last several years, all occupants have vacated the building. The site was formerly the location of Union White Lead Works until approximately 1904. This smelting operation is thought to be the source of lead found on-site. The building was demolished in the early 1900's and replaced by the structure that exists today. More current uses included a PVC products manufacturer. Site Geology and Hydrogeology: Site soils are characterized as sands and silts mixed with historic fill materials to a depth of 12 feet, and sand and gravel with some cobbles below that depth (maximum boring depth was 57 feet). Groundwater is approximately 25 - 35 feet below the ground surface at the site, and flow is predominately to the north.

Env Problem: Prior to remediation, the primary concerns were high levels of lead in soil, as well as the potential for volatile organic compounds in groundwater to enter the building via soil vapor intrusion. The site has been remediated. A large quantity of highly impacted soil was removed, however, some lead remains in soil at the site above 'Unrestricted' levels. Groundwater is marginally contaminated with Volatile Organic Compounds from an off-site source. This Remaining Contamination is managed through Institutional Controls and Engineering Controls, allowing for the site's intended use as a 'Restricted Residential' property.

Health Problem: Direct contact with the soil is unlikely because the site is covered with buildings and pavement. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Sub-slab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings.

DEC Memo:	11/2/05, Dyber: No response from owner. Referred to Region. Next Step: Perform state-funded investigation. 8/30/05, Dyber: Sent letter to owner. 8/9/05, Dyber: Did not receive reports. Left message for Gulum. Contact owner if no return call. 7/21/05: Al Gulum found a file with several reports. He will make copies and send them to me. 7/14/05: Spoke with Al Gulum. He will check his records. 9/7/06 - Austin - Assigned from Albany to Region 2 staff for review and closure - end 10/20/06 - Raphael Ketani. The spill case was opened due to the discovery of a buried 275 gal. tank and associated contaminated. The soil was excavated and the lead hot spot was also removed. Reports and correspondences regarding the excavation work are in the file. The present owners of the property are: 1 Carlton Associates Inc. The site location is block 02031 and lot 0016. I found a letter in the file dated 11/5/97 and written by Anthony Sigona, the previous Spills case worker for the project. The letter states at the end that the spill case will be closed. Based upon the reports and other documentation in the file, and the 11/5/97 letter, I am closing he spill case and setting the closure date as 11/5/97.

DEC Memo:	Cleanup is complete - Environmental Company will steam clean and epoxy paint soon Triumverate Environmental - Dan 718-274-3339 Alishia Overfilled the tank. Oil came out of the manhole and was contained within the vault. 5/12/2009 Sangesland reviewed a closure report prepared by Triumvirate Environmental. Report estimates that 80 to 100 gal of oil had spilled in the vault area. It was Triumverate's opinion that the tank had been overfilled based on the taining pattern on the sides of the tank. On Feb 10th Triumvirate returned to the site to pressure wash the tank vault floor/walls. After cleaning, staining was still evident, but was not treated further. See eDocs for Triumverate's report.
Remarks:	CALLER STATES THAT THERE MAY HAVE BEEN AN OVERFILL OF PRODUCT TO A TANK. PRODUCT IS CONTAINED TO THE VAULT. CLEAN UP IS PENDING. UNK AMOUNT.

DEC Memo:	11/16/10-Hiralkumar Patel. 10:09 AM:- left message for Mimi. 11/18/10-Hiralkumar Patel. 12:22 PM:- received email from Dave Yudelson (917-295-6449, dyudelson@aprlaw.com). Dave mentioned that no PID or odors found in soils. 2:45 PM:- spoke with Greg at ELM. Greg mentioned that during excavation

205 WATER STREET LLC (Continued) **1010328246**

for two 24- story tower construction, they found a 4,000 gal fuel oil UST. they found water and some product in tank, but no sign of any active leak. tank removed and collected five endpoint samples (four sidewalls and one bottom). Greg mentioned that there is an e-designation and they have SSDS in plan. asked Greg to send lab data, site map with sampling/tank location, color pics of excavation and soil description. also asked to send owner's contact info. 11/19/10-Hiralkumar Patel. received email from Mimi (at 6:12 PM on 11/18/10) including SVOC results. no contamination found in endpoint samples from east sidewall and bottom. SVOC contamination found in endpoint soil samples from north, south and west sidewalls. Mimi mentioned that no odors or staining or PID or VOCs detected in samples. Mimi inquired if site visit is needed. she will submit tank closure report with more details. 9:25 AM:- sent email to Mimi. informed her that based on submitted information, the department does not require any further investigation and no need for site visit. but the department may require additional investigation after reviewing complete tank closure report. email copied to Dave. 12:04 PM:- received email from Mimi. she mentioned that site is E-designated. as part of E-designation, they did two subsurface investigation and no contamination found in groundwater. also, they are installing vapor barrier and partially active SSDS in the building foundation. 12/14/10-Hiralkumar Patel. 3:55 PM:- received tank closure report from Mimi. based on submitted report, case closed. 4:31 PM:- sent email to Mimi and informed that case has been closed. email copied to Mr. Yudelson.

Remarks: While removing the tank from a construction site there was evidence of discolored soil, They took end points, results showed low contamination, Clean up is complete and more excavting will be down for construction purposes.

Longitude:	-73.9835133
DEC Memo:	8/04/2015: Rashad Spill transferred from Sangesland to Rashad as per RSE. As per NYC building records 404 Albee Square has alternate addresses of 404-404 Albee Square and 404-404 Gold Street. According to PBS#2-611063, there was a 5,000 gallon #6 fuel oil AST which has been closed-removed as of 1/23/2013, no other spill record was found. As stated in tank testing report the dry portion of tank failed isolation test as well as the wet portion of tank. Contact as per tank test failure results - Derrick 917-559-4337 DEC Possibly Requires: 1. Test results and possible investigation for piping (fill vent supply/return) 2. Investigation of possible spill related to tank testing results and failure of AST. 3. Clarification of fuel oil type of former AST #2 or #6. 8/05/2015: Rashad Email sent to Chris Quintana: After reviewing the failed tank test report for spill# 1214526 at 404 Albee Square, I would like to request the following information: Test results for supply/return and fill/vent piping. Fuel type that was stored in tank. According to spill report is was

TANK TEST FAIL TTF (Continued) **S112810196**

#2 fuel oil and according to PBS registration it was #6 fuel oil. Property owner s name and phone number for our requirement letter, if any and records.Thank you and feel free to call me at 718-482-6752 or email me to discuss. As per Vought if no response to email received a formal letter will be sent to the owner requiring the same information. Response by Chris: Hello in response to the request for information about this property I can offer the following. I performed a tank test as a sub-contractor of S&J Fuel Oil Co. in Brooklyn which resulted in a failure. As a result of that test, I called in the failure and had no further interaction with S&J Fuel on this matter or anyone else. I assumed the were going to fix the problem and have me re-test but they never called me back in. If I can offer anything else please let me know. You can reach me on my cell at any time 347-397-8298. If I recall correctly this was a 2 oil system at the time of the test. 8/06/2015: Rashad Replied to Chris' email: Thank you for your help would you happen to have a contact (name, number & email) at S&J Fuel that would be able to help me with this case? 8/20/2015: Rashad Emailed Chris & SJ Fuel: I spoke with Jeff and we would like to know which parts failed the wet leak and which parts failed the dry leak referred to in the tank test report. If we know this information it may save the property owner (NYC HPD) a costly investigation. Note I have copied S&J Fuel above in case they have any additional information. Andrew from SJ Fuel called and reported the tank was removed and that there was no contamination. He will be emailing the documents he has. Chris emailed: The test performed on this tank was a full system test indicating two types of leaks. On the Mic a dry(hiss) was heard and a slight bubble. This tank was wrapped in concrete and no definitive cause of leak could be determined under my scope of testing. The failure was called in and no further work was performed by my company. SJ fuel emailed back with document, it was uploaded to D2 and indicated gas free certificate, and certificate of affidavit which insicates tank and all line removal (vent/fill/supply/return). Called Derek 917-559-4337 from spill report and PBS registration he indicated all piping was above ground and no contamination was found. Case can be prepared for closure as per Vought 8/21/2015: Rashad Uploaded closure report to D2. Email sent to Chris, Support@sjfuelco.com, and mpianelli@sjfuelco.com: We reviewed the data and attached is a standardized letter closing spill case#1214526 for 404 Albee Square, Brooklyn NY. The original letter was mailed to the current owner NYC HPD.

Remarks: Tank test failure

DEC Memo:	3/25/24- Zhune-= Rachel Ataman frpm Touchtone Environmental emailed the following email abd the Phase II. I am attaching the TRC Phase II ESA dated September 29, 2023. As you can see low levels of Naphthalene 210 mg/kg (UUSCO - 12 mg/kg) and Xylene, Total .71mg/kg (UUSCO - .71 mg/kg were detected in boring TRC - SB-03 to the east of the suspect USTs. According to an FDNY Fire Department Affidavit, two USTs were abandoned in place at the Subject Property on June 15, 1998. I have attached the Fire Department Affidavit also. DEC Piper- the two 550-gallon USTs and contents were removed and properly disposed of along with 10.49 tons of contaminated soil. There was no visual/olfactory evidence of remaining contamination in the UST excavation and endpoint sample data confirm those observations. The tank excavation was backfilled with 15 cubic yards of clean fill. Based on work to date and results of analytical fdata collected, no further action is warranted. this spill is closed. PBS- 2-613614
Remarks:	Gasoline abandoned at property. Found leaking around the tanks in the soil.

DEC Memo:	10/21/05 - Raphael Ketani. I called up Jim Melnick of ProTest ((631) 321-4670) and asked him what happened as a result of the failed tank test. Mr. Melnick said that the tank was retested 1 week later and passed after Key Span did their own repairs. I spoke to Mike Calderon of Key Span at (718) 222-3479. He said that the vent line had been moved as a result of construction at the site (Marriot Hotel was having work done). He said that the construction crew had made a new vent pipe and had put a rubber cap on it. So this cap didn't hold the pressure during the tank test. However, once the cap was discovered, the pipe was retested and held the pressure, and the cap was replaced with a metal one. I contacted Mr. Calderon's supervisor, Ed Urban ((718) 389-4204, ext 17), regarding the tank test and he confirmed what Mr. Calderon had said. He added that the construction crew had hit the vent pipe and moved it and then trucks ran over the concrete cover and cracked the concrete. Mr. Urban added that water had leaked through the concrete and set off an alarm. So Key Span went to check out what happened and that's when they discovered the broken concrete and that the vent pipe had been moved. Mr. Urban added that the tank is registered with the PBS unit. The tank is registered with the Brooklyn Renaissance and the case # is 2-610012. 12/21/05 - Raphael Ketani. I tried calling up Mr. Urban, but the number had been disconnected with no forwarding number. I spoke to Mr. Melnick and he said he would FAX me a copy of the successful tank test. Mr. Melnick FAXed me a copy of the successful second tank test. As the rubber cap replacement and the repair of the moved vent line had been the only problems and had been corrected resulting in a successful tank test, I am closing the case.

installed in Oct. 1946. Sisters of St. Joseph **property owner as per property tax bill** c/o Rocklyn Asset Corp. 243 Prospect Park W Brooklyn, NY 11215 Attn.: Colleen Ceriello **property manager** Ph. (718) 965-7375/7352 email: cceriello@diobrook.org cceriello@rocklynasset.org 1:14 PM:- left message for Ms. Ceriello. 02/16/21-Hiralkumar Patel. 10:01 AM:- left message for Tom Leddy at Protest. 11:09 AM:- sent TTF letter via email to Ms. Ceriello. email copied to DEC Zhune, Victoria and Tom. case assigned to DEC Zhune. 4/5/21 Zhune- Casey Martinez sent the following email. I m following up on your call to me on 3/30 about the status of the tank. To recap our conversation, we hired Riteway and they are performing a second test since the tank body passed on the first test. The second testing will be to test the lines and will commence on 4/6. We will keep you updated. 7/8/21-David Chan emailed the report dated July 6, 2021 On February 22,2021 Riteway was contracted by united American Land LLC., to investigate a tank test failure (performed by others). Riteway proceeded to troubleshoot the failed system. The tanks were isolated and all lines were tested. The suction/ return lines passed for both tanks, the vent failed for both tanks and the fill line failed for tank #1(please see enclosed line test reports).Through further investigation and testing, it was determined that the interior portion of the fill line was tight and passed a pressure test(please see enclosed passing line test report for tank #1). A tank only was performed on both the tanks (on 3/19/2021) which passed (pleas see enclosed tank only tests). Samples were taken from the small portion of the exterior fill line that failed. The escavated area was 20 x 20 and 10 deep. Both samples were taken at 10 from grade. Refusal was at 10 because of a concrete enclosure that contained electrical and fiber optic lines for the property. Samples were field screened via PID meter and both specimens were clean. Thre was no odor, nor contamination observed at the buried exterior portion of the lines (please see enclosed sitemap). The old fill lines were abandoned and relocated to the steel grating (Complete with spill containment box) adjacent to the building foundation wall (please see enclosed sitemap). Both tanks (001,002)and systems were re-tested on April 16, 2021, which passed (please see enclosed tank test results). The site is clean and free from contamination. Spill Closed.

Remarks: 2 tanks - 3000 ust tank test failure gross dry leak no product loss

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 12/26/2001 - Tank test failure. DEC required the owner to file a new PBS form (signed by the owner) stating that the tank would be removed. Kevin O'Connor from Action Remediation (516-781-3000 ext

SACRED HEART CHURCH (Continued) **S105135425**

2421) stated that the tank would be pulled on Thursday Dec 27th, while the school is closed for Christmas vacation. Sangesland requested Action Remediation to take endpoint samples from the excavation and to take several color photos of the tank and excavation area. A proper Tank Closure report must be submitted to the DEC. 1/11/2002 - Sangesland received a Draft version of the report. Apparently only a single composite sidewall sample was taken along with a bottom endpoint sample. Sangesland called Kevin O'Connor to discuss the format and content of the Tank Closure report and requested several additional items. This Tank Closure report should include: 1) Discussion of what the tank problem was, what was done to solve/clean it, how the close out went. 2) Discuss the end point sampling - What was found, did it exceed limits (compare results to TAGM). 3) If anything exceeds limits, state how it will be remediated, or justify why this level of contamination is acceptible to be left on site. 4) Photos of the excavation. 2/1/02 - Sangesland received another package of information from Kevin O'Connor at Action Remediation. This package included the same information submitted earlier, plus photos. MISSING FROM THIS REPORT WAS: 1) THE SPILL NUMBER 2) THE NARRATIVE OF WHAT HAS BEEN DONE ON THE SITE AND WHY 3) THE CONSULTANTS REVIEW AND INTERPRETATION OF THE LAB RESULTS 2/7/2002 Protest sent a letter dated 1/30/2002 (Mailed 2/4/2002) Which included the information listed above (1/2/02 notes). Minor contamination continues to exist, but structural problems limit the ability to excavate any further. (Use of biologicals was not suggested by Protest). Spill Status - No Further Action

Remarks: TANK FAILED TEST - NO PRODUCT SPILLAGE

DEC Memo:	03/15/10 Spoke with Peter Forman, manager of the property.His contact number is (516)717-0000 CSL was sent out to Forman Jay LLC 130 Shore Rd, Suite 124 Port Washington, NY 11050 Attn: Peter Forman (sr) 9/22/2011- DEC Piper spoke wiht Peter. He will pass info t o Hydrotech and they will update. The Site is defined as 51 Jay Street (Block: 31 Lot: 1) and is located on the eastern side of Jay Street, between Plymouth Street to the north and Water Street to the south, in the Borough of Brooklyn, New York. The property is approximately 27,250 square feet in area and is currently

VACANT WAREHOUSE (Continued) **S110243161**

developed with a 3-story warehouse building with a 2-story annex and a cellar in the eastern portion of the Site. The entire building is approximately 81,805 square feet in area. The ground covering at the Site largely consists of concrete surfaces. The Site was historically utilized for manufacturing operations. The first floor of the warehouse is currently utilized for wood working and window fabrication. The remaining floors of the building, including the cellar are currently unoccupied. A Phase I Environmental Site Assessment (ESA) was performed by Hydro Tech in October 2009. The purpose of the Phase I was for environmental due diligence and financing purposes.
Subsequently, a phase II was performed in December 2009. The depth to water ranges from 4.37 feet in MW-7, located in the cellar to 14.72 feet in MW-4, located in the eastern portion of the first floor. No free product was detected in any of the wells. the total VOC concentrations in the shallow soil samples range from 29 ?g/kg in SP-3 to 255 ?g/kg in SP-5. the total VOC concentration in the deep soil samples is 10 ?g/kg in SP-5. the total SVOC concentrations in the shallow soil samples range from 290 ?g/kg in SP-5 to 17,910 ?g/kg in SP-1. Benzo (a) Anthracene (1,600 ?g/kg), Chrysene (1,400 ?g/kg), Benzo (b) Fluoranthene (1,200 ?g/kg) and Benzo (a) Pyrene (1,100 ?g/kg), were detected in the shallow soil sample from SP-1 at concentrations exceeding their respective RRUSCO. No other SVOCs are present in the shallow sample from SP-1 at concentrations exceeding their respective RRUSCO. Copper was detected in the shallow soil sample from SP-3 at a concentration of 275 mg/kg and Barium was detected in the shallow soil sample from SP-8, at a concentration of 4,372 mg/kg. Both concentrations exceed their respective RRUSCO. Manganese was detected at a concentration of 3,546 mg/kg and Zinc was detected at a concentration of 4,716 mg/kg in the deep soil sample from SP-4, both at concentrations exceeding their respective RRUSCO. no SVOCs, Pesticides and no PCBs were detected at concentrations exceeding their respective MDLs in any of the deep soil samples obtained. One (1) VOC was detected in MW-5 at a concentration exceeding its GQS. The VOC detected consists of 1,1-Dichloroethane (6 ?g/L), which exceed its GQS of 5 ?g/L. No other VOCs were detected in MW-5 at concentrations exceeding their respective laboratory MDLs. One (1) SVOC was detected in MW-4 through MW-7 at a concentration exceeding its respective GQS. The SVOC detected consists of Pentachlorophenol, which was detected at a concentration of 49 ?g/L in MW-4, 2,300 ?g/L in MW-5, 270 ?g/L in MW-6 and 10 ?g/L in MW-7. No other SVOCs were detected in the groundwater at concentrations

VACANT WAREHOUSE (Continued) **S110243161**

exceeding their respective MDLs. No
Pesticides or PCBs were detected in the groundwater at concentrations exceeding their respective
MDL. In November 2013, Soil Vapor and Indoor Air Study was conducted. Several VOCs were detected in
bot h soil vapor and indoor air. The most notable constituents are Trichlroethene at 1069 and 1193
ug/m^3 and Tetrachloroethene at 875 and 970 ug/m^3. According to the Soil vapor / indoor air
matrix, mitigation is warranted. In May 2014, the monitoring well network was re-sampled.
Tetrachloroethylene was detected in MW-6 at a concentration less than its GQS. Trichloroethylene
was detected in MW-3 and MW-6 at concentrations less than its GQS. No other VOCs were detected in
MW-1 through MW-6 at concentrations exceeding their respective MDLs. no SVOCs were detected in MW-1
through MW-6 at concentrations exceeding their respective GQSs. The SVOCs Anthracene,
Bis(2-ethylhexyl)phthalate, Fluorene, and Pyrene were detected in MW-4 at concentrations below
their respective GQSs. Pyrene was detected in MW-5 and Bis(2-ethylhexyl)phthalate was detected in
MW-6 at concentrations below their respective GQSs. No other SVOCs were detected in any groundwater
samples. 1/22/15- DEC Piper reviewed file for closure. Based on conversations with NYC OER, Albany
and the work completed to date regarding the petroleum related issues, this spill is closed.
Chlorinated VOCs will be handled under NYC OER program. This spill is closed. See Dec Docs if
warranted.

Remarks: SOIL SAMPLES SHOW POSITIVE FOR CONTAMINATION. CLEAN UP PENDING

DEC Memo: Sangesland spoke to Eric Telemaque at Emteque. Area is being excavated for new construciton. They found tanks and pulled them. They are in the process of removing the contaminated soil from the area. They will take end point samples of the bottom and sidewall. They will forward a report to DEC when the work is completed. 08/06/08-Hiralkumar Patel. left message for Eric at Emteque. received message from Rene from Emteque. they finished remediation and are preparing closure report and will submit report by end of 08/15/08. visited site. on-going excavation at the site. no petorleum odors. high school next to the site at 374-382 Bridge Street. received call from Eric. asked him to submit tank closure report. he will submit report by 08/15/08. asked him to contact owner to hold any foundation work until the department reviews the tank closure report. 08/18/08-Hiralkumar Patel. spoke with Eric. he will submit report tomorrow. 08/19/08-Hiralkumar Patel. received draft copy (not signed by authorized person) of spill closure report. abstract: - site address: 384-394 Bridge Street, Block #: 152, Lots #: 37 & 118 - e designated site: DEP #: 07DEPTECH258K <---------- - will develope residential tower <---------- - during excavation found seven tanks (six USTs and one AST) from the site - tanks were belived to have stored gasoline and waste oil - took endpoint samples after tanks removed, samples taken at depth of 12 ft bg and found clean Eric Telemaque EMTEQUE Corporation Ph. (212) 631-9000 Ext 100 (646) 529-6526 (C) Fax (212) 631-8066 email: eric@emteque.com 08/20/08-Hiralkumar Patel. spoke with Eric. asked him to submit all previous reports (Phase I, Phase II, Construction Health & Safety Plan and RAP). Eric mentioned that they found another area of contamination. visited site. met Jake Hawkes (cell: 917-769-2618) from Emteque at the site. they found two more areas with contamination. will collect endpoint samples. Jake mentioned that there was a drycleaner at the site. 08/21/08-Hiralkumar Patel. received emails from Eric with few documents, but all confusing. sent email to Eric to submit complete reports. also asked to submit property owner's information. Jim Farley 384 Bridge Street Associates, LLC **property owner** c/o Stahl Real Estate Co. 277 Park Avenue, 47th floor New York, NY 10017 Ph. (212) 826-7060 Fax (212) 223-4609 email: jfarley@stahlre.com 08/28/08-Hiralkumar Patel. received Phase I, Phase II reports and copy of DEP correspondence from Eric. subject site includes properties along Bridge Street (384-394 Bridge Street) and also along Lawrence Street (141-145 Lawrence street) abstract of Phase I report: - in the early 1900s the site was primarily residential and retail - in 1938 the site is listed as taxi garage

384 BRIDGE STREET, LLC. (Continued) **1000188813**

<---------- - from 1950 to the
present site has been used as retail, DRY CLEANING and training
facility <---------- according to
Phase I, previous owner Victoria Aviles, who has knowledge of the
facility since 1985, indicated
that she has no knowledge of gasoline tanks in the ground. (means
nobody has information about
dispenser island or remote fill port). discussed with DEC Jacob
regarding tank registration. he
mentioned as there was no gasoline tank use since 1985, no
registration required. <------ abstarct
of Phase II: - advanced ten borings to a maximum depth of 10 ft bg -
site elevation is approx. 37
ft above mean sea level - topography in surrounding area is gently
sloping to the west towards East
river <--------- - one soil sample collected at 2 ft bg and second
composite sample from 0-10 ft bg
from each borings <---- - found high Naphthalene in samples from 384
Bridge Street site - high SVOC
contamiantion found in all samples from parcels along Bridge street
(384-388-390 Bride street) -
found PCE (Tetrachloroethene) in all samples from site along Bridge
street (dry cleaner was located
at 384 Bridge Street and highest PCE found 480 ppb in soil sample from
384 Bridge Street parcel)
<---------- - mercury contamination found in almost all samples
<-------- according to DEP
correspondence dated 04/16/07, after reviewing RAP and construction
health and safety plan, DEP
rejected it and asked for following additional work: - endpoint
samples at the end of excavation -
an active SSDS and vapor barrier according to letter from DEP, dated
03/18/08, they approved to
excavate and for foundation work based on submitted revised RAP/CHASP,
but no approval for building
construction has issued yet. spoke with Eric. he mentioned that owner
is planning to excavate to
depth of approx. 30 ft bg. Eric doesn't know depth of groundwater, but
owner has done geotechnical
investigation and they have groundwater depth detail in it. asked Eric
to submit RAP and
geotechnical investigation report. also asked Eric to contact site
owner to hold any construction
activities until further soil and groundwater investigation is done
(which is required as found PCE
in soil at 10 ft depth and site had dry cleaner since 1950s). spoke
with Mr. Schreiber at DEP
regarding project manager. he will call back with project manager's
information. received call from
Mr. Winter from DEP, who is project manager for the subject site.
Maurice Winter **project manager
at DEP** NYC DEP Ph. (718) 595-4514 email: mwinter@dep.nyc.gov DEP
tracking #: 07DEPTECH258K
<---------- 08/29/08-Hiralkumar Patel. received geotechnical report
from Huy Pham from Cauldwell
Wingate. abstract: - proposed building will be 54 stories hith with
two levels of basement

384 BRIDGE STREET, LLC. (Continued) **1000188813**

extending about 26 ft below sidewalk grade <---------- - subway lines runs under Fulton Street and
Willoughby street, less than 200 ft from site - eight borings were installed: two on sidewalk and
six inside building at different location - sidewalk borings were installed to depth of 102 ft and
borings inside previous building were installed to depth of 60 ft bg - piezometers were installed
at borings B-1P and B-8P installed on sidewalk - groundwater found at depth of 43 ft bg Huy Pham
geotech consultant Cauldwell Wingate Co. LLC Bridge Street Construction Field Office 131
Lawrence St Brooklyn, NY 11201 Ph. (718) 852-7909 (Ext. 104) (917) 841-8827 (C) Fax (718) 858-0315
email: hpham@cwingate.com received RAP (previously approved by DEP) from Eric. abstract: - endpoint
samples shall be restricted to 384, 388 Bridge street location <------- - in the event that
elevated levels of VOCs continue to exist and can't be removed, a SSDS will be installed <--------
- vapor barrier will be installed - if dewatering occurs, will collect groundwater samples for
required permits RAP not acceptable for following reasons: - proposing to collect endpoint samples
in area of 384 & 388 Bridge street only and not throughout the site - proposing to install SSDS if
only any contamiantion left, but the department requires SSDS installed as site had gas tanks and
dry cleaner 09/03/08-Hiralkumar Patel. spoke with Eric. Eric asked about number of monitoring wells
at the site. asked Eric to collect endpoint soil samples throughout the site (regardless of
previous sampling results) to characterize soil beneath new foundation and based on endpoint sample
analyticals, monitoring well locations will be decided. also asked to install SSDS and vapor
barrier, throughout site, regardless of endpoint sample analyticals. discussed with DEC Jane. Jane
mentioned that regardless of endpoint soil sample results, the department requires sampling of
groundwater and also soil-vapor delineation in area close to school site at 374 Bridge street.
09/04/08-Hiralkumar Patel. discussed with DEC Austin regarding sampling requirements. Austin
mentioned that the Department only requires endponit soil samples, groundwater samples from three
wells at previous dry cleaner site with site specific groundwater flow direction and installation
of SSDS. Austin mentioned that soil vapor samples only be required if finds contamination in soil
or groundwater and at that point case will be transferred to remediation section C . sent letter to
Mr. Farley requiring endpoint soil samples throughout the site, groundwater samples via three
wells/piezometers and site specific groundwater flow direction. also asked to install vapor barrier
and SSDS after review and approval of investigation report. letter

384 BRIDGE STREET, LLC. (Continued) **1000188813**

emailed to Mr. Farley, Eric and
Mr. Winter (at DEP). 09/09/08-Hiralkumar Patel. received email from Eric with endpoint sample
analyticals. Eric mentioned that wells has been installed and will be sampled this week. Eric asked
to proceed with installation of mud slab. asked Eric to wait until gets groundwater sample
analyticals. (analyticals stored on e-docs). 09/10/08-Hiralkumar Patel. received call from Ivy from
PW Grosser. Ivy mentioned that they installed wells at the site. now as they are waiting for a week
prior to sampling these wells, property owner wants to install Rat Slab which comprises of
concrete, stone and other material and which will be maximum of 2 to 3 inches thick. owner wants to
install such slab to save time. explained to Ivy that if any contamination found in groundwater,
then the department requires complete groundwater delineation with more wells on-site as well as
off-site. and installation of on-site wells will requires holes in newly installed slab. Ivy
mentioned that owner is ready to take such chance. asked Ivy to call owner to call me to discuss
regarding such work. 09/11/08-Hiralkumar Patel. received email from Eric. he asked whether SSDS
required even no contamination found in groundwater. Eric mentioned that new structure will be
structural slab on grade and not a spread footing system and any disturbance to existing soils and
the installation of an SSDS system has potential structural implications, since a significant load
will be sitting on the piping system. also received site map with endpoint sampling locations and
well locations. spoke with Eric and Mr. Farley regarding rat slab and SSDS installation. mentioned
to them that the department requires installation of SSDS based on site history (dry cleaner and
repair shop). told them that if any contamination found in grondwater then SSDS is must. regarding
rat slab, Mr. Farley agreed to drill through new slab if finds contamination in groundwater samples
lateron. 09/22/08-Hiralkumar Patel. received call from Eric. they found perc in groundwater. they
also performed vapor intrusion study. they have SSDS design ready. asked Eric to hold all
construction activities and to submit investigation report with system design. left message for Mr.
Farley to hold construction activities until get approval from the department. received email from
Eric with SSDS drawings. drawings were not signed off by lincensed engineer. sent email to Eric
requiring drawings signed by licensed engineer. 09/23/08-Hiralkumar Patel. received SSDS design
from Eric in mail (not signed by licensed engineer).
09/24/08-Hiralkumar Patel. received
groundwater sample analyticals (only) from Eric. found high PERC contamination in all three

Cozzy. sent documents, which are
not on e-docs (because waiting for complete report), to DEC Kann.
10/03/08-Hiralkumar Patel. spoke
with Eric at Emteque. they are no longer working at the site. owner
has hired Fleming Lee Shue.
Eric mentioned that he has gave soil-gas data, groundwater analyticals
and draft report to Fleming
Lee Shue for review. left message for Mr. Ahmed at Fleming lee shue.
Mohamed Ahmed Fleming Lee Shue
Ph. (212) 675-3225 (O) (917) 612-6018 (C) Fax (212) 675-3224 email:
mohamed@flemingleeshue.com
spoke with Mr. Ahmed regarding groundwater and soil-gas investigation
report. Mr. Ahmed mentioned
that he only has lab data and nothing else. he mentioned that Eric
supposed to send complete
report. asked Mr. Ahmed to submit soil-gas data received soil-gas
analyticals. he mentioned that
methodology for soil-gal sampling and QA/QC is not available to him.
found chlorinated compounds in
soil-gas results. 10/03/08-Hiralkumar Patel. case transferred to DEC
Jennifer Kann. 10/06/08-
J.Kann - Discussed the site with B. Cozzy, and agreed it qualifies for
a non-petroleum stip. Spoke
with Mohamed Ahmed of FlemingLeeShue on 10/6, who requested a meeting
to discuss requirements for
the site. Agreed to meet on Thursday october 9 at 10AM. Mohamed said
an investigative work plan
will be submitted to the Department on october 7. 10/7/08 - J.kann -
Consultant (Mohamed Ahmed of
FLS 212.675.3225) requested the meeting be moved to the 14. Due to
scheduling conflicts, it could
not be rescheduled until October 16. A work plan should be submitted
by October 10. Mohamed
discussed doing grid sampling on site around the location of the
former dry cleaner, as well as
installing off-site wells. He was informed that the plan should also
include soil gas sampling in
the sidewalk adjacent to the private high school. 10/16/08: - J.Kann -
J. Krimgold and J.Kann met
with the consultant (M. Ahmed and A. Fleming) to discuss the work plan
which was submitted on
October 10. Informed them of changes the Department wants- a sampling
grid which covers the entire
lot of the former dry cleaning facility, as well as an off-site well
in front of the active dry
cleaners. They were informed that they should enter a stipulation
agreement, and were told that
John Urda would be the DEC legal contact. FLS will revise the work
plan and resubmit it. 10/24/08:
J.Kann - revised work plan submitted on October 23. Work Plan approved
via email provided two
comments were addressed - an additional soil vapor sample collected
and one shallow boring extended
to groundwater. CAP provided to J. Urda. 10/27/08 - J.Kann - spoke
with Mohamed of FLS. He agreed
to address the two comments (the deeper soil gas may need to be
performed inside the property line

384 BRIDGE STREET, LLC. (Continued) **1000188813**

where the soils have been excavated). Also spoke with John Urda, who said he will contact Steve
Russo and forward a non-petroleum stip to him. 10/30/08: J.Kann - visited site. Field work
commenced. 11/14/08: J.Kann - J.Urda sent stip to RPs attorney on 11/10. Attorney verbally said
they will enter into stipulation agreement. 12/24/08 - J.Kann Stipulation agreement executed
(edocs). RP sent preliminary results of soil gas and groundwater findings and requested a meeting.
12/31/08- J.Kann - Meeting scheduled for January 6, 2009 at 10AM. Letter received from NYCDOB
stating they have no authority to enforce such state and federal requirements . This letter was a
response to the DEC's September 25, 2008 letter requesting building permits be revoked. (edocs)
1/2/2009 - J.Kann - letter sent to NYCDOB, NYCDEP, City Planning and NYCDOH rescinding DEC's
request to have permits revoked, because the RP has entered into a stipulation agreement. (edocs)
1/6/09 - J.Kann - meeting held with the RP, James Farley, his consultants, Arnold Fleming and
Mohamed Ahmed of FLS, and Michael Bogin of Sive Paget and Reisel. DEC present, J Krimgold, J Urda
and J.Kann. Teleconferenced NYSDOH Bridget Calaghan and DEC's Jim Harrington. RP's consultant to
submit a brief work plan by Monday January 12. Indoor air and subslab sampling to be proposed in
the adjacent HS. Additional gw levels will also need to be taken to confirm gw flow direction.
1/13/09 - J.Kann - received Indoor Air Quality Work Plan on January 12. 5 sub-slab and concurrent
indoor air samples will be collected on janaury 19. One outdoor air will also be collected. DOH
(Bridget Calaghan) reviewed the work plan and had no comments. Approval letter was sent to
consultant today. 1/29/09 - J.Kann - preliminary results of IAQ received on 1/27 indicated elevated
levels of PCE in indoor air and sub-slab. A conference call was held today with the consultant and
DOH to determine how to proceed. It was decided that the principal must be informed immediately.
The RP said that he will try and contact her to arrange a conference call. 1/30/09 - J.kann -
Contacted RP's consultant, mohamed ahmed of FLS and asked if call with Principal was scheduled.
Mohammed said that they tried to contact her on 1/29, but were not able to reach her. They will try
again today. I will follow up at the end of the day. 2/2/09 - J.Kann - Conference call with St
Joseph's Principal, Sr. Joan Gallagher,DOH (B. Calaghan and Joe Crua), DEC (T. Morenzi, J.
Krimgold, J. Urda and J.Kann), FLS (Art Fleming, M. Ahmed), SPR (M. Bogan) and Stahl (J. Farley)
occured at 11 AM this morning. Sr. Joan was informed of the levels found in the school. Highest
indoor air concentration of PCE was 355 ug/m3. DOH guidance uses 100

384 BRIDGE STREET, LLC. (Continued) **1000188813**

ug/m3 to mitigate and 1000
ug/m3 requiring immediate response. DOH explained this to sister joan. Sister Joan was explained
the steps that were to follow and that included sealing of any cracks in the basement floor or
walls, sealing the door to the boiler room and possible replacement of the fan in the boiler room,
and the installation and operation of two temporary scrubber units. These are temporary actions,
and long term measure will be looked into. DOH said that Sister Joan will need to notify the
students and their parents and that DOH would help her with the preparation of that letter and they
would supply a Fact Sheet on vapor intrusion. Initial work (sealing, scrubbers) will start week of
February 6. 2/9/09 - J.Kann - Visited site on 2/6. Air scrubbers were to be delivered by COB
Friday. FLS was intending on running them over the weekend (will need to verify today if they were
received on time to be started). FLS will finalize a report including the investigative work
performed on the Bridge Street site and the IAQ work performed at St. Joseph's and will submit it
by mid-February. Cracks were sealed in the basement of St. Joseph's and the boiler room door was
better sealed. A walk through was performed on 2/6 and additional cracks were noticed and will be
sealed. In addition, some sheetrock work will be done in one basement storage room (no ceiling
tiles between this area and 1st floor auditorium). Indoor air will be performed again after the
scrubber is run for approximately a week. 2/10/09 - J.Kann - Spoke with FLS - scrubbers were only
received on 2/9. They were installed in the basement of St. Joseph's on 2/9 and are currently
running. FLS will be submitting a report by February 13 which includes the work performed at 384
Bridge in fall of 2008 and the sampling performed at St. Joseph's in January 2009. Bridget Calaghan
of DOH has been in contact with Sr. Joan, principal, and has provided her with sample letter and
fact sheets to use for parent/student notification. DOH spoke with the principal on 2/6 at which
time the principal did not commit to a date for notification. Air sampling will be performed the
week of February 16 to confirm effectiveness of scrubbers. 02/25/09 - J. Kann - The principal, Sr.
Joan, mailed notifications to the student s parents on February 13. The letter, prepared by the
principal, did not list DOH or DEC as contacts, and therefore no inquiries have been made to us. A
second round of indoor air sampling was performed in the basement and first floor of the school on
February 19. The sampling results are expected the first week of March. The St. Joseph's Indoor Air
Sampling Report was submitted to DEC and DOH on February 13. Groundwater flow direction at the

384 BRIDGE STREET, LLC. (Continued) **1000188813**

Bridge Street site has not been established. FLS is collected another round of groundwater measurements on 2/26. The investigative report for Bridge Street will be submitted after these measurements are completed and encorporated into the report. 03/05/09- J.Kann - receive results of second round of indoor air sampling. No significant change noted in the basement air levels. First floor levels are fine with the exception of a sample collected near the elevators. FLS, the consultant, will be collecting a sample in the pit on Saturday March 7 to determine if the elevator pit is a source. 03/10/09 - J.Kann - DOH reviewed data and requested a meeting with FLS. I spoke to FLS and provided the following information to DOH via email: 1. The installation of the air scrubbers consisted of just plugging them in . He can not say for sure why they aren't working because FLS's initial calculations said the concentrations would be reduced within 24 hours. The scrubbers were running 10 days before the follow up sampling was performed. 2. FLS is working with a Mechanical Engineer to attempt to fix the existing HVAC system at the school so that fresh air can be directed into the basement. By the end of this week they hope to have a report indicating what repairs/modifications will need to be done. 3. Results from the sample collected in the elevator pit is expected by the end of the week. If this is confirmed as a source, FLS will provide a coating around the elevator pit. 03/12/09: J.Kann - DOH requested a teleconference. Arranged teleconference for 2:30 Friday March 13. FLS said the attorney and RP would be on the call. DEC Legal, Urda, was notified. 03/13/09: J.kann - Teleconference participants included DOH, FLS, DEC, RP and his councel) Teleconference basically discussed the items sent to DOH in the march 10 email. DOH requested any draft information provided by the Mechanical Engineer be sent to them. This will likely be early next week. FLS has a structural engineer exploring the options for a final solution, a SSDS system. This process is taking longer than expected because no original drawings for the building exist. Results of the sample collected in the elevator pit are expected early next week. A vapor barrier will be installed in the elevator pit if the results confirm it as a source. 03/19/09: J.Kann - REceived an email from Mohammed of FLS summarizing their proposal of planned actions for the school. Information from the email is below: 1. Immediate action (within two weeks) a. The existing air scrubbers will continue operating b. Vent existing indoor air and replace with fresh air. A total of twelve air exchanges @ 2,000 CFM are planned. c. Re-activate existing basement outside air heating and ventilation unit to replace air being

384 BRIDGE STREET, LLC. (Continued) **1000188813**

exhausted by basement
kitchen hood system. d. Refurbish existing H-V unit including a new fan belt, lubricate bearings if
applicable, new air filters, vacuum inside of unit, and resume unit s operation. e. Install remote
kitchen hood fan starter buttons in kitchen area. 2. Long Term Action (operational within 4 months)
a. Design dehumidification system which will manage basement humidity levels and avert possibility
of mold propagation. b. Upgrade existing H-V unit motor drive to variable speed, and set for two
levels of operation, one without kitchen hood exhaust operational, and the second with kitchen
exhaust in operation. Interconnect kitchen exhaust fan starter with H-V drive unit for coordinated
operation. c. Design and installation of sub-slab venting system. 3/20/09: J.Kann -An email was
sent to the consultant indicating the following: DEC and DOH have no objections to your approach to
minimize indoor air concentrations in the basement. It is important to note that any modifications
to the HV system are short term solutions only and that installation and design of a SSDS must also
remain a priority. 3/31/09: J.Kann - A letter was submitted on remedy selection for the Bridge
Street site. The letter was forwarded to DOH and Albany (Mike MacCabe). An application was received
for the BCP on March 3 and a determination has not yet been made as far as eligibility. 4/22/09:
J.Kann - During a discussion with regional HWE, I was informed that the standard proceedure for
spill sites, that have applications in with the BCP, is to handle them as spill sites until a BCP
agreement is signed. Since a determination for BCP eligability has not been made to date, with the
concurrence of Jacob Krimgold, the review of remedy selection for the site will move forward. I
spoke with DOH today and they agree with the consultants proposal. The consultant proposes to do
soil vapor extraction on the site and want to start a pilot test as soon as possible. Once written
DOH concurrence is received by DEC an email will be prepared and sent to the consultant. 05/04/09:
Internal discussions at DEC about the use of SVE to treat groundwater indicate that it may not be
effective. The consultant was contacted and more information was requested to be provided on their
proposal, specifically if any case studies are available. The HV system in the adjacent school was
repaired and operational effective April 21. The consultant was asked if an additional round of
indoor air sampling was planned. 05/08/09: J.Kann - FLS provided the following email on 05/07 : The
indoor air sampling inside the school will be scheduled for the weekend of May 16, 2009. As we
spoke this morning, the case study of using SVE to remediate groundwater contamination was for a

384 BRIDGE STREET, LLC. (Continued) **1000188813**

NYSDEC spill site. The spill closure letter is attached. Please let me know if you have any question. (reference is made to spill 9605688) 6/23/09: J.Kann - SSDS design information for St. Joseph's and the results of an additional round of indoor air samples were submitted on 6/2/09. No significant change was noted in the indoor air samples collected. DOH comments on the SSDS were forwarded to the consultant on 6/9/09. Received an email from Mike McCabe of Albany on 6/22/09. He visited the site last week and noticed that an elevator pit was installed. I informed him that earlier this year the consultant had requested permission to construct the elevator pit only, and they were verbally told it was okay as long as proper vapor mitigation measures were installed. The area of the elevator pit, as far as I was told, was not in the former dry cleaner portion of the site. Based on the investigative work performed, soils remaining at the site do not contain VOCs above the RSCOs. 6/24/09: J.Kann - spoke with M. Ahmed of FLS. The RP is trying to coordinate the installation of the SSDS during the summer months while school is not in session with Sr. Joan of St. Joseph's School. They are hoping to speak with her and set a schedule sometime this week. The site, 384 Bridge Street, is being backfilled due to pressure from DOB. The RP is waiting on a determination regarding eligibility into the brownfields program before moving forward with on-site work and remediation. Spoke with J. Urda of legal who indicated that the RPs attorney will be dealing directly with Albany to resolve any issue regarding BCP eligibility. 8/13/09: J.Kann - a supplemental remedial investigation work plan was submitted on July 9. An email accepting the plan was sent to FLS on July 16. The site was accepted into the BCP on August 12. Site to be transferred to Mike MacCabe. 08/18/09: J.Kann. BCP Agreement signed for this site by Dale Desnoyers on August 13, 2009. On-site and off-site contamination is covered under the BCA. As per Amar Nagi, spill closed. See cross referenced remediation site number C224134 for additional information. **e designated site.** <----------

Remarks: unknown amount; gasoline and water mixed; tanks were uncovered during excavation; spill will be cleaned up as part of excavation;

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site Description:	Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial. Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium- to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.
Env Problem:	Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial

388 BRIDGE STREET (Continued) **S116041493**

actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

Updated By: STROBERT
Site Code: 410416
Site Description: Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial. Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium- to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.
Env Problem: Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.

388 BRIDGE STREET (Continued) **S116041493**

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

Site Description: Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential

388 BRIDGE STREET (Continued) **S116041493**

area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial. Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium- to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.

Env Problem: Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of

388 BRIDGE STREET (Continued) **S116041493**

site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

HW Code:	C224134
Control Code:	25
Control Type:	INST
Dt record added:	10/09/2013
Dt rec updated:	06/05/2024
Updated By:	STROBERT
Site Code:	410416
Site Description:	Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial. Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium- to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.
Env Problem:	Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management

388 BRIDGE STREET (Continued) **S116041493**

plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

388 BRIDGE STREET (Continued) **S116041493**

Town: New York City
Record Added Date: 02/24/2009
Record Updated Date: 03/05/2024
Update By: SMQUANDT
Site Description: Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial. Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium- to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.
Env Problem: Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.
Health Problem: Contaminated groundwater at the site is not used for drinking or other

388 BRIDGE STREET (Continued) **S116041493**

purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Updated By: KAMALONE
Site Description: Location: The Brooklyn Gas Light Works Manufactured Gas Plant (MGP) is located at 1 Hudson Avenue in Brooklyn, New York in Kings County. Site Features: An active generating station (Hudson Ave.), owned by Consolidated Edison, currently operates at the site. The site is covered by buildings, some asphalt parking areas and walkways. Current Zoning and Land Use: The site is currently an active generating station and is zoned for light manufacturing and commercial uses. The nearest residential area is 0.3 miles to the south. Past Use of the Site: The MGP plant operated from 1849 until approximately 1900. The property was sold to Brooklyn Edison Company between 1922 and 1928. The MGP buildings and associated above-ground structures were subsequently removed and the generating station was built. Consolidated Edison purchased the property and generating station in approximately 1950. Site Geology and Hydrogeology: The general geology in the area is artificial fill and alluvial deposits ranging between 15-20 feet thick. The next layer consists of glacial deposits (clay, sand, gravel and boulders); then a layer of Gardiner's Clay; coarse sand and gravel; a clay and silty clay layer; a sand layer interbedded with gravel clay and silt; and finally a bedrock consisting of gneiss, schist and pegmatite. Overall groundwater ranges between 5 and 22 feet below ground surface (bgs), and generally flows to the north towards the East River. The site groundwater is tidally influenced.
Env Problem: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern for include poly aromatic hydrocarbon (PAHs), benzene, ethylbenzene, toluene and xylenes (BETX), naphthene metals and Per-and Polyfluorinated Substances (PFAS). Soil: Total of 19 soil samples from the subsurface were collected from the depth of up to 50 . PAHs were detected above their respective unrestricted soil cleanup objectives (USCOs) at all boring locations primarily up to the depth of 25 below the boring surface (bgs). Concentrations of benzene was found on site in the range of ND (not detected) to 1.74 parts per million (ppm) and exceeded USCOs of 0.06 ppm in two samples. Ethylbenzene and toluene were found only one sample at concentration of 5.23 ppm and 2.59 ppm which exceeded their respective USCOs of 1 ppm and 0.7 ppm. Xylene was found in three samples with the maximum concentration of 55.5 PPM which exceeded significantly exceeded its USCO of 0.26 ppm. Arsenic and cadmium were found only one sample at concertation of 248 ppm and 235 ppm which significantly exceeded their respective USCOs of 13 ppm and 2.5 ppm. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Total of five samples were collected from the five monitoring wells from the depth ranging between 32 to 50 . Benzene was found in three samples with maximum concentration of 359 parts per billion (ppb) to exceed it groundwater quality standards (GWQS) of 1 ppb. The maximum was detected in the well located in most downgradient well near the East River. BETX compounds were found above their respective GWQSs in one well located in the eastern portion of the site. Some PAHs and metals were sporadically found above their respective GWQSs. PFAS were detected above their

K - BROOKLYN GAS LIGHT A (Continued) **S111009485**

	respective GWQSs in all five wells. The maximum PFOA and PFOS concentrations of 243 parts pert trillion (ppt) and 27.9 ppt which exceeded their respective GWQS of 6.7 and 2.7 ppt. BTEX and PFAS contaminated groundwater may potentially be migrating to the river.
Health Problem:	The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

Acres:	2.5
Fuse:	Industrial
Description:	Location: The Brooklyn Gas Light Works Manufactured Gas Plant (MGP) is located at 1 Hudson Avenue in Brooklyn, New York in Kings County. The 2.5-acre site is located in an industrial area to the East of the Manhattan Bridge on the East River. Site Features: An active generating station (Hudson Ave.), owned by Consolidated Edison, currently operates on portions of the site. The site is covered by buildings and some asphalt parking areas and walkways. Some buildings on the site which are not in use have been demolished, and building demolition is ongoing. Current Zoning and Land Use: The site is currently an active generating station and is zoned for light manufacturing and commercial uses. The surrounding parcels are used

K - BROOKLYN GAS LIGHT A (Continued) **S111009485**

for industrial use. A residential area is 0.3 miles to the south. Past Use of the Site: The MGP plant operated from 1849 until approximately 1900. The property was sold to Brooklyn Edison Company between 1922 and 1928. The MGP buildings and associated above-ground structures were subsequently removed and the generating station was built. Consolidated Edison purchased the property and generating station in approximately 1950. Site Geology and Hydrogeology: The general geology in the area is artificial fill and alluvial deposits ranging between 15-20 feet thick. The next layer consists of glacial deposits (clay, sand, gravel and boulders); then a layer of Gardiner's Clay; coarse sand and gravel; a clay and silty clay layer; a sand layer interbedded with gravel clay and silt; and finally a bedrock consisting of gneiss, schist and pegmatite. Overall groundwater ranges between 5 and 22 feet below ground surface (bgs), and generally flows to the north towards the East River. The site groundwater is tidally influenced.

Assess Env: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern for include poly aromatic hydrocarbon (PAHs), benzene, ethylbenzene, toluene and xylenes (BETX), naphthene metals and Per-and Polyfluorinated Substances (PFAS). Soil: Total of 19 soil samples from the subsurface were collected from the depth of up to 50?. PAHs were detected above their respective unrestricted soil cleanup objectives (USCOs) and the anticipated use SCOs is industrial (ISCO) at all boring locations primarily up to the depth of 25? below the boring surface (bgs). Concentrations of benzene found on site in the range of ND (not detected) to 1.74 parts per million (ppm) and exceeded USCOs and ISCOs of 0.06 ppm in two samples. Ethylbenzene and toluene were found only one sample at concentration of 5.23 ppm and 2.59 ppm which exceeded their respective USCOs and ISCOs of 1 ppm and 0.7 ppm. Xylene was found in three samples with the maximum concentration of 55.5 ppm which exceeded significantly exceeded its USCO of 0.26 ppm and ISCO of 1.6 ppm. Arsenic and cadmium were found only one sample at concertation of 248 ppm and 235 ppm which significantly exceeded their respective USCOs of 13 ppm and 2.5 ppm or their ISCO of 16 ppm and 7.5 ppm. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Total of five samples were collected from the five monitoring wells from the depth ranging between 32 to 50?. Benzene was found in three of five monitoring wells with maximum concentration of 359 parts per billion (ppb) to exceed it groundwater quality standards (GWQS) of 1 ppb. The maximum was detected in the well located in most downgradient well near the East River. BETX compounds were found above their respective GWQSs in three of five locations. PAHs and metals were sporadically found above their respective GWQSs. PFAS were detected above their respective GWQSs in all five wells. The maximum PFOA and PFOS concentrations of 243 parts pert trillion (ppt) and 27.9 ppt which exceeded their respective GWQS of 6.7 and 2.7 ppt. BTEX and PFAS contaminated groundwater may potentially be migrating to the river. Soil Vapor: Soil vapor has not been sampled.

Assess Doh: The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

DEC Memo:	Piper psoke w. Joe O at PTC. They are sending them a propesal to uncover tank. Piper mailed ttf letter to Heartshore Human Services of New York 191 Joralemon St. Brooklyn, NY 11201 Attn: Peter Lavin 06/04/08 Extension requested letter dated Jan 08,2008 is in file.(sr) 06/27/08 2nd letter was sent today with copy to their counsel.(sr) 08/18/08 I spoke with Mr. Cea, he would look into it, and let DEC know the status.(sr) 05/06/09 Performed site visit today.Tank is underground, located outside of the building, unsure about the capacity.I spoke with Sister Eyleen of the Church.They could not provide me any specific about the tank and spill, but will look into it. I sent letter again @ Church of The Sacred Heart 41 Adelphi Street Brooklyn, NY 11205 Attn: Rev. Robert Vitaglione Heartshore Human Services of New York 191 Joralemon Street Brooklyn, NY 11201 Attn: Peter Lavin (sr) 06/02/09 I called the Church today and spoke with sister Eileen. She said she received the letter and she spoke with few people, but nobody knows anything about the tank being failed the tightness test. I provided her the name & contact number of the contractor who performed the test, as per the spill report.(sr) 08/19/09 Letter was sent out again asking to do investigation and remediation of the spill case. Letter was sent to Church of The Sacred Heart 41 Adelphi Street Brooklyn, NY 11205 Attn: Rev. Robert Vitaglione CERTIFIED MAIL- 7001 1140 0001 8309 5956(sr) 10/01/09 Rec'd tank testing result by PTC.Problem found with combination stick line/fill line. No contamination discovered, as per PTC.Invoice in edocs.(sr)

DEC Memo:	3/30/2017 - Feng - Covered Duty Desk for Ryan Piper. Email dated 3/29/2017 from Shaminder Chawla of NYC OER Jeff and Randy: I am reviewing one RIR and came across following contamination situation: Soil: Depth to bedrock is unknown at the site, terminus of borings at 16 ft did not reach bedrock, stratigraphy of the site from surface down is a range of 5 feet to 13 feet of fill material, underlain by fine to medium grained sand to the terminus of borings. 9 samples were taken from 4 borings: - VOCs: 1,2,4-Trimethylbenzene, max 110 (mg/Kg), 1,3,5-Trimethylbenzene, max 10 (mg/Kg), Acetone, max 0.28 (mg/Kg), Ethylbenzene, max 5.3 (mg/Kg), N-butylbenzene, max 26 (mg/Kg), N-propylbenzene, max 37 (mg/Kg), Sec-butylbenzene max 26 (mg/Kg) - SVOCs: benzo(a)anthracene, max 2.07 (mg/Kg), benzo(a)pyrene, max 1.03 (mg/Kg), benzo(b)fluoranthene, max 1.01 (mg/Kg), benzo(k)fluoranthene, max 1.16 (mg/Kg), chrysene, max 1.99 (mg/Kg) - PCBs: none - Pesticides: 4,4 -DDT, max 0.00845 (mg/Kg) - Metals: Copper, max 63.2 ppm, lead, max 731 ppm, zinc, max 493 ppm, mercury, max 1.67 ppm Groundwater: groundwater is at approximately 13.95 to 15.1 feet below grade across the site, flow is presumed north toward the East River. 2 monitoring wells were installed, and two samples taken. - VOCs: benzene, max 2.1 (g/L), ethylbenzene, max 7.7 (g/L), Isopropylbenzene, max 180 (g/L), N-butylbenzene, max 37 (g/L), N-propylbenzene, max 270 (g/L), Sec-butylbenzene, max 63 (g/L), t-butylbenzene, max 12 (g/L) - SVOCs: no exceedances - PCBs: none - Pesticides: no exceedances - Metals: Iron (max 17,700 g/L), manganese (max 2080 g/L), sodium (max 41,100 g/L) Soil Vapor: 3 samples were taken for soil vapor, 2 samples takeb subslab, 1 ambient air

COMMERCIAL (Continued) **S120701595**

sample, 1 outdoor air sample PCE: max 100 (ug/m3), PCE in all samples at small concnetrations. TCE:
max 37 (ug/m3),TCE in 5 out of 6 SV and SS samples. Carbon Tetrachloride: max 11(ug/m3) in one
sample 1,1,1-TCA: max 23 (ug/m3)in two samples BTEX: Total BTEX Benzene, max 15 (ug/m3), Toluene,
max 6.5 (ug/m3), Ethylbenzene, 20 (ug/m3), Xylene (m&p), max 44 (ug/m3), Xylene(0), Max 24 (ug/m3).
Boring logs indicates petroleum odors as well as high PID readings of upto 1655 ppm. Attached is a
site briefing to be discussed with DEC (Albany) tomorrow. Should I make them call in a spill?
Shaminder

Shaminder Chawla - Deputy Director - NYC Office of Environmental Remediation (O) (212) 442-3007 -
(C) (917) 344-9835 - (F) (212) 788-2941- shaminderc@dep.nyc.gov 100 Gold Street, 2nd Floor, New
York, NY 10038 Email dated 3/29/2017 from Jeff Vought reply to Shaminder Chawla Shaminder, I
searched Spills and PBS records for 78 John Street and found no records of prior spills or tanks. A
spill should be called in due to the exceedence of petroleum compounds in soil up to ten times the
Unrestricted Use Soil Cleanup Objective, the notation of a UST on the site plans, and the proposed
future use as residential/commercial. The groundwater concentrations may be within attenuation
range and pending the receipt and review of additional information, may not warrant further action.
I see the UST reportedly in the rear of the building, however, the soil next to the tank reported
minimal VOCs. The heavier soil contamination noted in the front of the building may be due to a
former dispenser island or piping leak as if the tank was used for gasoline, the dispenser and fill
were likely by the property entrance (as seen with many other sites). If the spill is called in
today it will be assigned to Tim Demeo and if it is called in tomorrow it will be assigned to
Veronica Zhune. I am also copying June and Ryan as they are staffing the Duty Desk today and
tomorrow. Feel free to forward this email onto DEC Central Office or outside parties with a cc to
me, if need be. Thanks, Jeffrey Vought Engineering Geologist 2, Spill Response Program, Region 2
(NY City), Division of Environmental Remediation New York State Department of Environmental
Conservation 47-40 21 Street, Long Island City, New York 11101 P: (718) 482-6389 - F: (718)
482-4098 - jeffrey.vought@dec.ny.gov www.dec.ny.gov - - As per J. Vought’s email, spill is assigned
to Veronica Zhune. 4/4/17-Shaminder send the following email We need your s and Nathan Waltz s
input on this project in respect to need for active/passive SSDS. Consultant is requesting not to

COMMERCIAL (Continued) **S120701595**

install system. We are requiring at least 20 mil vapor barrier here. 4/4/17-Zhune sent the following email to Nathan Nathan, I have reviewed the reports, discussed them with Jeff, and the Department has no further concerns with respect to soil or groundwater at the site. Our only concern in the 100ug/m3 PCE in a soil vapor sample and whether the SSDS should be active or passive as per Shaminder s email below. Would you like me to send you a site summary of my review of the files on EPIC or would it be easier for you to just review those reports once you are granted access. 4/4/17- Nathan sent the following email I downloaded the RIR and will review and get back to you and Veronica. 4/4/17-Nathan sent the following email What I think would be best to do in this case since this soil vapor sample was collected in the parking lot and we are hovering right on the border of no further action and monitoring is to have the SSDS installed as a passive system. Then collect some air samples and see if there is a need to have it be made active, especially since additional excavation has occurred and could have resolved the PCE issue. 4/5/17- Nathan, Shaminder and Anna had a conversation to discuss if a passive or active system will be installed. 4/5/17 at 3:45 pm Anna sent the following emai l Following up on our call just now on 78 John Street, a passive system will be sufficient for the site. An SVI study will not be needed. 4/5/17-Jeff sent the following email to Shaminder and to Nathan. I also just discussed the closure with Nathan over the phone and he noted that NYSDOH had no objections to spill closure. As there are no further concerns with respect to soil, groundwater, or soil vapor, the Department will be closing the spill. I will follow up with Veronica so that we may close the spill and send a closure letter to the owner with a cc to all. Spill Closed. 4/19/17-A Spill Closure Letter was sent to: Mr. Michael Moeziniz 18 Bridge St. #1B Brooklyn NY 11201

Remarks: The caller said that they were doing testing on the area and found contamination on the soil and ground water.The cleanup is pending.

DEC Memo: 2/15/13-Vought-Duty desk officer. Vought called Bob Urban (ProTest Ph:631-321-4670 Fax:631-539-0822) for more information. Tank was a 10,000-gallon #2 fuel oil UST and had a dry leak and had always been empty as it was a backup tank and was relined eight years ago. Tank passed test five years ago but had not had oil for at least eight years. Proposal to isolate and retest will be submitted to Brooklyn Friends School. Vought inspected PBS #2-252174 and noted site has two 10,000-gallon #2 fuel oil USTs. Spill addressed to DEC Demeo as TTF at PBS site. Owner of site as per PBS and addressee for TTF is: Brooklyn Friends School 375 Pearl Street Brooklyn, NY 11201 Attn: Michel Rimpel Ph:(718)852-1029 Vought called and spoke to site contact Michel Rimpel (Ph:718-852-1029) and told him that Vought to send TTF letter and also provided contact info for DEC Demeo in case of further questions. Vought prepared TTF letter for signature by DEC Demeo with above address. DEC Demeo signed TTF letter and Vought added to e-docs and sent to address above. 4/30/14 TJD File review. Out of service (empty) tank failed tightness test with a dry leak. Contractor (ProTest) responded to location to perform a tightness test on an out of service UST (10K). This tank is reported to have been empty and not in use since previous testing 5 years earlier. Initial failure was reported on 2/15/13 - reported as a dry leak. ProTest returned to the propertty on multiple occassions - uncovering top of UST to access manway and piping connections. Manhole was regasket and supply/return lines were isolated still resulting in a dry leak failure. On 3/17/14 Protest isolated the remote fill and vent piping associated with the tank - replaced the vent pipe and still had a failure on system test. On 3/19/14 the remote fill pipe was disconnected at elbow and the underground section of piping was tested and passed. With the remote fill plugged at elbow, the system then passed a tightness test - the remote fill remains plugged and tank remains empty and out of service. As per ProTest There was no evidence of visible contamination within the excavation . Tank will remain out of service and tank owner plans to abandon in place. Based upon the information provided, no further action is required. All documentation has been uploaded to DECDOCS. Spill closed.
Remarks: 10000 gallon tank failed test and tank has not been used and has been empty for past eight years

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Obligado- I called Mark Salamac. He said he believes that the tank was empty at the time of the test. He said the tank failed probably due to the configuration of the fill port, which he said causes automatic failure. he has not been retained to do any more work at the site. Obligado - I called the DCAS Chief Engineer Joseph Wagner. He said he will have someone call me back with the particulars of the site. From PBS this is a 40,000 gallon #2 heating oil UST. I called back PTC to get mroe information. I spoke with Mr. Lara to confirm whether there was product in the tank. He said the tank had 32,000 gallons in it when it was tested. The leak was determined to be an above liquid leak . He thinks it is possibly a vent issue. He said this is a union site and they stick the tank daily to confirm the product levels. He doesn't suspect there was a release from the tank. Per Austin, spill will be assigned to Vadim Brevdo. 10-28-2014 - V. Brevdo Received a call from Darius Vasquez of Department of Citywide Administrative Services (212-386-0509), who requested extension to comply with the requirements of tank taseting and fixing the tank. Mr. Vasquea advised the Department that there was no actual release of product and that this is dry spill. I requested an e-mail with the extension request, provided an e-mail address to write to me. VB. Mr. Vasques said he will send an e-mail. VB. 11-06-2014 - V. Brevdo Department approved 45-day extension request from DCAS to investigate, make repairs to the tank and submit report to the Department for review. VB 01-21-2015 - V. Brevdo e-mail from Dario Vazquez of NYC Dept. of Citywide Administrative Services: Mr. Brevdo, Please see the attached pdf with the NYC DCAS purchase order to make repairs and retest Brooklyn Supreme Court (360 Adams Street, PBS # 2-217050) tank. I will inform your office once the contractor is schedule to be onsite to make repairs and retest tank. If any further information is needed please do not hesitate to contact me. Sincerely, Dario A. Vazquez, FMA,RPA - Executive Director of Facility Operations, Asset Management P: (212) 386-0509 - F: (212) 313-3384 - Dvazquez@dcas.nyc.gov 01-21-2015 - V. Brevdo e-mail response to NYC Dept. of Citywide Adminstrative Services: Mr. Vazquez: Thank you for the update. Yes, please inform me once the contractor is schedule to be onsite to make repairs and retest tank. V. Brevdo VB 02-20-2015 - V. Brevdo e-mail from Dario Vazquez of NYC Dept. of Citywide Administrative Services: Mr. Brevdo, Please see the above invoice and work tickets from Petroleum Tank Cleaners LTD indicating that the repairs and tightness testing was successful for Brooklyn Supreme Court. (Spill Case # 1406924) Once I receive the official statement from the contractor I will forward it to your office to close out this issue. If any further information is needed please do not hesitate to contact me. Sincerely Dario A. Vazquez, FMA,RPA -

Bill Garafolo from Miller Environmental who is on site cleaning the site. Everything is contained.
No drains, competent concrete. Approx 130 gallons of #6 fuel oil recovered in drums. Now they're
using speedy dry and Aquanex - presume a total of 5 drums and will be done in approx one hour. Then
they'll finish the demolision of the boiler. No release to environment. Close out.

Remarks: 60YO BOILERS IN BASEMENT - FOUND 6 OIL UNDER FOUNDATION DURING DEMOLITIONS OF THE BOILER - NEW BOILER GOING IN

Hazardous Waste Summary:
Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D006
Waste Description: Cadmium

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D010
Waste Description: Selenium

Waste Code: D018
Waste Description: Benzene

Waste Code: D040
Waste Description: Trichloroethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	07/19/12- Zhune spoke to Charles Power from Aldi Development

CVS PHARMACY #17681 (Continued) **S112147654**

516-032-3228. he said they were doing
support excavation. They found a 550- gallons gasoline tank. Thank was removed and soil
contaminated excavated. About 40 yards of soil contaminated was excavated. Endpoint collected.
10/26/12- Called Aldi Development spoke to Gim Vanhorn said the closure report is going to be send
in two weeks. 11/13/14-Wala Canation from CNC Management Corp.emailed the Remedial Action report
including the Phase I and the Phase II. Phase I.-Complety by FLS and Biene dated 1/2007 (with Phase
I update dated April 2008) REC identified st the subject site by Biene, included a parking garage
with ten gasoline USTs. a filling station with eight gasoline USTs, former painting operations, and
other past sites occupanciesn mauy have utilized hazardous and/or petroleum products as part of
therir operations. A CEQR E designation was also identified, being placed on the site by the
Department of City Planning as part of the Downtown Brooklyn Developmen for potential hazardous
materials and noise impacts based upon its historiacl use. The Phase I update dated April 2008 did
not identified any other REC than that stated within the previous Phase I. Phase II.- On 1/11/11
and 2/17/11, CNS advanced a total of nine (9) borings (ACRS-SBO1 through ACRS-SB09).On 10/31/11
through 11/8/11, CNS advanced an additional thirty-one borings ACRS-SB10 throught
ACRS-SB-40)Subsurface borings were advanced to a depth of 30 feet bg or refusal, which is two feet
below the planned excavation depthof 28 ft bgs or the anticipated foundation grade level of 44'
bgs. A total of (61) composite soil samples were obtained from ACRS-SB-10 through ACRS-SB40. The
analitycal result indicate no exceeding of the NYSDEC CP-51/soil cleanup guidance within the
collected soil samoles. Only sample ACRS-SB)5-S5B collected from 8'-16' bgs indicate low-level of
SVOC contituents consisting of Benzo(a)anthracene 3.8 ppm, Benzo (a)pyrene 3.2 ppm, Benzo
(b)fluoranthene 3.9 ppm and Indeno(1,2,3,-cd)pyrene)which was detected slightly above the
standards. On 8/3/11, CNS collected samples from the three remaining monitoring wells at the City
Development site, installed by FLS between 11/2007 to 01/2008. Monitoring well MW-1(FLS'MW5) is
located western portion of hte site, were groundwater was encountered at 43'4 bgs. Monitoring well
MW-2(FLS'MW-3) and MW-3(FLS'MW-2A) are located within the portion tax lot 101, where groundwater is
encountered at 45' 4 bgs and 42' 0 bgs. The groundwater analytical result did not identified any
VOC or Metal contaminants above the the NYSDEC TOGS Standards within any of the three groundwater
samples. However SVOCs contituents were identified. Both Benzo(a)anthracene and

CVS PHARMACY #17681 (Continued) **S112147654**

Benzo(b)fluoranthene were detected slightly above the NYSDEC TOGS within monitoring well MW-1 0.05
ppb and monitoring well MW-2 0.05 ppb. Benzo (a)pyrene 0.06 ppb and Benzo(b)fluoranthene 0.06 ppb
were detected above the standards in monitoting welll MW-3. On 11/13/11, CNS installed a total of
four(4)soil gas at the site labeled SG-01 through SG-04 Analitycal results of all four soil-gas
samples did not identify any volatile chemicals exceeding the air guideline values. Remedial Action
Plan.- The proposed remedial action will consist of: 1.- Perform a Community Air Monitoring Program
. 2.- Utilize site -specific Restricted-Residencail Soil Cleanup Objectives (SCOs) for contaminants
of concer. Excavation and removal os all soi/fill to the depths of 44'bgs including soil/fill
exceeding SCOs, where aplicable. 3.- Collection and analysis of end-point samples. 4.- Removal of
undergraund storage tanks 5.- Construction and maintenance of an Engineering composite cover
consisting of building slab. 6.- Installation of vapor barrier system. 7.- demarcation of residul
soil/fill. 8.- transportation and of -site disposal of all soil/fill material. 9.- Screening of
excavated soil/fill. 10.-Site movilization involving site security setup, equipment mobilization,
utility mark out and marking & staking excavation areas. 11.-Implementation of storm-water
pollution prevention measures. 12.-Performance of all activitities required for the remedial action
13.-Submission of a remedial Closure Report (RCR). 11/14/14-Wala Canario from CNS Environmental
Corp. emailed the Tank Closure Report dated 10/5/12. The report stated that Tank Area # 1,
discovered on 7/12/12 is located within the east /southeast portion of the site (Grid SB-23) where
a 550 gallon gasoline UST was idientified during redevelopment activities. The UST, which was
filled with an inert material was cut, cleaned and removed from the site. Prior to the tank removed
off -site, the area demostrated olfatory evidence of a potential release within the soil was
identified beneath the UST. Soil was excavated from the UST area. ACO # 1, discovered 7/26/12 is
located within the central portion of the site (Grid # 27) where elevated PID readings and a
gasoline odor were idintified during excavation activities. Upon completion of the excavation
activities CNS subsequently collected a total of (5) soil endpoint grab samples from each
excavation area. Endpoint soil samples collected from Area # 1 are: T1-Ep-NS-S1A (north
sidewall),T1-Ep-ES-S2A (east sidewall), T1-Ep-SS-S3A (south sidewall),T1-Ep-WS-S4A (West
sidewall),T1-Ep-BE-S5A (bottom of the excavation). Endpoint soil samples collected from AOC #1 are:
ACC1-EP-NS-S1A (North sidewall), ACC1-EP-ES-S2A (east sidewall),

CVS PHARMACY #17681 (Continued) **S112147654**

ACC1-EP-SS-S3A (south sidewall),
ACC1-EP-WS-S4A (West sidewall), ACC1-EP-BE-S5A (bottom of the excavation). The soil analytical
results of the endpoint samples from both excavation Tahnk #1 and AOC #1 did not identity any VOC
or SVOC contminants exceeding the standards. spill closed.

Remarks: DURING EXCAVATION, A 550 GALLON GASOLIN TANK WAS UNEARTHED.

DEC Memo:	10/5/2021 - Feng - Desk Duty in office. Spoke to Ken Wiles of AKRF. It is a NYCOER E-Designated site. The remedial scope is to do excavation and then building a commercial building. During the RI investigation, elevated PID readings were noted, but sampling did not show any contamination that's reportable. In addition, the RI investigation did not identify any tanks, but the Phase 1 indicates the use of the tanks at this site. This morning, during the excavation

29 JAY ST OFFICE LLC-JAY STREET OWNER LLC-EJM EQUITIES (Continued) **S128042582**

for the footing, they broke
a concrete encased tank, size 18 ft by 3' diameter. Estimated half of the tank content , 50-100
gallons of fuel oil, was leaked out. The contaminated soil has been excavated. The soil is
stockpiled on and the tank is on poly and covered with poly. They continue to excavate more and
deeper into groundwater. Groundwater is estimated at 12' and the excavation right now is at 6-8
feet. No sheen on water so far at some location. They will proceed more carefully in case there is
anymore unknown tanks. Briefed to Eric Kim. And the spill is assigned to him. Ken Wiles AKRF
646-388-9528 KWiles@AKRF.com 10/7/21 - Ken with AKRF consulted with the tank contractor and
believed that the product in the tank was No. 4 fuel oil and that the tank was 16ft in length and
4ft in diameter. AKRF had the contents of the tank removed using a vac truck; the tank was
scheduled to be cleaned for scrap metal disposal that week. AKRF collected a soil sample from the
stockpile for waste classification. 10/13/21 - Kim - I received an email from Ken Wiles with AKRF
that they excavated Tank 001 registered under PBS #2-370215: a 5,000gal tank that stored No. 2 fuel
oil and was closed-in-place. AKRF found petroleum-stained soil next to the tank, but PID readings
did not detect the presence of VOCs. AKRF is coordinating the disposal of this stained soil. AKRF
provided photos of the tank and the separated contaminated soil on poly. 1/17/24 - Kim - On
1/12/24, I received an email from NYC-OER and was provided with a copy of the Remedial Action
Report prepared by AKRF. Eight endpoint samples were collected across the Site, including one
(EP-6_18.5_20220407) collected at the base of the general excavation biased towards the area of the
spill from the discovered Tank 002 1500gal UST and another (EP-2) collected at the base of the
general excavation biased towards the area of the removed Tank 001 5,000gal UST. Acetone (VOC but
not a CP-51 SCO) was detected above its UUSCO of 0.05 mg/kg at a maximum concentration of
0.093mg/kg in EP-7_16_20220407; no other VOCs, SVOCs, PCBs, or pesticides were detected above
UUSCOs in any of the post-excavation endpoint samples. Metals: copper (max 221mg/kg), lead
EP-3_16_20220407 (max 284mg/kg), mercury (max 0.61mg/kg), nickel (max 34.5mg/kg), and zinc
(127mg/kg) were also detected above their UUSCOs but below RRSCOs at the excavation extents. These
compounds (acetone and metals) are likely unrelated to the no. 4 fuel oil spill. Figure 5 of the
RAR shows the final endpoint sample locations and the excavation depths; Figure 6 shows endpoint
sample locations and their concentrations above UUSCOs and RRSCOs. A table of the soil sampling

29 JAY ST OFFICE LLC-JAY STREET OWNER LLC-EJM EQUITIES (Continued) **S128042582**

results is included in Table 2. The full lab reports are included in Appendix H. The soil
contaminated by the spilled no. 4 fuel oil was effectively excavated during the course of site
redevelopment. No further corrective action or remediation is required. Spill case closed - end

DEC Memo:	8/15/2016: Rashad 20 Jay Street has alternate addresses of 26-28 Jay Street, 22 John Street, 30 John Street, 19-37 Pearl Street, and 145-165 Plymouth Street. PBS 2-361429 found for site, there is a 5000 gallon #4 fuel oil AST, three 4000 gallons diesel UST closed prior to 1991, one 4000 gallon gasoline UST closed prior to 1991. Called and left message for Ricky. Spoke to Ricky he said leak is dry leak and that he is technician. Called managing company and they are planning to repair gaskets and have tank retested. Email: eespinosa@twotreesny.com. TTF emailed to property manager. Spill assigned to DEC Piper for follow up. 8/19/16- DEC Piper received and reviewed passing tightness test report along with repair summary. Based on work to date and passing results. This spill is closed. See report in DEC Docs if warranted. Closed.
Remarks:	PBS# 2-361429.

Contact Name: MARK SALAMACK
Latitude: 40.7043960
Longitude: -73.9866610
DEC Memo: 12/12/07-Vought-Duty Desk officer. Called Mark Salamack and two tanks onsite (both 5000-gallon) ASTs and PTC contracted to remove on AST. Both wrapped in concrete. Construction crew discovered oil this morning. They were removing concrete from tank yesterday. Hess is oil company. Tank was overfilled. PTC working for Two Trees Inc (Elizabeth or George 718-625-5505) who is managing company for owner. PTC will be doing cleanup but DOB threatened to have workers arrested due to existing violations. Oil came out of crack two feet from tank top and oil still pooled in secondary containment. Salamack had no contact for DOB, indicated that he left scene and as a result Vought called OEM for assistance with DOB approval of product recovery. OEM will call back Vought to arrange site visit. Vought received callback from PTC Salamack and as per property manager, access was granted by DOB inspector due to spill. Vought returned call to OEM and requested no further assistance. Vought received call from PTC Salamack and cleanup will be performed by Castle Oil as they were delivery company. DEC requires: 1)submission of written summary of cleanup 2)submission of PBS registration. Vought called Rob Hill of Castle Oil (914-490-5443). Possible cause of spill was that customer left stick port open. Hill will callback DEC upon arrival at site. Vought received callback from Hill and delivery company was BLT Trucking not Hess who made 3000-gallon delivery. Cause of spill was disconnected stickwell or pipe was not connected inside. Spill on concrete and no sewers or drains affected. No spill out of vent pipe. Vought prepared CSL with above requirements and one month due date to: Two Trees Management 45 Main Street Brooklyn, NY 11201 and also to BLT Trucking as driver could not have heard whistle and should not have made delivery if pipe was disconnected. Vought called Hill who will call back with contact info of BLT Trucking for letter to be sent. 12/17/07-Vought-Received numerous messages from NYCOEM on status of site despite prior notification by Vought that no further assistance was needed. Called Rob Hill for update and spoke to Hill and BLT finished cleanup and he will be sending someone to inspect site today and will also send in brief letter with above requirements. Vought called NYCOEM Nick Sciallo(718-422-8708) and gave him update and told him again that no further assistance was needed and he was satisfied with update and action. 12/21/07-Vought-Called Rob Hill for update on cleanup and left message to return call. Vought called Two Trees and spoke to Elizabeth and she deferred

PRECISE CORPORATE PRINTING INC (Continued) **1005444290**

all knowledge to Rob Hill. No odor complaints and super is content with cleanup. Vought will closed
case upon verbal confirmation from Rob Hill that soil was not affected and that cleanup has been
completed. No need for CSL to date due to lack of confirmation that soil is indeed contaminated.
11/07/08 I spoke with Rob Hill(Castle Oil)on 11/06/08, he indicated that the spill was cleaned up
by BLT and PTC.He also told me that the tank was wrapped in cement and approx 10 gallons spilled on
cement and floor, floor condition was good and there was no soil contamination.Tank second vent
line was also plugged.Spill can be closed.(sr)

Remarks: CALLER STATES THAT THEY FOUND THIS OVERFILL WHILE GOING TO ABOVE ADDRESS TO CUT UP A DIFFERENT TANK: AND FOUND THE OVERFILL: IT HAPPENED AFTER 4:30 PM LAST NITE

DEC Memo:	Keith Dewar #00245, 1/05/04 AT 18:20 Shift Supervisor Earl Rhem discovered an oil spill in the Annex basement. The spill of 8 gallons was in the turbine reservoir oil conditioner system (Kaydon) moat. The spill was caused when excess water in Kaydon Unit was extracted to a waste drum causing the waste drum to overflow. The oil was cleaned up by Operating Mechanic Mike Slater using a shop vac and oil absorbant pads.Cleanup was completed @ 08:10. Report was filed by Keith Dewar #00245 on 1/05/04 @ 18:25
Remarks:	8 GALLONS SPILLED FROM OVERFLOW-ALL CONTAINED IN A MOAT.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 6/24/01, 4:45 pm: Spoke with Mary Albani (Con Ed Env. Manager) - she claims spill is between 5 and 10 gallons, not 50 gallons as reported by FDNY (see spill # 0103354). FDNY did not respond to site - Con Ed put out fire. (JHO) 5:30 PM: arrived at site, met with Albani, Pete Tokarz. All State Power Vac is on-scene beginning clean up. Appears to be less than 10 gallons on concrete pedestal of gas turbine and on asphalt. (JHO) 6/28/01, 12:00 PM: Visited site again - clean up still in progress. Requested Albani call me when clean up complete. 7/10/01: second load trip /fire on same unit (GT #4). Referred to Div of Air (Sam Lieblich) for follow up on air emissions/ bypass issues. (JHO) 3/24/03: no additional oil spill or clean up issues - close out. (JHO)
Remarks:	LEAK IN PIECE OF EQUIPMENT CAUSED OIL TO LEAK ONT THE FLOOR AND THEN IT CAUGHT FIRE. THE CO2 EXTINGUISHERS PUT THE FIRE OUT AND IT IS STILL BEING INVESTIGATED. UNK HOW MUCH SPILLED

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL DEC inspector notes: 4/9/04: spoke with Pete Tokarz (Env. Manager) - line has been capped, oil cleaned up. Valves upstream closed as a precaution. (JHO) ~~~~~~~~~~~~~~~~~~~ e2mis no. 152819: Environmental manager notified Shift Supv. that he is seeing #6 oil dripping from an isolated section of open ended pipe at 2 west fuel oil heater on the Tank Farm. This is the Discharge pipe from 2 West Fuel Oil heater and the heater has been removed for repairs. Believe leak to be residual oil in pipe. Spill estimated to be 3 gallons dispersed onto surrounding piping,insulation and into trench. Environmental Group at the Station is calling in Allstate power Vac to perform clean-up. Immediate action taken by operations was to secure next valve in line and apply oil pads. Allstate PowerVac arrived at 16:15 hours and strarted cleanup efforts using hand wiping and hotsy equipment. Staining covered a large area and was difficult to access due to piping configuration and unguarded platform area. At approximately 20:30 hours darkness had fallen and the task had become more hazardous. At this time, the job was stopped and schedule for restart in the morning. Much of the heavy spill is cleaned up. a lot of staining appears difficult to clean. APV left the station at approx. 21:10 hours. Allsatae PowerVac completed cleanup at 12:30 hours on 09-APR-04. Pipe end was cover with absorbent plug and heavy plastic bags. No further leakage is noted. Thermal expansion open ended pipe appears to be the root cause.
Remarks:	during equipment transport, residual oil leaked out of tank, spill has been contained, contractor is dispatcing cleanup crew.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 1/20/04: Con Ed requests closure: Report of turbine generator leaking oil. According to NYSDEC Report, the spill was completely contained in one of three containment pits and all 150 gallons were recovered. I responded to Angel Chang (Con Ed remediation): The information in the NYSDEC report is based on the initial call made to the Hotline by Con Edison. None of that information was confirmed by DEC. Provide Con Ed records for this spill. (JHO) 12/13/04: Con Ed submitted additional information on 9/29/04 - a site visit made by Dvirka & Bartilucci found that the leaking bearing oil supply line as well as the supply line were replaced with stainless steel piping to repair the leak. Also, no evidence of any residual oil was observed. Close out. (JHO)

DEC Memo:	e2mis no. 154420: Tunnel Maintenance supervisor D. Blackman #05717 discovered a 10 gallon transformer oil spill onto water inside the transformer vault #2. Chem Lab was notified to take samples and Clean Harbors were called to perform cleanup. 7/30/04 Oil was found in a vault that houses feeder cables. Not a transformer vault. Clean up was performed as follows: (1) Transmission Operations Group, made arrangements with Clean Harbors to clean out the oil and water mixture from the vault. The clean up was supervised by Transmission Ops (Vernon Schaffer emp# 78367 people). (2) After cleaning of the vault Transmission Ops entered the vault to inspect the Feeder. (3) No active leaks were found. (4) Transmission Operations, plans to periodically inspect the vault, to determine if additional oil is found. Lab Sequence Number: 04-05648-001: Analysis indicates the presence of a substance similar to a dielectric fluid. Lab Sequence Number: 04-05647-001: Aroclors < 1.0 ppm Lab Sequence Number: 04-05649-001: Benzene < 1.0 ug/L
Remarks:	VENDOR HAS BEEN NOTIFIED OF THE CLEAN UP BUT IT HAS NOT BEEN IN AFFECT RIGHT NOW: FOUND IN THE HEAD HOUSE IN A TRANSFORMER VAULT, ON GROUND LEVEL. NO TO FIVE QUESTIONS

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 6/30/95: Information submitted by Con Edison as part of site-wide investigation Work Plan: On Nov. 9, 1986, No. 6 fuel oil was discovered on the ground on the east side of Gold Street just north of Marshall Street. Some fuel oil migrated on the surface to the slip area. The source of the discharge was found to be a 12 pipeline running underneath Gold STreet from the tank farm to the slip area. The pipe was excavated on the east side of Gold Street just north of Marshall Street and repaired. The Coast Guard witnessed these activities and closed the case. A contractor was called in to recover product and remove contaminated soils. This spill was recommended for further investigation in the work plan. (JHO) 10/10/95: This is additional information about material spilled from the translation of the old spill file: 50-100 GALLONS. 2/23/07: Based on results of investigation contained in the Site Investigation and Remedial Plan prepared by Dvirka & Bartilucci dated March 2006, there is no

HUDSON AVE GENERATING STATION (Continued) **S102633617**

evidence of residual impact in the subsurface related to this release. See eDocs for the SIRP. This spill is closed. (JHO)

HUDSON AVE GENERATING STATION (Continued) **S102633617**

DEC Memo: 03/20/08 - See eDocs for Con Ed report detailing cleanup and closure. Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ E2MIS 149044 Peter Tokarz #97651 02JUL-2003 09:53 hours - At 09:05 hours a Spill of approximately 1 pint was reported by John Branda. The spill was at the loading well door of the LPBH. The area is protected with absorbant material to catch any leakage from a previous leak. The door was opened and the wind blew the pads away allowing approximately 1 pint of oil to drip on to concrete floor. Door was closed and Cleanup is proceeding using absorbant pads. COA Crandon notified CIG Larry Costa at 09:11 Hours at which he noted that Deminimus spills are not reportable. Sewer / Water Affected: No Active Fire / Smoke: NO Substance: #6 Fuel OIl Source of Spill: 82 boiler Cause of Spill: Unknown Private Property Affected: No Peter Tokarz #97651 02-JUL-2003 10:55 hours - An inspection of the spill area floor indicated more oil was found under the absorbant material (total est. 1/2 gallons). It was determined that the cleanup would take longer than 2 hours and CIG W. Murphy was notified at 10:29 hours of that determination. This changes the spill from a deminimus to an fuel oil spill. The floor had to be cleaned by a vendor using a hotsy (hot wash). At 10:35 hours Vendor AllstateN PowerVac (was on site) was ordered to start a clean up of the residual oils on the floor. Removal of all oil absorbant materials and hot water wash of the floor and replacement of absorbant material. Cleanup is in progress. There is no threat to sewers or waterways. Madee changes to brief descrition and Incident type removing reference to deminimus. Peter Tokarz 02-JUL-2003 11:21 hours - At 11:16 hours notified CIG Larry Costa of update of E2mis and Staus of cleanup. He will inform Bill Murphy.

Remarks: while removing a pipe some product in line dripped out only about 1 pint - location near loading door - ref #149044

Feature Description:	As Per Declaration Of Taking Dated 29 January 1941, The Department Of The Navy Obtained 2.638 Acres Fee. On 15 April 1975, The Department Of The Navy Conveyed 2.638 Acres Fee To Gsa. As Per Quitclaim Deed Dated 4 June 1979, Gsa Conveyed 0.294 Acre Fee To The Department Of Health And Hospitals Corporation (Hhc) Of The City Of New York. Said Deed Did Not Contain Any Recapture Or Restoration Clauses But Did Contain A Restrictive Clause (To Be Used Public Health Purposes For A Period Of Thirty Years -From The Date Of Conveyance). As Per Quitclaim Deed Dated 22 February 1985, Gsa Conveyed 2.344 Acres Fee To The City Of New York. Said Deed Did Not Contain Any Recapture, Restoration Or Restrictive Clauses. On 8 September 1986, The 0.294 Acre Fee Reverted Back To Gsa Because Of A Breach Of Contract By Hhc. Gsa Is Still The Owner Of Record Of The 0.2 94 Acre Fee.

NPL Status:	Not Listed
Description:	The Navy Barracks are located in the County of Kings, Borough of Brooklyn, City of New York, State of New York. The site is bounded on the North by Flushing Avenue, on the South by Park Avenue, on the East by Vanderbilt Avenue and on the West by Clermont Avenue. The site was improved by a six story concrete building utilized as a military prison and three story brick building used as barrack and for administrative purposes. The NYC Department of Corrections is used as the Brooklyn Correctional Facility. The former military prison building and associated utilities are beneficially used by the present owner the New York City Department of Corrections. The former Navy barrack and administrative building is abandoned and owned by GSA. There are number of underground storage tanks, which were never used

NAVY BARRACKS BKLYN (Continued) **1024899202**

by the present owner.

History: As per Declaration of Taking dated 29 January 1941, the Department of the Navy obtained 2.638 acres fee. On 15 April 1975, the Department of the Navy conveyed 2.638 acres fee to GSA. As per quitclaim deed dated 4 June 1979, GSA conveyed 0.294 acre fee to the Department of Health and Hospitals Corporation (HHC) of the City of New York. Said deed did not contain any recapture or restoration clauses but did contain a restrictive clause (to be used public health purposes for a period of thirty years -from the date of conveyance). As per quitclaim deed dated 22 February 1985, GSA conveyed 2.344 acres fee to the City of New York. Said deed did not contain any recapture, restoration or restrictive clauses. On 8 September 1986, the 0.294 acre fee reverted back to GSA because of a breach of contract by HHC. GSA is still the owner of record of the 0.2 94 acre fee.

DEC Memo:	05/19/21-Hiralkumar Patel. 4:31 PM:- spoke with Joel. he mentioned that the site enrolled in NYC VCP and OER asked to report spill. asked Joel to submit available reports for review. Joel Kane Fleming-Lee Shue, Inc. Ph. (212) 675-3225 (406) 321-0586 Fax (212) 675-3224 email: joel@flemingleeshue.com 05/20/21-Hiralkumar Patel. received email from OER confirming access to EPIC folder for this project. briefly reviewed remedial investigation report dated May 2021, which shows presence of some VOC/SVOC contamination at the site. spoke with Joel regarding need to report spill. he mentioned that OER asked to report spill based on high PID readings (up to 5,000 ppm) and strong petroleum odors in borings B3 and B7 which were installed in the suspected UST area. Joel stated that these tanks were in use in 1930s. as part of site development, soil will be removed to a depth of 1 ft above groundwater depth, and any tanks found will be removed. a RAWP is being drafted at this point. asked Joel to include endpoint sampling from contaminated areas as per DER-10 and vapor mitigation plan in the RAWP. 1:27 PM:- received email from OER Shaminder. he mentioned that this 19,580 sf site is currently being used for mixed-use commercial residential properties and a large parking garage. the proposed future use of the Site will consist of a new 52-story mixed-use commercial/residential building with two subgrade

(Continued) **S127584843**

parking floors (cellar and
sub-cellar). groundwater was found at 27 ft bg. three lots (# 25, 26 and 29) on block # 2095 are
included in this project. alternate address: 170-194 Ashland Place, 96-104 DeKalb Ave no PBS or
other spills found. site has e designation for hazmat. Ashland Dekalb LLC. **property owner** c/o
Rockrose Development LLC. 15 East 26th Street, 7th Floor New York, NY 10010 05/21/21-Hiralkumar
Patel. 10:37 AM:- sent email to OER Shminder. informed him that the case will be managed by DEC
Sekhon. asked Shaminder to provide EPIC folder access to Sekhon and send future correspondences to
Sekhon. email copied to OER Shirley Chen, DOH Nathan, DEC Sekhon and Joel. case assigned to DEC
Sekhon. 1/14/22 - Sekhon 9/28/21 - Sekhon forwarded draft RAWP send by OER reviewed and discussed
with OER & send to RP by Shirley Chen as email - Good morning Joel, Thank you for addressing OER's
comments. Please see the attached document with minor edits to the text. As per DEC's advisement,
Volatile Organic Compounds must meet Protection of Groundwater Standards. Language has been added
to Section 4.2 Soil Cleanup Objectives and Soil/Fill Management to reflect this. Additionally, the
elevator pit detail drawing in the vapor barrier diagram (Figure 8) should be revised to show the
vapor barrier installation along the bottom and up around the elevator pit. Currently, only the
bottom of the elevator pit is shown. The foundation sidewall detail drawing (top left circle) is
missing the 3 layer of aggregate and should be addressed to match the composite cover description.
Please finalize the RAWP and submit a full PDF version with text, figures, and appendices. Also
attached is a draft Stipulation letter. The vapor barrier figure should be revised and attached in
the RAWP PDF. If not addressed in the RAWP, please attach the revised figure in the Stipulation
letter. Lastly, OER will forward the draft RAWP to DEC Spills to coordinate any additional
requirements for addressing the open spill. Any items requested by DEC may be included in the Stip
Letter. Please let me know if you have any questions. Thank you, Shirley Chen Project Manager -
Office of Environmental Remediation 100 Gold Street, 2nd Fl, New York, NY 10038 shchen@dep.nyc.gov
11/3/21 - Sekhon Remedial Investigative report & final Remedial Action Work Plan submitted. DECDOCS
The proposed remedial action consist of: Performance of a Community Air Monitoring Program for
particulates and volatile organic carbon compounds. Excavation and removal of soil/fill exceeding
Track 2 Restricted Residential SCOs. The majority of the subcellar footprint will be excavated
approximately 16 feet below the existing basement grade (i.e. 22-24 NAVD88) to a depth of

(Continued) **S127584843**

approximately 5.6 (NAVD88) for development purposes. Within this area, the proposed elevator pit
footprint will be excavated approximately an additional 9 feet to a final depth of approximately -3
4 (NAVD88). Additionally, the northwestern section of the Site in Lots 25 and 26 will be excavated
to accommodate the proposed slab-on-grade parking ramp. Excavation depth will vary with maximum
excavation expected to be approximately 12.7 below existing street grade (i.e. 29 NAVD88) to a
maximum depth of 16.3 (NAVD88). Approximately 15,500 tons of soil/fill will be removed from the
Site and properly disposed at an appropriately licensed or permitted facility. Screening of
excavated soil/fill during intrusive work for indications of contamination by visual means, odor,
and monitoring with a PID. Management of excavated materials including temporarily stockpiling and
segregating in accordance with defined material types and to prevent co-mingling of contaminated
material and non-contaminated materials. Removal of all known underground storage tanks and other
USTs that are encountered during soil/fill removal actions, and bulk removal of petroleum
contaminated soil from below each tank and from around each tank in accordance with applicable laws
& regulations. Registration of tanks and reporting of any petroleum spills associated with USTs and
appropriate closure of these petroleum spills in compliance with applicable local, State and
Federal laws and regulations. Spill closure and any associated groundwater remediation will be
managed under NYSDEC authority for Spill No. 2101542. RP will submit Spill closure report for
closure. 8/26/22 - Sekhon Joel kane (Fleming Lee Shue) called and told that some light intrusive
work for this project has begun and they have begun some UST removal. Contractor will remove the
soil beneath UST to the areas to the planned development cut depth (approximately 14-20 feet below
the tanks) and collect confirmation samples at that depth. 4/14/23 - Sekhon Updates from Joel Kane
- Remedial Action As a reminder, the remedial investigation identified petroleum impacts in the
southeastern section of the Site derived from suspected USTs in the parking garage basement. The
proposed redevelopment of the Site included excavation of the bulk of the Site (including the
impacted area) down approximately 20 below existing street level to make way for a sub-cellar
parking garage. As such the proposed redevelopment would largely over-excavate the UST areas.
Original Site elevation ranged from approximately 29 34 NAVD88. Water table is expected at
approximately 5 to 8 NAVD88. Following demolition of the existing on-Site buildings support of
excavation (SOE) piles were installed around the Site s perimeter. All

(Continued) **S127584843**

drill cutting were screened
with a photoionization detector (PID) and for visual and olfactory
evidence of petroleum impacts.
Evidence of petroleum impacts were isolated to the areas in the
vicinity of suspected USTs in the
southeastern area of the Site. Following SOE install, incremental Site
excavation occurred. A total
of seven (7) USTs found on Site were removed, cleaned and properly
disposed of. Tanks are in the
process of being registered and subsequently closed with NYSDEC.
Following additional SOE
installation, the bulk of the Site was excavated approximately 20 feet
below street level to its
current elevation of 10 NAVD88. All excavated soil was screened with a
PID and two CAMP stations
monitored VOC and particulate concentrations during all intrusive
work. Again, the only remaining
petroleum impacts appear isolated to the southeastern portion of the
Site. All soil was managed
according to the approved Soil Materials Management Plan (SMMP). Next
Steps The remaining impacted
area in the southeastern section of the Site will be hotspot excavated
in conjunction with the
planned pile cap install in the area. Pile cap excavation is expected
to go to approximately
groundwater depth (approximately 5-6 NAVD88). Endpoint samples in that
area will be collected per
DER-10 (i.e. 1 sidewall sample per 30 linear feet of hot-spot
excavation and 1 bottom sample per
900 square feet of area). Additionally, per your request we will
develop a separate NYSDEC spill
closure report for your files summarizing all endpoint sample results.
Thanks again, Joel Kane
Director Fleming-Lee Shue 158 West 29th Street New York, NY, 10001 P:
(212) 675-3225 F: (212)
675-3224 C: (406) 321-0586 12/28/23 - Sekhon closure report submitted
for depatmental review.
DECDOCS 1/2/23 - Sekhon UST Removal A total of seven (7) USTs were
removed from the Site. USTs were
at various depths including four (4) below the existing basement
garage and an additional three (3)
USTs below the sidewalk and street-level building slabs. As such, UST
removal occurred throughout
the remedial excavation process over a period from September 13, 2022
to February 2, 2023. In
addition to the four (4) 550-gallon USTs originally identified in the
1938 Sanborn Fire Insurance
Map, FLS encountered an additional three (3)USTs located throughout
the Site. This included a
3,000-gallon gasoline UST located beneath the sidewalk in the vicinity
of the spill impact area.
All USTs were removed according to best practices and applicable
regulations. This generally
included vacuuming out remaining contents, filling the tank with inert
gas to avoid spark risk,
removal and cleaning of the tank, and finally off-site disposal at a
recycling facility. All USTs

(Continued) **S127584843**

were registered and subsequently closed with PBS # 2613477. Remedial Excavation Per the approved
RAWP, FLS proposed over-excavation of the UST area as a part of the redevelopment of the area to a
sub-cellar parking garage. Elevation varies on Site, but for the purposes of this report, 30 ft.
NAVD88 is considered street-level and all below-grade depths discussed herein are relative to this
elevation. Final development excavation depth on Site varied and consisted of four primary target
depths as shown on Figure 4. As a part of development, soils within the majority of the spill area
(i.e., the proposed sub-cellar garage) were excavated approximately 21 ft. from street level to
approximately 9 ft. NAVD88. Within the building core excavation, including a portion of the spill
area, soils were excavated an additional 6 ft. to an approximate depth of 3 ft. NAVD88. The
elevator pit was excavated to a depth of -10 ft. NAVD88 or approximately 40 ft. from street-level.
The Site includes two out-facing lots to DeKalb Avenue, neither of which had documented impacts
from the on-Site spill. The western lot was excavated along a gradient ranging from street level on
its northern edge, to a depth of approximately 21 ft. NAVD88, 9 ft. below street-level, on its
southern edge. The eastern DeKalb facing lot is a slab-on-grade development and was not excavated.
Overall, a total of 19,330 cubic yards (28,995 tons) of soil were removed from the proposed garage
area, which included the UST spill area. Of the total volume removed, 10,000 cubic yards (15,000
tons) were removed as non-hazardous, petroleum-contaminated soil. During excavation, soil was
screened for indications of contamination by visual means, odor, and monitoring with a PID.
Management of excavated materials included temporarily stockpiling and segregating them in
accordance with defined material types to prevent comingling of contaminated material and
non-contaminated materials. All excavated soil was disposed of at pre-approved, appropriately
licensed and/or permitted facilities. Deviations from the RAWP The approved RAWP initially outlined
over-excavation of impacted soils within the spill area to groundwater depth, which was projected
at 4 ft. NAVD88. However, during intrusive activity, neighboring structures along the southern edge
of the Site experienced extraneous movement, as documented by motion sensors installed within their
basements. As such, excavation of the impacted area to groundwater depth was no longer considered
safe or practical. This information was relayed to both NYCOER and NYSDEC, and a secondary
excavation and sampling plan was developed. The southeast section of the Site would be excavated to
the final slab depth of 9 ft. NAVD88, and additional excavation

(Continued) **S127584843**

ranging from 3 to 5 ft. NAVD88
would occur in the footprints of the proposed foundation elements
(i.e., pile caps) as shown in
Figure 3. FLS proposed collecting additional endpoint samples at final
excavation depth and within
each pile cap area to document remaining conditions and concentrations
of any contamination left in
place. NYSDEC and NYCOER approved of this sampling plan on April 25,
2023. Post-Excavation Soil
Sampling Sampling Scope A total of twenty-two (22) post-excavation
soil samples were collected
following remedial excavation. All samples were collected per DER-10,
including the bottom and
sidewalls of all pile caps near the area where leaking USTs were found
and removed. All soil
samples were shipped under proper chain of custody protocol via
courier to SGS North America Inc.,
a New York State ELAP-certified laboratory. The soil samples were
analyzed for Target Compound List
VOCs by U.S. Environmental Protection Agency (EPA) Method 8260, SVOCs
by EPA Method 8270, Target
Analyte List (TAL) Metals by EPA Methods 200.7/SW846 6010, and Target
Analyte Pesticides and
Polychlorinated Biphenyls (PCBs) by EPA Method 8081 and 8082,
respectively. Sampling Results
Sampling results were compared to the New York State Unrestricted Use
SCOs (UUSCOs), Restricted
Residential SCOs (RRSCOs), and Protection of Groundwater SCOs
(PGWSCOs). Volatile Organic Compounds
(VOCs) VOCs were generally non-detect throughout the Site with the
exception of some low
concentrations of various compounds including the petroleum compounds
cyclohexane (123 ug/kg),
benzene (20.9 ug/kg), ethylbenzene (1,390 ug/kg), isopropyl benzene
(739 ug/kg), methylcyclohexane
(705 ug/kg), toluene (29.7 ug/kg), and total xylene (92.5 ug/kg). Of
these, only two VOCs were
detected at concentrations exceeding regulatory standards: the
concentration of acetone within
sample EP-11 (27) (87 ug/kg) exceeded Unrestricted Use SCOs (50
ug/kg) and the NYS Protection of
Groundwater SCOs (50 ug/kg). Similarly, the concentration of
ethylbenzene (1,390 ug/kg) within
sample SW-6 (26) exceeded both Unrestricted Use SCOs (1,000 ug/kg)
and NYS Protection of
Groundwater SCOs (1,000 ug/kg), but did not exceed Restricted
Residential SCOs (41,000 ug/kg).
Semi-Volatile Organic Compounds (SVOCs) SVOCs were generally
non-detect throughout the Site with
the exception of some low concentrations of polycyclic aromatic
hydrocarbons (PAHs). Low
concentrations of various compounds below SCOs were detected,
including 1,1 -biphenyl (116 ug/kg),
acenaphthene (1,410 ug/kg), anthracene (515 ug/kg),
benzo(g,h,i)perylene (508 ug/kg),
benzo(k)fluoranthene (479 ug/kg), dibenzo(a,h)anthracene (175 ug/kg),
fluoranthene (2,230 ug/kg),

(Continued) **S127584843**

fluorene (1,180 ug/kg), naphthalene (3,640 ug/kg), phenanthrene (4,980 ug/kg), and pyrene (1,860
ug/kg). Concentrations of SVOCs exceeded regulatory standards within only one sample, SW-9 (26).
Concentrations of benzo(a)anthracene (1,230 ug/kg), benzo(a)pyrene (1,080 ug/kg),
benzo(b)fluoranthene (1,090 ug/kg), chrysene (1,060 ug/kg), and indeno(1,2,3-cd)pyrene (524 ug/kg)
all exceeded their respective Unrestricted Use SCOs. Of these compounds, all but chrysene exceeded
their respective Restricted Residential SCOs as well.
Indeno(1,2,3-cd)pyrene s exceeded Restricted
Residential SCO was 500 ug/kg, while benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene
each exceeded their Restricted Residential SCOs of 1000 ug/kg. The total concentration of SVOCs
detected ranged from 103.9 ug/kg to 31,364.0 ug/kg across the spill area. Total SVOCs did not
exceed the approved Site-Specific SCO of 200 ppm at any location.
Metals - Metals were found
throughout the Site including lead (23.2 mg/kg), nickel (96.4 mg/kg), arsenic (6.4 mg/kg), barium
(47.3 mg/kg), chromium (19.9 mg/kg), cobalt (8.1 mg/kg), and vanadium (26.1 mg/kg). All metal
compounds were detected below Unrestricted Use SCOs with the exception of nickel. Nickel was
detected at concentrations exceeding the NYS Unrestricted Use SCOs (30 mg/kg) in thirteen (13)
samples, ranging from 30.3 mg/kg to 96.4 mg/kg. There were no analyte concentrations, including
nickel, that exceeded the Restricted Residential SCOs. Polychlorinated Biphenyls (PCBs) - PCBs were
non-detect throughout the Site, with the exception of two instances. Concentrations of Aroclor 1242
exceeded Unrestricted Use SCOs within samples SW-8 (26) (240 ug/kg) and EP-8 (26) (161 ug/kg).
PCBs on Site did not exceed Restricted Residential SCOs. Pesticides Pesticides were largely
non-detect throughout the Site with the exception of some low concentrations of 4,4 -DDE (1.8
ug/kg), 4,4 -DDT (3.1 ug/kg), alpha-BHC (0.63 ug/kg), and endosulfan-I (0.88 ug/kg). Concentrations
of pesticides on Site did not exceed Unrestricted Use SCOs.
Engineering Control Installation At the
time of RAWP acceptance, the exact products and placements of all subgrade vapor
barrier/waterproofing products was not known and placeholders were used and a construction update
confirming the vapor barrier products and layouts planned for the Site was submitted to OER on May
12, 2022. Ultimately however, the final installation plans of the vapor barrier system differed
slightly from the specifications outlined in both the original RAWP and the construction update
letter. The completed vapor barrier system in the parking garage area of the Site was largely
unchanged from the approved RAWP and featured a Grace Preprufe 300R

(Continued) **S127584843**

Plus layer below the slab and a Grace Preprufe 160R Plus layer up to grade along the north, west, and south garage boundaries. The east boundary instead featured Bituthene 4000 up to grade. Within deeper structural or foundational excavations within the parking garage area, Grace Preprufe 300R Plus was installed along vertical surfaces along with infrequent use of 4000 Bituthene and Aquafin-1C Crystalline products. Similarly, the two outfacing areas along DeKalb Avenue were both underlain and bounded up to grade by Grace Preprufe 300R Plus,but feature sparing use of Aquafin-1C Crystalline waterproofing, Grace Preprufe 160R Plus, and 4000 Bituthene in select areas. Additionally, the northeastern outfacing lot features additional installations of Grace Preprufe 300R Plus around foundation and structural elements. These product and layout updates to the vapor barrier system conformed to the requirements of the approved RAWP and are protective of public health and the environment by mitigating soil vapor migration into the constructed building. The composite cover system installed throughout the Site is composed of a 6- to 18-inchthick concrete building slab, the vapor barrier system, and an approximately 3-inch-thick concrete mud slab over undisturbed compacted soil. Additionally, the use of a garage ventilation system throughout the sub-cellar parking garage area will further mitigate any human exposure to soil vapors. Summary and Recommendation As a part of the redevelopment of the property into mixed-use development with a sub-cellar garage, an NYCOER and NYSDEC approved RAWP was implemented at the Site. A total of seven (7) USTs were removed, cleaned, disposed of, and ultimately closed on-Site. As a part of redevelopment, initial excavation was planned to the groundwater table (i.e., approximately 4 ft. NAVD88 or 26-ft. below street level); however, excavation to this depth was later found to be infeasible and unsafe due to extraneous movement in neighboring structures during excavation. It was then determined by FLS, NYCOER, and NYSDEC that due to these safety restrictions some residual contamination may ultimately remain in place. Per the new approved excavation and sampling plan, the spill impact area was excavated to a depth of 9 ft. NAVD88 or approximately 21 ft. from street-level with additional excavations down to 3 to 5 ft. NAVD88 for various foundation elements throughout the area. Overall, 19,330 cubic yards (28,995 tons) of soil were removed from the proposed garage area, which included the UST spill area. Of this, 10,000 cubic yards (15,000 tons) were removed as non-hazardous petroleum contaminated soil. A total of twenty-two (22) endpoint samples were collected on Site and

(Continued) **S127584843**

analytical results show the vast majority of compounds meet Unrestricted Use SCOs. Regulatory exceedances beyond Unrestricted Use appear limited to relatively low concentrations of nickel throughout the Site, and a few isolated samples with exceedances of PCBs, VOCs and SVOCs. Concentrations of nickel did not exceed Restricted Residential SCOs at any location. PCB exceedances were limited to two detections of Aroclor 1242, which similarly did not exceed Restricted Residential SCOs. VOC exceedances were limited to two compounds, acetone and ethylbenzene, detected in two separate samples, neither of which exceeded Restricted Residential SCOs. SVOC concentrations were limited to PAH compounds within a single sample SW-9 (26). Concentrations of these compound modestly exceeded Restricted Residential SCOs and were present in concentrations consistent with Urban Fill. However, concentrations of Total SVOCs remain well below Site Specific SCOs. The vast majority of impacts from site have been successfully removed, but due to limitations in the excavation derived from extraneous movement in neighboring structures, some isolated contamination was left in place. Nonetheless, the installation of the engineering controls including a vapor barrier, a composite cover system, and the garage ventilation system will adequately mitigate any human exposure. Based upon to the provided information spill closed.

Remarks: Soil testing showing impacted soil. Further investigation and cleanup is pending. Caller requesting callback.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 01/26/04 Transferred from Rommel to Austin 02/17/04: Reassigned from AUSTIN to KRIMGOLD. 11/05/2005 Left messages for Dean Peterson at new location at Community Living (718-855-4035). Did not receive a callback. Bishop 09/13/06 This case was transferred from Albany to Region 2. Zhune called Mr. Petersen several times. He never call back. A TTF letter was sent to: Mr. Dean Petersen 40 Rector Street New York, NY 10006 08/14/08-Zhune visited the site spoke to Tiffany Adams Office/Building Manager (718) 855-4035 ext. 1303. Tiffany called Crris Heighter the Director of the Institue of Community Living celll 347- 219-8991, office 718- 272-6046. He said by the time that the tank failed the test in 2001 he was not the Director of the Community Living. The 3000 gallons # 2 fuel tank was recently tested by ACR Mechanical and passed the test. He will be back from vacation on september and will search for papers work. A TTF lettter was sent to: The Institute of Community Living 2384 Atlantic Ave. Brooklyn NY 11233 Att: Chris Heighter 09/19/08 Chris Heighter sent the result for the last Tightness test. The 3000 gallons #2 fuel tank was tested on 05/07/08. The result indicates that the tank passed the test Therefore DEC is asking for information that happened in 2001. 09/30/08- Zhune called Chris and gave him the phone # of Crown Leak Detection which was the company that tested the tank on 07/30/2001. 11/26/08-Chris sent the 02/21/03 tank test results thst was done by Protest. 11/26/08-Zhune spoke to Bob from Protest. As per Bob the tank system was tested in December, 2002 and failed the test with a Ullage (dry) leak. They replaced the remote fill and the vent line. On 02/21/03 the system was restested and passed the test. He also said that he did not see any note about contamination at this site. Worker who did this job are no longer with Protest Spill closed.
Remarks:	caller found the tank that may be connected to an abandoned tank and he believes that is why the tank test failed

NAVAL STATION-BROOKLYN, TRANSFORMER AREA (Continued) **S105586295**

Site Description: Location: Naval Station - Brooklyn is located in a flat industrial area within the New York Naval Shipyard in the Williamsburg section of Brooklyn, north of Flushing Avenue, between Clinton Avenue and Williamsburg Place. Site Features: The East River is 1500 feet west of the site. There are two working electrical substations at the site which have three transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls. They are located in the northern portion of the property, adjacent to the property line. Current Zoning/Use(s): Industrial Historic Use(s): A 1987 Phase I investigation showed that the PCB content of the dielectric fluid in the transformers ranged from 250 to 590 parts per million (ppm). Transformer spills stained slabs and soil located beneath the transformers, with soil contamination ranging from 0.5 to 870 ppm. The PCB containing transformers were subsequently retro-filled. Remedial work began in the summer of 1994 and concluded in 1995 and included power-washing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. Three monitoring wells were installed to determine whether PCBs had contaminated the groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. It was determined that further monitoring at this site was not warranted. In July 2012 NYSDEC placed an Environmental Notice on the Transformer Area which requires written approval from NYSDEC prior to any disturbance or excavation of the soil, proper management and/or disposal of any contaminated materials exposed or removed, and prior approval by NYSDEC for any change in use. The Transformer Area has been delisted from the Registry of Inactive Hazardous Waste Disposal Sites in New York State.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete, to extent that the Navy was able to work around the active transformers. The primary contaminants of concern at the site, PCB's, were addressed by the removal action completed in 1995. Due to the location in a walled transformer yard beneath the crushed stone site cover, and the limited amounts remaining in the soil, residual PCB contamination in the soils will not impact the East River. Three rounds of groundwater samples were non-detect for PCBs. Special Resources Impacted/ Threatened: None

Health Problem: Since some contaminated soils remain at the site below concrete or clean backfill, people will not come in contact with contaminated soils unless they dig below the surface materials. In addition, the site is fenced, which restricts public access.

NAVAL STATION-BROOKLYN, TRANSFORMER AREA (Continued) **S105586295**

Site Code: 55915
Site Description: Location: Naval Station - Brooklyn is located in a flat industrial area within the New York Naval Shipyard in the Williamsburg section of Brooklyn, north of Flushing Avenue, between Clinton Avenue and Williamsburg Place. Site Features: The East River is 1500 feet west of the site. There are two working electrical substations at the site which have three transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls. They are located in the northern portion of the property, adjacent to the property line. Current Zoning/Use(s): Industrial Historic Use(s): A 1987 Phase I investigation showed that the PCB content of the dielectric fluid in the transformers ranged from 250 to 590 parts per million (ppm). Transformer spills stained slabs and soil located beneath the transformers, with soil contamination ranging from 0.5 to 870 ppm. The PCB containing transformers were subsequently retro-filled. Remedial work began in the summer of 1994 and concluded in 1995 and included power-washing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. Three monitoring wells were installed to determine whether PCBs had contaminated the groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. It was determined that further monitoring at this site was not warranted. In July 2012 NYSDEC placed an Environmental Notice on the Transformer Area which requires written approval from NYSDEC prior to any disturbance or excavation of the soil, proper management and/or disposal of any contaminated materials exposed or removed, and prior approval by NYSDEC for any change in use. The Transformer Area has been delisted from the Registry of Inactive Hazardous Waste Disposal Sites in New York State.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete, to extent that the Navy was able to work around the active transformers. The primary contaminants of concern at the site, PCB's, were addressed by the removal action completed in 1995. Due to the location in a walled transformer yard beneath the crushed stone site cover, and the limited amounts remaining in the soil, residual PCB contamination in the soils will not impact the East River. Three rounds of groundwater samples were non-detect for PCBs. Special Resources Impacted/ Threatened: None
Health Problem: Since some contaminated soils remain at the site below concrete or clean backfill, people will not come in contact with contaminated soils unless they dig below the surface materials. In addition, the site is fenced, which restricts public access.

Common Name of Substance: Gasoline

Tightness Test Method: 21
Date Test: 03/31/2003
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: MJGRIFFI
Last Modified: 05/09/2022

Equipment Records:

H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I01 - Overfill - Float Vent Valve
K01 - Spill Prevention - Catch Basin
B04 - Tank External Protection - Fiberglass
D01 - Pipe Type - Steel/Carbon Steel/Iron
E00 - Piping Secondary Containment - None
A00 - Tank Internal Protection - None
J01 - Dispenser - Pressurized Dispenser
G04 - Tank Secondary Containment - Double-Walled (Underground)
L07 - Piping Leak Detection - Pressurized Piping Leak Detector
C02 - Pipe Location - Underground/On-ground
F03 - Pipe External Protection - Original Impressed Current
I04 - Overfill - Product Level Gauge (A/G)

Tank Number: 106
Tank ID: 50668
Tank Status: Closed - Removed
Material Name: Closed - Removed
Capacity Gallons: 550
Install Date: 06/01/1987
Date Tank Closed: 12/17/2004
Registered: True
Tank Location: Underground
Tank Type: Fiberglass coated steel
Material Code: 0022
Common Name of Substance: Waste Oil/Used Oil

Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: MJGRIFFI
Last Modified: 05/09/2022

Equipment Records:

E00 - Piping Secondary Containment - None
G04 - Tank Secondary Containment - Double-Walled (Underground)
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
L00 - Piping Leak Detection - None
D00 - Pipe Type - No Piping
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I00 - Overfill - None
K01 - Spill Prevention - Catch Basin
A00 - Tank Internal Protection - None
B04 - Tank External Protection - Fiberglass

MOBIL OIL-#17FLG (Continued) **1000553736**

J00 - Dispenser - None

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility

MOBIL OIL-#17FLG (Continued) **1000553736**

Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Name: KENT AVENUE GENERATING STATION
Address: 500 KENT AVENUE
City,State,Zip: BROOKLYN, NY 11211
Program: HW
Site Code: 421905
Classification: N
Region: 2
Acres: 2.640
HW Code: 224137
Record Add: 11/17/2009
Record Upd: 10/01/2020
Updated By: DJEATON
Site Description: The Kent Avenue Generating Station Site is located in Brooklyn, NY. It is along the waterfront (Wallabout Channel, trib to East River) on the west side of Kent Avenue, south of the intersection with Division Avenue. The site is the location of the former Kent Avenue Generating Station, which has since been demolished. Excepting activities related to building demolition and property rehabilitation, with respect to current use the site is considered inactive. The uses of the surrounding parcels are varied: across Kent Avenue is a NYC Park (Roberto Clemente Ballfield); immediately to the south is the Brooklyn Navy Yard 13 Acre Parcel Site (NYSDEC Site No. 224019A); immediately to the north across Division Avenue are commercial uses; properties to the northeast and to the southeast appear to have residential uses. Prior uses that appear to have led to site contamination include discharges during the period of operation of the power plant and on-site re-use of prior demolished structures as fill material. A number of environmental investigations of the property have occurred including a Phase II (2000) and other investigations focused on particular issues or areas of the site from 2006 to present. Reclassified to N. See V00732 - Kent Avenue Station Site. Work to be done under VCA Amendment.
Env Problem: This site has been successfully remediated. The information on the remedy is included under site V00732. The following description was true during the early stages of work at this site. The primary contaminants of concern at the site known at the time include PCBs, asbestos, various metals, petroleum constituents and PAHs. Investigations indicate SCG exceedances of PCB and petroeum compounds in sediments/ sludge contained in a large concrete structure (known as the ash pit); asbestos, metals and PAHs in subsurface soils/fill; and an area of groundwater petroleum contamination in the southwest corner of the property. The significance of the contamination needs to be determined.
Health Problem: Not reported

Acres:	2.640
Date Record Added:	06/23/2010
Date Record Updated:	06/18/2021
Updated By:	DJEATON
Site Description:	Location: The site is located in a mixed-use area along the Brooklyn waterfront. It is bounded by Kent Avenue to the east, Wallabout Channel to the west, Division Avenue to the north, and the Brooklyn Navy Yard to the south. Site Features: The site has been sold to a developer but is still currently vacant and open. In the subsurface, a large concrete-lined pit is present in the northwest corner of the site and along the edge of the Wallabout Channel. A large concrete slab which is part of a former power plant foundation occupies the center of the site. The slab has been covered with clean fill. Current zoning/use. The site is zoned for industrial use but is currently vacant. It is surrounded by commercial buildings and multiple occupancy residences. Past Use of the Site: The site was previously an electrical generating station and substation from 1906 until the late 1990s. The site was razed from 2007 to 2009. The main sources of contamination were the concrete-lined ash pit storage area and by-products of the electrical generating process which are

KENT AVENUE STATION SITE (Continued) **S102663001**

	scattered across the site. Site Geology and Hydrogeology: The site is underlain by a 5 to 10 foot layer of fill material. Under the fill are intermingled layers of silt and sand down to roughly 100 feet below grade. Beneath the silt and sand is a clay confining unit. The water table lies roughly 8 feet below the ground surface. Based on the site s proximity to the Wallabout channel, groundwater levels are probably tidally influenced. The far western edge of the site is built out on piles over the bank of the Wallabout Channel.
Env Problem:	Active Remediation at the site is complete. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) in soil, volatile organic compounds (VOCs) in groundwater and polychlorinated biphenyls (PCBs) in the ash pit sediments.
Health Problem:	The site is completely fenced, which restricts public access. Persons who dig below the ground surface may come into contact with contaminants in the subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

DEC Memo:	11/22/10 - Austin - This spill has been reassigned to Douglas MacNeal in DER-Albany, as part of a remediaton project he is handling - end 11/24/10 - MacNeal - The Asbestos brought to the surface has been handled by a National Grid Contractor. I am awaiting a report from National Grid documenting the clean-up. Any additional asbestos material will be handled under the existing VCA (V00732) 3/31/2011 - MacNeal - The spill is closed. The date of closure is the date that correspondence was received from National Grid which contained air monitoring reports and a waste manifest which confirmed proper disposal of the asbestos which was released. Those items have been placed in edocs.
Remarks:	While taking bore samples has a release into the apmosphere. Location is a former ConEd site.

DEC Memo:	12/14/06: spoke with David Rubin, Con Ed Remediation project manager. Apparently the site is undergoing second Phase II for property transfer. Con Ed also plans on demolishing the former gen station building. They expect a summary report of investigation with recommendations for remediation from consultant during 1Q07. I told Dave to make sure DEC receives a copy, since we have a number of outstanding spills related to the site. (JHO) 3/14/08: NYSDEC received Ash Pit Remedial Investigation (RI) summary report dated March 3, 2008 from Con Ed. See eDocs for details. (MA, 4/04/08) 4/3/08: Spoke with Con Ed Remediation project manager, David Rubin regarding suitable time-frame for submission of feasibility study work plan (FSWP) and RAWP related to Ash Pit site. The Department has approved 90 days period as requested by Con Ed for submission of FSWP and RAWP. 4/14/08: NYSDEC sent comments letter to Con Ed in response to Ash Pit Remedial Investigation Summary Report dated March 3, 2008. Comments letter is in eDocs. (MA). 4/17/08: NYSDEC is in receipt of response letter from ConEd. The letter requests for modification of time-frame requested in comments letter of April 4, 2008 for submission of RAWP and Feasibility Study report. See eDocs

KENT AVENUE STATION SITE (Continued) **S102663001**

for details. (MA) 4/18/08: NYSDEC sent approval letter to ConEd, the letter modified submission of
FS and RAWP schedule. Document in eDocs. (MA) 11/25/09. This site was transfered to Hazardous Waste
Program and should be tracked under HW224137. Spill case closed. JK. 5/23/13 - note that the prior
comment needs clarification; the investigation finding that was reported to the Department via this
spill is being addressed through the Voluntary Cleanup Program (VCP) as site V00732. The prior
comment also notes that the spill case was closed, but it was not. It is closed today as an
administrative closure as referred to V00732. Refer to VCP site V00732 for further information.
(JOC)

Name:	BROOKLYN NAVY YARD 13 ACRE PARCEL
Address:	KENT AVENUE
City,State,Zip:	BROOKLYN, NY 11205-
Program:	HW
Site Code:	57818
Classification:	Significant threat to the public health or environment - action required.
Region:	2
Acres:	5.890
HW Code:	224019A
Record Add:	11/18/1999
Record Upd:	10/30/2024
Updated By:	DKMACNEA

Site Description: Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin)on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The

BROOKLYN NAVY YARD 13 ACRE PARCEL (Continued) **S105586296**

	site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychloriinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds and PCBs in the soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site.

Site Code: 57818
Site Description: Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin)on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded

BROOKLYN NAVY YARD 13 ACRE PARCEL (Continued) **S105586296**

from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychloriinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds and PCBs in the soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site.

Longitude:	-73.9813790
DEC Memo:	09/30/10 - LZ Reviewed correspondence (eDocs) from Bethlehem Lutheran Church concerning repairs done to the tank after it failed the tightness test. After the fill line had been replaced, the tank passed the tightness test. Obviously, the tank is located in a subterranean vault without access, but the UIS shows the tank as aboveground (see cross-reference). Sent out a spill closure letter that contains a requirement for tank information correction. The spill case is closed. 11/24/2009 TTF letter sent to: Rev. Paul Knudsen Bethlehem Lutheran Church 490 Pacific Street Brooklyn, NY

DEC Memo:	DEC Piper spoke with DEC Jerry Pratt. He was inspecting site yesterday and noticed housekeeping issues. Speedy dry put down but not swept. Puddles of waste oil, etc. Site is a listed site and he will talk with RP to have Tenant clean area and be more aware of spilling. Spill closed. 2/21/18- DEC Piper re-opened case as problem has not been resolved. 2-612201 11/5/20- DEC Piper spoke with DEC Pratt. Spill area satisfactory. Site is in BCP. any additional issues will be addressed through that program. Spill closed.
Remarks:	Loss discovered during inspection. Pictures available

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/29/2025

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 09/22/2025

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Next Scheduled EDR Contact: 02/16/2026
Data Release Frequency: Quarterly

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 04/04/2025

Next Scheduled EDR Contact: 02/16/2026
Data Release Frequency: Varies

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Date of Government Version: 01/01/2002

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER RELEASE: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

Date of Government Version: 06/08/2023
Date Data Arrived at EDR: 10/31/2023

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

PFAS: PFAS Contamination Site Location Listing

DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2025

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

West Map:	50026933 JERSEY CITY, NJ
Version Date:	2023

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

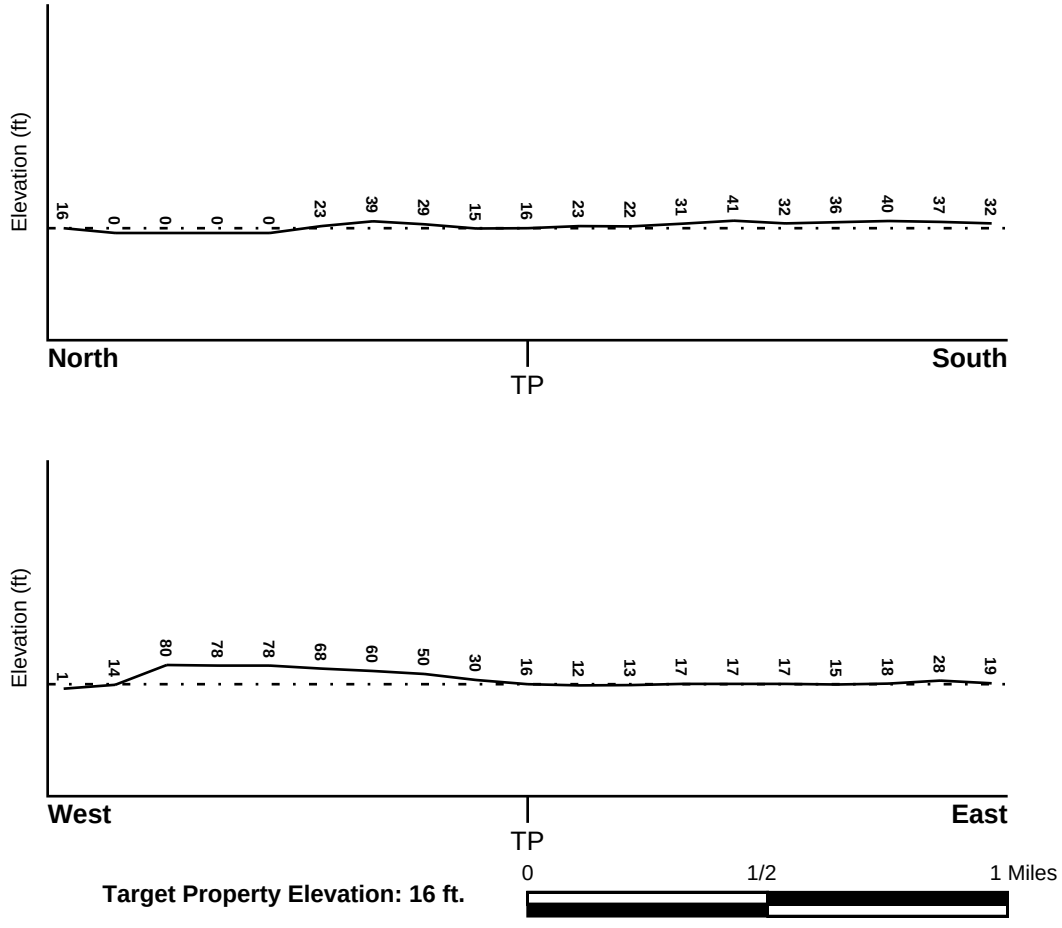
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 16 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970203F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970184F	FEMA FIRM Flood data
3604970204F	FEMA FIRM Flood data

3604970063B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile East
Site Name:	Naval Station Ny
Site EPA ID Number:	NY5170022250
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	14 feet in a well located 1 mile southeast of the site.
Hydraulic Connection:	Information is not available about the hydraulic connection between the surficial aquifer (upper glacial till) and underlying aquifer(s). Bedrock is present at an estimated depth of 100 feet.
Sole Source Aquifer:	A sole source aquifer is persent at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Ordovician
Code:	Oe *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AKRF, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT. Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by AKRF, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# 241201
Project: York and Navy Streets

Coordinates:

Latitude:	40.700952 40° 42' 3" North
Longitude:	-73.98092 -73° 58' 51" West
UTM Zone:	Zone 18 North
UTM X Meters:	586093.08
UTM Y Meters:	4506060.07
Elevation:	28.65' above sea level

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 401 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

TARGET PROPERTY: ADDRESS NOT IDENTIFIED IN RESEARCH SOURCE

The following Target Property addresses were researched for this report, and the addresses were not identified in the research source.

Address Researched	Address Not Identified in Research Source
50 Navy Street	2020, 2014, 1997, 1985, 1980, 1976, 1960, 1949, 1945, 1940, 1934, 1928

APPENDIX H
USER QUESTIONNAIRE

Environmental Site Assessment – Site Questionnaire

50 Navy Street, Brooklyn, NY

Please answer all questions to the best of your knowledge to support the findings of the Phase I Environmental Site Assessment (ESA) for the 50 Navy Street site (the Subject Property). Please call with any questions or comments.

AKRF Contact: Evelyn Levine
Office phone: 646.388.9717
Email Address: elevine@akrf.com

Person completing questionnaire: David McCarty, Alloy Development

Relationship to the Subject Property: Developer

Length of time associated with the Subject Property: Two months

1. Please provide:

   - The reason why the Phase I ESA is being performed.

     Proposed redevelopment of site and adjacent 240 Nassau Street

   - The type of property and type of property transaction (for example, sale, purchase, exchange, refinancing, etc.).

     Current use is public school; proposed transaction is a 99-year ground lease

   - The complete and correct address for the Subject Property (a map or other documentation showing the Subject Property location and boundaries is helpful).

     50 Navy Street, Brooklyn, NY 11201

2. Please provide information regarding the history of the Subject Property, including past uses, deeds, sale/purchase prices, etc.

   I believe it's been a public school since the 1950s. I don't know the prior use. It's been owned by NYC since the 1950s

3. If the Subject Property is undergoing a transaction, does the purchase price being paid for the Subject Property reasonably reflect the fair market value of the Subject Property?

   ■ Yes ☐ No ☐ N/A

   If you conclude that there is a difference, are you aware of whether the lower purchase price is because of an environmental issue or contamination that is known or believed to be present at the Subject Property?

4. Are you aware of any former studies that have been conducted at the Subject Property, including: geotechnical surveys, environmental site assessment reports, spill investigations/remediation reports, asbestos or lead abatement, former or current environmental permits, licenses, audits, investigations, community right-to-know plans, safety plans, preparedness and prevention plans, spill prevention plans, countermeasure or control plans, or other documentation or correspondence concerning the Subject Property. If yes, please provide copies.

   ☐ Yes ■ No

5. Are you aware of any environmental liens or activity use limitations (such as engineering controls, land use restrictions, or institutional controls) that are in place at the Subject Property and/or have been filed or recorded against the Subject Property under federal, tribal, state, or local law?

   ☐ Yes ■ No

6. Based on your knowledge and experience related to the Subject Property, are there any other obvious indicators that point to the presence or likely presence of releases or contamination at the Subject Property? Please provide any commonly known or reasonably ascertainable information about the Subject Property that would help the environmental professional identify conditions indicative of contamination, releases, or threatened releases. For example:

   - Are you aware of any spills or other chemical releases that have taken place at the Subject Property?

     ☐ Yes ■ No

   - Are you aware of any cleanups that have taken place at the Subject Property?

     ☐ Yes ■ No

   - Are you aware of any specific chemicals or petroleum products that are currently present or once were present at the Subject Property?

     ☐ Yes ■ No

   - Are you aware of any former or current chemical or fuel oil storage, including storage tanks, chemical/pesticide/herbicide use, etc., at the Subject Property?

     ☐ Yes ■ No

   - Are you aware of the presence of any historic fill, construction and demolition debris, ash, dredge spoils, etc.?

     ☐ Yes ■ No

8. Please provide any information you have on former and/or current buildings, utilities, and operations, including past and present:

    - Water: I have no information on this
    - Electric: I have no information on this
    - Gas/fuel oil: I have no information on this
    - Heating and cooling systems: I have no information on this
    - Sewer or septic/cesspool: I have no information on this
    - Trash collection: I have no information on this
    - Hazardous materials storage or use (paint, solvent, pesticides, herbicides):
      I have no information on this
    - Construction/demolition date(s):
      I have no information on this
    - Surveyed drawings, blueprints, subsurface studies, renovation/addition details, etc.:
      We have a site survey and DOE provided a building condition assessment in

9. Please advise whether you are aware of the following:

    - Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Subject Property

      ☐ Yes ■ No

    - Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Subject Property

      ☐ Yes ■ No

    - Any notices from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous materials at the Subject Property.

      ☐ Yes ■ No

10. Do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

    ☐ Yes ■ No

11. Please provide:

- The identification of all parties who will rely on the Phase I ESA report.

  Current use is for EIS; future users would be TBD capital partners, lenders, etc.

- The identification of the Subject Property contact and how the contact can be reached for the inspection.

  Please contact Jennifer Maldonado <JMaldonado10@schools.nyc.gov>

- Any special terms and conditions that must be agreed upon by the environmental professional.

  N/A

Building Condition Assessment Survey 2022 - 2023

Architectural Inspection **K287**

Asset: **P.S. 287 - BROOKLYN, 50 NAVY STREET, New York, 11201**

Inspection Id	Inspection Type	Time In	Last Edited
SA : K287	Architectural - Senior	2022-11-02 9:13 AM	2022-11-18 1:24 PM
AA : K287	Architectural - Associate	2022-11-02 8:30 AM	2023-06-15 1:57 PM

Asset Data

Question	Answer
Was the building fully accessible for inspection	No
Inspection Access Comment	1st Floor Boys Locker Room, 1st Floor Boys and Girls Shower Rooms (Due to storage)
Building Square Footage	78,000
Comments on the Area	None
Comments on the Stories (Floors) plus Basements	3+B
Comments on the Number of Classrooms	32
Comments on the Year Built	1953
Student Population	295
Staff Population	70
Weather	Fair
Principal(s) Information	
Principal Name	Everbell Boampong-Bishop
Organization	P.S. 287 Bailey K. Ashford School - Brooklyn
Did you meet with this Principal?	Yes
Did this Principal provide feedback?	Yes
Summary of Principal's Feedback	The Principal had no comments regarding the physical condition of the building at this time.
Principal Name	Erin Carstensen
Organization	Community Roots Charter School - Brooklyn
Did you meet with this Principal?	Yes
Did this Principal provide feedback?	Yes
Summary of Principal's Feedback	The Principal had no comments regarding the physical condition of the building at this time.
Custodian	Louis Granato
Fireman	David Perez

Have any Systems/Major Building Components been upgraded?	Yes	
	Systems:	Partial Foundation Wall and Slab on Grade Repair in Boiler Room.
	Year:	UC
	Systems:	Roofing and Flashing at Roofs 3 and 4 - replaced; Parapets and Coping - replaced; Leaders/Gutters/Downspouts - replaced; Chimney - repointed/repaired; New Roof Barrier; Exterior Walls repointed/repaired (partial); Gymnasium and Auditorium Windows and Window Guards replaced; Window Guards - refurbished; Exterior Stairs - repaired (partial)
	Year:	2021
	Systems:	Partial Waterproofing at Bulkheads.
	Year:	2013
	Systems:	Windows and Window Guards - replaced except at Main Facade.
	Year:	2000
Have there been any New Building Additions?	No	
Tandem Schools?	No	
Leased Space?	No
