/mitigate action level established by the NYSDOH in soil vapor sample SV-4. Data does not indicate any off-site impacts in soil vapor related to this site.
Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

CON EDISON (Continued) **1018279148**

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	1/3/2005 File Update by Sun: -The Department has reviewed the Soil and Groundwater Analytical Results, which were reported in Divestment Assessment Phase II Report, prepared by EnviroTrac dated 10/27/04 for Sunoco for the subject site. The report indicates that the Groundwater samples secured from MW-3 had BTEX and MTBE concentrations in excess of NYS Water Quality standards. Based on the sampling data taken on October 18, 2004, MW-3 had MTBE concentration of 130, 000 ug/l and total BTEX concentration of 3,483 ug/l, including benzene concentration of 2,300 ug/l. The high MTBE and BTEX concentrations indicated that the groundwater had been contaminated and thus, is required to be remediated and monitored. -On 11/8/04, Sun sent a letter to Russell Hammond of Sunoco requiring complete delineation of soil and groundwater contaminations, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of 11/30/04 for signing the Stipulation Agreement. -In Sun's letter to Russell Hammond dated 11/8/04, the Department also requires the following: 1. Re-test the underground storage tanks (USTs) and piping system for tightness: The analytical result of Phase II Assessment Report in Reference 1 showed that the MTBE in monitoring well MW-3 had extreme concentration of 130,000 ug/l, which needs to be investigated to determine if the source of the contamination is from new spill. Per DEC Regulation for Petroleum Bulk Storage, 6 NYCRR part 613.7, the owner or operator is required to inspect and to test the tanks, piping system or equipment for tightness and structural soundness when a leak of petroleum is suspected. 2. Delineation of Soil and Groundwater Contamination: A subsurface investigation to adequately characterize site hydrogeology and to completely delineate the full extent of petroleum contamination both on-site and off-site must be performed. The investigation at a minimum must include installation of borings/wells: down-gradient of MW-3 (see MW-4), side-gradient of MW-3 (see

SUNOCO #0007-1548 (Continued) **U001839271**

MW-5), southeast of MW-3 and west of tank field (see MW-6), and up-gradient of MW-3 (see MA-7) . 3. Surrounding Property Sketch: A surrounding property sketch including property layout and usage must be submitted to the Department. North arrow and scale must also be included on the Site Plan. 4. Locations of Remote Fills and Dispenser Island: The locations of former remote fills and dispenser islands must be included on the site plan. Also note as per DER-10 Section 3.7.1 Pump islands and associated piping greater than 25 feet from the tank field should be considered separate areas of concern and should require a separate groundwater sample location . North arrow and scale must also be included on the Site Plan. -10/17/2005, S. Andersen assigned as new project manager. -10/17/2005: Reviewed Quarterly monitoring report by Envirotrac dated 10/12/2005, and groundwater investigation report by Hydro Tech, and sent letter to firms, owner, and buyer to confirm review of these reports. Now awaiting results of continued monitoring as well as a RAP. 11/3/05: new address : North Development Group, LLC 217 Havemeyer Street, 5th Floor Brooklyn, NY 11211 718-599-8600 718-599-8613 11/29/05: Spoke with Hydrotech on the phone. Hydrotech is the consultant for the current owner, who is taking charge of the site remediation. The site has an E designation with the DEP, meaning it has been rezoned residential. Hydrotech will complete and submit an investigation summary report to DEC and DEP. 12/9/05: December 8 meeting between Sunoco, EnviroTrac and NYSDEC. Sunoco said that they and EnviroTrac are still in charge of site remediation (not Hydrotech). An RAP is currently in progress. The site will be utilized as a parking lot by the new owners. 1/26/06: Review of phase 1/2 performed by hydrotech shows soil and gw contamination. 4/10/06: Received monitoring report. Concentrations high in MW-3 and MW-4. BTEX 5,052 ppb in MW4, and 1,194 ppb in MW3. An additional MW west of the plume is required by June 10, 2006. 4/12/06: Received email from Erin Goelz of EnviroTrac. Additional delineation is not possible due to the subway. Sent RAP required letter, due back 6/12/06. 6/21/06: Sent Erin Goelz and email to followup on the status of overdue RAP. 7/5/06: Received an email from Erin Goelz of EnviroTrac stating the following: The Remedial Action Plan (RAP) for this site is in progress and will be submitted to the NYSDEC on or before July 14, 2006. 7/11/06: RAP reviewed and rejected. MNA proposed. Revised RAP required by 9/29/06 with more aggressive remedial strategy. Groundwater samples collected on 5/24/06 show max BTEX 5,475 in MW4 and 83 ppb MTBE in MW3. 8/11/06: Received phone call from new owner and consultant (Dave Yudelson of Sive Paget). They will be taking over

SUNOCO #0007-1548 (Continued) **U001839271**

site remediation. They are
thinking of excavating the site. The site will redeveloped with a rec center and pool. A sub-slab
depressurization system and vapor barrier will be used in the construction. The site has an E
designation. Chemical oxidation will also be used. A meeting is scheduled for 8/22/06 at 11:30am.
8/18/06: Meeting on 8/17/06 with Sunoco, ET, and NYSDEC. Sunoco will discuss remedial plans with
the new owner prior to resubmitting an RAP. 8/22/06: Meeting with David Yudelson (Sive, Paget &
Riesel), new owners law firm, and Charles Sosik (P.W. Grosser), new owners consulting firm,
regarding remediation. Chemical oxidation will be used. A RAP will be submitted. 9/26/06: Received
phone call from Erin Goelz of EnviroTrac, representing Sunoco. Construction has begun at the site,
Sunoco cannot access the monitoring wells, and a RAP has not been received by the new owners.
Sunoco requested a one month extension to submit a RAP until this issue has been resolved. New
owner is James Muller (North Development). Called Charles Sosik and David Yudelson and both were
unavailable. Spoke to David Yudelson, an RAP will be submitted in a day or two. Demolition is being
conducted at the site, but construction has not begun. The Department informed him that a violation
will be issued if construction begins prior to the Departments approval of a RAP. 9/27/06: DEP
Project Managers: Callista Nazaire : cnazaire@dep.nyc.gov Amy Ma: AMa3@dep.nyc.gov The DEP has not
received development plans or a remedial workplan. 9/28/06: Site visit. Demolition at the site is
complete. The monitoring wells could not be located. They are either destroyed, or inaccessible
under construction equipment. 10/12/06: Received and reviewed RAP from PW Grosser. Excavation,
chemical oxidation (sodium persulfate), vapor barrier, and active sub slab venting system proposed.
RAP conditionally approved, with extension of chemox treatment area by 10 feet north, groundwater
sampling for pH, DO, redox potential, conductivity, and persulfate, a baseline groundwater sampling
event, and Department approval required for gw samples collected two weeks after chemox injection,
prior to initiation of constuction activities on the southern portion of the property, and monthly
subslab depressurization system air effluent sampling. A stipulation agreement was mailed.
12/18/06: Emailed Charles Sosik and David Yudelson to followup on status of stipulation agreement
and RAP implementation. Received email from David Yudelson: I have the signed stip and will send it
over. We are having some delays with DEP so we should talk about it. Received email from Charles
Sosik indicating he is no longer working on this project. New project manager: Kris Almskog at PWGC

SUNOCO #0007-1548 (Continued) **U001839271**

(631)589-6353, KrisA@pwgrosser.com. 1/2/07: Left voice message for David Yudelson. 1/22/07: Spoke to David Yudelson. DEP has delayed approval due to review of soundproof glass specifications. Will send signed stipulation agreement. 1/24/07: Spoke to Amy Ma of DEP (718-595-6658). She will cc me on DEP's RAP approval. 1/26/07: Stipulation agreement signed by North Development Group. Effective date 1/23/07. Sent email to Gary Heath of DEP (garyh@dep.nyc.gov), as per David Yudelson's request, confirming the DEC conditionally approved the RAP, received a signed stipulation agreement, and has no further requirements that need to be met prior to initiation of RAP implementation. 3/1/07:
Emailed David Yudelson and Kris Almskog to followup on DEP approval and RAP implementation.
Received email from Dave Yudelson, DEP approval for Hazmat expected soon. 4/2/07: Emailed David Yudelson to followup on DEP approval and RAP implementation. Received email from David Yudelson: We expect the MTA excavation permit to be issued in a week or so and excavation to start April 16 .
4/16/07: Spoke to Kris Almskog at PWGC (631)589-6353, date not set yet for excavation. He will call the developer and get back to me. 5/1/07: Emailed Kris Almskog to followup on exavation. 5/4/07:
Received email from David Yudelson. The excavation is delayed for an MTA permit. 6/12/07: Emailed David Yudelson to followup on RAP implementation. 7/30/07: Emailed David Yudelson to followup on the status of RAP implementation. 8/2/07: Spoke to David Yudelson. They are still having trouble getting an excavation permit from MTA because there is a subway directly adjacent to the site.
8/3/07: Received email from David Yudelson: We are still waiting for approvals to start excavation from the MTA and NYC DOB. We are eager to start remediation and development and are pushing as hard as we can but realistically it will be about a month. 8/21/07:
Received letter from Charles Sosik with additional information regarding soil disposal. 9/13/07: Emailed David Yudelson to followup on workplan implementation and permit aquisition. 9/14/07: Received email from David Yudelson. Permits not received yet. 10/23/07: Emailed David Yudelson to followup on workplan implementation and permit aquisition. 10/31/07: Reassigned from Sarah Carlson to Chanda. 11/5/07: Chanda received an email from Joe Sun (NYSDEC) regarding the new project consultant's(Environmental Business Consultant) email. The consultant's email is: This is to inform you that EBC has taken over as the environmental consultant on this project. We are intimately familiar with the project and the remedial action plan as I was the Senior PM on this project with PW Grosser and had met with you and Joe Sunn on the development of the remedial plan. With respect to

SUNOCO #0007-1548 (Continued) **U001839271**

current status: The project
has been delayed by permits an approvals from the MTA due to the proximity to the subway. These
issues have largely been resolved and we expect to begin excavation shortly. We completed test pits
for additional waste characterization of the top four feet of material and are assisting in
identifying a disposal facility and securing approvals. We met last week with the excavation
contractor to go over details and scheduling. I will notify you when we have a date to begin
excavation. Right now that is still dependant on final arrangements andapprovals with MTA. Please
direct all future inquiries and correspondence to EBC and / or North Development Group. Thank you.
11/6/07:The file is updated by Chanda. Chanda received an email from Charles B. Sosik (consultant):
This is to inform you that EBC has taken over as the environmental consultant on this project. We
are intimately familiar with the project and the remedial action plan as I was the Senior PM on
this project with PW Grosser and had met with you and Joe Sunn on the development of the remedial
plan. With respect to current status: The project has been delayed by permits and approvals from
the MTA due to the proximity to the subway. These issues have largely been resolved and we expect
to begin excavation shortly. We completed test pits for additional waste characterization of the
top four feet of material and are assisting in identifying a disposal facility and securing
approvals. We met last week with the excavation contractor to go over details and scheduling. I
will notify you when we have a date to begin excavation. Right now that is still dependant on final
arrangements and approvals with MTA. On 11/6/07, Chanda sent an email to Charles Sosik (EBC): This
is to inform you I am the project manager for the above referenced site. On 10/5/06, the New York
State Department of Environmental Conservation (the Department) received the RAP from PW Grosser.
Excavation, chemical oxidation (sodium persulfate), vapor barriers, and active sub slab venting
system proposed. On 10/12/06, the Department conditionally approved the RAP, with extension of
chemical oxidation treatment area by 10 feet north, groundwater sampling for pH, dissolve oxygen,
oxidation/reduction potential, conductivity, and persulfate, a baseline groundwater sampling event,
and the Department approval required for groundwater samples collected two weeks after chemical
oxidant injection, prior to initiation of construction activities on the southern portion of the
property, and monthly sub-slab depressurization system air effluent sampling. 11/13/07:Chanda
received a letter from P.W. Grosser Consulting (PWG) dated 11/9/07. This letter stated that PWG is

SUNOCO #0007-1548 (Continued) **U001839271**

no long representing the developer/owner of the 75-85 Flatbush Ave., Brooklyn, NY property.
12/21/07: Chanda received an email from Charles Sosik (EBC): We are making final arrangements with
the excavation contractor and their disposal company and plan to begin excavation and removal of
soil at the site in early January. We have an on-site meeting with the contractor on January 2nd
and will update you at that time on scheduling. 2/14/08: Chanda received an email from Charles
Sosik, Environmental Business Consultants regarding the soil excavation and installation of
chemical oxidant injection points at the site. (see eDocs) 2/20/08: Chanda received the following
email from Charles Sosik, Environmental Business Consultants: Injection well installation was
completed on Friday. We designated 3 locations as monitoring wells and are collecting samples from
them today. We are also running tests on the soil and groundwater to determine buffering capacity
of the soil and groundwater at the site to assist in adjusting the chemical oxidant mixture. I will
let you know when the injections are scheduled. A 550 gallon UST was discovered Monday. The tank
was encased in concrete and partially filled with water. Both tanks appeared to have been used for
gasoline. Both tanks were in good condition with only minor surface rust. We photographed the tanks
and collected endpoint samples beneath the concrete base. The tanks were cut-opened, cleaned and
scrapped yesterday by ABC Tank. The tanks will be closed with the FD and NYSPBS group.
Documentation will be provided in the site closure report. 5/5/08: Chanda called Charles Sosik, EBC
(Ph.631-504-6000) to get updated information regarding this site. He stated that an email will be
sent to DEC with updated status as soon as possible. (Chanda) 10/15/08: Chanda called Charles
Sosik, EBC (Ph.631-504-6000) to get the UST closure report for this site. He stated that the Site
closure report will be sent to DEC end of Novenmer 2008. 1/19/11: Breen. Mike Taormina called. He
is the new consultant. He will FOIL the 2006 Remedial Action Plan to get on board. He is at
201-332-1844, X107. See e-docs for his address. His cell is 973-479-3095. 1/24/11: Breen. I spoke
to Mike this morning. He says his client is anxious to get moving. Client asked him to do a phase
2. Mike has option to complete already approve RAP, or with fresh eyes and the long passage of time
making the RAP somewhat stale to propose a better way. He will explore his options. 2/2/11. Breen.
Mike called to say putting up a building has been cancelled. Thus subslab vapor extraction is no
longer needed. He will submit a new RAP to reflect this. He says his copy of the Hydrotech RAP of
Jan 06 contains only portions of the drawings. He wants to know if we

SUNOCO #0007-1548 (Continued) **U001839271**

have the complete drawings.
Office = 201-332-1844. Cell = 973-479-3095. 2/22/11: Breen. Mike Taormina called to ask for tables
of soil analytical results. Tables were printed B size, but only half was scanned. I checked e-docs
and found that was indeed the case. I called the original consultant, HydroTech and spoke to
Mostafa. He said he should never have sent in that RAP in 1-5-2006 because his client, Isaac Hagar,
had not paid him. He said Hagar owes him $30K. He said he spent $15K in legal fees to sue Hagar and
WON. However, he can't collect because this corporation of Hagar's is broke. Hagar has defaulted on
STIP. He has not done anything in three years. He may have abandoned an open excavation. 2/24/11.
Breen. I told Mike that I was not successful in obtaining copies of the missing pages. I told him
that HydroTech was not paid. He said he is not working for Hagar, but rather for the Bank that
holds the mortgage. Mike has nothing to do with Hagar; he may be gone. The Bank may just want to do
the cleanup and sell the land. The Bank is not interested in going ahead with the development.
2/28/11. Breen. I sent Isaac Hagar a letter to notify him of his delinquency under his Stip. I
called the bank that holds the mortgage, was put into voice mail; I asked them to return my call so
I could send copy of the letter to a person. No call back yet. 3/1/11. Breen. I found a paper copy
of the HydroTech Site Investigation report of 1-5-06 in the basement storage room. It had the pages
Mike was looking for. I sent Mike the seven missing pages, all B-sized, by e-mail. I also put these
pages in e-docs. 3/2/11. Breen. I learned further details from the e-mail Mike sent me to
acknowledge receipt of the B-sized pages. He says he is not working for the bank that holds the
mortgage, rather for a bank that represents a prospective buyer. I will get more details tomorrow
when I can question to him directly. 3/2/11. Breen. I got the green card back from Isaac Hagar with
his signature. This confirms delivery and receipt. 6/10/2011 Got a call from Mike Taormina. His
client wants to move forward with the project. I explained to Mike that if he wants modifications
to the work plan - send me what modifications are needed and I will review. Ultimately, for spill
to be closed concentrations must be acceptable, no free product, no exposure threat, no plume
migrations, etc. Mike understood and said he will get me something thought e-mail later today. VB
12/1/2011 - Carlson: Received phone call from Michael Dougherty (212-885-5578), attorney from
USBank. He wants to know case status. Site will not be redeveloped. They will be selling land only.
12/6/11 - Carlson: Received email from Mike Taormina of AEI Consultants. His contact at US Bank is:

SUNOCO #0007-1548 (Continued) **U001839271**

Karen Boyer Vice President Special Assets Group U.S. Bank National Association 461 Fifth Avenue New York, New York 10017 Phone: (646) 935-4558 Cell: (646) 275-6081 Fax: (646) 935-4550 E-mail: karen.boyer@usbank.com Left voice message for Karen Boyer. 1/4/12 - Carlson: Left message for Karen Boyer. Will US Bank be remediating site? 1/12/12 - Carlson: I spoke to Karen Boyer. USBank received forclosure proceedings but they do not formally own property. They will try to sell the property as is. USBank will not be remediating the site at this time. She will forward documents by email. 2/16/2012 - Carlson: Spoke to Charles Sosik- site was partially excavated - he doesn't have manifests (former owner has manifests). He is working with buyer (do they formally own the property?). Sosik will send workplan for site investigation and info on buyer/new owner. 2/22/2012 - Carlson: Received email from Charles Sosik with info on new owner. The new owner is or will be: Flatbush Holding LLC 16 E. 34th Street New York, NY Aaron Kline (917) 604-1139 2/27/2012 - Carlson: Reviewed workplan dated 2/24/2012. The workplan submitted by email. In email Charles Sosik stated he wanted to implement work plan on 2/28/2012. The new property owner is going to continue with redevelopment of the site. Sent email requesting a revised work plan. Soil samples must collected from all mw locations proposed (six monitoring wells proposed). Sampling for VOCs and SVOCs is required. Revised work plan due in 30 days. 2/29/2012 - Carlson: Reviewed revised work plan. Sent email approving revised work plan and requiring stip by 3/29/2012. Four wells were installed yesterday. Two remaining well locations are blocked by cars, wells will be installed today if cars can be removed. 4/18/2012 - Carlson: Reviewed Sampling Report and Remedial Action Plan both dated April 2012. Seven soil borings/monitoring wells installed. High soil and gw impact in MW6. Low level gw MTBE present in MW4 and MW5. Low level SVOCs in groundwater present in MW-1,3,4,5,6,7 - may be historic fill. MW-6 also had napthalenes present in gw that were a result of the spill (not related to historic fill). RAP proposed chemical injection of sodium persulfate into six injection points. Groundwater sampling proposed two weeks following injection to evaluate effectiveness, need for further injection. look up info on sodium persulfate. What are redevelopment plans? several rounds of injection will likely be necessary as well as comfirmatory soil sampling. if rapid redevelopment is planned, full excavation would be the fastest/best approach; 5/9/12 - Carlson: Received email from Charles Sosik - they will excavate the entire property to 26 ft, he wants to submit a revised RAP; Replied to email - will they still be using

SUNOCO #0007-1548 (Continued) **U001839271**

chemox to treat groundwater?,
revised RAP must include post remedial (post chemox) soil sampling to confirm remediation has been
completed. Revised RAP due in 30 days. 6/4/12 - Carlson: Received revised RAP submitted on 5/18/12
(but dated April 2012). Emailed Charles Sosik the following comments/questions: The text of the RAP
was updated, but the figures were not. The report states the impacted soil in the vicinity of MW6
will be excavated to the water table, but the figures shows the excavated area to include MW1, MW2,
and MW3 only. Please update the figures. Additionally, section 3.2 states the injection well screen
will extend 2 ft above the water table, but section 3.1 states the area will excavated to the water
table. Please explain this discrepancy. 6/5/12 - Carlson: Received email from Charles Sosik. Spoke
to Charles Sosik. Entire site will be excavated to 20 ft. Hotspot excavation in vicinity of MW6
will extend to water table. Hotspot excavation samples will be collected. Injection wells will be
installed for chemical oxidation to address groundwater contamination around MW6. Future
development will include a vapor barrier. SSDS will NOT be included because basement level is a
ventilated parking garage. Revised RAP to be submitted. 6/8/12 - Carlson: Reviewed revised Remedial
Action Plan dated June 2012. The RAP proposes excavation of impacted soil to the water table.
Chemical oxidation is proposed to treat impacted groundwater and saturated soil. Impacted soil in
the vicinity of MW6 will be excavated to the groundwater table. The excavation will be expanded
horizontally to remove all impacted vadose zone soils. Sidewall endpoint samples will be collected
at the base of the excavation to confirm impacted vadose zone soils have been removed. Following
collected of endpoint samples, the excavation will be backfilled to the desired depth for future
development plans. Six injection points are proposed in the vicinity of MW6. Injection of chelated
iron activated sodium persulfate is proposed. Performance groundwater samples will be collected
following the initial injection event. The need for subsequent injections will be evaluated based
on the results of performance groundwater samples. Confirmatory soil samples will be collected
following completion of the chemical injections to confirm complete remediation of saturated soils.
Future construction at this site will include a 20 mil HDPE geomembrane liner. The plan notes a
sub-slab depressurization system is not necessary because future development plans at this site
include a two-level basement parking garage that will be ventilated. Quarterly groundwater
monitoring, sampling, and reporting will be initiated. A Remedial Action Completion Report will be

SUNOCO #0007-1548 (Continued) **U001839271**

submitted summarizing the remedial work performed. Issued approval letter. Departmental approval of
Remedial Completion Report is required prior to site redevelopment. 7/2/2012 - Carlson: Received
email from Charles Sosik. Building will be a hotel. The sub-cellar will be used by hotel
maintenance and laundry facilities. The cellar will be a kitchen, gym and meeting room. Sent email
requiring submission of a revised RAP in 15 days that includes a SSDS. 9/18/12 - Carlson: Reviewed
revised RAWP dated 9/9/12. spoke to charles sosik - requested revised SSDS site plan to
differentiate between pipes types, and a sub-slab monitoring point to sample vacuum/air pressure.
Revised RAWP to be submitted. 9/28/12 - Carlson: Approved revised RAP dated September 2012. SSDS
included in redevelopement plans. Post-remedial soil gas samples will be collected in order to
evaluate the need for installation of the proposed SSDS. The SSDS design includes a sub-slab
monitoring point that will be tested in order to confirm effectiveness of the SSDS. A Remedial
Action Completion Report will be submitted summarizing the remedial work performed. 12/1/12 -
Carlson: Received revised RAP dated 11/28/12 proposed SVE to treat unsaturate zone soil impact and
chemox to treat saturated soil and gw contamination. Workplan states that remediation will be
performed in conjunction with foundation construction. 12/5/12 - Carlson: Spoke to Mr. Charles
Sosik. Building footings and framing will be installed, these will not interfere with remediation.
12/14/12 - Carlson: Revised RAP text proposes installation of 6 injection wells, while figure
indicated 7 injection wells will be installed. Emailed Charles Sosik about inaccuracy. 1/4/13 -
Carlson: DEC Hassan, Carlson, Ketani, and O'Connel met with Mr. Sosik to discuss the revised RAP.
Additional excavation not possible due to subway. He said AS would interefere with construction.
Chemox is the easiest remedial method for groundwater treatment for them. 1/7/2013 - Carlson:
Issued letter requiring a revised RAP that includes 1) a secondary, backup, groundwater remediation
method, 2) performance monitoring samples must effectively monitor the aquifer for rebounding
groundwater concentrations, 3) an additional soil boring must be performed in the vicinity of
boring B6 in order to vertical delineate the extent of contamination. Issued a new stip to 85
flatbush LLC. Received email from Mr. Sosik, plan will be revised the include statement that the
chemox injection plan will be modified if need be, and a contingency AS system will be installed.
plan will be resubmitted Received signed stip via email. Original must be submitted. 1/11/13 -
Carlson: Received original signed stip. Agreement was signed as

SUNOCO #0007-1548 (Continued) **U001839271**

flatbush extension LLC, but
respondent was listed at 85 flatbush LLC. Flatbush extension LLC
appears to be correct based on
ACRIS property records. DEC issued a second stipulation with
respondent listed as Flatbush
Extension LLC. Revised Agreement must be be signed and resubmitted.
Received revised RAP dated
January 2013. Reviewed revised RAP. Required modifications were made
as per 1/7/13 letter.
1/16/2013 - Carlson: Received signed Stipulation Agreement, forwarded
to Legal Division. Issued
approval letter for January 2013 revised RAWP. 2/6/13 - Carlson:
Received executed Stip from Legal,
signed by DEC 1/25/13. Forwarded to Charles Sosik
(csosik@ebcincny.com). 07/15/13 - Spill Case is
transferred from Sarah Carlson (Section C) to June Feng (Section of
Spill Prevention and Response)
as per DER Region 2 decision. 06/27/2014: This spill case was
transferred to A. Doronova. - AD
08/05/2014: Sent the following e-mail to Sunoco contact - Russell
Hammond (e-mail:
rhammond@sunocoinc.com) and copied to Anthony Fiorentine
(afiorentine@cg-env.com): Dear Mr.
Hammond: My name is Ainura Doronova. I am a NYSDEC project manager for
the following spill cases,
which were recently transferred to me: 1. Spill No. 1011266, 550
Humbolt Street, Brooklyn; 2. Spill
No. 0913725, 1626 Steelwell Avenue, Brooklyn; 3. Spill No. 0809869,
42-02 21st Streeet, Queens; 4.
Spill No. 0708451, 972 Remsen Avenue, Brooklyn; 5. Spill No. 0502868,
1781 Bay Ridge Parkway,
Brooklyn; 6. Spill No. 0407558, 5 Flatbush Avenue, Brooklyn; 7. Spill
No. 0304033, 805 65th Street,
Brooklyn; 8. Spill No. 9909665, 175-33, Horace Harding Expressway,
Queens; 9. Spill No. 9900619,
1650 Forest Avenue, Staten Island; 10. Spill No. 9808686, 188-06
Hillside Avenue, Queens; 11. Spill
No. 9711173, 2310 Tillotson Avenue, Bronx; 12. Spill No. 9609282, 1781
Arthur Kill Rd., Staten
Island; 13. Spill No. 9501327, 2701 Knapp Stret, Brooklyn; 14. Spill
No. 8905358, 32-32 Queens
Boulevard, New York; 15. Spill No. 8904831, 38-15 Queens Boulevard,
Queens; 16. Spill No. 8904151,
161-15 46th Avenue, New York; 17. Spill No. 8808987, 135-45 Cross Bay
Boulevard, Queens; 18. Spill
No. 8706272. 2052 Victory Boulevard, Staten Island. From now on,
please submit all your future
documentation (letters, reports, work plans, RAPs) related to these
spill cases to my attention.
Please note, that you should submit one hard copy of the document
(report/work plan) and e-copy on
a CD by regular mail. Please, do not submit large size documents via
e-mail, since we have limited
storage capacity, so it should be used only for correspondence. Feel
free to contact me if you have
any questions. Thank you. Sincerely, Ainura Doronova Environmental
Engineer 1 Division of

SUNOCO #0007-1548 (Continued) **U001839271**

Environmental Remediation NYS Department of Environmental Conservation Region 2 (718) 482-6453 AD 05/05/2015: Called and left a message to Charlie Sosik of EBC. AD 08/27/2015: Received the following e-mail from Kevin Brusee of EBC: Ainura, I will be forwarding you a copy of the Remedial Action Report for NYSDEC Spill No. 0407558 via the DEC FTS link. The Remedial Action Report was prepared for NYC OER, but discusses all of the information regarding the spill. The RAR describes site excavation for the new building, describes installation of monitoring wells, collection of groundwater samples, injections of chemical oxidant and groundwater sampling after the injections to confirm effectiveness of the injections. All tanks on site have been properly removed, the majority of the Site was excavated to a depth immediately above the groundwater table, and the concentrations of gasoline related VOCs in groundwater have decreased significantly following chemical oxidant injections. Therefore, EBC is recommending closure of the spill number. Please feel free to call me with any questions or concerns. Kevin Brussee Senior Project Manager EB C Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Later in the day received the second e-mail from Kevin stating: Ainura, The Report is attached. All of the appendices will be sent to you via the FTS link. Thanks, Kevin Brussee Senior Project Manager EB C Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review. AD 09/08/2015: Reviewed the report. It states that the site was re-developed. The initial redevelopment plan proposed in 2005 consisted of a new 21-story mixed use building with a cellar, sub-cellar and mezzanine. However, the redevelopment plans changed in 2012 to a 12 story hotel/apartment building with two sub-cellar levels and a small cellar level. The underground storage tanks (USTs), dispensers and related piping associated with the former Sunoco service station were removed from the Site in 2005. A Remedial Action Work Plan was approved by DEC on October 12, 2006. The approved Remedial Action Work Plan included the excavation and removal of all petroleum affected soils and historic fill materials at the Site and the injection of chemical oxidants to treat residual petroleum contamination in soil and groundwater. The petroleum contamination was limited to the southern third of the property where the USTs and dispensers were formerly located. Excavation and off-Site disposal was started in early 2008, but was discontinued during the recession. The majority of former Lot 45 (former Sunoco service station) had been excavated to a

SUNOCO #0007-1548 (Continued) **U001839271**

depth of approximately 20
feet below surface grade. The west wall (toward Flatbush Avenue) of the excavation was backfilled
to form a steep slope while the southern and eastern property lines were shored with wooden
planking. The northern end of the property gradually slopes up toward former Lot 13. Following the
recession, ownership was transferred and the redevelopment plan changed. The following remedial
action were performed at the site: -From April 18, 2013, to June 17, 2013, a total 11,259.85 tons
of fill/soil was excavated and loaded into 10-wheel dump trucks for transport to Soil Safe - Logan
facility. An additional 7,247.23 tons of clean soil was removed from July 3, 2013, to August 8,
2013, from across the Site to get to the final excavation depth for the building s
cellar/sub-cellar. The final depth of the excavation reached depth 30’ bgl. -One 550-gallon
underground storage tank was removed off-site in compliance with applicable local, State and
Federal laws and regulations; -Installed Preprufe 300R as manufactured by Grace as a vapor
barrier/waterproofing membrane system beneath the entirety of the building slab, and installed
Bituthene 4000 as manufactured by Grace as a vapor
barrier/waterproofing membrane system behind all
foundation walls to grade; -Installed seven injection wells and performed three rounds of chemical
oxidant injections to reduce soil/groundwater contamination;
-Collected groundwater samples from
monitoring wells to determine the effectiveness of the chemical injections. There is no figure of
the site plan with locations of thee monitoring well and injection points. Called and left a
message to Mr. Brussee. AD 09/17/2015: Left a message to Mr. Brussee. AD 09/23/2015: Received the
requested figure. Will review. AD 09/24/2015: Reviewed the submitted figure. The historically most
contaminated well MW-6 located along the Flatbush Avenue. In-situ chemical oxidation was performed
in the vicinity of this well via 7 injection points. Discussed with J. Kolleeny the closure
request. Given the performed remedial excavation, in-situ chemical oxidation and most recent
groundwater data, it was decided to approve the spill closure request. AD 09/25/2015: Issued and
sent an approval letter to Gabby Goldberger of 85 Flatbush, LLC. Case closed.

Remarks: FROM A GROUNDWATER SAMPLE, MTBE 78,000 PPB WAS LOCATED IN THE SAMPLE.

Environmental Interest/Information System:

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY SITE WAS INVESTIGATED BY URS, THEN LIRO. LIRO WILL INSTALL REMEDIAL SYSTEM TO ADDRESS THIS SITE AND ADJACENT ENGINE CO. 207. SEE ALSO SPILLS 9601161 AND 9601818; FROM SAME TANKS. WHEN SITE HAS BEEN REMEDIATED, ALL THREE SPILLS SHOULD BE CLOSED. The Site is currently under remediation by LiRo. It being the same site, the above-mentioned two spills have been closed today keeping this initial one open. - IMDAD (12/10/04). LiRo is operating a multi-phase extraction system at this site and the adjacent Engine Co. 207 site, which have been combined for purposes of remediation. This spill transferred from Kolleeny to A. Zhitomirsky on 4/13/05. - JK 6-2-2005 Reviewed a Monitoring Report for the above referenced site. The report presented remedial system performance and groundwater monitoring data. The data show that wells adjacent to Gold Street showed increasing contaminant concentrations. In the report LiRo proposed to discontinue groundwater sampling at wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-12 and MW-13. The Department concurred with this proposal. However, the Department recommended

84 PRECINCT NYPD -DDC (Continued) **S104951147**

that LiRo should take steps to address the increases in dissolved-phase VOC levels in the wells adjacent to Gold Street. AZ 8-28-2005 Reviewed a Monitoring Report for June 2005. The report presented remedial system performance and groundwater monitoring data. Groundwater contaminant levels appear to be falling along the west side of Gold Street. In the report LiRo proposed to install ORC socks at wells MW-15, MW-17, 84MW-2 and 84MW-6. The Department concurred with this proposal. AZ 2/9/2006 Reviewed a Monitoring Report received in November 2005. The system was down for 26 days in September due to clogged lines. Franklin has been directed to make necessary repairs to increase induced vacuum in the 84th Pct. driveway area. AZ 3/20/2006 Stuart Knoop (Langan Engineering) 212-479-5461 reported that during their site investigation at the adjacent property 167 Johnson Street they found dissolved phase in groundwater on the north-western part of the property on Gold Street. BTEX and naphthalene were encountered at concentrations 2009 ppb total VOCs and 680 ppb total SVOCs . New spill was opened # 0514513. AZ 5/15/2006 Reviewed a Monitoring Report for October - December 2005. Recent groundwater analytical results showed total VOC concentrations up to 4,462 ppb in MW-6. The current sampling results showed increase in VOC levels in wells MW-17, 84MW-2 and 84MW-6 in the portion of 84 Precinct. AZ 5-24-2006 Stuart Knoop 212-479-5461 (GDY Properties - real estate developers). During Phase 2 Environmental Site Assessment they discovered in the north-western portion of the property adjacent to the 84th Precinct some exceedances of VOCs in groundwater (2,000 ppb total VOCs) and soil (4,140 ppb total VOCs). The contaminated area is cross gradient from the 84th Precinct. They will remove contaminated soil from the site and take end point samples. They are putting a soil vapor barrier underneath a future residential tower building. Also, they found perc in two groundwater samples obtained from wells at 93 ppb and 17 ppb. When the excavation is complete a report will be submitted to DEC. AZ 9/25/2006 Stuart Knoop from Langan Engineering @212-479-5461 inquired about the site. AZ 12/01/2006 Reviewed a Monitoring Report for April - June 2006 by Roux. Flow meter is broken therefore the system's efficiency in removing VOCs in gw is unknown. The MPE system needs rebalancing to ensure maximum vacuum and fluid extraction rates in EW-6, EW-8, EW-12, PD-BW-6, and PD-BW-2. In a telephone conversation with Brian Morissey I concurred with removing 84-MW-5 from gw the sampling program because VOCs and SVOCs were not detected for two consecutive monitoring events. The total VOC concentrations in MW-20 sharply increased. MW-2

84 PRECINCT NYPD -DDC (Continued) **S104951147**

has 10,450 ppb total VOCs. AZ
5-11-2007 Reviewed a Monitoring Report for July - September 2006 dated January 5, 2007. MPE system
had an uptime of 9%. because of failure of liquid transfer pump P-101. System has restrictive fluid
flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in
four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC
concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid
pump, re-starting the MPE system and making adjustments to increase floe extraction and vacuum at
extraction wells EW-11,EW-12,PD-BW-02 and PD-BW-05. The MPE system needs adjustment. Roux
recommended inspection of the water flow meter, removal of several monitoring wells from the
sampling program, removal of SVOCs from the sample schedule, inclusion of several bioremediation
parameters in the sampling program. E-mail was sent to DDC/Roux/Greyhawk: MPE system at this site
had an uptime of 9% because of failure of liquid transfer pump P-101. System has restrictive fluid
flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in
four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC
concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid
pump, re-starting the MPE system and making adjustments to increase flow extraction and vacuum at
extraction wells EW-11, EW-12, PD-BW-02 and PD-BW-05. The MPE system needs adjustment. Al these
tasks should be performed without delay.Roux recommended inspection of the water flow meter,
removal of SVOCs from the sampling schedule and inclusion of several bioremediation parameters in
the sampling program. All these recommendations are approved. Sampling of wells MW-06 and 84MW-05
could be discontinued. AZ 8-11-2008 An e-mail was sent to Roux/Greyhawk/DDC/V. Brevdo: 8-11-2008 An
e-mail was sent to Roux/Greyhawk/DDC/V. Brevdo: I have reviewed report for the above spill
submitted on June 2, 2008. This spill was issued on March 29, 2001 when concentrations of
semi-volatile organic compounds (SVOCs) around a 10,000-gallon tank containing #2 fuel and
3,000-gallon tank containing diesel were found to exceed allowable regulatory guidelines. The tanks
are closed in place. Spill #9512589 at this site is currently being remediated by Greyhawk/Roux
Associates for gasoline contamination. The spill #0013663 will be incorporated into
investigation/remediation of spill#9512589. However, soil and groundwater testing should be
performed around the #2 fuel tank and the diesel tank prior to the closure of spill #9512589. An

84 PRECINCT NYPD -DDC (Continued) **S104951147**

electronic copy of the report dated June 2, 2008, should be submitted to DEC. The spill #0013663 was consolidated with spill #9512589. The spill #0013663 was consolidated with spill #9512589. AZ 12-20-2010 An e-mail was sent to DDC/V. Brevdo, S. Frank (LiRo): Dear Steve, I have reviewed a quarterly monitoring report and site turn-over status. The report proposed advancement of five borings and installation of one well. These proposals are approved. Also, the report stated that a number of diesel/gasoline tanks were closed in place. These tanks could be a continued source of contamination. Excavation of these tanks should be considered as one of the remedial options, if feasible. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. Elevated levels of soil and dissolved groundwater contamination exist at this site. The City s consultant conducted a site reconnaissance, well inspection, and a round of water gauging in June 2010. Residual soil and groundwater contamination remain at the site. Moderate to high level VOC remain in the groundwater. The MPE remediation system has been offline since 2007 due to failure of the discharge pump and phase separator transfer pump. Two bio-injections were performed at the site in 2008-2009. The DEC has made several requests in correspondence requesting to repair the system. Consultants proposed conducting an additional site investigation to determine current soil conditions. DEC approved proposed advancement of five borings and installation of one well. Also, DEC recommended in December 2010 excavation of a number of diesel/gasoline tanks were closed in place, if feasible., since these tanks could be a continued source of contamination. AZ 3-25-2011 Reviewed tank closure report dated 12/13/2010 4,000 gal gasoline tank was removed. 2 samples were taken from the bottom and 2 samples were taken from suction line and dispenser location excavation. No VOC exceedances were recorded. SVOCs were present in soil samples dispensers and pipeline. The SVOCs that were detected were below CP-51 numbers. No side samples were taken due to a steel sheet piles. AZ 10-12-2011 Received and reviewed proposals for in-situ chemical oxidation (ISCO) pilot test. I called S. Frank and expressed concerns regarding heat generation effects on communications and existing tanks. The following e-mail was received in response: Dear Alex, I received your voice mail expressing concern about heat generation and potential impact to USTs and utilities at the 84th Precinct site. Because the depth to water is about 20 feet, the tops of the injection well screens will be set at 18 feet which is far below the depth of the UST bottoms (which are founded on a concrete slab at a depth of about 12 feet) and infrastructure at

84 PRECINCT NYPD -DDC (Continued) **S104951147**

the site. Therefore we are
comfortable that no damage will result and no warranties will be voided through application of
peroxide at the site. Please call if you require further information.
An e-mail was sent to S.
Frank/F. Ashkan/ V. Brevdo: Dear Steve, I have reviewed in-Situ Chemical Oxidation (ISCO) Pilot
Test Work Plan. I have expressed concern about the heat generation impact to USTs and utilities.
You are stating that LiRo is comfortable that no damage will result. Based on this statement, the
proposed pilot test is approved. EPA should be notified of the injection. The Responsible Party and
its contractors are solely responsible for the safe execution of all work performed at the site,
and in particular, are responsible for identifying subsurface utilities and safeguarding the
structural integrity of any buildings, utilities, and other structures both on- and off-site that
may be adversely affected by the work. The Responsible Party and its contractors must obtain any
local, state or federal permits or approvals that may be required to perform the work necessary to
address this spill. Furthermore, the Responsible Party and its contractors are solely responsible
for the implementation of all appropriate health and safety measures during the performance of this
work. AZ 1-9-2012 An email was sent to LiRo/F. Ashkan/V. Brevdo:Dear Steve, I have reviewed a
quarterly monitoring report for the period of April through August 2011 and dated October 31, 2011.
The report stated that LiRo will conduct an In-Situ Chemical Oxidation pilot test which was
approved by DEC on October 12, 2011. LiRo proposed removing several monitoring wells from the
monitoring program. Monitoring wells MW-03 and MW-13 could be removed from the monitoring program.
AZ 6-20-2012 Reviewed QMR September through November 2011 dated February 23, 2012. Elevated levels
of VOC and SVOC in soil in the parking area of the precinct. VOCs in groundwater ranging from 128
ppb to 9,317 ppb. ORC socks are installed. AZ 10-9-2012 Reviewed QMR September 2011 through Feb
2012 2011 dated May 31, 2012. Wells MW-09, EW-09/MW-14,EW-05 and EW-07 will be re-developed and
one-time sampled. Based on the results of the site visit to evaluate removal of remaining
closed-in-place USTs, GPR/Radio Frequency/Electromagnetic survey to confirm the presence of of the
USTs will be conducted. The survey will also include the driveway are south of 84th precinct to try
to determine location of piping from the emergency generator to the 10,000 gallon #2 fuel oil UST.
DEC approved ISCO (hydrogen peroxide) test on October 12, 2011. This test is yet to be done. AZ
4-19-2013 Six injection wells were installed in May 2012. In April 2012 total VOC concentrations

84 PRECINCT NYPD -DDC (Continued) **S104951147**

were up to 16,030 ppb in PD-BW-06. ISCO pilot rest will be completed. Four injections are planned.
GPR survey to locate USTs will be conducted. AZ 7-5-2013 Reviewed QMR report dated January 15,
2013. The WP recommended 4 injection events. A total of three events were completed. A total of
2,880-gallon of iron catalyst and 9,900-gallons of 8% hydrogen peroxide have been injected into the
six injection wells between May 2012 and August 2012. Dissolved phase VOC impacts remain in the
vicinity of wells MW-A, FW-05 and MW-07/EW-06. Offsite well MW-15 showed an order of magnitude
increase compared to the April 2012 sampling. Nuisance odors were reported in the basement area
adjacent top the injection area. As a result, the fourth ISCO injection event has been temporarily
halted. LiRo will evaluate ways to address odor issues. AZ 5-15-2014 Reviewed report dated
10/28/2013. Increased VOC concentrations in January 2013 and August 2013 indicate rebounding
levels.Off site wells MW-15 and MW-17 reported increase in VOC concentrations in August 2013. Due
to nuisance odors in the basement area the fourth ISCO injection will be delayed. Potential off
gassing issues will be addressed. AZ 9-2-2014 Reviewed report dated 1/09/2014. Routine groundwater
sampling was completed in November 2013. Dissolved phase VOC impacts remain in the vicinity of
wells MW-A, EW-05, MW-07/EW-06. The fourth application event event will be completed and potential;
off-gassing issues will be addressed. AZ 12-22-2014 Reviewed a monitoring report December 2013 -
April 2014 dated June 19, 2014. Groundwater sampling was completed in February 2014 and April 2014.
Dissolved phase VOC impacts at 84th Pct remain along the driveway/alleyway, reported decrease in
total VOC concentrations in all but one location. Due to ongoing construction at the adjacent
building the fourth ISCO injection will be delayed. AZ 4-22-2015 Reviewed a monitoring report
August 2014 - October 2014 dated February 17, 2015. LiRo proposes to advance 5 soil borings along
the 84th Precinct Alleyway to assess the current soil situation. One additional soil boring is
recommended along the sewer line (along Gold Street) to assess the current soil situation.Based on
the results of the proposed investigation, LiRo proposes to abandon the current ISCO injection
wells and install new wells. The following e-amil was sent to S. Frank/V. brevdo: Dear Steve, I
have reviewed a monitoring report for the period of August 2014 to October 2014, dated February 17,
2015. LiRo proposes to advance five soil borings along the 84th Precinct alleyway to assess the
current soil situation. One additional soil boring is recommended along the sewer line (along Gold
Street) to assess the current soil situation. Based on the results of

84 PRECINCT NYPD -DDC (Continued) **S104951147**

the proposed investigation,
LiRo proposes to abandon the current ISCO injection wells and install new wells. I concur with this
proposals. This Work Plan is approved. The Responsible Party and its contractors are solely
responsible for the safe execution of all invasive work performed at the site. Alex Zhitomirsky
1-11-2016 Reviewed a monitoring report November 2014 - February 2015 dated May 26, 2015. Soil data
collected indicates that soil contamination is present at and below the groundwater table, in the
saturated zone along the driveway area of 84 Precinct. The fourth ISCO injection event was
completed in July 2014. Groundwater sampling was completed in January 2015. Dissolved phase VOC
impacts were recorded in 11 wells. The total VOC concentrations above AWQSGV's ranged from 6 ppb to
10.996 ppb. AZ 2-12-2016 Reviewed a Work Plan dated December 7, 2015. The Work Plan proposed a
modified ISCO injections. Four rounds of ISCO injections were completed at the site, however,
significant groundwater contamination remains at the site. Left a message for S. Frank. AZ
2-23-2016 Discussed the site over the phone with S. Frank. The following e-mail was received from
S. Frank: Dear Alex, During our phone conversation today, you stated that you would like LiRo to
re-examine any alternatives to additional injections at the 84th Precinct Site. You mentioned that
you would like us to remove any closed in place tanks or do a source removal type of soil
excavation. As I mentioned, the soil contamination is relatively deep and due to the proximity of
the station house in the most contaminated portion of the site, excavation may not be feasible. We
will revisit the excavation approach, however, and consider if any tank removal work is feasible.
We will provide a letter detailing the evaluation and any potential changes that we could make to
our previously submitted injection plan. Sincerely, Steve AZ 1-30-2017 Reviewed a report for the
period of Sept. 2015 through February 2016. The report stated 13 reported VOC above AWQSGV. Nine of
the 13 wells with exceedances are associated with the 84th Precinct side. The total VOC
concentrations ranged from 263 ppb to 16,899 ppb. Four wells on the side of EC 207 concentrations
ranged from 32 ppb to 12,850 ppb. LiRo will conduct GPR survey in the alley (84th Pct.0 to
determine possible locations of the closed in place UST piping. Additionally, LiRo will evaluate
excavating test pits or completing borings based on the GPR results in the alleyway to determine if
piping source areas are present. AZ 1-31-2017 The following e-mail was sent to S. Frank and V.
Brevdo: Dear Steve, Based on the latest monitoring report dated August 4, 2016, significant VOC

84 PRECINCT NYPD -DDC (Continued) **S104951147**

impacts were noted in the groundwater at the site. The total VOC concentrations ranged from 23 ppb to 12,227 ppb. As per LiRo proposal, test pits should be excavated, if feasible. If contaminated soil is encountered, it should be removed. End point samples should be taken. The test pits should be performed without delay. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov 5-4-2017 Reviewed a report for the period of June 2016 through August 2016. GPR survey was performed in the alley (84th Pct.) to determine possible locations of the closed in place UST piping. Anomaly was detected in the general area of the closed-in-place USTs. Monthly EFR is conducted. Several test pits will be advanced to determine possible sources of contamination. The total VOC concentrations ranged from ND to 20,939 ppb. AZ 11-13-2017 Reviewed a report for the period of Dec. 2016 through Feb. 2017. Monthly EFR is conducted. Several test pits will be advanced to determine possible sources of contamination. Due to the relatively high VOC concentrations reported in EW-05 in January 2017, LiRo will collect samples from wells previously removed from the sampling program. The total VOC concentrations ranged from ND to 19,378 ppb. AZ 1-25-2018 Reviewed a report for the period of March 2017 through May 2017. Monthly EFR is conducted. The reported VOC concentrations in EW-05 returned to historical values. LiRo submitted to NYCDDC a Site and Health Safety Plan for approval. Once the Plan is approved, the planned test pits will completed. AZ 3-2-2018 Reviewed a report for the period of June 2017 through August 2017. Monthly EFR is conducted. The reported VOC concentrations in EW-05 returned to historical values. The Health and Safety Plan was approved by NYCDDC. The planned test pits are scheduled for completion. ORC socks will be changed. Monitoring well EW-05 reported

84 PRECINCT NYPD -DDC (Continued) **S104951147**

VOC concentrations of 7,209
ppb in July 2017. Also, monitoring well EW-03/MW-11, previously removed from sampling program,
reported 1,195 ppb of total VOCs in July 2017. AZ 8-29-2018 Reviewed a report for the period of
Sept. 2017 through Nov. 2017. Monthly EFR is conducted. The reported VOC concentrations in EW-05
returned to historical values. ORC socks will be changed. Monitoring well EW-05 reported VOC
concentrations of 1,609 ppb in October 2017. The test pits were advanced in October 2017. No former
fueling piping was identified in any of the test pits. AZ 6-6-2019 Reviewed a report for the period
of June 2018 through August 2018. Monthly EFR is conducted. No free-phase product was measured
during EFR events. ORC socks will be changed. Groundwater samples from the 84th Precinct parcel
along the driveway/alleyway/sidewalk reported dissolved-phase VOC concentrations greater than
NYSDEC standards in ten wells. The highest concentration was measured in PD-BW-05 at 10,117 ppb 0n
7/16/18. AZ 8-6-2019 Reviewed the Evaluation of Remedial Alternatives report dated May 17, 2019.
LiRo considers that S-ISCO (Surfactant Enhanced In-Situ Chemical Oxidation) technology is most
likely to provide a relatively low cost effective, accelerated remediation of petroleum-related
VOCs at the site. They recommended I-ISCO as the preferred remedial alternative. This proposal was
approved via e-mail. The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have
reviewed the Evaluation of Remedial Alternatives report dated May 17, 2019. LiRo considers that
S-ISCO (Surfactant Enhanced In-Situ Chemical Oxidation) technology is most likely to provide a
relatively low cost effective, accelerated remediation of petroleum-related VOCs at the site. They
recommended I-ISCO as the preferred remedial alternative. I approve this proposal. A design of the
proposed injections should be submitted to DEC. USEPA must approve the proposed injections.
Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation

alexander.zhitomirsky@dec.ny.gov 10-15-2019 Reviewed a report for the period of September 2018
through November 2018. Soil data collected March 2018 in the sidewalk area, along Gold Street,
determined that the upper northern portion of the sidewalk area is not impacted by petroleum
contamination. However, contaminated soils are present to the south along Gold Street sidewalk.
Five wells reported increases in total VOC concentrations and seven wells reported decreases in
total VOC concentrations. The highest concentration was measured in PD-BW-06 at 9,116 ppb. Monthly

84 PRECINCT NYPD -DDC (Continued) **S104951147**

EFR is conducted. No free-phase product was measured during EFR events. ORC socks will be changed.
AZ 2-21-2020 The following e-amil was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed
the revised NYPD 84th Precinct/FDNY Engine Company 207 Work Plan received on February 13, 2020. I
concur with this plan. The Responsible Party and its contractors are solely responsible for the
safe execution of all invasive work performed at the site, and in particular, are responsible for
identifying subsurface utilities and safeguarding the structural integrity of any excavations,
buildings, utilities, and other structures both on- and off-site that may be adversely affected by
the work. The Responsible Party and its contractors must obtain any local, state or federal permits
or approvals that may be required to perform the work necessary to address this spill. Furthermore,
the Responsible Party and its contractors are solely responsible for the implementation of all
appropriate health and safety measures during the performance of this work. Sincerely, Alex
Zhitomirsky 1-25-2021 DEC reviewed a monitoring report dated November 25, 2020. Routine groundwater
sampling was completed in July 2020. According to the report, of the 10 groundwater samples
submitted for laboratory analysis from the 84th Precinct facility, VOC concentrations above AWQSGVs
were reported in eight samples. These include wells, 84MW-02, 84MW-03, 84MW-06, EW-12, MW-16,
MW-17, MW-18, and MW-20R. The total VOC concentrations in these eight samples from the 84th
Precinct ranged from 5 micrograms per liter (?g/L) in well MW-16 to 1,137 ?g/L in well EW-12. The
total VOC concentrations reported were within historical ranges. Of the 10 groundwater samples
collected from 84th Precinct wells, four wells reported increases in total VOC concentrations, five
wells reported decreases in total VOC concentrations, and one well reported no change (non-detect)
when compared to the April 2020 or most recent sampling event. Wells within the injection
(driveway/alleyway) area have historically shown variability in VOC concentrations. Wells located
along Gold Street, MW-16 and MW-18 (on-site) and wells MW-15 and MW-17 (off-site) have also shown
variability in VOC concentrations. During this monitoring period, on-site well MW-16 and well MW-18
reported a decrease and an increase, respectively, in total VOC concentrations compared to the
April 2020 sampling data. In summary, petroleum impacts at the 84th Precinct facility are
concentrated in the alleyway/driveway and in the Gold Street sidewalk, alongside the precinct
facility. The ORC socks were replaced in several wells in July 2020. EFR was performed during this
monitoring period. Due to contractual limitations, completion of

84 PRECINCT NYPD -DDC (Continued) **S104951147**

approved S-ISCO injection work
plan has been postponed until the first quarter of 2021. AZ 3-18-2021
Reviewed a report dated
January 27, 2020. ORC socks are utilized in the following wells:MW-16,
MW-17, MW-18, MW-20R,
84MW-02, 84MW-03, 84MW-06, PD-BW-05, PD-BW-06, EW-12.Routine
groundwater sampling was completed in
September 2020.Groundwater samples from the 84th Precinct parcel along
the
driveway/alleyway/sidewalk, reported dissolved-phase VOC
concentrations greater than NYSDEC
standards in wells 84MW-02, 84MW-03, 84MW-06, EW-12, MW-16, MW-17,
MW-18, MW-20R, and PD-BW-06.
Dissolved-phase concentrations at the site have shown high degrees of
variability. In summary,
petroleum impacts at the 84th Precinct facility are concentrated in
the alleyway/driveway and in
the Gold Street sidewalk, alongside the precinct facility.LiRo has
submitted a work plan and NYSDEC
has approved the use of Surfactant Enhanced In-Situ Chemical Oxidation
(S-ISCO) at the site. In
September 2020, LiRo was informed by NYCDCC of revisions to the FY2021
budget (covering period of
July 2020 through June 2021). As a result, EFR at the site has been
reduced to quarterly
(free-phase product is not present) and only one round of S-ISCO
injections will be completed in
the spring of 2021. The highest total VOC concentrations were reported
at 8,871 ppb. AZ 8-11-2021
Reviewed a report dated April 30, 2021.During the current monitoring
period (December 2020 through
February 2021), the following activities were performed: Routine
groundwater gauging and sampling
was completed December 1-3, 2020. EFR was completed on select wells on
January 21, 2021. Of the 11
groundwater samples submitted for laboratory analysis from the 84th
Precinct facility, VOC
concentrations above AWQSGVs were reported in seven samples. These
include wells 84MW-03, EW-12,
MW-16, MW-17, MW-18, MW-20R, and PD-BW-06. The total VOC
concentrations in these seven samples from
the 84th Precinct ranged from 6 micrograms per liter (?g/L) in well
MW-16 to 4,961 ppb in well
PD-BW-06. The total VOC concentrations reported were within historical
ranges. Of the 11
groundwater samples collected from 84th Precinct wells, nine wells
reported increases in total VOC
concentrations and two wells reported decreases in total VOC
concentrations when compared to the
previous sampling event (September 2020) or most recent sampling
event. AZ 12-15-2021 Reviewed a
report dated August 16, 2021 for the period of March 2021 through May
2021.Of the 12 groundwater
samples submitted for laboratory analysis from the 84th Precinct
facility, VOC concentrations above
AWQSGVs were reported in eight samples. These eight wells are:
84MW-02, 84MW- 03, 84MW-06, EW-12,

84 PRECINCT NYPD -DDC (Continued) **S104951147**

MW-18, MW-20R, PD-BW-05, and PD-BW-06. The total VOC concentrations in these eight samples from the
84th Precinct ranged from 37 micrograms per liter (ppb) in well
PD-BW-05 to 6,060 ppb in well
PD-BW-06. The total VOC concentrations reported for all wells sampled were within historical
ranges. Of the 12 groundwater samples collected from 84th Precinct wells, five wells reported
increases in total VOC concentrations, six wells reported decreases in total VOC concentrations,
and one well reported no change when compared to the previous sampling event (December 2020). AZ
4-7-2022 Reviewed a report dated December 1, 2021, for the period of June 2021 through August 2021.
Of the 12 groundwater samples submitted for laboratory analysis from the 84th Precinct facility,
VOC concentrations above AWQSGVs were reported in ten samples. These ten wells are: 84MW-02, 84MW-
03, 84MW-06, EW-12, MW-15, MW-16, MW-18, MW-20R, PD-BW-05, and PD-BW-06. The total VOC
concentrations in these ten samples from the 84th Precinct ranged from 8 micrograms per liter (ppb)
in well MW-16 to 3,891 ppb in well PD-BW-06. Of the 12 groundwater samples collected from 84th
Precinct wells, ten wells reported increases in total VOC concentrations, and two wells reported
decreases in total VOC concentrations when compared to the previous sampling event (March 2021) or
most recent sampling event. Wells within the injection (driveway/alleyway) area have historically
shown variability in VOC concentrations. Wells located along Gold Street, MW-16 and MW-18 (on-site)
and wells MW-15 and MW-17 (off-site) have also shown variability in VOC concentrations. During this
monitoring period, both wells (MW-16 and MW-18) reported VOCs at concentrations above AWQSGVs. Both
wells reported an increase in total VOC concentrations compared to the March 2021 sampling data.
The VOC concentrations in off-site well MW-15, reported one VOC (1,2,4-Trimethylbenzene) at
concentrations above its respective guidance value and MW-17 reported no VOCs at concentrations
above AWQSGVs. Historically, VOC concentrations in off-site wells MW-15 and MW-17 have shown high
variability. LiRo will continued use of ORC socks. LiRo will complete of post S-ISCO soil sampling
to evaluate the effectiveness of S-ISCO injections on soil conditions (estimated 2Q2022). AZ
12-16-2022 Reviewed a report for the period of March 2022 through May 2022. Groundwater sampling
was completed for this monitoring period on March 14, 2022, and March 16, 2022.Of the ten
groundwater samples submitted for laboratory analysis from the 84th Precinct facility, VOC
concentrations above AWQSGVs were reported in seven wells. These seven wells include: 84MW-02,
84MW-03, 84MW-06, EW-12, MW-17, MW-18, and MW-20R. The total VOC

84 PRECINCT NYPD -DDC (Continued) **S104951147**

concentrations in these seven
samples from the 84th Precinct ranged from 222 micrograms per liter (g/L) in well 84MW-03 to 1,613
g/L in well MW-20R. Of the ten groundwater samples collected from 84th Precinct wells, six wells
reported decreases in total VOC concentrations, and four wells reported increases in total VOC
concentrations when compared to the previous sampling event (January 2022) or most recent sampling
event. Wells within the injection (driveway/alleyway) area have historically shown variability in
VOC concentrations. ORC socks are utilized in the following wells: 84th Precinct: MW-16, MW-17,
MW-18, 84MW-02, 84MW-03, PD-BW-06, PD-BW-05, EW-12. AZ 7-20-2023 Reviewed a report for the period
of June 2022 through September 2022. Soil borings advanced in 2022 (post S-ISCO injections),
reported (with the exception of a few soil samples) decreases in total VOC concentrations within
the alleyway. Reductions in specific depth intervals were noted in LBR-31, LBR-33, LBR-34, LBR-35,
LBR-37, LBR-38, LBR-39, LBR-40, and LBR-41.Based on laboratory data and drilling observations,
soils within the alleyway with petroleum contamination were LBR-35 and LBR-36, in the western
portion of alleyway at depths of 26 to 35 ft. bgs and to borings LBR-40 and LBR-41 at depths of 28
to 35 ft. bgs in the eastern portion of the alleyway. Reductions in VOC concentrations were also
reported in borings completed along the Gold Street sidewalk in LBR-31, LBR-33 and LBR-34. However,
based on laboratory data and drilling observations, VOC impacted soils within the Gold Street
sidewalk remained present in LBR-31, LBR-33 and LBR-34 at shallower depths to north (LBR-31) at 20
to 23 ft. bgs. to 24 to 28 ft. bgs in LBR-33 and 24 to 34 ft. bgs in LBR-34. The S-ISCO injections
were completed within the Gold Street sidewalk area and the alleyway at depths of 25 to 30 ft. bgs.
The 2022 soil data indicates that reductions in VOC concentrations were noted in soil, however,
petroleum impacts remain with some concentrations outside the injection depth range. LiRo will
continue use of ORC socks in wells. AZ 9-13-2023 Reviewed a report for the period of October 2022
through December 2022.Routine groundwater sampling was completed in November/December 2022.
Groundwater samples from the 84th Precinct parcel along the driveway/alleyway/sidewalk, reported
dissolved-phase VOC concentrations greater than NYSDEC standards in several wells and include
84MW-02, 84MW-03, 84MW-06, EW-12, MW-18, MW-20R, and PD-BW-06. Dissolved-phase concentrations at
the Site have shown high degrees of variability. ORC socks are utilized in wells MW-16, MW-17,
MW-18, MW-20R, 84MW-02, 84MW-03, PD-BW-05, PDBW- 06, EW-12. Of the eleven groundwater samples

84 PRECINCT NYPD -DDC (Continued) **S104951147**

submitted for laboratory analysis from the 84th Precinct facility, VOC concentrations above AWQSGVs were reported in seven wells. These seven wells include: 84MW-02, 84MW-03, 84MW-06, EW-12, MW-18, MW-20R and PD-BW-06. The total VOC concentrations in these seven samples from the 84th Precinct ranged from 273 micrograms per liter (ppb) in well 84MW-03 to 4,398 ppb in well PD-BW-06. AZ 11-2-2023 Reviewed a report for the period of January 2023 through March 2023. Routine groundwater sampling was completed in March 2023. Groundwater samples from the 84th Precinct parcel along the driveway/alleyway/sidewalk, reported dissolved-phase VOC concentrations greater than NYSDEC standards in several wells and include 84MW-02, 84MW-03, 84MW-06, EW-12, MW-16R, MW-18, MW-20R, and PD-BW-06. Dissolved-phase concentrations at the Site have shown high degrees of variability. During this monitoring period, a total of eight former MPE system wells (VW-02, VW-04, VW-05, EW-07, 84VW-03, 84VW-04, 84VW-05, and 84VW-06), and two damaged wells (MW-10 and MW-16) were decommissioned. Petroleum impacts (soil and groundwater) at the 84th Precinct facility are concentrated in the alleyway/driveway and in the Gold Street sidewalk, alongside the precinct facility. AZ 1-17-2024 Reviewed a report for the period of April 2023 through June 2023. Of the eleven groundwater samples submitted for laboratory analysis from the 84th Precinct facility, VOC concentrations above AWQSGVs were reported in eight wells. These eight wells include: 84MW-02, 84MW-03, 84MW-06, EW-12, MW-16R, MW-18, MW-20R and PD-BW-06. The total VOC concentrations in these eight samples from the 84th Precinct ranged from 36 micrograms per liter (?g/L) in well 84MW-02 to 7,703 ?g/L in well MW-16R. ORC socks are or historically have been utilized in the following wells: MW-16 (well decommissioned in February 2023), MW-17, MW-18, 84MW-02, 84MW- 03, PD-BW-05, PD-BW-06, EW-12, MW-20R (removed). Petroleum impacts (groundwater) remain at the Engine Company 207 facility mainly within the apparatus floor and monitoring wells MW-A and EW-05. AZ 3-13-24 Reviewed a report for the period of July 2023 through September 2023.ORC socks are or historically have been utilized in the following wells: MW-16 (well decommissioned in February 2023), MW-16R, MW-17, MW-18, 84MW-02, 84MW-03, 84MW-06, PD-BW-05, PD-BW-06, EW-12, MW-20R.Dissolved-phase concentrations at the Site have shown high degrees of variability. During this monitoring period, total VOC concentrations in these wells ranged from 0.22 ug/L (MW-15) to 1,683 ug/L (MW-16R). AZ 8-19-24 Reviewed a Monitoring Report for October - December 2023. During this monitoring period, total VOC concentrations in these wells ranged from 37 ug/L (MW-02) to 2,039

84 PRECINCT NYPD -DDC (Continued) **S104951147**

ug/L (MW-16R). AZ 10-1-2024
Reviewed a Monitoring Report for January 2024 through March 2024. Of the twelve groundwater samples
submitted for laboratory analysis from the 84th Precinct facility, VOC concentrations above AWQSGVs
were reported in eight wells. These eight wells include: 84MW-02, 84MW-03, 84MW-06, EW-12, MW-16R,
MW-18, MW-20R and PD-BW-06. The total VOC concentrations in these eight samples from the 84th
Precinct ranged from 34 micrograms per liter (ug/L) in well 84MW-06 to 6,867 ug/L in well MW-16R.
ORC socks are or historically have been utilized in the following wells: MW-16 (well decommissioned
in February 2023), MW-16R, MW-17, MW-18, 84MW- 02, 84MW-03, 84MW-06, PD-BW-05 (previously removed),
PD-BW-06, EW-12, MW-20R (removed October 2023). AZ 12-23-2024 Reviewed a Monitoring Report for
April 2024 through June 2024. Of the eleven groundwater samples submitted for laboratory analysis
from the 84th Precinct facility, VOC concentrations above AWQSGVs were reported in seven wells.
These seven wells include: 84MW-02, 84MW-03, EW-12, MW-16R, MW-18, MW-20R, and PD-BW-06. The total
VOC concentrations in these seven samples from the 84th Precinct ranged from 208 micrograms per
liter (ug/L) in well MW-20R to 1,696. ORC socks are or historically have been utilized in the
following wells: MW-16 (well decommissioned in February 2023), MW-16R, MW-17, MW-18, 84MW-02,
84MW-03, 84MW-06, PD-BW-05 (previously removed), PD-BW-06, EW-12, MW-20R (removed October 2023)
ug/L in well MW-18 (see Figure 7A). AZ 4-3-2025 Reviewed a Monitoring Report for July 2024 through
September 2024. Of the ten groundwater samples submitted for laboratory analysis from the 84th
Precinct facility, VOC concentrations above AWQSGVs were reported in six wells. These six wells
include: 84MW-02, 84MW-03, EW-12, MW-16R, MW-18, and MW-20R. The total VOC concentrations in these
six samples from the 84th Precinct ranged from 18 micrograms per liter (ug/L) in well 84MW-02 to
1,439 ug/L in well MW-16R .ORC socks are or historically have been utilized in the following wells:
MW-16 (well decommissioned in February 2023), MW-16R, MW-17, MW-18, 84MW- 02, 84MW-03, 84MW-06,
PD-BW-05 (previously removed), PD-BW-06, EW-12, MW-20R (removed October 2023). LiRo will continue
use of ORC socks in wells. ORC socks will be changed per manufacturer s recommendations. AZ

DEC Memo:	8-28-2005 Reviewed a Monitoring Report for June 2005. The report presented remedial system performance and groundwater monitoring data. Groundwater contaminant levels appear to be falling along the west side of Gold Street. In the report LiRo proposed to install ORC socks at wells MW-15, MW-17, 84MW-2 and 84MW-6. The Department concured with this proposal. AZ 2/9/2006 Reviewed a Monitoring Report received in November 2005. The system was down for 26 days in September due to clogged lines. Franklin has been directed to make necessary repairs to increase induced vacuum in the 84th Pct. driveway area. AZ 3/20/2006 Stuart Knoop (Langan Engineering) 212-479-5461 reported

84 PRECINCT NYPD -DDC (Continued) **S104951147**

that during their site investigation at the adjacent property 167 Johnson Street they found dissolved phase in groundwater on the north-western part of the property on Gold Street. BTEX and naphtalene were encountered at concentrations 2009 ppb total VOCs and 680 ppb total SVOCs . New spill was opened # 0514513. AZ 5/15/2006 Reviewed a Monitoring Report for October - December 2005. Recent growndwater analytical results showed total VOC concentrations up to 4,462 ppb in MW-6. The current sampling results showed increase in VOC levels in wells MW-17, 84MW-2 and 84MW-6 in the portion of 84 Precinct. AZ 12/01/2006 Reviewed a Monitoring Report for April - June 2006. Flow meter is brokentherefore the the system's efficiency in removing VOCs in gw is unknown. The MPE system needs rebalancing to ensure maximum vacuum and fluid extraction rates in EW-6, EW-8, EW-12, PD-BW-6, and PD-BW-2. In a telephone conversation with Brian Morissey I concurred with removing 84-MW-5 from gw the sampling program because VOCs and SVOCs were not detected for two consecutive monitoring events. The total VOC concentrations in MW-20 sharply increased. MW-2 has 10,450 ppb total VOCs. AZ 5-11-2007 Reviewed a Monitoring Report for July - September 2006 dated January 5, 2007. MPE system had an uptime of 9%. because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase floe extraction and vacuum at extraction wells EW-11,EW-12,PD-BW-02 and PD-BW-05. The MPE system needs adjustment. Roux recommended inspection of the water flow meter, removal of several monitoring wells from the sampling program, removal of SVOCs from the sample schedule, inclusion of several bioremediation parameters in the sampling program. E-mail was sent to DDC/Roux/Greyhawk: MPE system at this site had an uptime of 9% because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase flow extraction and vacuum at extraction wells EW-11, EW-12, PD-BW-02 and PD-BW-05. The MPE system needs adjustment. Al these tasks should be performed without delay.Roux recommended inspection of

84 PRECINCT NYPD -DDC (Continued) **S104951147**

the water flow meter,
removal of SVOCs from the sampling schedule and inclusion of several bioremediation parameters in
the sampling program. All these recommendations are approved. Sampling of wells MW-06 and 84MW-05
could be discontinued. AZ 7-23-2007 An e-mail was sent to DDC/Roux/Greyhawk: I have reviewed a
Monitoring Report for the above site for the period of October 2006 - March 2007 and dated May 24,
2007. Total VOC concentrations ranged at the site from non-detect to 6,458 ppb in 84MW-02. Total
VOC concentrations significantly increased in downgradient monitoring well MW-20 (from 601 ppb to
1777 ppb). The MPE system had an uptime of only 13%. Roux proposed that only seven extraction wells
should remain online. DEC concurs with the following addition: extraction well EW-12 should also
remain online. Bioremediation program proposed by Roux should be implemented without delay. Roux
proposed removing six monitoring wells from the groundwater sampling program. DEC concurs. Roux
proposed removing SVOCs from the sampling program. DEC previously concurred to this proposal in an
e-mail dated 5-11-2007. AZ 3-25-2008 An e-mail was sent to Greyhawk/DDC/ROux/V.Brevdo: I have
reviewed a Monitoring Report for the above site for the period of April - September 2007 dated
December 21, 2007. Total VOC concentrations ranged at the site from non-detect to 5,712 ppb in
84MW-03. Total VOC concentrations significantly increased in monitoring wells 84MW-6 and MW-07/EW06
. The MPE system is offline. Roux proposed restart of the MPE system. MPE system restart should be
performed without delay. Bioremediation program proposed by Roux should be implemented without
delay. AZ 8-11-2008 An e-mail was sent to Roux/Greyhawk/DDC/V. Brevdo: I have reviewed report for
the above spill submitted on June 2, 2008. This spill was issued on March 29, 2001 when
concentrations of semi-volatile organic compounds (SVOCs) around a 10,000-gallon tank containing #2
fuel and 3,000-gallon tank containing diesel were found to exceed allowable regulatory guidelines.
The tanks are closed in place. Spill #9512589 at this site is currently being remediated by
Greyhawk/Roux Associates for gasoline contamination. The spill #0013663 will be incorporated into
investigation/remediation of spill#9512589. However, soil and groundwater testing should be
performed around the #2 fuel tank and the diesel tank prior to the closure of spill #9512589. An
electronic copy of the report dated June 2, 2008, should be submitted to DEC. The spill #0013663
was consolidated with spill #9512589. AZ

Remarks: A site assessment was performed on 10,000 gal UST on Mar 13, 2001. The analytical results show there is soil contamination.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	6/9/14: Mahat DEC Mahat contacted Mr. Kevin Brussee (Environmental Business @ 631.338.1749)inquiring more about the spill. He was away from his desk. A voice message was left requesting to call back the Department. 6/10/14: Mahat T/C : DEC Mahat received a call from Mr. Brussee supplying more information about the spill and its nature. A tank was discovered when water from the drill displaced it from its place. Contaminated soil and water has been pumped out. The tank was found 10 feet below the ground level and for the foundation of the new structure they will excavate 35 feet below the ground level regardless. Mr. Brussee will be on the site to dispose the contaminated soil with proper leveling to the facility. A daily report from the operation team is supplied to the Department. It is uploaded on D2 for reference. Point of contact on the site is Mr. Sunny Chang (347.993.9116). The Department is waiting on Laboratory Report for conformation points. 8/19/14: Mahat A site visit is schedule for 8/21/14. 4/22/16: Mahat File Review: DEC Mahat reviewed the spill file. Spill was reported as 10 gallon and it was all removed from the site. Excavation was performed to the clean end. Spill case will be closed on DEC Spill database administratively pending generated manifest.
Remarks:	water from drills spilled in to oil tank and forced oil in to ground. work site is 10 feet beloow ground.

DEC Memo:	09/08/16-Hiralkumar Patel. 2:53 PM:- spoke with Debbie. she mentioned that a 5,000 gal tank failed in wet portion. 2:56 PM:- left message for Ryan Brown (cell: 516-492-4628), property manager. 3:10 PM:- received call from Mr. Brown. site has one (1) 5,000 gal tank sitting on floor. due to tank test failure in wet portion of the tank, asked Mr. Brown to either confirm tank's integrity via an isolation test or empty it out immediately. he mentioned that GC Env. will do the job. 3:14 PM:- spoke with Greg Collins at GC Env. he mentioned that the tank test was conducted as part of routine PBS compliance. the tank is approx. 8 inches into the slab. Greg confirmed that there is no sign of oil on tank room floor or any petroleum odors in the building. he has scheduled an isolation test tomorrow morning. if tank fails the test, it will be pumped out immediately. Greg Collins GC Env. Ph. (516) 680-6348 DEC Omar responded. 9/9/2016: Rashad Responded to site yesterday 9/8. Inspected tank in secondary containment unit, there was no evidence of discharge and no odors were observed. 9:45am: Called Greg Collins, mail box was full, unable to leave voice message. 11:45am: Called Debbie Brown she said they are on site now and will give me an update after tests are completed. 9/12/2016: Rashad Called Debbie, tank passed tank only test, repairs were performed and the tank was retested and passed, she will be emailing me summary and tank results today. 9/13/2016: Rashad Received email from Debra Brown with 2 attachments they have been uploaded to D2. Closure report states that they performed isolation tests and that the tank passed the test. The initial leak was found coming from the gauge piping assembly. GCE replaced a bushing associated with the petro meter assembly, they re-pressurized and repaired, no other leaks were found. Also on September 9th GCE conducted a tank system test which passed. GCE is requesting closure of spill. Also additional document is passing tank system test. As per passing tank system test, report stating gauge and bushings were cause of leak and repairs were made, spill will be closed.
Remarks:	Failed Tank Test 5000 gallon tank.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	11/29/05: This spill transferred from J.Kolleeny to S.Kraszewski. 02/02/06: This spill transferred from S.Kraszewski to Q.Abidi. 04/04/06: This spill transferred from Q. Abidi to Koon Tang. 12/30/09: Spill transferred to J.kann and consolidated with 9912596. 3/10/11: J.Kann - Investigative work plan submitted on 3/3/11. 12/30/14: J.Kann - Work Plan approved, Site included in multi site stipulation executed on 10/14/14. SIR due 4/14/15 1/22/15: J.Kann - field work is ongoing. Modifications were made to the work plan based on field conditions. One viable well has been installed. Depth to gw is approximately 41 feet. Drew Pardus called and explained that there is no visual or PID impacts around the tank. He sent an email requesting that and requesting that just one more attempt be made at SB-4. The following email was sent to drew Pardus DPardus@PardusEnv.com 646-577-8280 Based on the diagram I have the following recommendation- Another soil boring should be advanced in the northeastern area of the tanks (in the vicinity of SB-2). Even if it is in the garbage area that we had discussed which is a few feet to the east. I

FARRAGUT HOUSES -NYCHA (Continued) **S102672303**

do not feel that that area has been investigated at all based on the relocation of borings and the
termination of SB-3 at 11-15 feet. Otherwise, I am fine with your recommendation. However, keep in
mind if laboratory results come back with elevated levels of contaminants, additional work will be
necessary. 3/12/15: J.kann - Received report on 3/2/15. Reviewed report. Concurred with the
recommendations of no further action given no contamination was detected as a part of the 2015
investigation (6 borings advanced, 6 soil samples analyzed, 2 wells installed and sampled). Spill
closure email sent to NYCHA today.

Remarks: DURING TANK REMOVAL OF A 25,000 GALLON TANK, CONTAMINATED SOIL WAS DISCOVERED. SOIL IS BEING STOCK PILED AND SAMPLED.

Capacity Gallons:	4000
Install Date:	10/01/1988
Date Tank Closed:	Not reported
Registered:	True
Tank Location:	Underground
Tank Type:	Equivalent technology
Material Code:	2712
Common Name of Substance:	Gasoline/Ethanol
Tightness Test Method:	21
Date Test:	10/27/2004
Next Test Date:	Not reported
Pipe Model:	Not reported
Modified By:	MJGRIFFI
Last Modified:	05/09/2022

Equipment Records:

C02 - Pipe Location - Underground/On-ground
F04 - Pipe External Protection - Fiberglass
L07 - Piping Leak Detection - Pressurized Piping Leak Detector
E04 - Piping Secondary Containment - Double walled UG
G04 - Tank Secondary Containment - Double-Walled (Underground)
J01 - Dispenser - Pressurized Dispenser
A00 - Tank Internal Protection - None
B04 - Tank External Protection - Fiberglass
D06 - Pipe Type - Fiberglass Reinforced Plastic (FRP)
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I02 - Overfill - High Level Alarm
I03 - Overfill - Automatic Shut-Off
K01 - Spill Prevention - Catch Basin

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
Registry ID: 110059791596

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and

MERIT OIL CORP (Continued) **1000263793**

local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. This site was listed in the Eckhardt subcommittee report as having had disposal from 1960-'79. An on-site inspection was carried out by DEC, Region 2 on April 29, 1980. The entire manufacturing buildiing is four stories high and there was a freight unloading area adjacent to the buildings and parking lot. Facility is bounded by Prospect Street and York Street. There appears to be no disposal ever practiced here.

Site Description: Location: The Front Street Holder Station site is comprised of one parcel of land located at #218 Front Street in the Vinegar Hill neighborhood of Brooklyn, Kings County. The site is approximately 1.13 acres in size, identified as Block 55, Lot 20, and is bordered by Front Street to the north, by Gold Street to the east, by York Street to the south, and by Bridge Street to the west. The current owner of the site property is Great Front Realty Corp. Site Features: The main site feature is a one-story building at #218 Front Street,

K - FRONT ST. STATION (Continued) **S109321185**

which is used as a warehouse. There are also three open-air buildings at the south side of the property with an address of 171 York Street. The three open-air buildings are actively used for lumber and building material storage. These buildings cover approximately 90 percent of the site. The rest of the property is covered with pavement and/or, locally, gravel, and used for loading and unloading of materials in the lumber yard. Current Zoning and Land Use: The site is currently zoned for C2-4/R6A, which allows for residential, commercial and light industrial uses. The actual use is commercial with an active warehouse, and lumber yard. The nearest residential area is directly adjacent to the site at the northwest and southeast site boundaries. Past Use of the Site: The site was owned and/or operated as a Manufactured Gas Plant (MGP) holder station by The Brooklyn Gas Light Company from approximately 1867 to November 1895. Following incorporation of The Brooklyn Union Gas Company in September 1895, the site was then owned and operated by this company until 1935. The station operated solely for gas distribution, and no gas production facilities were present at the site. The site consisted of two water-sealed gas holders, identified as Holder No. 4 and Holder No. 5. The first gas holder (No. 4) was completed circa 1867, and the second gas holder (No. 5) was constructed around 1890 in the southwestern portion of the site. Both holders and all associated MGP buildings were removed between 1935 and 1938. The property was used as a parking lot until it was sold in 1951. Subsequent use has been, and continues to be, as a lumberyard and warehouse. Site Geology and Hydrogeology: The site is underlain by varying amounts of fill which is underlain by natural deposits of fine to coarse sand with gravel and cobbles. Material within the holder tanks is primarily fill consisting of sands and gravel and varying amounts of brick, concrete, and wood. Regional groundwater occurs at a depth of approximately 40 feet below grade with flow to the north towards the East River. Perched groundwater was encountered within the Holder No. 5 tank, and is not hydraulically connected to the regional groundwater.

Env Problem: Based upon investigations conducted to date, which included sampling of soil and groundwater for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOC), and inorganics (metals and cyanide), the primary contaminants of concern are benzene, toluene, ethylbenzene and xylene (together known as BTEX), 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene; polycyclic aromatic hydrocarbons (PAHs); and inorganics. Soil - The subsurface soil on-site exceeded the unrestricted soil cleanup objectives (SCOs) for petroleum related VOCs, metals and SVOCs only inside the holder tanks (See Figure 3). However, sampling of subsurface soil was limited due to inability to access much of the property with a drill rig, and a source area of higher contaminant concentrations may be present beneath the buildings. The soil within the holder tanks had concentrations of naphthalene with a maximum of 280 parts per million (ppm), and xylene with a maximum of 120 ppm. (See Figure 4, soil which exceeds restricted residential SCOs, and Figure 5, soil which exceeds commercial SCOs). There were no detections of chlorinated solvents or total cyanide above unrestricted SCOs in soils either on- or off-site. The PAHs which exceeded unrestricted SCOs were benz(a)anthracene (maximum concentration of 8.4 ppm), benzo(a)pyrene (maximum of 8.8 ppm), and benzo(b)fluoranthene (maximum of 8.2 ppm), chrysene (maximum of 9.1 ppm), all have an SCO of 1 ppm; dibenz(a,h)anthracene (SCO of 0.33 ppm) had a maximum concentration

K - FRONT ST. STATION (Continued) **S109321185**

of 1.9 ppm; and indeno(1,2,3-cd)pyrene (SCO of 0.5 ppm) had a maximum concentration of 6.7 ppm. Adjacent to the site, the soils only slightly exceeded the unrestricted SCOs, which is likely more indicative of historic, urban fill. The only inorganics of concern in subsurface soils to exceed unrestricted SCOs were lead (SCO of 63 ppm) at a maximum concentration of 926 ppm, and mercury (SCO of 0.18 ppm) with a maximum of 4.0 ppm. Groundwater - Samples collected from monitoring wells on-site (water contained inside the Holder No. 5 tank) exceeded groundwater quality standards (GWQS) for benzene at 210 parts per billion (ppb) with a standard of 1 ppb, toluene at 55 ppb (standard of 5 ppb), ethylbenzene at 110 ppb (standard of 5 ppb), xylenes at 210 ppb (standard of 5 ppb), naphthalene at 70 ppb (standard 10 ppb), 1,2,4-trimethylbenzene at 6 ppb (standard of 5 ppb), isopropylbenzene at 10 ppb (standard of 5 ppb), five PAHs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene; all with an standard of 0.002 ppb) ranging from ND to 1.8 ppb, cyanide at a 287 ppb (standard of 200 ppb), and three metals consisting of arsenic at 38 ppb (standard of 25 ppb), chromium at 130 ppb (standard of 50 ppb), and lead at 5,210 ppb (standard of 25 ppb). The groundwater sampled from one of four off-site monitoring wells, only, contained chlorinated VOCs (1,2-dichloroethene, tetrachloroethene (PCE), trichloroethene (TCE)) and naphthalene exceeding GWQS. (See Figure 6, Groundwater Exceedances). It should be noted that the chlorinated solvents were not used during the holder station operations and are not considered related to the former holder station operations.

Health Problem: Persons who enter the site could contact contaminants in the soil by digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by the groundwater. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion within the on-site buildings. Access to conduct the recommended sampling within the on-site structures has been impeded due to existing infrastructure and operating businesses. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

City,State,Zip: BROOKLYN, NY 11201
Region: 2
Class: Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Swis Code: 2401
Town: New York City
Disp Start: Not reported
Disp Term: Not reported
Acres: 1.13
Fuse: Restricted-Residential
Description: Location: The Front Street Holder Station site is comprised of one parcel of land located at #218 Front Street in the Vinegar Hill neighborhood of Brooklyn, Kings County. The site is approximately 1.13 acres in size, identified as Block 55, Lot 20, and is bordered by Front Street to the north, by Gold Street to the east, by York Street to the south, and by Bridge Street to the west. The current owner of the site property is Great Front Realty Corp. Site Features: The main site feature is a one-story building at #218 Front Street, which is used as a warehouse. There are also three open-air buildings at the south side of the property with an address of 171 York Street. The three open-air buildings are actively used for lumber and building material storage. These buildings cover approximately 90 percent of the site. The rest of the property is covered with pavement and/or, locally, gravel, and used for loading and unloading of materials in the lumber yard. Current Zoning and Land Use: The site is currently zoned for C2-4/R6A, which allows for residential, commercial and light industrial uses. The actual use is commercial with an active warehouse, and lumber yard. The nearest residential area is directly adjacent to the site at the northwest and southeast site boundaries. Past Use of the Site: The site was owned and/or operated as a Manufactured Gas Plant (MGP) holder station by The Brooklyn Gas Light Company from approximately 1867 to November 1895. Following incorporation of The Brooklyn Union Gas Company in September 1895, the site was then owned and operated by this company until 1935. The station operated solely for gas distribution, and no gas production facilities were present at the site. The site consisted of two water-sealed gas holders, identified as Holder No. 4 and Holder No. 5. The first gas holder (No. 4) was completed circa 1867, and the second gas holder (No. 5) was constructed around 1890 in the southwestern portion of the site. Both holders and all associated MGP buildings were removed between 1935 and 1938. The property was used as a parking lot until it was sold in 1951. Subsequent use has been, and continues to be, as a lumberyard and warehouse. Site Geology and Hydrogeology: The site is underlain by varying amounts of fill which is underlain by natural deposits of fine to coarse sand with gravel and cobbles. Material within the holder tanks is primarily fill consisting of sands and gravel and varying amounts of brick, concrete, and wood. Regional groundwater occurs at a depth of approximately 40 feet below grade with flow to the north towards the East River. Perched groundwater was encountered within the Holder No. 5 tank, and is not hydraulically connected to the regional groundwater.
Assess Env: Based upon investigations conducted to date, which included sampling

K - FRONT ST. STATION (Continued) **S109321185**

of soil and groundwater for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOC), and inorganics (metals and cyanide), the primary contaminants of concern are benzene, toluene, ethylbenzene and xylene (together known as BTEX), 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene; polycyclic aromatic hydrocarbons (PAHs); and inorganics. Soil - The subsurface soil on-site exceeded the unrestricted soil cleanup objectives (SCOs) for petroleum related VOCs, metals and SVOCs only inside the holder tanks (See Figure 3). However, sampling of subsurface soil was limited due to inability to access much of the property with a drill rig, and a source area of higher contaminant concentrations may be present beneath the buildings. The soil within the holder tanks had concentrations of naphthalene with a maximum of 280 parts per million (ppm), and xylene with a maximum of 120 ppm. (See Figure 4, soil which exceeds restricted residential SCOs, and Figure 5, soil which exceeds commercial SCOs). There were no detections of chlorinated solvents or total cyanide above unrestricted SCOs in soils either on- or off-site. The PAHs which exceeded unrestricted SCOs were benz(a)anthracene (maximum concentration of 8.4 ppm), benzo(a)pyrene (maximum of 8.8 ppm), and benzo(b)fluoranthene (maximum of 8.2 ppm), chrysene (maximum of 9.1 ppm), all have an SCO of 1 ppm; dibenz(a,h)anthracene (SCO of 0.33 ppm) had a maximum concentration of 1.9 ppm; and indeno(1,2,3-cd)pyrene (SCO of 0.5 ppm) had a maximum concentration of 6.7 ppm. Adjacent to the site, the soils only slightly exceeded the unrestricted SCOs, which is likely more indicative of historic, urban fill. The only inorganics of concern in subsurface soils to exceed unrestricted SCOs were lead (SCO of 63 ppm) at a maximum concentration of 926 ppm, and mercury (SCO of 0.18 ppm) with a maximum of 4.0 ppm. Groundwater - Samples collected from monitoring wells on-site (water contained inside the Holder No. 5 tank) exceeded groundwater quality standards (GWQS) for benzene at 210 parts per billion (ppb) with a standard of 1 ppb, toluene at 55 ppb (standard of 5 ppb), ethylbenzene at 110 ppb (standard of 5 ppb), xylenes at 210 ppb (standard of 5 ppb), naphthalene at 70 ppb (standard 10 ppb), 1,2,4-trimethylbenzene at 6 ppb (standard of 5 ppb), isopropylbenzene at 10 ppb (standard of 5 ppb), five PAHs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene; all with an standard of 0.002 ppb) ranging from ND to 1.8 ppb, cyanide at a 287 ppb (standard of 200 ppb), and three metals consisting of arsenic at 38 ppb (standard of 25 ppb), chromium at 130 ppb (standard of 50 ppb), and lead at 5,210 ppb (standard of 25 ppb). The groundwater sampled from one of four off-site monitoring wells, only, contained chlorinated VOCs (1,2-dichloroethene, tetrachloroethene (PCE), trichloroethene (TCE)) and naphthalene exceeding GWQS. (See Figure 6, Groundwater Exceedances). It should be noted that the chlorinated solvents were not used during the holder station operations and are not considered related to the former holder station operations.

Assess Doh: Persons who enter the site could contact contaminants in the soil by digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by the groundwater. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor

K - FRONT ST. STATION (Continued) **S109321185**

air due to soil vapor intrusion within the on-site buildings. Access to conduct the recommended sampling within the on-site structures has been impeded due to existing infrastructure and operating businesses. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Description:	This BCP site is +/- .76 acres, and is located at 166-180 Myrtle Avenue, City of New York, Borough of Brooklyn, Kings County. Historic uses of the property have been commercial in nature. Surrounding uses include residential apartment buildings, commercial office buildings, day care centers and retail stores. The site is occupied by a one-story brick building with a cellar. It is bounded by Myrtle Avenue to the north, a construction area to the east, Fair Street to the south, and Prince Street to the west. The BCP application was denied by letter dated 4/28/09.

Longitude:	-73.9094670
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 4/2/2002 Mark Califano from Galli Engineering called to find out status of spill closure. 631-271-9292 Reassigned from Sullivan to Sangesland. Site is a former gas station which failed a tank test in 1990. 4/11/2002 Sangesland ran a PBS for this site. File says 9 tanks had been removed in May 1994 and one waste oil tank remains. Sangesland called the facility operator (Pedro Mendez 718-628-7285) who said the tanks were not pulled, but filled with cement before he arrived at the property. Property owner is Mr. Barry (718-326-7265) Mr. Barry said the tanks were not pulled, but rather filled in place. Apparently the property is being sold and Mr. Barry would like this old spill closed out. PBS Application will need to be updated to identify that the status of the tanks is not Removed , but rather Abandoned in place 4/11/2002 Sangesland left a message with Joseph Martinez of Galli Engineering (734 Walt Whitman Rd. Suite 402A Melville, NY 11747) According to Mr. Barry, soil borings were drilled and tested. Review needs to confirm that soil samples were taken in appropriate locations and that samples were tested to EPA Method 8270 and 8021. Since this was a Tank Farm of several 550 gal UST's at least 1 ground water sample will also need to be run for VOC and SVOC's. 4/12/2002 Sangesland spoke with Mr.Martinez of Galli Engineering. Apparently a Phase I and Phase II report has been completed including soil borings. After a discussion of what was in the report, it was concluded that a well would be required and groundwater tested. Mr. Martinez will complete this work and incorportate the results into his report and resubmit. Sangesland also forwarded to Mr. Martinez a copy of Spill Closure Report Outline . 4/13/2002 Sangesland forwarded (fax) a request to identify the location/status of the waste oil 550 UST. Requested a soil boring tested to 8021, 8270 and RCRA Metals. 4/26/2002 Sangesland received a Sampling Investigation Work Plan from Galli Engineering which outlines 2 soil borings and 1 water sample - All as discussed above. Sangesland forwarded an OK back to Galli Engineering to go ahead with this work. 7/8/2002 Sangesland was on site for an additional round of soil borings and groundwater sampling. Specific boring and water sampling locations were selected on site with Galli. All samples appear clear. Galli will submit samples to the lab and will prepare a closure report. 8/15/2002 Sangesland reviewed a Spill Closure Report dated August 9, 2002. This report presents additional soil boring data from July 8 field work, results from 2 well samples (65'depth) and a section on the MTBE issue at the site. All of the soil results

58-02 FLUSHING AVE/QUEENS (Continued) **S105230168**

for the site are ND for VOC and SVOC. The groundwater samples were trace or ND for VOC and SVOC. MTBE was detected in both groundwater samples: (GW-7 = 1,106 ug/L) and (GW-8 = 2,543 ug/L). In the MTBE section of the report, Galli presented data to support their belief that the MTBE found was due to several documented MTBE releases within 1/2 mile upgradient of this site. Based on this analysis and the lack of any detection of MTBE, VOC or SVOC's in any of the soil samples above 65ft depth, the DEC is satisfied that this site is not causing any negative impact to the environment. Spill Closed

Remarks: (8) 550 GAL TANKS FAILED AN AIR PRESSURE TEST WITH AN UNDETERMINED LEAK RATE, UNKNOWN ACTION.

DEC Region:	2
DER Facility ID:	391124
Latitude:	40.6980901
Longitude:	-73.9751759
DEC Memo:	8/05/2015: Rashad Spill transferred from Sangesland to Rashad as per RSE. 8/18/2015: Rashad Caller remarks tank test failure. Retest and isolation test planned, pending approval 12-41a 15K AST failed on 6/16/10 DEC Piper spoke with Bob Urban, He stated they tested 2-14,500 AST systems and they failed. Tank #'s 10-41a, 11-41a. As per NYC building records 63 Flushing Ave 12-41A (Brooklyn Navy Yard) does not have an alternate address. According to PBS#2-602406, there are 20 tanks listed with 7 out of service (all 7 closed in 1999). The 13 tanks include 2 14,500 gallon #2 fuel oil aboveground contact with impervious barrier, 1 15,000 gallon #2 fuel oil tank aboveground contact with impervious barrier, 1 1,080 gallon diesel tank underground, 3 5,000 gallon diesel tanks aboveground on saddles, 3 100 gallon diesel tanks aboveground contact with impervious barrier, 1 1,500 gasoline/ethanol tank underground, 1 10,000 gallon #2 fuel oil underground tank, and 1 8,000 gallon #2 fuel oil tank aboveground on stilts. An additional PBS#2-254673 lists 7 active tanks, 4 25,000

BROOKLYN NAVY YARD TTF (Continued) **S110490705**

Remarks:	gallon diesel underground tanks as well as 2 2,500 gallon diesel aboveground in contact with impervious barrier. There also are 3 tanks which are listed as tank converted to non-regulated use. PBS#2-602567 also has various tanks for this site. There are approximately 50 other spill cases for this site however most of them are sewage overflows during large storm events (Red Hook water treatment plant). No documents found in D2. 8/19/2015: Rashad Email sent to Pro test: After reviewing the spill reports for 974 Saint Nicholas Ave, New York NY spill#1006576 dated 9/17/2010 and 63 Flushing Ave 12-41A, Brooklyn NY (Brooklyn Navy Yard) spill#1003000 dated 6/16/2010. I would like to request the following information for each site: Failed system test reports. Test results for supply/return and vent/fill lines Property owners information. 9/9/2015: Rashad Sent Email to Protest: I am following up on an email I sent to you on 8/19/2015 for Brooklyn Navy Yard, 63 Flushing Ave spill#1003000 dated 6/16/2010. I am looking for the most recent passing or failing tank tests for tanks 10-41A -14,500 gallon, 11-41A 14,500 gallon, and 12-41A 15,000 gallon (PBS#2-602406). Any documentation you could provide is greatly appreciated. Received email from Pro Test: I have attached the passing system tests for all three tanks from 2010. Let me know if you need anything else. Three documents were received and uploaded to D2. Tightness test report for tank 10-41A 14,500 gallon AST conducted on 8/18/2010 has passing tank and system test. Tightness test report for tank 11-41A 14,500 gallon AST conducted on 8/20/2010 has passing tank and system test. Tightness test report for tank 12-41A 15,000 gallon tank AST was conducted on 8/20/2010 has passing tank and system test. All piping is aboveground and all tanks are aboveground contact with impervious barrier. Due to passing tank tests and aboveground tanks as well as piping the spill will be closed. Closure letter uploaded to D2. tank test failure. Retest and isolation planned, pending approval 12-41a 15K AST failed on 6/16/10 DEC Piper spoke with Bob Urban, He stated they tested 2- 14,500 AST systems and they failed. Tank #'s 10-41a, 11-41a

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 9/24/03 There was a Ferric Chloride spill called in to the DEC Hotline by DEP James Daley at 8:37 AM on September 24,2003. Reportedly, the spill was caused by a tank failure. DEC Spill responder Michelle Tipple and Joseph Kudirka from the Water unit responded to this spill. Upon investigation, an 8000 gallon tank of Ferric Chloride had an internal failure and released some of it's contents to a secondary containment tank, this secondary tank released some of the Ferric Chloride into the containment area surrounding the secondary tank. The containment area surrounding the secondary tank had been modified with the installation of a wooden structure secured with steel bolts around the top of the containment. When the chemical hit the bolts they were dissolved, allowing a small amount,10-15 gal of Ferric Chloride beyond the containment areas. Soda Ash was applied to the Ferric Chloride as required by DEP protocol. Mats were placed on the drain inlets in the vicinity to reduce the possibility of the chemical reaching the water. Eagle Brook Pump and repair were in route to remove all product from the tanks and containment area, assess and repair the system. DEP Plant Superintendent Joseph Massaro will keep DEC updated. 9/25/03 Tipple followed up with James Daly- DEP safety. Eagle Brook worked until 4:30 this AM removing product and thoroughly cleaning the tanks and impacted area, all product removed from the site was carried by the eagle brook company's properly tagged tank trucks. Upon inspection of the cleaned system it was determined that the discharge line on the

SHERMAN ABRAM LABORATORIES (Continued) **U003075007**

bottom of the tank was compromised causing the release. The system repairs are scheduled to begin later today.
Remarks: ruptured tank caused materal to leak - attm to stop leak now - haz mat enroute - 10 to 15 gal on the ground -- over 1000 gal in the tank -- potential for a large spill

DEC Memo:	3/18/11-HRAHMED-Denish from ADT called. As per him, drive shaft of a vac truck was broken which fall off on hydraulic line of that truck, that caused about 40 gal of hydraulic oil release on asphalt. they put some speedy dry and cleaned it. No sewer or water ways were affected. Ask him to send some pictures. Spill happened on asphalt concrete and it was contained and cleaned. Pictures will be uploaded to eDocs as they are available. Spill closed.

DEC Memo:	11/22/2019 - Obligado - Desk Duty - Spill assigned to Charlie Post in Central Office as per Randall Austin. 11/22/2019 - C. Post - the Brooklyn Navy Yard was a VCP site that is currently under site management. C. Post is the project PM and the Department had approved the cover system breach and was aware of the dewatering. Groundwater removed from the excavation was containerized in a frac tank. A contractor accidentally allowed some water (approximately 3,000 gallons) to siphon back into the excavation. Laboratory analytical results indicated low-level concentrations of VOCs, SVOC and metals. No PCBs were detected. The spill was administratively closed 11/22/2019.
Remarks:	Under site management plan under DEC Charlie Post in Central. Water contained into frac tank that was re-introduced back into the ground.

City,State,Zip:	NEW YORK, NY 11201
Program:	BCP
Site Code:	456949
Acres:	1.800
HW Code:	C224155
SWIS:	2401
Town:	New York City
Record Added Date:	10/20/2011
Record Updated Date:	06/29/2012
Update By:	KALEWAND
Site Description:	Site Location: The subject property is located at 160-180 Myrtle Avenue and is identified in New York City Tax Maps as Block 2061, Lot 1. The subject property consists of a total land area of approximately 1.8 acres. The site is bounded by Myrtle Avenue to the north, a commercial/residential building to the east, commercial and residential buildings to the south and a parking garage to the west. The site is presently vacant land, which is utilized as on-grade parking. Two combined-sewer DEP easements (50-feet wide) traverse the site north to south. Site Features: An active NYCT subway tunnel, IRT lines N, Q, B and D, is located approximately 350 feet to the west of the site beneath Flatbush Avenue. Current Zoning: The site is zoned as an R7-1 residential district with a C2-2 commercial overlay. Both residential and commercial uses are allowed under this type of zoning. The New York City Department of Environmental Protection has assigned an E-124 designation to the Subject Site concerning noise and hazardous materials. Historical Use: Sanborn Maps indicate that the property was developed with commercial and residential properties as early as 1887. Former one-story retail buildings with single level basements were demolished in early-to-mid 2007. Site Geology/Hydrogeology: The site is currently paved; subsurface soil at the site consists primarily of urban fill to a depth of approximately 16 feet, with native soils beneath that depth. Native soils are expected to be somewhat stratified, containing beds of fine soils (silts and clays) with low rates of hydraulic conductivity and beds of coarse soils (sand and gravels) with high rates of hydraulic conductivity at greater depths. The surface elevation of the site is approximately 35 feet above mean sea level. The topography of the site is generally flat. Regional topography is generally flat, with a slight elevation drop to the west and to the north. According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map

THE GIOVANI (PROPOSED) (Continued) **S113916505**

for the City of New York (Panel 203 of 457, effective date September 5, 2007; FEMA Map # 3604970203F), the Site is located in a Flood Zone X - an area outside the 0.2 annual chance floodplain. The East River is located approximately 1 mile northwest of the Subject Site. The limited studies concluded that the general direction of surface and groundwater flow is northwesterly and hence any contaminants released from the Site have a limited potential to migrate towards the East River. Depth to groundwater at the Site is approximately 30 feet below ground surface (bgs). The BCP application was denied by letter dated June 29, 2012.

VCP:

Name:	BROOKLYN NAVY YARD INDUSTRIAL PARK
Address:	FLUSHING AVENUE & CUMBERLAND STREET
City,State,Zip:	BROOKLYN, NY 1205
Program Type:	VCP
Site Code:	58910
HW Code:	V00120
Site Class:	C
SWIS:	2401
Region:	2
Town:	New York City
Acres:	146.790
Date Record Added:	11/30/2000
Date Record Updated:	12/24/2024
Updated By:	DKMACNEA
Site Description:	Location: The Brooklyn Navy Yard Voluntary Cleanup Program site consists of 146.79 acres of the 353-acre Brooklyn Navy Yard Industrial Park. Site Features: The site is generally flat and bounded by the East River on the north, Flushing Avenue to the south, Kent Avenue to the east and Navy Street to the west. The main site features include piers surrounding large dry docks used for ship repair, many industrial and commercial use buildings, roadways and a movie studio and associated sound stages. Current Zoning and Land Use: The site is currently used as an industrial park and is zoned as M3-1. This zoning allows for heavy manufacturing, warehousing, office work and the making of films. The Navy Yard itself is an industrial/commercial area, while the property surrounding the Navy yard is mixed commercial and residential use. Past Use of the Site: The site was used as a ship building and repair facility from the 1800's to the mid-1900's. These activities included metal fabrication, painting and sand blasting, as well as various support activities including the maintenance of the electrical system. These functions resulted in the release of metals, petroleum products and PCBs. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) was created for the site-wide investigation in an effort to find discreet source areas throughout the BNY facility. OU2 was created in order to expedite the investigation at a portion of the site prior to building a new movie studio. OU 3 was created in order to expedite the investigation at a portion of the site that was to have a second studio built upon it. For administrative reasons, OU 3 was subsequently terminated, and the remedy was incorporated under the OU 1 remedy. All studies are now complete and the final remedy is in-place. Site Geology and Hydrogeology: Site soil is comprised of many feet of historic fill (e.g., soil mixed with coal ash and building rubble) that was placed in low-lying, marshy areas over a hundred years ago. Groundwater occurs at a depth of approximately four feet below ground surface, and it flows west/northwest towards the East River.

BROOKLYN NAVY YARD - NYC DEP (Continued) **1000446347**

Env Problem: Post-Remediation: All remedies have been implemented. The site remedy requires that the site be covered with materials suitable for commercial use. The site is controlled via an Environmental Easement and is now managed under a Site Management Plan. Prior to Remediation: The primary contaminants of concern at the facility were metal, semi-volatile organic compounds and PCBs, as detailed below. Nature and Extent of Contamination: The majority of the Brooklyn Navy Yard is underlain by historic fill, and soil and groundwater quality at the site is reflective of this. Much of the low to moderate-level metal and Semi-Volatile Organic Compound (SVOC) contamination identified in soil during site investigations is attributable to coal ash, cinders, asphalt and other fill materials in the upper soil layer (0 ft-20ft below ground surface), with concentrations of contaminants typically elevated above state Unrestricted, Residential, and Restricted Residential Use Cleanup Objectives, but generally near the state s Restricted Commercial Use Cleanup Objectives (see 6 NYCRR Part 375-6). The metals and SVOC compounds detected in site soil/fill appear to be bound through physical and chemical processes, limiting the potential for ground water impacts, as well as curtailing pathways to environmental receptors (i.e., groundwater and down gradient surface waters). Groundwater contamination with metals and SVOCs is present at levels that are generally reflective of the historic fill present at the facility, with only one well showing SVOC levels appreciably above standards, and that well (MW-04) is thought to be impacted by contamination emanating from the nearby former manufactured gas plant at the adjacent K-Nassau Works MGP site (Site ID No. 224019B). That site is being addressed under a separate investigation, and the impacts to groundwater will be assessed under the remedy for that site. Metals in excess of groundwater standards appears to be largely an artifact of the sampling technique (i.e., soil particles became entrained in the water sample), as opposed to a wide-spread plume of dissolved contamination. Soil vapors were assessed at the facility and while certain contaminants were detected, the levels were not considered to be indicative of a potential threat to indoor air. Twenty-three electrical sub-stations located within the Brooklyn Navy Yard study area were found to be contaminated with polychlorinated biphenyls (PCBs). Twenty of those areas have been either remedied or are being actively managed under the Site Management Plan and are slated for remedy when taken out of service. Three areas (Building 297, Building 274 and Building 77) originally within the VCP study were excluded from the final VCP remedy and are being considered for further action under consent order with the NYSDEC. Special Resources Impacted/Threatened: Sediments contained several metals and SVOCs above screening criteria, however, the aquatic ecological evaluation shows the benthic and finfish communities to be of moderate diversity and population size, consistent with other similar settings in the New York City area. The investigation concluded that the ecological resources at the Brooklyn Navy Yard (Wallabout Basin) have not been significantly impacted by site contamination.

Health Problem: People in the area around Brooklyn Navy Yard are not exposed to site contaminants in their drinking water since the area is served with public water. Any contamination that may remain in soil at the site following excavation and off-site disposal will be inaccessible since it will be under pavement, structures or one foot of clean soil over a demarcation layer. Data collected during investigations indicate that it is unlikely that people in the area of the site would be

Date Record Added:	03/05/2002
Date Record Updated:	03/22/2010
Updated By:	RXSCHICK
Site Description:	The site is the location of a former portable gas works used for pilot demonstration of gas manufacturing technology. It operated in the rear yard of 286 Water Street and fed a street lamp located in an adjacent house at 7 Cherry Street in the former Franklin Square. It was operated in early 1824 for an unknown length of time. The site is currently occupied by the Manhattan anchor tower of the Brooklyn Bridge. Con Ed submitted a Site Characterization Workplan for a records search to detemine if the Former MGP had been removed by the construction of the Manhattan tower of the Brooklyn bridge in September 2009 that was approved on September 29, 2009. The Site Characterization report was submitted in January 2010 and the recommendation for no further action approved by NYSDEC and NYSDOH on January 22,2010. The release and covenent not to sue letter was issued to Con Edison for this site on March 19, 2010.
Env Problem:	The Site Characterization Records Report which reveiewed available soil borings and other documentation from the time of the plants

CE - 286 WATER ST. SITE (Continued) **S109321180**

operation and the construction of teh Brooklyn Bridge was submitted by Con Ed in January 2010 and approved by a DER letter dated January 22, 2010. The SCR concluded that the plant was a small Apackage plant that began operation in April 1824 and ceased in February 1825, it is reported to have been located at two locations on the 286 Water Street property. The gas manufacturing activities performed at the site used pine or balsam resin to produce Arosin gas@ and the resulting rosin oil was prized for a number of industrial uses at the time and was collected for resale. Subsequent to the MGP operation the Manhattan Anchor Tower of the Brooklyn Bridge was constructed, covering all but a small portion of this 0.7 acre lot. Based upon a review of boring logs competed near the site during the design, and other records from the construction of the Brooklyn Bridge, there was no evidence of the MGP identified during the construction which resulted in an excavation to at least 22 to 23 feet below the ground surface. The report concluded that nothing remains of the site, therefore additional site characterization investigation was not required, and a no further action determination could be made.

Health Problem:	No evidence of manufactured gas plant waste was found at the site, therefore, no exposure to manufactured gas plant waste is expected.

CE - 286 WATER ST. SITE (Continued) **S109321180**

Updated By: Not reported

MGP:

Site ID:	Not reported
Name:	CE - 286 WATER ST. SITE
Address:	312 WATER STREET
City,State,Zip:	NEW YORK, NY 10038
Region:	2
Class:	Completed: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Swis Code:	3101
Town:	New York City
Disp Start:	Not reported
Disp Term:	Not reported
Acres:	0.7
Fuse:	Not Identified
Description:	The site is the location of a former portable gas works used for pilot demonstration of gas manufacturing technology. It operated in the rear yard of 286 Water Street and fed a street lamp located in an adjacent house at 7 Cherry Street in the former Franklin Square. It was operated in early 1824 for an unknown length of time. The site is currently occupied by the Manhattan anchor tower of the Brooklyn Bridge. Con Ed submitted a Site Characterization Workplan for a records search to detemine if the Former MGP had been removed by the construction of the Manhattan tower of the Brooklyn bridge in September 2009 that was approved on September 29, 2009. The Site Characterization report was submitted in January 2010 and the recommendation for no further action approved by NYSDEC and NYSDOH on January 22,2010. The release and covenent not to sue letter was issued to Con Edison for this site on March 19, 2010.
Assess Env:	The Site Characterization Records Report which reveiewed available soil borings and other documentation from the time of the plants operation and the construction of teh Brooklyn Bridge was submitted by Con Ed in January 2010 and approved by a DER letter dated January 22, 2010. The SCR concluded that the plant was a small Apackage plant that began operation in April 1824 and ceased in February 1825, it is reported to have been located at two locations on the 286 Water Street property. The gas manufacturing activities performed at the site used pine or balsam resin to produce Arosin gas@ and the resulting rosin oil was prized for a number of industrial uses at the time and was collected for resale. Subsequent to the MGP operation the Manhattan Anchor Tower of the Brooklyn Bridge was constructed, covering all but a small portion of this 0.7 acre lot. Based upon a review of boring logs competed near the site during the design, and other records from the construction of the Brooklyn Bridge, there was no evidence of the MGP identified during the construction which

CE - 286 WATER ST. SITE (Continued) **S109321180**

resulted in an excavation to at least 22 to 23 feet below the ground surface. The report concluded that nothing remains of the site, therefore additional site characterization investigation was not required, and a no further action determination could be made.

Assess Doh: No evidence of manufactured gas plant waste was found at the site, therefore, no exposure to manufactured gas plant waste is expected.

Site Description:	Site Location: The site is located at 101 Fleet Place in the Downtown Brooklyn neighborhood of Kings County and is designated as Block 2061, Lot 100 on the New York City Tax Map. The site is bounded to the north by a mixed use residential and commercial development followed by Myrtle Avenue, to the east by a parking lot and residential development, to the south by parking and a residential development followed by Willoughby Street, and to the west by Fleet Place. The Metropolitan Transit Authority (MTA) subway B, D, N and Q lines are located approximately 380 feet (ft) to the west below

LOT 100,TAXBLOCK 2061 (Continued) **S106703334**

Flatbush Avenue. Site Features: The 0.472 acre (approximately 20,575 square ft) site is an irregular shaped parcel. The site is under construction for a 21-story mixed-use commercial/residential building with affordable housing and a 13 ft cellar. The cellar level will be utilized as a parking garage, and the first floor will include recreational space, bicycle storage, commercial space, and some residential units. Current Zoning and Land Use: According to the New York City Planning Commission Zoning Map 16c, the site is located within a residential and commercial zoning district (R6 and C6 4 DB). The proposed development of this property is consistent with the current zoning. The site is located within an urban area of Downtown Brooklyn characterized by multi story institutional, commercial, and residential buildings. Past Land Use: The site was developed in the late 1880s as multiple lots with multiple residential use buildings and a church. By 1915, the church was replaced with more residential buildings, and by 1938 the site was vacant. By 1969 the site had been operating as a garage. Records for on site historic bulk petroleum storage (PBS No. 2 344176) included one 1,200 gallon #2 fuel oil underground storage tank (UST) and five 550-gallon gasoline USTs. All six USTs were closed and removed in March 1993. A spill of an unknown quantity of gasoline was also reported to the NYSDEC in June 1989 (Spill No. 8902455) due to a tank test failure and reported air pressure loss. The spill case was closed by NYSDEC in June 2004. The site began operating as the Duffield Children Center from 1993 up until early 2022. The former on-site one-story building was fully demolished in 2023. Site Geology and Hydrogeology: All historic urban fill would have been removed from the site during the 2023 remedial excavation. The new 13 ft building cellar is now underlain by up to 17 ft of clean imported stone. Any urban fill that may remain underneath this layer would consist of light to dark brown, medium to fine, silty sand with varying amounts of gravel, brick, concrete, coal, ash, glass, metal, ceramic, and asphalt. A native soil layer consisting of light brown to orange medium to fine silty sand, and sand with varying amounts of silt and gravel underlies the clean stone at up to 35 ft below grade surface (ft-bgs). During the April 2022 Remedial Investigation, intermittent clay lenses were also observed in the native soil layer along the southern portion of the site from 6.5 to 15 ft-bgs. Groundwater beneath the site was observed at approximately 34 ft-bgs and generally flows north-northwest towards the East River.

Env Problem:	Remediation at the site is complete. Prior to the remediation, the primary contaminants of concern were SVOCs and metals in soil, SVOCs in groundwater, and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for Track 1 Unrestricted use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination.

Waste Code: D022
Waste Description: Chloroform

Waste Code: D027
Waste Description: 1,4-Dichlorobenzene

Waste Code: D038
Waste Description: Pyridine

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And

CUNY COLLEGE OF TECHNOLOGY (Continued) **1000136828**

F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: P077
Waste Description: Benzenamine, 4-Nitro- (Or) P-Nitroaniline

Waste Code: P108
Waste Description: Strychnidin-10-One, & Salts (Or) Strychnine, & Salts

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U003
Waste Description: Acetonitrile (I,T)

Waste Code: U006
Waste Description: Acetyl Chloride (C,R,T)

Waste Code: U056
Waste Description: Benzene, Hexahydro- (I) (Or) Cyclohexane (I)

Waste Code: U072
Waste Description: Benzene, 1,4-Dichloro- (Or) P-Dichlorobenzene

Waste Code: U117
Waste Description: Ethane, 1,1'-Oxybis-(I) (Or) Ethyl Ether (I)

Waste Code: U138
Waste Description: Methane, Iodo- (Or) Methyl Iodide

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U165
Waste Description: Naphthalene

Waste Code: U196
Waste Description: Pyridine

Waste Code: U201
Waste Description: 1,3-Benzenediol (Or) Resorcinol

Waste Code: U213
Waste Description: Furan, Tetrahydro-(I) (Or) Tetrahydrofuran (I)

Hazardous Waste Summary:

Waste Code: D000

Waste Description: Not Defined

NEW YORK UNIVERSITY - TANDON SCHOOL OF ENGINEERING (Continued) **1000442411**

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	D004
Waste Description:	Arsenic
Waste Code:	D005
Waste Description:	Barium
Waste Code:	D006
Waste Description:	Cadmium
Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D008
Waste Description:	Lead
Waste Code:	D009
Waste Description:	Mercury
Waste Code:	D010
Waste Description:	Selenium
Waste Code:	D011
Waste Description:	Silver
Waste Code:	D018
Waste Description:	Benzene
Waste Code:	D019
Waste Description:	Carbon Tetrachloride
Waste Code:	D021
Waste Description:	Chlorobenzene
Waste Code:	D022
Waste Description:	Chloroform
Waste Code:	D027
Waste Description:	1,4-Dichlorobenzene
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	D036
Waste Description:	Nitrobenzene
Waste Code:	D038
Waste Description:	Pyridine

NEW YORK UNIVERSITY - TANDON SCHOOL OF ENGINEERING (Continued) **1000442411**

Waste Code: D040
Waste Description: Trichloroethylene

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: LABP
Waste Description: Lab Pack

Waste Code: P012
Waste Description: Arsenic Oxide As2o3 (Or) Arsenic Trioxide

Waste Code: P022
Waste Description: Carbon Disulfide

Waste Code: P028
Waste Description: Benzene, (Chloromethyl)- (Or) Benzyl Chloride

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: P048
Waste Description: 2,4-Dinitrophenol (Or) Phenol, 2,4-Dinitro-

Waste Code: P077
Waste Description: Benzenamine, 4-Nitro- (Or) P-Nitroaniline

Waste Code: P095

NEW YORK UNIVERSITY - TANDON SCHOOL OF ENGINEERING (Continued) **1000442411**

Waste Description: Carbonic Dichloride (Or) Phosgene

Waste Code: P098
Waste Description: Potassium Cyanide (Or) Potassium Cyanide K(Cn)

Waste Code: P105
Waste Description: Sodium Azide

Waste Code: P106
Waste Description: Sodium Cyanide (Or) Sodium Cyanide Na(Cn)

Waste Code: P108
Waste Description: Strychnidin-10-One, & Salts (Or) Strychnine, & Salts

Waste Code: U001
Waste Description: Acetaldehyde (I) (Or) Ethanal (I)

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U004
Waste Description: Acetophenone (Or) Ethanone, 1-Phenyl-

Waste Code: U006
Waste Description: Acetyl Chloride (C,R,T)

Waste Code: U007
Waste Description: 2-Propenamide (Or) Acrylamide

Waste Code: U008
Waste Description: 2-Propenoic Acid (I) (Or) Acrylic Acid (I)

Waste Code: U012
Waste Description: Aniline (I,T) (Or) Benzenamine (I,T)

Waste Code: U019
Waste Description: Benzene (I,T)

Waste Code: U031
Waste Description: 1-Butanol (I) (Or) N-Butyl Alcohol (I)

Waste Code: U044
Waste Description: Chloroform (Or) Methane, Trichloro-

Waste Code: U056
Waste Description: Benzene, Hexahydro- (I) (Or) Cyclohexane (I)

Waste Code: U080
Waste Description: Methane, Dichloro- (Or) Methylene Chloride

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U117
Waste Description: Ethane, 1,1'-Oxybis-(I) (Or) Ethyl Ether (I)

Waste Code: U122

NEW YORK UNIVERSITY - TANDON SCHOOL OF ENGINEERING (Continued) **1000442411**

Waste Description: Formaldehyde

Waste Code: U123
Waste Description: Formic Acid (C,T)

Waste Code: U134
Waste Description: Hydrofluoric Acid (C,T) (Or) Hydrogen Fluoride (C,T)

Waste Code: U138
Waste Description: Methane, Iodo- (Or) Methyl Iodide

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U170
Waste Description: P-Nitrophenol (I,T) (Or) Phenol, 4-Nitro-

Waste Code: U188
Waste Description: Phenol

Waste Code: U200
Waste Description: Reserpine (Or) Yohimban-16-Carboxylic Acid, 11,17-Dimethoxy-18-[(3,4,5-Trimethoxybenzoyl)Oxy]-, Methyl Ester, (3beta, 16beta, 17alpha, 18beta, 20alpha)-

Waste Code: U208
Waste Description: 1,1,1,2-Tetrachloroethane (Or) Ethane, 1,1,1,2-Tetrachloro-

Waste Code: U211
Waste Description: Carbon Tetrachloride (Or) Methane, Tetrachloro-

Waste Code: U213
Waste Description: Furan, Tetrahydro-(I) (Or) Tetrahydrofuran (I)

Waste Code: U219
Waste Description: Thiourea

Waste Code: U220
Waste Description: Benzene, Methyl- (Or) Toluene

Waste Code: U228
Waste Description: Ethene, Trichloro- (Or) Trichloroethylene

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

Waste Code: U328
Waste Description: Benzenamine, 2-Methyl- (Or) O-Toluidine

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 8/10/2001 - Tony Kloss from Impact Environmetal (office # 516-453-2790 cell phone 516-250-3187) Impact has been hired to remove two #4 oil tanks from sidewalk vaults on Jay St in front of PolyTech University. Impact did some geoprobes and found contamination consistant with #4 oil. They also opened up the vaults and found 6 of floating product. The plan is to excavate the site and remove the tanks (probably in September 2001) At that time they will try to over excavate and remove as much as possible. If end point samples remain high, they will need to propose a remediation. 8/20/2001 - Sangesland spoke with Tony Kloss. Samples came back, some were high. Mr.Kloss is putting together a map with results and will mail it to the DEC. He also reconfirmed that the tanks will be pulled in September. 5/9/2002 - Sangesland received a Tank Closure Report from Impact Environmental dated 3/11/2002. The report details the removal of two - 7,500 gal heating oil UST. All contaminated soil around the tanks was removed (447.13 tons). Post-excavation soil samples were all below TAGM - Soil Clean Up Objectives for VOC's and SVOC's A new 7,500 gal double walled tank was installed in the space in Feb 2002. A new Vedeer Root monitoring system was installed and the tank was pressure tested on Feb 6, 2002. All work was complete at this site and the spill case is closed.
Remarks:	caller reportng a spill at the jacob's building at above closing 2 tanks and believe spill is from that one tank 001 and tank 002 nys pbs#2-158232 no clean up and spill is subsurface

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

CON EDISON OTHER SPECIFY 00000 (Continued) **S102239729**

CONTAINED.TEST TRUCK WAS AT 55 GOLD STREET BKLYN WELDING SHOP FOR REPAIRS WHEN LEAK WAS
NOTICED.REPORT ENETERED BY E2MIS RHEIN #52639. 10-APR-1998 1130 HRS OS LUBRANO REPORTED THAT
TRANSPORTATION JUST ARRIVED ON LOCATION TO REPAIR AND MOVE THE VEHICLE. HE REPORTS THAT THE CLEANUP
HAS NOT BEEN DONE BECAUSE THE TRUCK HAS A LOW BODY AND THERE WILL BE NO ACCESS TO THE SPILL UNTIL
THE VEHICLE IS MOVED. IT IS NOT KNOWN WHY THE TRUCK WAS NOT REPAIRED AND MOVED EARLIER. OS LUBRANO
ALSO REPORTS THAT THE SUBSTANCE IS TRANSMISSION FLUID. THE INCIDENT TYPE WILL NOW BE CHANGED FROM
MOTOR OIL TO TRANSMISSION FLUID . CIG WILL BE NOTIFIED THAT THE CLEANUP WAS NOT COMPLETED WITHIN
TWO HOURS OF DISCOVERY. NOTE THAT THIS IS A LATE NOTIFICATION. OS LUBRANO WILL REPORT WHEN THE
CLEANUP IS COMPLETED. 1145 HRS CIG ROACH UPDATED. 1150 OS LUBRANO REPORTS THAT THE CLEANUP WAS
COMPLETED. THE LEAK ORIGINATED IN THE BREAK MNECHANISM. THE TRUCK ALSO HAD A DEAD BATTERY. THE LEAK
WAS STOPPED, THE VEH WAS MOVED AND THE SPILL WAS CLEANED UP.

Remarks: con ed truck was leaking in a con ed facility - repair and clean up
will be done today

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE sent TTF letter Sangesland spoke with Phil Fazin Crown Leak Det. (516-939-2959) One of 2 - 10,000 gal tanks on site leaked and failed a tank test. PBS records show the PBS expired 7/14/2002. TTF Ltr (with PBS expired note) sent to: Arco-Wentworth Management 3646 Nostrand Ave - 4th Flr Brooklyn, NY 11229 Attn: Martin Marks 7.16.04 tipple sent letter requesting documentation.////////////////////// 2/15/06: CBN Called Martin Marks (718) 332-0777 and left a message but haven't received anything back. 9/22/06 called A-1 Crown Leak re: tank failure. left info. they will get back to me. bf 8/17/12 Spill re-assigned to T. Demeo as per RSE. bf 1/3/13 AFrischeisen intern

APARTMENT BUILDING - TTF (Continued) **S106124004**

Revious TTF letter mailed Dec 13, 2012 was returned as undeliverable. Resent TTF letter to revised address and upped to eDocs. 8/1/14 TJD File review - TTF (wet/dry leak) reported by A1- Crown Leak Detection associated with (2) 10K UST's manifolded. A review of PBS documents reveal the registration expired on 7/14/02. Multiple calls to contacts listed on PBS registration were made - all contact information is out of date. DeMeo was able to obtain information for the current management company FS Residential Management and the current management agent Ms. Miriam Stolin (718.875.9225). Teleconference with Ms. Stolin reveal that property is a co-op comprised of (5)building for a total of 292 units. Ms. Stolin states she has managed the property since 2009 and was unaware of any open spill file associated with this site - she further states that in April 2014 the complex converted to natural gas from dual fuel and will no longer be using oil - they will be abandonning the UST in place. DeMeo requested of all documentation available concerning the tank system at this property. 8/12/14 TJD File review - duplicate PBS numbers found for this facility 2-279617 & 2-608923. Property has had multiple management agents since reported tank test failure - historical records are unavailable. Facilty was able to produce records (work orders and invoices) for work associated with the (2)10K UST's registered at this facilty. The contractor Petroleum Tank Cleaners isolated the tanks and performed tank only tests with passing results in February 2004, a failed cross-over line was identified and replaced in May 2004, followed by passing system test in June 2004. There is no mention of any contamination discovered during the replacement of the failed cross-over line by PTC. Another passing system test was performed in January 2012. As per information obtained during discussions with the current property manager the facility has switched to a natural gas in April 2014 and will no longer be using the (2)10K UST's which they plan to close in place ASAP. Based upon the documentation available - no further action is required at this time. Spill is administratively closed. Due to the multiple PBS numbers associated withthis property Spills (DeMeo). referred the PBS discrepancies to PBS unit (Zielinski) for any necessary follow-up. All available documentation has been uploaded to DECDOCS.

Remarks: gross failure, above ground tank. recommend tank cleaning and retest

Name:	85 JAY STREET (BROOKLYN), LLC
Address:	85 JAY STREET
City,State,Zip:	BROOKLYN, NY 11201
Program:	BCP
Site Code:	535137
Acres:	3.101
HW Code:	C224248
SWIS:	2401
Town:	New York City
Record Added Date:	10/31/2016
Record Updated Date:	04/03/2020
Update By:	JCGRATHW
Site Description:	Location: The 85 Jay Street (Brooklyn) LLC Site is a 3.101-acre site located in an urban area. The site is bounded to the north by Front Street, to the east by Bridge Street, to the south by York Street, and to the west by Jay Street. Site Features: The development consists of a 21-story building with ground floor retail and commercial space, and four upper residential sectors. The lower level cellar will include bike storage, residential and commercial storage, a dog spa, and building mechanical and service rooms. The lowest

85 JAY STREET (BROOKLYN), LLC (Continued) **S120706188**

level will be designated as parking, which will include ventilation in accordance with the New York City Department of Buildings (NYCDOB) code requirements. The entire footprint of the site is covered by a building, with some landscaping within an above-grade courtyard in the center of the residential sectors. Current Zoning and Land Use: The current zoning designation for the site is light manufacturing and residential and the site is in the Special Mixed Use District MX-2. The Special Mixed Use District was established to encourage investment in existing neighborhoods with mixed residential and industrial uses. The proposed use is consistent with the existing zoning for the site. The site is not an e-designated property. Past Use of the Site: Historic records indicate that the site was developed with industrial and manufacturing uses by at least 1887. The Bradley White Lead Company and/or Lenox Smelting occupied the site between 1887 and 1989. Additionally, an electrical substation occupied the western portion of the site from circa 1904 to 1950. A brewery, a paper goods company, and an electrical repair company also historically occupied the site. The buildings were subsequently demolished by 1996 and the site has since been used as a private parking lot and for construction materials storage. Site Geology and Hydrogeology: Due to the sloping elevation across the site, groundwater was encountered at depths ranging from approximately 24 to 40 feet below grade (bgs) on the western and eastern portions of the Site, respectively. Groundwater flow is in a WNW-direction beneath the site and surrounding area, toward the East River. The stratigraphy of the site, from the surface downward, generally consists of fill comprising sand, silt, gravel, cinders, concrete, and brick down to approximately 15 feet bgs, underlain by apparent native sand with varying amounts of gravel and silt up to the maximum boring termination depth of 40 feet bgs. Bedrock was not encountered during the investigation.

Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were heavy metals and polycyclic aromatic hydrocarbons (PAHs), located primarily in the top fifteen feet of soil with isolated exceedances of SCGs down to 30 feet below ground surface (bgs). Remedial actions have successfully achieved cleanup objectives for unrestricted use.
Health Problem:	Remedial actions are complete and have eliminated the potential for contact with site related contaminants.

Site Description: Location: The Plymouth Street Holder Station is comprised of one parcel of land located at 49 Gold Street in Brooklyn, New York, Kings County. Site Features: The site is currently used as a Phase Angle Electric Regulator station by Con Edison. The site is approximately 90% occupied by buildings and electrical equipment, with the balance of the site serving as asphalt parking areas. Current Zoning/Use: The site is currently active (regulator station) and is zoned for light manufacturing and commercial applications. The nearest residential area is less than 0.1 miles to the east. Past Use of the Site: Gas storage and distribution activities began on the site prior to 1887 and continued until approximately 1925. It is not known when the MGP structures were removed. The site remained vacant from 1938 until 1959, when the regulator station was built. Site Geology and Hydrogeology: The site geology consists of a historic fill layer, followed by a glacial deposit layer (sands and gravel), Gardiner's Clay unit, a coarse sand and gravel unit, a gravel, clay and silt unit, and finally a bedrock unit consisting of gneiss, schist and pegmatite. The depth to groundwater ranges from 7 to 17 feet below ground surface, and generally flows to the north.
Env Problem: Prior to Remediation: A Site Characterization is scheduled pending access. Site is location of the Con Edison Hudson Ave Generating Station.
Health Problem: The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

Site Description:	Location: The 220 Water St. Site is located at 220 Water St., Brooklyn, N.Y. The site is bounded by Front St., Bridge St., and Water St. on the south, east and north, respectively. A vacant lot and another building are immediately west of the site. Site Features: The entire site is covered by a five-story building. Current Zoning and Land Uses: The site is officially zoned M1-4/R7A by New York City's Department of Planning, which allows for light industrial uses as well as commercial and residential use. The on-site building accommodates restricted residential and commercial reuse. Past Use of the Site: The site has been the home of several industries and businesses, as well as several artist studios/residences. Over the last several years, all occupants have vacated the building. The site was formerly the location of Union White Lead Works until approximately 1904. This smelting operation is thought to be the source of lead found on-site. The building was demolished in the early 1900's and replaced by the structure that exists today. More current uses included a PVC products manufacturer. Site Geology and Hydrogeology: Site soils are characterized as sands and silts mixed with historic fill materials to a depth of 12 feet, and sand and gravel with some cobbles below that depth (maximum boring depth was 57 feet). Groundwater is approximately 25 - 35 feet below the ground surface at the site, and flow is predominately to the north.
Env Problem:	Prior to remediation, the primary concerns were high levels of lead in soil, as well as the potential for volatile organic compounds in groundwater to enter the building via soil vapor intrusion. The site has been remediated. A large quantity of highly impacted soil was removed, however, some lead remains in soil at the site above 'Unrestricted' levels. Groundwater is marginally contaminated with Volatile Organic Compounds from an off-site source. This Remaining Contamination is managed through Institutional Controls and Engineering Controls, allowing for the site's intended use as a 'Restricted Residential' property.
Health Problem:	Direct contact with the soil is unlikely because the site is covered with buildings and pavement. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Sub-slab depressurization systems (systems that

220 WATER STREET (Continued) **S110047046**

ventilate/remove the air beneath the building) have been installed to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings.

Site Code: 332140
Site Description: Location: The 220 Water St. Site is located at 220 Water St., Brooklyn, N.Y. The site is bounded by Front St., Bridge St., and Water St. on the south, east and north, respectively. A vacant lot and another building are immediately west of the site. Site Features: The entire site is covered by a five-story building. Current Zoning and Land Uses: The site is officially zoned M1-4/R7A by New York City's Department of Planning, which allows for light industrial uses as well as commercial and residential use. The on-site building accommodates restricted residential and commercial reuse. Past Use of the Site: The site has been the home of several industries and businesses, as well as several artist studios/residences. Over the last several years, all occupants have vacated the building. The site was formerly the location of Union White Lead Works until approximately 1904. This smelting operation is thought to be the source of lead found on-site. The building was demolished in the early 1900's and replaced by the structure that exists today. More current uses included a PVC products manufacturer. Site Geology and Hydrogeology: Site soils are characterized as sands and silts mixed with historic fill materials to a depth of 12 feet, and sand and gravel with some cobbles below that depth (maximum boring depth was 57 feet). Groundwater is approximately 25 - 35 feet below the ground surface at the site, and flow is predominately to the north.
Env Problem: Prior to remediation, the primary concerns were high levels of lead

220 WATER STREET (Continued) **S110047046**

in soil, as well as the potential for volatile organic compounds in groundwater to enter the building via soil vapor intrusion. The site has been remediated. A large quantity of highly impacted soil was removed, however, some lead remains in soil at the site above 'Unrestricted' levels. Groundwater is marginally contaminated with Volatile Organic Compounds from an off-site source. This Remaining Contamination is managed through Institutional Controls and Engineering Controls, allowing for the site's intended use as a 'Restricted Residential' property.

Health Problem: Direct contact with the soil is unlikely because the site is covered with buildings and pavement. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Sub-slab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings.
