FORM LR ATTACHMENT A: FAIR SHARE

ANALYSIS UNDER THE CRITERIA FOR THE LOCATION OF CITY FACILITIES
OFFICE OF THE CHIEF MEDICAL EXAMINER

The Office of the Chief Medical Examiner of the City of New York (OCME) is seeking to site a new OCME Forensic Pathology Center (FPC) in Manhattan as part of the proposed Science Park And Research Campus (SPARC) Kips Bay proposal, following the SPARC Kips Bay Master Plan that was released November 2023, led by the New York City Economic Development Corporation (NYCEDC), OCME, and the New York City Department of Citywide Administrative Services (DCAS) (collectively, the Applicants), in affiliation with the New York City Health and Hospitals Corporation (H+H), New York City Public Schools (NYCPS), the New York City School Construction Authority (SCA), and City University of New York (CUNY). The proposal would redevelop the southern approximately 4.75-acre portion of ("p/o") Manhattan Block 962, Lot 100 (the Development Site) in the Kips Bay area of Manhattan Community District 6 (CD 6).

OFFICE OF THE CHIEF MEDICAL EXAMINER—MANHATTAN FORENSIC PATHOLOGY CENTER (OCME FPC)

OCME was established in 1918 pursuant to a 1915 Act of the New York State Legislature. In addition to being the first governmental agency of its type in the United States, OCME established the first toxicology laboratory in 1918 and the first serology laboratory in 1938, both at Bellevue Hospital in Manhattan. OCME's administrative offices were in the Municipal Building from 1918 to 1934, and at 125 Worth Street from 1934 to 1960; autopsies were performed at Bellevue Hospital and other borough municipal hospitals during those years. In 1960, OCME's six-story headquarters at 520 First Avenue opened on land deeded to the City by NYU for forensic medical purposes, adjacent to NYU Medical Center.

Today, many of OCME's central functions remain located at 520 First Avenue. The existing building is approximately 86,000 gross square feet (gsf). The building includes the OCME FPC, cold boxes for decedents, executive offices, autopsy rooms, office space, x-ray/photography facilities, toxicology and histology laboratories, anthropology lab space, and Family Services

Offices for decedent identification. OCME's DNA forensics laboratory and other facilities are located in the Hirsch Building, directly across former East 26th Street from the Development Site. This building houses three Forensic Biology laboratories, the Molecular Genetics laboratory, Medicolegal Investigations, the agency-wide Operations Center, OCME's administrative units, medical examiner and medicolegal training facilities, emergency mass fatality operations laboratory, and evidence facilities including a forensic garage to examine vehicles for forensic evidence.

Need for New OCME Facilities

The existing 520 First Avenue OCME facility needs significant upgrades and repairs. The building was never intended to serve as a laboratory and the building's age and state of disrepair are not suitable for the high quality of the forensic science work conducted at the facility. OCME is currently engaged in a multi-year medical examiner accreditation, and it is anticipated that the building will not pass the next accreditation inspection.

In 2013, OCME completed a Capital Project Scope Development plan with the NYC Office of Management and Budget (OMB) for the fire alarm system, the electrical system, the elevators, the HVAC system, the roof, and the façade. The inspection and evaluation confirmed that these systems were past their useful life and would require over $30 million in repairs to correct the following conditions:

- The toxicology laboratory equipment generates a considerable amount of heat that must be managed, but the original HVAC equipment was too small to accommodate expanded operations that have happened within the building. The increase in internal heat sources coupled with the deteriorating condition of the HVAC system necessitates a complete overhaul of the chiller plant and all of its associated equipment.
- The building's power system does not comply with the current New York City electrical code requirements.
- The fire alarm system was never approved by the New York City Fire Department and is not code compliant. As a result, OCME employees are stationed within the building 24 hours a day, 7 days a week as fire watch to provide public and employee safety.

- The elevators require modernization given the age of the elevator equipment, unavailability of replacement parts, regular wear and tear, necessitates replacement the elevator machinery, controls, power supply, doors, cables, and cabs.
- The roof leaks and needs to be replaced.
- The Department of Buildings deemed the façade to be unsafe and OCME erected a sidewalk shed to protect pedestrians.

SPARC Kips Bay Master Plan

As described above, several discretionary actions are being sought to redevelop the southern approximately 4.75-acre Development Site. The Applicants seek to transform Hunter College's antiquated Brookdale Campus into approximately 1,782,000 zoning square feet (zsf) of state-of-the-art academic, healthcare, and life sciences space.

As described, the Development Site is comprised of a p/o Block 962, Lot 100 in the Kips Bay neighborhood of Manhattan Community District 6, and is bounded by First Avenue to the west, Franklin D. Roosevelt (FDR) Drive to the east, East 25th Street to the south, and the northern edge of former East 26th Street to the north. The Development Site has a lot area of approximately 206,981 sf (4.75 acres).

The proposal would allow for the construction of approximately 1,782,000 zsf of academic, health care, life science, and retail space, as well as public realm improvements. The public realm improvements would take the form of new publicly accessible open space, a floodwall tie-in to the Kips Bay Coastal Resiliency (KBCR) project's planned floodwall to the northeast along FDR Drive and protection along East 25th Street, and a widening of the demapped portion of former East 26th Street located between FDR Drive and First Avenue to accommodate two-way traffic flow. Public realm improvements would also include a replacement pedestrian bridge over FDR Drive at East 25th Street to make it ADA accessible. If the design of the new pedestrian bridge would require further change to the City Map, a separate mapping action would be requested in a future application. Collectively, the new 1,782,000 zsf of development and the public realm improvements are the "Proposed Development."

The Proposed Development would consist of multiple buildings (illustratively shown as Buildings A, B1, and B2)[1]. Two buildings would be located between First Avenue to the west, approximately 430 feet east of First Avenue to the east, East 25th Street to the south, and former East 26th Street to the north—on a portion of the site known as the "Western Parcel." The "Eastern Parcel" is located approximately 370 feet west of FDR Drive between East 25th Street and former East 26th Street. The Proposed Development would include a total of approximately 934,075 zsf of community facilities (Use Group III(B)) space; specifically, approximately 559,185 zsf of community facilities (Use Group III(B)) space would be located on the Eastern Parcel, and approximately 374,890 zsf of community facilities (Use Group III(B)) space would be located on the Western Parcel.

As part of the Proposed Development, OCME would completely vacate the 520 First Avenue building and move the OCME FPC and the toxicology laboratory operations to the Development Site's Western Parcel. The future buildings on the Development Site would include a mixture of uses, including community facility space available for use by the proposed OCME FPC, which would occupy one or more floors of Building B2 on the Western Parcel.

Pursuant to Section 203 of the City Charter, the City Planning Commission (CPC) adopted guidelines known as the Criteria for the Location of City Facilities (the Fair Share Criteria). The Fair Share Criteria are to be employed with respect to the siting (including relocation), significant expansion and/or closure of City facilities, and are to be considered as part of a fair and open process with significant and early community involvement. While the Fair Share Criteria do not dictate any particular outcome, the sponsoring agency and CPC are to consider the Fair Share Criteria in siting facilities in order to help them balance a number of factors, such as community needs for services, efficient and cost-effective delivery of those services, effects on community stability and revitalization, and broad geographic distribution of facilities.

[1] As design progresses for the Proposed Project, it is possible that the building on the eastern portion of the Development Site (i.e., Building A) could be designed as two buildings with independent utility systems to accommodate separation between the public school and CUNY/BMCC. In this instance, both sites would provide their own loading areas pursuant to applicable zoning requirements. However, the overall program and building envelope would not change.

Certain criteria (set forth in Article 4.1) apply to all facility siting or expansions, while additional criteria (set forth in Article 5.1) apply to the siting or expansion of "local or neighborhood facilities." Other criteria are to be considered for the siting of a "regional or citywide facility" (Article 6.1).

A "local or neighborhood facility" is defined as "a city facility serving an area no larger than a community district or local service delivery district (pursuant to Section 2704 of the Charter), in which the majority of persons served by the facility live or work." The Fair Share Criteria Attachment A's "local/neighborhood facilities" list includes city facilities such as police precinct houses, branch libraries, Fire/EMS stations, senior centers, etc. A "regional or citywide facility" is defined in Attachment B as a "facility which serves two or more community districts or local service delivery districts, an entire borough, or the city as a whole and which may be located in any of several different areas consistent with the specific criteria for that facility as described in the Citywide Statement of Needs pursuant to Section 204 of the Charter." Attachment B lists facilities such as sewage treatment plants, airports, incinerators, courts, museums, zoos, regional non-residential substance abuse programs, regional parks, maintenance/storage facilities, etc., none of which has a defined local service delivery district. Department of Health centers are listed as a regional/citywide facility but a facility with similar uses to the OCME facility is not specifically listed. As the future OCME facility would serve both the Bronx and Manhattan, it is considered a regional facility for this analysis.

ULURP-Related Actions

The ULURP-related actions necessary to facilitate the construction of the new OCME facility include:

- Disposition of City-Owned Site: The Western Parcel of Development Site is proposed for disposition to a developer or developers to be selected at a future date, through a public RFP, and the City is seeking disposition of a portion of the Eastern Parcel to CUNY. With NYCEDC and DCAS serving as co-Applicants for the disposition actions, the City would release one or more RFPs delineating requirements in line with the ULURP approvals for the redevelopment of the

Western Parcel at the Development Site. Further, while the open space premises would remain under DCAS jurisdiction, maintenance responsibilities may be transferred to the future developer for the Western Parcel through the inclusion of the open space premises in the lease agreement. The disposition of the City-owned property requires approval through ULURP under the City Charter Section 197(c) and separate Borough Board and Mayoral approval if disposed of pursuant to City Charter Section 384(b)(4).

- Site Selection and Acquisition of Real Property Interest: The relocation of the OCME FPC may require the acquisition of property by the City. The Development Site's Western Parcel would be disposed of to a private developer for development through an RFP process. After completion of the improvements to be constructed by the developer on the Western Parcel, as determined through the contract between NYCEDC or the City and the future developer, the portion of the building containing the OCME FPC may be reacquired by the City.

ARTICLE 4: CRITERIA FOR SITING OR EXPANDING FACILITIES

4.1 The sponsoring agency and, for actions subject to ULURP or review pursuant to Section 195 of the Charter; the City Planning Commission, shall consider the following criteria:

4.1(a) Compatibility of the facility with existing facilities and programs, both city and non-city, in the immediate vicinity of the site.

The purpose of this criterion is to discourage the placement of facilities on sites that would be incompatible with nearby public and public-type private facility uses and programs and to encourage the proximity of facilities that would enhance each other's services. A description of the city and non-city facilities in the immediate vicinity of the proposed OCME facility is provided below, including an overview of the zoning and land use patterns. Public and public-type private facilities within a 400-foot radius of the proposed OCME facility were reviewed in accordance with New York City Department of City Planning's ("NYCDCP") *Fair Share Guide* to determine their compatibility (see **Figure 1** and **Table 1**).

The Development Site is located within a portion of Block 962, part of Lot 100. The Development Site would be fully redeveloped as part of the proposed SPARC Kips Bay project, transforming the site into an integrated educational campus, bringing together the Hunter College

School of Nursing and departments of Physical Therapy, Speech-Language Pathology and Audiology (including the community clinic), and Medical Laboratory Sciences, BMCC Health Sciences, Health Studies, and Nursing Programs, and the CUNY Graduate School of Public Health and Health Policy, along with a NYCPS high school focused on health care and sciences education. These uses would be located on the "Eastern Parcel". The western portion of the Development Site would include two life sciences buildings, Building B1 and Building B2. Building B1 would front on First Avenue, and include space dedicated to H+H. Building B2 would be located to the east of Building B1 and would include space for OCME.

The Development Site is currently zoned R8. Zoning districts within 400 feet are predominantly residential with C2-5 commercial overlays along the western side of First Avenue, and portions of an M1-1 district and C2-7 district along the waterfront. The primary land uses within 400 feet are institutional and recreational, with some residential located directly east of the Development Site at Waterside Plaza. Institutional uses located east of the Development Site include the British International School and the UN International School. Uses located south of the site include the Veterans Affairs (VA) New York Harbor Healthcare System's New York campus and the Department of Parks and Recreation's (DPR) Asser Levy Recreation Center. Uses located west of the site include institutional uses such as the International Center for the Disabled Margaret Millbank Bogert Pavilion, New York University (NYU) School of Dentistry and the Department of Health and Mental Hygiene Public Health Laboratory Building. The area located north of the site contains the OCME Charles S. Hirsch Center for Forensic Sciences Building, the Kips Bay EMS Battalion 8, and Bellevue Medical Center. The entrance plaza to Bellevue Hospital is used at certain times by a day care center affiliated with Bellevue, starting in mid-morning.

As part of the ULURP actions, zoning for the Development Site is proposed to be changed to C6-4, which would allow a wide range of residential, commercial, and community facility uses, including the proposed OCME facility.

The analysis of compatibility of the proposed SPARC Kips Bay project, including the OCME facility, with the surrounding area presented in the Draft Environmental Impact Statement ("DEIS") for the Proposed Actions (i.e., land use, zoning, and public policy; socioeconomic impacts; urban design and visual resources; and neighborhood character) found that the Proposed Development would not have significant adverse impacts on neighboring uses.

The proposal is to acquire, by purchase or long-term lease, a portion of the future Building 2 on the Western Parcel so that the future OCME facility can remain located in the same neighborhood as the existing facility. Moreover, as described above, the surrounding neighborhood is defined by institutional uses. Therefore, the siting of the proposed OCME facility at the Development Site would not be incompatible with existing facilities and programs, both City and non-City, in the immediate vicinity of the Development Site.

4.1(b) Extent to which neighborhood character would be adversely affected by a concentration of city and/or non-city facilities.

The purpose of this assessment is to determine whether the addition of the proposed OCME facility to a neighborhood with an existing concentration of facilities is likely to create or contribute to an undesirable alteration in neighborhood growth and development, generally defined as shifts in population distribution and growth, economic activity, or use and development of land. As discussed in the environmental review for the Proposed Development, neighborhood character is defined by the City's *CEQR Technical Manual* as "a mixture of various elements that give neighborhoods their distinct personality . . . including land use, urban design, visual resources, historic resources, socioeconomics, transportation, and noise." An inventory of City and non-City (state, federal and private) facilities similar in use, scale and neighborhood impacts to that of the Proposed Development was undertaken for the study area within a one half-mile radius of the site

(**Figure 1** and **Table 1**). The purpose of this inventory is to determine if other such facilities are already concentrated within the study area.

For the purpose of this fair share analysis, all city and non-city facilities within a one-half mile radius of the Development Site were identified. The one-half mile radius around the site is located primarily within Manhattan CD 6. A small area between Lexington and Park Avenues and East 18th and East 33rd Streets is located within Manhattan CD 5. The area that was reviewed encompassed an area generally bounded by East 36th Street to the north, the East River to the east, East 15th Street to the south and Park Avenue to the west. By presenting these facilities and understanding their spatial distribution throughout the one-half mile radius around the Development Site, issues of concentration and compatibility can be evaluated and assessed. See the Land Use Map and Fair Share Facilities Map, below, for illustrations of the project study area.

The one-half mile study area includes similar facilities in use, scale and neighborhood impacts to the Proposed Development, such as the existing OCME facility within the existing 520 First Avenue building and the Hirsch Center Building, which is located directly across the former East 26th Street from the Development Site. In addition, other similar medical facilities, including the Bellevue Campus and the VA Hospital, are also located within the one-half mile study area. Therefore, the relocation of the proposed OCME facility within the same area would not contribute to a greater concentration of City or non-City facilities that would adversely affect neighborhood character.

4.1 (c) Suitability of site to provide cost-effective delivery of the intended services. Consideration of sites shall include properties not under city ownership, unless the agency provides a written explanation of why it is unreasonable to do so in a particular instance.

OCME considered a number of alternative locations for the OCME facility. Throughout 2015, OCME worked with NYCEDC and DCAS to identify an appropriate relocation site. OCME's goals were to consolidate all of the Manhattan operations into one facility or within the same block, and to address the issue of poor building condition for the OCME facility. Criteria included

proximity, time until occupancy, availability of land, appropriateness of the future space, and cost. NYCEDC evaluated releasing a Request for Proposal for the 520 First Avenue property and part of the future deal would be contingent on relocating the OCME facility to the identified site. NYCEDC and OCME also investigated temporarily relocating the OCME facility to another borough's location. This option would have provided an opportunity to redevelop and rehabilitate the 520 First Avenue building but was not feasible as unavailable city capital funds would have been needed and there would be no sale revenue since the building and land would not have been sold. Additionally, temporarily relocating the facility would have a significant negative impact on efficiency for the overall OCME operations. Following the reconstruction of the facility, Manhattan operations would have remained fragmented once the 520 First Avenue facility was completed, as the 520 Building is materially farther from the agency's administrative headquarters at 421 Bellevue Drive than the proposed Development Site. OCME also investigated relocating the OCME facility to a new building on the site of Bellevue's current staff parking facility. This option would have placed the new OCME facility directly adjacent to the Hirsch Center Building but, ultimately, OCME was informed that the parking facility was not available for this purpose. Finally, OCME evaluated the possibility of relocating to the Proposed Development Site. This option would provide close proximity to the Hirsch Center Building on land that would be in city control. It is also significantly beneficial for the future for OCME to function within an entirely new building, although the building would not be occupied until 2031.

4.1 (d) Consistency with the locational and other specific criteria for the facility identified in the Statement of Needs.

The need for the OCME facility was not identified in the Citywide Statement of Needs. Pursuant to 204(g) of the NYC Charter, OCME sent a letter to the Borough President on May 23, 2024. The Borough President did not provide comments or recommendations for alternative locations. OCME is currently working with NYC OMB to identify the necessary funding to finance the relocation of the OCME facility to the Development Site.

4.1 (e) Consistency with any plan adopted pursuant to Section 197-a of the Charter

Manhattan Community Board 6 Stuyvesant Cove 197-a Plan

Manhattan Community Board 6 Stuyvesant Cove §197-a Plan was modified and approved by the CPC on and further modified by the City Council on March 13, 1997. The §197-a Plan's primary goals were: (i) the development of easily accessible public park and open space at the waterfront, (ii) the encouragement of water-dependent uses that are compatible with the open space goals of Community Board 6, and (iii) consistency with planning goals of the Department of City Planning and the Manhattan Borough President's Office. The proposed OCME facility would not conflict with the Manhattan Community Board 6 §197-a plan.

Community Board 6 §197-a Plan for the Eastern Section of Community District 6

The Proposed Development would also be subject to the "Community Board 6 197-a Plan for the Eastern Section of Community District 6" which was adopted by the CPC on January 28, 2008. The plan covered the entire East River waterfront of Community District 6 to a distance 100 feet west of First Avenue. As developed by Community Board 6, the plan's primary goals were (i) increase the amount of useful open space, (ii) improve access to the waterfront and complete the East River Esplanade, (iii) enhance and reclaim the street network to restore the street grid and improve transportation systems and access to the waterfront, (iv) implement land use policies consistent with historical trends in the area, and (v) preserve significant residential developments and individual buildings.

The City Planning Commission replaced and modified recommendations and proposals contained in the Community Board 6 197-a plan. As adopted, one of the plan's recommendations and proposals includes an area close to the Development Site, specifically:

> 2. Explore with NYCDOT and DPR the feasibility of making the 25th Street pedestrian bridge handicapped accessible.

As part of the Proposed Development a new ADA-compliant pedestrian bridge would be constructed. The proposed replacement bridge would allow the Proposed Development to deliver

on a long-standing request from the community to provide an ADA-accessible pedestrian pathway that connects to the waterfront and the communities at Waterside Towers and the UN International School. While the size, footprint, and alignment of the replacement bridge is still being determined, it would increase the underside clearance height to approximately 16 feet to comply with State and City DOT standards. As such, neither the Proposed Development nor the OCME facility would hinder or prevent making the bridge handicapped accessible and, therefore, would not conflict with this community recommendation. Instead, the collective Proposed Actions and resultant Proposed Development would be consistent with and supportive of the recommendation to construct an ADA- compliant pedestrian bridge. If the design of the new pedestrian bridge would require further change to the City Map, a separate mapping action would be requested in a future application.

21. Encourage institutional development and community uses that are compatible with the existing scientific, hospital and hospital related uses in the area bounded by 23rd Street, First Avenue, 34th Street, and FDR Drive

Given that the OCME facility is already located within the neighborhood and would continue in the future, the proposed facility aligns with this recommendation. As such, the proposed OCME facility is consistent with the adopted Charter Section 197-a plan for this location.

Manhattan Waterfront §197-a Plan

The Comprehensive Manhattan Waterfront Plan, adopted by the City Council in 1997, aims to enhance public access to and use of the 32-mile Manhattan shoreline. This plan is pursuant to Section 197-a of the City Charter, which provides a process whereby boroughs and Community Boards can propose planning guidelines for a particular area for consideration by the CPC and City Council.

The plan's recommendations aim to enhance public access to and use of the borough's waterfront. The plan includes both overall planning principles and a series of site-specific recommendations intended to help guide future use and improvement of the waterfront, including opportunities for development of a continuous waterfront esplanade, new public open spaces, improved access to

existing public waterfront areas, and for water-related commercial, educational, and transportation uses. The plan includes a section with recommendations that include the Study Area. These recommendations include:

- Encouraging an esplanade easement around the UN School's perimeter
- Clear signage indicating the presence of a public waterfront esplanade to improve public access to the Waterside esplanade.

The proposed OCME facility would not conflict with the Manhattan Waterfront §197-a Plan.

New York City Local Waterfront Revitalization Program

Pursuant to Section 197-a of the Charter, the Proposed Development, including the OCME facility, would be subject to the City's Local Waterfront Revitalization Program (LWRP). The proposed OCME facility would be located within the City's designated coastal zone boundary and, therefore, subject to review for consistency with the LWRP policies and sub-policies. Review of the LWRP policies found that the overall Proposed Development, including the OCME facility, would be consistent. A full consistency assessment was prepared as part of the DEIS for the Proposed Development. Although a final determination by the NYCDCP has not been made at this time, it is expected that the Proposed Development would be found consistent with the LWRP.

In formulating its facility proposals, the sponsoring agency shall:

4.2(a) Consider the Mayor's and Borough President's strategic policy statements, the Community Board's Statement of District Needs and Budget Priorities, and any published Department of City Planning land use plan for the area.

In December 2016, the then Mayor announced the LifeSci NYC initiative to support the development of this sector and leverage the agglomeration benefits of the related uses along the corridor, including an advisory council with leaders in the field, significant investment through incentives and direct support for life sciences development, entrepreneurship programs and the development of a non-profit life sciences hub within the key corridor. In August 2022, Mayor Eric Adams and NYCEDC President and CEO Andrew Kimball awarded $26.6 million to further spur the growth of New York City's life sciences industry and create jobs. The relocation of the OCME

facility is consistent with the growth and support of research in forensic analysis and life sciences, particularly on the East Side corridor.

The CB6 fiscal year 2022 (FY22) District Needs Statement specifies that the community is consistently interested in the development of high-quality health-related facilities within the medical corridor along First Avenue and "look[s] forward to continued cooperation with these medical facilities as they expand and modernize their operations in the district, as well as cooperation with city agencies in ensuring that these institutions have the adequate, surrounding infrastructure and supportive programming needed to properly serve both district residents and New Yorkers at large." The proposed OCME facility would be a relocation of an existing use in the area that would be staffed by medical examiners and health professionals consistent with this vision. The CB6 FY23 and FY24 District Needs Statements each reiterate the importance of the medical corridor and health-related facilities in the district.

The CB6 197(a) Plan supports the development of medical facilities and life sciences facilities within the district, citing certain projects such as the East River Science Park as an "ideal setting in which to bring together New York City's 15 celebrated medical and research centers, numerous life scientists, Nobel laureates, and healthcare and technical practitioners, and attract life science companies to New York City." The OCME facility relocation is consistent with these desired services.

4.2(b) Consider any comments received from the Community Boards or Borough Presidents and any alternative sites proposed by a Borough President pursuant to section 204(f) of the Charter, as well as any comments or recommendations received in any meetings, consultations or communications with the Community Boards or Borough Presidents. If the Statement of Needs has identified the community district where a proposed facility would be sited, then, upon the written request of the affected Community Board, the sponsoring agency should attend the Board's hearing on the Statement. If the community district is later identified, then the sponsoring agency shall at that point notify the Community Board and offer to meet with the board or its designee to discuss the proposed program.

The need for the OCME facility was not identified in the Citywide Statement of Needs. Pursuant to 204(g) of the NYC Charter, OCME sent a letter to the Borough President on May 23, 2024. The Borough President did not provide comments or recommendations for alternative locations.

Article 6: Criteria for Siting or Expanding Regional/Citywide Facilities

6.1 The sponsoring agency and, for actions subject to ULURP or review pursuant to Section 195 of the Charter, the City Planning Commission, shall consider the following criteria:

6.1 (a) Need for facility or expansion. Need shall be established in a citywide or borough-wide service plan or, as applicable, by inclusion in the city's ten-year capital strategy, four-year capital program, or other analyses of service needs.

The OCME facility is the nexus of all of OCME's medical examiner teaching, training, and development of the next generation of forensic pathologists for New York City and nationwide. As described above, the existing 520 First Avenue building requires extensive repairs and has exceeded its useful life. The building's age and level of disrepair are seen as a constraint for OCME and its ability to perform its duties. Without significant improvements and repairs, OCME is concerned that the existing facility will not pass its next medical examiner accreditation process. Finally, a new facility at the SPARC Kips Bay Development Site adjacent to the existing Hirsch Center Building on the former East 26th Street would enhance scientific and operational synergy between medical examiner fellows, medical examiners, forensic laboratory scientists, and medicolegal death scene investigators.

6.1(b) Distribution of similar facilities throughout the city. To promote the fair geographic distribution of facilities, the sponsoring agency should examine the distribution among the boroughs of existing and proposed facilities; both city and non-city, that provide similar services, in addition to the availability of appropriately zoned sites.

OCME functions as one citywide office with three forensic campuses and two additional family service locations. All OCME locations are currently sited on city hospital property. In addition to the facilities at 520 First Avenue in Manhattan, there is a OCME facility in Brooklyn at the Kings County Hospital Campus, 599 Winthrop Avenue; another OCME facility at the Queens Hospital Center Campus at 160-15 82nd Drive; and Family Service Centers in the Bronx at 260 East 161st Street, used for identification purposes, and on Staten Island at the Seaview Hospital Campus at 460 Brielle Avenue.

While pathology services provided citywide are equivalent no matter where the case originates, OCME's laboratories and medical examiner training programs are sited in Manhattan. The proximity of the Hirsch Center Building with its Laboratory and the OCME facility is essential to maximize collaboration between scientists, including medical examiners and trainee medical examiners. The Queens and Brooklyn Pathology Centers serve those boroughs as well as the Bronx and Staten Island, and provide the city with additional capability, particularly in the event of an emergency and the need for continuity of operations.

6.1(c) Size of the facility. To lessen local impacts and increase broad distribution of facilities, the new facility or expansion should not exceed the minimum size necessary to achieve efficient and cost-effective delivery of services to meet existing and projected needs.

The future OCME facility would include programmatic space consisting of medical facilities, an autopsy suite, toxicology and pathology laboratories, a forensic anthropology laboratory, a cooler/freezer, the general autopsy room, conference/training space, office staff and staff space, and storage space.

The new facility is anticipated to include specific preferred design details, as described further below, but given that the building has not yet been designed, their specific implementation would be determined at the time of the building's design. The facility should optimize the space layout and planning such that program spaces are continuous and ensure the separation of users (family/visitors, funeral directors, authorized personnel). It is anticipated that the HVAC system

would be an independent system, separated from other uses in the building, with redundancy. This system would provide the separation of "clean" and "dirty" areas such that air changes with 100% fresh air. The determination of how best to efficiently accommodate the specific features of the OCME facility would be resolved during the design process.

6.1(d) Adequacy of the streets and transit to handle the volume and frequency of traffic generated by the facility.

The proposed OCME facility would primarily relocate services provided in the 520 First Avenue building located four blocks north of the Development Site to a new modern facility at the Development Site, as well as shifting a small number of services from the 421 East 26th Street building located across the street from the Development Site. The projected staff count and operations are expected to be similar to the existing operations. Traffic generated by the proposed facility is already traveling through the nearby streets and transit networks, therefore traffic patterns would largely remain consistent with the proposed facility.

The OCME facility would continue to serve primarily the Bronx and Manhattan cases for autopsies and the toxicology lab would serve all five boroughs, as it is the only facility of its kind in the city. As the existing facility is located a few blocks north of the proposed location at the Development Site, trucks and vehicles would continue to use First Avenue to reach the site. The OCME space would have frontages along a proposed interior private shared access drive that would span between former East 26th Street and East 25th Street (described in more detail below). Passenger drop-off and pick-up locations would be provided along the shared access drive for OCME vehicles. A dedicated cellar area would also be provided for OCME.

All loading berths on the Western Parcel would be provided at the basement level with access from the ground level via either a ramp or truck elevators, and as such, all loading activities at the Western Parcel would take place off the street and in the basement level of the building. Trucks would access Western Parcel by driving north on First Avenue, then turning right onto either the former East 26th Street (as part of the Proposed Development's site circulation improvements, the former East 26th Street would be widened and made a two-way street, described further below) or

25th Street, before entering the loading docks in the building via the shared access drive. A parking garage would also be provided at the basement level and accessed from the ground level via a ramp and would be parking for OCME's various specialty vehicles.

Former East 26th Street to the north of the Development Site is an unmapped, 24-foot-wide, one-way road with one westbound travel lane. Under existing conditions, vehicles traveling through former East 26th Street must enter from East 30th Street and travel southbound along FDR Drive service road that terminates at the eastern end of former East 26th Street. Although both sides of the street contain posted signage with "No Parking" and "No Standing Anytime" regulations, both sides of the sidewalk are often occupied by parked vehicles.

To alleviate the potential for obstructions of the travel lane under proposed future conditions along former East 26th Street and improve circulation of vehicles in the vicinity of the Development Site, former East 26th Street would be widened by setting the proposed buildings back from the northern property line. This would enable vehicles to enter former East 26th Street from First Avenue instead of only entering from East 30th Street, four blocks north of the site. A cul-de-sac or similar area would be provided at the eastern end of former East 26th Street for vehicles to safely turn around and travel west to First Avenue. The wider roadbed would allow for improved traffic flow and increased area for vehicles to turn around at the eastern end of the street.

Vehicular circulation would be further improved through a proposed two-way interior private shared access drive that would connect former East 26th Street and East 25th Street. Ambulatory and passenger vehicles for H+H and OCME would circulate through the corridor and accommodate drop-offs for vehicles, which would effectively reduce drop-offs on other frontages. Additionally, the shared access drive would be pedestrianized with crosswalks and other public realm improvements. The adjacent sidewalks along the shared access drive would also encourage the circulation of pedestrians through the site.

The Proposed Development aims to provide open and safe spaces for pedestrians to traverse through the site. As there would be multiple vehicular access points to the Development Site, the safety of pedestrians, especially at points of conflict with vehicles, is a high priority. Potential

pedestrian safety measures to be evaluated in conjunction with NYCDOT may include implementing leading pedestrian intervals at First Avenue, introducing striping high-visibility crosswalks, installing pedestrian crossing signs at crosswalks and near school zones, tabled ("raised") pedestrian crossing, and grooved pavement, installing speed bumps at the entrances of the private shared access drive, and enforcing slow zones near the schools and along the private shared access drive.

While the facility would be operational 24 hours a day, the peak hours of operation would be between 8 AM and 6 PM with the heaviest staff presence on-site during those hours. According to OCME, employees at the existing facility predominantly take public transportation and it is anticipated that they would continue to take transit to access the proposed facility.
