Avenue. Site Features: The site is approximately 0.382 acres in size with a single story vacant warehouse covering the entire site. The site is surrounded by mixed commercial and residential property uses. Current Zoning and Land Use: The site has an E-designation as part of the Greenpoint-Williamsburg Rezoning and is included in the M1-2/R6A mixed use district. The property is currently vacant. Past Use of the Site: From approximately 1980 to until 1998, the site was operated by Barouh Eaton Allen Corp., a manufacturer of typewriter ink and printer products. The building was used from 1998 to 2010 for warehousing and distribution by Lucky Paper Inc. (eastern portion), a distributor or restaurant supplies, and by LJJ, Inc. (western portion), a clothing wholesaler and distributor and from 2010 to 2012 by 200 Supplies Corp., a plumbing supplier. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction.

Env Problem: Nature and Extent of Contamination: During the Remedial Investigation, soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the results of the RI, the primary contaminants of concern include the VOCs trichloroethene (TCE) and cis-1,2-DCE. Contamination can likely be attributed to activities associated with the historic use of the site for manufacturing activities. Soil - During the investigation in January 2014, TCE was detected at concentrations of up to 88 parts per million (ppm), above the restricted-residential SCO of 21 parts per million (ppm). With the exception of 2 samples, TCE was detected in all other samples above the unrestricted use SCO of 0.47 ppm. Low levels of SVOCs, including benzo(a)pyrene at 1.99 ppm and chrysene at 1.82 ppm, were detected at concentrations exceeding the UUSCO. In addition, metals including mercury at 4.24 ppm, copper at 100 ppm and lead at 122 ppm were detected at concentrations exceeding UUSCOs, Site-related soil contamination does not extend off-site based on the available data. Groundwater - Compounds exceeding the groundwater standards include TCE at a maximum concentration of 520 parts per billion (ppb) and cis-1,2-DCE at 14 ppb. Metals detected in groundwater at concentrations exceeding the standards include mercury at 3.5 ppb, copper at 332 ppb and lead at 1640 ppb. It should be noted that these metals were detected in unfiltered samples. Site-related groundwater contamination does not extend off-site based on the available data. Soil vapor - TCE was detected at concentrations of up to 1,600,000 ug/m3 and cis-1,2-DCE at concentrations of up to 15,000 ug/m3. Elevated concentrations of contaminants in soil vapor were found at the property boundaries and may extend off-site.

Health Problem: People are not drinking the contaminated groundwater because the area

87 KENT AVENUE (Continued) **S116550038**

is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered by a building and pavement. Volatile organic compounds in groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site occupancy or development. Additional sampling is needed to evaluate the potential for soil vapor intrusion to impact off-site structures.

Site Code: 492995
Site Description: Site Location: The site is located at the corner of Kent Avenue and North 9th Street in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site is approximately 0.382 acres in size with a single story vacant warehouse covering the entire site. The site is surrounded by mixed commercial and residential property uses. Current Zoning and Land Use: The site has an E-designation as part of the Greenpoint-Williamsburg Rezoning and is included in the M1-2/R6A mixed use district. The property is currently vacant. Past Use of the Site: From approximately 1980 to until 1998, the site was operated by Barouh Eaton Allen Corp., a manufacturer of typewriter ink and printer products. The building was used from 1998 to 2010 for warehousing and distribution by Lucky Paper Inc. (eastern portion), a distributor or restaurant supplies, and by LJJ, Inc. (western portion), a clothing wholesaler and distributor and from 2010 to 2012 by 200 Supplies Corp., a plumbing supplier. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction.
Env Problem: Nature and Extent of Contamination: During the Remedial Investigation, soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the results of the RI, the primary contaminants of concern include the VOCs trichloroethene (TCE) and cis-1,2-DCE. Contamination can likely be attributed to activities associated with the historic use of the site for manufacturing activities. Soil - During the investigation in January 2014, TCE was

87 KENT AVENUE (Continued) **S116550038**

detected at concentrations of up to 88 parts per million (ppm), above the restricted-residential SCO of 21 parts per million (ppm). With the exception of 2 samples, TCE was detected in all other samples above the unrestricted use SCO of 0.47 ppm. Low levels of SVOCs, including benzo(a)pyrene at 1.99 ppm and chrysene at 1.82 ppm, were detected at concentrations exceeding the UUSCO. In addition, metals including mercury at 4.24 ppm, copper at 100 ppm and lead at 122 ppm were detected at concentrations exceeding UUSCOs, Site-related soil contamination does not extend off-site based on the available data. Groundwater - Compounds exceeding the groundwater standards include TCE at a maximum concentration of 520 parts per billion (ppb) and cis-1,2-DCE at 14 ppb. Metals detected in groundwater at concentrations exceeding the standards include mercury at 3.5 ppb, copper at 332 ppb and lead at 1640 ppb. It should be noted that these metals were detected in unfiltered samples. Site-related groundwater contamination does not extend off-site based on the available data. Soil vapor - TCE was detected at concentrations of up to 1,600,000 ug/m3 and cis-1,2-DCE at concentrations of up to 15,000 ug/m3. Elevated concentrations of contaminants in soil vapor were found at the property boundaries and may extend off-site.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered by a building and pavement. Volatile organic compounds in groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site occupancy or development. Additional sampling is needed to evaluate the potential for soil vapor intrusion to impact off-site structures.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 3/14/2001 - Store front building with 3-4 apartments

DELI (Continued) **S104953397**

above. 2-275 gallon #2 oil tanks in the basement service the building. Scaggs & Walsh Oil Company made a delivery (no sign of overfill) Later that day the bottom of one of the tanks (looks like corrosion) gave way and approx 100 gallons went to the basement floor and a drywell floor drain. NYFD on scene emptied most of the 275 gallon tank into overpack drums. Scaggs & Walsh arrived on the scene and pumped out whatever remained. Scaggs & Walsh's insurance would not cover the loss because the tank is the property of the building owner and the tank failed due to corrosion. Scaggs & Walsh hired Milro Associates after a verbal discussion with the building owner (Robert Bak 718-628-9700) that the cost of the clean up was the responsibility of the building owner. 3/16/2001 - Sangesland called Milro to find the cleanup status. Paul (at Milro) said between 3/14 and 3/15 a 5'x8' section of the floor was opened up and dug down 2' and 2 cubic yards of contaminated soil was removed. Milro is not working today (3/16) because Scaggs & Walsh is installing new oil tanks. Milro will return on Monday 3/19 to continue excavation. 3/20/2001 Paul at Milro says the excavation is approx 5' x 10' x 3' deep. Because of access problems they can't really excavate any more and he'll probably spend one more day on site. Paul said he would PID the samples first and if they don't look bad, he'll back fill before the soil samples come back from the lab. 4/5/2001 End point sample from excavation was tested for: TCLP Volatiles 8021/STARS (All results were Non-Detect) TCLP Polynuc, Arom. Hydrocarbons (BN) 8270 - Non-Detect Spill closed 4/5/2001"

Remarks: "spill in inside deli's basement fd on the scene"

Date Record Updated: 05/11/2007
Updated By: mobarrie
Site Description: 101-105 West Street is located in the Greenpoint area of Brooklyn, NY 10310, Block 2556, Lot 58. The site is a 0.2-acre parcel used as a construction material storage yard. It is located between Kent Street and Java Street, on the west side of West Street. A commercial property borders the site to the east. The intended use of the site remains to be a construction material storage yard. The surrounding uses are mainly residential with some commercial divisions. Contamination at the site was predominantly in the soil and represented by Semi Volatile Organic Compounds and metals, and resulted from historic fill and uncontrolled dumping of oil and oil-related products from trucks loading construction materials. The Remedial Investigation work plan was approved in 1999 and the RI was completed in 2000. The groundwater is 8-10 feet below ground. The soil is sandy and it is covered with 3-4 feet of fill material. The Remedial Work Plan was approved in 2001 and the field remedial work was completed in 2002. The remedy involved excavation of the entire site and off site disposal. Clean backfill material has been placed in the former excavation. Remedial work at the site is completed.
Env Problem: The contaminants of concern in soil at the site were Semi Volatile Organic Compounds (SVOCs)and heavy metals. The groundwater has not been impacted by the contaminants. In 1998, the Pase I and Phase II Environmental Site Aassessment have revealed that the contaminants of concern in soil were above TAGM 4046 RSCO. The SVOCs had excedences ranging from non detected to Benzo(a)anthracene 43ppm, benzo(a)fluoranthene 1500ppm, benzo(b)fluoranthene 41ppm, benzo(k)fluoranthene 26ppm, benzo(a)pyrene 41ppm, Chrysene 38ppm,Dibenzofuran 12ppm. Some of the havy metal excedences were Arsenic 52ppm, Selenium 5.6ppm, Chromium 49ppm, Cadmium 12.5ppm, Lead 1930ppm,Zinc 1490ppm, Mercury 3.5ppm. The source was presumed to be in the fill material and also produced by uncontrolled dumping. During the remedial phase, the site has been excavated and the end point samples showed that the concentrations of the contaminats levels were very close to TAGM 4046 RSCO. The excavation has been backfilled with clean soil. The remediation was completed in 2002.
Health Problem: Soils contaminated with metals and semi-volatile organic compounds were identified at this site. Contaminated soils have either been excavated and disposed of offsite or are covered by a concrete slab or the onsite building, thereby minimizing the potential for direct contact exposures. Groundwater has not been impacted, therefore there is no potential for ingestion exposures. Volatile organic compounds were not detected at this site therefore, inhalation via soil vapor intrusion is not a potential exposure pathway .

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vouight-Spill transferred from Sullivan to Rommel as per Rommel. Contacted present owner. Manny Shurka (212) 832-9100. He has no info on followup tank test. He bought site in 1997. All tanks closed in 1999. If tanks were operated for two years after tank test failure, then tanks can be assumed to have been OK in 1997. Tanks were not suction dispensers. They used submersible pumps. So, depending on where the tank test failure leak was, there could have been a release. Check with Manny if he did an environmental assessment when he bought the property or if Getty did one when they sold the property. 8/17/12 Spill re-assigned to T. Demeo as per RSE. bf 10/09/14-Hiralkumar Patel. reviewed available documents for DEC DeMeo. alternate address: 190 McGuiness Blvd. PBS #s: 2-146994, 2-610594 PBS # 2-146994 for 176 McGuiness Blvd. as per PBS record, site has/had following tanks: - twelve (12) 550 gal gasoline USTs, closed-in-place in Feb. 1999 - one (1) 4,000 gal gasoline UST, closed-in-place in Feb. 1999 - two (2) 4,000 gal gasoline UST,

BROOKLYN FILLING STATION (Continued) **U003200532**

in-service, installed in Feb. 1999 - one (1) 4,000 gal diesel UST, in-service, installed in Feb. 1999 PBS #: 2-610594 for 190 McGuiness Blvd. as per PBS record, the site has on 250 gal waste oil AST on legs, installed in Apr. 2007. other spill # 0204172 was reported on 07/22/2002 due to gasoline odors during delivery to the station. case closed. found tank test report dated 06/25/1997 on PBC edoc. as per the document, twelve (12) 550 gal gasoline tanks and one (1) 4,000 gal diesel tanks were fount tight. there is no document available to confirm source of tank test failure in 1991 (subject spill) and any petroleum release associated with it. Helf Enterprises LLC. **property owner** 10/27/14 TJD File review - determinations are based upon research into historical case file by Patel. Current owner took possession of propert 1997, followed by the closure of (12) UST's in 1999 and a (4K) UST's also closed in place in 1999. In February 1999 a total of (2) new 4K UST's were installed on site and remain in operation. All (12) 550's and (1) 4K gasoline UST's passed a tighntess test in 1997 - no record of repair or remedial action in file. Passing tank tightness reports for all tanks performed in 1997 have been uploaded to DECDOCS. Due to the lack of available history at this property and the fact the tighness test failure was reported in excess of 20 years ago, the suspect tanks were abandonned in place in 1999, the site has new owner's and no additional information is currently available - no further action is required at this time - spill is administratively closed. "

DER Facility ID:	30480
DEC Memo:	"01/27/2006 Kuldeep received the Fax from Brumer, but again information not adequate and need more follow up. 01/23/2006 Kuldeep sent a letterfor more information. 01/09/2006 Kuldeep Gupta- Facility Faxed on -01/06/2006 copy of consent Order. Region 2 Nick Lombardo on 01/09/2006 Faxed Report of 5000 gallon Tank Test report of 01/05/2004. 01/06/06 Kuldeep Gupta talked to Ms. Jill Huey and she need a letter in writing what document we need. She wanted to fax it at 1-718-486-6862. DEC Faxed the letter as requested. Kuldeep discussed with Philip Lodico Senior Attorney DEC and found Consent order signed on 03/24/2003 for not this spill. Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Does not appear on PBS database. Called Jill Huey. She stated that she received a Consent Order to bring the facility in compliance with state laws. The tank is 5000 gallons. 3/11/2003 ars. DEC Sigona sent TTF notice on March 14, 2003. 9/11/06 This case was transfered from Albany to Region 2. Zhune spoke to Jill Huey (ph: 718-9052) She doesn't want phone calls. She wants every thing by writing. 9/11/06 A TTF letter was sending to : Jill Huey 498 Leonard Street Brooklyn, NY 11222 09/18/06 Ms. Huey sent a package of documents the passing tank test from 2003 was missing. 09/19/06 I sent a letter requesting her the tank test results from 2003. 09/22/03 Ms. Huey sent a package of 8 pages including the passing tank test results from 2003, letters stated the fallowing: The system test passed. After the system test failed in October due to a vent bad line, we decided to replace all pipes just to be sure we would pass. Also we would like to convey to your department that no contamination was detected in our system. What was the cause of the tank test failure on March 3, 2003? Water in tank issue. Piping needed to be replaced was replaced and systems test passed as a result of replacement. 09/27/06 This case was closed for V. Zhune in accordance with J. Vought. "

DEC Memo:	"Sangesland spoke to Ezgy (As-Gee). (See eDocs for Phase 2 Report) She said the property is a 2 story industrial building being sold to a developer who will tear it down for a new residential building. City has placed an e-designation on the property because it's changing from industrial to residential. Problem is associated with leaking from a 5,000 gal buried oil tank. Hydro Tech was hired by the potential buyer and found contamination. Hydro Tech will continue to work on the site and come up with a plan to solve the spill problems and close them out. 6/12/13-Vought-Received call from and spoke to OER Chawla (212-442-3007) and the groundwater is 12-13'bg and proposed full excavation to the water table as part of redevelopment however contamination extends down to 30'bg. They are willing to do additional remedial action but would not like to excavate into groundwater and developer needs to decide by today or he will walk away. Three other developers walked away from site (was previously HydroTech). Former use of site is a plating site. Site was discussed with DEC Cozzy as per Chawla and Cozzy noted that it did not qualify for State BCP and Cozzy did talk to Demeo re site as per OER Chawla. Vought spoke to DEC Demeo and this spill transferred from Demeo to Patel for followup. 06/12/13-Hiralkumar Patel. little 'E' desgination for Hazmat ---------- alternate address: 498-502 Leonard Street PBS #: 2-608752. as per PBS record, the site has oe 5,000 gal #2 oil UST, in-service, installed in Jan. 1929. tank system was tested on 01/20/2010. other spills: 0212132, 1206982 spill # 0212132 was reported on 03/10/2003 due to tank test failure. tank system failed test due to bad vent line. lines were changed and system passed. no contamination found. case closed. spill # 1206982 was reported on 10/16/2012 due to tank test failure of 5,000 gal #2 oil UST. case is still open. 2:02 PM:- left message for Mr. Chawla at NYC OER. asked him to submit available reports. 2:39 PM:- received email from William Wong from NYC OER including link to reports. William H. Wong Ph. (212) 341-0659 Fax (212) 788-1482 email: WiWong@dep.nyc.gov

BRUMAR SHEET METAL INC (Continued) **S108076226**

sidewalk. groundwater table elevations were measured between 14.77 and 15.71 ft ---------- - stratigraphy of the site from surface down consists of a layer of historic fill material from approx. 0 to 12 ft bg, sand, gravel and silty with heavy petroleum impacts from 12-16 ft bg, visible petroleum staining from 16-30 ft bg in the area of the UST and an impacted layer of highly compressible organic peat, clay and silt from 16-28 ft bg and highly compressible layer of clay/silt at approx. 28-34 ft bg - schools within 0.2 miles to the south ---------- - in Feb. 2013, GRANT installed five soil borings (SB-01 to SB-05) surrounding the UST in the southwest portion of the site and only visual inspection of the borings were performed (no samples were collected) ---------- - in Apr. 2013, GRANT installed seven soil borings (SB-06 to SB-12) across the entire site and collected 19 soil samples; 7 of 19 soil samples were analyzed for finger printing - borings SB-01 through SB-12 exhibited visual evidence of a petroleum discoloration layer from approx. 4 to 30 ft bg and free product observed from approx. 10 to 12 ft bg - free product noted on between 12 and 24 ft bg in borings SB-02, SB-03, SB-04 and SB-05, these borings were located around the UST ---------- - elevated PID readings were observed ranging from 455 ppm to 895 ppm in borings SB-7 through SB-12 - in Apr. 2013, GRANT installed 3 temporary wells (TWP-01 to TWP-03) towards the northwestern, northeastern and southeastern portions of the site, respectively - temporary wells were installed to a depth of 20 ft bg, with 10 ft of screen (means there were no screen above water table) ---------- - in Apr. 2013, GRANT installed 3 soil vapor probes (SVP-01 to SVP-03) and collected 3 samples - depth to groundwater was present at approx. 10 ft bg ---------- - groundwater flow direction is generally from the south towards the north ---------- - found mostly sec/n/tert-Butylbenzene in soil samples - high metals found in samples

BRUMAR SHEET METAL INC (Continued) **S108076226**

property owner's contact info, missing appendices of Feb. 2013 Phase I and investigation report for work done by HydroTech in Oct. 2013. discussed with DEC Jane regarding metal/PCBs in soil/groundwater samples. she and DEC Cozzy have discussed data with Mr. Chawla and NYC OER will manage remediation of metal/PCB contamination. 11:20 AM:- spoke with Mr. Fung, property owner. he mentioned that they are planning to build a four (4) story apartment building with one-level basement. the basement floor will be at 7.5 ft bg. they will excavate site to 10 ft bg for foundation work. currently, there is a vacant one-story warehouse at the site. scheduled a site inspection at 10:30 AM on 12/09/13. East Star Realty LLC. **property owner** 1740 East 27th Street Brooklyn, NY 11229 Attn.: Tin See Fung PH. (917) 662-3803 email: jacktinfung@gmail.com 12/09/13-Hiralkumar Patel. 10:20 AM:- visited site. met Mr. Fung. found multiple wells on-site. the tank is located under the floor, in area of one of the rolling door. found fill port and vent pipe at the foundation wall. suggested Mr. Fung to pump out the tank and seal the fill port to prevent any misdelivery and possible spill from tank. asked Mr. Fung to gauge all the wells and implement IRM, if product exists in well. he will contact his environmental contractor. found RAWP on NYC OER website. abstract of RAWP: - proposed plan to demolish the existing structure and construct a multi-story residential building that is expected to include a 65 ft by 74 ft cellar - the proposed building is planned to constructed starting from the property line along the length of Leonard St and extending east - depth to groundwater was present at approx. 10 ft bg - HydroTech installed thirteen (13) monitoring wells - wells were surveyed and groundwater table elevations were measured between 14.77 and 15.71 ft - groundwater flow direction is generally from the south towards the north - soil excavation below the water table is anticipated for the area surrounding the UST in the southwest portion of the site - will collect endpoint samples - will install a vapor barrier and an active SSDS beneath the proposed building 11:13 AM:- spoke with Stephen Morse at Grant Engineering. inquired him about spill remediation work plan, that he mentioned as attachement F in RAWP for NYC OER. Steve mentioned that such work plan is not ready yet. discussed about well gauging and implementation of IRM. Steve will talk to Mr. Fung and try to conduct well gauging prior to meeting with NYC OER on 12/13/13. Stephen Morse Grant Engineering Ph. (212) 464-8689 email: smorse@grantpllc.com 11:25 AM:- left message for Mr. Chawla. 12/10/13-Hiralkumar Patel. 11:40 AM:- left message for Steve inquiring about well gauging, prior to upcoming meeting on 12/13/13. 12/17/13-Hiralkumar Patel. 1:17 PM:- left message for Steve. 1:18 PM:- left message for Mr. Chawla. 12/20/13-Hiralkumar Patel. 10:01 AM:- spoke with Steve. they met with NYC OER on 12/13/13 and discussed remedial action plan. Steve mentioned that owner has not hired his firm to gauge wells and remove any product in well(s). 10:05 AM:- spoke with Mr. Fung. informed him that the Department requires gauging of all existing wells and immediate removal of any product in well(s). he will talk to Steve. 1:04 PM:- received call from Andrew from Grant Engineering inquiring about what work needs to be done. informed him that the Department requires well gauging and removal of any free product from wells, until permanent remediation system is installed. informed him that well gauging must be done by end of 12/27/13. also recommended removing oil from the UST. Andrew Rizk Grant Engineering Ph. (212) 464-8689 Ext. 2 email: arizk@grantpllc.com 01/08/14-Hiralkumar Patel. 10:01 AM:- received call from Andrew. they gauged 12 out of 13 wells

BRUMAR SHEET METAL INC (Continued) **S108076226**

installed for the subject project. one well was installed across the site which is inside construction zone and was not accessible for gauging. out of 12 wells, free phase product found in 3 wells. about 4 inch product found in one of the well and less than 1 inch product found in remaining two wells. Andrew will submit memo, once he gets previous well survey data from record. Andrew confirmed that the on-site tank was also pumped out last week. informed Andrew that the department requires implementation of interim remedial measures until permanent remedial system in in operation. 01/09/14-Hiralkumar Patel. received email from Andrew (at 6:59 PM on 01/08/14) including well gauging data. total of 13 wells (MW-1 through MW-13) were installed previously by Hydrotech. well MW-7 is located on west sidewalk of Leonard St, across from the site. well MW-7 was inaccessible due to the presence of green construction fence directly over top of the well. out of 12 remaining wells, product found in three wells (MW-1, MW-2 and MW-8) between 2 and 4 inches. 01/13/14-Hiralkumar Patel. 12:49 PM:- left message for Mr. Fung. 12:50 PM:- left message for Mr. Chawla. 01/27/14-Hiralkumar Patel. 11:12 AM:- received email from Mr. Chawla including owner's letter and OER briefing. property owner Mr. Fung stated that the entire site will be excavated down to 13 ft bg (into groundwater table). Mr. Chawla included copy of ORC application plan. 4:09 PM:- sent email to Mr. Chawla and informed him that the Department has not received any ORC treatment work plan and such plan is not approved prior to reviewing tank removal report with endpoint sample results. email copied to Mr. Wong at OER. 01/28/14-Hiralkumar Patel. 9:12 AM:- left message for Mr. Chawla. 9:41 AM:- received call from Mr. Chawla and Mr. Wong from NYC OER. Mr. Chawla mentioned that they received a revised RAWP and ready to issue Notice to Proceed letter. he wanted to know any requirements from DEC, prior to sending letter to property owner. revised RAWP will be forwarded for review. 12:29 PM:- received email from Mr. Chawla including link to RAWP Stipulation List. abstract of RAWP Stipulation List to NYC OER: - entire site will be excavated to 13 ft bg, with additional excavation in locations where further pockets of contamination is observed - collection and analysis of 22 endpoint samples from the bottom of excavation will be collected - a minimum of 20-millimeter vapor barrier will be installed beneath te structure's slab and along foundation wall - dewatering will be performed - excavation of the impacted soil will be performed following the removal of existing tanks abstract of site-specific groundwater treatment and monitoring plan dated 01/21/14: - remaining product from 5,000 gal tank was pumped from the tank on 12/27/13 - proposes to mitigate the contamination in three stages: 1) the existing site will be remediated via purging of product from the existing wells on a monthly basis, 2) site will be excavated to approx. 13 ft bg, or deeper in locations where contamination is present and the open excavation will be treated with chemical application, and 3) monitoring wells and contingency injection wells will be installed in the cellar level of the proposed development to allow for future chemical injections, if necessary - prior to construction, the assessment of groundwater quality will include the collection of groundwater samples from the existing wells 01/29/14-Hiralkumar Patel. 12:46 PM:- sent letter to Mr. Fung requiring bi-weekly monitoring of wells, product removal from impacted wells and monthly submission of well monitoring reports. informed him that the department only approves tank removal work (as listed in appendix 1 of RAWP Stipulation List submitted to NYC OER) and required

BRUMAR SHEET METAL INC (Continued) **S108076226**

submission of tank removal report. also informed him that the department may require additional investigation, after reviewing the tank removal report, prior to any comment on in-situ remediation, if needed. letter emailed to Mr. Fung, Mr. Chawla, Mr. Wong, Steve and Andrew. 12:53 PM:- spoke with Mr. Fung and informed him about letter sent in email. he will discuss with Grant Engineering.
02/20/14-Hiralkumar Patel. 1:06 PM:- received email from Andrew. he mentioned that while drilling borings for geotechnical investigation, a second UST was found, directly east of the existing 5,000 gal UST. unknown UST had about an inch of product. he confirmed that product from 5,000 gal tank was pumped out on 12/27/13. they pumped out product from impacted wells (MW1, MW2 and MW) on 02/07/14.
03/04/14-Hiralkumar Patel. 1:32 PM:- received email from Andrew including interim remedial measure letter report. between 1 and 6 inches of product noted in three wells (MW-1, MW-2 and MW-8).
04/09/14-Hiralkumar Patel. received email from Steve (at 5:39 PM on 04/08/14) including interim remedial measure letter report. wells were monitored on 03/07/14 and 03/21/14. between 2.5 and 6.6 inches of product noted in three wells (MW-1, MW-2 and MW-8).
04/18/14-Hiralkumar Patel. received email from Steve (at 8:09 PM on 04/17/14). he mentioned that bi-weekly groundwater gauging, monitoring and reporting will not be conducted this week due to the building currently undergoing asbestos abatement activities. he also mentioned that the existing building will be immediately demolished once the abatement work is completed. Steve mentioned that well gauging will resume, if demolition does not occur.
04/28/14-Hiralkumar Patel. 3:33 PM:- sent email to Steve inquiring updates. 04/29/14-Hiralkumar Patel. 10:15 AM:- received email from Steve. he mentioned that currently, the building is under a stop work order and full vacate order. the owner and asbestos abatement contractor are taking steps to address this. 08/19/14-Hiralkumar Patel. 11:58 AM:- received message from Ray Kahn from ESPL.
08/22/14-Hiralkumar Patel. 2:39 PM:- spoke with Mr. Kahn. ESPL has been hired for required work at the site and they are ready to start soil excavation. asked Mr. Kahn to provide work schedule for site work. he will send email. 11/14/14-Hiralkumar Patel. 10:16 AM:- left message for Mr. Kahn. 11/18/14-Hiralkumar Patel. 12:04 PM:- received call from Mr. Kahn. he mentioned that site excavation has not begun yet as owner has planned to change design of new building. Mr. Kahn will talk to property owner about required well gauging/product removal. 12/17/14-Hiralkumar Patel. 1:21 PM:- spoke with Mr. Kahn. he mentioned that property owner has met with NYC OER and planning to start excavation on 01/05/15. he mentioned that well monitoring/gauging/product removal has not been conducted yet since Feb. 2014. 1:22 PM:- left message for Mr. Wong at NYC OER. 1:44 PM:- spoke with Shaminder Chawla at NYC OER and informed him about property owner's failure to comply with the well monitoring/report submission requirements as per the letter dated 01/29/14. informed him that the case may be referred for legal enforcement. Mr. Chawla has no objection to DEC's enforcement. 01/07/15-Hiralkumar Patel. 11:52 AM:- spoke with Mr. Kahn. after discussion on 12/17/14, ESPL installed a test pit next to the UST. the test pit was dug down to 9 ft bg, where groundwater was found. free phase product was noted on groundwater and product recovered using absorbent pads. asked Mr. Kahn to submit letter summarizing test pit work and monitoring data. Mr. Kahn mentioned about chemical treatment of contamination. informed him that the department does not approve chemical treatment

BRUMAR SHEET METAL INC (Continued) **S108076226**

at this time and requires submission of endpoint soil and groundwater samnple results prior to finalizing a remedial method. 01/21/15-Hiralkumar Patel. 9:08 AM:- received email from Mr. Kahn including test pit letter report. three test pits were excavate on 12/19/14 to a depth of 11 ft bg (2 ft below groundwater) and 8 ft wide. product found on water in test pit #1 which is located east of the tank farm. product is being collected using absorbent pads. on 01/12/15, a stop work order was issued by NYC DOB. interim cleanup will continue by capturing the product using adsorption pads and pump-out methods until the actual tank removal and spill clean-up can be conducted. 9:11 AM:- sent email to Mr. Kahn and asked him to submit a scaled site map with existing well, tank and test pit locations. email copied to Mr. Chawla. 01/23/15-Hiralkumar Patel. received email from Mr. Kahn (at 8:16 PM on 01/22/15) including site map. he also mentioned that the stop work order was removed and the shoring conctractor is driving the beams into the ground in the west and north side of the site. 01/28/15-Hiralkumar Patel. received email from Mr. Kahn (at 2:54 PM on 01/25/15) including test pit/UST plan and shoring plan. he mentioned that two USTs were exposed on 01/23/15 to prepare the site location plan. both tanks were found containing water. 01/29/15-Hiralkumar Patel. 9:58 AM:- received call from Mr. Kahn. today they pumped out and removed two tanks. excavation was about 9 ft bg and groundwater was not found in the excavation. due to structural safety of the adjoining building, they have to backfill the excavation. Mr. Kahn mentioned that contaminated soils will be removed once underpinning for adjoining building is done (possibly within two weeks depends on weather). 02/05/15-Hiralkumar Patel. 2:14 PM:- received email from Mr. Chawla. William Wong of OER visited site and noted petroleum odors while tank piping being removed. 02/06/15-Hiralkumar Patel. 10:30 AM:- visited site. met with on-site supervisor. crew was underpining adjacent building in area where the USTs were located. no petroleum odors noted in work zone. 02/11/15-Hiralkumar Patel. 1:32 PM:- received message from Mr. Kahn. 02/12/15-Hiralkumar Patel. 10:03 AM:- received call from Mr. Kahn. during underpining operation, crew found set of ten (10) 1,000 gal tanks in rear portion of the site. Mr. Kahn spoke with neighbours and reviewed sanborn maps. maps shows location of ten tanks. Mr. Kahn has collected liquid samples from these ten tanks. asked him to send site map with these tank location, sanborn map and tank removal plan. also asked him to submit results of liquid samples from the tank, once available. 03/03/15-Hiralkumar Patel. 10:38 AM:- received email from Mr. Kahn including link to UST removal report. abstract: - previously known USTs # 1 & 2 were removed on 01/29/15 - during underpinning of the adjacent structure, two additional tanks (UST # 3 & 4 - size: 5.5 ft dia x 7 ft long) were discovered approx. 3 ft bg on 02/09/15, which were removed - during further work, an additional eight (8) USTs were identified (UST # 5, 6, 7, 8, 9, 10, 11 & 12) on 02/11/15; these tanks were buried vertically approx. 2.5 ft bg - USTs # 5-12 were identified on 1942-1965 Sanborn Maps - USTs # 5-12 were encased in concrete - based on site history and shape of tanks # 5-12 and interior structure, it was concluded that the tanks could have been used for mixing operation which is consistent with the site history of a carpet dying operation during 1940's and 1960's - dimensions of tanks # 5-12 varied: 5 ft dia x 6 ft long (1,000 gal) & 5 ft dia x 4 ft long (500 gal) - additional soil excavation will continue Mr. Kahn included copy of PBS application form (signed on 02/11/15) to register previously unknown tanks, but no records found in PBS

BRUMAR SHEET METAL INC (Continued) **S108076226**

record. 03/31/15-Hiralkumar Patel. 9:06 AM:- received call from Mr. Kahn. he mentioned that soil from almost entire footprint of the site has been removed to a depth of approx. 11 ft bg. they removed about 3,028 tons of soil. currently, the site excavation is filled with groundwater. the north and south sidewall of the excavations are concrete underpining under adjacent buildings and there is a shoring along the west sidewall to pretect the sidewalk. asked Mr. Kahn to collect endpoint soil samples from east sidewall, water sample from excavation pool and groundwater samples from monitoring wells on sidewalk. asked him to analyze all samples for full list VOCs/SVOCs. informed Mr. Kahn that the department does not approve application of any chemical prior to reviewing soil/groundwater samples. he mentioned that the new foundation will be at around 9.5 ft bg. 04/01/15-Hiralkumar Patel. 8:45 AM:- went to site for inspection, but site was closed. looked through opening in construction fence. the entire excavation was filled with water. no petroleum sheen or odors were observed. 04/09/15-Hiralkumar Patel. 10:55 PM:- received email from Mr. Kahn including status report. abstract: - composite soil sample was collected from east sidewall - groundwater samples were collected from excavation pool and wells MW-5 and MW-6 - no contamination found in any sample based on available documents/information, no further work is needed and case is closed. 3:01 PM:- spoke with Mr. Chawla at NYC OER and informed him about case closure. Mr. Chawla confirmed that a moisture/vapor barrier will be installed underneath the new building. 3:19 PM:- sent spill closure letter to Mr. Fung. letter emailed to Mr. Fung, Mr. Chawla and Mr. Kahn. **also refer to spill #: 1206982.**"

Remarks: "tank is in place, soil samples confirm contamination"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 12/23/05- Andersen - Reviewed quarterly report dated 11/7/05. Eight MW sampled on September 23, 2005. Max BTEX 729ppb (MW5), max MTBE 352ppb (MW3). SVE system shut down May 5, 2005 due because low influent vapors. RAP required for remaining contamination. 12/29/05: RAP required letter sent. RAP due 2/9/06. 1/26/06: 1/25/06 meeting with Quantum, NYSDEC, and ET. A sensitive receptor survey and soil vapor survey will be performed, and then site closure will be considered. A kiosk vapor abatement system is in place. 2/2/06: Reviewed the fourth 2005 quarterly report. Max BTEX 497 ppb (MW5), max MTBE 351 ppb (MW6). A sensitive receptor survey will be prepared. 6/30/06: Meeting on 6/28/06 with Hess, Quantum, NYSDEC, EnviroTrac and GSC. Will submit request for closure. Sub slab vapor sampling conducted. 7/25/06: Received the results of sub-slab sampling and a sensitive receptor survey. Two sub slab samples were collected from beneath the kiosk on site. MTBE and BTEX were not detected above method detection limits. The sensitive receptor survey revealed that residential houses with basements are located within 1,000 ft of the site. Closure was requested. 10/6/06: Emailed Dawn Coughlin to followup on quarterly report. Received email from Ed Russo: the site was sampled on August 15, 2006. Results indicated concentrations that we feel warrant closure, especially due to the positive results of the soil-gas sampling and sensitive receptor survey. The report was just finalized yesterday, so you should be receiving it by the middle of next week. 11/1/06: Received closure request. Max benzene 158ppb in MW3, MTBE 338 in MW3. Continued groundwater sampling required. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. 1/23/07: Received update report. Wells samples on 11/8/06. Max BTEX 63 (MW3), max MTBE 222 (MW6). 4/20/07: Reviewed update report. Max BTEX 12.3 ppb (MW1). As reportedin the sensitive receptor survey, soil vapor sampling showed soil gas MTBE and BTEX concentrations ND. ND concentrations in downgradient wells. NFA issued."
Remarks:	"SOIL FOUND IN TANK PULL - SOIL BEING STODE PILED."

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major

HESS#32516 (Continued) **1000263799**

redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Update By:	GTBOBERS
Site Description:	Location: The site is located at 65 Eckford Street in the Greenpoint section of Brooklyn, NY. The site is about 0.23 acres in size. Site Features: The site is an irregular shaped lot and is developed with a one and two-story industrial/manufacturing building. Current Zoning: The site was rezoned in 2005 from industrial (M1-2) to residential (M1-2/R6B). Past Use of the Site: The site was undeveloped prior to 1887. By 1905, several one-story manufacturing buildings were constructed on the site and used as a part of the Meisel Danowitz & Co. woodworking operation. The site was redeveloped by 1916 with the existing one and two-story building currently constructed at the site. From then until the 1940s, the building variously housed a machine shop and parking garage. By 1950, the building was occupied with a wood box manufacturing company, and a company that performed lacquer spraying on the 2nd floor. From 1960 to 1989, the building was used for metal finishing and spraying. Site Geology and Hydrogeology: Based on the Remedial Investigation (RI) Report for the site, the regional geologic setting consists of bedrock overlain by layers of unconsolidated sediments (generally sand, gravel and silty clays) deposited by glacial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the Site consists of historic fill material that extends to depths as great as 13 feet below grade in some areas, followed by grey silty clay. According to the United States Geographical Survey (USGS) topographic map for the area (Brooklyn Quadrangle), the elevation of the property is about 14 feet above mean sea level. The area topography gradually slopes downward to the north and west. Groundwater is present beneath the Site at a depth of 11 to 12 feet below sidewalk grade under water table conditions. Regional groundwater flow is to the northwest.
Env Problem:	Nature and Extent of Contamination: Soils: Soil samples collected during the Remedial Investigation (RI) were analyzed for all classes of contaminant (i.e., volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides). The following contaminants were found: - Petroleum-related contaminants were detected above unrestricted use soil cleanup objectives (SCOs) and Protection of Groundwater SCOs in soil samples collected at the water table (11-13 ft below ground

FORMER CARTER SPRAY FINISHING CORP. (Continued) **S117936657**

	surface) at several locations throughout the site; - Chlorinated solvents were detected in shallow soil samples (0-4 ft below ground surface) above Unrestricted Use SCOs and Protection of Groundwater SCOs in the southern and western portions of the site; - SVOCs were detected above Commercial SCOs in shallow soils (0-4 ft below ground surface) and soil samples collected from the water table (11-13 ft below ground surface) in the southern and eastern portions of the site; and - Metals were detected above Commercial SCOs in shallow (0-4 ft below ground surface) and deep (18-20 ft below ground surface) soil samples collected throughout the site. Groundwater: Groundwater samples were analyzed for all classes of compounds during the RI. The following contaminants were found: - Petroleum-related contaminants, chlorinated solvents and SVOCs were detected in groundwater samples above the Groundwater Quality Standards; and - Metals were detected in several groundwater samples. However the metals were not dissolved and are more indicative of soil contamination than groundwater contamination. Data does not indicate any off-site impacts in groundwater related to this site Soil Vapor: Soil vapor samples were analyzed for VOCs. The following contaminants were found: - Chlorinated solvents and petroleum-related compounds were detected in all soil vapor samples.
Health Problem:	The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Additional investigation is needed to evaluate whether further actions are needed to address soil vapor intrusion at off-site structures.

Updated By: TJKILLEE
Site Description: Site was referred to DER by the NYCOER due to elevated concentrations of arsenic in on-site surficial soil. No additional information is available at this time.
Env Problem: Additional investigation will be needed in order to define the nature and extent of the contamination.

BERKMAN BROS INC (Continued) **1000271415**

Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description:	Location: The Site is located in an urban area in the Williamsburg section of the City of New York and Borough of Brooklyn (Kings County). The site is located on the corner of North 10th Street and Roebling Street. Site Features: The property is developed with two one-story buildings. One is currently occupied by Brooklyn Moto Club and Brooklyn Moto Service LLC, which rents space in the building for motorcycle repair. There are two smaller one-story structures. Parking areas surround the structures. The entire site is paved with several areas of overgrown vegetation. Current Zoning and Land Use:

ROBINSON BROS. INDUSTRIES, CORP. (Continued) **S102638185**

	The site is currently zoned M1-2 (light manufacturing) with an R6A (residential) overlay and is currently occupied by a motorcycle repair operation and storage business. The site has a New York City e designation for hazardous materials as a result of recent rezoning from the previous MX8 zoning (heavy industrial use). Past Use of the Site: The Site was developed with a varnish research works in 1942. In 1965, there were two chemical warehouses on site. Site Geology and Hydrogeology: The elevation of the Site ranges is approximately 10-14 feet above the National Geodetic Vertical Datum (NGVD). The area topography gradually slopes to the east. The geologic setting of Long Island consists of crystalline bedrock overlain by layers of unconsolidated deposits. The bedrock is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the Site is described as historic fill materials to a depth as great as 4 feet below the surface followed by brown sand, red clay, brown clay black gravel, black/brown slit. The depth to groundwater beneath the Site is approximately 7 feet below grade and flows to the northeast.
Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Record Updated Date:	04/04/2017
Update By:	GTBOBERS
Site Description:	Location: The site is located in the Williamsburg section of the borough of Brooklyn, NY. The site has about175 feet of frontage along Driggs Avenue and 100 feet of frontage along North 8th Street. Site Features: The property is currently developed with an asphalt-paved parking lot, with a small unoccupied attendant's booth. Current Zoning and Land Use: The property is currently a vacant parking lot. The site is zoned commercial/industrial/high density residential (M1-2/R6A and R6B). Allowable uses include light manufacturing, warehouses, wholesalers, and multi-story residential buildings. Past use of the Site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant (MGP). The MGP was demolished by 1887. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by a food warehouse circa 1991. Both buildings were demolished in 2006 and replaced with the existing parking lot. Geology and Hydrogeology: Soil at the site is described as historic fill materials to a depth of about 15 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater is present at about 12 feet below ground surface, and flows to the northeast.
Env Problem:	Nature and Extent of Contamination A Remedial Investigation (RI) was conducted at the site in August and September 2015. Soil and groundwater samples were analyzed for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), Metals, Polychlorinated Biphenyls (PCBs) and Pesticides. Soil vapor samples were analyzed for VOCs. Soil borings in the southern half of the site encountered refusal between 18 and 21 feet below ground surface (bgs), in the vicinity of the suspected former MGP gas holder foundation. A source area near the location of the former MGP gas holder is suspected due to the presence of non-aqueous phase liquids (NAPL) and elevated levels of petroleum VOCs, chlorinated VOCs (CVOCs), and naphthalene. The following are the results for each medium sampled: Soil: Results of the RI show that fill materials are present to a depth of about 15 feet bgs. Chlorinated and

FORMER STERLING TRANSFORMER CORP. (Continued) **S117363438**

petroleum-related VOCs were reported above unrestricted use soil cleanup objectives (SCOs) in samples collected in the southern portion of the site from 10 to 21 feet bgs. Compounds included benzene (up to 0.89 parts per million (ppm)), chrysene (up to 38 ppm, naphthalene (up to 620 ppm) and vinyl chloride (up to 2.6 ppm). The unrestricted use SCOs for benzene, chrysene, naphthalene and vinyl chloride are 0.06 ppm, 1 ppm, 12 ppm and 0.02 ppm, respectively. SVOCs were detected above unrestricted use SCOs throughout the site at all sampled depths. Compounds included benz(a)anthracene (150 ppm) benzo(a)pyrene (86 ppm), benzo(b)fluoranthracene (100 ppm), chrysene (120 ppm), dibenz(a,h)anthracene (4.2 ppm), and indeno(1,2,3-cd)pyrene (27 ppm). The unrestricted use SCOs for benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthracene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene are 1 ppm, 1ppm, 1 ppm, 1 ppm, 0.33 ppm, and 0.5 ppm, respectively. Off-site investigation of soil was not conducted as part of the RI. Metals including chromium, mercury, and lead were detected up to 121 ppm. Pesticides including chlordane, a-chlordane 4,4 -DDT, 4,4 -DDE, and deildrin were detected up to .97 ppm. Detections of metals and pesticides were predominantly at the 0 5 foot sampling depth. PCBs were not detected during environmental sampling. Groundwater: CVOCs were reported above ambient water quality standards (AWQS) at all of the sample locations, with pure solvent found in the southern portion of the site and elevated concentrations (up to 1,200 parts per billion, or ppb, of cis-1,2-dichloroethene) in the southeast corner of the site. The AWQS for cis-1,2-dichloroethene is 5 ppb. Benzene and SVOCs were also detected above AWQS in several monitoring wells. Benzene was detected up to 4,300 ppb in the central portion of the site. SVOCs including ben(a)anthracene, benzo(a)pyrene, benzo(b)flouranthene, chrysene, and indeno(1,2,3-cd)pyrene, were detected between 0.02 and 0.35 ppb, predominantly in the western portion of the site. Metals including iron, sodium, and manganese were detected above standards at levels commonly observed throughout Brooklyn due to historic over pumping of groundwater in the area. PCBs were not detected during environmental sampling. Data indicates potential off-site impacts in groundwater related to this site. Soil Vapor: Chlorinated solvents were reported in all of the soil vapor samples, with the highest levels (vinyl chloride at 116,000 micrograms (ug)/cubic meter) in the eastern portion of the site. Petroleum-related compounds were detected in soil vapor samples. Benzene was the highest petroleum- related compound at 1,240 ug/cubic meter, detected in the eastern portion of the lot. All other petroleum related compounds were detected between 2.26 ug/cubic meter and 390 ug/cubic meter. Data indicates potential off-site impacts in soil vapor related to this site.

Health Problem: Since the site is fenced and covered by asphalt or concrete, people will not come into contact with site-related soil and groundwater contamination unless they dig below the ground surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no on-site buildings, inhalation of site contaminants in indoor air

FORMER STERLING TRANSFORMER CORP. (Continued) **S117363438**

due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. In addition, sampling indicates soil vapor intrusion is a concern for off-site buildings.

DEC Memo:	"Tank test failure. PBS file shows tank in service, but next tank tes due prior to the date of this spill. PBS registration expired in 2000. Need to follow up. 9/22/06 left message for attorney found on deed to contact Williamsburgh Square LLC (new owner as of 2003). address:154 N. 7th St., Brooklyn 11211. deed had no individual's name (only corporation). bf 4/30/08 Sent Old TTF letter to: Jerry Lebedowicz Williamsburg Square LLC 52-47 Browvale Lane Little Neck, NY 11362 Address obtained from tank closure application. bf 5/2/08 Received message from J. Lebedowitz to call him back. bf 5/5/089 Received call from J. Lebedowitz tank was closed. Athena Environmental sampled after tank was removed. bf 6/18/08 Yesterday, recieved message from Spiro of (Name not clear) Environmental Services. He requested call back to (718)784-7490. I called the number today, but number is not in service at this time and no further informatuion is available. Review of PBS file shows tank was closed in 2008. They should have closure report. Called Jerry Lebedowicz and left message to call me back. His number (from PBS application) is (718)784-7490. Mr. lebedowicz hand-delivered sampling results from Athenica Environmental Services. One contaminant was above soil clean-up objectives to protect gw quality: chrysene (690 ppb) in sample B-3. Faxed nfa letter to Mr. Lebedowicz. Fax:

154-158 NORTH 7TH ST/BKLY (Continued) **S104275561**

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO TTF letter sent to Mr. Wersocki at 187 Bedford Ave Bklyn 11211 12/3/05: CBN Called Alex Wersocki (718) 963-2659 and left a message for hm to call me back, but haven't heard from him yet. 12/1/08 bf: Sent ttf old spill letter to: Alexander Wersocki 187 Bedford Avenue Brooklyn, NY 11211 10/14/14-Hiralkumar Patel. reviewed available information for DEC DeMeo. alternate address: none no other spills found. PBS #: 2-608263. as per PBS record, the site has one 2,000 gal #2 oil UST, in-service, installed in Jun. 1983. as per documents available on PBS database, the tank system was found tight during test on 11/26/2008 and 01/31/2014. Alexander Wersocki **property owner** 187 Bedford Avenue Brooklyn, NY 11211 PH. (718) 963-2659 (646) 287-6165 email: dg.nycbdrs@gmail.com 2/12/15 TJD Spill reassigned from DeMeo to Patel 03/24/15-Hiralkumar Patel. 10:35 AM:- went to site for inspection, but no one was available to provide access to the basement. found a color coded fill port and vent pipe by the building wall, at the southeast corner of the building (adjacent to building 189 Bedford Ave). 10:43 AM:- spoke with Mr. Wersocki. he mentioned that he doesn't remember the actual cause of test failure in 2003, but the tank system was tested tight after 2003. he confirmed no spill inside building. 10:47 AM:- spoke with Richard (917-647-6475), who maintains the boiler system at the site. he confirmed that the site has an underground tank which was found tight during recent testing. he also confirmed no signs of oil spill within building. in accordance with R2 TTF closure protocol, this spill is being closed due to no indication of a current release, no information indicating that there may have been a historical release, no information that this tank test failure will be an issue in the future and the tank system was found tight during subsequent testing."

Updated By: BXANDERS
Site Description: Location: The site is located in an urban area at 135 Kent Avenue in the Borough of Brooklyn, Kings County, NY. The site is bordered to the north by North 6th Street, to the west by Kent Avenue, to the south by a vacant 2-story warehouse (see BCP site no. C224159), and to the east by a three story building which appears to consist of a garage on the first floor with residential above. Single and multi-family residential is located across North 6th St. and newly-constructed multi-story residential towers are located across Kent Avenue. Site Features: The Site currently consists of a 11,000 sq. ft. (0.27 acre) 2 story brick building with commercial units on the first floor and residential units on second floor. Current Zoning/Use(s): The site is currently zoned M1-2 (manufacturing) with an R6A (residential) overlay. The site is located within the Greenpoint-Williamsburg Rezoning District, and is surrounded by mixed commercial and residential uses. The Site has a NYC Restrictive Declaration (similar to E-Designation) for Hazardous Materials (E-138) and Air Quality (E-227). Past Site Use(s): The Site was previously occupied by a warehouse which operated as a commercial dry cleaner supplies distribution facility (Cleaners Sales & Equipment Corp.). This facility operated from about 1958 to 2002. Cleaners Sales & Equipment Corp. has a USEPA ID no. NYR000113480 for hazardous waste generation (tetrachloroethylene, or PCE). Furthermore, the site is a registered Chemical Bulk Storage Facility (CBS No. 2-000353 for a 5,000 gallon aboveground PCE storage tank) and Petroleum Bulk Storage facility (PBS No. 2-608579 for a 3,000 gallon closed-in-place underground storage tank. Site Geology and Hydrogeology: Soil borings installed on a neighboring property identified fill materials consisting of medium-grained sand with some gravel and brick fragments to a depth of approximately 8 feet below grade. Beneath the surface fill layer is sand and gravel to a depth of at least 28 feet below grade. Groundwater is present at a depth of approximately 12 feet below grade. Groundwater flows generally to the west-southwest towards the East River, which is located approximately 550 feet west of the site. Borings done in the sidewalk on N 6th St showed sand to 28 feet followed by a clay layer and then silty sand at 35 feet. Groundwater was at 17 feet below ground surface. This site has been accepted into the Brownfield Cleanup Program and, therefore, investigation and remediation will occur under that

FORMER CLEANERS SALES & EQUIPMENT CORP (Continued) **S103942699**

	program. The site Index is C224177.
Env Problem:	Nature and Extent of Contamination: Recent sampling was conducted as part of the Remedial Investigation for the adjacent BCP site. Soil vapor samples were collected from immediately in front of the loading dock for the former cleaner supply facility, which identified PCE at a concentration of 25,300,000ug/m3, and TCE 10,400 g/m3 and cis-1,2-DCE at 7,060 ug/m3. Significant Threat: Based upon the soil vapor sampling results there is a potential for inhalation of the site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures. The NYSDOH made an evaluation of significant threat for this site. The site was accepted in the Brownfield Cleanup Program (BCP) and the Index # is C224177.
Health Problem:	Volatile organic compounds related to the site in the groundwater may move into soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures.

Town:	New York City
Record Added Date:	07/02/2013
Record Updated Date:	09/02/2016
Update By:	JHOCONNE
Site Description:	Location: The site is bounded to the north by North 6th St., to the west by Kent Avenue, to the south by BCP C224159, and to the est by mixed commercial/residential buildings. Site Features: The site is currently developed with a 2-story commercial/residential building (measuring approx. 125 ft x 100 ft). The first floor of the building is divided into individual tenant spaces operated by a coffee shop, deli, furniture store, clothing store, and storage area. A small sub-grade utility room exists beneath part of the first floor, where a boiler historically operated. One sump and two cleanout accesses, all with dirt bottoms, exist in the floor of the utility room. The second floor consists of 11 residential units. Current Zoning and Land Use: The site use is commercial and it is included in an M1-2/R6A (Manufacturing with a Residential Overlay) mixed use district. Past Use of the Site: Former Cleaners Sales & Equipment Corp., a dry cleaning fluid distribution facility and laundry supply distributor, operated onsite from approximately 1958 to October, 2002. Site Geology and Hydrogeology: USGS reports indicate the depth of the bedrock expected to be approximatively 100 feet below ground surface (fbsg). Based on the local topograpy, groundwater most likely flows in the west-southwest direction toward East River, located 500 feet from the subject site. The depth to the groundwater is expected to be 8 to 10 fbsg.
Env Problem:	Nature and Extent of Contamination Limited information about site contamination has been obtained through investigations performed on an adjacent site, and investigations performed on the sidewalk in front of the site by NYSDEC (see former site no. 224177). Further investigation of the on-site portions of the site are planned. a) Contaminants: The primary contaminants of concern are tetrachloroethylene (PCE) and its breakdown products trichloroethene

CLEANERS SALES & EQUIPMENT (Continued) **1006810542**

(TCE), 1,2-dichloroethene (DCE) and vinyl chloride (VC). In May and June 2013, NYSDEC performed limited investigation on the sidewalk in front of 135 Kent Ave. and identified these contaminants in soil, groundwater, and soil vapor. b) Area/depth extent: The extent of the contamination has not been determined yet. c) Concentrations: Soil: PCE concentrations were detected at concentrations as high as 1.6 ppm (compared with Unrestricted Use Soil Cleanup Objective of 1.3 ppm); VC was detected at concentrations as high as 0.064 ppb (compared with 6NYCRR Part 375-6.8(a) UUSCO of 0.02 ppm). Groundwater: PCE concentrations were detected as high as 870 ppb (compared with Ambient Water Quality Standard of 5 ppb); TCE was found at up to 33 ppb (compared with AWQS of 5 ppb), and DCE was found at up to 20 ppb (compared with AWQS of 5 ppb). Soil vapor: PCE was identified at a concentration of 25,300,000 ug/m3, TCE at 10,400 g/m3 and DCE at 7,060 ug/m3. Significant Threat: The site presents a significant human health threat due to the high concentrations of PCE, TCE, and DCE in soil vapor and the potential for exposures to site-related contaminants via soil vapor intrusion.

Health Problem:	Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface in to the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling identified impacts to the indoor air quality of the on-site building and immediate actions have been taken to minimize exposures. Additional evaluation is needed to determine whether soil vapor intrusion is a concern for off-site buildings.

FINDS:

Registry ID: 110004336479

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description:	Location: The site is known as Huxley Envelope Industrial Site and is located at 21, 23 and 143 India Street, Greenpoint, Brooklyn. The site is bordered by Huron Street to the north, West Street to the East, India Street to the south, and the East River to the west. The site is approximately 2.65 acres in size. Site Features: The site is currently being improved with two unoccupied steel framed masonry block structures. There are three tax lots (lots 1, 7 and 8) that comprise the site. Current Zoning and Land Use(s): The site is being developed, is zoned residential, and is located next to other vacant former industrial or underutilized sites. Past Uses of the Site: Lot 1 - There was a single-story warehouse building (approximately 96,000 square feet) which was constructed in or about 1970 for Huxley Envelope, and was owned and operated by this envelope manufacturing company through 1995. Thereafter, it was operated as an ornament manufacturing facility until 2006. Lot 7 - There was a small 2 story building on this parcel which most recently contained a seafood distribution facility until 2011. The two-story building includes a loading area and refrigerated storage units on the ground floor, an office on the second floor, and a storage area in the basement. The building was constructed in 1931. Lot 8 - There was a two-story building that formerly contained a garage on the first floor and an apartment on the second floor. The building was constructed in 1931. Due to historic industrial uses at the site, all three lots received an environmental or E designation by New York City Department of Environmental Protection (NYCDEP) during the Greenpoint rezoning of this area in 2006. The identified on-site industrial uses included, but are not limited to, solvent based manufacturing, an iron works facility, and a commercial heating facility; all of these are types of businesses/operations that typically stored and used hazardous materials, and/or generated hazardous wastes. Site Geology and Hydrogeology: The site is located within the City's designated coastal zone, in an area which is mapped as ground moraine. Borings within the site area revealed that the site is underlain by brownish grey sand with some silt, ash, fragments of brick and wood (urban fill). Black course grained sand was encountered under the western portion of the site near the East River. Brown and grey silty clay was encountered at depths ranging from 5 to 10 feet below grade in the eastern portion of the site. Groundwater movement is from east to west, with a very low gradient toward the East River, the discharge point. Groundwater was encountered at depths between 7 and 12 feet below grade level. Groundwater in the New York City area is not used as a potable water source. The potable water supply for the site is provided by the City of New York, and originates from upstate

HUXLEY ENVELOPE INDUSTRIAL SITE (Continued) **S120706167**

	reservoirs. According to the USGS Bedrock and Engineering Geologic Maps, dated 1994, the site straddles a bedrock contact between the Cambrian-Ordovician Ravenswood Granodiorite on the northwestern portion of the site and the Hartland Formation on the remainder of the site. The Ravenswood Granodiorite consists of mica-quartz-feldspar gneiss, and the Hartland Formation is characterized by granulite, mica, schist and amphilblite. The bedrock is between 70 and 100 feet below grade. The site is within the 100-year Federal Emergency Management Agency (FEMA) flood plain (Sheet 36049702020F dated September 5, 2007).
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were arsenic, barium, copper, lead, mercury, and zinc in soil, benzene, ethylbenzene and lead in groundwater. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use for Building C; restricted residential use for Building B and commercial use for Building A. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Update By:	MJKOMORO
Site Description:	Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. Site Features: Currently, the site is vacant and unpaved. The buildings on-site have been demolished. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses) and is currently

NEW 470 PROJECT (Continued) **S118950508**

vacant. This zoning is consistent with the proposed use of the site. The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1. Former Lots 30, 32, and 33 have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site.

Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil: Soil samples were compared to the restricted-residential soil cleanup objectives (SCOs). No VOCs, PCBs, or pesticides were found above SCOs. Several heavy metals such as arsenic (maximum of 39 parts per million [ppm], compared to the SCO of 16 ppm), lead (14,000 ppm vs. 400 ppm), and mercury (7.6 ppm vs. 0.81 ppm) were found in the shallow soil across the site. Shallow soil was also contaminated above the SCOs with SVOCs in a class of contaminants called polycyclic aromatic hydrocarbons (PAHs) (for example, benzo(b)fluoranthene). The highest PAH concentration found during the investigations was benzo(b)fluoranthene at 21 ppm (1 ppm SCO). PAHs are typically associated with incomplete combustion of coal or oil. Soil with heavy metal and PAH contamination of this nature is consistent with historic fill. No source area for the VOCs was found in on-site soil, but based on the groundwater and soil vapor results, a source area may be present at the boundary with the off-site portion of Lot 1. Groundwater: Groundwater samples were compared to Class GA Ambient Water Quality Standards. PAHs were the only SVOCs detected slightly above standards. Naturally-occurring metals were also detected above standards in several samples, and a pesticide was found in a single water sample from the off-site portion of Lot 1. There were no PCBs in any samples. On-site groundwater samples contained methyl tert butyl ether (MTBE) at concentrations of up to 48 ppb, above the standard of 10 ppb.

NEW 470 PROJECT (Continued) **S118950508**

	Although on-site groundwater samples did not contain chlorinated VOCs, samples from the off-site portions of Lot 1 had VOCs 1,1,1-trichloroethane (1,1,1-TCA) at a maximum concentration of 43 ppb, 1,1-dichloroethane at 740 ppb , and trichloroethene (TCE) at 7.6 ppb. All three of these VOCs have a standard of 5 ppb. Soil Vapor: Soil vapor was analyzed for VOCs, and the primary contaminants of concern for the site include 1,1,1-TCA, tetrachloroethene (PCE), and TCE. The highest levels of these VOCs were measured in the northeastern part of the site in the northern part of former Lot 30, with 1,1,1-TCA at 37,300 micrograms/cubic meter (ug/m3), PCE at 956 ug/m3, and TCE at 1,120 ug/m3. Because these soil vapor concentrations were measured near the site boundary, off-site soil vapor may be a concern for the residential buildings adjacent to the site. Special Resources Impacted/Threatened: None.
Health Problem:	Access is restricted by a fence. However, people who enter may come into contact with contaminants in soil by walking on the site, digging, or otherwise disturbing the soil. People will not come into contact with site related groundwater contamination unless they dig below the surface. People are not drinking the contaminated water because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Further evaluation is needed to determine whether soil vapor intrusion is a concern for off-site structures.

Record Added Date: 05/01/2012
Record Updated Date: 01/18/2017
Update By: JHOCONNE
Site Description: Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.
Env Problem: Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the

KENT & WYTHE OWNERS LLC (Continued) **S117742197**

	Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.
Env Problem:	Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Updated By:	IXMUNTEA
Site Description:	Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.
Env Problem:	Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Site Code: 463657
Site Description: Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the

KENT & WYTHE OWNERS LLC (Continued) **S117742197**

site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem: Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.
Env Problem: Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

FINDS:

Registry ID: 110004334872

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110013752313

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions,

KIEN IMPORT CORPORATION (Continued) **1000164221**

and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site Description: Location: The site is located in the Williamsburg section of Brooklyn. The site is bounded by Havemeyer Street to the northwest, North 6th Street to the southwest, Macri Triangle park to the southeast, and North 8th Street to the northeast. Site Features: The site is completely covered with buildings in the northwest section; and covered with asphalt, concrete, and open park space in the southeast section. The site is bisected by an elevated portion of I-278 (the Brooklyn-Queens Expressway (BQE)) adjacent to the park. Current Zoning and Land Use(s): The site is zoned for residential, manufacturing, and commercial uses. The residential area is in the northwest section of the site. The manufacturing building along Meeker Avenue is unoccupied. Past Use of the Site: According to Sanborn maps, the former Ansbacher Color and Dye Factory (Ansbacher) occupied multiple buildings along North 6th Street, North 7th Street, and Metropolitan Avenue from ~1887 to ~1945. The assumed use of the facility was to manufacture paints and/or pigments for commercial and industrial use. In the early 1950's, the buildings in the southeastern section of the site were torn down to make room for the construction of the BQE. It is believed that during this construction, waste material and debris from the former Ansbacher plant may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation (NYSDOT) in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed by the New York State Department of Environmental Conservation (NYSDEC) during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. In 2015, the NYSDEC initiated an investigation on the perimeter of the site to identify the origin of chlorinated solvents found in groundwater beneath the sidewalk as part of routine sampling. Site Geology and Hydrogeology: The site is underlain by fine to medium sands; with limited quantities of coarse sand, gravel, and silt throughout the site at varying intervals. Groundwater is approximately 9.5 - 12.5' below grade. Flow direction in shallow groundwater is toward the west-southwest, while deeper groundwater appears to flow towards the east. (This may be due to the presence of the "L" train subway tunnel underneath North 7th Street.)

Env Problem: Nature and Extent of Contamination: - Soil Sampling was completed in multiple stages from 1988 to 1999. The primary contaminants of concern in soil at this site are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 7,500 ppm, well above the

BQE/ANSBACHER COLOR & DYE FACTORY (Continued) **S106780917**

cleanup objective for commercial use (16 ppm). This soil failed for EP Toxicity (48 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Lead has been found at concentrations up to 10,600 ppm, well above the cleanup objective for commercial use (1,000 ppm). This soil failed for EP Toxicity (20.3 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Mercury was also found at concentrations up to 294 ppm, well above the cleanup objective for commercial use (2.8 ppm). These concentrations were all found in the vicinity of the "arsenate of lead" building in the southeast area of the site, which is now located in the footprint of the BQE. - Groundwater Sampling has been completed in multiple stages from 1988 to 2015. The primary contaminants of concern in groundwater are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 15,500 ppb, well above the Class GA standard of 25 ppb. Lead has been found at concentrations up to 431 ppb, above the Class GA standard of 25 ppb. Mercury has been found at concentrations up to 75 ppb, well above the Class GA standard of 0.7 ppb. These concentrations were all found in the vicinity of the "arsenate of lead" building in the southeast area of the site, which is now located in the footprint of the BQE. In 2015, groundwater in the northwest portion of the site was also found to contain tetrachloroethene (PCE) up to 1,900 ppb, trichloroethene (TCE) up to 120 ppb, and cis-1,2-dichloroethene (DCE) up to 320 ppb. PCE, TCE, and DCE all have a Class GA standard of 5 ppb. Significant Threat: The site does not constitute a significant threat to human health or the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.

Health Problem: Residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt, thereby preventing direct contact. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Groundwater in the area is not used, since public water is available. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants.

Site Description:	Location: The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The approximately

NUHART CO (Continued) **1009232006**

1 acre site is described on the county tax map as Block No. 2487, Lots No. 1, 10, 12, 72 and 78. Site Features: The dimensions of the site are approximately 240 feet by 200 feet. The building consists of a number of smaller buildings that have been joined together. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To the west is a park and to the northwest is a paved lot which is used for truck storage. Current Zoning/Use: The Site zoned M1-2/R6 which designates the site as manufacturing with a residential overlay. The site is currently vacant. Historic Use: The site has been in existence since 1887. It has been used for manufacturing, as an office, for storage, and for shipping and receiving. Prior to the late 1940s, the site and the surrounding lots were used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. The subject property was developed for plastic manufacturing purposes in the late 1940s to early 1950s, and has remained relatively unchanged since that time. From 1983 to 2004, NuHart and Company made vinyl siding and sheeting at the site. After 2004, NuHart removed all of their equipment and offices. There are 12 underground storage tanks (USTs) located on the Site. According to records, these tanks were emptied and closed as part of an Interim Remedial Measure (IRM). There are also two large aboveground silos on site. The Petroleum Bulk Storage (PBS) number is 2-608875, and the Chemical Bulk Storage (CBS) number is 2-000444. Liquid plasticizers stored included bis(2-ethylhexyl)phthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate. Site Geology and Hydrogeology: Measurements of the groundwater elevation indicated groundwater flow is generally to west towards the East River.

Env Problem: Nature and Extent of Contamination: The plasticizers bis(2-ethylhexyl)phthalate, Di-n-Octyl phthalate, as well as high boiling, paraffinic, petroleum oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in soil. TCE was also detected in soil vapor, shallow soil and groundwater in central portion of the site. From 1983 to 2004 NuHart and Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000 ppm of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. According to the Interim Investigation Report dated April 2010, a large plume of plasticizer NAPL mixture consisting of phthalates and paraffinic petroleum was identified under the western end of the factory where the plasticizer USTs were located. A small plume of NAPL consisting primarily of phthalate was identified beneath Lot 12 near one of the plasticizer tanks. The large plume has migrated off-site in a northwesterly direction under the sidewalk. Previous interim remedial measures (IRMs) implemented under the spill program involved cleaning the floors of the factory, cleaning out the USTs, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and recovery equipment. NAPL recovery has been ongoing since 2007. The IRM activitiy includes the use of a automated recovery unit at one recovery well and manual bailing from other wells. Typically about 70

NUHART CO (Continued) **1009232006**

	to 80 gallons of product/water mixture are recovered each month.
Health Problem:	It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil since it is under the ground surface, however, if the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. Also, the potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby structures via soil vapor intrusion needs to be evaluated.

Site Description: The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The building consists of a number of smaller buildings that have been joined together. The dimensions of the footprint of the one large building are approximately 400 feet by 200 feet. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To the west is a park and to the northwest is a paved lot which is used for truck storage. The site has been in existence since 1887. It has been used for manufacturing, as an office, as storage, and for shipping and receiving. Prior to 1950, the site was used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. From 1983 to 2004, NuHart & Company made vinyl siding and sheeting at the site. After 2004, NuHart & Company removed all of their equipment and offices. The site is now used for the storage of plastic wrapping and many large (36 cu. ft.) fabric bags containing pellets of resin. There are 17 underground storage tanks located on the site and two large silos above ground at the west end of the building. The Petroleum Bulk Storage (PBS)number is 2-608875 (for 13 registered tanks). The site is a former Chemical Bulk Storage (CBS) facility #2-000444 with 5 plasticizer tanks. Liquid plasticizers stored included bis(2-ethylhexyl)tertphthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate. The requestor withdrew the application, and the site was listed on the Registry of Inactive Hazardous Waste disposal site as of June 2010 (see site no. 224136).
Env Problem: The plasticizers bis(2-ethylhexyl)phthalate anddi-n-octylphthalate, as well as #4 fuel oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in soil. From 1983 to 2004 NuHart & Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000,000 ppb of

NUHART CO (Continued) **1009232006**

bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. A large plume of plasticizer NAPL was identified under the western end of the factory where the plasticizer USTs were located. This plume had migrated off-site in a northwesterly direction. A small plume of mostly #4 oil NAPL was identified under the northeast corner of the factory and had migrated a shorty distance off site. The environmental remediation which followed involved cleaning the floors of the factory, cleaning out the underground storage tanks, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and equipment. The NAPL plumes have now been reduced in size and consist of three separate plumes. All of the plumes are contained under the sidewalks bounding the factory and under the footprint of the building. The smallest plume is under the northeast corner of the site. The former large plume under the western end of the factory is now two separate plumes (according to the November 26, 2008 gauging event) and consist solely of plasticizers. The thickness of the NAPL ranges from 0.16 feet to 1.38 feet. Product collection from these two plumes is continuing and, as of December 2008, has recovered a total of 8,356 gallons of NAPL.

Site Description: Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which has started in 2011. Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the past ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. In 1999 RGJ contractor closed in place 14 USTs used to store VOCs. RGJ reported soil contamination around the USTs. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001, after Con Edison, the owner of the adjacent property discovered Volatile Organic Compounds (VOCs) under their parking lot and sued Fyn Paint Co. The investigation at the site revealed soil and groundwater highly contaminated with VOCs. After multiple phase investigations and negotiations, starting in January 2007, an IRM/pump and treatment of the groundwater was installed and operated. The RAWP was approved in 2009, and an excavation of the contaminated soil around six of the USTs constituting the source of VOCs was completed in 2010. Additional remedial design for a dual phase extraction system is being negotiated. In November 2011, RCRA Closure field work started under EPA supervision and it continued through 2012 performed by the

FYN PAINT & LAQUER CO. INC. (Continued) **S108524789**

Volunteer's consultant. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of a layer of antropogenic fill material (0-12 feet and the rest to 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. This site is being remediated under a Voluntary Cleanup Agreement (see site no. V00380).

Env Problem: Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are highly contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and ConEd parking lot. c) concentrations: Groundwater monitoring conducted at the site revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in few of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In July 2011, the RCRA closure work plan was approved and in November 2011, EPA started the RCRA site investigation as a response to the Department?s request for emergency action. RCRA closure activities continued through 2012.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Code: 56974

Site Description: Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Env Problem: Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2013. A Remedial Design for a dual phase extraction system was approved.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.
Env Problem: Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was

FYN PAINT & LAQUER CO. INC. (Continued) **S108524789**

performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2013. A Remedial Design for a dual phase extraction system was approved.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Site Description: Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Site Description:	The area of concern subject to this work is considered off-site from BCP site C224154 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224154 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The Fyn Paint and Lacquer Co., Inc.- Off-Site is located in an urban area in Brooklyn, Kings County. The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Site Features: The site consists of the areas surrounding the Fyn Paint facility. Site Geology and Hydrogeology: Based on information collected during the investigation of C224154, shallow soil consist fill material followed by medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (bgs). Groundwater flow direction is toward the west. The depth to groundwater is approximately 12 to 15 ft below grade. The East River is located approximately 500 feet to the west of the Fyn Paint site.
Env Problem:	Nature and Extent of Contamination: The remedial investigation for the C224154 site revealed: a) contamination: the soil, soil vapor and the groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes which have migrated off-site from C224154. b) areal/depth extent: the VOC plume from site C224154 extends across the footprint of the Fyn Paint building under the adjacent sidewalks, parking lot

FYN PAINT & LAQUER CO. INC. (Continued) **S108524789**

	and streets. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in on-site and off-site monitoring wells. Additional investigation is necessary to delineate the plume emanating from the Fyn Paint site.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Site Description:	Location: The Fyn Paint and Lacquer Co., Inc. site is located in an urban area at 230 Kent Avenue in Brooklyn, Kings County. The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Alternate addresses for the property are: 230-232 Kent Avenue; 76-80 River Street; and 29-37 North First

FYN PAINT & LAQUER CO. INC. (Continued) **S108524789**

Street. Site Features: The site consists of a 0.135-acre lot improved with an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contains the heating oil tank, furnace and controls for the sprinkler system. Current Zoning and Land Use: The site land use is currently recorded as Industrial and Manufacturing. Zoning for the property is M3-1, which is designated for areas with heavy industries that generate noise, traffic or pollutants. The on-site building is currently vacant. Past Use of the Site: Past land uses associated with the site include a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.

Env Problem: Nature and Extent of Contamination: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in the soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved-phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub-slab vapor - Sub-slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub-slab vapor extend to the property boundaries.

Health Problem: People may contact contaminated soils or groundwater if they dig below the surface. People are not drinking contaminated groundwater

FYN PAINT & LAQUER CO. INC. (Continued) **S108524789**

associated with the site because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion on-site. Further evaluation is needed to determine whether soil vapor intrusion is a concern for off-site structures.

Site Description: Location: The Site is located across multiple addresses in the Greenpoint section of Brooklyn, NY. The addresses for the Site include 257, 259, 263, & 269 Freeman Street and 230, 238, 242 Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site. Site Features: The original Site encompassed five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site. Current Zoning/Uses: The area (and properties) is zoned M3-1 which

FORMER NEY SMELTING AND REFINING COMPANY (Continued) **S113916765**

includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment. - 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories - 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses: In the early 1900?s the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations ceased in 2003. Site Geology and Hydrogeology: Shallow boring logs indicate the Site overlies historic fill. The soil type below the fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeast Miscellaneous: There are no PBS, CBS records for the multiple addresses of the Site.

Env Problem:	The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is largely underlain by a concrete slab. The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from TCLP analyses were all below hazardous waste thresholds. Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present.

Record Upd: 03/08/2017
Updated By: JXGRECO
Site Description: Location: The site is located in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features: The site is completely covered by multiple buildings of varying construction and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plant is located approximately 1/2 mile north of the site. Current Zoning/Use(s): The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, etc.). Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. The Meeker Avenue Plume Trackdown Site Characterization in the area of this site was conducted in several phases, and was completed in the Summer of 2009. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (approximately 138.5' below ground surface). Groundwater is approximately 11-25' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site.
Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000 ppb, and in deep groundwater at concentrations up to 170,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 1,000,000 ppm (100%) in deep monitoring wells. Trichloroethene (up to 5,000 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each). - Soil PCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm). -Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 8,200,000 ug/m^3, and in indoor air up to 170 ug/m^3. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m^3, and in indoor air up to 12 ug/m^3. Significant Threat: The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater.
Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

DEC Memo:	"6/9/2014: During investigation work being conducted at a State Superfund site (Former Spic and Span Cleaners, DEC Site ID No. 224129), a UST was discovered beneath the southern portion of a vacant warehouse during pre-clearing activities. DEC PM (Harrington) directed the standby consultant (URS Corporation) to call in a spill for this site. Soils surrounding the tank have been found to contain visual and olfactory evidence of petroleum contamination. (Harrington) 6/9/2014: H. Patel (DEC - Region 2) received spill from dispatch. Patel contacted D. Harrington (DEC PM - Central Office) to discuss the case, and subsequently assigned it to him. 6/16/2014: URS personel have uncovered a portion of the UST located inside the property (vacant warehouse located at 315 Kingsland Avenue/260 Norman Avenue). Tank appears to be oriented long-way north to south, and is approximately 10' in length. Tank was approximately 14 below grade. Through a hole in the top of the tank, it was observed to be single-walled steel approximately 1/4 thick, and approximately 4' in diameter. There appears to be ~6 of an unidentified liquid at the bottom of the tank. Contents smelled like a mixture of weathered petroleum and solvents such as paint thinner or wood stripper. (Harrington) 6/17/2014: URS personnel collected a product sample from the UST and submitted it to the lab. Product will be analyzed for VOCs, SVOCs, PCBs, RCRA characteristics, viscosity, surface tension, and specific gravity. (Harrington) 11/21/2014: PM requested URS to generate report detailing the findings of investigation surrounding the UST inside the building. Report will include sampling results from soil and product samples, and a tank removal estimate. (Harrington) 12/26/2014: PM sent an e-mail to URS Corporation commenting on the draft UST data summary report for the work done inside the vacant building at 315 Kingsland Avenue. Numerous changes need to be made before the report can be finalized. (Harrington) 1/24/2015: PM sent an e-mail to URS Corporation approving the revised UST data summary report on 1/9/15. This report was distributed to interested parties (including Community Board 1 and Greenpoint branch of Brooklyn Public Library) on 1/21/15. (Harrington) 3/30/2015: PM sent an e-mail to URS Corp. requesting budget estimate for IRM regarding DNAPL recovery and oversight work related to the removal of the UST inside the building (which will be handled separately under response call-out with Island Pump and Tank). (Harrington) 5/18/2015: The Department sent a WA Issuance/Notice to Proceed letter to URS Corporation for the development of the Schedule 2.11 budget package regarding the IRM work assignment. This package is due to the Department in mid-June. (Harrington) 7/21/2015: DEC sent the WA Approval Letter to URS Corporation for the initiation of this IRM work assignment. IRM covers both UST removal and DNAPL recovery at the site. Call-out for tank removal to be completed by PM shortly. (Harrington) 7/31/2015: DEC PM issues call-out 124051 to Island Pump

FORMER SPIC AND SPAN CLEANERS (Continued) **S109416408**

and Tank (IPT) for the completion of UST removal within the abandoned warehouse building at 315 Kingsland Avenue/260 Norman Avenue. Site visit with IPT and URS to be completed week of August 17th. (Harrington) 8/19/2015: DEC PM conducted kick-off meeting with URS and IPT personnel regarding the UST removal from the site building. IPT to confirm the permits needed before initiating work. URS will be providing scope for structural support of roof to IPT shortly. (Harrington) 9/21/2015: IPT mobilizes to the site to complete tank pull. Wall pockets are cut into the south, east, and west walls for placement of structural steel to support the building roof. Bobcat, mini-excavator, scissor lift, and steel brought to the site. (Harrington) 9/22/2015: IPT places the structural steel beams (W12x30) in place (one east-west beam supported by east and west wall pockets, and two north-south beams supported by southern wall pockets and east-west beam). Roof made placement difficult as there is a 5 sag in the middle, as well as numerous sprinkler lines (one of which was cut and capped). (Harrington) 9/23/2015: IPT welds the steel beams together, and seals up the wall pockets with brick and mortar mix. The scissor lift is removed from the site. UST top is exposed at the southern end. There appears to be ~11 of liquid in the tank. It smells like a mix of gasoline and paint stripper. Vent and fill lines are noted heading east from the tank toward the sidewalk. Tank appears to be at an angle descending to the north. (Harrington) 9/24/2015: IPT vacuum truck removes 225 gallons of a Class 3 flammable liquid (ID Number 1993). Tank is removed from the ground and cleaned. There were a lot of holes in the tank bottom; leaks were minimized by clay soils beneath tank. Stained soils evident beneath tank. Soil samples collected by URS. IPT over-excavated the area and stockpiled contaminated soil for shipment off-site. (Harrington) 9/25/2015: IPT completed soil excavations in the UST area to the extent feasible given conditions. URS collected confirmatory samples. MJ Engineering and Land Surveying completed an updated survey of the building interior, UST location, sample locations, and excavation boundaries. (Harrington) 9/28/2015: IPT completes backfill of excavation with clean fill, then finishes by saw-cutting the rough edges in the floor and capping the backfill with a 6 layer of concrete (with wire mesh) to match the surrounding floor. IPT demobilizes from the site. (Harrington) 12/28/2015: IPT has submitted paperwork regarding their efforts to remove the UST at the property. This paperwork was approved in an e-mail to IPT. Reporting on the overall effort will be received from URS in late January-early February 2016. (Harrington) 3/4/2016: URS submitted the UST closure report. Confirmatory soil sampling indicates all contaminated soil has been removed from the site. Spill closed. (Harrington)"

Remarks: "Unknown UST (4'x10') discovered during test borings and contaminated soil found. DEC Dave Harrington out of Albany Ofc is aware and project manager. Cleanup is pending. Tank still in the ground."

Record Upd:	09/15/2010
Updated By:	SRHEIGEL

Site Description: The Site is located at 460 Kingsland Avenue in the northernmost section of Brooklyn within a commercial/industrial area and is approximately 3.5 acres in size. It is bordered by Newtown Creek to the east, Kingsland Avenue to the west, Greenpoint Avenue to the north (adjacent to Newtown Creek WPCP), and the Former ExxonMobil Brooklyn Terminal (Mobil Brooklyn Refinery) to the south. Topographic elevations at the Site are approximately 7 feet above mean sea level (amsl) within the southeastern portion of the Site and gradually rise to approximately 11 ft amsl within the northwestern portion of the Site. The Site is currently vacant but was most recently used as a trucking distribution hub. The site has two abutting one-story buildings divided into storage and office space. Exterior areas are paved and used for delivery and shipping purposes, as well as the staging of delivery vehicles. The Site was historically operated as part of the former Mobil Brooklyn Refinery (SOCONY), which itself was a continuation of petroleum refining and storage operations that were prevalent in Greenpoint since the mid-Nineteenth Century. As part of the earlier petroleum refining and storage operations, the southern region of the Site was used for petroleum bulk storage purposes whereas improvements in the northern region of the Site included a distillery and a boiler works storage yard. Under former operations,

460 KINGSLAND AVENUE (Continued) **U003074537**

the Site also served as a petroleum bulk storage yard that included three petroleum bulk storage tanks, two chemical bulk storage tanks containing acids, and an API-type oil/water separator along the southern Site boundary. The site was reportedly used by Mobil?s Technical Services Division (TSD) for study of petroleum product uses. After refinery operations at the former Mobil Brooklyn Refinery ceased in 1966, the Site was sold in 1967 and redeveloped with the existing commercial building in 1968 and occupied by miscellaneous trucking operations. In addition, fifteen underground storage tanks containing diesel fuel, heating oil, and waste oil were maintained during the operation of the commercial/transfer facilities and were removed in 1994. A spill (#9402812) reported during the tank removal initiated site investigation and characterization activities. In addition, ExxonMobil has performed some investigation of the site as part of the remediation of the former Mobil Brooklyn Refinery. The initial investigation activities indicated petroleum-impacted soils existed within the shallow subsurface beneath the Site and that free-phase petroleum product was also located within the shallow subsurface. More recent sampling seeking to close the open spill identified PCB contamination in shallow soil under the asphalt pavement and indicated limited groundwater contamination from PCBs exists.

Env Problem: Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present. Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Advised that the NYS-DEP be informed. FDNY called again to cinfirmed that amount of diesel spilled is 200 gallons. Discussed with Michelle, who decided to visit spill site. Ed. 10/29/03 Tipple conducted site visit//sand still on roadway//three drums of mostly liquid oil on site//called FDNY, located captain who responded, by the time the FD arrived, the truck responsible for the spill was long gone. Upon interviewing individuals who worked adjacent to the facility the truck was a dark green fuel iol truck, no one interviewed noticed the name of the company. NO RP IDENTIFIED. put drums on drum run. 11/13/03 TJD Containers emptied on 11/7/03 as part of R2 drum run. See spill #9930008. Spill closed."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL ALSO SEE LATER, CLOSED SPILL REPORT NO. 9403747. 10/10/95: This is additional information about material spilled from the translation of the old spill file: HEAVY FUEL OIL. 03/29/04 Related to Mobil Greenpoint spill Transferred from Miller to Rommel. 10/12/04 Received call from John Harrison, EcolSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel 3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST 3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ 9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells installed at the property and along the perimetr of the property in order to compare background contamination with the site

460 KINGSLAND AVENUE (Continued) **U003074537**

contamination. AZ 1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ 1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?)(they are in the same building as Galasso Trucking). I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner)516-965-7766. He will ask him to contact me ASAP. AZ 4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.)516-965-7766. He will file for FOIL and have his consultant contact me. AZ 6/13/2006 I left a message for John Urda (DEC Legal)requesting his assistance with this case. AZ 6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ 6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ 6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company(212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ 6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ 7/27/2006 Left a message for Steve Russo (Sive, Paget & Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information:borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, mointoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of actin in a week. AZ 8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New York 10022(212) 421-2150 confirming the additional items that should be submitted to DEC: 1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ 1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ 2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly. AZ 4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E. Hampston will likely to request some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see if there is deeper contamination. I reviewed the Exxon proposals and discussed the work plan with Ed. I suggested increasing the

460 KINGSLAND AVENUE (Continued) **U003074537**

number of wells (they initially suggested 3 wells), advancing wells at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil plume maps. AZ 11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and received on August 21, 2007. Nine soil borings and three new shallow aquifer wells wells and three new regional aquifer monitoring wells were completed. SVOC and metals were detected at concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface beneath the property. with the highest concentrations present in the vicinity of SB-4, SB-7, SB-9. PCBs were also detected at three soil borings with the highest concentrations observed at SB-6. Although petroleum staining was observed throughout the shallow subsurface, only globules of free product were observed at two locations that were associated historic petroleum storage operations. There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location within the sallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level. According to the report, data indicated that the free product plume present within the regional aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to the north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and remediation of the site. AZ 1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ 8-12-2008 The owner is proceeding with the sale of the property. The existing building will be demolished for a clean fill recycling operation. As part of the demo, they intend to dig out around the building footprint, and want to know if this will be enough to close the UST spill. I recommended taking the end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on the previous investigations), the excavation area and proposed sampling locations should be submitted to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ 10-27-2008 I have received an e-mail from Ed Hampston who forwarded a request for spill closure by Leggette, Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ 10-29-2008 Conference call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in front of the building at the locations of the former USTs (diesel, waste oil and heating oil tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the background concentrations. DEC (Mike Mulqueen 2-27-1995) requested further investigation and remediation. AZ 1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon Mobil to address PCB contamination. AZ 2/4/2009 A meeting was held among Alex Zhitomirsky, John Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin representing Mr. Galasso. Phil Galasso and Michael Bogin presented information that appears to support their conviction that PCB contamination and remaining petroleum contamination plums are part of

460 KINGSLAND AVENUE (Continued) **U003074537**

a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hempston and Allan Michaels) will call a meeting with Exxon Mobil so the other party can present their case. If information presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ 3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed. According to Ed Hampston, all further activities for this site will be tracked under spill #8800244 (this is the spill Central Ofiice has PIN attached). Ed Hampston intends to create a P site for 460 Kingsland. AZ "

Record Upd: 03/08/2017
Updated By: JXGRECO
Site Description: Location: The site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the south side of Division Place between Kingsland and Debevoise Avenues. Site Features: The site is mostly covered with one-story buildings, with a storage yard located on the south side along Richardson Street. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently used by a furniture manufacturing company. Numerous commercial, industrial, and residential properties surround the site. Past Use of the Site: Goodman Brothers began operations in 1909 as a re-conditioner and recycler of used steel drums for re-use or disposal. The Department's initial involvement with the facility was a RCRA inspection conducted in September 1982, as the company was a large quantity generator of hazardous waste above a sole-source aquifer. The company went out of business in June 2002. During the last 20 years of its operation, Goodman Brothers entered into one consent order with the USEPA (1983), and two consent orders with the Department (1987 and 2003), and agreed to pay penalties in the overall amount of $28,000 for numerous violations. In February 2003 a limited subsurface investigation was performed at the site; a total of nine soil borings were installed with soil samples collected from all nine borings and groundwater samples collected at four locations. The Department began a Site Characterization in this area during the Summer of 2011 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). Site Geology and Hydrogeology: The site is underlain by a sand/silty sand unit (~15-35' thick), a discontinuous sand/gravel unit within the sand/silty sand unit (~5' thick), a discontinuous clayey silt unit within the sand/silty sand unit (~5' thick), and a sand unit below. Groundwater is approximately 15-20' below grade in the immediate vicinity of the site, and appears to be a perched unit. Groundwater below the site flows toward the east in the direction of Newtown Creek (~3,600' away).
Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminants of concern at the site are tetrachloroethene (PCE) and its daughter compounds (trichloroethene, cis-1,2 dichloroethene and vinyl chloride); 1,1,1, trichloroethane (1,1,1 TCA); BTEX compounds (benzene, toluene, ethylbenzene, and xylene); and PCBs. These compounds have been found well above their respective Part 703.5 Class GA standards (shown in parenthesis). PCE has been found up to 30,000 ppb (5 ppb); trichloroethene (TCE) up to 2,800 ppb (5 ppb); cis-1,2 dichloroethene (DCE) up to 140,000 ppb (5 ppb); vinyl chloride up to 2,300 ppb (2 ppb); 1,1,1-TCA up to 15,000 ppb (5 ppb); benzene up to 2,400 ppb (1 ppb); toluene up to 54,000 ppb (5 ppb); ethylbenzene up to 2,400 ppb (5 ppb); total xylenes up to 12,100 ppb (5 ppb); and PCBs (Arochlor-1260) up to 940 ppb (0.09 ppb). All the contaminants listed above (except PCBs) have migrated off-site. - Soil Numerous compounds have been found in excess of their unrestricted use soil cleanup objective (shown in parenthesis). PCE has been found up to 260 ppm (1.3 ppm); TCE up to 140 ppm (0.47 ppm); DCE up to 70 ppm (0.25 ppm); 1,1,1-TCA up to 22 ppm (0.68 ppm); benzene up to 13 ppm (0.06 ppm); toluene up to 520 ppm (0.7 ppm);

GOODMAN BROTHERS STEEL DRUM CO INC (Continued) **1000190383**

ethylbenzene up to 88 ppm (1 ppm); total xylenes up to 368 ppm (0.26 ppm); PCBs up to 80 ppm (0.1 ppm); lead up to 1,300 ppm (63 ppm); and mercury up to 240 ppm (0.18 ppm). Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE (and its breakdown products), BTEX compounds, and PCBs from source areas into soil and groundwater.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion in on-site and off-site structures exists and should be evaluated and may need to be evaluated for off-site structures.

FINDS:

Registry ID: 110000892017

Environmental Interest/Information System

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Site Description: LOCATION: The Greenpoint Manufacturing and Design Center (GMDC) property is located at 1155-1205 Manhattan Avenue which is an urban area of Brooklyn (Kings County) in New York City. SITE FEATURES: The property is nearly entirely covered by structures, with only one small area covered with other impervious material located along the northern edge of the property along Newtown Creek. There are eight contiguous four to six-story building on the property. The property borders Newtown Creek on the north side. CURRENT ZONING/USE: This property is currently in use for many separate commercial uses, primarily by small businesses and artisans. The surrounding uses are varied - the property adjacent to the west is indicated as having residential and commercial use but appears commercial; the properties to the east across Manhattan Avenue are indicated as being

S & G WOODWORKING INC (Continued) **1008892201**

factory/industrial uses, but appear to be commercial with residential above. HISTORICAL USE(s): The property has a long industrial/commercial history, but went through an extensive remedial effort overseen by local agencies in the 1990's. The property owners have done significant renovations on the buildings and have conducted at least two recent investigations which identified limited groundwater contamination, but did not identify any significant soil contamination.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Only two (of ten) temporary groundwater sampling wells located in the basement of the structure at 1155 Manhattan Avenue showed evidence of contamination. Each contained one chlorinated VOC slightly above standards. Tetrachloroethylene was identified at 21ppb; chloroform was identified at 12 ppb. Groundwater standards are 5 ppb and 7 ppb respectively. Soil samples from these borings were below unrestricted standards for the same compounds. Samples taken from permanent wells did not identify any VOC contamination. Based on professional judgment, the slight exceedances of groundwater standards, adjacent to the Newtown Creek Superfund Site, do not constitute a significant threat to the environment. No further investigations are warranted at this time. Site designation was changed from "P" to "N."

Updated By: kstang
Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

Updated By: JXGRECO
Site Description: Location: The site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of Vandervoort Avenue between Anthony and Lombardy Streets. Site Features: The site is completely covered by one (1) two-story and three (3) one-story brick buildings. The site is surrounded by other commercial and industrial properties. Sergeant William Dougherty Playground is located immediately north of the site across Anthony Street, and the eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area is located one block south of the site. Current Zoning/Use(s): The site is zoned for manufacturing. The site is currently used as a granite warehouse and showroom at 95 Lombardy Street, and a paper distribution office and a kitchen cabinet warehouse/showroom at 46 Anthony Street. Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a metal fabricator and painting facility from the 1930's to the late 2000's, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). This investigation was conducted in several phases, and was completed in the Summer of 2009. Based on an extensive records search and several inspections, it was

95 LOMBARDY ST./ACME ARCH. PRODS., INC. (Continued) **U003652054**

	determined that waste paint, waste oil, waste degreasers, and waste water precipitate were generated at the property during site operations. Numerous floor drains with unknown outfall locations existed within the property, and were identified as potential injection wells. In addition, an underground storage tank that was used as a dip tank and for storing degreasing products was located in the northwest corner of the site. Several pipes that originated from the dip tank discharged to a floor drain in the loading dock area. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site.
Env Problem:	Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is trichloroethene (TCE). TCE has been found on-site in shallow groundwater at concentrations up to 66,000 ppb, and in deep groundwater at concentrations up to 70,000 ppb, well above Part 703.5 class GA standards (5 ppb). Concentrations of tetrachloroethene (up to 8,000 ppb) and 1,2-dichloroethene (3,200 ppb) have also been found above their respective Part 703.5 class GA standards (5 ppb each). The plume of TCE-contaminated groundwater has migrated at least 400' off-site. - Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 3,100 ug/m^3. Concentrations of TCE in soil vapor have been found up to 4,500 ug/m^3, and in indoor air up to 13 ug/m^3. Significant Threat: The site poses a significant environmental threat due to ongoing releases of TCE from source areas into soil and groundwater.
Health Problem:	Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

Site Description: Location: The site is located in the Greenpoint/East Williamsburg Industrial Area section of Brooklyn, NY. The site is located on the southwest corner of the intersection of Vandervoort Avenue and Richardson Street. Site Features: The site is completely covered by a one-story brick building. Numerous other commercial and industrial properties are located to the north, south, and west of the site. The Greenpoint Little League fields and a National Grid energy facility are east of the site across Vandervoort Avenue. A small residential area is located 1-2 blocks north of the site. An eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located 4 blocks to the north. Current Zoning/Use(s): The site is zoned for manufacturing. The site is currently used for sheet metal fabrication. Historical Use(s): The Department began a Site Characterization in this area during the spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on interviews with multiple residents indicating the site s former

FORMER KLINK COSMO CLEANERS (Continued) **S109416412**

usage as a commercial dry cleaner from the 1950's to the mid 1990's (including one former employee), and a Department database which lists the cleaners as a generator of F002 waste (spent halogenated solvents). The Meeker Avenue Plume Trackdown Site Characterization in the area of the site was conducted in several phases, and was completed in the summer of 2009. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-8' thick), a sand/silty sand unit (approximately 100' thick), a discontinuous clay/silt unit (approximately 1-10' thick) within the sand/silty sand unit, a sand and gravel unit (approximately 1-3' thick), and the Raritan Formation (located 108-113' below ground surface). Groundwater is approximately 24-50' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 3,000' northeast of the site.

Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 46,000 ppb, which is well above the Part 703.5 class GA standard of 5 ppb. PCE has also been found in very deep groundwater (atop the Raritan clay) at 4,500 ppb. The plume of PCE-contaminated groundwater has migrated at least 1,200' downgradient of the site. - Soil PCE has been found in on-site soils at concentrations up to 273 ppm, above the soil cleanup objective for unrestricted use (1.3 ppm). - Soil Vapor PCE has been found in soil vapor beneath the site at concentrations up to 48,200,000 ug/m^3. TCE has been found at concentrations up to 230,000 ug/m^3. Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE from source areas into soil and groundwater.

Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Data Release Frequency: No Update Planned

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/30/2017	Source: EPA

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 10/06/2017

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/11/2017	Source: EPA
Date Data Arrived at EDR: 07/21/2017	Telephone: 800-424-9346
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 11/03/2017

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2017
Date Data Arrived at EDR: 09/26/2017

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

INLET ASSEMBLAGE
30 GEM STREET
BROOKLYN, NY 11222

TARGET PROPERTY COORDINATES

Latitude (North):	40.724831 - 40˚ 43' 29.39''
Longitude (West):	73.95617 - 73˚ 57' 22.21''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	588154.9
UTM Y (Meters):	4508524.0
Elevation:	9 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940597 BROOKLYN, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 9 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970202F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970201F	FEMA FIRM Flood data
3604970206F	FEMA FIRM Flood data

3604970204F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Ordovician
Code:	Oe *(decoded above as Era, System & Series)*

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Langan Project No.: 170494901

Dear Sir or Madam:

Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have.

The subject property is located at **Block 2615, Lot 1 (36 - 56 Gem Street, alternatively addressed as 14 - 22 Meserole Avenue), Lot 6 (214 - 236 Banker Street, alternatively addressed as 26 - 32 Meserole Avenue), Lot 19 (200 – 202 Banker Street), Lot 21 (16 - 24 Gem Street, alternatively addressed as 192 – 198 Banker Street), Lot 25 (10 - 14 Gem Street, alternatively addressed as 166 – 190 Banker Street and 39 – 47 North 15th Street), Lot 50 (26 – 34 Gem Street), and Lot 125 (14 Wythe Avenue).** The subject property is bound by Meserole Avenue to the north, Banker Street to the east, Wythe Avenue and North 15th Street to the south, and Gem Street to the west.

Please contact me at **212-479-5400x5750** with any questions or send your response to my attention at **sholberton@langan.com** or at the below address:

Langan
21 Penn Plaza
360 West 31st Street, 8th floor
New York, New York 10001-2727

Thank you in advance for your cooperation.

Sincerely,

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Shana Holberton
Senior Staff Scientist

Dear Ms. Shana Holberton,

EPA-R2-2018-001972 has been processed with the following final disposition: Full grant.

This is in response to your Freedom of Information Act (FOIA) request, identified above, dated 11/27/2017, that you submitted to the U.S. Environmental Protection Agency (EPA). Your request seeks to obtain environmental assessment information on the following:

"Block 2615, Lot 1 (36 - 56 Gem Street, alternatively addressed as 14 - 22 Meserole Avenue), Lot 6 (214 - 236 Banker Street, alternatively addressed as 26 - 32 Meserole Avenue), Lot 19 (200 –202 Banker Street), Lot 21 (16 - 24 Gem Street, alternatively addressed as 192 –198 Banker Street), Lot 25 (10 - 14 Gem Street, alternatively addressed as 166 –190 Banker Street and 39 –47 North 15th Street), Lot 50 (26 –34 Gem Street), and Lot 125 (14 Wythe Avenue). The property is bound by Meserole Avenue to the north, Banker Street to the east, Wythe Avenue and North 15th Street to the south, and Gem Street to the west."

The information that you are seeking is publicly available on EPA's *MyPropertyInfo* online database. The database will provide you with information concerning records the EPA has about a specific property, and it can be accessed at the link below:

https://www.epa.gov/enviro/frs-query-page

Because this information is publicly available, your FOIA request for this information is being administratively closed, in accordance with EPA's FOIA regulations. See 40 C.F.R. Part 2, Subpart A. ***Please note you should perform the initial search of a property of interest by visiting the above link. If your search produces results, then proceed with an information request for additional records under FOIA. Your FOIA submittal should be accompanied by these results.***

If you consider this response to be a denial of your request, you may appeal this determination to the National Freedom of Information Office, U.S. EPA, 1200 Pennsylvania Avenue, N.W. (2822T), Washington, DC 20460 (U.S. Postal Service Only). Only items mailed through the United States Postal Service may be delivered to 1200 Pennsylvania Avenue, N.W. If you are submitting your appeal via hand delivery, courier service, or overnight delivery, you must address your correspondence to 1301 Constitution Avenue, N.W., Room 6416J, Washington, DC 20001. Your appeal must be made in writing, and it must be received no later than 90 calendar days from the date of this letter. The Agency will not consider appeals received after the 90 calendar day limit. Appeals received after 5:00 pm EST will be considered received the next business day. The appeal letter should include the FOIA tracking number listed above. For quickest possible handling, the subject line of your email, the appeal letter, and its envelope, if applicable, should be marked "Freedom of Information Act Appeal." Additionally, you may seek assistance from EPA's FOIA Public Liaison at hq.foia@epa.gov or (202)566-1667, or from the Office of Government Information Services (OGIS). You may contact OGIS in any of the following ways: by mail, Office of Government Information Services, National Archives and Records Administration, Room 2510, 8610 Adelphi Road, College Park, MD 20740-6001; e-mail, ogis@nara.gov; telephone, 301-837-1996 or 1-877-684-6448; and facsimile, 301-837-0348.

Please contact Ms. Wanda Calderon of my staff if you have web access difficulties. This letter concludes our response to your request. Thank you for your interest in this information.

Respectfully,

/s/
Mary Mears

Public Affairs Director
U.S. EPA Region 2 (NJ, NY, PR, the US VI and eight Indian Nations)

RE: PUBLIC RECORDS REQUEST of 11/16/2017, Reference # W029381-111617

Dear Senior Staff Scientist Shana Holberton,

I write in response to your Freedom of Information Law (FOIL) request seeking:
The subject property is located at Block 2615, Lot 1 (36 - 56 Gem Street, alternatively addressed as 14 - 22 Meserole Avenue), Lot 6 (214 - 236 Banker Street, alternatively addressed as 26 - 32 Meserole Avenue), Lot 19 (200 – 202 Banker Street), Lot 21 (16 - 24 Gem Street, alternatively addressed as 192 – 198 Banker Street), Lot 25 (10 - 14 Gem Street, alternatively addressed as 166 – 190 Banker Street and 39 – 47 North 15th Street), Lot 50 (26 – 34 Gem Street), and Lot 125 (14 Wythe Avenue). The subject property is bound by Meserole Avenue to the north, Banker Street to the east, Wythe Avenue and North 15th Street to the south, and Gem Street to the west. Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have..

A diligent search of the files maintained by the Department produced no responsive records.

If I can be of further assistance, please contact me at (718) 482-4940 and reference FOIL W029381-111617.

Sincerely,
Region 2 FOIL Coordinator

RE: Tank Test Failure- Petroleum Bulk Storage (PBS) Facility No. 2-117080
20,000 Gallon Underground #2 Fuel Oil Tank - Spill # 0212[redacted], 211 Banker St., Brooklyn
557
NYSDEC Project Manager: Jeffrey Vought

Dear Mr. Knozelman:

The Department of Environmental Conservation (DEC) was notified of a tank system integrity test failure at the above-mentioned facility. You have been identified as either the owner of this tank, or as representing the owner. Since there is a potential for a petroleum release from this tank system, action must be taken, as specified below, to both ascertain the nature of the failure, and investigate for any soil/groundwater contamination, if a release is confirmed. The DEC's regulations require that one of the following two options be immediately done concerning this tank:

OPTION #1 (If you plan to continue utilizing this tank):

1. The tank must be isolated from the piping and both components must be independently retested. If the components test tight, they may remain in service. If one of the components fails the retest, then the system must be taken out of service, pursuant to 6 NYCRR Part 613.5(a)(5) (Note: copies of this regulation, also known as the N.Y. State Petroleum Bulk Storage Code, are available by calling 718-482-6454). The defective component is then to be repaired or replaced pursuant to 6NYCRR Part 614. If contaminated soil is encountered upon uncovering the piping it shall be handled as per the guidance under paragraph 4, below.

2. Once the repairs are completed, a precision test of the complete tank system as defined by 6NYCRR Part 613.5(a)(6) is done to assure that the tank system no longer has a problem. A copy of the **passing** tank system integrity test results are to be sent to this office, as per 6 NYCRR Part 613.5(a)(4). This should be sent to the above captioned address, "Attention: PBS Unit".

3. An investigation must then be performed to confirm any petroleum releases from either the piping or the tank. A written report of the work done on this tank/pipe system to repair and retest must be submitted by an environmental consultant to the Department, care of the above captioned address and Project Manager. This report must also include a discussion of the extent of petroleum-impacted soil discovered during the excavation of the tank and piping, and include a scaled site plan, any soil/

groundwater sample analytical reports, and copies of any soil disposal paperwork. The report must have conclusions and recommendations for any remedial actions to be taken to assure that any contamination is removed in accordance with Departmental regulations and guidance. Appropriate action, as approved by the Project Manager assigned to this report, must be taken by the responsible party to abate any petroleum contamination of the soils and groundwater, if such contamination exists. If it is determined that no petroleum was released to the environment, an affidavit signed by the company who performed the work stating that there was no contamination noted, must accompany this report. As part of this report, a full explanation must be given as to what caused the initial test failure. Photographs and other documentation should be sent to support the findings of the report.

OPTION #2: (If you decide not to retest, or if the tank fails the retest, the following must be done):

1. All product must be immediately removed from the tank, pursuant to 6 NYCRR 613.5(a)(5).

2. The tank must be properly closed in accordance with 6 NYCRR 613.9. A Petroleum Bulk Storage form must be submitted to this Department (above captioned address, "Attention PBS Unit") prior to tank closure.

3. A report of the work done on this tank/pipe system on any efforts to repair and retest must be submitted by an environmental consultant to the Department, care of the above captioned address and Project Manager. This report must also include a discussion of the extent of petroleum-impacted soil discovered during the excavation of the tank and piping, and include a scaled site plan, any soil/ groundwater sample analytical reports, and copies of any soil disposal paperwork. The report must have conclusions and recommendations for any remedial actions to be taken to assure that any contamination is removed in accordance with Departmental regulations and guidance. Appropriate action, as approved by the Project Manager assigned to this report, must be taken by the responsible party to abate any petroleum contamination of the soils and groundwater, if such contamination exists. If it is determined that no petroleum was released to the environment, an affidavit signed by the company who performed the work stating that there was no contamination noted, must accompany this report. As part of this report, a full explanation must be given as to what caused the initial test failure. Photographs and other documentation should be sent to support the findings of the report.

Failure to comply with the above may led to possible legal action by the Department under sections of the both the Environmental Conservation Law and the Navigation Law, with penalties of up to $25,000. pr day per violation. **If you have any questions concerning this matter, please call Region 2 Spills Duty Desk at (718) 482-4651.**

Sincerely,

Spill Prevention & Response Programs

Subject: Spill #02-12557
W.H. Christian & Sons
211 Banker St. Brooklyn NY 11222

Spill #02-12557 dates from 3/03.

On 9/15/04 Pro Test ran an Ezy 3 Locator Plus tightness test on this tank and it failed with an indication of air entering below the product line. The tank was excavated and isolated and passed a tank only test. Two sets of supply and return lines were replaced along with a stickwell. The tank then passed a system test on 9/29/04.

On 10/4/04 the tank ran out of oil and it was tightness tested. At first it passed the test run at the protocol vacuum of -.5PSI. When subjected to a vacuum of –2.5PSI it failed. We believe that sludge at the bottom of the tank may have been masking or plugging a hole at the bottom of the tank.

The tank has been put out of commission and a temporary tank installed.

A copy of the failing test report included.

We will update you on further action, investigation and remediation.

Attachment: Soil Manifests and Water Analysis

Attached please find STARS 8021 and 8270 analysis of a water sample from the excavation at the subject site. Since our meeting at the site on March 30, 2005, we have removed oil by absorptive material and periodically removed 2508 gallons of contaminated water.

The manifests for removal of the contaminated water and 220 tons of contaminated soil are also attached. Manifests for the additional 60 tons are due to be received shortly.

It is requested that this spill number be closed as soon as we provide those last manifests. We want to minimize the duration the excavation inside the building is left open, for structural reasons.

If any additional information is desired, please ask.

Thank you.

Subject:	Freedom of Information Request: Brooklyn NY Block 2615, Lots 1, 6, 19, 21, 25, 50, and 125
Attachments:	NYSDOH 02 - Request Form (email attachment).pdf

Dear Sir or Madam:

Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have.

The subject property is located at **Block 2615, Lot 1 (36 - 56 Gem Street, alternatively addressed as 14 - 22 Meserole Avenue), Lot 6 (214 - 236 Banker Street, alternatively addressed as 26 - 32 Meserole Avenue), Lot 19 (200 – 202 Banker Street), Lot 21 (16 - 24 Gem Street, alternatively addressed as 192 – 198 Banker Street), Lot 25 (10 - 14 Gem Street, alternatively addressed as 166 – 190 Banker Street and 39 – 47 North 15th Street), Lot 50 (26 – 34 Gem Street), and Lot 125 (14 Wythe Avenue).** The subject property is bound by Meserole Avenue to the north, Banker Street to the east, Wythe Avenue and North 15th Street to the south, and Gem Street to the west.

Please contact me at **212-479-5400x5750** with any questions or send your response to my attention at **sholberton@langan.com** or at the below address:

1. TO THE NEW YORK STATE DEPARTMENT OF HEALTH:

I hereby apply to **Inspect** □ or **Receive Copies** X of the following records (use additional sheets as needed and attach)

See attached

NAME: Shana Holberton PHONE: ((212)479-5400x5750) EMAIL: SHolberton@Langan.com

FIRM: Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

ADDRESS: 21 Penn Plaza - 360 West 31st Street, 8th Floor, New York, NY 10001-2727

SIGNATURE: _____ DATE: 11/16/2017

2. TO THE APPLICANT:

-Records Provided

☐ The reproduction costs for the records are $_____. Please forward a check payable to the New York State Department of Health to the address listed above. If we do not receive your payment within **60** days, we will assume that you no longer wish to receive the materials, and they will be sent back to the originating unit. Accordingly, any future requests for information will require an initial deposit before processing.

☐ Records have been (partially, fully) provided. (If not fully provided, date when records are expected to be fully provided:_____).

-Records Not Available

☐ Records cannot be found after a diligent search.

☐ The Department does not maintain records indicated, please contact:_____

-Records Denied or Redacted

I hereby certify that access to the records—or part of the records—have been denied to the applicant for the reason(s) checked below (You may appeal this denial of access in writing within 30 days to the Records Access Appeals Officer, Empire State Plaza, 1455 Corning Tower, Albany New York 12237):

☐ Specifically exempt by other statute(s).

☐ Unwarranted invasion of personal privacy.

☐ Would impair present or imminent contract awards or collective bargaining negotiations.

☐ Are examination questions or answers.
Are inter-agency or intra-agency materials that are not: -statistical or factual tabulations or data
-instructions to staff that affect the public
-final agency policy or determinations; or
-external audits, including but not limited to audits performed by the comptroller and the federal government.

☐ Are trade secrets.

☐ Could, if disclosed endanger the life of any person.

☐ Are compiled for law enforcement purposes and which, if disclosed would:
-interfere with law enforcement investigations or judicial proceedings
-deprive a person of the right to a fair trial or impartial adjudication
-identify a confidential source or disclose confidential information relating to a criminal investigation, or
-reveal criminal investigative techniques and procedures

☐ Would jeopardize an agency's capacity to guarantee the security of its information technology assets, such assets encompassing both electronic information systems and infrastructures.

FOIL #: 17-11-278
Langan Project No. 170494901

Dear Ms. Holberton:

This letter responds to your Freedom of Information Law request of November 16, 2017, in which you requested a copy of environmental records pertaining to the following addresses;

1. 36 - 56 Gem Street, alternatively addressed as 14 - 22 Meserole Avenue
2. 214 - 236 Banker Street, alternatively addressed as 26 - 32 Meserole Avenue)
3. 200 - 202 Banker Street
4. 16 – 24 Gem Street, alternatively addressed as 192-198 Banker Street
5. 10 -14 Gem Street, alternatively addressed as 166 -190 Banker Street and 39 - 47 North 15th Street
6. 26 - 34 Gem Street
7. 14 Wythe Avenue

Please be advised that after conducting a diligent search, no records responsive to your request have been located.

Insofar as your request pertains to records regarding asbestos, please be advised records of this type may be maintained by the New York State Department of Labor's Asbestos Control Bureau. The contact information for that office is:

New York State Department of Labor
Asbestos Control Bureau
One Hudson Square
75 Varick Street, 7th Floor
New York, New York 10013
Tel: (212) 775-3540

Should you feel that you have been unlawfully denied access to records, you may appeal such denial in writing within 30 days to the Records Access Appeals Officer, Division of Legal Affairs, Empire State Plaza, 2438 Corning Tower, Albany, New York 12237-0026.

If you require additional information or wish to discuss this matter further, please do not hesitate to contact me at (518) 474-8734.

Sincerely,

Re: Block 2615, Lot 1, 6, 19, 25 & 50 Brooklyn, NY

Dear Shana Holberton:

[X] We write to inform you that a search of records maintained by The Division of Emergency Response and Technical Assessment, (DERTA) yielded documents responsive to your FOIL request. Your request is granted. Copies of records responsive to your request and to which you are entitled access are enclosed.

[ ] Please be advised that a search of records maintained by DERTA was made and records you requested were not found.

In the event that you disagree with this determination, you may appeal it within 30 days, by writing to:

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 501 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 501 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Deed Exhibit 1

U 3295 PG 0411

Standard N.Y.B.T.U. Form 8002 - 2-73 - Warranty Deed With Full Covenants - Individual or Corporation (single sheet)

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT — THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made the 15TH day of MAY nineteen hundred and ninety four

BETWEEN Rubin Caslow and Joseph Brownstein, residing respectively at 35 Oak Drive, East Hills, NY 11576 and 272 Hungry Harbor Road, Valley Stream, NY 11581

party of the first part, and

Charmir Holdings, Inc., a New York corporation with its principal office at 30 Gem Street, Brooklyn, NY 11222

party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

No Consideration

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Brooklyn, County of Kings, City and State of New York, bounded and described as follows:

BEGINNING at the corner formed by the intersection of the Southerly side of Meserole Street and Easterly side of Gem Street running Southerly along Easterly side of Gem Street 205 feet; thence Easterly and parallel with Meserole Avenue 95 feet; running Northerly and parallel with Gem Street 205 feet to Southerly side or Meserole Avenue and thence Westerly along Southerly side or Meserole Avenue 95 feet to the point or place of Beginning.

Sec. 9
Blk. 2615
Lot. 1

The Premises are also known as and by the street address, 34 Gem Street, Brooklyn, New York., a/k/a 14-22 Meserole Street, Brooklyn, NY

TOGETHER with all right, title and interest, if any, of the party of the first part of, in and to any streets and roads abutting the above-described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever

AND the party of the first part in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose

AND the party of the first part covenants as follows: that said party of the first part is seized of the said premises in fee simple, and has good right to convey the same; that the party of the second part shall quietly enjoy the said premises; that the said premises are free from incumbrances, except as aforesaid; that the party of the first part will execute or procure any further necessary assurance of the title to said premises; and that said party of the first part will forever warrant the title to said premises.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

..1328..0310

Standard N Y B T U Form 9003 – 2-73 – Warranty Deed With Full Covenants - Individual or Corporation (single sheet)

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT – THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made the 17th day of APRIL nineteen hundred and ninety four

BETWEEN Rubin Caslow and Joseph Brownstein, residing respectively at 35 Oak Drive, East Hills, NY 11576 and 272 Hungry Harbor Road, Valley Stream, NY 11581

party of the first part, and Charmir Holdings, Inc., a New York corporation with its principal office at 30 Gem Street, Brooklyn, NY 11222

party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

No Consideration

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Brooklyn, County of Kings, City and State of New York, bounded and described as follows: Schedule "A" attached hereto.

Sec. 9
Block 2615
Lot 50

The Premises are also known as and by the street address, 30 Gem Street, Brooklyn, New York 11222

TOGETHER with all right, title and interest, if any, of the party of the first part of, in and to any streets and roads abutting the above-described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

AND the party of the first part covenants as follows: that said party of the first part is seized of the said premises in fee simple, and has good right to convey the same; that the party of the second part shall quietly enjoy the said premises; that the said premises are free from incumbrances, except as aforesaid; that the party of the first part will execute or procure any further necessary assurance of the title to said premises; and that said party of the first part will forever warrant the title to said premises.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

IN PRESENCE OF

Rubin Caslow

Joseph Brownstein

SCHEDULE "A"

All that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Brooklyn. County of Kings, City and State of New York, known and designated as Lots 94 to 99 inclusive, Block 2615 on a certain map entitled "Map of the Estate of Henry Hilton, Deceased, situated in the Seventeenth Ward, Borough of Brooklyn, City of New York and filed in the Office of the Register of the County of Kings, on March 25th, 1920, being more particulary bounded and described as follows:

BEGINNING at a point on the easterly side of Gem Street, distant 205 feet southerly from the corner formed by the intersection of the easterly side of Gem Street with the southerly side of Meserole Avenue; running thence easterly along the northerly side of lot 99 on said map 95 feet to the easterly side of lot 99 as laid down on said map; thence southerly along lot 99 and partly along the easterly side of lots 99, 97, 96, 95 and 94, 120 feet to the southerly side of lot 94 on said map; and thence westerly along the southerly side of lot 94 and said map 95 feet to the easterly side of Gem Street; and thence northerly along the easterly side of Gem Street 120 feet to the point or place of BEGINNING.

Said premises known as and by the street number 30 Gem Street, Brooklyn, New York.

Intended to be the same premises conveyed to the party of the first part herein by deed dated May 1, 1979 executed by Mildred Cannon and Allene Saggese and recorded May 4, 1979, Reel 1070, Page 918, Office of the City Register, Kings County.

REC'D 2566 PAGE 1237

THIS INDENTURE, made the 25th day of May, nineteen hundred and ninety

BETWEEN Zee-Jay Realty, Co., A New York partnership having an office at 2161 81st Street, Brooklyn, New York 11222

party of the first part, and Corzo Maintenance Co., Inc., a New York corporation having an office at 78 Richfield Street, Plainview, New York

party of the second part,

WITNESSETH, that the party of the first part, in consideration of ten dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Brooklyn, County of Kings, City and State of New York as shown on Map entitled "Map of the Estate of Henry Hilton, deceased, situated in the 17th Ward of the Borough of Brooklyn, City of New York" surveyed December, 1919 by Homer L. Bartlett, C.S. and filed March 25, 1920 in the office of the Register of the County of Kings and known as and by the lot numbers 73,74,75,76,77,78,79,80,81, 82,83,84,85,86,87,88 and 89.

Except so much thereof as has been taken for the widening of Wythe Avenue.

BEGINNING at a point on the southwesterly side of Banker Street distant 405' southeasterly from the corner formed by the intersection of the southwesterly side of Banker Street with the southeasterly side of Meserole Avenue;

RUNNING THENCE southeasterly along the southwesterly side of Banker Street 173'9" to the westerly side of Wythe Avenue;

THENCE southerly along the westerly side of Wythe Avenue 162'11½" to the northerly side of North 15th Street;

THENCE westerly along the northerly side of North 15th Street 98'5 3/4" to the northeasterly side of Gem Street;

THENCE northwesterly along the northeasterly side of Gem Street 160' 8 1/8";

THENCE northeasterly and at right angles to the northeasterly side of Gem Street 190' 0" to the point or place of BEGINNING.

The premises known as 190 Banker Street.

See Rider A attached hereto

See Schedule A attached

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

APPENDIX M

RESUMES

Mimi Raygorodetsky

Senior Associate
Environmental Engineering

16 years in the industry

Ms. Raygorodetsky sources and directs large, complex environmental remediation and redevelopment projects from the earliest stages of pre-development diligence, through the remediation/construction phase, to long-term operation and monitoring of remedial systems and engineering controls. She has a comprehensive understanding of federal, state and local regulatory programs and she uses this expertise to guide her clients through a preliminary cost benefit analysis to select the right program(s) given the clients' legal obligations, development desires and risk tolerance. She is particularly strong at integrating the requirements of selected programs and client development needs to develop and design targeted and streamlined diligence programs and remediation strategies. Ms. Raygorodetsky is also highly skilled in integrating remediation with construction on large urban waterfront projects, which tend to more complex than landside projects.

Shana Holberton

Senior Staff Scientist
Environmental Engineering

7 years in the industry

Ms. Holberton is an environmental scientist with a diverse background which includes experience both managing and regulating environmental projects located in the New York Metropolitan and San Francisco Bay areas. As a consultant, she has managed numerous site assessments/ investigations and remedial programs at residential, commercial, and industrial properties. Ms. Holberton has implemented, reviewed, and drafted budgets, proposals, and invoices for Phase I environmental site assessments, Phase II site investigations, vapor intrusion studies, and comprehensive remedial projects. She has provided oversight for site remediation activities that included the design of waste characterization studies to determine appropriate solid waste disposal facilities, the excavation and transport of native and contaminated on-site soil, soil and groundwater treatment, the decommissioning of groundwater monitoring wells, the removal/closure of buried tanks, and the installation of engineering controls. Ms. Holberton has prepared detailed reports for both private clients and government agencies and provided guidance to clients on environmental issues and possible resolutions based on careful consideration of investigation results, applicable cleanup criteria, and proposed development plans. She has also served as the lead on business development programs including RFP bid submissions.

As a regulator for the New York City Mayor's Office of Environmental Remediation (OER), Ms. Holberton managed over 100 New York City development projects simultaneously. As OER's Chief of Contracts she also managed the selection of on-call contractors, the issuance of RFPs, and the review of bid submissions and technical documents. In addition, she served as OER's Chief of Hazardous Waste Management, overseeing the office's hazardous waste fee waiver program through ongoing coordination with the NYSDEC. While at OER, Ms. Holberton worked directly with OER's director to develop and advance initiatives which supported the mayor's goals, to include programs which supported affordable housing development as well as the design and management of a pilot program to bring clean soil to community gardens from sites remediated under OER's oversight.

Selected Projects

OER/GreenThumb/Brooklyn College Community Garden Pilot Program, Clean Soil Study for Community Gardens, Brooklyn, NY

Domino Sugar Factory Development (Hazardous Materials RIWPs, RIRs, and RAWPs; Air Quality and Noise RAPs; remediation oversight; NYCDOT, NYCDCP, NYCDPR, NYCHPD, and NYSDEC coordination), Brooklyn, NY

Hudson Yards Redevelopment, Phase I Eastern Yard (Air Quality and Noise RAPs; remediation oversight), New York, NY

Education

B.A., Environmental Science
Mills College

Professional Registration

29 CFR 1910.120 40-hour HAZWOPER

29 CFR 1910.120 8-hour HAZWOPER Annual Refresher

29 CFR 1926 10-hour Construction Safety and Health

Affiliations

New York City Brownfield Partnership – Committee Member

LANGAN

Seaside Park and Community Arts Center (Hazardous Materials RIWP, RIR, and RAP; remediation oversight), Brooklyn, NY

”Edge” Condominium Tower and Waterfront Esplanade (Hazardous Materials RIWP, RIR, and RAWP; Noise Monitoring and RAP; NYCDOT and NYCDPR coordination; remediation oversight), Brooklyn, NY

Flushing Commons Phase I (Hazardous Materials RIWP, RIR, and RAWP; Air Quality and Noise RAP; remediation oversight), Flushing, NY

843 Lexington Avenue (Hazardous Materials RIWP, RIR, and RAWP; noise monitoring report; NYSDEC interaction), Brooklyn, NY

52-01 Queens Boulevard (Hazardous Materials RIR and RAWP; performed remedial oversight), Sunnyside, NY

Confidential Proposed NYCSCA Pre-K Development Site (Excavation Materials Management Plan, Health and Safety Plan, and waste characterization sampling), Brooklyn, NY

60-01 Northern Boulevard (NYSDEC-approved investigative work plan, interim remedial work plan), Woodside, NY

Confidential Development Site (Phase I ESA, Phase II ESI, and underground storage tank removal), Brooklyn, NY

Confidential Site (Phase I ESA and vapor intrusion study), Brooklyn, NY
