DRAFT

EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) was retained by RP Inlet Prop, LLC (the User) to prepare a Phase I Environmental Site Assessment (ESA) and Limited Phase II Environmental Site Investigation (ESI) for the property located at 14 Meserole Avenue, 190 & 192 Banker Street, and 26 Gem Street in the Greenpoint neighborhood of Brooklyn, New York (the Subject Property). The Subject Property is identified as Tax Block 2615, Lots 1, 21, 25, and 50 on the Brooklyn Borough Tax Map. The Subject Property is bound by Meserole Avenue and one- and two-story industrial buildings (Lots 19 and 6 of Block 2615, respectively) to the north, Banker Street to the east, an open parcel with a one-story structure used by a construction contractor (Lot 125 of Block 2615) to the south, and Gem Street to the west. The Subject Property is about 64,145 square feet in area and consists of four one-story commercial/industrial buildings with mezzanine levels.

This Phase I ESA was conducted in accordance with ASTM International (ASTM) Practice E1527-13 (Standard Practice for ESA: Phase I ESA Process) and the United States Environmental Protection Agency's (USEPA) All Appropriate Inquiry (AAI) Rule, and reflects the findings of a Limited Phase II Environmental Site Investigation (ESI). The objective of this Phase I ESA was to identify the presence or likely presence, use, or release of hazardous substances or petroleum products on the Subject Property as defined in ASTM E1527-13 as a recognized environmental condition (REC) and to satisfy the AAI needed to qualify for the bona fide prospective purchaser liability protections available under the Comprehensive Environmental Response Compensation and Liability Act (CERCLA).

The Limited Phase II ESI was performed in the public right-of-way adjoining the Subject Property in December 2017 and January 2018 for due diligence purposes to evaluate site conditions. The investigation included soil and groundwater sampling and laboratory analysis.

Based on information obtained during the visual inspection of the Subject Property, review of environmental databases and historic information, contact with federal, state, and local agencies, and the findings of our Limited Phase II ESI, RECs were identified. Controlled recognized environmental conditions (CRECs) and historic recognized environmental conditions (HRECs) were not identified.

Recognized Environmental Conditions

The following RECs were identified:

DRAFT

REC 1 – Historical Use of the Subject Property and Current and Historical Use of Adjoining and Surrounding Properties

The Subject Property has a century-long history of industrial occupants and uses including a lumber yard, a metal fabrication and manufacturing facility, a plastics manufacturer and die company, machinery/equipment/auto repair, a tank stack company, and a laundry and dry cleaning company. Historical records indicate petroleum was stored at the Subject Property as early as 1910. Adjoining and hydraulically up-gradient properties also have a century-long history of industrial occupants and uses including various manufacturers, machinery/equipment/auto repair, trucking corporations, an aluminum smelter, dry cleaning facilities, rubber and chemical companies, a fuel corporation, paint and ink companies, and metal/electroplating facilities. Many of these properties were listed in regulatory databases for petroleum bulk storage and/or petroleum releases. One of these properties (W.H. Christian & Sons, Inc.) was a Recourse Conservation and Recovery Act (RCRA) generator of hazardous waste, including halogenated solvent wastes; this generator adjoins the Subject Property to the east across Banker Street.

Subsurface impacts were identified on the Subject Property (and on the adjoining Gem Street sidewalk) and on the south-adjoining property by the Limited Phase II Environmental Site Investigations completed by Langan and by other previous investigations. These impacts are likely related to the uses and operations identified above for the Subject Property and adjoining and surrounding properties.

- Subsurface petroleum contamination was identified by field observations and analytical results in soil and groundwater along the Gem Street sidewalk, which is the inferred downgradient end of the Subject Property. These conditions do not present a threat to human health, do not constitute a new threat to the environment, and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. These area-specific investigation findings are collectively considered a *de minimis* condition.

- Chlorinated volatile organic compounds (CVOCs) were identified in soil vapor during a Limited Phase II ESI completed at the adjoining property to the south. The CVOCs in soil vapor on the south-adjoining property are likely representative of a condition that also exists at the Subject Property. The Subject Property is improved with weather-tight buildings and the potential exists for soil vapor to migrate into the buildings via

DRAFT

preferential migration pathways (i.e., sumps, pits, and drains) and accumulate within the structures and affect indoor air quality.

The subsurface testing programs completed to date are insufficient to fully characterize subsurface conditions on the Subject Property given the long history of industrial uses and petroleum bulk storage at the Subject Property and current and historical uses of adjoining and hydraulically up-gradient properties. Therefore, these uses, together with the identified CVOCs in soil vapor at an adjoining property, are considered a REC as they indicate the likely presence of hazardous substances and/or petroleum in soil, groundwater and/or soil vapor at the Subject Property.

Business Environmental Risk

A business environmental risk (BER) is defined by ASTM 1527-13 as a risk that can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. The following BERs were identified on the Subject Property:

<u>BER 1 - Redevelopment Considerations</u>

Contaminants associated with historic fill material, specifically semivolatile organic compounds (SVOCs) and metals, were detected in soil during previous environmental investigations and Langan's Limited Phase II ESI at the Subject Property. Historic fill material was also identified during previous geotechnical and environmental investigations at the adjoining property to the south and on the same block as the Subject Property (Lot 125 of Block 2615). The presence of historic fill material will require implementation of special soil handling, management and off-site disposal procedures at a cost premium during any future site redevelopment that will entail excavation. At least one buried underground storage tank (UST) is present at the Subject Property; this UST, and any others found during future redevelopment, would need to be removed by a tank removal contractor licensed by the Fire Department of New York (FDNY).

Groundwater impacted with VOCs and SVOCs will likely require special management procedures (e.g., on-site treatment before discharge to municipal sewer system with an appropriate permit or off-site disposal) during any future site redevelopment that will entail dewatering.

DRAFT

Through a rezoning action, it is reasonable to expect the Subject Property would be assigned an E-Designation for Hazardous Materials, which would make any future site redevelopment subject to review by the New York City Office of Environmental Remediation (OER). The management and mitigation measures outlined above are typical requirements for E-Designation sites with subsurface conditions similar to those identified on the Subject Property.

BER 2 – Unregistered Petroleum Bulk Storage Tank

A 4,000-gallon diesel aboveground storage tank, which is associated with the Subject Property's cogeneration system, is not registered with the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage Unit and therefore not in compliance with Title 6 New York Codes, Rules and Regulations (NYCRR) Part 613-1.9. Any tank or facility with a storage capacity or combined storage capacity of greater than 1,100 gallons must be registered with the NYSDEC. The facility owner may be liable for penalties and fees for missed registration; a future owner may also be liable for penalties and fees if the tank is transferred with the property.

Non-ASTM Environmental Considerations

The following non-ASTM environmental considerations were identified:

Asbestos-Containing Material, Lead-Based Paint, and Polychlorinated Biphenyls (PCBs)

Because of the age of the buildings at the Subject Property (constructed before 1961), asbestos-containing materials, lead-based paint, and PCB-containing materials may be present in building materials. Potential PCB-containing fluorescent lighting fixtures were observed throughout the buildings that occupy Subject Property.

DRAFT

1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) was retained by RP Inlet Prop, LLC (the User) to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 14 Meserole Avenue, 190 & 192 Banker Street, and 26 Gem Street in the Greenpoint neighborhood of Brooklyn, New York (the Subject Property). The Subject Property is identified as Tax Block 2615, Lots 1, 21, 25, and 50 on the Brooklyn Borough Tax Map. The Subject Property is bound by Meserole Avenue and one- and two-story industrial buildings (Lots 19 and 6 of Block 2615, respectively) to the north, Banker Street to the east, an open parcel with a one-story structure used by a construction contractor (Lot 125 of Block 2615) to the south, and Gem Street to the west. This Phase I ESA was performed in accordance with ASTM International (ASTM) Standard E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process) and the guidelines set forth in the United States Environmental Protection Agency's (USEPA) All Appropriate Inquiries (AAI) Rule, 40 Code of Federal Regulations (CFR) Part 312 and reflects the findings of a Limited Phase II Environmental Site Assessment (ESI) performed in December 2017 and January 2018 by Langan.

The purpose of the Limited Phase II ESI was to perform a preliminary evaluation of subsurface conditions at the Subject Property for due diligence purposes.

1.1. Purpose

The purpose of this Phase I ESA is to accomplish the following:

> (1) Identify Recognized Environmental Conditions (RECs) in connection with the Subject Property, as defined in The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-13, which states: The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

DRAFT

(2) Satisfy the criteria of USEPA 40 CFR Part 312 Subpart C Standards and Practices §312.20 AAI Rule.

1.2. Scope of the ESA

This Phase I ESA was conducted using a standard of good commercial and customary practice that is consistent with the ASTM Standard E1527-13. Any significant scope-of-work additions, deletions, or deviations to ASTM E1527-13 are noted in Section 8.0 of this report. In general, the scope of this assessment consisted of obtaining information from the User, reviewing reasonably ascertainable information and environmental data relating to the Subject Property, reviewing maps and records maintained by federal, state, and local regulatory agencies, interviewing persons knowledgeable about the Subject Property, and conducting a site inspection. The specific scope of this assessment included the following:

1. A site reconnaissance to characterize conditions and assess the location of the Subject Property with respect to adjoining and surrounding property uses and natural surface features. The reconnaissance included the surrounding roads and observations of surrounding properties from public rights-of-way to identify obvious potential environmental conditions on neighboring properties. The site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Subject Property and then progressing to adjoining and surrounding properties. Photographs taken as part of the site reconnaissance are provided in Appendix A.
2. A review of the responses to the User/Client Questionnaire. The completed questionnaire is provided in Appendix B.
3. A review of available previous environmental reports completed for the Subject Property. Copies of the previous reports are included in Appendix C.
4. A review of environmental databases maintained by the USEPA, state, and local agencies within the approximate minimum search distance. The environmental database report was provided by Environmental Data Resources, Inc. (EDR), and is included in Appendix D.
5. Filing of Freedom of Information Act (FOIA) requests with federal, state, and local agencies. Copies of the FOIA requests are included in Appendix E.
6. A review of New York City Department of Buildings (NYCDOB) records and a Planning Commission Zoning Map. Available NYCDOB records and the Zoning Map are included in Appendices F and G, respectively.

DRAFT

7. A review of physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
8. A review and interpretation of aerial photographs, Sanborn Fire Insurance Maps (Sanborn Maps), historical topographic maps, and city directories to identify previous activities on and in the vicinity of the Subject Property. Copies are included in Appendices H, I, J, and K respectively.
9. A review of environmental lien searches for the lots at the Subject Property. A copy of the environmental lien search report is included as Appendix L.
10. A review of published radon occurrence maps to evaluate whether the Subject Property is located in an area with a propensity for elevated radon levels.

1.3. Scope of the Limited Phase II Subsurface Investigation

The Limited Phase II ESI included soil and groundwater sampling and laboratory analysis in the Gem Street sidewalk, immediately west and topographically downgradient from the Subject Property. The investigation methodology, field observations, and analytical results are presented in Section 7.0.

1.4. Assumptions, Limitations, and Exceptions

This Phase I ESA was prepared for RP Inlet Prop, LLC for the Subject Property located at 10-56 Gem Street, 166-198 Banker Street, 14-22 Meserole Avenue, and 39-47 North 15th Street in the Greenpoint neighborhood of Brooklyn, New York. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the Subject Property addressed herein, or by any other third party without a written authorization from Langan.

Langan's scope of services, which is described in Section 1.2, was limited to that agreed to with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort comports to those prescribed in the ASTM Standard E1527-13. Soil and groundwater sampling were performed as part of the Limited Phase II ESI.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the Subject Property. The purpose of this investigation was limited to identifying RECs at the Subject Property. It should be understood that even the most comprehensive Phase I ESA may fail to detect environmental liabilities at a particular Subject Property.

DRAFT

Therefore, Langan cannot "insure" or "certify" that the Subject Property is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed as described herein, within the limits prescribed by our client and with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The conclusions, opinions, and recommendations provided in this report are based solely on the specific activities as required for the performance of ASTM E1527-13, as supplemented by a Limited Phase II ESI and are intended exclusively for the purpose stated herein, at the specified Subject Property, as it existed at the time of our site visit.

The results provided in this report are based on subsurface conditions ascertained from the inspection and analysis of a limited number of samples collected at locations outside property lines. Recommendations provided are contingent upon one another and no recommendation should be followed independent of the others. Actual conditions encountered may differ substantially from those presented herein and should be promptly brought to the attention of the owner and to Langan.

DRAFT

2.0 SITE DESCRIPTION

Location and Description

2.1 The Subject Property is approximately 64,145 square feet in area, consists of four contiguous tax lots located at 26 Gem Street, 190 & 192 Banker Street, and 14 Meserole Avenue in Brooklyn, New York, and is identified on the Brooklyn Borough Tax Map as Block 2615, Lots 1, 21, 25, and 50. The Subject Property is developed with four one- to two-story commercial/industrial buildings, some with mezzanine levels, all of which are occupied by ACME Smoked Fish Corp. A subject property location map is included as Figure 1.

The Subject Property tax lots are summarized in the following table:

Lot No.	Lot Size	Lot Address	Current Lot Usage
1	19,475 square feet	14 Meserole Avenue (alternatively addressed as 36-56 Gem Street and 14-22 Meserole Avenue)	One-story building with mezzanine levels occupied by ACME Smoked Fish Corp.
21	15,200 square feet	192 Banker Street (alternatively addressed as 16-24 Gem Street and 192-198 Banker Street)	One-story building occupied by ACME Smoked Fish Corp.
25	18,070 square feet	190 Banker Street (alternatively addressed as 10-14 Gem Street, 166-190 Banker Street and 39-47 North 15th Street)	One- and two-story building occupied by ACME Smoked Fish Corp.
50	11,400 square feet	26 Gem Street (alternatively addressed as 26-34 Gem Street)	One-story building with mezzanine levels occupied by ACME Smoked Fish Corp.

The Subject Property is located in an urban area characterized by industrial/manufacturing, commercial, and residential buildings. According to the 2013 United States Geological Survey (USGS) Brooklyn, N.Y. 7.5-minute Series Topographic Quadrangle Map, the Subject Property is at an elevation of about 10 feet above mean sea level. Site reconnaissance photographs are provided in Appendix A. Surrounding property usage is summarized in the following table:

DRAFT

Direction	Adjoining Properties			Surrounding Properties
	Block No.	Lot No.	Description	
North	2592	1	Meserole Avenue followed by a one-story industrial building (14-16 Franklin Street/1-13 Meserole Avenue) occupied by a gallery	Industrial and commercial buildings
		30	Meserole Avenue followed by a two-story industrial building (27-33 Meserole Avenue/238-256 Banker) occupied by Lucky's Real Tomatoes	
		37	Meserole Avenue followed by a two-story industrial building (21-23 Meserole Avenue) – vacant or occupied by an unidentified tenant	
		40	Meserole Avenue followed by a one-story industrial building (15 Meserole Avenue) - vacant or occupied by an unidentified tenant	
East	2615	6	One-story industrial building (214-236 Banker Street, alternatively addressed as 26-32 Meserole Avenue) and a rear paved yard with a shed, occupied by ABC Stone	Industrial, commercial, and residential buildings
		19	One-story building (200-202 Banker Street) occupied by The Halcyon Gourmet café and M. Edeler and Son Custom Carpentry	
	2616	18	Banker Street followed by two two-story industrial buildings (175 Banker Street/77-107 Dobbin Street) occupied by Lion Die Cutting Co., Inc.	
		31	Banker Street followed by a one-story industrial building (165-173 Banker Street/69-75 Dobbin Street/19-37 Norman Avenue) occupied by A/D/O (retail, restaurant, workspace, and gallery)	
		45	Banker Street followed by two two-story industrial buildings (193-195 Banker Street) under construction	
South	2615	125	Contractor yard with a one-story structure and a shed occupied Corzo Contracting Co., Inc. (14 Wythe Avenue)	Industrial and commercial buildings
West	2613	20	North 15th Street followed by a one-story industrial building (34-48 North 15th Street) occupied by Glopack, Inc.	
	2614	1	Gem Street followed by a one-story commercial building (27-33 Gem Street/3-7 North 15th Street) occupied by Greenpoint Beer and Ale Co.	Industrial and commercial buildings and Bushwick Inlet
		8	Gem Street followed by a one-story industrial building (37 Gem Street/8 Meserole Avenue) occupied by Scientific Laboratories Music Rehearsal Studios	
		16	Gem Street followed by a one-story industrial building (23-25 Gem Street/9-13 North 15th Street) occupied by Linaire Sheet Metal Corporation	
		19	Gem Street followed by a one-story industrial building (13-21 Gem Street/15 North 15th Street) occupied by Steintex Manufacturing Corporation	
		24	Gem Street followed by a two-story commercial building (1-11 Gem Street/37 North 15th Street) occupied by commercial studios and offices	

DRAFT

2.2 Description of Subject Property Improvements

Improvements at the Subject Property are summarized in the following table:

SUBJECT PROPERTY DESCRIPTION	
Size of the Subject Property	About 64,145 square feet
Buildings/Spaces/Structures	Four one- and two-story commercial/industrial buildings, some with mezzanine levels
Surface Water	Surface water is not located on the Subject Property.
Potable Water Source	New York City Municipal
Sanitary and Storm Sewer Utilities	New York City Municipal
Electrical Utilities	Electricity at the site is provided by Consolidated Edison Company of New York, Inc. ACME Smoked Fish Corp. also generates electricity for the Subject Property buildings via a cogeneration system that consists of two natural gas-fired engines and one diesel engine linked to a 4,000-gallon diesel aboveground storage tank (AST).
Construction Completion Date	Lot 1 • The building was constructed in 1956. Lot 21 • The eastern part of the building on Lot 21 was constructed between 1916 and 1942 and the western part of the building was constructed between 1954 and 1961. Lots 25 and 50 • The buildings were constructed between 1916 and 1942.
General Construction Type	Lot 1 • Steel frame construction with brick and concrete masonry walls and flat roofing Lot 21 • Brick and concrete construction with flat roofing and a bulkhead with metal walls and roofing on the roof on the western side of the building Lot 25 • Brick and concrete construction with a wood bowstring truss roof on the one-story part of the building and flat roofing on the two-story part of the building Lot 50 • Steel frame construction with brick walls and flat roofing
Heating/Cooling System Type	The first floors of the buildings are heated by natural gas-fired ceiling-mounted heaters. Heat and air conditioning is supplied to the second-floor offices by electrical split-system units and natural gas-fired HVAC units.
Emergency Power	Emergency power is provided by the roof-mounted cogeneration units.

2.3 Title Records

Langan researched ownership records through the New York City Department of Finance (NYCDOF), Office of the City Register Automated City Register Information System (ACRIS)

DRAFT

website at http://a836-acris.nyc.gov/CP/. The following table provides available deed information for the Subject Property:

The historical ownership and occupation (as per Sanborn Maps) by a steel products company (Lot 1) indicates the likely presence of hazardous substances and/or petroleum in soil, groundwater, and/or soil vapor at the Subject Property.

DRAFT

3.0 USER PROVIDED INFORMATION

User Questionnaire

3.1 Per ASTM E1527-13, a User questionnaire was provided to RP Inlet Prop, LLC to inquire about specialized information related to the Subject Property. The User questionnaire was completed by Rick Furches, Vice President/Director of Development at RP Inlet Prop, LLC, the potential purchaser of the Subject Property, on December 13, 2017. Mr. Furches stated that he is not aware of any environmental cleanup liens or Activity Use Limitations (AULs), chemical releases, remediated spills, open spills, or historical use of chemicals at the Subject Property. According to Mr. Furches, the purchase price of the Subject Property reasonably reflects fair market value and is not attributable to contamination known or believed to be present at the Subject Property. The completed questionnaire is provided as Appendix B.

Owner Questionnaire

3.2

Per ASTM E1527-13, an Owner questionnaire was provided to Charmir Holdings Inc. and 190 Gem LLC (the owners of the Subject Property) to inquire about specialized information related to the Subject Property. As of the date of this report, completed questionnaires have not been received.

3.3

Previous Environmental Reports

The following previous environmental reports pertaining to the Subject Property and the south-adjacent Lot 125 were reviewed. Copies of these reports are included in Appendix C.

<u>Phase I Environmental Site Assessment (ESA) for ACME, 190 Banker Street, Brooklyn, New York, prepared by AEI Consultants (AEI), dated May 30, 2014</u>

AEI completed a Phase I ESA of Lot 25 in 2014 in accordance with ASTM E1527-13. At the time of AEI's site inspection, the first floor of the two-story building was occupied by the ACME Smoked Fish Corporation and the second floor contained vacant apartment units. A concrete loading dock, storage trailers, cars, and trucks were also located in the central part of the property. The Phase I ESA identified the following REC at the Subject Property:

- Historical use of the Subject Property as an iron and steel works facility from at least 1928 until 1951 and a machine shop from 1960 to at least 1985 and historical petroleum bulk storage. AEI identified one 3,000-gallon No. 2 fuel oil underground storage tank (UST) in the regulatory database believed to be associated with the historic use of the

DRAFT

Subject Property. AEI indicated they could not determine the exact location of the former UST, but indicated it was closed and removed in January 1993. No spills or releases were reported in association with the UST. AEI was unable to acquire documentation relating to the UST closure. In addition, AEI did not identify any evidence such as a fill port or vent pipe that would indicate the presence of a former UST.

AEI's Phase I ESA did not identify any CRECs or HRECs. AEI indicated asbestos-containing materials (ACM) and lead-based paint (LBP) may be present in the building.

The historical use of the Subject Property, including the former use of Lot 25 as an iron and steel works facility and machine shop, and the 3,000-gallon UST associated with Lot 25 are further discussed in Section 4.1 and 4.3 of this Phase I ESA report.

<u>Limited Phase II Subsurface Investigation Report for 190 Banker Street, Brooklyn, New York, prepared by AEI Consultants (AEI), dated August 29, 2014</u>

AEI conducted a limited subsurface investigation at the Subject Property to investigate the RECs in their 2014 Phase I ESA. The Phase II included a geophysical survey and the completion of six soil borings to about 12 feet below ground surface (bgs) and the collection of soil samples for laboratory analysis. No groundwater or soil vapor samples were collected as part of the investigation. Two soil borings were completed in the sidewalk of Gem Street on near the northwestern corner of the building on Lot 25and four borings were completed in a grid-like pattern on the ground floor of the two-story building. The two borings completed in the sidewalk were meant to evaluate subsurface conditions near the suspected location of the former 3,000-gallon UST. However, as described below, this location is likely incorrect.

The soil generally consisted of historic fill material (coarse sand mixed with gravel, brick, concrete, and glass). Elevated photoionization detector (PID) readings were noted in all borings, while petroleum-like odors were observed in two of the six borings in and/or proximate to the Gem Street sidewalk (proximate to the former UST). Groundwater was encountered at about 10 and 11 feet in each boring. The geophysical survey did not identify any USTs at the Subject Property.

Soil samples were collected from depth intervals exhibiting the greatest degree of contamination ranging from 5 to 9 feet bgs or from the groundwater interface in borings without impacts. Soil samples collected from borings installed within the sidewalk were analyzed for volatile organic compounds (VOCs) and semivolatile organic compounds (SVOCs),

DRAFT

and soil samples collected from within the building were analyzed for VOCs, SVOCs, and metals.

No VOCs exceeded the Title 6 New York Codes Rules and Regulations (6 NYCRR) Part 375-6.8(b) Unrestricted Use Soil Cleanup Objectives (SCOs). Two SVOCs, both polycyclic aromatic hydrocarbons (PAHs), exceeded their Unrestricted Use SCOs, but did not exceed their Commercial Use SCOs in one or more soil samples. Five metals, including arsenic, copper, lead, mercury, and zinc, exceeded their Unrestricted Use SCOs; only arsenic exceeded the Commercial and Industrial Use SCO.

The general conclusions of the report were as follows:

- The SVOCs in soil represent a reportable release to the NYSDEC. No spill was reported to the NYSDEC as a result of this finding according to the report.
- Metals exceeding the Unrestricted Use SCOs are likely present across the entire lot.
- The soil findings are not an immediate threat to human health because of incomplete exposure pathways resulting from the presence of a cover system (concrete slab), public potable water supply, and lack of preferential migration pathways.
- The absence of VOCs in soil reduces the risk of vapor intrusion, but an assessment of soil vapor and indoor is needed to verify the potential for vapor intrusion.

Langan generally agrees with the conclusions of the report except the conclusions related to SVOCs. The SVOCs detected at the property are characteristic of historic fill material and commonly detected at urban properties and do not constitute a reportable release. The presence of petroleum-like odors in two borings also does not constitute a reportable release. In addition, Langan notes that a report documenting the results of the geophysical survey was not included in the investigation report and that the location of the former 3,000-gallon UST as depicted in AEI's figure is likely incorrect. Based on interviews with the adjoining property owner and former owner of Lot 25, the former 3,000-gallon UST was located under the Banker Street sidewalk.

Furthermore, Langan concludes that the limited investigation was not adequate to evaluate the potential impact of historical on-site and off-site uses on soil, groundwater, and soil vapor conditions at the Subject Property for the following reasons:

1. No soil vapor or groundwater samples were collected and analyzed and groundwater flow direction was not evaluated.

DRAFT

2. No shallow soil samples were collected and analyzed. Shallow soil samples can indicate surficial releases that cannot be detected with a PID.
3. Soil samples were not analyzed for the following Part 375 parameters: polychlorinated biphenyls (PCBs), pesticides, herbicides, hexavalent chromium, trivalent chromium, and cyanide.
4. No soil samples were collected near the former location of 3,000-gallon UST under the Banker Street sidewalk.

Geotechnical Desktop Study Technical Memorandum, prepared by Langan dated February 16, 2018

Langan completed a geotechnical desktop study and limited geotechnical investigation to provide information on anticipated and known subsurface conditions and conceptual recommendations for foundation design and construction. Of relevance to this Phase I ESA, the limited geotechnical investigation includes boring logs and descriptions for three approximately 102-foot deep borings completed on the sidewalks adjoining the Subject Property. The logs indicate the fill material is about 4 to 15 feet deep and is underlain by organic clay followed by moraine till (sand, silt, and clay) overlying bedrock. Groundwater was measured at about 7.5 to 10.5 feet bgs (corresponding to about el. -0.5 and el. 2 feet North American Vertical Datum [NAVD88][1]) using monitoring wells. Competent bedrock was not encountered in the three borings; however, weathered bedrock was found at about 96 feet below grade in boring LB-3 on Gem. This finding confirms the information on available bedrock geology maps indicating the bedrock surface in the area generally varies between 90 and 110 feet bgs.

Draft Phase I Environmental Site Assessment and Limited Phase II Environmental Site Investigation for 14 Wythe Avenue, Brooklyn, NY (Block 2615, Lot 125), prepared by Langan, dated February 15, 2018

Langan completed a Phase I ESA and Limited Phase II Environmental Site Investigation of an adjoining property (Lot 125) in 2017. The Phase I ESA was conducted in accordance with ASTM E1527-13. At the time of ESA and investigation, the property included a concrete- and

[1] NAVD88 is 1.1 feet above the U.S. Coast and Geodetic Survey Datum mean sea level at Sandy Hook, New Jersey, 1929 (NGVD).

DRAFT

asphalt-paved contractor yard with a one-story makeshift structure, a shed, and a trailer. The Phase I ESA did not identify any RECs, but identified a *de minimis* condition associated with the presence of chlorinated volatile organic compounds (CVOCs) in groundwater and soil vapor and petroleum-impacted soil and soil vapor. The conditions were not determined to present a threat to human health for that property, were not considered to constitute a new threat to the environment, and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. The source of the CVOCs was attributed to adjoining and surrounding properties with a nearly century-long history of industrial uses that may have involved CVOC use, including various manufacturers, machinery/equipment/auto repair, dry cleaning facilities and rubber and chemical companies. One of these properties was a Recourse Conservation and Recovery Act (RCRA) generator of hazardous waste, including halogenated solvent wastes. The CVOCs in soil vapor did not present a threat to human health because soil vapor intrusion risk to the site occupants was deemed negligible, as the property's use at the time of the ESA included an asphalt-paved, open-air contractor yard and a one-story structure that was not weather-tight.

Langan concludes that while the CVOCs in soil vapor are likely representative of a condition that also exists at the Subject Property and while CVOCs in soil vapor did not present a threat to human health to site occupants at the 14 Wythe Ave property, the CVOCs in soil vapor do present a threat to human health at the Subject Property, which includes weather-tight structures. The potential exists for soil vapor to migrate into these buildings via preferential migration pathways (i.e., sumps, pits, and drains), accumulate and affect indoor air quality. In addition, the RCRA generator of halogenated solvent waste (WH Christian & Sons at 211-217 Banker Street, Brooklyn, NY) adjoins the Subject Property to the east, across Banker Street.

<u>Conclusions</u>

Conclusions derived from the review of previous environmental reports include the following:

- Historical use of the Subject Property as an iron and steel works facility and a machine shop with historical petroleum bulk storage indicates the likely presence of hazardous substances and/or petroleum at the Subject Property.
- Subsurface petroleum contamination (i.e., petroleum-like odors in soil borings) identified on Lot 25 by AEI is considered a *de minimis* condition. These conditions do not present a threat to human health, do not constitute a new threat to the environment, and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

DRAFT

- The presence of CVOCs in soil vapor at an adjoining property is likely representative of a localized condition that also exists at the Subject Property. This condition represents a material threat to the health of current occupants of the Subject Property and is considered a REC
- The presence of historic fill material is considered a business environmental risk (BER) as it will require implementation of special soil handling, management and off-site disposal procedures during any future site redevelopment that will entail excavation.

.

DRAFT

4.0 RECORDS REVIEW

Environmental Records

4.1 Regulatory database information was provided by EDR and is included in Appendix D. The EDR report is a listing of sites identified on select federal and state standard source environmental databases within the approximate search radii, some of which are specified by ASTM E1527-13. Langan reviewed each environmental database on a record-by-record basis to determine if certain sites identified in the report are suspected to represent a potential impact to the Subject Property. Langan also reviewed "Orphan Sites" listed within the report. Orphan Sites are those sites that could not be mapped because of inadequate address information. Eighteen Orphan Sites were identified, and 12 were determined by Langan to be located beyond the ASTM search radii and as such, are not discussed below. Six Orphan Sites were determined to be within the ASTM search radii and are discussed below in the appropriate sub-sections. All distances were measured from the perimeter of the Subject Property unless otherwise noted.

The following table lists the number of sites by database within the prescribed search radius appearing in the EDR Report.

DATABASE RECORD SUMMARY

N/A: Not Applicable

A summary of the Subject Property database listing and listings for other sites identified in one or more of the reviewed databases within the prescribed search area is presented below.

4.1.1 Federal Agency Database Findings

The Subject Property and/or sites within their respective minimum search distances as specified by ASTM E1527-13 were not listed in the following federal agency databases: NPL,

DRAFT

Proposed NPL, Delisted NPL, RCRA-TSDF, ERNS, US ENG CONTROLS, US INST CONTROLS, and US BROWNFIELDS.

Superfund Enterprise Management System (SEMS, formerly CERCLIS) and SEMS-Archive (formerly known as CERCLIS-NFRAP)

The SEMS database contains data on potentially hazardous waste sites that were reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). The list was formerly known as CERCLIS and was renamed to SEMS by the USEPA in 2015. SEMS contains sites that are either proposed or on the NPL and sites that are in the screening assessment phase for possible inclusion on the NPL. SEMS Archive sites are sites that were removed and archived from the inventory of SEMS sites. Archived sites indicate that, to the best of USEPA's knowledge, assessment at a site was completed and that USEPA determined no further steps will be taken to list this site on the NPL, unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time.

The Subject Property was not listed in the SEMS or SEMS Archive database and there were no sites within the minimum search distance were listed in the SEMS database. Four sites in the SEMS Archive database (two of which were listed on the Orphan Site list by EDR) were identified within the minimum search distance. All of the sites were located greater than 500 feet from the Subject Property and at hydraulically cross- or down-gradient locations and do not indicate the presence of hazardous substances and/or petroleum that has impacted the Subject Property.

CORRACTS

RCRA CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. The Subject Property was not listed in this database. One site was identified within the minimum search criteria; however, the site was located more than 4,000 feet from the Subject Property and at a hydraulically cross-gradient location and does not indicate the presence of hazardous substances and/or petroleum that has impacted the Subject Property.

RCRA Generators

The RCRA-LQG, RCRA-SQG, RCRA-CESQG and RCRA-NonGen database includes selective information on sites that generate, transport, treat, and/or dispose of hazardous waste as

DRAFT

defined by RCRA. The minimum search radius for the databases includes the Subject Property and adjoining properties. The Subject Property was not listed in the RCRA database. Three RCRA generator database listings identified at adjoining properties are summarized below.

Site Name: Con Edison – Manhole 8356
Site Address: 23 North 15th Street
Location: Within the street west of the Subject Property; hydraulically down-gradient
Description: The manhole at this address was listed in 2013 as a RCRA-LQG of lead waste (D008) and a RCRA non-generator and RCRA-CESQG of unspecified waste. No violations are listed. The manhole at this address is also listed under the NY Manifest database for the transport of lead waste (D008) in 2013. The listing of the manhole on the RCRA database does not indicate the presence of hazardous substance and/or petroleum that has impacted the Subject Property.

Site Name: VE2 Plating Co
Site Address: 7-11 North 15th Street
Location: Western adjoining property across Gem Street; hydraulically down-gradient
Description: The facility is listed as a RCRA non-generator of unspecified waste in 1999, 2006, and 2007. The facility is also listed as a RCRA-LQG of unspecified waste in 1990 and a RCRA-LQG of undefined waste (D000), corrosive waste (D002), chromium (D007), lead (D008), spent cyanide plating bath solutions from electroplating operations (F007), plating bath residues from the bottom of plating baths from electroplating operations in which cyanides are used in the process (F008), and spent stripping and cleaning bath solutions from electroplating operations in which cyanides are used in the process (F009) in 1995. General generator violations are listed in 1992 and 1994; however, the facility is listed as achieving compliance. The facility is also listed under the NY Manifest database for the transport of wastes from electroplating operations in 1989 and chromium waste (D007) and unspecified corrosive waste (D002) in 1995. The historical use of this adjoining property as a metal plating/electroplating facility that generated RCRA waste indicates the likely presence of VOCs (including chlorinated solvents) that may have migrated to and impacted soil vapor at the Subject Property. Any impacts related to possible releases to groundwater are not expected to migrate to the Subject Property because of the hydraulically downgradient location of this facility relative to the Subject Property.

Site Name: Hard Chrome Electro Processing Corp
Site Address: 8 Meserole Avenue

DRAFT

Location: Western adjoining property across Gem Street; hydraulically down-gradient
Description: The facility is listed as a RCRA non-generator of unspecified waste in 1999 and a RCRA-SQG of unspecified waste in 2006 and 2007. The facility is listed as a RCRA-LQG of corrosive waste (D002) and barium (D005) in 2006 and a LQG of spent cyanide plating bath solutions from electroplating operations (F007), plating bath residues from the bottom of plating baths from electroplating operations in which cyanides are used in the process (F008), and spent stripping and cleaning bath solutions from electroplating operations in which cyanides are used in the process (F009). No violations are listed. The facility is also listed under the NY Manifest database for the transport of unspecified ignitable waste (D001) in 2012, and barium waste (D005) and unspecified corrosive waste (D002) in 2005. The historical use of this adjoining property as a metal plating/electroplating facility that generated RCRA waste indicates the likely presence of VOCs (including chlorinated solvents) that may have migrated to and impacted soil vapor at the Subject Property. Any impacts related to possible releases to groundwater are not expected to migrate to the Subject Property because of the hydraulically downgradient location of this facility relative to the Subject Property.

FINDS Database

The Facility Index System (FINDS) database contains both facility information and "pointers" to other sources that contain more detail.

The source of the listing is the New York Facility Information System (FIS), NYSDEC's information system for tracking environmental facility information found across the state. The Subject Property was listed in the FINDS database as ACME Smoked Fish, located at 192-198 Banker Street, with Registry ID 110022503502. The facility code associated with ACME Smoked Fish identifies it as a food product facility. No further environmental information was included. The use of the Subject Property as a food product facility does not indicate the likely presence of hazardous substance and/or petroleum impacts on the Subject Property.

4.1.2 State Agency Database Findings

The Subject Property and/or sites within their respective minimum search distances as specified by ASTM E1527-13 were not listed in the following state agency databases: NY SWRCY, NY ENG CONTROL, NY INST CONTROL, NY CBS, NY MOSF, and NY E-Designation.

DRAFT

SHWS Database

The SHWS database is a comprehensive listing of sites that are the state's equivalent to SEMS. These consist of priority sites planned for cleanup using state funds (state equivalent of Superfund) and or potentially responsible parties. The Subject Property is not listed in the SHWS database; however, 21 sites were identified within the minimum search distance (including two sites listed on the Orphan Site list by EDR). Sites listed on the SHWS database that are hydraulically cross- or down-gradient of and more than 750 feet from the Subject Property. Sites that are hydraulically up-gradient of the Subject Property are located greater than 2,000 feet away and are not listed for open spills or releases. These listed sites do not indicate the likely presence of hazardous substance and/or petroleum that has impacted the Subject Property.

HSWDS

The HSWDS database includes any known or suspected hazardous substance waste disposal sites. The Subject Property was not listed in the HSWDS database; however, two sites on this database were identified within the minimum search distance. Both sites are located over 500 feet from and hydraulically cross-gradient of the Subject Property and therefore do not indicate the presence of hazardous substance and/or petroleum impacts to the Subject Property.

SWF/LF

The SWF/LF database is a comprehensive listing of State permitted/recorded solid waste facilities. The Subject Property is listed in the SWF/LF database as an inactive registered industrial/commercial landfill facility under the facility name Corzo Contracting Co Inc (190 Banker Street). The waste type is listed as asphalt, concrete, brick, and clean soil. James Lema, the owner of Corzo Maintenance Co Inc. (owner of the south-adjoining property at Block 2615, Lot 125 and the former owner of a portion of the Subject Property at 190 Banker Street [Lot 25 of Block 2615]) was interviewed during the preparation of this report. Mr. Lema indicated that Corzo Maintenance Co Inc. applied to the NYSDEC and New York City Department of Sanitation for a transfer facility permit in the late 1990s before Lot 25 was subdivided into Lots 25 and 125 in 2003, but later rescinded the application. Mr. Lema confirmed that no waste management or transfer facility activities ever occurred at the former Lot 25 before the property subdivision. Based on this information, this listing does not likely indicate releases of hazardous substances and/or petroleum that have impacted the Subject Property. Three facilities in the SWF/LF database were identified within the minimum search distance. The listed SWF/LF facilities are located more than 1,000 feet from and at hydraulically

DRAFT

cross- or down-gradient relative to the Subject Property and do not indicate the presence of hazardous substances and/or petroleum that has migrated to and impacted the Subject Property.

LTANKS Database

The LTANKS database contains an inventory of reported leaking storage tank incidents, including leaking USTs and ASTs. The minimum search radius for the LTANKS database includes the Subject Property and any sites within a 1/2-mile radius. The Subject Property was not listed in the LTANKS database; however, 32 sites were listed within the search radius (one listed on the Orphan Site list by EDR). The listed incidents were primarily caused by tank test failures, tank failures, and tank overfills. Of the 32 spill incidents, 31 were not reported at adjoining properties and were closed by the NYSDEC and do not indicate the presence of hazardous substances and/or petroleum that has migrated to and impacted the Subject Property. The remaining listing is described below:

Site Name: WH Christian & Sons
Site Address: 211-217 Banker Street
Location: About 160 feet east; hydraulically up-gradient
Classification: Spill No. 0212557 (Closed)
Description: The spill was assigned in March 2003 following a tank test failure reported at the property. The NYSDEC database entry indicates that a tank was removed and endpoint soil samples and groundwater samples were collected following removal of the tank. Concentrations of gasoline constituents, including benzene, ethylbenze, toluene, xylenes, methyl-tert butyl ether, naphthalene, 1,2-4-trimethylbenzene, and 1,3,5-trimethylbenzene, were detected in groundwater above the regulatory criteria; the listing attributed the presence of these constituents in groundwater to a regional plume and the spill was closed. The listing does not indicate that any efforts were undertaken to address or reduce the concentrations of the gasoline constituents in groundwater. The subsurface petroleum contamination on the Subject Property, as documented by AEI's limited Phase II subsurface investigation (see Section 3.3) and Langan's Limited Phase II ESI (see Section 7.3), may be related to this off-site source.

Spills Database

The NY Spills database is an inventory of sites where spills have been identified and reported to the NYSDEC. The minimum search radius for the Spills database includes the Subject Property and any sites within a 1/8-mile radius. The Subject Property was not listed in the Spills

DRAFT

database; however, 47 sites with closed status spill incidents were listed within the search radius. The listed incidents were primarily caused by tank test failures, tank failures, and tank overfills. Of the 47 spill incidents, 41 were not reported at adjoining properties. The remaining spill incidents were reported adjacent to the site within vaults and manholes:

Site Name: VANAGE SERVICE 3184
Spill No.: 9904547 (Closed)

Site Name: VAULT VS3184
Spill No.: 9904106 (Closed)

Site Name: VAULT 3184
Spill No.: 9912676 (Closed)

Site Name: VAULT VS3184
Spill No.: 9904235 (Closed)

Site Name: VS #3184
Spill No.: 9912478 (Closed)

Site Name: VAULT #3533
Spill No.: 9808835 (Closed)

The NYSDEC database entry for each vault and manhole spill incident indicates that the spilled material was contained and recovered and repairs were made to the vaults and manholes where warranted. Based on this information, the 47 reported spills do not indicate the likely presence of hazardous substances and/or petroleum that has migrated to and impacted the Subject Property.

Voluntary Cleanup Program Sites

VCP sites are properties at which redevelopment or re-use may be complicated by the presence or potential presence of hazardous substances, pollutants, or contamination. The Subject Property was not listed in the VCP database; however, five VCP sites (including two Orphan Sites) were identified within 1/2 mile of the Subject Property. All of the sites were located more than 750 feet from and at hydraulically cross- or down-gradient locations relative to the Subject Property and do not indicate the presence of hazardous substances and/or petroleum that has migrated to and impacted the Subject Property.

Brownfield Sites

Brownfield sites are those at which investigation and remediation is being conducted or was completed pursuant to the New York State Brownfield Cleanup Program. A brownfield site

DRAFT

is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by NYSDEC that are applicable based on the reasonably anticipated use of the property. The Subject Property was not listed as a NY Brownfield site; however, 15 NY Brownfield sites were identified within 1/2 mile of the Subject Property. Sites listed on the NY Brownfield database were either located more than 500 feet hydraulically cross- or down-gradient from the Subject Property or were located greater than 2,000 feet hydraulically up-gradient of the Subject Property. These listings do not indicate the presence of hazardous substances and/or petroleum that has likely migrated to and impacted the Subject Property.

Registered Drycleaners (DRYCLEANERS)

The DRYCLEANERS database is a listing of registered dry cleaning facilities. Dry cleaning facilities are associated with the use of tetrachloroethene (PCE), a chlorinated solvent that has the potential to infiltrate groundwater and can readily migrate to surrounding properties. The Subject Property was not listed in the DRYCLEANERS database. Three facilities identified within 1/4 mile of the Subject Property were listed in the DRYCLEANERS database. Of the three sites, two were located more than 1,000 feet from the Subject Property, were not associated with documented releases or other regulatory listings, and therefore do not indicate the likely presence of hazardous substances that has migrated to and impacted the Subject Property. The remaining site is discussed below:

Site Name: WH Christian & Sons
Site Address: 211 Banker Street
Location: About 160 feet east; hydraulically up-gradient
Description: The site was registered under Facility No. 2-6101-00378 in the DRYCLEANERS database. The facility was also listed in the RCRA database as a SQG of unspecified RCRA waste in 1999, 2006, and 2007, and a LQG in 1990. General generator violations were listed in 1999 and 2006; however, the facility was listed as having achieved compliance. The facility was also listed under the NY Manifest database for the transport of halogenated solvent waste (F002), chromium (D007), 1,1-dichloroethylene (D029), PCE (D039), and trichloroethene (TCE) (D040) between 1990 and 2011. The use of this hydraulically up-gradient property as a dry cleaning facility that generated hazardous waste including chlorinated solvents since at least 1990 indicates the likely presence of hazardous substances that has migrated to and impacted groundwater and/or soil vapor at the Subject Property.

DRAFT

PBS UST/AST Databases

The PBS UST and AST databases are listings of all properties that have petroleum storage capacities in excess of 1,100-gallons, but less than 400,000 gallons. The minimum search radius for the UST and AST databases includes the Subject Property and adjoining properties. The Subject Property is listed in the PBS database and is discussed below:

Site Name: Corzo Contracting Co Inc
Site Address: 190 Banker Street
Description: According to the EDR report and the NYSDEC on-line PBS database, one closed 3,000-gallon No. 2 fuel oil UST and one closed 3,000 gallon AST are registered at the site (PBS Facility No. 2-085251). The records indicate the UST was removed in January 1993 and the AST was removed in May 2003. James Lema, the owner of Corzo Contracting Co Inc. (owner of the adjoining property to the south and formerly the owner of Lot 25 / PBS Facility No. 2-085251), was interviewed during the site reconnaissance and indicated he was present at the time of the UST was removed. Mr. Lema stated that the UST was located below the sidewalk immediately east of the building and there was no evidence of leaks or contamination when the tank was removed. To the best of our knowledge, an environmental professional was not present at the time of UST removal. Evidence of a release could not be verified in the photographs of the removal provided by Mr. Lema during the site reconnaissance. The former 3,000-gallon AST does not indicate the presence of petroleum that has migrated to and impacted the Subject Property as no spills appear to be associated with the AST. The *de minimis* subsurface petroleum contamination documented by AEI's limited Phase II subsurface investigation (see Section 3.3) and Langan's Limited Phase II ESI (see Section 7.3) may be related to this former 3,000-gallon fuel oil UST.

Site Name: ACME Smoked Fish Co
Site Address: 26-56 Gem Street
Description: According to the EDR report and the NYSDEC on-line PBS database, one closed 5,000-gallon No. 2 fuel oil UST is registered at the site (PBS Facility No. 2-271861). The records indicate the UST was installed at the site in May 1956 and closed-in-place in May 1990. The presence of this fuel oil UST at the Subject Property indicates the likely presence of petroleum impacts to soil, groundwater and/or soil vapor at the Subject Property. The *de minimis* subsurface petroleum contamination documented by AEI's limited Phase II subsurface investigation (see Section 3.3) and Langan's Limited

DRAFT

Phase II ESI (see Section 7.3) may be related to this closed-in-place 5,000-gallon fuel oil UST.

The following adjoining property was identified in the PBS database:

Site Name: VE2 Plating Co
Site Address: 7-11 North 15th Street
Location: Western adjoining property across Gem Street; hydraulically down-gradient
Description: According to the EDR report and the NYSDEC on-line PBS database, one closed 2,000-gallon No. 2 fuel oil UST is registered at the site (PBS Facility No. 2-364150). The records indicate the UST was closed in place in July 1996. The property is not listed for any spills or releases. Based on the absence of documented spills and the distance and hydraulically down-gradient location of the site with respect to the Subject Property, the PBS listing does not indicate the presence of petroleum impacts that have migrated to and impacted the Subject Property.

4.1.3 Other Database Findings

Manufactured Gas Plant Sites

The MGP sites database is a proprietary database that includes records of manufactured coal gas plants compiled by EDR. The Subject Property was not listed in the MGP database. Three sites were identified within the minimum search criteria. Two of the sites are located in Manhattan across the East River and the remaining site is located about 600 feet southwest and hydraulically cross-gradient of Subject Property. Based on the distance and location relative to the Subject Property, these sites do not indicate the presence of hazardous substances and/or petroleum that has migrated to and impacted the Subject Property.

Historical Auto

The Historical Auto database is a proprietary database that lists potential gas station/filling station/service station sites based on review of national collections of business directories that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The Subject Property was not listed in the EDR Historical Auto database. Two facilities were identified within the minimum search criteria.

One of the facilities is located about 150 feet southwest and hydraulically cross-gradient of the Subject Property. The facility was not listed for reporting any spills.

DRAFT

The second facility is located about 300 feet northwest and down-gradient of the Subject Property. A spill related to a tank failure was reported; however, the spill case was closed. No other documented spills are associated with the site. Based on the distances and hydraulically down-gradient locations of these listings relative to the Subject Property and the lack of spills or closed status spills, these facilities do not indicate the presence of hazardous substances and/or petroleum that has migrated to and impacted the Subject Property.

4.1.4 Local Regulatory Agency Findings

FOIA Requests

FOIA requests were submitted to the following federal, state, and local agencies via written correspondence:

- New York City Department of Environmental Protection (NYCDEP)
- New York City Department of Health and Mental Hygiene (NYCDHMH)
- New York City Fire Department (FDNY)
- New York State Department of Health (NYSDOH)
- NYSDEC
- USEPA, Region 2

The following table summarizes acknowledgements of receipt and responses to date.

Agency	Acknowledgement of Receipt Date	Response
NYCDEP	November 16, 2017	December 14, 2017
NYCDHMH	None received	January 11, 2018
FDNY	None received	None received
NYSDOH	December 13, 2017	December 18, 2017
NYSDEC	November 16, 2017	December 13, 2017
USEPA Region 2	November 27, 2017	December 13, 2017

USEPA Region 2 issued a response stating that information for the Subject Property is publicly available on the EPA's website. Information related to EPA listings was also provided in the

DRAFT

EDR database and is further discussed in the Federal Agency Database Findings summary above (Section 4.1.1). The NYCDHMH, NYSDOH and the NYSDEC issued responses stating that no records related to the Subject Property were located. The response from the NYCDEP did not include records for the Subject Property; however, it included a "Right-to-Know" list of chemicals associated with the WH Christian & Sons facility (211-217 Banker Street). The list of chemicals included rust inhibiting coating, bleach, stain removers, detergents, lubricants and machine oil, water treatment chemicals, a scale buildup remover, and an alternative dry cleaning solvent. As discussed above in Section 4.1.2, the use of that property as a commercial dry cleaning facility that used chemicals and generated hazardous chlorinated solvent waste indicates the likely presence of hazardous substances that have migrated to and impacted groundwater and/or soil vapor at the Subject Property.

Langan submitted a FOIL request to the NYSDEC for information on the closed spill (at Spill No. 0212557) associated with the WH Christian & Sons facility at 211-217 Banker Street. The response included tank tightness test results, the NYSDEC spill report, manifests for exported contaminated soil and groundwater, and groundwater analytical results. Remedial actions associated with this spill included export of 2,508 gallons of contaminated water and 280 tons of contaminated soil to off-site disposal facilities. Groundwater analytical results obtained during the spill investigation indicated gasoline constituents, including benzene, ethylbenze, toluene, total xylenes, methyl-tert butyl ether, naphthalene, 1,2-4-trimethylbenzene, 1,3,5-trimethylbenzene, isopropylbenzene, p-isopropylbenzene, and n-propylbenzene were detected. The results also indicated three SVOCs, including fluorene, phenanthrene, and acenaphthene were detected. The FOIL documentation does not indicate that the release was remediated to applicable soil and groundwater standards.

Copies of the FOIA requests and responses are included in Appendix E.

New York City Department of Buildings (NYCDOB)

Langan conducted a records search through the NYCDOB online query system on November 27, 2017. The following table summarizes NYCDOB records:

Lot	Building Identification Number (BIN)	NYCDOF Classification	Actions	Total Jobs	DOB Violations		Environmental Control Board (ECB) Violations	
					Total	Open	Total	Open
1	3065481	F1 - factory; heavy manufacturing	25	2	1	0	0	0

DRAFT

Lot	Building Identification Number (BIN)	NYCDOF Classification	Actions	Total Jobs	DOB Violations		Environmental Control Board (ECB) Violations	
					Total	Open	Total	Open
21	3065483	F4- factory; industrial	16	10	1	0	0	0
25	3065484	F4 - factory; industrial	88	19	11	4	2	1
50	3065485	F4 - factory; industrial	52	21	15	1	2	0

Eleven certificate of occupancy documents were available for the Subject Property and are summarized below by tax lot:

- Lot 1: Certificates of occupancy from 2000 and 2003 indicate the building consisted of a boiler room in an on-ground cellar; a fish processing plant with freezers, offices, and a loading berth and truck storage on the first floor; and a mezzanine with offices and locker rooms. The 2000 document lists a code issued in 1973 for fuel oil by the Fire Department.
- Lot 21: A certificate of occupancy from 1956 indicates the building consisted of a boiler room in the on-ground cellar, offices and a factory (machine shop) on the first floor and storage on two mezzanines. The document lists a Fire Department approval related to fuel oil dated April 26, 1956. A certificate of occupancy from 1996 indicates the building consisted of a boiler room in the on-ground cellar and fish packing, a herring cooler, a freezer, and offices on the first floor.
- Lot 25: Certificates of occupancy from 1922, 1923, and 1927 are mostly illegible, although the 1923 certificate appears to indicate the building was used for storage. A certificate of occupancy from 1968 indicates the building consisted of a vacant on-ground cellar; a machine shop, tool and die making, tool manufacturing, and machinery manufacturing and repair on the first floor; and offices and drafting on the second floor.
- Lot 50: A certificate of occupancy from 2002 indicates the building consisted of a boiler room in an on-ground cellar; a fish processing plant and freezers, offices, and a loading berth and truck storage on the first floor; and offices and locker rooms on mezzanine levels.

A total of 181 actions were reported for the Subject Property including actions related to new buildings, building alterations, building notices, certificates of occupancy, construction, plumbing, sprinklers, oil burner applications, unsafe building actions, violations, and

DRAFT

miscellaneous actions. No details other than action type and date were provided. The oil burner application actions were listed in BIN 3065483 (192 Banker Street, Lot 21) in 1910, BIN 3065484 (190 Banker Street, Lot 25) in 1958, 1969, and 1976, and BIN 3065485 (26 Gem Street, Lot 50) in 1956, 1989, and 1990. Additionally, at BIN 3065484 (190 Banker Street, Lot 25), a fuel oil equipment alteration was filed in 1926, fuel oil actions were filed in 1942, and a machine shop alteration was filed in 1962. A total of 52 jobs relating to various alterations are listed for the Subject Property. Open violations at the Subject Property are reported as unspecified or construction- or boiler-related violations, and all other building violations are listed as resolved or dismissed.

The listing of fire department approvals for fuel oil, oil burner applications, and fuel oil actions at Lots 1, 21, 25, and 50 may correspond to former fuel oil tanks, including known USTs and ASTs and potential other unknown USTs and ASTs. Historical petroleum storage indicates the likely presence of petroleum in soil, groundwater, and/or soil vapor at the Subject Property. The *de minimis* subsurface petroleum contamination documented by AEI's limited Phase II subsurface investigation (see Section 3.3) and Langan's Limited Phase II ESI (see Section 7.3) may be related to historical on-site petroleum bulk storage. The historical use of the building on Lot 25 for steel tool and die making, tool manufacturing, and machinery manufacturing and repair also indicates the likely presence of hazardous substances and/or petroleum in soil, groundwater, and/or soil vapor at the Subject Property.

A copy of the NYCDOB findings is included in Appendix F.

'E'-Designation Status

The New York City Department of City Planning (NYCDCP) coordinated a program identifying properties requiring an assessment of environmental site conditions based on documented historical use, requiring attenuation of neighborhood noise conditions, and/or special measure to mitigate against exacerbation of neighborhood air quality issues. These properties are identified as part of the environmental review process associated with discretionary actions, and are then noted as E-Designated sites on the City's zoning maps and in the NYCDOB Building Information System (BIS) database. For properties that have been so designated, the NYCDOB is restricted from issuing building permits until the New York City Office of Environmental Remediation (OER) reviews information prepared by an environmental professional and makes a determination to issue a "Notice-of-No-Objection" or a "Notice-to-Proceed" to the NYCDOB. Before the OER was established in 2008, the NYCDEP conducted these reviews. Langan reviewed the following information sources to determine if the Subject Property was listed as an E-Designated site:

DRAFT

- CEQR Environmental Designations List dated October 31, 2017 (https://www1.nyc.gov/assets/planning/download/pdf/zoning/zoning-text/appendixc_tab1.pdf)
- CEQR Restrictive Declaration List dated October 17, 2017 (https://www1.nyc.gov/assets/planning/download/pdf/zoning/zoning-text/appendixc_tab2.pdf)
- NYCDOB BIS on November 27, 2017 (http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp).

The Subject Property was not listed for an E-Designation according to these resources. Any discretionary rezoning action would be expected to require an environmental review of the Subject Property. As a result, an E-Designation for Hazardous Materials (and potentially also for Noise and Air Quality) would likely be placed on the Subject Property.

Zoning Department

According to the New York City Planning Commission Zoning Map 13a, the Subject Property is located in a M3-1 zoning district, which is designated for areas with heavy industries that generate noise, traffic and air pollutants. A copy of the zoning map is included in Appendix G.

4.2 Physical Setting Sources

4.2.1 Topography

According to the 2013 USGS Brooklyn, N.Y. 7.5-minute Series Topographic Quadrangle Map, the Subject Property is at an elevation of approximately 10 feet above mean sea level. The topography at the Subject Property was observed to be relatively flat. According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) dated September 5, 2007 (Map Number 3604970202F) and the preliminary FIRM dated December 5, 2013 (Map Number 3604970202G), the Subject Property is located within the 100-year floodplain of the East River.

4.2.2 Geology

Geological surface features (e.g., rock outcroppings) were not observed at the Subject Property. Soil and bedrock stratigraphy throughout Brooklyn typically consists of a layer of historical fill that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. Based on a review of the Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York and Parts of Bergen and Hudson Counties New Jersey, by Charles A.

DRAFT

Baskerville, dated 1994, the Subject Property is underlain by a glacial deposit known as ground moraine. New York City's subsurface soil is primarily the result of repeated glaciation and ice advancement during the Pleistocene Epoch. During ice advancement, soil and rock material scraped from the surface and pushed southward by the glaciers was deposited at the limit of the ice advance as a wall of soil and rock called a terminal moraine. The New York City area terminal moraine stretches across northern Long Island, through Staten Island and across New Jersey. When the climate moderated, the glacier began a gradual retreat northward. During the retreat, soil and rock material was still carried south in the melting glacier outwash and spread out over the ground in front of the ice as a veneer called ground moraine. The ground moraine is a widespread dense layer, consisting typically of clay, sand, and boulders, typically less than 100 feet thick.

Historical maps indicate the Subject Property, which was once part of Bushwick Inlet, was filled in for development purposes in the mid-1800s. Historic fill material was identified during AEI's limited Phase II subsurface investigation and Langan's Limited Phase II ESI and geotechnical exploration at the Subject Property. Previous geotechnical and environmental investigations at the adjoining property to the south and on the same block as the Subject Property (Lot 125 of Block 2615) also found historic fill material. The investigations at the Subject Property identified historic fill to depths of about 4 to 15 feet below ground surface (bgs) followed by, in descending order, organic slay and moraine till (sand, silt, and clay). Langan's geotechnical exploration did not find competent bedrock; however, weathered bedrock was found at about 96 feet below grade in one boring on Gem Street. This finding confirms the information on available bedrock geology maps indicating the bedrock surface in the area generally varies between 90 and 110 feet bgs.

4.2.3 Hydrology

Groundwater flow is typically hydraulically influenced, as shallow groundwater tends to originate in areas of topographic highs and flow toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetative cover, and extent of impervious cover. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks.

According to well gauging records generated by Langan's Limited Phase II ESI (discussed in Section 7.3), groundwater is present at about 8.5 to 9.5 feet bgs at the Subject Property.

DRAFT

Groundwater flow direction was not evaluated as part of previous investigations or Langan's Limited Phase II ESI; however, based on the regional and local topography, groundwater in the area is inferred to flow to the west/northwest towards the Bushwick Inlet of the East River, which is about 400 feet west of the Subject Property. Potable water is provided to the Subject Property by the City of New York and is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

Historical Use Information

4.3 Langan reviewed available historic resources (including aerial photographs, Sanborn and topographic maps, and city directories) dated between 1887 and 2013. Findings from the review are presented below.

4.3.1 Aerial Photographs

Langan reviewed aerial photographs of the Subject Property and surrounding areas for the years 1944, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 1994, 2006, 2009, and 2011. Copies of aerial photographs are included in Appendix H.

The aerial photographs indicate the Subject Property was located in a developed urban area as early as 1944. The current buildings on Lots 25 and 50 and the eastern portion of the building on Lot 21 appear present in 1944. The building on Lot 1 and the western portion of the building on Lot 21 appear to have been constructed by 1961. From 1961 to 2011, the Subject Property and adjoining properties appear relatively unchanged.

The area surrounding the Subject Property is composed predominantly of industrial properties with residential areas farther to the north, east, and south in all photographs. Several large tank-like structures appear at the waterfront west and topographically down-gradient of the Subject Property from about 1944 to 1954, and then again from 1966 to 2011. Two manufactured gas holders can be seen about 650 feet south of the Subject Property on the photographs from 1944 through 1961. Based on their hydraulic location relative to and distance from the Subject Property, these structures do not indicate the likely presence of hazardous substances and/or petroleum that have migrated to and impacted the Subject Property.

Langan's review of aerial photographs did not reveal any RECs.

DRAFT

4.3.2 Sanborn Fire Insurance Maps

Langan reviewed Sanborn Fire Insurance Maps (Sanborn Maps) for the years 1887, 1905, 1916, 1928, 1942, 1951, 1965, 1978 through 1983, 1986 through 1989, 1991, 1993, 1995, 1996, and 2001 through 2007. Sanborn Maps constitute a database of prior site uses for real properties located in many cities and towns across the United States. Copies of the maps are included in Appendix I.

The Sanborn maps indicate the Subject Property was undeveloped in 1887 with the adjoining property to the south labeled as "under water." Remaining largely undeveloped until the 1942 map, the Subject Property appears in its current configuration by 1965. Former operations at the Subject Property include:

- Lumber yard (14-22 Meserole Avenue) – 1905
- Iron works (10-14 Gem Street) – 1942-1951
- Metal works and welding (192-198 Banker Street) – 1942-1951
- Gas generator storage with acetylene tanks (192 Banker Street) – 1942-2007
- Garage with a gasoline tank (36 Gem Street) – 1942-1951
- Fish smoking with a gasoline tank labeled "not used" (26-30 Gem Street) – 1942-2007
- Steel products company (10-22 Meserole Avenue) – 1965
- Shipping with a gasoline tank (36 Gem Street) – 1965-2007
- Machine shop (10-14 Gem Street) – 1965-2007
- Builders' corporation warehouse (10-22 Meserole Avenue) – 1978-2007

This historical use of the Subject Property as a lumber yard, iron/metal/steel companies, a garage, and a machine shop indicates the likely presence of hazardous substances and/or petroleum that have impacted soil, groundwater, and/or soil vapor at the Subject Property. Additionally, the two gasoline tanks, located on Lot 50 of the Subject Property, indicate the likely presence of petroleum that has impacted soil, groundwater, and/or soil vapor at the Subject Property. The *de minimis* subsurface petroleum contamination documented by AEI's limited Phase II subsurface investigation (see Section 3.3) and Langan's Limited Phase II ESI (see Section 7.3) may be related to historical petroleum storage at the Subject Property.

Industrial buildings historically occupied the adjoining properties. The following list includes the historical uses at the adjoining and hydraulically up-gradient surrounding properties that indicate the likely presence of hazardous substances and/or petroleum that has migrated to and impacted soil, groundwater, and/or soil vapor at the Subject Property One or more of these listings with petroleum-related operations could be the off-site source of the *de minimis*

DRAFT

subsurface petroleum contamination documented by AEI's limited Phase II subsurface investigation (see Section 3.3) and Langan's Limited Phase II ESI (see Section 7.3). The subsurface testing programs completed to date are insufficient to fully characterize subsurface conditions on the Subject Property and evaluate the potential for additional petroleum and/or hazardous substances contamination from these off-site uses

- North-adjoining properties
  - Blower and pipe works (21-23 Meserole Avenue) – 1916-1965
  - Machine shop (5 Meserole Avenue) – 1942
  - Metal working (25-33 Meserole Avenue) – 1965
- East-adjoining and up-gradient surrounding properties
  - Garage and auto repair with 1,000-gallon underground gasoline tank (227 Banker Street) – 1942-1951
  - Aluminum smelting (219-221 Banker Street) – 1942
  - Iron and steel company (211-213 Banker Street) – 1942-1951
  - Iron and steel company (193 Banker Street) – 1942
  - Fire-proof door manufacturing company with a buried fuel oil tank (175 Banker Street) – 1942
  - Rubber company with a boiler room, transformer room, and buried fuel oil tank (175 Banker Street) – 1951-1965
  - Metal products manufacturing with a painting and baking area (230 Banker Street) – 1965-2007
  - Manufacturing building with gasoline tank (227 Banker Street) – 1965-2007
  - Die company with boiler room, transformer room, and buried fuel oil tank (175 Banker Street) – 1978-2007
  - Manufacturing (202 Banker Street) – 1988 to 2007
- South and cross-gradient surrounding properties[2]
  - Garage and auto repair with gasoline tank (159-163 Banker Street) – 1942-1951
  - Paint and varnishing (7 Wythe Avenue) – 1942-1951
  - Inflammable liquid canning (7 Wythe Avenue) – 1965-1981
  - Plastic products manufacturing (159-163 Banker Street) – 1978-2007
- Southwest-adjoining

[2] Although Lot 125 of Block 2615 lies in between the Subject Property and these soiuth and cross-gradient properties, hazardous substances and/or petroleum have the potential to migrated under/around Lot 125 and impact groundwater and/or soil vapor at the Subject Property.

DRAFT

  - Pressure casting company (34-48 North 15th Street) – 1942-1951
- West-adjoining
  - Garage with three gasoline tanks (27-33 Gem Street) – 1942-1951
  - Bronze bearing company (37-43 Gem Street) – 1951
  - Metal finishing (37-43 Gem Street) – 1965-2007

4.3.3 Historical USGS Topographic Quadrangles

Langan reviewed historical USGS Topographic Quadrangles obtained from EDR for information regarding past uses of the Subject Property. Quadrangle maps were available for the Subject Property for the years 1897, 1898, 1900, 1947, 1956, 1967, 1979, 1995, and 2013. Copies of the topographic maps are provided in Appendix J. Based on a review of the historic topographic maps, the Subject Property and adjoining area was undeveloped and partially underwater in the 1897 through 1900 maps. By 1947, the Subject Property and surrounding area was shown to be in a dense urban environment. The review of the historic topographic maps did not identify RECs for the Subject Property.

4.3.4 City Directories

The City Directory Abstract obtained from EDR is a review of available business directories, including city, cross-reference, and telephone directories, at approximately five-year intervals for the years spanning 1928 through 2014. A copy of the City Directory Abstract is included in Appendix K.

The following listings were provided for the Subject Property:

- Lot 21 - 16–24 Gem Street (alternatively addressed as 192–198 Banker Street): a tank stack company (1928 to 1940), Fabric Laundry and Dry Cleaning Machy Corp/Washex Machy Corp (1945 to 1960), Carmel Construction Corp (1965 to 1976), Cavalier Multicolor Corp. (1973)
- Lot 25 - 10–14 Gem Street (alternatively addressed as 166–190 Banker Street and 39–47 North 15th Street): steel and iron works companies (1928 to 1949), Schultz Engineering Corp (1960 to 1976), Elsner Engineering Works (1985 to 1997), Harnden Inc. (1992), and Corzo Contracting Co Inc. (1992 to 2014)
- Lot 50 - 26–34 Gem Street: an auto garage (1934), a trucking company (1934 to 1949), smoked fish companies (1940 to 2014), Northside Fuel Oil Co (1960), and Northeast Supply Corp / Maximum Supply (2010 to 2014)

DRAFT

The historical use of the Subject Property as iron/steel companies (Lots 25), a tank stack company (Lot 21), a laundry/dry cleaning corporation (Lot 21), a garage (Lot 50), and a fuel oil company (Lot 50) indicates the likely presence of hazardous substances and/or petroleum that have impacted soil, groundwater, and/or soil vapor at the Subject Property. The *de minimis* subsurface petroleum contamination documented by AEI's limited Phase II subsurface investigation (see Section 3.3) and Langan's Limited Phase II ESI (see Section 7.3) may be related to historical petroleum storage or use at the Subject Property.

Industrial buildings historically occupied adjoining properties. The following list includes the historical uses at the adjoining and hydraulically up-gradient surrounding properties that indicate the likely presence of hazardous substances and/or petroleum that has migrated to and impacted groundwater and/or soil vapor at the Subject Property. One or more of these listings with petroleum-related operations could be the off-source of the subsurface petroleum contamination documented by AEI's limited Phase II subsurface investigation (see Section 3.3) and Langan's Limited Phase II ESI (see Section 7.3).

- Block 2592, Lot 40 (about 50 feet north of the Subject Property and hydraulically cross-gradient): a sheet iron works / metallizing and machine works company (1949) and a blower and pipe works company (1960 to 1973)
- Block 2592, Lot 37 (about 50 feet north of the Subject Property and hydraulically cross-gradient): a blower and pipe works company (1928 to 1965), a tin and sheet iron works company (1940 to 1945), and a tank stack company (1960 to 1970)
- Block 2592, Lot 30 (about 50 feet north of the Subject Property and hydraulically cross-gradient): machinery/equipment companies (1934 to 1949), a steam specialty company (1965 to 1970), and a valve and fitting company (1965 to 1970)
- Block 2615, Lot 6 (immediately east of the Subject Property): iron and steel products company (1960 to 1985)
- Block 2615, Lot 19 (immediately east of the Subject Property): welding supply, rental, and repair company (1945 to 1976), a plastic products and die company (1992), and an auto repair facility (1997 to 2000)
- Block 2616, Lot 1 (about 160 feet east of the Subject Property and hydraulically up-gradient): an auto garage (1928 to 1949) and a trucking corporation (1960)
- Block 2616, Lot 56 (about 160 feet east of the Subject Property and hydraulically up-gradient): iron and steel companies (1928 to 1949)

DRAFT

- Block 2616, Lot 45 (about 60 feet east of the Subject Property and hydraulically up-gradient): a metal corporation (1985) and an auto repair company (1992 to 2010)
- Block 2616, Lot 18 (about 60 feet east of the Subject Property and hydraulically up-gradient): bronze/steel/ironworks companies (1934 to 1976), a chemical corporation (1960 to 1970), a coating and laminating company (1970 to 1973), a die cutting company (1985 to 2014), and an auto repair company (1992 to 2010)
- Block 2617, Lot 52 (about 300 feet east of the Subject Property and hydraulically up-gradient): a uniform and towel dry cleaning facility (1945 to 1973)
- Block 2641, Lot 1 (about 200 feet southeast of the Subject Property and hydraulically cross-gradient): a barrel service company (1945-1976), sheet metal and steel companies (1970 to 1992), a chemical and rubber corporation (1980), a fuel oil corporation (1992 to 2010), and petroleum/carrier/trucking companies (2010)
- Block 2641, Lot 3 (about 180 feet southeast of the Subject Property and hydraulically cross-gradient): a products corporation (1928), a printing ink company (1934), a paint and enamel company (1940 and 1949), a fluid manufacturing corporation (1960), a chemical and rubber corporation (1965 to 1976), a carbon paper company (1965 to 1970), and a steel/ironworks contractor (2005 to 2014)
- Block 2613, Lot 20 (about 90 feet southwest of the Subject Property and hydraulically down-gradient): an electrical supply company (1928), a die/pressure casting company (1934 to 1940) and a plastic fabricator (1976 to 1997)
- Block 2614, Lot 19 (about 50 feet west of the Subject Property and hydraulically down-gradient): a garage and trucking company (1945), a concrete forms company (1949) and a fabrication/manufacturing company (2005 to 2014)
- Block 2614, Lot 1 (about 50 feet west of the Subject Property and hydraulically down-gradient): a mailing and finishing company (1960), a laminating corporation (1965 to 1970), an electroplating corporation (1965 to 1973) and a sheet metal company (2010 to 2014)
- Block 2614, Lot 8 (about 50 feet west of the Subject Property and hydraulically down-gradient): electrochemical/electro-processing/electro-plating companies (1965 to 1992)

DRAFT

4.3.5 Title Records, Environmental Liens, and Use Limitations

An environmental lien and AUL search was provided by EDR to confirm whether environmental liens or AULs (engineering or institutional controls) existed for the Subject Property. No environmental liens or AULs were identified for the Subject Property in the EDR environmental lien and AUL search, or in the user questionnaire. Deed records identified during the search list the following current owners of the Subject Property:

Block No.	Lot No.	Lot Address	Current Lot Owner
2615	1	14 Meserole Avenue (alternatively addressed as 36-56 Gem Street and 14-22 Meserole Avenue)	Charmir Holdings Inc
	21	192 Banker Street (alternatively addressed as 16-24 Gem Street and 192-198 Banker Street)	Charmir Holdings Inc
	25	190 Banker Street (alternatively addressed as 10-14 Gem Street, 166-190 Banker Street and 39-47 North 15th Street)	190 Gem LLC
	50	26 Gem Street (alternatively addressed as 26-34 Gem Street)	Charmir Holdings Inc

The deed listings are consistent with the deed records listed in Section 2.1. The lien and AUL search did not identify the likely presence of hazardous substance and/or petroleum impacts to soil, groundwater and/or soil vapor at the Subject Property. A copy of the report is included in Appendix L.

DRAFT

5.0 SITE RECONNAISSANCE

Methodology and Limiting Conditions

The site reconnaissance was conducted in a systematic manner focusing on the spatial extent
5.1 of the Subject Property and progressing to the adjoining and surrounding properties. The assessment of the adjoining and surrounding properties was limited to identifying, if possible, any indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products, noting the general type of current use, the general topography of the surrounding area, and providing a general description of adjoining structures.

5.1.1 Date and Time of Inspections

The site reconnaissance was performed on November 17, 2017 by Shana Holberton of Langan. Ryan Smith, the plant engineer for ACME Smoked Fish Corp., accompanied Langan during the site reconnaissance. The weather at the time of inspections was sunny and about 45 degrees Fahrenheit. James Lema, the president of Corzo Contracting Co., Inc. (the owner/operator of the adjoining property to the south and former owner/operator of Lot 25) was also interviewed during the site reconnaissance.

5.1.2 General Site Setting and Reconnaissance Observations

Reconnaissance observations at each Subject Property lot are provided below.

Lot 1

A one-story building with two, separated mezzanine levels, used by ACME Smoked Fish Corp. occupied the entire lot. The first floor of the building included coolers and freezers, a loading area, packaging areas, offices, and food preparation areas. The mezzanine levels consisted of facility offices and break rooms. The building occupied the entire footprint of the lot.

Lot 21

A one-story building used by ACME Smoked Fish Corp occupied the entire lot. The building included coolers, a freezer, a chemical room with a partial cellar, food preparation areas (including a hot smoke wet room and two smoking oven rooms), a loading area, and a trash compactor room. A bulkhead on the roof at the western side of the building contained a

DRAFT

cogeneration system with two natural gas-fired engines and one diesel engine linked to a 4,000-gallon diesel AST.

Lot 25

A one- and two-story building used by ACME Smoked Fish Corp. occupied the entire lot. The first floor of the building included a cooler, dry good storage, a loading area, and a waste storage area. The eastern portion of the building contained a second floor with facility offices.

Lot 50

A one-story building used by ACME Smoked Fish Corp. occupied the entire lot. The first floor of the building included coolers and food preparation areas, including six smoking oven room and a cold smoke wet room. The ovens at the eastern side of the lot were two levels high. A mezzanine level at the western side of the lot contained utility panels.

Pits, Ponds, Lagoons

A sump/ejector pit was observed at the northwest side of Lot 25. A sealed metal plate labeled "non-permit confined space" appeared above a suspect pit near the northern boundary of Lot 1. Staining or other indications of releases were not observed around either pit.

Pools of Liquid

No pools of liquid were observed. The floor surfaces of the first floor of Lots 21 and 50 were wet because of power washing occurring at the time of the site inspection and automated cleaning sprays with detergents and disinfectants at doors and passageways.

Drains, Wells, and Cisterns

Floor drains were observed throughout the Subject Property buildings. Six drains were observed at Lot 21, eight were observed at Lot 25, twelve were observed at Lot 1, and seventeen were observed at Lot 50. The drains appeared to mainly receive floor washing fluids with detergents and disinfectants. Evidence of releases petroleum or hazardous substances was not observed around any of the drains. The floor drains likely empty into municipal sewer connections; however, discharge locations were not verified during the site reconnaissance.

DRAFT

Polychlorinated Biphenyl (PCB) Transformers and/or Hydraulic Equipment

Transformers were not observed. Hydraulic trash compactors were observed. No evidence of staining or a release was observed around the trash compactors.

Storage Containers and Drums

The following storage containers were observed at the Subject Property:

Lot 1

Three 55-gallon steel drums containing hydraulic oil

were observed on a mezzanine level at the southern side of the building. No evidence of staining or a release was observed around any of the drums.

Lot 21

Power foam cleaner, disinfectant, and refrigerant in containers less than five gallons were observed throughout the lot. A 55-gallon steel drum containing maple syrup was observed by an oven at the southwest side of the lot and a 55-gallon steel drum containing mineral oil on metal secondary containment was observed within the hot smoke wet room. Twelve empty 55-gallon plastic drums that formerly contained power foam cleaner and two 55-gallon containers containing oxidizer were observed within a hallway at the eastern side of the lot. Seventeen 55-gallon drums containing disinfectant/sanitizer and/or cleaner/degreasers (for food handling and process areas) manufactured by AFCO of Chambersburg, PA were observed within a chemical room at the eastern side of the lot; four of the drums containing disinfectant/sanitizer and/or cleaner/degreasers were situated on plastic or metal secondary containment and the remainder of the drums were situated directly on the floor. The cleaner/degreasers include the following corrosive liquids: potassium hydroxide, quaternary ammonium compound, and sodium hydroxide/sodium hypochlorite. Eleven 55-gallon steel drums and four 55-gallon plastic drums containing lubricant, motor oil, and antifreeze were observed within the bulkhead on the roof of the building. Four empty 55-gallon drums and two empty 55-gallon plastic drums were observed on the metal roof of the building. No evidence of staining or a release was observed around any of the drums.

DRAFT

Lot 25

Four 55-gallon plastic drums containing corrosive liquid smokehouse cleaner (potassium hydroxide solution), five 55-gallon plastic drum containing corrosive tray wash (potassium hydroxide solution), and two 55-gallon steel drums containing mineral oil were observed within the loading area on the first floor of the building. The plastic drums were situated directly on the concrete floor without secondary containment and the steel drums were situated on wooden pallets. No evidence of staining or a release was observed around any of the drums.

Waste Generation, Storage, and Disposal

Trash compactors were observed on Lots 21 and 25. Waste (including general refuse, plastics, recyclables, organic waste, municipal solid waste, and cardboard waste) was stored in designated storage areas prior to off-site disposal by a commercial hauling company. Compacted plastics, recyclables and cardboard and 55-gallon drums of spent hydraulic oil and empty 55-gallon drums that held corrosive liquids on wood pallets were observed in a narrow corridor at the south side of Lot 25.

According to Ryan Smith, the facility completely uses its disinfectant/sanitizers and corrosive cleaners/degreasers and a commercial recycler routinely picks up empty 55-gallon drums. A copy of a bill of lading from NCG-Recycle Inc. documents this waste management process.

Air Emissions or Wastewater Discharges

Air emissions associated with smoking operations and wastewater discharges into the sump/ejector pit were observed at the Subject Property. According to Ryan Smith, each smoking oven has an afterburner installed to remove smoke and odor. In addition, ACME Smoked Fish Corp has a triennial NYCDEP permit for the cogeneration unit; Ryan Smith indicated he is in the process of renewing the permit with the agency.

Sumps

A sump/ejector pit with concrete walls about 6 feet in length and about 3 feet in width was observed at the northwest side of Lot 25. The condition or integrity of the pit could not be verified. The presence of sewer connection could not be verified, but presumably one exists. Ryan Smith indicated the trap/ejector may have been installed circa 2006 coincident with the installation of an industrial rack washer. The pit served as a drainage termination point for five visibly corroded iron pipes. A soapy liquid was discharging into the pit from the industrial rack

DRAFT

washer at the time of the site reconnaissance. Staining or other indications of a release were not observed around the sump pit.

USTs or ASTs

A 4,000-gallon diesel fuel AST for one of the cogeneration units was observed inside the rooftop bulkhead on Lot 21. A fill port box and petroleum meter near the southwest corner Lot 21 appear to be associated with the 4,000-gallon AST. No additional evidence of tanks was observed at the Subject Property. EDR and NYSDEC PBS records were reviewed and it was determined that the 4,000-gallon AST was not registered.

In addition, James Lema provided photographic documentation of a 3,000-gallon No. 2 fuel oil tank (PBS Facility No. 2-085251) removed from below the sidewalk immediately east of Lot 25 and indicated he was present at the time the UST was removed. Mr. Lema stated that to his knowledge the tank was empty at the time of removal and no evidence of a release or contamination was observed when the tank was removed. Evidence of a release was not identified in photographs of the removal provided by Mr. Lema.

Monitoring Wells or Remedial Activities

No monitoring wells or other evidence of remedial activities (e.g., patched soil borings) were observed at the Subject Property.

Stained or Discolored Surfaces (Soil, Asphalt, Concrete, etc.)

Staining of discolored surfaces were not observed.

Leachate or Seeps

Leachate and seeps were not observed.

Adjoining and Surrounding Property Uses

The adjoining and surrounding properties consisted of industrial and commercial buildings occupied by a café, galleries, warehouses, workshops and studios, packaging companies, a brewery, and a uniform cleaning business (formerly registered as a dry cleaner), W.H. Christian & Sons, Inc. A full description of the buildings and identifiable tenants is listed in Section 2.1. A fuel oil fill port and vent pipe were observed on the eastern façade of an adjoining building to the east (Lot 6).

DRAFT

Site Reconnaissance Conclusions

The conclusions of the site reconnaissance are as follows:

- No evidence of spills or releases was observed at the Subject Property.
- The sump/ejector pit observed at the northwest side of Lot 25 could have served as a potential preferential pathway for hazardous substances or petroleum releases or discharges to enter the subsurface. Although the pit was reportedly installed in 2006 per the interview with Ryan Smith, the visible pipes entering the pit suggest the pit is older indicating it was likely used by previous occupants of the Subject Property.
- The following uses at adjoining and hydraulically up-gradient surrounding properties indicate the likely presence of hazardous substances and/or petroleum that have impacted groundwater and/or soil vapor at the Subject Property:
    - Hydraulically up-gradient adjoining property to the east across Banker Street as a die cutting company (Lion Die Cutting Co., Inc. at 95 Dobbin Street)
    - Hydraulically up-gradient surrounding property to the east across Banker Street as a dry cleaning facility (W.H. Christian & Sons, Inc. at 211-213 Banker Street)
- The unregistered 4,000-gallon diesel AST is considered a Business Environmental Risk.

DRAFT

6.0 INTERVIEWS

Subject Property Owner

6.1 Ryan Smith, the plant engineer for ACME Smoked Fish Corp. (the operator at Lots 1, 21, 25, and 50), was interviewed during the site reconnaissance for information related to use of the Subject Property. Mr. Smith indicated that he has been an employee of ACME for about one year. Mr. Smith indicated that he was not aware of petroleum or chemical spills or releases or that occurred at the Subject Property. Other information obtained from the interview is provided throughout this report.

Owners/Tenants of Adjoining Properties

6.2 James Lema, the president of Corzo Contracting Co., Inc. (the owner/operator of the adjoining property to the south and former owner/operator of Lot 25) was interviewed for information related to use of the Subject Property. Mr. Lema was not aware of petroleum or chemical spills or releases or that have occurred at the Subject Property. Mr. Lema stated that he was present at the time a 3,000-gallon No. 2 fuel oil UST associated with Lot 25 was removed (described in Section 5.1.2). Owners/tenants of other adjoining properties were not interviewed as part of this Phase I ESA.

DRAFT

7.0 ADDITIONAL SERVICES

Radon

7.1 Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water and subsequently, enters the atmosphere. It can concentrate in buildings by entering through cracks and/or other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, which is reflective of subsurface lithological conditions.

The NYSDOH maintains a database of radon test results on a local and county level. According to the database (updated in October 2017), 109 and 474 radon tests were conducted on first floors and basements, respectively, in homes in Kings County. The average radon levels in basements and first floors were 2.42 pico Curies per Liter (pCi/L) and 1.10 pCi/L, respectively. A total of 88% of indoor radon tests for basement areas and 96% for first floor areas conducted in Kings County resulted in a radon concentration less than 4.0 pCi/L. Based on this information, it is unlikely that actionable levels of radon gas are present at the Subject Property.

7.2 Asbestos-Containing Material, Lead-Based Paint, and PCBs

A formal survey to identify asbestos containing materials (ACM), lead-based paint (LBP), and PCBs in building materials was not completed. Because of the age of the buildings at the Subject Property (constructed before 1961), asbestos-containing materials, lead-based paint, and PCB-containing materials may be present in building materials. Potential PCB-containing fluorescent lighting fixtures were observed throughout the Subject Property buildings.

7.3

Limited Phase II Environmental Site Investigation (ESI)

Langan conducted a Limited Phase II ESI at the Subject Property in December 2017 and January 2018 for due diligence purposes to evaluate site conditions. The investigation included soil and groundwater sampling and laboratory analysis. Sampling locations are presented on Figure 1 in Appendix M. The borings and well were located at the inferred, hydraulically downgradient side of the Subject Property in the Gem Street sidewalk adjoining Lots 25 and 50. Soil borings and monitoring wells were installed by AARCO Environmental Services, Inc. (AARCO) under the observation of Langan field staff. Soil and groundwater samples were collected into laboratory-supplied batch-certified clean containers and submitted to a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory (Alpha Analytical, Inc. of Westborough, MA [ELAP ID #11148]) via courier service under standard chain-of-custody

DRAFT

protocol. The investigation methodology, field observations, and analytical results are summarized below.

Due Diligence Soil Investigation and Sample Results

AARCO advanced two soil borings (A-SB02 and A-SB03) within the sidewalk west of the Subject Property along Gem Street. A-SB02 was installed west of Lot 50 and A-MW03 was installed west of Lot 25. Both borings were advanced to 28 feet bgs using a Geoprobe® 7822DT direct-push drill rig. Soil was continuously collected and screened using a 2-inch Macrocore® sampler with dedicated acetate sleeves. Langan field staff supervised the installation of the borings, classified extracted soil samples, screened soil samples with a PID, and collected soil samples for laboratory analysis. Grab soil samples were collected at the surface (about 0-2 feet bgs) and middle of the soil boring (about 7-8 feet bgs) at A-SB02, at intervals where the greatest field evidence of contamination was identified (10.5 to 12 feet bgs at A-SB02 and 19.5 to 20 feet bgs at A-SB03), and at the first soil interval (26 to 28 feet bgs at A-SB03) without impacts below the impacted interval. Quality assurance/quality control (QA/QC) samples were also collected for laboratory analysis. A sample summary is included in Table 1 in Appendix M.

The stratigraphy at the borings consists of a 10- to 12-foot thick layer of historic fill material composed of varying amounts of sand, silt, gravel, coal, asphalt, brick, concrete, and organic material. The historic fill is underlain by native soil consisting of sand and gravel to a depth of approximately 18 feet bgs followed by gray clay. Bedrock was not encountered during the investigation. Sheen, staining, and petroleum-like odors were detected at A-SB02 at the groundwater interface (about 10.5 feet bgs). No evidence of petroleum impacts was observed below 12 feet in boring A-SB02. Petroleum odors were detected at A-SB03 at about 15 to 16 feet bgs and sheen, staining, petroleum-like odors, and elevated PID readings were encountered at this boring at about 19 to 20 feet bgs. No evidence of petroleum impacts was observed below about 26 feet bgs in boring A-SB03. Boring logs are included in Appendix M.

Soil samples were submitted to Alpha and analyzed for VOCs, SVOCs, PCBs, pesticides, herbicides, and inorganics, including metals and cyanide. The analytical soil results were tabulated and compared to 6 NYCRR Part 375-6.8(a,b) Unrestricted Use (UU) and Commercial Use SCOs (see Tables 2 to 4). The results of the duplicate soil sample analyses are presented in Tables 2 to 4 and the results of the remaining QA/QC sample analyses are presented in Table 6.

A summary of the soil analytical results is provided below:

DRAFT

- VOCs – One VOC (acetone) exceeded the UU SCO in the sample collected from 10.5 to 12 feet bgs at A-SB02 and the petroleum-related VOCs (benzene, ethylbenzene, toluene and total xylenes) exceeded the UU SCOs in a duplicate sample collected from 0-2 feet bgs at A-SB02. No VOCs exceeded the Commercial Use SCOs. Acetone is considered a laboratory artifact. Field evidence of petroleum contamination (sheen, staining and petroleum-like odors) was observed at A-SB03 at 19.5 to 20 feet bgs, but no petroleum-related VOCs exceeded the UU SCOs in samples collected from that depth.

- SVOCs – Seven SVOCs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene, exceeded their UU SCOs in one or more soil samples collected from both the historic fill layer in both borings and in the underlying native soil where field evidence of petroleum contamination was observed (19.5 to 20 feet bgs at A-SB03). Benzo(a)pyrene and dibenzo(a,h)anthracene also exceeded their Commercial Use SCOs.

- Metals – Four metals, including copper, lead, mercury and zinc exceeded the UU SCOs in one or more soil samples. No metals exceeded the Commercial Use SCOs.

- PCBs, Pesticides, and Herbicides – No PCBs or pesticides exceeded the UU SCOs and no herbicides were detected in any soil sample.

Due Diligence Groundwater Investigation and Sample Results

Both soil borings were converted to permanent monitoring wells (A-MW02 and A-MW03) using the Geoprobe® 7822DT direct-push drill rig. The wells were constructed of 2-inch Schedule 40 PVC pipe with 0.010-inch slotted well screen across the groundwater interface. The annulus around the well was filled with a coarse sand filter pack and the wells were finished with flush-mounted covers. Depth to groundwater was measured at about 8.5 feet bgs at A-MW02 and about 9 feet bgs at A-MW03 using an interface probe. About ¼-inch of light non-aqueous phase liquid (LNAPL) was found at A-MW03; the LNAPL was removed during purging and did not return during groundwater sampling. The monitoring wells were not surveyed. One groundwater sample was collected from each monitoring well in accordance with NYSDEC DER-10 and USEPA's *Low Flow Purging and Sampling Procedures for the Collection of Groundwater Samples from Monitoring Wells*. The groundwater samples were collected more than one week after the monitoring wells were installed using a peristaltic pump. QA/QC samples were also collected for laboratory analysis. Well construction logs, well sampling logs

DRAFT

and a sample summary (Table 1) are included in Appendix M. The well sampling logs indicated purged groundwater exhibited a petroleum-like sheen and odor.

Groundwater samples were submitted to Alpha and analyzed for VOCs, SVOCs, PCBs, and inorganics, including total and dissolved metals and cyanide. The analytical groundwater results were compared to the NYSDEC Technical Operational Guidance Series 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) (see Table 5). The results of the duplicate groundwater sample analyses are presented in Table 5 alongside the parent sample (A-MW03) and the results of the remaining QA/QC sample analyses are presented in Table 6.

A summary of the groundwater analytical results is provided below:

- VOCs – Four VOCs (including petroleum-related compounds 1,2,4,5-tetramethylbenzene, benzene, and naphthalene, and the chlorinated solvent TCE) were detected, but at concentrations below their NYSDEC SGVs.

- SVOCs – Four SVOCs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and chrysene exceeded the NYSDEC SGV in both groundwater samples and the SVOCs benzo(k)fluoranthene and indeno(1,2,3-cd)pyrene also slightly exceeded the NYSDEC SGV in the groundwater sample collected at A-MW02.

- Inorganics – The metals iron, magnesium, manganese, and sodium exceeded the NYSDEC SGVs at total and dissolved concentrations in the groundwater samples collected at each well. Cyanide was not detected above the NYSDEC SGV in either groundwater sample.

- PCBs – PCBs were not detected in either groundwater sample.

Conclusions

Based on the field observations and analytical results of the Limited Phase II ESI, Langan concludes the following:

- Historic fill material is present along the Gem Street sidewalk on the western perimeter of the Subject Property to a depth of about 12 feet bgs and is underlain by native soil consisting of sand and gravel followed by gray clay. The concentrations of SVOCs and metals detected in the historic fill material are characteristic of and consistent with

DRAFT

urban environments, not indicative of spills or releases, and have no migration potential as they are adsorbed to solid particles in subsurface strata.

- The petroleum-like odors, elevated PID readings sheen, staining, and LNAPL observed in soil and/or groundwater and may be related to known historical on-site petroleum bulk storage tanks and/or off-site sources. The SVOCs detected in underlying native soil where field evidence of petroleum contamination was observed (19.5 to 20 feet bgs at A-SB03) may be also related to these sources.
- The petroleum-related VOCs and SVOCs detected in surficial soil at A-SB02 may be related to historical on-site petroleum bulk storage tanks or historical on-site uses.
- The presence of TCE in groundwater may be related to an isolated on-site source or an off-site source.
- The total concentrations of SVOCs in the groundwater samples are likely attributed to high sample turbidity and suspended solids derived from historic fill material and/or residual subsurface contamination. Dissolved iron, magnesium, manganese, and sodium in groundwater are characteristic of brackish and naturally-occurring groundwater conditions related to the proximity of the Subject Property to the East River.
- The soil and groundwater conditions observed below the Gem Street sidewalk adjoining Lots 25 and 50 along the inferred downgradient western perimeter of the Subject Property and analytical results of the Limited Phase II ESI at the two boring locations do not present a threat to human health because of incomplete exposure pathways to soil and groundwater; impervious cover systems prevent access to subsurface soil and a municipal restriction prohibits the use of groundwater as drinking water in NYC. These conditions are indicative of past releases of hazardous substances and petroleum and are typical in urban areas with long histories of industrial use and do not constitute a new threat to the environment. In addition, the conditions generally would not be the subject of an enforcement action if brought to the attention of the state.
- The presence of historic fill material will require implementation of special soil handling, management and off-site disposal procedures at a cost premium during any future site redevelopment that will entail excavation.
- Groundwater impacted with VOCs and SVOCs will require special management procedures (e.g., on-site treatment before discharge to municipal sewer system with an appropriate permit or off-site disposal) at a cost premium during any future site redevelopment that will entail dewatering.

DRAFT

DRAFT

8.0 DEVIATIONS AND DATA GAPS

Deviations

8.1 Langan has performed a Phase I ESA of the Subject Property using a standard of good commercial and customary practice that is consistent with the ASTM E1527-13 and the USEPA AAI Rule. Significant deviations were not made to the above referenced standard that was supplemented by the additional services described in Section 7.0.

Data Gaps

8.2 In order to address data gaps, additional sources of information may be consulted. According to AAI, Section 312.20 (g), "to the extent there are data gaps (as defined in section 312.10) in the information developed… that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases...such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps." According to ASTM International E1527-13, Section 8.3.2.3, "historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all standard historical sources that are reasonably ascertainable and likely to be useful were reviewed and yet the objectives have not been met. If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for the exclusion."

One data gap was identified during the preparation of this Phase I ESA:

- As noted in Section 4.1.4, a response to a FOIA request was not received from the FDNY. However, other data sources, such as regulatory databases, were consulted to address this data gap and the lack of responses is not expected to materially affect the findings of this Phase I ESA. Therefore, this data gap is not considered significant.

DRAFT

9.0 FINDINGS AND OPINIONS

This Phase I ESA was conducted in accordance with ASTM E1527-13 and the USEPA AAI Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Subject Property of hazardous substances or petroleum products as defined in ASTM E1527-13 as a REC.

Based on information obtained during the visual inspection of the Subject Property, review of environmental databases and historic information, and contact with federal, state, and local agencies, RECs were identified. Controlled recognized environmental conditions (CRECs) and historic recognized environmental conditions (HRECs) were not identified.

Recognized Environmental Conditions

The following RECs were identified:

<u>REC 1 – Historical Use of the Subject Property and Current and Historical Use of Adjoining and Surrounding Properties</u>

The Subject Property has a century-long history of industrial occupants and uses including a lumber yard, a metal fabrication and manufacturing facility, a plastics manufacturer and die company, machinery/equipment/auto repair, a tank stack company, and a laundry and dry cleaning company. Historical records indicate petroleum was stored at the Subject Property as early as 1910. Adjoining and hydraulically up-gradient properties also have a century-long history of industrial occupants and uses including various manufacturers, machinery/equipment/auto repair, trucking corporations, an aluminum smelter, dry cleaning facilities, rubber and chemical companies, a fuel corporation, paint and ink companies, and metal/electroplating facilities. Many of these properties were listed in regulatory databases for petroleum bulk storage and/or petroleum releases. One of these properties (W.H. Christian & Sons, Inc.) was a Recourse Conservation and Recovery Act (RCRA) generator of hazardous waste, including halogenated solvent wastes; this generator adjoins the Subject Property to the east across Banker Street.

Subsurface impacts were identified on the Subject Property (and on the adjoining Gem Street sidewalk) and on the south-adjoining property by the Limited Phase II Environmental Site Investigations completed by Langan and by other previous investigations. These impacts are likely related to the uses and operations identified above for the Subject Property and adjoining and surrounding properties.

DRAFT

- Subsurface petroleum contamination was identified by field observations and analytical results in soil and groundwater along the Gem Street sidewalk, which is the inferred downgradient end of the Subject Property. These conditions do not present a threat to human health, do not constitute a new threat to the environment, and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. These area-specific investigation findings are collectively considered a *de minimis* condition.

- Chlorinated volatile organic compounds (CVOCs) were identified in soil vapor during a Limited Phase II ESI completed at the adjoining property to the south. The CVOCs in soil vapor on the south-adjoining property are likely representative of a condition that also exists at the Subject Property. The Subject Property is improved with weather-tight buildings and the potential exists for soil vapor to migrate into the buildings via preferential migration pathways (i.e., sumps, pits, and drains) and accumulate within the structures and affect indoor air quality.

The subsurface testing programs completed to date are insufficient to fully characterize subsurface conditions on the Subject Property given the long history of industrial uses and petroleum bulk storage at the Subject Property and current and historical uses of adjoining and hydraulically up-gradient properties. Therefore, these uses, together with the identified CVOCs in soil vapor at an adjoining property, are considered a REC as they indicate the likely presence of hazardous substances and/or petroleum in soil, groundwater and/or soil vapor at the Subject Property.

Business Environmental Risk

A business environmental risk (BER) is defined by ASTM 1527-13 as a risk that can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. The following BERs were identified on the Subject Property:

<u>BER 1 - Redevelopment Considerations</u>

Contaminants associated with historic fill material, specifically semivolatile organic compounds (SVOCs) and metals, were detected in soil during previous environmental investigations and Langan's Limited Phase II ESI at the Subject Property. Historic fill material was also identified during previous geotechnical and environmental investigations at the adjoining property to the

DRAFT

south and on the same block as the Subject Property (Lot 125 of Block 2615). The presence of historic fill material will require implementation of special soil handling, management and off-site disposal procedures at a cost premium during any future site redevelopment that will entail excavation. At least one buried underground storage tank (UST) is present at the Subject Property; this UST, and any others found during future redevelopment, would need to be removed by a tank removal contractor licensed by the Fire Department of New York (FDNY).

Groundwater impacted with VOCs and SVOCs will likely require special management procedures (e.g., on-site treatment before discharge to municipal sewer system with an appropriate permit or off-site disposal) during any future site redevelopment that will entail dewatering.

Through a rezoning action, it is reasonable to expect the Subject Property would be assigned an E-Designation for Hazardous Materials, which would make any future site redevelopment subject to review by the New York City Office of Environmental Remediation (OER). The management and mitigation measures outlined above are typical requirements for E-Designation sites with subsurface conditions similar to those identified on the Subject Property.

<u>BER 2 – Unregistered Petroleum Bulk Storage Tank</u>

A 4,000-gallon diesel aboveground storage tank, which is associated with the Subject Property's cogeneration system, is not registered with the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage Unit and therefore not in compliance with Title 6 New York Codes, Rules and Regulations (NYCRR) Part 613-1.9. Any tank or facility with a storage capacity or combined storage capacity of greater than 1,100 gallons must be registered with the NYSDEC. The facility owner may be liable for penalties and fees for missed registration; a future owner may also be liable for penalties and fees if the tank is transferred with the property.

Non-ASTM Environmental Considerations

The following non-ASTM environmental considerations were identified:

<u>Asbestos-Containing Material, Lead-Based Paint, and Polychlorinated Biphenyls (PCBs)</u>

Because of the age of the buildings at the Subject Property (constructed before 1961), asbestos-containing materials, lead-based paint, and PCB-containing materials may be present in building materials. Potential PCB-containing fluorescent lighting fixtures were observed throughout the buildings that occupy Subject Property.

DRAFT

A table summarizing the uses of adjoining and surrounding properties is included as Table 1. A map of the Subject Property and adjoining and surrounding property uses is included as Figure 2.

11.0 STATEMENT OF QUALIFICATIONS AND SIGNATURES

Langan declares that, to the best of its professional knowledge and belief, the personnel who performed this Phase I ESA meet the definition of Environmental Professional as defined in Subsection 312 10 of 40 CFR 312 and that they have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. They have developed and performed the AAIs in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes outlining the qualifications of the Environmental Professionals who performed this Phase I ESA are included in Appendix N.

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

TABLE

Table 1
Summary of Subject Property and Adjoining/Surrounding Property Uses
Phase I Environmental Site Assessment
Brooklyn Block 2615, Lots 1, 21, 25, and 50
Brooklyn, New York
Langan Project No. 170494901

Subject Property		
14-22 Meserole Ave; 36-56 Gem Street	Block 2615, Lot 1	Lumber yard (1905)
		Steel products company (1965)
		NYCDOB records: evidence of historical fuel oil storage in 1973
192-198 Banker Street; 16-24 Gem Street	Block 2615, Lot 21	Tank stack company (1928-1940)
		Metal works and machine shop (1942-1956)
		Gas generator storage with acetylene tanks (1942-2007)
		Laundry and dry cleaning company (1945-1960)
		NYCDOB records: evidence of historical fuel oil storage in 1910 and 1956
166-190 Banker Street; 10-14 Gem Street; 39-47 North 15th Street	Block 2615, Lot 25	Steel and iron works (1928-1951)
		Machine shop, tool and die manufacturing, machine manufacturing and repair (1962-2007)
		Solid waste facility/landfill - industrial/commercial wastes (1999-2012)
		PBS facility 2-085251 - 3,000-gallon No. 2 fuel oil UST (located beneath Banker Street sidewalk, removed 1993);
		3,000-gallon AST (removed 2003)
		NYCDOB records: evidence of historical fuel oil storage in 1926, 1942, 1958, 1969, and 1976
		Ejector/sump pit observed during site reconnaissance (2017)
26-34 Gem Street	Block 2615, Lot 50	Trucking company (1934-1949)
		Auto garage with gasoline tank (1934-1951)
		Fish smoking with gasoline tank labeled "not used" (1942-2007)
		PBS facility 2-271861 - 5,000-gallon No. 2 fuel oil UST (installed 1956, closed-in-place 1990)
		Fuel oil company (1960)
		Shipping company with gasoline tank (1965-2007)
North-adjoining and hydraulically cross-gradient properties		
15 Meserole Ave	Block 2592, Lot 40	Sheet iron works, metallizing company, and machine works (1949)
		Blower and pipe corporation (1960-1973)
21-23 Meserole Ave	Block 2592, Lot 37	Blower and pipe works (1916-1965)
		Tin and sheet iron company (1940-1945)
		Tank stack company (1960-1970)
238-256 Banker Street; 27-33 Meserole Ave	Block 2592, Lot 30	Machinery and equipment company (1934-1949)
		Metal works (1965)
		Steam specialty company (1965-1970)
		Valve and fitting company (1965-1970)
East-adjoining and and hydraulically up-gradient properties		
200-202 Banker Street	Block 2615, Lot 19	Welding supply, rental, and repair (1945-1986)
		Manufacturing (1988-2007)
		Plastic products and die company (1992)
		Auto repair with US AIRS permit (1997-2000)
214-236 Banker Street; 26-32 Meserole Ave	Block 2615, Lot 6	Foundry (1930)
		Steel fabrication and metal products manufacturing (1956-2007)
		Trucking corporation (1992)
		NYCDOB records: evidence of historical fuel oil storage in 1923 and 1956
East-adjoining and hydraulically up-gradient properties		
277-235 Banker Street; 34-42 Meserole Ave	Block 2616, Lot 1	Auto garage with 1,000-gallon buried tank (1928-1949)
		Manufacturing building with gasoline tank (1965-2007)
221 Banker Street	Block 2616, Lot 60	Aluminum smelting (1942)
211-213 Banker Street	Block 2616, Lot 56	Iron and steel company (1928-1951)
		Dry cleaner (1990-2011)
		- RCRA SQG (1999, 2006) & LQG (1990) spent halogenated solvents
		LTANKS Spill No. 0212557 - contamination encountered during removal of a 3,000-gallon No. 2 fuel oil UST
193 Banker Street	Block 2616, Lot 45	Iron and steel company (1942)
		Metal corporation (1985)
		Auto repair (1992-2010)
77-107 Dobbin Street	Block 2616, Lot 18	Bronze, steel, and iron company (1934-1976)
		Manufacturing building with buried oil tank (1942)
		Rubber company with boiler room, transformer room, and buried oil tank (1951-1965)
		Chemical company (1960-1970)
		Coating and laminating company (1970-1973)
		Die company with a boiler room, transformer room, and buried oil tank (1978-2014)
		Auto repair (1992-2005)
165-173 Banker Street; 69-75 Dobbin Street; 19-37 Norman Ave	Block 2616, Lot 31	Garage and auto repair with gasoline tank (1942-1951)
Surrounding hydraulically up-gradient property to the east		
108-116 Dobbin Street	Block 2617, Lot 52	Uniform and towel dry cleaning facility (1945-1973)
Surrounding hydraulically cross-gradient properties to the southeast		
159-163 Banker Street; 65-67 Dobbin Street; 16-34 Norman Ave	Block 2642, Lot 1	Garage and auto repair with gasoline tank (1942-1951)
		Plastic products manufacturing (1978-2007)
61 Dobbin Street	Block 2642, Lot 11	Manhattan and Queens Fuel Corp (1992)
Surrounding hydraulically cross-gradient properties to the south		
152 Banker Street; 7 Wythe Ave	Block 2641, Lot 3	Printing ink company (1934)
		Paint and enamel company (1940-1951)
		Fluid manufacturing (1960)
		Carbon paper company (1965-1970)
		Chemical and rubber company (1965-1978)
		Inflammable liquid canning (1965-1981)
		Tool company (1985-1992)
		Steel and iron works contractor (2005-2014)
132-150 Banker Street; 49-73 North 15th Street; 9-11 Wythe Ave	Block 2641, Lot 1	Barrel service company (1945-1976)
		Sheet metal and steel company (1970-1992)
		Chemical and rubber corporation (1980)
		Fuel oil corporation (1992-2010)
		Petroleum carrier and trucking company (2004-2010)
Southwest-adjoining and hydraulically down-gradient properties		
34-48 North 15th Street	Block 2613, Lot 20	Steel company (1934-1942)
		Pressure casting company (1949-1960)
		Metal products company (1965-1985)
		Plastic products manufacturing (1985-2014)
West-adjoining and hydraulically down-gradient properties		
37 Gem Street; 8 Meserole Ave	Block 2614, Lot 8	Bronze bearing company (1951)
		Electrochemical and metal finishing company (1965-2007)
		- RCRA LQG (2006, 1980) and SQG (2006) barium, cyanide, spent electroplating and stripping baths
27-33 Gem Street; 3-7 North 15 Street	Block 2614, Lot 1	Auto garage with three gasoline tanks (1940-1951)
		Mailing and finishing company (1960)
		Laminating company (1965-1970)
		Electroplating company (1965-1973)
		Sheet metal company (2010-2014)
13-31 Gem Street; 15 North 15th Street	Block 2614, Lot 19	Garage and trucking company (1945)
		Concrete forms company (1949)
		Fabrication and manufacturing (2005-2014)
1-11 Gem Street; 37 North 15th Street	Block 2614, Lot 24	Welding and equipment company (1940-1992)

APPENDIX A

SITE RECONNAISSANCE PHOTOGRAPHS

Photograph 1: View of the west façade of the Subject Property building (Lot 21); facing northeast.

Photograph 2: View of the eastern façades of the Subject Property buildings (Lots 21 and 25), the adjoining property to the south, and the adjoining properties to the east across Banker Street; facing north.

Photograph 3: View of the north facade of the Subject Property (Lot 1) and the adjoining property to the east from Meserole Avenue; facing west.

Photograph 4: View of the western facades of the Subject Property buildings (Lots 1, 21, 25, and 50) and the adjoining property to the south; facing north.

Photograph 5: View of the loading area at the western side of the building on Lot 25; facing west.

Photograph 6: View of a trash receptacle and five 55-gallon plastic drum containing tray wash (potassium hydroxide solution) within a corridor at the south side of the building on Lot 25; facing east.

Photograph 7: A sump/ejector pit observed at the northwest side of the building on Lot 25. The pit serves as a drainage termination point for at least five pipes. A soapy liquid was discharging into the pit from an industrial washer at the time of the site reconnaissance.

Photograph 8: An industrial washer and four 55-gallon plastic drums containing liquid smokehouse cleaner (potassium hydroxide solution) observed at the northwest side of the building on Lot 25; facing west.

Photograph 9: View of the dry good storage area at the eastern side of the building on Lot 25; facing east. Several floor drains were observed throughout the building.

Photograph 10: A smoker and loading dock located at the western side of the building on Lot 21; facing west.

Photograph 11: A petrometer for the 4,000-gallon diesel AST observed on the interior southern wall at the far west side of the building on Lot 21; facing south.

Photograph 12: Detergent and washing fluids on the floor of the building on Lot 21. Several floor drains were observed throughout the building.

Photograph 13: View of the hot smoke wet room at the western side of the building on Lot 21; facing west.

Photograph 14: View of the chemical room at the eastern side of the building on Lot 21; facing south. Seventeen 55-gallon drums containing disinfectant/sanitizer and cleaner/degreasers were observed within the room.

Photograph 15: View of an unoccupied partial cellar below the chemical room at the eastern side of the building on Lot 21.

Photograph 16: View of an oven at the eastern side of the building on Lot 50; facing east.

Photograph 17: View of electrical panels observed at the western side of the building on Lot 50.

Photograph 18: View of a food preparation area at the eastern side of the building on Lot 1; facing west.

Photograph 19: View of a sealed metal plate observed within the concrete floor of the packaging warehouse at the northeast side of the building on Lot 1.

Photograph 20: View of the roof of the building on Lot 1; facing east.

Photograph 21: View of the bulkhead located on the roof of the building on Lot 21. Eleven 55-gallon steel drums and four 55-gallon plastic drums containing lubricant, motor oil, and antifreeze were observed within the roof bulkhead.

Photograph 22: View of a 4,000-gallon aboveground storage tank containing diesel fuel for one of the cogeneration units observed within the roof bulkhead on Lot 21; facing west.

Photograph 23: View of the second-floor offices within the building on Lot 25; facing west.

Photograph 24: View of the adjoining property to the south from the roof of the building on Lot 25; facing southwest.

Photograph 25: View of the adjoining properties to the west across Gem Street; facing north.

Photograph 26: View of the adjoining properties to the north across Meserole Avenue; facing northeast.

Photograph 27: View of the adjoining properties to the east across Banker Street; facing north.

Photograph 28: View of the adjoining property to the east (Lot 19); facing north.

Photograph 29: View of the adjoining property to the east (Lot 6); facing south.

Photograph 30: View of the adjoining property to the west across North 15th Street; facing northwest.

USER/CLIENT QUESTIONNAIRE

LANGAN

ASTM PRACTICE E 1527-13: USER/CLIENT QUESTIONNAIRE

Please complete the below form and return to
Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the User must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The User is defined as the party seeking to use Practice E1527 to complete an environmental site assessment of the property. A User may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. These inquiries must also be conducted by the EPA Brownfield Assessment and Characterization grantees. The User should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquires" is not complete.

General Information

User/Client Name (s): RP INLET PROP, LLC

Property Name: ACME

Address: 216 GEM ST., 14 MESEROLE AVE, 192 BANKOR ST., 190 BANKOR ST. BROOKLYN, NY

Property Type: OFFICE / WAREHOUSE / PRODUCTION PLANT

Type of Property Transaction:

- Purchase of property ☑
- Financing of property ☐
- Sale of property ☐
- Ground Lease ☐
- Build to Suit Lease ☐
- Other _____

Reason Why Phase I ESA is required: PRE-PURCHASE INVESTIGATION.

Site Contact (s): DAVID CASLOW / RYAN SMITH

Required Information

The citation at the end of each item (e.g. 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item.

LANGAN

(1.) Environmental liens that are filed or recorded against the property (40 CFR 312.25).

Did a search of recorded land title records (or judicial records, where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

Note 1 – In certain jurisdictions, federal, tribal, state or local statutes or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

Yes	No
☐	☑

WE HAVE NOT DONE A SEARCH

(2.) Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi)).

Did a search of recorded land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

Yes	No
☐	☑

DON'T KNOW

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes	No
☐	☑

(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

	Yes	No
(a.) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? [If no, proceed to Part 5.]	☑	☐
(b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	☐	☑

(5.) Commonly known or reasonably known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

	Yes	No
	☐	☑
(a.) Do you know the past uses of the property?	☐	☑
(b.) Do you know of specific chemicals that are present or once were present at the property?	☐	☑
(c.) Do you know of spills or other chemical releases that have taken place at the property?	☐	☑
(d.) Do you know of any environmental cleanups that have taken place at the property?	☐	☑

(6.) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

Yes	No
☐	☑

SUBJECT: TRANSMITTAL LETTER: PHASE I ENVIRONMENTAL SITE ASSESSMENT

Dear Mr. Lawless:

This letter summary provides the findings for the Phase I Environmental Site Assessment (ESA) performed on the site referenced below.

I. SCOPE OF INVESTIGATION

The purpose of this Phase I Environmental Site Assessment (ESA) is to identify potential environmental liabilities at the subject property arising from past or present practices in the handling, storage or disposal of hazardous materials or petroleum products on-site or at neighboring sites. This is assessment is based on the following activities: (1) Site inspection; (2) Review of regulatory agency databases and regulatory agency records inquiries; (3) historical source review; (4) Interviews with Owners, Occupants (both past and present).

II. PROPERTY INFORMATION

Subject Property Address:	190 Banker Street Brooklyn, New York 11222
TD Bank RIMS Project Number:	14-003142-01-1
Consultant Name/Project Number:	AEI Consultants/330202
Report Submittal Date:	May 30, 2014

III. PROPERTY DESCRIPTION / USE

The subject property, which consists of an industrial building, is located on the western side of Banker Street in a mixed commercial and residential area of Brooklyn, New York. The property totals approximately 0.41 acres and is improved with a two-story building totaling approximately 20,250 square feet. The first floor of the property contains a loading area to the west (Gem Street side) with a rack washer in the northwest corner, followed by dry goods storage, and a cooler/refrigerated room in the southeast corner. The second floor of the building contains a former apartment with at least two inactive bathrooms, which are currently being used for storage. The building is mostly slab-on-grade with a partial basement which contains former mechanical equipment and water meters which are no longer in use. The exterior of the building is constructed of brick. The interior first floor is constructed of cement flooring and concrete block walls. The second floor contains wood flooring except the ceramic tile in the bathrooms and drywall covered walls and ceiling. The subject property is currently occupied by a subset of Acme Smoked Fish Corporation. On-site operations include rack

washing, refrigeration of packaged goods, and dry products storage. In addition to the subject property building, the property is improved with on-street parking.

According to historical sources, the property was developed with the current improvements in 1928; however, according to the New York City Department of City Planning (NYCDOCP), the subject property building was constructed in 1931 for use as an industrial manufacturing building. Prior to the current site improvements, the subject property was identified to consist of unimproved land.

The subject property was identified in the regulatory database as a Recovered Government Archive Landfill (RGA LF) site, a New York Solid Waste Facility/Landfill (NY SWF/LF) site, a New York Underground Storage Tank (NY UST) site, a New York Historical UST (NY HIST UST) site, and a New York Aboveground Storage Tank (NY AST) site, and is further discussed in Section 5.1.

Please feel free to contact us at 201-332-1844 you have any questions.

Sincerely,

Margaret Garcia
Project Manager

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by TD Bank, N.A. to conduct a Phase I Environmental Site Assessment (ESA), in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 190 Banker Street in the City of Brooklyn, Kings County, New York. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report.

PROPERTY DESCRIPTION

The subject property, which consists of an industrial building, is located on the western side of Banker Street in a mixed commercial and residential area of Brooklyn, New York. The property totals approximately 0.41 acres and is improved with a two-story building totaling approximately 20,250 square feet. The first floor of the property contains a loading area to the west (Gem Street side) with a rack washer in the northwest corner, followed by dry goods storage, and a cooler/refrigerated room in the southeast corner. The second floor of the building contains a former apartment with at least two inactive bathrooms, which are currently being used for storage. The building is mostly slab-on-grade with a partial basement which contains former mechanical equipment and water meters which are no longer in use. The exterior of the building is constructed of brick. The interior first floor is constructed of cement flooring and concrete block walls. The second floor contains wood flooring except the ceramic tile in the bathrooms and drywall covered walls and ceiling. The subject property is currently occupied by a subset of Acme Smoked Fish Corporation. On-site operations include rack washing, refrigeration of packaged goods, and dry products storage. In addition to the subject property building, the property is improved with on-street parking.

According to historical sources, the property was developed with the current improvements in 1928; however, according to the New York City Department of City Planning (NYCDOCP), the subject property building was constructed in 1931 for use as an industrial manufacturing building. Prior to the current site improvements, the subject property was identified to consist of unimproved land.

The subject property was identified in the regulatory database as a Recovered Government Archive Landfill (RGA LF) site, a New York Solid Waste Facility/Landfill (NY SWF/LF) site, a New York Underground Storage Tank (NY UST) site, a New York Historical UST (NY HIST UST) site, and a New York Aboveground Storage Tank (NY AST) site, and is further discussed in Section 5.1.

The immediately surrounding properties consist of the following:

Direction from Site	Address-Tenant/Use
North	Acme Smoked Fish Corporation (192 Banker Street)
South	Corzo Maintenance Corporation storage yard and parking lot (168 Banker Street)
East	Vert Gardens Inc. Garden Installation & Maintenance (193 Banker Street)
West	Flood Music Studios (37 North 15th Street); Glopack, Inc. Manufacturers and Importers of Paper & Plastic Bags (48 North 15th Street); Brooklyn Water Maintenance (22 North 15th Street)

The adjacent site to the east (193 Banker Street) was identified in the regulatory database as an EDR US Historical Auto Station site. Please refer to Section 5.1.

The western adjacent site (Brooklyn Water Maintenance-22 North 15th Street) was identified in the regulatory database as a New York Tanks site, a New York Historical Underground Storage Tank (UST) site, eight times (8x) as a New York Spills site, a Facility Index System (FINDS) site, a New York Manifest site, and a Resource Conservation and Recovery Act Non-Generator/No Longer Regulated (RCRA NonGen/NLR) site. Please refer to Section 5.1.

Based upon topographic map interpretation, the direction of groundwater flow beneath the subject property is inferred to be to the west. Based on United States Geological Survey (USGS) Groundwater Watch, groundwater is presumed to be present at an estimated depth of 10-14 feet below ground surface (bgs).

FINDINGS

Recognized Environmental Conditions (RECs) are defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. AEI's assessment has revealed the following RECs associated with the subject property or nearby properties:

- According to a review of the historical sources, the subject property building was constructed for use as an iron and steel works facility from at least 1928 until 1951. From 1960 to at least 1985, the property was used as a machine shop with manufacturing purposes. The specific operations which were performed during this timeframe are unknown. AEI was also unable to identify the specific hazardous materials and equipment historically used on the subject property. AEI identified one (1) 3,000-gallon No. 2 Fuel Oil UST in the regulatory database which is believed to be associated with the historic use of the property. The exact location of this former UST is unknown; however, the UST was closed and removed on January 1, 1993. No spills or releases were reported in association with this UST. AEI was unable to acquire documentation of this UST closure. No significant staining was observed throughout the subject property and there is no other evidence of contamination. In addition, AEI did not identify any evidence such as a fill port or vent pipe which would indicate the presence of a former UST. Due to the lack of information regarding the previous use of the subject property and the lack of documentation regarding the removal of the UST, the historic use of the property and the UST represent a REC.

Controlled Recognized Environmental Conditions (CRECs) are defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. AEI's assessment has revealed the following CRECs associated with the subject property or nearby properties:

- No on-site CRECs were identified during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. AEI's assessment has revealed the following HRECs associated with the subject property or nearby properties:

- No on-site HRECs were identified during the course of this assessment.

Environmental Issues include environmental concerns identified by AEI that warrant discussion, but do not qualify as recognized environmental conditions, as defined by the ASTM Standard Practice E1527-13. These can include, but are not limited to risks which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of the subject property. AEI's investigation has revealed the following environmental issues associated with the subject property or nearby properties :

- No on-site environmental issues were identified during the course of this assessment.

Non-ASTM Considerations may include the presence of environmental conditions such as asbestos containing materials, lead-based paint, radon, mold, lead in drinking water, etc. which can affect the liabilities and financial obligations of the client, the health & safety of site occupants, and the value and marketability of the subject property. AEI's assessment has revealed the following Non-ASTM considerations associated with the subject property or nearby properties:

- Due to the age of the subject property building, there is a potential that asbestos-containing materials (ACMs) are present. All observed suspect ACMs were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. In the event that building renovation or demolition activities are planned, an asbestos survey adhering to Asbestos Hazard Emergency Response Act (AHERA) sampling protocol should be performed prior to demolition or renovation activities that may disturb suspect ACMs.

- Due to the age of the subject property building, there is a potential that LBP is present. During the site inspection damaged paint was observed along the walls and ceiling of the second floor. Local regulations may apply to lead-based paint in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an XRF survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing *any amount* of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

CONCLUSIONS, OPINIONS AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment for the property located at 190 Banker Street in the City of Brooklyn, Kings County, New York, in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312). Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment has revealed no evidence of RECs or CRECs in connection with the property, except for those previously identified in the *Findings* section. AEI recommends subsurface investigation of the subject property to determine the impact of the historical use as a machine shop and a manufacturing facility.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment (ESA) performed in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 190 Banker Street in the City of Brooklyn, Kings County, New York (Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs).

Subject Property Name: Acme
Site Inspection Date: May 21, 2014
Report Author(s): Ms. Margaret Garcia and Mr. Richard D. Fehler
TD Bank RFP Contact: Mr. Thomas Lawless
TD Bank RIMS No: 330202

1.1 SCOPE OF WORK

The purpose of the Phase I Environmental Site Assessment is to assist the client in identifying potential environmental liabilities associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property, as well as regulatory non-compliance that may have occurred at the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

The goal of AEI Consultants in conducting the Phase I Environmental Site Assessment was to identify the presence or likely presence of any hazardous substances or petroleum products on the property that may indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum product into the soil, groundwater, or surface water of the property.

1.2 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI Consultants in this report. AEI Consultants relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI Consultants has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites are assumed based on contours depicted on the United States Geological Survey topographic maps. AEI Consultants assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.3 LIMITATIONS

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI Consultants makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: asbestos-containing materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, vapor intrusion, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed in Section 7.2. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice".

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.4 LIMITING CONDITIONS/DEVIATIONS

The performance of this Phase I Environmental Site Assessment was limited by the following condition(s):

- Due to the time constraints associated with this report, AEI was not able to obtain records from the New York State Department of Health (NYSDOH), the Fire Department City of New York (FDNY), and the New York State Department of Environmental Conservation (NYSDEC). Pursuant to ASTM Standard E1527 Section 7.1.4.2, information that is obtainable within a reasonable time frame is information that will be provided by the source within 20 calendar days of receiving a public information request. Based on the expected response time of over 20 calendar days for these agencies, records from this agency are not considered reasonably ascertainable. If this review reveals any items of concern for the subject property, an addendum to this report will be issued.

- AEI was granted full and complete access to the subject property.

1.5 DATA GAPS AND DATA FAILURE

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required, despite good faith efforts to gather such information.

Data failure is one type of data gap. According to ASTM E1527-13 "data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met". Pursuant to ASTM Standards, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier.

The following data gaps were identified during the course of this assessment:

Data Gap:	The subject property building was constructed for use as an iron and steel works facility from at least 1928 until 1951. From 1960 to at least 1985, the property was used as a machine shop with manufacturing purposes. There is no other information regarding the specific use of the property.			
Does this data gap affect the EP's ability to identify RECs?		Yes	X	No
Rationale	The types of hazardous materials and equipment used and the specific manufacturing processes performed is unclear, therefore this lack of information represents a significant data gap.			
Information/ sources consulted	AEI interviewed Mr. Eduardo Carbajosa, the CFO of Acme Smoked Fish Corporation and the co-owner of the subject property regarding the previous uses of the subject property and he was unaware of the type of manufacturing which was performed on the subject property. AEI also researched the names of the companies identified to occupy in the subject property in the City Directories and could not identify the specific uses.			

1.6 RELIANCE

All reports, both verbal and written, are for the benefit of TD Bank, N.A. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms & Conditions executed by TD Bank, N.A. on May 9, 2014. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

Site Owner: 190 Gem LLC
Site Occupant(s): Acme Smoked Fish Corporation
Date of Ownership: 2004
Site Location: 190 Banker Street, Brooklyn, New York 11222
Assessor Parcel Number (APN): Block 2615, Lot 25
Zoning: M3-1 Heavy Manufacturing District (Low Performance)
County: Kings County
USGS Quadrangle: Brooklyn, New York
Latitude and Longitude: 40°43'27.99"N 73°57'20.66"W
NAICS (North American Industry Classification System) number: 238220, 311710, and 493110

The subject property, which consists of an industrial building, is located on the western side of Banker Street in a mixed commercial and residential area of Brooklyn, New York. The property totals approximately 0.41 acres and is improved with a two-story building totaling approximately 20,250 square feet. The first floor of the property contains a loading area to the west (Gem Street side) with a rack washer in the northwest corner, followed by dry goods storage, and a cooler/refrigerated room in the southeast corner. The second floor of the building contains a former apartment with at least two inactive bathrooms which are currently being used for storage. The building is mostly slab-on-grade with a partial basement which contains former mechanical equipment and water meters which are no longer in use. The exterior of the building is constructed of brick. The interior first floor is constructed of cement flooring and concrete block walls. The second floor contains wood flooring except the ceramic tile in the bathrooms and drywall covered walls and ceiling. The subject property is currently occupied by a subset of Acme Smoked Fish Corporation. On-site operations include rack washing, refrigeration of packaged goods, and dry products storage. In addition to the subject property building, the property is improved with on-street parking.

According to historical sources, the property was developed with the current improvements in 1928; however, according to the New York City Department of City Planning (NYCDOCP), the subject property building was constructed in 1931 for use as an industrial manufacturing building. Prior to the current site improvements, the subject property was identified to consist of unimproved land.

The subject property was identified in the regulatory database as a Recovered Government Archive Landfill (RGA LF) site, a New York Solid Waste Facility/Landfill (NY SWF/LF) site, a New York Underground Storage Tank (NY UST) site, a New York Historical UST (NY HIST UST) site, and a New York Aboveground Storage Tank (NY AST) site, and is further discussed in Section 5.1.

The Assessor's Parcel Number (APN) for the subject property is Block 2615, Lot 25. According to Mr. Carbajosa, CFO of Acme Smoked Fish Corporation and co-owner of the subject property, heating and cooling systems on the subject property are fueled by natural gas and electricity provided by National Grid and an onsite power plant above the 192 Banker Street building, respectively, and potable water and sewage disposal are provided by the City of New York.

Refer to Figure 1: Site Location Map, Figure 2: Site Map and Appendix A: Property Photographs for site location.

2.2 SITE AND VICINITY CHARACTERISTICS

The subject property is located in a mixed residential and industrial area of the Bronx. The immediately surrounding properties consist of the following:

Direction from Site	Address-Tenant/Use
North	Acme Smoked Fish Corporation (192 Banker Street)
South	Corzo Maintenance Corporation storage yard and parking lot (168 Banker Street)
East	Vert Gardens Inc. Garden Installation & Maintenance (193 Banker Street)
West	Flood Music Studios (37 North 15th Street); Glopack, Inc. Manufacturers and Importers of Paper & Plastic Bags (48 North 15th Street); Brooklyn Water Maintenance (22 North 15th Street)

The adjacent site to the east (193 Banker Street) was identified in the regulatory database as an EDR US Historical Auto Station site. Please refer to Section 5.1.

The western adjacent site (Brooklyn Water Maintenance-22 North 15th Street) was identified in the regulatory database as a New York Tanks site, a New York Historical Underground Storage Tank (UST) site, eight times (8x) as a New York Spills site, a Facility Index System (FINDS) site, a New York Manifest site, and a Resource Conservation and Recovery Act Non-Generator/No Longer Regulated (RCRA NonGen/NLR) site. Please refer to Section 5.1.

2.3 PHYSICAL SETTING

Geology: Based on a review of the United States Department of Agriculture (USDA) Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as Urban Land. The Urban Land designation indicates that more than 85 percent of the original soils have been disturbed or covered by paved surfaces, buildings or other structures. Because of the variability of the soil material, on-site investigation would be required to determine the specific soil composition at the subject property.	
USGS Topographic Map:	Brooklyn, New York Quadrangle
Nearest surface water to subject property :	East River/0.35 miles west
Gradient Direction/Source:	West/Topographic Map Interpretation
Estimated Depth to Groundwater/Source:	10-14 feet bgs/USGS Groundwater Watch

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

3.1 HISTORICAL SUMMARY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historic city directories, Sanborn fire insurance maps and agency records is as follows:

Date Range	Subject Property Description/Use	Source(s)
1887-1916	Unimproved land	Sanborn Maps
1928-1951	Subject property improved with an industrial building used for ornamental steel and iron works	Aerial Photographs, Sanborn Maps, and City Directories
1960-1985	Subject property building used as a "Machine Shop"	Sanborn Maps and City Directories
1992-2008	Subject property building occupied by Corzo Maintenance Co for use as construction materials storage	City Directories
2004-present	According to Mr. Eduardo Carbajosa, these historical dates overlap because Acme Smoked Fish Corporation purchased the property from Corzo Maintenance Co ten years ago. The property is currently being used for washing, refrigeration, and dry goods storage	Interview with the CFO of Acme Smoked Fish Corporation and Co-Owner of the subject property and Sanborn Maps

According to historical sources, the current subject property building was constructed in at least 1928. However, the New York State Department of City Planning website stated the subject property building was constructed in 1931 for use as an industrial manufacturing building. Prior to the construction of the building, the property consisted of unimproved land.

Based on a review of historical sources, the following historical addresses were associated with the subject property: 10-14 North 15th Street and 178, 186, 190 Banker Street. AEI researched these addresses in the regulatory database to identified further listings associated with the subject property.

The subject property building was constructed for use as an iron and steel works facility from at least 1928 until 1951. From 1960 to at least 1985, the property was used as a machine shop with manufacturing purposes. The specific operations which were performed during this timeframe are unknown. These industrial machine shop and manufacturing uses represent a significant environmental concern.

If available, copies of historical sources are provided in the report appendices.

3.2 AERIAL PHOTOGRAPH REVIEW

AEI Consultants reviewed aerial photographs of the subject property and surrounding area. Aerial photographs were reviewed for the following years: 1954, 1966, 1980, 1994, 2002, 2006, 2010, and 2012.

Date(s)	Scale	Subject Property Description	Surrounding Area Descriptions
1954*, 1966* 1980*, 1994	1:500	Subject property developed with current industrial building	**North:** Commercial/industrial building **South:** Fenced off parking lot **East:** Local road followed by a commercial/industrial building and parking **West:** Local road followed by a commercial/industrial building, an intersecting road, and a second commercial/industrial building
2002, 2006 2010, 2012	1:500	No significant changes except an extension was included to the south of the subject property building	**North:** No significant changes **South:** No significant changes **East:** No significant changes except an additional structure was constructed in the southern portion of the original parking area **West:** No significant changes

* Due to copyright restrictions, copies of these aerial photographs are not included in this report; however, they may be viewed on Historicaerials.com.

3.3 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of Environmental Data Resources (EDR) collection of Sanborn Fire Insurance maps.

Sanborn maps were available and reviewed for the years 1887, 1905, 1916, 1928, 1942, 1951, 1965, 1978, 1979, 1980, 1981, 1982, 1983, 1986, 1987, 1988, 1989, 1991, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006, and 2007.

Date(s)	Subject Property Description	Surrounding Area Descriptions
1887, 1905 1916, 1928	Subject property consists of unimproved land	**North:** Unimproved land **South:** Unimproved land **East:** Banker Street followed by unimproved land **West:** Gem street followed by unimproved land

1942	Subject property developed as a commercial building labeled "C.E. Halback & Co" used for iron works with a second story to the east with the addresses 10-14 North 15th Street and 178, 186, 190 Banker Street	**North:** Commercial building used for "Metal Works & Welding" with an interior space for a saw tooth **South:** A wash house to the west followed by unimproved land and a structure to the east used for storage **East:** Banker Street followed by a "Finished Door Storage Yard" and a commercial building with various uses such as a spray room and a bake oven **West:** Gem Street followed by building used for welding. Beyond Gem Street is North 15th Street followed by a commercial building labeled "Advance Pressure Casting Inc Die Casting"
1951	No significant changes	**North:** An industrial building containing a gas generator and storage of acetylene tanks followed by metal works and welding and a saw tooth room **South:** Wash house to the west and a sand blasting room structure to the east **East:** Banker Street followed by unimproved land and a transformer **West:** Gem Street followed by a factory/manufacturing facility. Beyond this building is North 15th Street followed by a commercial building labeled "Advance Pressure Casting Inc. Trimming & Shipping"
1965	Industrial building used as a machine shop with a second story to the east	**North:** Gas generator, acetylene storage tanks, and office to the east and a saw tooth room to the north **South:** Unimproved land **East:** Banker Street followed by unimproved land and commercial development **West:** Gem Street followed by a factory/manufacturing facility, beyond which is North 15th Street followed by a commercial building used for warehouse and shipping
1978, 1979 1980, 1981 1982, 1983 1986, 1987 1988	No significant changes	**North:** No significant changes except the building is now labeled as a factory/manufacturing facility and the section of the building to the west is labeled as a commercial building **South:** No significant changes **East:** Banker Street followed by a parking lot and a transformer room **West:** No significant changes except the commercial building beyond North 15th Street is now labeled as a factory with manufacturing uses

1989	No significant changes	**North:** No significant changes **South:** No significant changes **East:** Banker Street followed by a parking lot with a single-story commercial building and a transformer room **West:**
1991,1993 1995,1996	No significant changes	No significant changes except the saw tooth room in the north adjacent property is no longer labeled and that area is now only a factory space
2001, 2002 2003, 2004 2005, 2006 2007	No significant changes	**North:** No significant changes **South:** Parking lot **East:** No significant changes **West:** No significant changes except the factory/manufacturing facility beyond Gem Street is labeled as a warehouse and office

3.4 CITY DIRECTORIES

A search of historic city directories was conducted for the subject property provided by EDR Directories were available and reviewed for the years 1928, 1934, 1940, 1945, 1949, 1960, 1965, 1970, 1973, 1976, 1980, 1985, 1992, 1997, 2000, 2005, 2008, 2013. The following table summarizes the results of the city directory search.

City Directory Search Results

Date(s)	Occupant Listed
1928	Halback C E & Co Ornamental Iron & Steel; Halco Steel Sash Co; Nelco Rity Corp
1934	Halback C E & Co Inc A Walter Nelson Pres-Treas A Lincoln Moseman Sec Iron; Halco Steel Sach Co Inc A Waiter Nelson Pres-Treas A Lincoln Moseman Sec; Nelco Realty Corp A Walter Nelson Pres-Treas A Lincoln Moseman Sec
1940	Halback C E & Co ornamental iron & steel; Halco Steel Sash Co; Nelco Rity Corp
1945	Halback C E & Co ornamental iron & steel; Halco Steel Sash Co; Nelco Rity Corp
1949	Halback C E & Co ornamental iron & steel; Halco Steel Sash Co; Nelco Rity Corp
1960	Schultz Engineering Corp
1965	Not listed
1970	Not listed
1973	Not listed
1976	Schultz Engineering Corp
1980	Not listed
1985	Elsner Engineering Works Inc
1992	Corzo Contracting Co Inc; Elsner Engineering Works Inc; Harnden Inc.
1997	Corzo Contracting Co Inc; Elsner Engineering Works Inc
2000	Corzo Contracting Co; Timothy McAdams
2005	Corzo Contracting Co
2008	Corzo Contracting Co Inc; Hamden Inc
2013	Not listed

The industrial use of the subject property as a former iron/steel works and manufacturing facility represents a significant environmental concern.

3.5 HISTORICAL TOPOGRAPHIC MAPS

Historical use of the subject property was researched using other standard historical sources. Historical topographic maps were not reviewed as part of this assessment.

3.6 CHAIN OF TITLE

In accordance with our approved scope of services, a Chain of Title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

4.1 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to Activity and Use Limitations (AULs), defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1.1 HEALTH DEPARTMENT

On May 14, 2014, AEI contacted the New York State Department of Health the (NYSDOH) for information on the subject property and nearby sites of concern. Files at this agency may contain information regarding hazardous materials storage, as well as information regarding unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area.

Pursuant to ASTM Standard E1527 Section 7.1.4.2, information that is obtainable within a reasonable time frame is information that will be provided by the source within 20 calendar days of receiving a public information request. Based on the expected response time of over 20 calendar days for the NYSDOH, records from this agency are not considered reasonably ascertainable. If this review reveals any items of concern for the subject property, an addendum to this report will be issued.

4.1.2 FIRE DEPARTMENT

On May 15, 2014, AEI contacted the Fire Department City of New York (FDNY) for information on the subject property to identify any evidence of previous or current hazardous material usage. Pursuant to ASTM Standard E1527 Section 7.1.4.2, information that is obtainable within a reasonable time frame is information that will be provided by the source within 20 calendar days of receiving a public information request. Based on the expected response time of over 20 calendar days for the FDNY, records from this agency are not considered reasonably ascertainable. However, based on the quality of information obtained from other sources, this limitation is not expected to significantly alter the findings of this assessment.

4.1.3 BUILDING DEPARTMENT

On May 22, 2014, AEI visited the Department of Buildings Building Information Search (BIS) website for information on the subject property in order to identify historical tenants and property use. Please refer to the following table for a listing of permits reviewed:

Building Permits Reviewed

Year(s)	Owner/Applicant	Description of Permit/Building Use
1932	Unknown	Certificate of Occupancy (CO) to certify that the new building had been completed substantially according to the approved plans and specifications and the requirements of the building code, and permission was granted for the occupancy of said building by the Superintendent of Buildings.
1963	Unknown	Certificate of Occupancy (CO) for 190 Banker Street used as a machine stop and office. The CO authorizes the installation of a machine shop tool and die making on the first floor. The CO authorizes the use of the first floor of the property to manufacture and repair machinery. Also, the CO authorizes the use of the property as an office and drafting room. The Fire Department approved the installation of a sprinkler system and a stand-pipe system.
1998	William Chin	Building permit issued to replace the existing air conditioner unit at the roof
2004, 2006	Glendale Brzoza	Building permit issued to construct a new refrigeration room and install a rooftop dunnage for equipment to create a new opening in the masonry
2006	Troy Alix, Mario Zgajardic	Building permit issued to install a new heat transfer system for domestic hot water.
2007	Anthony Tranchina	Building permit issued to construct an equipment wash room on the first floor and to install a new sewer connection at Gem Street

The historic use of the property to manufacture and repair machinery, as mentioned in the CO discussed from 1963 discussed above, represents a significant environmental concern.

4.1.4 PLANNING DEPARTMENT

On May 22, 2014, AEI visited the New York City Department of City Planning (NYCDOCP) website for information on the subject property in order to identify AULs associated with the subject property.

No information indicating the existence of AULs was on file for the subject property with the NYCDOCP.

4.1.5 COUNTY ASSESSOR OFFICE

On May 22, 2014, AEI visited the NYCDOCP website for information on the subject property in order to determine the earliest recorded date of development and use.

According to the NYCDOCP County assessor's office, the earliest recorded date of development on subject property was 1931, and the subject property was utilized for industrial and manufacturing purposes.

4.1.6 Department of Oil and Gas

Department of Oil and Gas (DOG) maps concerning the subject property and nearby properties were reviewed. DOG maps contain information regarding oil and gas development.

As the State of New York does not maintain a Department of Oil and Gas, AEI consulted the USGS topographic map which indicated that there are no oil or gas wells within 500 feet of the subject property. No environmental concerns were noted during the USGS map review.

4.1.7 Other Agencies Searched

On May 14, 2014, AEI contacted the New York State Department of Environmental Conservation (NYSDEC) for information concerning hazardous materials storage, spills or remediation at the subject property. Pursuant to ASTM Standard E1527 Section 7.1.4.2, information that is obtainable within a reasonable time frame is information that will be provided by the source within 20 calendar days of receiving a public information request. Based on the expected response time of over 20 calendar days for the NYSDEC, records from this agency are not considered reasonably ascertainable. However, based on the quality of information obtained from other sources, this limitation is not expected to significantly alter the findings of this assessment.

AEI researched the NYSDEC Bulk Petroleum Database website and found that two tanks were removed from the subject property. One (1) 3,000-gallon No. 2 Fuel Oil UST was removed from the subject property. One (1) empty 3,000-gallon AST on soil was removed from the subject property. No further information was provided. AEI did not identify the subject property on the NYSDEC Spills Database.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted Environmental Data Resources (EDR) to conduct a search of federal, state, tribal, and local databases containing known and suspected sites of environmental contamination. The number of listed sites identified within the approximate minimum search distance (AMSD) from the Federal and State environmental records database listings specified in ASTM Standard E 1527-13 are summarized in the following table. A copy of the regulatory database report is included in Appendix B of this report.

The subject property was identified on the following databases: a New York Recovered Government Archive Landfill (RGA LF) site, a New York Solid Waste Facility/ Landfill (NY SWF/LF) site, a New York Aboveground Storage Tank (AST) site, and a New York Historic Underground Storage Tank (NY HIST UST) site. See Section 5.1 for additional discussion.

In determining if a site is a potential environmental concern to the subject property in the records summary table below, AEI has applied the following criteria to classify the site(s) as low concern: 1) the site(s) only hold an operating permit (which does not imply a release), 2) the site(s) have been granted "No Further Action" by the appropriate regulatory agency, and/or 3) based upon AEI's review, the distance and/or topographic position relative to the subject property reduce the level of risk associated with the site(s).

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property Listed	Total Number of Listings	Recognized Environmental Condition or Environmental Issue (Yes/No)
NPL	1	No	0	
DELISTED NPL	0.5	No	0	
CERCLIS	0.5	No	0	
CERCLIS NFRAP	0.5	No	1	No; based on inferred direction of groundwater flow and relative distance from the subject property.
RCRA CORRACTS	1	No	1	No; based on inferred direction of groundwater flow and relative distance from the subject property
RCRA-TSD	0.5	No	0	
RCRA LG-GEN, SM-GEN, CESQGs, VGN, NLR	TP/ADJ	No	0	
US ENG CONTROLS	TP	No	0	
US INST CONTROLS	TP	No	0	
ERNS	TP	No	0	

Database	Search Distance (Miles)	Subject Property Listed	Total Number of Listings	Recognized Environmental Condition or Environmental Issue (Yes/No)
STATE/TRIBAL HWS	1	No	16	No; one nearby site discussed below.
STATE/TRIBAL SWLF	0.5	Yes	4	No; subject property discussed below. The remaining listings are not a concern based on inferred direction of groundwater flow and relative distance from the subject property.
STATE/TRIBAL REGISTERED STORAGE TANKS	TP/ADJ	Yes	3	No; subject property and western adjacent property associated with the subject property discussed below.
STATE/TRIBAL LUST	0.5	No	28	No; based on inferred direction of groundwater flow, relative distance from the subject property and regulatory status
STATE/TRIBAL ENG-INST CONTROLS	TP	No	0	
STATE/TRIBAL VCP	0.5	No	3	No; based on inferred direction of groundwater flow and relative distance from the subject property.
STATE/TRIBAL BROWNFIELD	0.5	No	3	No; based on inferred direction of groundwater flow and relative distance from the subject property.
ORPHAN	N/A	No	20	None of the identified orphan sites are located in the immediate vicinity (500-feet) of the subject property, and therefore, these sites are not expected to represent a significant environmental concern.
NON-ASTM DATABASES	TP/ADJ	No	15	No; subject property and adjacent properties discussed below

Site Name: Corzo Contracting Co Inc.
Database(s): NY RGA LF, NY SWF/LF, NY UST, NY HIST UST, NY AST
Address: 190 Banker Street, Brooklyn, NY 11222
Distance: Subject Property
Direction: N/A

Comments:

Recovered Government Archive Landfill (RGA LF) provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists

- According to the regulatory database, this subject property was listed as historic landfill identified as Corzo Contracting Co Inc in 1999, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, and 2012. No violations or releases were reported in association with this landfill. Based on this information and the nature of this listing, it does not represent a significant environmental concern.

Solid Waste Landfill (SWLF) sites are sites identified as permitted landfills.

- According to the regulatory database, the subject property is listed as an inactive industrial/commercial landfill which used to store wastes such as asphalt, concrete, brick, and clean soil. No further information is listed in the database. Based on the regulatory case closure status and the nature of the materials formerly being stored, the former use as a landfill does not represent a significant environmental concern.

Underground Storage Tanks (UST) is a comprehensive listing of registered underground and aboveground storage tanks located within the State of New York.

- According to the regulatory database, this site (ID/Status: 2-085251/ Site ID: 2033) was equipped with one (1) 3,000-gallon #2 fuel oil UST which was installed on an unreported date and removed on January 1, 1993. This UST was constructed of steel/carbon steel with secondary containment. No releases have been reported in association with this UST. The exact location of this former UST is unknown; however, the UST was closed and removed on January 1, 1993. AEI was unable to acquire documentation of this UST closure.

Historic UST (HIST UST) is a comprehensive listing of historic registered underground storage tanks located within the State of New York.

- According to the regulatory database, this site (PBS Number 2-085251) was equipped with one (1) 3,000-gallon No's 1, 2 or 4 fuel oil and was constructed of steel/carbon steel and was closed on January 1, 1993. This listing is identical to the UST listing discussed above.

AST is a comprehensive listing of registered aboveground storage tanks located within the State of New York.

- According to the regulatory database, this site (Facility ID: 2-085251/Site ID: 2033) was equipped with one (1) 3,000-gallon AST which was reported as empty. The AST was constructed of steel/carbon steel and it was closed-removed on May 17, 2003. No releases were reported in association with this AST. Due to the removal of this AST, the lack of hazardous substances contained within the AST, and the lack of a documented release, the storage of hazardous materials within registered tanks is not a significant environmental concern.

Site Name: K- Williamsburg Works Database(s): NY SHWS, NY Brownfields Address: Kent Ave & 12th Street Distance: 987 feet Direction: West-Southwest
Comments: State Hazardous Waste Sites (SHWS or State) records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. • According to the regulatory database, this facility is active as of October 27, 2006. The source of contamination at this site is known or has caused groundwater contamination. A manufacturing gas plant (MGP) operated onsite from at least 1887 to 1916. According to the United States Environmental Protection Agency (US EPA), a preliminary assessment (PA) was prepared for the site on September 24, 1986. The environmental assessment for this site has not yet been completed. The byproducts onsite consists of DNAPL and purified waste. The contamination was noted to affect the East River which this site is adjacent to. No further information concerning the subject property is provided in the regulatory database. Based on the relative distance from the subject property and the inferred direction of groundwater flow, this site is not expected to represent a significant environmental concern.

Site Name: WH Christian & Sons Database(s): NY LTANKS Address: 211-217 Banker Street Distance: 317 feet Direction: North
Comments: Leaking Underground Storage Tank (LUST/ LTANKS) contains an inventory of reported leaking storage tank incidents. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. • According to the regulatory database, a release was reported at this site (Site ID 110211) on March 20, 2003 due to tank test failure. Corrective action was conducted and the release was granted case closure on May 26, 2005. Based on the inferred direction of groundwater flow and the regulatory status, this site is not expected to represent a significant environmental concern.

Site Name: Brooklyn Water Maintenance; NYC DEP B-9 Facility, NYCDEP-Brooklyn Water Maintenance Database(s): NY Tanks, NY Spills (8x), HIST UST, RCRA NonGen/NLR, FINDS, NY Manifest Address: 22 North 15th Street, Brooklyn NY 11222 Distance: 417 feet Direction: West Adjacent
Comments: NY TANKS: Storage tank facility listing contains records of facilities that are or have been regulated under the Bulk Storage Program. • According to the regulatory database, this site (Facility ID: 2-456195) is listed with an active tank on the property. No further information is provided. No releases were documented in association with this tank. Based on the down-gradient inferred direction of groundwater flow and the lack of documented releases, this listing is not expected to represent a significant environmental concern.

Spills is a listing of sites at which chemical and petroleum spill incidents that may have impacted waters of the state occurred and were reported to the NYSDEC.

- According to the regulatory database, a release was reported at this site (Site ID: 1108135) on September 26, 2011 due to equipment failure. A spill of hydraulic oil to the parking lot floor occurred as a result of a commercial vehicle failure. Corrective action was conducted and the release was granted case closure on October 4, 2011.
- A second release was reported at this site (Facility ID 1002593) on June 4, 2010 due to human error. Corrective action was taken and the release was granted case closure on February 14, 2011.
- A third release was reported at this site (Facility ID 9811521) on May 5, 1998 due to equipment failure. Tank replacement was performed when contaminated soil was encountered. A pipe was leaking into the soil. The tank was reinstalled in June 2008 and the release was granted closure on April 9, 2013.
- A fourth release was reported at this site (Facility ID 1002082) on May 24, 2010 due to human error caused by insufficient data collection. The spill case was closed by the DEP on February 14, 2011.
- A fifth release was reported at this site (Facility ID 0501684) on May 11, 2005, due to equipment failure. There was a broken hose. Speed Dri was placed down and the release was cleaned up. No drains were in the vicinity of the release. The release was granted case closure on May 23, 2005.
- A sixth release was reported at this site (Facility ID 0800167) on April 4, 2008 due to equipment failure. A delivery truck dribbled hydraulic oil on to the cement. No drains were impacted and the release was cleaned up and granted case closure on April 11, 2008.
- A seventh release was reported at this site (Facility ID 0712917) on March 8, 2008 due to human error. A hose connection broke off and spilled approximately 15 gallons on hard concrete. The Fire Department Hazmat responded and cleaned up the spill. No soil was impacted and the release was closed on March 10, 2008.
- An eighth release was reported at this site (Facility ID 9515580) on March 2, 1996 due to equipment failure. A pipe leaked into the soil of a UST. Two 1,000-gallon diesel tanks are still in the ground. Piping has been replaced and the release was granted closure on June 11, 2008.

Based on the inferred direction of groundwater flow and the regulatory statuses, these releases are not expected to represent a significant environmental concern.

HIST UST

- According to the regulatory database, this site (PBS Number 2-456195) was equipped with two (2) 1080-gallon unleaded gasoline USTs and one (1) 1080-gallon diesel UST, which were constructed of steel/iron, installed on February 1, 1984, and closed on May 1, 1998. Three (3) unleaded gasoline USTs were constructed of fiberglass reinforced plastic, installed on May 1, 1998, and are currently in use. Based on the down-gradient inferred direction of groundwater flow, this listing is not expected to represent a significant environmental concern.

RCRA Non-Generator/No Longer Generated (RCRA NonGen/NLR) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. Non-GEN, or non-generators, are facilities that do not presently generate hazardous waste.

- According to the regulatory database, this site has been a non-generator since January 1, 2007. This site was formerly listed as a Conditionally Exempt Small Quantity Generator on December 12, 2006 and on December 13, 2006. No violations were reported in association with these listings. Based on the lack of violations reported, this listing is not expected to represent a significant environmental concern.

Facility Index System (FINDS) is typically a pointer to other databases, and is used as a tracking tool by the US EPA and State agencies. It is a compilation of the following lists: Permit Compliance System (PCS), Aerometric Information Retrieval System (AIRS), the enforcement document used to manage and track information on civil judicial enforcement cases (Docket), Federal Underground Injection Control (FURS), the criminal docket system used to track criminal enforcement actions for all environmental statutes (C-Docket), Federal Facilities Information System (FFIS), state environmental laws and statutes (State), and the PCB activity data system (PADS).

- This property is listed as a FINDS site (Registry ID 110031404834) in association with the above listings. No further information was provided under this listing. Based on the nature of this listing, it is not expected to represent a significant environmental concern.

Manifest lists and tracks hazardous waste from the generator through transporters to a TSD facility.

- According to the regulatory database, various hazardous wastes were transported from this property fifteen (15) times in New York between 2008 and 2014. No violations were listed in association with these manifests. Documentation of proper storage, transfer, and disposal of hazardous materials is not considered to represent a significant environmental concern.

Site Name: Acme Smoked Fish Co
Database(s): NY UST
Address: 26-56 Gem Street, Brooklyn, NY 11222
Distance: 179 feet
Direction: West-Northwest

Comments:

UST

- According to the regulatory database, this site (ID/Status: 2-271861/ Site ID: 11492) was equipped with one (1) 3,000-gallon #2 fuel oil UST which was installed on May 5, 1956 and removed on May 1, 1990. This UST was constructed of steel/carbon steel with secondary containment. No releases have been reported in association with this UST. Due to the removal of this UST and the lack of a documented release, the storage of hazardous materials within registered tanks is not a significant environmental concern.

Site Name: Vault #3533
Database(s): NY Spills
Address: 15th Street & Gem St, Brooklyn, NY
Distance: 161 feet
Direction: West-Southwest

Comments:

Spills

- According to the regulatory database, a release was reported at this site (Facility ID: 9808835) on October 15, 1998 due to an unknown cause. A spill of 10-gallons of hydraulic oil to the parking lot floor occurred as a result of a transformer spill. No drains, sewers, or waterways were affected. Corrective action was conducted and the release was granted case closure on October 28, 2002. Based on the inferred direction of groundwater flow and the regulatory status, this release is not expected to represent a significant environmental concern.

Site Name: Stratford Tool Database(s): NY Manifest Address: 153 Banker Street, Brooklyn, NY 11222 Distance: 270 feet Direction: Southeast
Comments: <u>Manifest</u> • According to the regulatory database, various hazardous wastes were transported from this property one (1) time in New York in 1986. No violations were listed in association with these manifests. Documentation of proper storage, transfer, and disposal of hazardous materials is not considered to represent a significant environmental concern.

Site Name: Not Reported Database(s): EDR US Hist Auto Stat Address: 179 Banker Street, Brooklyn, NY 11222 Distance: 126 feet Direction: East-Northeast
Comments: <u>EDR Historical Auto Stations</u> is a list of potential former gas station/ filling station/ service station sites, based on selected national collections of business directories. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/ filling station/ service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. • According to the regulatory database, this site was listed as G & I Auto Repair Center, an automobile repair facility, in 1999, 2000, 2001, 2002, and 2003. This site was not listed for any spills or releases. Based on this information and the inferred direction of groundwater flow, this site is not expected to represent a significant environmental concern.

Site Name: Not reported Database(s): NY Manifest Address: 193 Banker Street, Brooklyn, NY 11222 Distance: 186 feet Direction: Eastern Adjacent Property
Comments: <u>EDR Historical Auto Stations</u> • According to the regulatory database, this site was listed as Fast Way Towing & Collision Inc. in 2004. This site was not listed for any spills or releases. Based on this information and the inferred direction of groundwater flow, this site is not expected to represent a significant environmental concern.

5.2 VAPOR ENCROACHMENT

A Tier 1 Vapor Encroachment Screen (VES) pursuant to ASTM E2600-10 was performed as part of this assessment to determine whether a potential *vapor encroachment condition* (VEC) exists at the subject property. The VES included the review of reasonably ascertainable information for the subject and nearby properties. During the course of this assessment, a reasonable probability was not identified to indicate that a VEC exists at the subject property.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this investigation in order to obtain information indicating RECs in connection with the subject property.

6.1.1 INTERVIEW WITH OWNER

An interview with the owner of the subject property (190 Gem LLC) was not reasonably ascertainable. Instead, AEI interviewed Mr. Eduardo Carbajosa who has been associated with the subject property for seven years. The interview with Mr. Carbajosa is discussed below.

6.1.2 INTERVIEW WITH KEY SITE MANAGER

The key site manager, Mr. Eduardo Carbajosa was visited on May 21, 2014. Mr. Carbajosa has been associated with the subject property as the CFO of Acme Smoked Fish Corporation and the co-owner of the subject property since approximately 2007. Mr. Carbajosa provided general information regarding historic and current operations at the subject property. Prior to Acme Smoked Fish Corporation, the subject property was occupied by Corzo Maintenance Corp. until around 2003 for use as a storage area for construction materials. When Acme Smoked Fish Corporation bought the property around 2004, no significant renovations were completed. Around 2011, a wall was built creating a space between the southern exterior wall and the end of the subject property boundary. This wall was constructed in order to prevent pests from entering the property. That space between the exterior wall and the new wall is currently being used to store garbage and paper recycling. During that time, several backflow preventers were also installed. There is a small basement underneath the western portion of the property. This basement contains mechanical equipment and water meters which are no longer in use. The buildings are currently off of the electricity grid and are utilizing energy produced by the power plant located on the roof of the north adjacent property on 192 Banker Street. The power plant also contains a 4,000-gallon diesel AST which is use by the co-generation units to provide electricity for the buildings owned by Acme Smoked Fish Corporation.

The main space at the entrance of the building from Gem Street is a staging room where the refrigerated trucks are parked overnight to keep them cool. The trucks are connected to an electricity source from the power plant. No staining was observed in the area where the trucks are parked. The rack washer on the first floor, which was installed around 2005, is connected to the power plant and uses excess heat to heat the water. The remainder of the first floor is used for dry goods storage and there is a cooler room for packaged goods. There are empty 55-gallon drums which contained sanitation solutions for the rack washer, antifreeze for the mechanical equipment, and vacuum pump fluids for the refrigeration. These drums were stored in a back room in the southern portion of the building and are recycled regularly. Also in the southern portion of the building are batteries to charge the four forklifts in the subject property building. The second floor of the property was a former apartment, which is currently being used for storage by ACME Smoked Fish Corporation. AEI observed the storage of miscellaneous items such as unused files, unused computers, unused furniture, etc.

Finally, when asked about the former UST which was removed on the property, Mr. Carbajosa stated that he remembered a storage tank was found during the closing with Corzo Maintenance. The UST needed to be removed in order for the closing to be completed. Mr.

Carbajosa did not have access to these closure documents and was unaware of where he could obtain them.

Mr. Carbajosa was asked if he was aware of any of the following:

Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.		Yes	**X**	No
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.		Yes	**X**	No
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.		Yes	**X**	No
Any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality.		Yes	**X**	No

6.1.3 Past Owners, Operators and Occupants

In an attempt to interview past owners, operators and occupants regarding historical on-site operations, AEI requested the contact information for these entities from the subject property owner, Mr. Carbajosa. Mr. Carbajosa was unable to provide the contact information for the past owners, operators and occupants. Other methods of researching the contact information for past owners, operators and occupants performed by AEI included reviewing historical agency records and online research. None of these additional research methods provided AEI contact information for past owners, operators and occupants. Consequently, interviews with these entities regarding historical on site operations were not reasonably ascertainable which constitutes a data gap.

6.1.4 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and EPA's AAI Rule, certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the environmental professional. The responsibility for qualifying for Landowner Liability Protections (LLPs) by conducting the inquiries ultimately rests with the User, and providing the information to the environmental professional would be prudent if such information is available.

The User did not complete the ASTM User questionnaire or provide the User information to AEI.

6.3 Previous Reports and Other Provided Documentation

No prior reports or relevant documentation in association with the subject property were made available to AEI during the course of this assessment.

7.0 SITE INSPECTION AND RECONNAISSANCE

On May 21, 2014, a site reconnaissance of the subject property and adjacent properties was conducted by Ms. Margaret Garcia of AEI in order to obtain information indicating the likelihood of RECs at the subject property and adjacent properties as specified in ASTM Standard Practice E1527-13 §8.4.2, 8.4.3 and 8.4.4. During the on-site reconnaissance, AEI was accompanied by Mr. Eduardo Carbajosa, CFO of Acme Smoked Fish Corporation and co-owner of the subject property. During the onsite reconnaissance, AEI inspected 100 percent of the property including, the rack washer area, the cooler, the dry room storage, the recycled drums storage, the waste disposal area, the second floor apartment area, and the partial basement.

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
X		Hazardous Substances and/or Petroleum Products in Connection with Property Use
	X	Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs)
	X	Hazardous Substance and Petroleum Product Containers and Unidentified Containers not in Connection with Property Use
	X	Unidentified Substance Containers
X		Electrical or Mechanical Equipment Likely to Contain Fluids
X		Interior Stains or Corrosion
	X	Strong, Pungent or Noxious Odors
	X	Pools of Liquid
X		Drains, Sumps and Clarifiers
	X	Pits, Ponds and Lagoons
	X	Stained Soil or Pavement
	X	Stressed Vegetation
	X	Solid Waste Disposal or Evidence of Fill Materials
	X	Waste Water Discharges
	X	Wells
	X	Septic Systems
X		Other: Electric Forklifts, Backflow Preventers

The subject property is currently occupied by Acme Smoked Fish Corporation. On-site operations include rack washing, refrigeration of packaged goods, and dry products storage. The above identified observed items are further discussed below.

HAZARDOUS SUBSTANCES AND/OR PETROLEUM PRODUCTS IN CONNECTION WITH PROPERTY USE

AEI observed multiple 55-gallon drums filled with sanitation solutions in the southern portion of the subject property building. These solutions are used in the rack washer which washes the racks formerly holding the smoked fish. In the same portion of the building, AEI observed multiple empty containers of anti-freeze and vacuum-pump fluids which are used to service the mechanical equipment in the power plant above the north adjacent property which provides electricity for the subject property. These empty drums are recycled regularly. No spills,

staining or leaks were observed around the area of these full and empty drums. In addition, there were no drains in the vicinity of these drums. Based on this information, the presence of the storage of hazardous materials does not represent a significant environmental concern.

ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Toxic polychlorinated biphenyls (PCBs) were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing". Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Trash Compactor

One (1) hydraulic trash compactor located in the northern interior of the subject property building was observed. No evidence of a release was observed around this unit. Since the trash compactor was installed on the property around 2004 when Acme Smoked Fish Corporation began occupying the building, it is unlikely that this unit contains PCBs. Based on the lack of staining or evidence of a release, the presence of this equipment is not expected to represent a significant environmental concern.

INTERIOR STAINS OR CORROSION

AEI observed corrosion on the mechanical equipment in the partial basement of the subject property. This equipment has ceased being used since the installation of the power plant above the north adjacent property. In addition, according to Mr. Eduardo Carbajosa, the CFO of Acme Smoked Fish Corporation and the co-owner of the subject property, employees do not go into the basement. Based on this information, the presence of corrosion does not represent a significant environmental concern.

DRAINS, SUMPS AND CLARIFIERS

Floor Drains

Multiple floor drains were noted in the vicinity of the rack washer and by the sprinkler system in the subject property building. No stains were observed in the area of these drains, and no evidence of the improper discharge of hazardous materials or petroleum products was apparent. No storage of hazardous materials or petroleum products appeared present near the drains. Based on these observations, the presence of the drains is not expected to represent a significant environmental concern.

OTHER

Electric Forklifts

Four (4) electric forklifts were observed within the subject property building. These forklifts are charged with batteries and do not contain hydraulic fluid. Forklifts are generally used to lift the dry materials such as cardboard boxes short distances. Based on this information, the presence of these forklifts is not expected to represent a significant environmental concern.

Backflow Preventers

AEI observed several backflow preventers which were installed three years ago according to Mr. Carbajosa. Backflow preventers are used to protect the potable water supply from contamination or pollution due to backflow. Based on the use of these preventers to keep undesirable reversal of flow of a liquid into the potable water supply, their presence does not represent a significant environmental concern.

7.2 NON-ASTM SERVICES

7.2.1 ASBESTOS-CONTAINING BUILDING MATERIALS

OSHA

For buildings constructed prior to 1981, the Code of Federal Regulations (29 CFR 1926.1101 and 29 CFR 1910.1001) define presumed asbestos-containing material (PACM) as 1. Thermal System Insulation (TSI), e.g., boiler insulation, pipe lagging, fireproofing; and 2. Surfacing Materials, e.g., acoustical ceilings. Building owners/employers are responsible for locating the presence and quantity of PACM. Building Owners/employers can rebut installed material as PACM by either having an inspection in accordance with Asbestos Hazard Emergency Response Act (AHERA) (40 CFR Part 763, Subpart E) or hiring an accredited inspector to take bulk samples of the suspect material.

Typical materials not covered by the presumptive rule include but are not limited to: floor tiles and adhesives, wallboard systems, siding and roofing. Building materials such as wallboard systems may contain asbestos but unless a building owner/employer has specific knowledge or should have known through the exercise of due diligence that these other materials contain asbestos, the standard does not compel the building owner to sample these materials.

NESHAP

The applicability of the EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP, 40 CFR Chapter 61, Subpart M) apply to the owner or operator of a facility where an inspection for the presence of asbestos-containing materials (ACM), including Category I (asbestos containing packings, gaskets, resilient floor coverings and asphalt roofing products), and Category II (all remaining types of non-friable asbestos containing material not included in Category I that when dry, cannot be crumbled, pulverized or reduced to powder by hand pressure), non-friable ACM must occur prior to the commencement of demolition or renovation activities. NESHAP defines ACM as any material or product that contains *greater than* 1% asbestos. It should be noted that the NESHAP regulation applies to all facilities regardless of construction date, including: 1. Any institutional, commercial, public, industrial, or residential structure, installation, or building; 2. Any ship; and 3. Any active or inactive waste disposal site. This requirement is typically enforced by the EPA or by local air pollution control/air quality management districts.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Due to the age of the subject property building, there is potential that ACMs are present. The condition and friability of the identified suspect ACMs is noted in the following table:Suspect Asbestos Containing Materials (ACMs)

Material	Location	Friable	Condition
Drywall Systems	Throughout the interior of the second floor	Yes	Good/Fair
Roofing Systems	Roof	Yes	Good

All observed suspect ACMs were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. In the event that building renovation or demolition activities are planned, an asbestos survey adhering to AHERA sampling protocol should be performed prior to demolition or renovation activities that may disturb suspect ACMs.

7.2.2 Lead-Based Paint

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm^2 (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm^2 to 2.0 mg/cm^2. Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X", defines a LBP hazard is "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact lead-based paint on most walls and ceilings would not be considered a "hazard", although the paint should be maintained and its condition and monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on lead-based paint and lead-based paint hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, federally owned or subsidized housing are affected by this rule.

Lead-containing paint (LCP) is defined as any paint with any detectable amount of lead present in it. It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state or local regulations in regards to lead-containing paints.

In buildings constructed after 1978, it is unlikely that LBP is present. Structures built prior to 1978 and especially prior to the 1960's should be expected to contain LBP.

Due to the age of the subject property building, there is a potential that LBP is present. During the site inspection damaged paint was observed along the walls and ceiling of the second floor of the subject property building. Local regulations may apply to lead-based paint in association with building demolition/renovations and worker/occupant protection. Actual material samples

would need to be collected or an XRF survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing *any amount* of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

7.2.3 Radon

Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones; Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action limit of 4.0 picoCuries per Liter (pCi/L). It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 3, which has a predicted average indoor screening level less than 2 pCi/L, below the action level of 4.0 pCi/L set forth by the EPA.

7.2.4 Drinking Water Sources and Lead in Drinking Water

The New York City Department of Environmental Protection (DEP) supplies potable water to the subject property. The most recent water quality report states that lead levels in the areas water supply were between Not Detected (ND) and 14 micrograms per liter (µg/L) and therefore are well within standards established by the United States Environmental Protection Agency (US EPA).

7.2.5 Mold / Indoor Air Quality Issues

Molds are simple, microscopic organisms, which can often be seen in the form of discoloration, frequently green, gray, white, brown or black. When excessive moisture or water accumulates indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or is not addressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting often play host to such growth. Mold spores primarily cause health problems through the inhalation of mold spores or the toxins they emit when they are present in large numbers. This can occur primarily when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

AEI observed interior areas of the subject property building in order to identify the significant presence of mold. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to mold appears to be warranted at this time.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, heating, ventilation and air conditioning (HVAC) systems and behind enclosed walls and ceilings, may be present on the subject property.

7.2.6 Obvious Regulatory Noncompliance

No obvious environmental regulatory non-compliance issues were identified in connection with the subject property during this assessment.

7.2.7 Wetlands

Review of the National Wetlands Inventory (NWI) map showed that the subject property is not located within a federally designated wetlands area.

7.3 Adjacent Property Reconnaissance Findings

Yes	No	Observation
	X	Hazardous Substances and/or Petroleum Products in Connection with Property Use
X		Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs)
X		Hazardous Substance and Petroleum Product Containers and Unidentified Containers not in Connection with Property Use
	X	Unidentified Substance Containers
	X	Electrical or Mechanical Equipment Likely to Contain Fluids
	X	Strong, Pungent or Noxious Odors
	X	Pools of Liquid
X		Drains, Sumps and Clarifiers
	X	Pits, Ponds and Lagoons
	X	Stained Soil or Pavement
	X	Stressed Vegetation
	X	Solid Waste Disposal or Evidence of Fill Materials
	X	Waste Water Discharges
	X	Wells
	X	Septic Systems
X		Other: Co-generation Units

The above identified observed items are further discussed below.

HAZARDOUS SUBSTANCES AND/OR PETROLEUM PRODUCTS IN CONNECTION WITH PROPERTY USE

Multiple 55-gallon full and empty drums containing antifreeze were observed within the power plant on the roof of the north adjacent property. No significant staining or leaking was observed around the base of these drums. In addition, no drains were located in the vicinity of these drums. Based on the lack of stains or leaks, the presence of these hazardous materials does not represent a significant environmental concern.

ABOVEGROUND & UNDERGROUND HAZARDOUS SUBSTANCE OR PETROLEUM PRODUCT STORAGE TANKS (ASTS / USTS)

Size (gallons)/Contents	Location	Construction/Secondary Containment
Approximately 750-gallon hot water AST	Power plant on roof of north adjacent property located on 192 Banker Street	Double-walled Steel
Approximately 4,000-gallon diesel fuel	Power plant on roof of north adjacent property located on 192 Banker Street	Steel/One foot block of cement around the base

These two ASTs were located on the roof of the north adjacent property. The 750-gallon hot water AST provides heated water for the buildings. The 4,000-gallon AST services the co-generation units in the power plant. No significant staining or leaks were observed from these tanks. Since the ASTs are located on the roof of the north adjacent building, it is unlikely that soil or groundwater contamination will occur. Based on this information, the storage of hazardous materials does not represent a significant environmental concern for the subject property.

DRAINS, SUMPS AND CLARIFIERS

Storm Drains

Multiple storm drains were observed along the sidewalks of the adjacent properties. No hazardous substances or petroleum products were noted in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

OTHER

Co-generation Units

The power plant on the roof of the north adjacent property is equipped with three (3) co-generation units, two are running on synchronization, and one is on standby. These co-generation units generally use a heat engine or power station to simultaneously generate electricity and useful heat. Cogeneration is a thermodynamically efficient use of fuel (in this case, natural gas). Based on the nature of this equipment, its use is not expected to represent a significant environmental concern.

8.0 RECOMMENDATIONS

As previously identified in the *Findings* section of the Executive Summary, this assessment has revealed evidence of recognized environmental conditions or conditional recognized environmental conditions in connection with the property which require further investigation. AEI recommends subsurface investigation of the subject property to determine the affects of the historic use as a machine shop and manufacturing facility.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

By signing this report, the senior author declares that, to the best of his or her professional knowledge and belief, he or she meets the definition of *Environmental Professional* as defined in §312.10 of 40 CFR Part 312.

The senior author has the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. The senior author has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/11/2014 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 6 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 03/27/2014 has revealed that there are 16 NY SHWS sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/17/2014 has revealed that there are 28 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

NY TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the NY TANKS list, as provided by EDR, and dated 03/31/2014 has revealed that there is 1 NY TANKS site within approximately 0.25 miles of the target property.

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY MOSF UST sites within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY MOSF AST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY MOSF AST sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/17/2014 has revealed that there are

EXECUTIVE SUMMARY

24 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/11/2014 has revealed that there are 31 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 2 NY HSWDS sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 6 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 4 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

DEC Memo:	05/17/10- Zhune spoke FF reder from Hazmat 1 (347)-203-6886. He said a storage gasoline tank from a repair shop was leaking. Approximatelly 20 -25 gallons of a mixture of oil and water went to the street and to the sewer. Fire Department cleaned spill on the street. Fire Department notified DEP. Incident # 185034.Repair Shop owner: Ili Argi 718-266-8360, 732 616-6898Worker Rodney Lochansingh06/08/10- Zhune spoke Alex Castro from DEP. Alex responded to this site. Alex spoke to Rodney Lochansingh a worker of the shop. Mr. Lochansingh said he was reparing a truck accidentally he punched one of the two gasoline tanks located on the driver side. Approximatelly 25 gallons of gasoline leaked from the tank. He tried to cleaned the spill but due to the vapors they called the Fire Departement. The F. Department used foam and water to clean the spill. This mixture went to the street and then to the sewer. 09/15/10- Saddle tank spill to street. Fire Department cleaned it.
Remarks:	Caller reporting a spill of approx 20 gallons of gasoline/ water mixture. Clean up is in progress.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Region: 2
DER Facility ID: 96623
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"3/20/03 - AUSTIN, DDO - SENT OUT TTF LETTER TO BOB KNOZELMAN OF WH CHRISTIAN & sONS1/7/04-Vought-Spill transferred from Vought to Austin.1/27/04 - Sawyer - Spill transferred from Austin to Sawyer.10/5/04 - Sawyer - Received another failed tank test from Pro Test with a letter informing the Department of repair attemps made and the ultimate removal of tank from service. Pro Test will update on further action, investigation and remediation.03/04/05 - Sawyer - Jim from Protest called me about begining excavation at the above site 0n 3/08/05. They are going to remove the tank an about 60 cubic yards of contamination. 03/30/05 - Sawyer - Met Tom Leddy and Ted Dros of Protest Environmental at excavation. They will pump and pad the pit to clean sheen off water in pit. Clean endpoint samples and a ground water sample will then be needed.5/26/05 - Sawyer - Received endpoint samples from Protest on 4/12/05 and though some of the groundwater samples were above ground water criteria, this property was included in the Greenpoint Plume. This is the reason there are gasoline constituents in the gw sample. The groundwater is between 12-15 and this is an industrial area. No further action required. Closed.
Remarks: tank failure, possible bad vent line

DEC Memo:	Sangesland spoke to Melissa Whitley at DEP.she said the pump meter was re-calibrated and a tank test is scheduled for the next few days.Inventory reconciliation is using a new system. Tempurature compensation calculations from the Veeter Root system does not add up. The old system was to match delivery quantity from the vendor (this system does add up).After the tank is tested, they will try to work out the new Veeter Root based measuring system.2/14/2011 - DEP forwarded a 25 page packet of information showing that the problem was human error (forgot to deduct some product manually pumped off)eDocs will not allow the .pdf to be loaded despite several tries.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY"06/11/08: At direction of my supervisor, Vadim Brevdo, I closed spill no. 9515580 to consolidate with this spill case (9801521), under which remediation of subsurface petroleum contamination at this site will be tracked. Closed spill 9515580 was for diesel tanks; unknown if diesel tanks were at same location as gasoline tanks. - J. Kolleeny08/04/11: Reviewed Site-Specific Investigation Plan by LiRo, dated April 2011 (in eDocs). Plan states that, based on 1996 aerial photo, old USTs (removed in 1998) were likely located in same area as new USTs. Plan proposes install'n of 4 monitoring wells around existing UST system, with soil sampling during well install'n and GW sampling following well development. If GW is found to be impacted, slug tests may be performed to obtain hydraulic conductivity data. Investigation results will be presented in an ISRP, which will discuss findings and recommend a remedial strategy, if warranted by data. I sent letter (in eDocs) approving SSIP to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC and Steve Frank of LiRo. - JK04/09/13: Reviewed Investigation Summary and Remediation Plan and Spill Closure Request rpt by LiRo, dated 4/5/13 (in eDocs). Rpt summarizes install'n of 4 wells in Sept. 2012 and sampling of wells in Dec. 2012 and Jan. 2013. Results of soil samples showed no VOCs or SVOCs above CP-51 SCLs. GW results for Dec. 2012 showed several low-level exceedances: well LMW-01 had 57 ug/L of MTBE, well LMW-03 had 30 ug/L of naphthalene, well LMW-04 had 160 ug/L MTBE. GW results for Jan. 2013 were similar: LMW-01 again had 57 ug/L of MTBE and LMW-04 had 110 ug/L of MTBE. LiRo concludes that there are no soil impacts ad GW impacts are minimal, therefore they recommend/request spill closure. I closed spill, sent closure letter (in eDocs) to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC and Steve Frank of LiRo. - JK
Remarks:	TANK REPLACEMENT BEING PERFORMED WHEN CONTAMINATED SOIL WAS ENCOUNTERED-ASSESSMETN WILL BE DONE AFTER TANKS ARE RE-INSTALLED.06/11/08: These are Caller Remarks [sic] from spill no. 9515580, closed on 6/11/08 to consolidate with this spill case: "Piping leaked into the soil of a underground tank. The tanksare 2 1000 gallon diesel tanks. They are still in the ground.piping has been replaced. This occurred in august 1995."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"DEC responder notes:4/12/99- 2:15PM. ROBERT LEUNG SPOKE TO C. ENGELHARDT AND GAVE HIM THE INFO.No. 6 oil spilled during pigging of No. 7 line. On location John Mitchell (White Hat for Con Ed), Barry Korman, Sal Bocuzzi. Barry Korman syas occurred while pigging, had recovery vac truck @ Noble Street. First truck = 4221 gallons, second truck = 1400 gallons when stopped (noticed oil on street). Notified by NYC Sanitation inpector at 12:00. They then shut down the compressor.Contractor Clean Venture was @ Noble Street - responded by 12:15. They were vac'ing line from North 1st Street to valve 10 (North 11th / Kent) - removed 12,000 gallons.FDNY came in fire boat - did not get off boat. No NYCDEP of USCG response. No oil in water (Bushwick Inlet approx. 50 feet west). Thus far only 1 subsurface structure (Con Ed vault) is impacted. There is a sewer near 15th Street - oil did not reach it.Equipment on location: 3600 gallon vac truck (AllState Power Vac); 3150 and 5040 gallon vac trucks (Clean Venture). (CAE)5/25/99: call from John Mitchell. They have not been monitoring the well. They will start every week for 5 weeks, then go to every 2 weeks if no product. Will be going tomorrow and next

CON ED PIPELINE NO. 7 (Continued) **S104648846**

Tuesday. (CAE)~~~~~~~~~~~~~~~~~~~~e2mis no. 124-172:On April 12, 1999, working on Fuel Line #7 in Brooklyn. J. O'Connell and M. Dobler was working Noble Street end and J. Daly was working at North 11th Street end of Fuel Line #7. A Santiation Department employee informed D. Daly that oil was coming out on the street. J. Daly informed J. O'Connell and they meet at the location (Kent Ave) where the oil was coming on the street. They took action by putting pads down, put drain plug on the catch basin and putting oil absorent down around the catch basin. Clean Ventures is at the location. They are in the process of taking oil out of the line. Approx. 30 gallons of oil spilled. UPDATE - April 13, 1999, from manhole 4348, 1800 gallons of oil has been pumped. At present leak has not been found, still looking.UPDATE - April 14, 1999, leak was found at 11:00 am, leak clamped 14:00 Tuesday.LARGE OIL SPILL CLEANUP CHECKLIST-Location of spill: N.14TH STREET AND FRANKLIN STREET, BROOKLYN.-Source/cause of spill: PIGGING OPERATION TO REMOVE # FUEL OIL FROM PIPELINE #7; A 20 INCH DIA PIPELINE.-Description of area affected by spill: 50' X 10' X 12' (EXCAVATION - APPROX.). Excavated contaminated soil, bluestone.-Name of contractor: ALL STATE POWER VAC, CLEAN HARBORS AND RCI.-Recovered oil 1,800 GALLONS; Recovered fluids/solids 200 CUBIC YARDS; Recovered oil/water 3,000+ GALLONS .-8 SOIL SAMPLES WERE COLLECTED FROM THE EXCAVATION.-1 WELL INSTALLED; OIL SHEEN ON WATER.~~~~~~~~~~~~~~~DEC Responder notes (cont'd.):Results of well gauging/bailing/vacuuming:5/26/99: Well depth - 140" (11.7'); Top of product - 40.5"; Top of water - 29"; product thickness - 11.5". Well was vacuumed, approx. 400 gallons oil/water removed.6/4/99: Oil thickness 1', Depth to water 9'6". Approx. 500 gallons oil/water removed.6/9/99: Oil thickness 1'2", Depth to water 9'8". Approx. 500 gallons oil/water removed.6/16/99: Oil thickness (pre-vacuum) 1', Depth to water 9'3". No notation on how much oil/water removed. Post-vacuum oil thickness 1.5".6/25/99: Oil thickness 8", Depth to water 9'4". No notation on how much oil/water removed.7/28/99: Oil thickness 4", Depth to water 8'9". Approx. 350 gallons oil/water removed.Additional vacuum enhanced fluid recovery (VEFR) events occurred 7/11/00 (16 gallons); 10/27/00 (100 gallons); 1/24/01 (16 gallons); 4/17/01 (30 gallons); 10/4/01 (17 gallons); 4/4/02 (32 gallons); 10/24/02 (110 gallons).THIS IS PART OF APPENDIX B SITE 25/45. (JHO)Update 6/9/06Spill closed based on final site investigation report located in eDocs App. B Site 25. (SKA)

Remarks: CALLER STATES THAT UPON EVACUATING A FUEL LINE THERE WAS AIR IN THE LINE AND OIL POURED ONTO THE STREET. CLEAN UP IS UNDERWAY AND EXCAVATION WILL BE DONE.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

HARD CHROME ELECTRO PROCESSING CORP (Continued) **1000185169**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:
Program: BCP
Site Code: 491045
Site Description: BCP Denial Letter signed by DER Div Director on 2/19/14.Site Location: The proposed 94 N. 13th Street BCP site is located in the Williamsburg section of Brooklyn, Kings County. The site is made up of two tax parcels and is bordered by Wythe Avenue, N. 12th Street, and N. 13th Street.Site Features: The site is developed with two-one story commercial/industrial buildings which were built in the 1960's and are occupied. There is a small parking area and buildings cover most of the site area, which is approximately 1.147 acres in size.Current Zoning and Land Use: The site is zoned M1-2 which includes light industrial uses and is currently used by a manufacturer of clear plastic bags, and a manufacturer of wooden pallets. Past Uses of the Site: Previous uses were manufacturing and include the storage of manufactured gas and also as a plating facility. Site Geology and Hydrogeology: The geologic setting of Long Island is well documented and consists of crystalline bedrock overlain by layers of unconsolidated deposits. The bedrock in this area is igneous intrusive classified as the ravenwood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisteing of dredge spoils, rubble and/or other materials have historically been used to raise and improve the drainage of low lying areas. Subsurface soils consist of a mixture of a silty

94 N. 13TH STREET (Continued) **S116041508**

non-native fill, to a depth of approximately 12 feet below grade followed by sand and gravel. The elevation of the site is 15 feet above National Geodetic Vertical Datum (NGVD) and the area topography gradually slopes to the northwest.Groundwater is present at a depth of approximately 7 feet below the surface and is expected to flow north.

Env Problem: Nature of Contamination:Based upon investigations conducted to date, the primary contaminants of concern include benzene, toluene, ethylbenzene and xylene (BTEX), napthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene; various SVOCs (PAHs), including benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene; and several metals (lead, mercury, barium, nickel, zinc and copper).Soil- Subsurface soil contains maximum concentrations of BTEX (944 ppm), napthalene (280 ppm), total PAHs (218 ppm), lead (920 ppm), mercury (18 ppm). The metals concentrations were 920 ppm for lead, 18 ppm for mercury, 160 ppm for copper, 52 ppm for nickel, 2,300 ppm for zinc, and 2,400 ppm for barium.Groundwater- On-site groundwater contained low levels of PAHs, with a maximum concentration of total PAHs of 7 ug/L. Lead was detected at a maximum concentration of 254 ug/L.Off-site groundwater contained BTEX concentrations as high as 6,480 ug/L, 1,600 ug/L of napthalene, total PAHs of 1,670 ug/L, 600 ug/L of 1,2,4-trimethylbenzene,and 160 ug/L of 1,3,5-trimethylbenzene.

Health Problem: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

PAT & DOM'S COLLISION INC (Continued) **1004755884**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SPILL NUMBER 0207277 (Continued) **S104621824**

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"9/3/99 - Environmental firm was hired by company which is buying the on site company and leasing the land.Environmental firm did a phase 1 & phase 2 assessment with several wells and borings. Found floating product and contamination. SS told them to delineate the site, submit a profile of what is there now and a proposal of what will be done to clean it up. They asked about DEC going after a former owner, SS said no, DEC holds present owner responsible.Envir. firm will submit such a report "soon"2/18/2000 Sangesland called Mr. Pradhan at Malcolm Pirnie (614-888-4953). Left a voice mail to ask whatever happened to the report DEC asked for in Sept.99Report should include:1) Delineate the site2) Outline what is on the property now and what will be built3) Identify how the product will be remediated. ALSO SEE SPILL # 00033904/12/04-Vought-Spill transferred from Sangesland to Rommel as per Rommel.1/11/2006 - Haggerty - Malcolm Pirnie did Phase I,II site assessments to determine if this property was a canidate for development. After discovering free-floating product on groundwater, the decision was made not to develop this property. As far as I know, no additional investigation or remediation was done on site. I have made every attempt to locate responsible party with no luckI am requesting a site visitAlternate addresses 70-72 Wythe Ave 91-101 N 12 St 82 N 13 St 58 Wythe Ave 92 N 13 St I believe this property is located at the intersection of North 13th and Wythe AveRegion 2 rep visited the site, but could not get inside to inspect.Site is rented to "Nations Rent" - Oscar Parker salesman - 718-387-4872Posted sign showed two different property managers:Segal Realty Group LLC 718-388-9000M.C. O'Brien Inc. 718-252-9191Albany review (above) - jcgrathw1/29/07 - Austin - Transferred from Albany assignment to Patel in R-2 office for further work - end03/09/07-Hiralkumar Patel. left message for Bill Blaker (718-387-4872), tenant (Nations Rent) at site.03/14/07-Hiralkumar Patel. spoke with Mr. Blaker. he gave Mr. Prigozen's number (718-366-7930). spoke with Sage Prigozen. he will ask his father, who is owner of property, to call.received message from Mr. Prigozen (Cell: 917-750-4112), property owner.03/16/07-Hiralkumar Patel. spoke with Mr. Prigozen, property owner. currently he is living in Florida. as per him, they found this contamination during tank removal and has all paperwork in storage in NY. he will submit these paper once he comes to NY in June 07.Elliot Prigozen3400 Pen American DriveMiami, Florida 33133Ph. (917) 750-4112 (C)Fax (305) 860-6699email: elliotp@bobcatzone.com06/14/07-Hiralkumar Patel. tried cell number for Elliot, but no success. left message for Elliot's son.06/15/07-Hiralkumar Patel. left message for Elliot's son.06/18/07-Hiralkumar Patel. received call from Elliot Prigozen. he searched for records and found some reports on tank removals. asked him to send copy of those reports. Mr. Prigozen will be back in city after 10 days and will send copies at that time.PBS #: 2-091030. as per PBS record, site had following tanks:1. two 1,500 gal Lube Oil UST, closed and removed in July 20002. one 1,500 gal gasoline UST, closed and removed in July 20003. four 550 gal diesel USTs, closed and removed in Dec. 19984. one 1,000 gal diesel AST, closed and removed in Apr. 20025. one 550 gal gasoline UST, closed-in-place in June 19896. one 550 gal diesel UST, closed-in-place7. one 1,100 gal gasoline UST, closed-in-placetotal 11 tanks were on-site.sent letter to Mr. Prigozen requiring Phase I, soil and groundwater delineation. letter emailed to Mr. Prigozen.07/02/07-Hiralkumar Patel. received message from Mr. Prigozen. left message for Sage Prigozen as Elliot's

SPILL NUMBER 0207277 (Continued) **S104621824**

number was busy.07/05/07-Hiralkumar Patel. received copy of three reports from Mr. Prigozen. 1. addendum to tank closure report (don't have original tank closure report) for four 550 gal USTs2. geoprobe investigation report for soil investigation in area of previously removed four 550 gal USTs (four 550 gal USTs were located in parking lot along Kent Avenue)3. closure report for four 1500 gal tanks, which were located near main entrance (on north side) along north 12th street, and were removed in June 2000. addendum to four 550 gal USTs closure includes a further review of sample analyticals for samples taken after tanks removed in Aug. 1998. during tank removal found heavy SVOC contamination in three endpoint samples out of four samples.geoprobe investigation in area of previously removed 550 gal USTs was done as found heavy SVOC contamination during endpoint analysis. abstract:- report prepared on Oct. 7, 1998- four borings were installed (one on each side of excavation area of previous 550 gal UST location)- three soil samples from the smear zone at approx. 7 ft bg, were chosen for analysis: S-1 (southeast of excavation), S-3 (northwest of excavation) and S-4 (northeast of excavation)- all three samples were analyzed for SVOCs only (as didn't found VOCs in previous sampling)- few SVOC contamination found in sample S-3 (which is along Kent ave)abstract of tank closure report for 1500 gal tanks:- removed four 1500 gal single wall, concrete-encased USTs.- from regional water table maps, groundwater occurs approx. 15 ft bg and flows in a northwesterly direction- tanks were located approx. 4 ft bg- tanks were in good condition with no corrosion. no visible holes or leaks were noted- sidewall samples were collected at 8 ft and bottom sample was collected at 12 ft bg- groundwater was not encountered at the site during excavation- approx. 79.16 tons of contaminated soil were removed- highest PID observed in west side wall sample (PID: 398.3 ppm)- due to observed staining, odors and documented PID readings, the DEC was notified (spill #: 0003390)- minor contamination found in soil endpoint samplesspoke with Mr. Prigozen. explained him that spill was reported as found free product on groundwater during environmental investigation in 1999. and during tank removal activities, no groundwater sample was taken. asked him to delineate groundwater contamination. asked him to install monitoring wells atleast to previous tanks locations (one along kent ave and one along north 12th street). sent email to Mr. Prigozen with specific requirement of monitoring well locations.07/09/07-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he removed four 550 gal tanks from his site, which were located along Kent Avenuen and based on closure report addendum, there was no soil contamination. and he believes that groundwater contamination, found in 1999, came from Texaco oil terminal along Kent Avenue. asked Mr. Prigozen to look for investigation report from Aug. 1999, based on which this case was reported. if monitoring wells, during that investigation, were installed along kent ave and found contaminated then based on groundwater flow direction data (if available in report), the department can ask upgradient property to do investigation, but if no site specific groundwater flow direction or previous monitoring well location available to the Deparment, then the department requires him to do groundwater delineation with site-specific groundwater flow direction. Mr. Prigozen will look for report.07/09/07- Sangesland received a call from an Environmental consultant in Charlotte, North Carolina. He asked if the DEC required work to be done by a licenced New York State Prof. Engineer. Sangesland said no. The only requirement is the lab used for testing

SPILL NUMBER 0207277 (Continued) **S104621824**

must be NYS Licenced and if any material is removed from the site it must be taken by a licenced hauler.07/13/07-Hiralkumar Patel. received limited Phase II report from Mr. Prigozen. abstract:- an affidavit dated 06/13/1989 indicates that one 550 gal gasoline tank was purged and filled with concrete slurry in the sourthern portion of the site- two soil borings and nine monitoring wells were installed- highest PID reading found in boring BK-6 (595 ppm) at 5 to 7 ft bg <--------- groundwater sample was not obtained from boring location BK-6, which was installed closed to sediment trap area <---------- based on site topography and nearby waterways, it is determined that the nearby groundwater flow direction is to the northwest- free product was measured in two monitoring wells (MW-10 with 1.5 inch and MW-7 with 0.05 inch of free product) <---------- minor tetracholorethane was found in (assumed) upgradient groundwater samples (BK-1, BK-2 and BK-3)- MTBE contamination (236 ppb) found in groundwater samples MW-2 and MW-3 (area near abandoned gasoline tank)- highest contamination found in soil sample at BK-6 (near old sediment trap)----------Xylene----BenzeneBK-6 (1-3 ft)------8,730-----2,025BK-6 (3-5 ft)------3,320-------327//during Phase II, borings were installed to maximum depth of 17.5 ft bg, but report doesn't mentioned about groundwater depth.// 07/18/07-Hiralkumar Patel. after reviewing available reports found following:- no groundwater depth information- free product in wells MW-7 and MW-10 along Kent Avneue, but no groundwater flow direction- MTBE contamination in groundwater sample at BK3, which is close to previously abandoned gasoline tank location- benzene and xylene contamination in sample at BK-6, which is close to sediment trap. no groundwater sample taken from there.spoke with Mr. Prigozen. based on available data, asked Mr. Prigozen to do following:- soil and groundwater sampling at previous sampling location BK-6 (as found Benzene and Xylene in soil and had highest PID during Phase II investigation)- soil and groundwater sampling at previous sampling location BK-3, close to previously abandoned gasoline UST (as found MTBE in gw)- complete groundwater delineation (with atleast three permanent monitoring wells and site specific groundwater flow direction) in area of previous boring locations MW-7 and MW-10.asked Mr. Prigozen to check any previous wells exists on site. if not then he needs to install new wells. based on available data and reports, asked Mr. Prigozen to disregard requirement of Phase I investigation, as mentioned in letter dated June 18, 2007.07/19/07-Hiralkumar Patel. sent letter to Mr. Prigozen requiring soil/groundwater sampling at previous boring locations BK-3 and BK-6 and complete groundwater delineation in area of previous boring locations BK-7 and BK-10. letter emailed to Mr. Prigozen with map (from former phase II report) indicating locations where the Department requires further investigation.09/06/07-Hiralkumar Patel. received email from Mr. Prigozen. he is contacting companies for price quote.09/13/07-Hiralkumar Patel. left message for Mr. Prigozen. received call from Mr. Prigozen. he is reviewing quotes from companies and will fanalize next week. he will send company's name next week with scheduling and estimated date for report submission.09/20/07-Hiralkumar Patel. received email from Mr. Prigozen. he has hired Hart & Hickman to do the investigative work. they will be on site in two to three weeks. Theron GrimHart & Hickman, PCPh. (704) 586-0007Mr. Prigozen will call once get dates finalized for investigation work.09/28/07-Hiralkumar Patel. received

SPILL NUMBER 0207277 (Continued) **S104621824**

email from Mr. Prigozen. contractor will start work on Oct. 8th, 2007.10/23/07-Hiralkumar Patel. received call from Mr. Grim. he just received analytical data from lab and they found contamination and free product in groundwater. Mr. Grim will submit report within two weeks. asked Mr. Grim to send analytical data, groundwater flow direction and site map with sampling locations for review. he will send these tomorrow.10/26/07-Hiralkumar Patel. received analytical data for few samples and site map. found soil and groundwater contamination in area of former sediment trap. waiting for full report.11/06/07-Hiralkumar Patel. spoke with Mat Ingalls Hart & Hickman, PC. Mr. Grim is no longer working there. Mat is sending report to Mr. Prigozen to review and approval and once gets approval, he will forward report.Mat IngallsPh. (704) 887-4617email: mingalls@harthickman.com11/15/07-Hiralkumar Patel. received report from Mr. Ingalls. abstract:- installed four soil borings (BK-3A, BK-6A, BK-7A and BK-10A); three soil samples (BK-3A, BK-7A and BK-10A) were advanced to depth of 5 ft below grade adjacent to existing wells and boring BK-6A was installed adjacent to the northwest corner of the sediment trap and was advanced to depth of 12 ft bg (later converted to temporary well)- installed one temporary well (BK-6A)- found high PID in BK-6A (from 21.3 ppm to 2,350 ppm with max at water table at 7 ft depth)- sampled recently installed temporary well and two existing wells (BK-3 and BK-7)- depth to groundwater at the site ranges from approx. 5 ft bg in the northern portion of the site to 10 ft bg in the southern portion of the site- map indicates shallow groundwater generally flows to the southwest <--------- during static water level measurements, 2.37 ft of free product was measured in monitoring well BK-10 <---------- directly south of the bayside fuel oil depot and also upgradient of the subject site is the former Williamburg Manufactured Gas site.soil analyticals:----------BK-6A (5-7 ft)Benzene----------895Ethylbenzene----------16, 300Isopropylbenzene----------3,180p-Isopropyltoluene-------10, 200n-Propylbenzene----------5,7801,2,4-Trimethylbenzene---22, 200Xylene----------2,530groundwater analyticals:----------BK-6Benzene----------2, 110Ethylbenzene----------844MTBE----------257Naphthalene----------6971,2,4-Trimethylbenzene--3, 020Xylene----------247conclusions:- based on groundwater elevation data and lack of impacts at the potential source area well BK-7 (previous 550 gal USTs area), it appears the free product in well BK-10 is likely from an offside source- Bayside fuel oil depot is located adjacent and upgradient, and site is under Voluntary Cleanup Program (ID #: V00587-2) <---------- petroleum impacts identified in soil sample collected from BK-6A are likely associated with four 1500 gal USTs located adjacent to sediment trap- lack of groundwater impacts in downgradient monitoring well BK-3 indicates impacts from onsite or upgradient sources have likely not migrated off-sitereport missing following:- no analysis done to identify product found in well # 10- no site specific groundwater flow direction available- no information about tidal influence on flow direction11/20/07-Hiralkumar Patel. left message for Mr. Ingalls to provide missing information. sent email to Mr. Prigozen and Mr. Ingalls with missing information including detailed scaled site plan with all major suspected sites in neighbourhood.11/21/07-Hiralkumar Patel. received message from Mr. Ingalls. left message for Mr. Ingalls.11/26/07-Hiralkumar Patel. received email from Mr. Ingalls

SPILL NUMBER 0207277 (Continued) **S104621824**

proposing fingerprint analysis of oil from well # 10, 12 hour tidal survey and detailed site map. sent email to Mr. Ingalls asking 24 hours of tidal survey (instead of 12 hours), fingerprint analysis and detailed site map with surrounding area.11/28/07-Hiralkumar Patel. received call from Mr. Ingalls. they will do tidal survey on two day period as access available from 8 am to 6 pm only. will submit report after Dec. 10, 2007.12/13/07-Hiralkumar Patel. received addendum to Phase II report. abstract:- collected groundwater elevation data from monitoring wells BK-3, BK-4, BK-7, BK-8, BK-10 and BK-11 <---------- product was found in wells BK-10 and BK-4 <---------- tidal influence survey indicates that the monitoring well water levels were consistent during the observation period (9.5 hours) and showed no tidal influence <--------- direction of groundwater flow was determined to be southeast <---------- product observed in BK-10 is highly weathered middle distillate such as diesel oil or fuel oil <--------- floating free product (approx. 0.46 ft) was observed in BK-4; BK-4 is located near four former 1500 gal USTs- collected sample from BK-04 and held at lab (not analyzed)- Bayside Oil is located upgradient from subject sitebased on following, contractor believes that product in BK-10 is from off-site:- product thickness (2.67 ft)- degree of weathering and biological degradation- sepearation distance (approx. 50 ft) and cross gradient location of BK-10 from the former UST basin- confirmed site groundwater flow direction to the southeast- absence of floating product in BK-7 installed in the immediate vicinity of former UST basinsummary:found free product in two wells: BK-4 and BK-10. BK-4 is located in area of previous 1500 gal USTs and BK-10 is located close to corner of Kent ave and N. 13th st. oil in BK-4 could be from previously removed tanks on-site, but oil in BK-10 could be coming from off-site.spoke with Matt. he mentioned that they did not found well BK-4 during Phase II investigation, but found during recent well survey. found free product in well and took sample and it is on hold, in lab. asked Matt to analyze sample from BK-4. also asked him to monitor and remove product from existing wells on-site.discussed with DEC Austin. as owner suspecting off-site spill that impacting well BK-10 at his property, Austin asked to pump out product, weekly for a month to see if any more product comes to the site and then based on product recovery data, may require futher work by site owner.sent email to Matt and Mr. Prigozen requiring analysis of sample from BK-4 and monitoring and product removal from existing wells on weekly basis.12/24/07-Hiralkumar Patel. spoke with DEC Leszek, who is handling project at Bayside Oil. he confirmed that there was no product found in two monitoring wells (MW-4 & MW-12) located along Kent ave, near 91 N 12th street site.01/08/08-Hiralkumar Patel. spoke with Matt. he submitted proposal for product removal but haven't heard back.spoke with Mr. Prigozen. he hasn't hire anyone to remove product. asked Mr. Prigozen to remove product from wells on his property and also explained him to install well upgradient from well # 10, on sidewalk, to prove any off-site migration.01/15/08-Hiralkumar Patel. spoke with Mr. Prigozen. he has authorized Matt to pump product out. asked him to schedule upgradient well installation on sidewalk along kent ave. he is waiting for proposal from Matt.left message for Matt to submit analyticals for sample taken from well # 4. also asked to submit schedule for product removal and to plan for upgradient (from well # 10) well installation.01/17/08-Hiralkumar Patel. received message from Matt. left message for Matt.received analyticals for sample from well BK-4.

SPILL NUMBER 0207277 (Continued) **S104621824**

during fingerprint analysis, found product from well BK-4 in range from degraded gasoline or similar material to diesel or fuel oil. well BK-4 is installed in area of previous 1500 gal USTs.01/24/08-Hiralkumar Patel. received call from Matt. they are removing product from BK-4 and BK-10. asked them to continue removing product from these wells for about a month and then based on remaining product, the department may require downgradient well from BK-4 and upgradient well from BK-10. Matt will send report.03/20/08-Hiralkumar Patel. left message for Mr. Ingalls to submit product recovery data. sent email to Mr. Ingalls and Mr. Prigozen to submit product recovery data by end of 03/28/08.03/24/08-Hiralkumar Patel. received message from Mr. Ingalls. they finished field work and will submit report, once get Mr. Prigozen reviews it.03/27/08-Hiralkumar Patel. received report from Mr. Ingalls. abstract:- fingerprint result indicate that the product observed in BK-4 is a mix of low boiling material such as petroleum solvent or degraded gasoline, and a middle distillate such as diesel fuel or fuel oil that has undergone extensive biological degradationapparent product thickness (in feet) in BK-4 and BK-10:----------01/21/08---------02/06/08---------02/14/ 08----------02/21/08BK-04---------0.53----------0.21----------0. 29----------0.34BK-10---------2.55----------0.76----------0. 56----------0.9104/25/08-Hiralkumar Patel. left message from Mr. INgalls to continue product recovery from both wells until finds clean groundwater.based on recent product recovery report, product thickness in wells BK-04 and BK-10 has been reduced. but closest well to well BK-10 is BK-07 which is 50 ft away and crossgradient and next downgradient well from BK-10 is BK-06A which is 250 ft away and has groundwater contaminated. also closest well to BK-04 is BK-06A which is about 40 ft away and crossgradient and there are no downgradient well from BK-04. discussed with DEC Austin. as product thickness in both wells reduced, Austin believes that this could be localized problem. Austin asked for complete horizontal delineation of groundwater contamination around BK-04, BK-10 and BK-06A. Austin asked to call owner regarding continuous recovery of product and about further groundwater investigation work.spoke with Mr. Prigozen. asked him to continue product recovery from both wells. also mentioned to him regarding further groundwater delineation. Mr. Prigozen still believes that product in both wells coming from off-site.sent letter to Mr. Prigozen requiring removal of product from existing wells and further soil/groundwater delineation around wells BK-04 and BK-10 and previous boring location BK-06A. letter emailed to Mr. Prigozen and Mr. Ingalls.04/30/08-Hiralkumar Patel. received call from Mr. Ingalls. they still believes that product in BK-10 is coming from off-site. they are planning to install well on sidewalk to see any off-site migration. Mr. Ingalls asked for number of wells around BK-10 and BK-04. mentioned to Mr. Ingalls that the department requires complete delineation which may require multiple wells on-site as well as off-site. asked him to install one permanent well at previous boring location BK-06 as found contaminated groundwater in previous investigation and BK-06 is cross gradient from BK-04.06/04/08-Hiralkumar Patel. left message for Mr. Ingalls. spoke with Mr. Prigozen. they are currently removing oil from wells and will install required well in two weeks.07/08/08-Hiralkumar Patel. spoke with Mr. Ingalls. they are removing oil from wells on weekly basis but haven't heard from owner regarding further well installation. spoke with Mr. Prigozen. he was out for work and just

SPILL NUMBER 0207277 (Continued) **S104621824**

came back. he will talk to Mr. Ingalls regarding further well installation and will submit schedule by end of 07/18/08.08/25/08-Hiralkumar Patel. left message for Mr. Prigozen.09/19/08-Hiralkumar Patel. spoke with Mr. Ingalls. he mentioned that he tried few times but no response from Mr. Prigozen. left message for Mr. Prigozen.09/22/08-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he was out of country and will contact Mr. Ingalls. will install wells in early october. Mr. Prigozen will ask Mr. Ingalls to call with work schedules.12/01/08-Hiralkumar Patel. left message for Mr. Ingalls.spoke with Mr. Prigozen. he will call back as was busy.12/02/08-Hiralkumar Patel. received message from Mr. Prigozen. left message for Mr. Prigozen.12/03/08-Hiralkumar Patel. received call from Mr. Ingalls. they are still waiting for authorization for required work.received call from Mr. Prigozen. he mentioned that he has gave authorization long time back. asked Mr. Prigozen to contact Mr. Ingalls to solve this confusion and asked to call back with work schedule.received call from Mr. Ingalls. he spoke with Mr. Prigozen and Mr. Prigozen asked him to start work after New Year holiday. mentioned to Mr. Ingalls that required report is overdue since June 2008 and the department can't approve any more extension. he will contact Mr. Prigozen and will call back.12/04/08-Hiralkumar Patel. received call from Mr. Ingalls. he got approval from Mr. Prigozen for additional work. he spoke with drilling company and can start work from 12/22/08. approves it and asked Mr. Ingalls to submit proposed well location map alongwith existing well locations.sent email to Mr. Ingalls to submit proposed well location map, by end of 12/09/08, including locations of previous borings and wells. email copied to Mr. Prigozen.12/05/08-Hiralkumar Patel. received email from Ed from Hart & Hickman with proposed well location. they are proposing to install three wells: one upgradient from BK-10 (along property boundry along Kent ave), one downgradient from BK-04 (along N. 12th street) and one downgradient from previous boring BK-06 (across sediment trap which might be route for groundwater contamination.)Edward H. StephensHart & Hickman, PCPh. (704) 586-0007 (704) 887-4609Fax (704) 586-0373email: EStephens@harthickman.comsent email to Ed and Mr. Prigozen approving proposed well locations. email copied to Mr. Ingalls. required investigation report submission by the end of Jan. 26, 2009 and weekly submission of well monitoring/product recovery data.12/09/08-Hiralkumar Patel. received call from Ed from Hart & Hickman. he asked about location of well BK-14. he proposed to install well downgradient from sediment trap instead of at BK-14. mentioned to Ed that the Department wants well at (suspect) source location (which is sediment trap) to capture mostly contaminated material and based on findings, more wells needs to be installed.12/15/08-Hiralkumar Patel. spoke with Ed at Hart & Hickman. they have scheduled well installation on 12/29/08.01/06/09-Hiralkumar Patel. received email from Ed. they installed four monitoring wells on 12/30/08 and will submit report once gets sample analyticals.02/04/09-Hiralkumar Patel. received email from Ed with site map including results of recent groundwater investigation. four more wells (or borings) were installed. well/boring BK-12 installed upgradient from BK-10. no contamination found in BK-12. well/boring BK-14 installed near previous sediment trap and found contaminated groundwater. well/boring BK-13 installed on southwest side of BK-14, where no contamination found. well/boring BK-15 was installed on northwest of BK-4 and found contaminated

groundwater.groundwater
analyticals:
----------BK-14------BK-15Benzene----------1,
060Ethylbenzene----------468Xylene----------204Naphthalene--
----------738------1,04002/11/09-Hiralkumar Patel. received call
from Ed. he mentioned that during recent survey, they found
groundwater flowing in southeast towards northwest portion of the
site (near intersection of Kent ave and N. 13th street) and
groundwater flowing in south direction towards southeast portion of
the site (near intersection of N. 12th street and Wythe ave).
according to recent groundwater flow direction, BK-13 is downgradient
from BK-14, but cross gradient from BK-4. asked Ed for off-site
investigation, downgradient from wells BK-15 and BK-4. also asked for
weekly monitoring and recovery of free product. Ed will speak with
Mr. Prigozen and will submit complete investigation
report.02/12/09-Hiralkumar Patel. received additional Phase II report
(analyticals recorded earlier). abstract:- four borings were advanced
to depth of 15 ft bg- one soil sample, with highest PID, from each
boring was sent for analysis- groundwater flows to the southeast in
the western portion and to the south in eastern portion of the site-
found 1.78 ft of free product in BK-10A- strong odor found during
installation of wells BK-12 and BK-13- high PID readings were found
during installation of BK-13 (276 ppm at 5 ft) and BK-14 (729 ppm at
6 ft)conclusions from Ed:- "free product was not observed in BK-12
(which is upgradient from BK-10) during the recent assessment, it is
not common to observe a delay in free product recharge into newly
installed monitoring well. BK-12 should be observed over time to
confirm occurence of free product."- "based on local groundwater flow
direction and the absence of a potential on-site source in the
vicinity of the observed free product at BK-10A, H&H believes the
observed free product has migrated on-site from the upgradient
Bayside Oil Depot."- "based upon the result of the receptor survey,
soil and groundwater assessment, existing poor groundwater quality in
the vicinity of the subject property, and a documented upgradient
source of groundwater impacts including free product, soil and
groundwater impacts at the site can be most effectively managed
through LAND USE RESTRICTIONS AND STANDARD ENGINEERING
CONTROLS."02/20/09-Hiralkumar Patel. spoke with Ed regarding
conclusions in submitted report. mentioned to Ed that clean
groundwater was found in upgradient well BK-12 which indicates no
off-site source. Ed mentioned that they will go back to site to check
well again as suspecting that newly installed well could recharge
slowly.spoke with Mr. Prigozen. based on results of investigations
till date, asked him to start weekly monitoring of all wells, and
removal of any product, immediately. also asked him for off-site
investigation downgradient from wells BK-4 and BK-15. told him that
product must be removed from wells by next week (end of 02/28/09) and
weekly there after.02/23/09-Hiralkumar Patel. spoke with Mr.
Prigozen. will do product removal on 02/25/09.alternate addresses: 58
Wythe Ave, 91-101 N 12 St, 70-72 Wythe Ave, 82 N 13 St, 92 N 13
Stfound two old closed spill reports:1. 0003390:- consolidated with
this spill2. 0207277:- surface spill reported02/25/09-Hiralkumar
Patel. spoke with Mr. Prigozen. he has hired his mechanic guy to bail
out product from wells. he mentioned that he got directions from Ed
how to remove product and got some forms for recording. he also
mentioned that they have waste oil tank on-site and they will collect
product into this on-site tank and will pump out tank once get full.

SPILL NUMBER 0207277 (Continued) **S104621824**

asked Mr. Prigozen to call once he reach to site tomorrow (02/26/09). Mr. Prigozen asked to send STIP at following address:Sylvan Holdings LLC. **property owner**c/o Sage Prigozen **Elliot's son**58-64A Maurice AvenueMaspeth, NY 11378Ph. (917) 750-4112 (C)Fax (305) 860-6699email: sagep@bobcatzone.com02/26/09-Hiralkumar Patel. received call from Mr. Prigozen. he has hired Tri-State environment for product removal (not local mechanic). will submit report. asked him to remove product weekly.02/27/09-Hiralkumar Patel. received call from Mr. Prigozen. he is planning to hire some local investiation team for further investigation. will call back with company's name who will do further investigations.sent STIP to Mr. Prigozen (7005 1820 0007 9827 6066). STIP emailed to Mr. Prigozen.03/13/09-Hiralkumar Patel. received call from Paul from Ecosystems. they have been hired by Mr. Prigozen. will submit work plan for additional investigation.Paul CiminelloEcosystems Strategies Inc.Ph. (845) 452-1658 (O) (914) 475-4208 (C)Email: paul@ecosystemsstrategies.com03/16/09-Hiralkumar Patel. received STIP delivery confirmation (letter delivered on 03/11/09).03/25/09-Hiralkumar Patel. received email from Ecosystems with work plan for further investigation. abstact:- will put absorbent pads in wells BK-4 and BK-10 as an interim remedial measure; pads will be changed, as needed, on a weekly basis- will verify groundwater flow direction- propose to install six to ten borings on site- borings will be extended (at a minimum) to the soil/groundwater interface or until refusal- at least two soil samples will be collected: one with highest PID and one at groundwater interface; if no PIDs found then only one soil sample will be collected at groundwater interface- convert one to two borings into a monitoring well- wells will be installed with a ten ft of screen; mimimum of 2 ft of screening will extend above water tableaccording to submitted site plan in proposed work plan, Ecosystems is planning to install all borings around BK-10, but no investigation proposed to delienation soil/groundwater contamination around BK-04. <----------spoke with Mr. Prigozen. told him that without having signed Stipulation agreement, i can't approve any work plan. Mr. Prigozen mentioned that his attorney asked him not to sign STIP as he might loose right to get fund from brownfield program. Mr. Prigozen will ask him attorney to call. Mr. Prigozen has choose to proceed with proposed plan without having approval from the department.spoke with Paul at Ecosystems. they are at the site today and are surveying all wells to confirm groundwater flow direction. they have put absorbent pads in wells and recovering free product. asked Paul about investigation around BK-04. he is currently concentrating on finding source for BK-10 and will eventually include investigation around BK-04. mentioned to him that the department requires investigation around BK-04 also and will only approve the work plan if includes soil/gw investigation around BK-04 along with investigation around BK-10.03/26/09-Hiralkumar Patel. received email from Larry Schnapf, environmental attorney representing Mr. Prigozen. Larry claims that contamination found in BK-10 is from an upgradient oil depot, so he advised his client not to sign STIP which result in waiver of righs to seek reimbursement from the spill fund. he mentioned that his client will sign STIP if oil spill fund waiver paragraph deleted from agreement.Larry Schnapfemail: Lawrence.Schnapf@srz.com04/01/09-Hiralkumar Patel. spoke with Paul at Ecosystem. groundwater flow direction found almost in same direction as found earlier. no product found in well upgradient from

SPILL NUMBER 0207277 (Continued) **S104621824**

BK-10.04/02/09-Hiralkumar Patel. received email from Paul with report. abstract:- groundwater flow measurements are broadly consistent with the findings of previous consultant- groundwater flowing towards the south- review of sanborn maps indicates that the western portion was associated with oil refining activities predominantly performed on the adjoining property to the west (towards bayside oil depot)- numerous tanks are shown on the site between 1887 and 1916- between 1905 and 1965 a tunnel, that appears to have contained pipes connecting both sites, extended beneath Kent ave <---------- according to sanborn maps from 1887 to 1916, western portion of the site (in area of Bk-10) was occupied by an oil refining company and site had multiple tanks on western portion- adjoining to the southwest was MGP site from 1887 to 1916- 1942 sanborn map showing a tunnel beneath kent ave between the subject site and western property (currently bayside oil depot)spoke with Mr. Schnapf. Mr. Schnapf mentioned that they are suspecting that old tunnel between two properties (current bayside oil depot and subject site) might be bringing contamination on his client's property. he is planning for more soil and groundwater investigation and investigation about a tunnel before signing STIP. discussed with DEC legal and legal division agreed with this. asked Mr. Schnapf to submit revised work plan for soil and groundwater investigation around BK-4 and BK-10 and tunnel investigation with time schedule. Mr. Schnapf will ask Paul to submit revised work plan by 04/06/09.spoke with Paul at Ecosystems. asked him for revised work plan. also asked him to submit site map with approx. locations of following:- BK-10, BK-4- previous tanks on the property (from 1887 to 1916)- adjoining MGP site- tunnel under kent ave04/06/09-Hiralkumar Patel. sent email (at 3:30 PM) to Mr. Prigozen to submit revised work plan by 4 PM today.received revised work plan. abstract:- absorbent booms will be used in wells BK-04 and BK-10 as an interim remedial measures- will sample all wells- proposes to dig minimum of three test pits in area where tunnel was located- test pits will be extended to a maximum depth of 10 ft bg or until groundwater is reached- if contamination found in soil during test pit installation, samples will be collected and soil will be removed for off-site disposal- total of 8 to 12 soil borings will be extended across the site with 3 to 5 of these boring being completed as wells- borings will be extended (at a minimum) to the soil/groundwater interface- two soil samples will be collected from each borings: one at soil/groundwater interface and one at highest PID- will submit investigation report within 10 weeks of the approval <--------04/07/09-Hiralkumar Patel. sent work plan approval letter to Mr. Prigozen. letter emailed to Mr. Prigozen, Paul and Mr. Schnapf.04/16/09-Hiralkumar Patel. received email from Richard Hooker from Ecosystems. will start investigation work at 8 AM on 04/23/09.05/06/09-Hiralkumar Patel. received email from Richard. they completed extension of test pits at the western property line and the sampling and laboratory analysis of all existing wells. will install on- and off-site monitoring wells and extension of soil boring on-site on 05/13/09.06/16/09-Hiralkumar Patel.4:58 PM:- received email from Paul. he just received comments on the draft report from client and will incorporate these changes. will submit report tomorrow.06/19/09-Hiralkumar Patel.3:21 PM:- received investigation summary report from Paul. abstract:- one test pit was installed immediately southeast of center point of western property line- eleven soil borings were installed: nine borings (B-1 through B-9)

SPILL NUMBER 0207277 (Continued) **S104621824**

were installed in the vicinity of BK-4 and two borings (B-10 and
B-11) were installed in the vicinity of BK-10- sampling was conducted
at each boring location at five-ft intervals to a maximum depth of 20
ft bg or until refusl was reached- test pit documented the presence
of a 10 inch diameter iron pipe in a brick-lined depression- broken
end of pipe was found approx. 2.5 ft bg and the pipe was found to
extend down to approx. 6 ft bg before turning sharply west beneath
Kent Ave- water was encountered in test pit at approx. 4 ft bg and no
evidence of contamination was encountered <---------- field
evidence of contamination was observed at the groundwater interface
at most borings extended in the vicinity of BK-4 <---------- no
field evidence of contamination was encountered in the vicinity of
BK-10 <=========- soil borings B-1, B-9 and B-10 were completed as
temporary monitoring wells MW-1, MW-2 and MW-3 respectively- screen
interval from 2 ft above to 8 ft below static groundwater level- free
product was noted in monitoring well MW-2 (B-9) and remains in BK-10-
previously unknown well (MW-4) was discovered to the northeast of
BK-10- found free product in BK-10: 4.7 inches of product on 03/25/09
and 4.2 inches of product on 05/13/09 <---------- found 1.5 inch of
free product in MW-2 <---------- borings B-10 and B-11 were
installed to the southwest and southeast of BK-10; soil samples from
these borings at the groundwater interface found no contamination-
boring B-10 was converted into well MW-3; sampled MW-3 and previously
unknown well MW-4 (20 ft north of BK-10) and found no contamination-
soil samples from borings collected in the area of BK-4 indicate
significant, but uneven soil contamination immediately southeast of
the repair shop; these results confirm the presence of an area of
subsurface petroleum contamination beneath and southeast of the
repair shop- petroleum odors found in borings B-1 throgh B-9- high
PID readings found in borings B-2, B-5, B-6 and B-7PID readings (in
ppm):depth (in

will submit RAWP by 07/17/091:45 PM:- spoke with Mr. Prigozen. based
on results of further investigation, informed him that the department
requires stipulation agreement signed before reviewing or approving
any remediation action work plan. also asked him to schedule a site
visit. he agreed to meet at the site at 10 AM on 07/01/09.2:03 PM:-
received call from Paul. he spoke with Mr. Prigozen and will meet at
10 AM on 07/01/09.07/01/09-Hiralkumar Patel.10:00 AM:- visited site.
met Mr. Prigozen and Paul. repair shop nearby entrance along N. 12th
street consists three 275 gal ASTs: two for fresh oil and one for
waste oil. waste oil tank is not registered. asked Mr. Prigozen to
register waste oil tank. inpected areas around sediment trap/repair
shop, BK-10, old abandoned tunnel and previosly abandoned gasoline
UST. Paul mentioned that abandoned tunnel extends towards BK-10. Paul
will submit RAP by 07/17/09. proposes to excavate area by repair shop
entrance as found heavily impacted soil in boring B7. asked Mr.
Prigozen to excavate all following areas:- around BK-10 (as it could
be localized problem)- entire abandoned tunnel running towards BK-10
(to investigate any more product in tunnel)- in front of repair shop
in area of B-7- around B-9/MW-2 as found free product in itsuggest to
remove old abandoned gasoline UST as found 236 ppb MTBE in well BK-3
nearby tank location. Paul suggest to sample BK-3 again before any
excavation in this area. mentioned to Mr. Prigozen that based on gw
analytical results from BK-3, the department doesn't require removal
of the tank, but as they will do excavation in other part of site, it
will be easy to use on-site equipments to dug this suspected area.
Mr. Prigozen will discuss with Paul regarding gasoline UST
removal.found self-contained parts cleaning machine with small tank
(probably 15-20 gal). no stains/odors found around parts cleaning
machine.found well cap missing for BK-10. asked Paul to replace it.
asked Mr. Prigozen to send his tenant's contact info.12:46 PM:-
received email from Mr. Prigozen with tenant's contact info.David
WilliamsDirector of Real Estate and ConstructionSunbelt Rentals800
Hartford TurnpikeShrewsbury, MA 01545-4107Ph. (508) 925-1611 (O)
(508) 245-1107 (C)email: David.williams@sunbeltrentals.com 1:40 PM:-
left message for Mr. Williams.3:51 PM:- sent revised STIP to Mr.
Prigozen. asked him to submit signed STIP by end of
07/13/09.07/06/09-Hiralkumar Patel.1:45 PM:- received message from
Mr. Williams.07/24/09-Hiralkumar Patel.10:41 AM:- received work plan
from Ecosystems. proposes to monitoring/recover product from wells,
excavate contaminated soils from areas of B-7 and
BK-10.07/27/09-Hiralkumar Patel.10:40 AM:- spoke with Paul about work
schedule. today he will send cost estimates to Mr. Prigozen and
expect to start work by Aug. 3, 2009. asked him to send confirmed
work schedule.10:43 AM:- sent email to Mr. Prigozen approving
proposed plan and asked to submit work schedule. email copied to
Paul.08/06/09-Hiralkumar Patel.11:53 AM:- left message for Paul about
work schedule.12:18 PM:- received message from Paul. he met property
owner and tenant yesterday to coordinate excavation and planning to
start work on 08/14/09. will send email with confirmed
schedule.08/12/09-Hiralkumar Patel.10:39 AM:- received email from
Paul. they will start soil excavation on 08/21/09 and expect to
finish by 08/22/09.2:10 PM:- sent email to Paul. asked him to call me

SPILL NUMBER 0207277 (Continued) **S104621824**

once excavation starts as planning to visit site during endpoint sample collection.08/21/09-Hiralkumar Patel.8:48 AM:- spoke with Richard (845-803-2709) at Ecosystems. they have started excavation in area of BK-10. found contaminated sand, construction debris and clay layer. thick clay layer found right below water table.11:20 AM:- received call from Richard. while digging area around BK-10, well was destroyed and found brick structure in ground and heavily contaminated soil.2:00 PM:- visited site. area around BK-10 was excavated and patially backfilled after collecting endpoint samples. found water in excavation, but no product. Richrd mentioned that brick walls found on both side of BK-10 running parallel to N. 13th Street. Richard believes that this channel in ground around BK-10 was holding some product which was appearing in BK-10.crew was excavating area around B-7 (in front of garage entrance) at the time of site visit. found sticky black material from excavation with strange odors. Richard believes that this black material could be source of heavy contamination in B-7. will excavate to depth of 8 ft where contamination found during soil investigation.crew was also working inside garage where B-2 was installed and product found in MW-2. will collect appropriate endpoint samples.left site around 3 PM.3:47 PM:- received call from Mr. Prigozen. while working inside garage around MW-2, they found abandoned tank in ground. will investigate more.08/22/09-Hiralkumar Patel.9:25 AM:- received call from Mr. Prigozen. they are planning to remove tank.08/24/09-Hiralkumar Patel.8:09 AM:- received call from Mr. Prigozen. he mentioned that tank removal is not possible as tank is located closed to foundation wall. it is about 1,500 gal tank. as per Mr. Prigozen, tank was full of product when discovered. asked him to pump out tank, clean it and then collect soil samples through bottom and sides of the tank to confirm no contamination around tank.08/25/09-Hiralkumar Patel.10:58 AM:- spoke with Mr. Prigozen. they pumped out at least 3,000 gal of product from tank. currently cleaning tank.09/23/09-Hiralkumar Patel.2:22 PM:- received call from Mr. Williams from Sunbelt Rentals inquiring about waste oil tank registration.2:26 PM:- sent email to Mr. Williams with PBS registration form and instruction.09/28/09-Hiralkumar Patel.2:54 PM:- left message for Paul inquiring about cleanup report.10/30/09-Hiralkumar Patel.2:25 PM:- received tank closure and cleanup report from Ecosystems. abstract:- found shallow (18 inches) dark-stained soil immediately beneath the asphalt during excavation around BK-10- beneath the stained material, found construction debris to 7 ft bg around BK-10; no evidence of contamination- immediately beneath well BK-10, a brick lined channel was encountered at 10 ft bg; expanding northwest-southeast for approx. 15 ft, the channel contained grossly contaminated sandy soil and debris- excavation in area immediately southeast of the machine shop found no field evidence of contamination until groundwater was encountered at approx. 7 ft bg and in shallow soils at the far southeastern corner of the excavation where an area of heavy, bituminous material was encountered at between 2 and 3 ft bg- found 3,000 gal previously unknown UST in area of MW-2 inside shop- collected four soil samples through sidewall and two soil samples through bottom of 3,000 gal tank- collected total of six endpoint soil samples (four sidewalls and two bottoms) from each excavations at BK-10 as well as outside of repair shop- collected groundwater samples from wells BK-4, BK-13, BK-14, BK-15 and MW-1- found little SVOC contamination in endpoint soil samples, but no VOC contamination- found VOC contamination in groundwater sample from

SPILL NUMBER 0207277 (Continued) **S104621824**

BK-13 (but as per report dated 03/04/10, sampling data for BK-13 and BK-14 were switched in the subject report and contamination was actually found in BK-14)- proposes quarterly monitoring for a year based on groundwater result from BK-13VOC
result:
----------BK-14Benzene----------570Toluen
e----------86Ethylbenzene----------530Xylene------
----------2391,2,4-Trimethylbenzene-----1,
400Naphthalene----------430MTBE----------8711/
02/09-Hiralkumar Patel. reviewed all previous soil and groundwater data and found:- according to Limited Phase II Environmental Site Assessment, dated Aug. 16, 1999, no contamination found in soil sample in BK-4 at 7-9 ft- found free product in well BK-4, BK-10 and well MW-2 (inside repair shop)- found soil contamination at the entrance of repair shop- contaminated soil removed from area around BK-10 and at the entrance of repair shop- found old 3,000 gal tank inside repair shop nearby MW-2- collected soil samples through walls and bottom of 3,000 gal UST and found no contamination- installed two wells BK-13 and MW-1 downgradient from BK-4- no free product ever observed in BK-13 and MW-1- no free product or groundwater contamination observed in BK-4 during sampling in Oct. 2009- found soil and groundwater contamination in area around sediment trap (BK-6 and BK-6A)- found high PID in BK-6A throughout boring (from 21.3 ppm to 2,350 ppm with max at water table at 7 ft depth)- no excavation conducted in area of sediment trapspoke with Richard about excavation around sediment trap and BK-6/BK-6A area. Richard mentioned that as found clean sidewall sample from excavation in front of repair shop area, they didn't excavated area around sediment trap.11/03/09-Hiralkumar Patel.9:35 AM:- spoke with Mr. Prigozen and informed him that the department requires removal of contaminated soil from area of BK-6/BK-6A (as there was soil contamination above water table and high PID readings during installation of boring BK-6A). also mentioned that the Department suggest to excavate area around BK-4, while excavating area around BK-6A, as found free product earlier. Mr. Prigozen requested copy of site map and he will discuss with Ecosystem.9:52 AM:- spoke with Richard about location of 3,000 gal tank and MW-2 inside repair shop. Richard mentioned that MW-2 was about 6 ft from tank's north end and there was drain between tank and MW-2. they removed contamination from drain and MW-2 areas. MW-2 was destroyed during excavation work.10:32 AM:- sent email to Mr. Prigozen with copy of site maps with sample analyticals and asked Mr. Prigozen to remove contaminated soil from area of sediment trap. email copied to Paul.11/20/09-Hiralkumar Patel.3:02 PM:- spoke with Mr. Prigozen regarding excavation in sediment trap. he spoke with Paul and waiting for his response. will call back.11/24/09-Hiralkumar Patel.10:39 AM:- received email from Richard. they are discussing with Mr. Prigozen and will call back by next week.12/04/09-Hiralkumar Patel.2:43 PM:- left message for Mr. Prigozen.2:47 PM:- spoke with Richard. they are currently discussing and will call back by end of 12/07/09.3:45 PM:- received call from Mr. Prigozen. he spoke with Richard and will call back once gets answer from Ecosystem next week.12/09/09-Hiralkumar Patel. received email from Ecosystem (at 5:20 PM on 12/08/09) including response to soil excavation requirement in area of BK-6/BK-4 (response was recalled immediately). Ecosystem proposed for quarterly groundwater sampling instead of soil excavation in area between BK-6 and BK-4 based on endpoint samples from recent excavation and groundwater sample results in Oct.

SPILL NUMBER 0207277 (Continued) **S104621824**

20092:15 PM:- spoke with Mr. Prigozen. based on level of soil contamination and depth of water table, suggested Mr. Prigozen to excavate area around sediment trap and BK-4 to remove probably last spot of contamination. Mr. Prigozen mentioned that he would like to do excavation, if any, in his presence. he is out of NY during winter and will be back in summar. he requested to postpone soil excavation, if any, till summer.based on spill history and soil/gw sample results, approved Mr. Prigozen's request to postpone any soil excavation till summer, but required monthly monitoring and quarterly sampling from existing wells.2:31 PM:- spoke with Richard at Ecosystem regarding their response which was recalled. Richard mentioned that there is some change in it and will send revised one. Richard requested to hold requirement of gw monitoring and sampling until they submit revised response.12/15/09-Hiralkumar Patel.11:38 AM:- spoke with Richard regarding response to soil excavation in area of BK-6/BK-4. Richard mentioned that owner's attorney is currently reviewing it and will submit soon.12/21/09-Hiralkumar Patel.2:02 PM:- spoke with Richard and asked to send document by end of tomorrow.12/22/09-Hiralkumar Patel. received email from Richard (at 4:29 PM on 12/21/09) including response regarding excavation in area of BK-6/BK-4. Ecosystem recommends at least three quarterly rounds of groundwater sampling from existing wells and continued monitoring of the booms in BK-4 prior to decision regarding implementation of any additional remediation.12/23/09-Hiralkumar Patel.1:37 PM:- left message for Mr. Prigozen and informed him that the department is agreed with recommendations for three rounds of quarterly sampling. asked him to provide dates for first round of sampling.1:39 PM:- spoke with Richard. informed him that the department agreed with their recommendation of quarterly groundwater sampling. asked Richard to send dates for first round of sampling.1:53 PM:- sent email to Mr. Prigozen and asked to submit first quarterly groundwater sampling report by the end of 02/12/10. email copied to Richard and Paul.2:54 PM:- received call from Mr. Prigozen. he received email and will ask Paul to collect groundwater samples in Jan. 2010.03/04/10-Hiralkumar Patel.12:02 PM:- received first quarterly groundwater sampling report. collected groundwater samples from wells MW-1, BK-4, BK-13, BK-14 and BK-15 on 02/01/10. groundwater samples were analyzed for VOCs (via 8260) only. no free product observed in well BK-4. found VOC contamination in groundwater sample from BK-14 and very minor contamination in other wells. but as per report from Oct. 2009, no contamination found in BK-14, but contamination was found in BK-13. Paul mentioned that sample results for BK-13 and BK-14 were switched in report dated 10/30/09.groundwater
analyticals:
----------BK-14Benzene----------469Toluen
e----------89Ethylbenzene----------485Xylene------
----------2011,2,4-Trimethylbenzene-----1,
290Naphthalene----------266MTBE----------6106/
22/10-Hiralkumar Patel. received quarterly groundwater sampling report from Ecosystems. on 06/08/10, they sampled wells MW-1, BK-4, BK-13, BK-14 and BK-15. found contamination in groundwater sample from well BK-14: the well in previous sediment trap area. found only MTBE (71 ppb) in well BK-4. will sample wells again in Sep. 2010.groundwater
analyticals:
----------BK-14Benzene----------600Toluen
e----------92Ethylbenzene----------470Xylene------

SPILL NUMBER 0207277 (Continued) **S104621824**

----------1961,2,
4-Trimethylbenzene-------930Naphthalene----------250MTBE------
----------6411:56 AM:- spoke with Mr. Prigozen. informed
him that groundwater is contaminated near sediment trap area and if
they continue groundwater monitoring and are planning for no
excavation, then this case may be transferred to remediation group
for long-term remediation. Mr. Prigozen will discuss with Ecosystems
and will call back by 07/10/10.07/28/10-Hiralkumar Patel.11:08 AM:-
received email from Mr. Prigozen. he mentioned that they will
excavate area around BK-6/BK-4 in August, 2010. Ecosystem will send
work schedule.08/04/10-Hiralkumar Patel.9:01 AM:- received email from
Richard. they have scheduled a soil excavation around sediment trap
on 08/12/10. work will start at 9 AM.09/13/10-Hiralkumar Patel.11:51
AM:- sent email to Paul inquiring updates. email copied to Mr.
Prigozen.11:53 AM:- received email from Paul. he will submit report
by end of Sep., 2010.10/26/10-Hiralkumar Patel.1:56 PM:- received
supplemental remediation report from Ecosystems. the submitted report
doesn't include info about depth of endpoint sidewall samples and
sample analyticals were compared with Part 375 instead of TAGM
4046.10/27/10-Hiralkumar Patel.10:22 AM:- spoke with Richard at
Ecosystems regarding excavation dimension and endpoint sampling
depths. Richard mentioned that final excavation was approx. 50 ft by
30 ft to 15 ft depth. they collected endpoint sidewall samples at
groundwater interface (at 7 ft depth) and bottom soil sample was
collected at 15 ft depth. as per Richard, groundwater was seeping
into excavation at very low rate, so groundwater was not present in
exavation for sampling. asked Richard to submit revised report
including info about sidewall sampling depth and sample results
comparison with TAGM 4046 instead of Part 375.10:31 AM:- left message
for Mr. Prigozen. informed him that based on results of endpoint
samples, the department requires further
investigation/remediation.10:40 AM:- sent email to Richard asking to
submit revised report. email copied to Mr. Prigozen.11:38 AM:-
received call from Mr. Prigozen. he mentioned that he doesn't remeber
discussing about excavation around BK-4 and based on groundwater
sampling results, he does not want to dug in area of BK-4. informed
Mr. Prigozen that based on quarterly groundwater sampling results
from BK-4, the department does not require excavation, but based on
endpoint sample results from recent excavation, the department
requires further investigation/remediation.11/30/10-Hiralkumar
Patel.9:32 AM:- spoke with Rich. he will submit revised report. they
are proposing for groundwater monitoring at this time and based on
monitoring results, may propose additional investigation in former
sediment trap area.12/02/10-Hiralkumar Patel.2:13 PM:- received
revised report from Ecosystems.- excavated area around former
sediment trap and well BK-14- no field evidence of contamination
until groundwater was encountered at approx. 7 ft bg and in shallow
soils at the far southeastern corner of the excavation where an area
of heavy, bituminous material was encountered at between 2 and 3 ft
bg- during excavation, petroleum odors and PID readings between 300
and 600 were recorded- five endpoint samples (four sidewalls and one
bottom) were collected from excavation- sampled groundwater in wells
BK-4, BK-13, BK-15 and MW-1- petroleum contaminated soils remain at
depths greater than 15 ft below the former sediment trap and below
static water level- found heavy contamination in bottom endpoint soil
sample- very minor VOC contamination found in groundwater samples
(max 43 ppb MTBE in BK-4)----------bottom 15 ft

SPILL NUMBER 0207277 (Continued) **S104621824**

bgBenzene----------3,
400Toluene----------2,
900Ethylbenzene----------31,
000Xylene----------5,4001,2,
4-Trimethylbenzene---------210,000Naphthalene----------29,
000Isopropylbenzene----------19,
000n-Butylbenzene----------33,
000n-Propylbenzene----------37,000due to heavy soil contamination in endpoint bottom sample and heavy contamination in groundwater sample from well BK-14, which was installed in the vicinity of the sediment trap, the department requires further complete delineation of soil and groundwater investigation including installation of one well at the location of endpoint bottom sample with deeper screen.12/07/10-Hiralkumar Patel. discussed with DEC Austin regarding soil contamination below water table. he asked to contact MGP project manager in Albany as MGP site was in neighbourhood.11:10 AM:- spoke with DEC William Ottaway in Albany regarding MGP site. Bill mentioned that Douglas MacNeal is the project manager for MGP site (V-00732) on Kent ave. Bill mentioned that MGP waste contains very high SVOCs and may have some VOCs.reviewed recent report. no SVOCs found in any endpoint sample.1:38 PM:- sent letter to Mr. Prigozen requiring additional soil and groundwater investigation in former sediment trap area. letter emailed to Mr. Prigozen and Paul.12/20/10-Hiralkumar Patel.2:22 PM:- received message from Paul from Ecosystems.12/21/10-Hiralkumar Patel.2:31 PM:- left message for Paul.12/29/10-Hiralkumar Patel.1:35 PM:- received email from Rich. a well at the former sediment trap will be installed on 01/06/11.01/04/11-Hiralkumar Patel.3:21 PM:- spoke with Rich. they will start well installation work around 8 AM. he also mentioned that a new drain structure has been installed in the previous sediment trap area. so they have to relocate the new well. Rich will decide well location once visit the site.01/06/11-Hiralkumar Patel.10:01 AM:- received call from Rich. they installed boring in area close to former sediment trap. boring was installed to 19 ft depth where they found refusal. during boring, found 160 ppm on PID at groundwater interface (groundwater at 7 ft depth) and 75 ppm from 10-15 ft depth. there was no recovery in 15-20 ft range. the boring was installed in previously excavated area to 15 ft depth. so highest PID was found at groundwater interface in backfill material. a well will be installed in boring with 15 ft of screen. as high soil contamination found at 15 ft depth in endpoint sample from excavation and as no recovery in 15-20 ft depth, asked Rich to install another boring in area.11:15 AM:- visited site. Rich installed another boring to 20 ft depth and collected soil from 15 to 20 ft depth only. minor odor noticed in clayey material from 15 to 20 ft depth. asked Rich to collect two soil samples: one at 15-16 and one at 19-20 ft depth. Rich will sample all existing wells, around former sediment trap area, next week.02/17/11-Hiralkumar Patel.1:13 PM:- received supplemental investigation report from Rich. abstract:- two soil borings (2B-1 and 2B-2) installed in former sediment trap area- collected two soil samples from each boring: at 7 and 15 ft from 2B-1 and at 15 and 20 ft at 2B-2- installed 2 inch well (BK-14(R)) at boring 2B-1 with 10 ft of screen (from 5 to 15 ft bg)- sampled water from wells BK-4, BK-13, BK-14(R) and BK-15- no contamination found in any soil sample (not even in sample at 15 ft bg in 2B-1 which was collected in same area as endpoint bottom sample after excavation around former

SPILL NUMBER 0207277 (Continued) **S104621824**

sediment trap)- very minor contamination found in water samples except sample from BK-14(R)groundwater analyticals:----------BK-14(R) Benzene----------190Ethylbenzene----------280Xylene----------1201,2,4-Trimethylbenzene------1,300Naphthalene----------210- recommended sampling of wells MW-1, BK-4, BK-13, BK-14(R) and BK-15 after three months03/17/11-Hiralkumar Patel. discussed with DEC Austin. based on consistent data in well BK-14, Austin asked for remediation.3:16 PM:- sent letter to Mr. Prigozen requiring submission of a RAP for remediation of contamination in and around the area of the former sediment trap. letter emailed to Mr. Prigozen, Paul and Rich.05/20/11-Hiralkumar Patel.10:40 AM:- received call from Paul. he mentioned that as groundwater contamination found in only by former sediment trap area, he propose to monitor groundwater for some time before any active remediation. he will send work plan by 06/03/11.07/20/11-Hiralkumar Patel.1:46 PM:- received quarterly groundwater sampling report from Ecosystem. on 04/28/11, groundwater samples were collected from wells MW-1, BK-4, BK-13, BK-14R and BK-15 and analyzed for VOCs only. next round of quarterly sampling is schedule for the end of July 2011. found contamination in samples from BK-14R.groundwater analyticals:----------BK-14(R) Benzene----------44Ethylbenzene----------150Xylene----------1821,2,4-Trimethylbenzene--------380Naphthalene----------240Paul mentioned that results of groundwater samples support the conclusion that significant natural attenuation of contamination is taking place and he requested to close the case (but quarterly sampling is scheduled for end of July, 2011). need a revised report as confusing info in the report.08/03/11-Hiralkumar Patel.11:43 AM:- left message for Paul.12:32 PM:- sent email to Paul requiring to submit revised report. informed him that the Department requires minimum of two years of groundwater monitoring before considering case closure. asked him to submit revised report and results of groundwater samples that must have been taken in july 2011. email copied to Mr. Prigozen, Larry Schnapf (attorney) and Richard.08/05/11-Hiralkumar Patel.2:14 PM:- received call from Richard. he mentioned that as first round of groundwater samples taken in 2009, two years of monitoring is over and thats why they requested closure. informed him that the Department requires two years of groundwater monitoring after the replacement of well in the former sediment trap area.02/08/12-Hiralkumar Patel.3:42 PM:- spoke with Mr. Prigozen. he mentioned that groundwater samples were taken last month. asked him to submit report by the end of 02/17/12.3:45 PM:- sent email to Mr. Prigozen and asked to submit report by 02/17/12. email copied to Paul.02/10/12-Hiralkumar Patel. received email from Paul (at 5:55 PM on 02/08/12). he will submit report by 02/21/12.02/21/12-Hiralkumar Patel.11:22 AM:- received quarterly groundwater monitoring report from Ecosystems. abstract:- wells MW-1, BK-4, BK-13, BK-14R and BK-15 were sampled on 02/01/12- found very minor contamination in groundwater samples (max 41 ppb 1,2,4-Trimethylbenzene in BK-14R)04/02/12-Hiralkumar Patel. after reviewing available information, case closed based on results of soil endpoint samples and groundwater samples.3:35 PM:- sent spill closure letter to Mr. Prigozen. letter emailed to Mr. Prigozen and Paul.

Remarks: HISTORICAL SPILL-FLOATING PRODUCT ON GROUND WATER-SPILL WILL CONTINUE

DEC Memo:	Property is being sold. Purchaser hired a firm to do a phase 2 and found contaminated soil under a crack in the cement floor. This location used to have an oil tank standing above it.Eastern Environmental has been hired by the current owner. They have opened the floor and will have a "guzzler" truck suck out contaminated soil.In the next few days they "HOPE" to hit clean endpoints and send samples in to confirm cleanup is complete. If they do not get clean endpoints they will call Sharif Rahman directly for further instructions.10/08/10 Stopped by the site.The area in questionw was dug and contaminated soil was removed and excavation backfilled, cemented.Report will be sent to DEC.(sr)12/14/10 Rec'd analytical report for soil sample.VOCs/SVOCs exceedances are minor.Report in edocs.Case closed.(sr)05/12/11 Doug from Eastern Environmental(631-727-2700) called me to say that his company was not paid for the work and asked why the spill was closed without disposal

CON EDISON (Continued) **S104789770**

manifest.He also mentioned that the tank and associated contamination was removed properly.I explained it to him that the spill was closed based on end point data.(sr)

Remarks: onto concrete. Further Information Unknown at this time.

Site Description: Location:Transition from V00704 and C224055. The Williamsburg Works Manufactured Gas Plant (MGP) site is located in a commercial/industrial area in the Williamsburg section of Brooklyn New York in Kings County. The site is composed of three parcels of land located on the east bank of the East River between North 11th and North 12th Streets on the west and east sides of Kent Avenue.Site features: Site features include a vacant asphalt paved lot two large document storage warehouses ,a one-story glass fabrication factory that is currently vacant and a petroleum terminal. Current zoning and land use: The area is zoned Industrial/Commercial. The vacant lot is owned by the NYC Parks and Recreation Deptartment and used as an outdoor music venue.The document storage warehouses are in active use and the petroleum storage facility is being purchased by NYC Parks to be included in the Bushwick Inlet Park. The nearest residential property is located approximately 1 block to the south.Past use of the site: A manufactured gas plant operated om the site from at least 1887 to 1916. Following the decommissioning of the MGP, the now vacant lot was occupied by a NYC Department of Sanitation Garage that was demolished around 2000.The City of NY has identified this site for construction of a proposed waterfront park, which would extend far beyound site boundaries to the north and south. A Pre-Design Investigation for an IRM on the Parcel owned by NYC began in early 2012 and is scheduled to conclude in late 2012. The construction phase of the IRM is scheduled for late 2014/early 2015. The RI, begun in 2009 should be completed in the Autumn/winter of 2013. Site Geology and Hydrogeology:The site is underlain by: urban fill and varied glacial sediments consisting of outwash sand and gravel, till, and lenticular clay more than 100 feet in thickness. The groundwater table is approximately 7 feet below ground surface. Groundwater flows to the west, toward the East River.

Env Problem: According to the USEPA, a preliminary assessment (PA) was prepared for the site dated September 24, 1986. A copy of the PA was not supplied with the application. The environmental assessment for this site has not yet been completed. The site is the confirmed location of a historic MGP. MGPs have known onsite by products of DNAPL and purifier waste. The materials are made up of BTEX, PAHs, and cyanide. The DNAPL causes contravention of both groundwater and soil SCGs. The site is also adjacent to the East River and several public and private buildings, including residences. DNAPL is known to migrate into surface water bodies, contaminating sediment. The BTEX components are also known to contribute to soil vapor issues. There are already reports of tar seeping into the East River and tar has been found on an adjacent property.

K - WILLIAMSBURG WORKS (Continued) **S109209078**

Health Problem:	The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	4/24/2009 TTF letter sent to:NYC Dept of Field Operations - Fuel DivisionMr. James Merlo44-36 Vernon BlvdLong Island City, NY 111016/12/09. J.Krimgold reviewed and approved the proposed scope of work outlined in the letter report submitted by TRC and dated June 2, 2009.01/28/10. J.Krimgold reviewed the SIR dated 08/07/09 and concurs with conclusions and recommendations of the report. However, requested closure of waste oil tank and submittal of appropriate Bulk Storage Application.02/17/11 - LZThe waste oil tank was permanently closed in place (edocs), which meets DEC requirements. An application was submitted to change the status of the tank. However, it has been returned to the applicant since the tightness test for another tank at the facility is overdue.The spill case is closed.

DEC Memo:	3/21/2005 There was an earlier tank test failure spill number (0004062-DeMeo) which has now been closed out in favor of this new spill number.Earth Tech believes that the old tank was relined after the tank failed the prior tank test several years ago, however no work was ever done to remediate the contamination which occurred because of that leak. Earth Tech believes that approx 2 years ago this buried tank was taken out of service. Since that time the building has been supplied by an above ground 5,000 gal tank. Unknown if the buried tank was ever emptied.Earth Tech recently did soil borings around the UST area and came back with high contamination levels. This information was forwarded to the City SCA (SCA Contact:Lee Guterman 718-472-5802)SCA has now decided to removed the UST and excavate out the contaminated soil around it.Earth Tech is modifying the standard city bid package to site specific conditions and will work with the city as they put the excavation/remediation work out to bid. Bid package should go out around April 1st, 2005. Work should be done summer 2005.04/13/06- Case was transferred from Jake Krimgold to Koon

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued) **U000409472**

Tang.

----------7/9/07: Reassigned from Koon Tang to Kartik Chanda (Chanda)7/18/07: Kartik Chanda of DEC reviewed all documents regarding this spill case. On 7/18/07, Chanda sent a letter to Ms. Lee Guuterman, Manager IEH Department, NYC School Construction Authority, requiring that the following documents be submitted to the DEC for review by 9/4/07.1. An explanation of the cause of the tank system failure;2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank;3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system;4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation.10/29/07: Chanda called Mr. Drew Pardus(NYCSCA) to get updated information regarding this spill site. He stated that NYCSCA is finding the information regarding this spill. NYCSCA will send an investigation report shortly.12/6/07: Chanda received an email (see edocs) from Ms. Lee Guterman, NYCSCA. She stated that "The Investigation Summary Report for Automotive Trade HS has been prepared and is under my review. A Remedial Action Plan is being prepared and is anticipated to be completed by 12/15/07." 2/12/08: Chanda received a Subsurface Investigation Summary Report from NYCSCA, prepared by TRC Engineers, Inc. (TRC), dated November 9, 2007.2/28/08: Chanda has reviewed the Subsurface Investigation Summary Report and has the following comments:-Subsurface investigation report regarding the 20,000-gallon #4 fuel oil UST. -About two years ago, a tank tightness test was performed and the tank failed. At that time UST was taken out of service and a temporary 5,000-gallon AST was installed to supply #2 fuel oil to the boiler.-The soil data indicated that the UST had leaked and had contaminated the surrounding soils near the UST and the supply line to the building. VOCs and SVOCs were detected in soil samples. The greatest impacts appear to be in the immediate vicinity of the UST and just below the depth of UST near the water table. -VOC were not detected in groundwater beneath the site. Several SVOCs were detected in groundwater beneath the site. -The results of finger print analysis indicate that the impacts are associated with #4 fuel oil.- The groundwater table has been measured between 10 and 11 feet bgs.-Removal of UST and associated impacted soil could potentially damage the adjacent school building and concrete vehicle access ramp.3/3/08: Chanda discussed with Joe Sun (supervisor),and sent a letter with Stips and generalized Corrective Action Plan via certified mail to RP (Ms. Lee Guterman) and Mr. Drew Pardus (NYCSCA). The Department requires installation of permanent monitoring wells to determine the correct groundwater flow direction at the site. The signed STIP must be submitted to DEC by 3/25/08.3/24/08: The Stipulation Agreement was signed by the RP (The New York City Department of Education).3/31/08: Chanda sent a fully executed STIP to the RP and required that a Subsurface investigation and monitoring well installation report be submitted to DEC by 6/2/08 for review and approval.4/3/08: Chanda received a Subsurface Investigation Work Plan from NYCSCA, prepared by TRC Engineers, Inc. (TRC)dated March 18, 2008.4/4/08: Chanda has reviewed the Subsurface Investigation Work Plan and has the following comments:-TRC will advance ten (10) soil

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued) **U000409472**

borings across the Site as part of monitoring well installation. Soil samples will be analyzed for the STARS volatile organic compounds (VOCs) and STARS SVOCs.-TRC will install nine (9) two-inch diameter and one (1) four inch diameter flush mounted permanent groundwater monitoring wells. The wells will be screened approximately 5 feet above the water table and 10 feet below the water table. The samples will be analyzed for STARS VOCs and STARS SVOCs.4/7/08: Chanda sent the work plan approval letter to Ms. Lee Guterman, NYCSCA and her consultant (TRC Engineers Inc.), requiring that an Investigation Report must be submitted to the Department by June 2, 2008 for review and approval.4/17/08: Chanda received the following email from Mr. Drew Pardus, NYCSCA:"TRC is scheduled to start preforming the field work for theinvestigation on April 24, 2008. We will provide the investigationreport as soon as it is available.Please feel free to contact me if you have any questions or comments.Sincerely,Drew Pardus"6/2/08: Chanda received an email from Mr. Bob Kanaparthi, NYCSCA, regarding one week time extension to submit the Investigation Report for this site. Chanda sent an extension approval letter to Ms. Guterman, NYCSCA. The Deadline is extended to 6/9/08.6/9/08: Chanda received a Site Investigation Report from NYCSCA, prepared by TRC Engineers, Inc., dated June 6, 2008. (see eDocs)7/3/08: Chanda has reviewed the site investigation report and has the followings:-The site consists of a three-story public school building with basement, and asphalt-paved parking and landscaped areas.-The results of the analyses of the soil samples revealed detectable concentrations of VOCs and SVOCs.- Permanent flush mounted ten (10)GW monitoring wells were installed at the site.-The depth to groundwater measured at the Site is approximately 8 to 10 feet bgs.-No SVOCs detected in GW at concentrations exceeding Class GA Values.-Several VOCs were detected in GW samples.-NAPL was not encountered in any of the GW monitoring wells during gauging with an oil /water interface probe.-Based on GW table surface elevation measurements, only a slight gradient, indicating a predominant inward flow direction, exists beneath the site.Based on the results of site investigation, and considering the result of previous investigation, TRC concluded that there is a potential damage of school building that could result from attempting to remove the 20,000-gallon UST from the site. TRC recommended the following:* Permanently close-in-place the 20,000-gallon UST;* In-service waste oil UST identified during the geophysical survey is registered, operated and maintained in accordance with applicable regulations;* Close or take out of service the concrete vault in accordance with applicable regulations;* Monthly monitoring of the permanent groundwater monitoring wells for light NAPL to confirm that it is not present;* Implement a program to ensure proper maintenance of the asphalt pavement in the vicinity of the UST and impacted subsurface soil;7/9/08: Chanda discussed with Joe Sun, NYSDEC regarding the findings of the Site Investigate Report. It is concluded that the Department (DEC) requires that a Remedial Action Work Plan to remove all contaminated media from this subject site.7/11/08: Chanda sent a letter to RP (Ms. Lee Guterman, NYCSCA) and her consultant (TRC) requiring that a Remedial Action Plan (RAP) be submitted to DEC by 9/11/08 for review and approval.8/1/08: A meeting was held on 7/30/08 among DER staff, NYCSCA and TRC Environmental Consultant Inc. (TRC) to discuss the site investigation results and Remedial Action Plan (RAP) to remediate all the contaminated media. The meeting's consensus was that a RAP be submitted to DEC by 9/11/2008 for review and approval.9/11/08: A

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued) **U000409472**

follow-up meeting was held on 9/10/08 among DER Staff, Mr. Drew Pardus(NYCSCA), and Mr. David Glass (TRC Environmental) regarding the findings of the recent inspection of the school building basement for this site.As agreed at the meeting, NYCSCA will conduct the following activities associated with the Site:Clean the 20,000-gallon UST in accordance with applicable regulation but leave it unfilled to use a monitoring point for a short time.Clean the standing oil into the concrete vault. Evaluate the size and structure of the concrete vault and determine the piping layout associated with the vault. Also, determine if the pumping system is still in operation or needs to be.Clean the oil strains inside the basement areas and tank vault area to see if they return. Advance several monitoring wells in the vicinity of the 20,000-gallon UST.Prepare and submit a brief work plan with borings and monitoring well locations. Include an implementation schedule.9/11/08: Chanda sent a letter to Ms. Lee Guterman requiring that a brief work plan be submitted to DEC by 10/12/08 for review and approval.10/10/08: Chanda received a Site Investigation and Interim Remedial Scope of Work from NYCSCA prepared by TRC Engineers, Inc., dated 10/7/08. Chanda reviewed the work plan. The work plan has the following:* Investigation of Concrete Valt*Removal and Monitoring of "Seeps"* UST and Vault Cleaning and Inspection*Geophysical Survey* Four groundwater Monitoring Wells Installation and Sampling in the vicinity of the 20,000-gallon UST10/31/08: A meeting was held on 10/21/08 between DER staff and NYCSCA to discuss the project status and investigation work plan regarding this site. On 10/30/08, DEC approved the work plan. Chanda sent a letter to NYCSCA and Consultant (TRC) requiring that a report summarizing the findings of the investigation be submitted to the Department by December 30,2008. 05/13/2009: This spill case was transferred to A. Doronova. - ADReviewed the file. The investigation summary report requested by Kartik Chanda of DEC was not submitted yet. AD12/04/2009: Received a RAP. Will review. PDF copy is missing. To request its submission. AD12/08/2009: Received a pdf copy. DL to eDocs. AD12/30/2009: Reviewed the RAP. It states that based on previous investigations, evidence of a UST defect was not found; free product is present in soil and GW in the vicinity of UST, and is apparently being conveyed to the concrete vault via subsurface drainage system beneath the building basement; dissolved phase impacts to GW from the release are minimal and limited to the immediate vicinity of the UST. The RAP proposes the following: closure-in-place of 20,000-gallon UST and annual inspection of a concrete vault, the pump pit in the boiler room, and monitoring wells with removal of accumulated oil (if present). Proposed course of actions is questionable. To discuss the RAP with J. Kolleeny. AD01/06/2010: Discussed the RAP with J. Kolleeny of DEC. Called and spoke with D. Pardus of SCA regarding the RAP and vault investigation. He requested a meeting with DEC. Scheduled the meeting for January 21, 2010. AD 01/21/2010: I and J. Kolleeny of DEC met with Drew Pardus and Bob Kanaparthi of NYCSCA and Charles Guder of TRC. Discussed the proposed RAP. It was agreed that two additional soil borings will be adwanced in the vicinity of the concrete vault, and based in the field observation of the soil samples, one boring will be finished as a permanent monitoring well. It was decided that gauging of the site monitoring wells and vault pumping will be performed quarterly and GW sampling will be semi-annually. Addendum to the RAP will be submitted to DEC for review and approval. AD04/30/2010: Called and spoke with D. Pardus regarding submission of

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued) **U000409472**

the addendum to the RAP. He said that it was prepared and is now under review for budgetary approval. AD06/20/2011: Received an e-mail from Drew Pardus saying:"Ainura, In order to continue progress at Automotive Trade HS to remediate DEC Spill 0413160 and in light of constrained City budgets, an inspection of the out-of-service pump station where oil accumulates was performed. TRC's observations of this inspection and removal of oil from the out-of-service pump station (by PTC on behalf of DSF) are provided below. Another site inspection and visual monitoring of the permanent wells will be performed in approximately three months to determine if free product is observed. If no free product is observed after multiple inspections, SCA will request that the fuel oil tank may filled (i.e., closed via abandonment) and no further action for Spill Case 0413160. Please feel free to contact me at 646-577-8280 if you have any questions.Sincerely, Drew Pardus"DL the attached document to eDocs. AD03/27/2012: Received an e-mail from S. Kline of SCA saying:"Ms. Doronova- As per your request, our consultant (TRC) has prepared the attached remediation action work plan addendum for the above referenced spill case. Our consultant will proceed with the scope of work described in the attached documents as soon as we have NYSDEC approval and we have secured funding for these additional remedial measures. Since Drew Pardus is no longer working on this project, I will be the SCA point of contact for this project moving forward. Please contact me with and questions or comments. Regards-Stephen Kline, P.E.NYC School Construction AuthorityIEH Division30-30 Thomson AvenueLong Island City, NY 11101Cell (347) 242-7109Stephen.kline@gza.com"DL the attached report and letter to eDocs. Will review. AD04/20/2012: Reviewed the work plan. It states that TRC proposes to do site investigation via advancing two soil borings with collection of soil sampling; installation on one monitoring well; quarterly groundwater monitoring and free product recovery.Soil sampling will include the following:TRC will advance two (2) soil borings (TRC-SB-1 and TRC-SB-2) adjacent to the subsurfacedrainage pipe between the concrete vault and the building (refer to Figure 1 for the boringlocations). Geologic descriptions of the soil and field screening results will be recorded in field logs.One groundwater monitoring well (TRC-MW15) will be installed in one of the boreholes. The well will be installed in TRC-SB-1 as shown if no evidence of contamination is observed during the subsurface investigation. If contamination is observed, the monitoring well will be installed in the borehole showing the highest evidence of contamination.Quarterly groundwater monitoring will be performed for a period of one year. - Monitoring wells TRC-MW-1, TRC-MW-2, TRC-MW-3, TRC-MW-4, TRC-MW-5, TRC-MW-6, TRC-MW-7, TRC-MW-8, TRC-MW-9, TRC-MW-10, TRC-MW-11, TRC-MW-12, TRCMW-13, TRC-MW-14, and TRC-MW-15 will be inspected and gauged. Any wells found to be damaged will be assessed for re-installation. - The entire monitoring well network will be gauged and sampled during the first quarterlymonitoring event. If LNAPL is present in a well, groundwater will not be analyzed from thatmonitoring well. If the results of the analyses of groundwater from monitoring wells TRC-MW-6, TRC-MW-8, and TRC-MW-10 (upgradient wells) from the first quarterly sampling round arebelow Class GA Values, these wells will not be sampled during subsequent quarterly events.However, all wells will be gauged during each quarterly event. A quarterly monitoring report with conclusions and recommendations for further actions, if necessary, will be submitted to DEC. Vault Inspections and Product Removal:TRC will perform the

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued) **U000409472**

following activities under this task: - periodic inspections and product removal at the concrete vault for a period of one year. For the first quarter, TRC anticipates performing 6 events (three during the first month,two during the second month, and one during the third month). Inspections/product removalevents will occur once per quarter thereafter. - If oil is present in the vault, the procedure below will be followed: - The depth to the oil will be gauged and recorded; - The thickness of the oil and the thickness of the water will be gauged and recorded; and, - The oil and water will be removed from the vault by a vacuum truck for off-Site disposal. If no oil is detected in the concrete vault, the depth to the liquid in the vault will be gauged and recorded. - Similarly the boiler room pump pit and on-Site monitoring wells will be gauged for oil. If oil is detected in a groundwater monitoring well, the depth and thickness (if possible) of the oil will be measured and recorded, and the oil will be removed by a vacuum truck for off-Site disposal. If oil is detected in the boiler room pump pit, the pump system will be immediately shut down and the NYCDOE Division of School Facilities and the NYCSCA will be contacted to determine the appropriate course of action. - Waste generated will be properly transported off-Site for disposal in accordance with applicable laws and regulations. - The information collected during the vault inspections/product removal will be submitted with the quarterly monitoring reports. AD04/24/2012: Discussed the work plan with J. Kolleeny of DEC. AD04/25/2012: issued and sent an approval letter to L. Guterman of SCA. DL pdf copy of the letter to eDocs. AD12/21/2012: Received a Project Progress Report #1 from TRC. DL the report to eDocs. Will review. AD02/01/2013: Reviewed the report. It states that field activities were conducted at the Site between July 14 and October 18, 2012. During this period, the following activities were completed at the site: In-place closure of the 20,000-gallon underground storage tank (UST);A 20,000-gallon UST, which is located beneath an asphalt paved parking lot north of the school building, was formerly used to store No. 4 and No. 6 fuel oil for the school's boiler and was taken out-of-service in 2003 and was cleaned in 2009. In accordance with the NYSDEC-approved RAP and RAP Addendum, the 20,000-gallon UST was permanently closed in-place in accordance with the applicable requirements of the NYSDEC and the FDNY on July 26, 2012.Prior to closing the UST in place, the UST was inspected to verify that the UST did not require additional cleaning. The UST was observed to contain a small amount of water but there was no evidence of residual product. The remaining contents of the 20,000-gallon UST were removed utilizing a vacuum truck and the UST and concrete hatch were then completely filled with concrete slurry. Geophysical survey; Subsurface soil investigation and installation of a permanent monitoring well;A hollow stem auger rig was used to retrieve soil samples. Soil samples were collected and screened for evidence of field contamination continuously from the ground surface to theboring completion depth. No visual or olfactory indications of contamination were observed in any of the soil samples collected. Soil boring TRC-SB-1/MW15 was advanced, east of and adjacent to the subsurface drainagepipe, to approximately 21 feet bgs. One discrete soil sample, collected from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at approximately 11 feet bgs in TRC-SB-1/MW15. Soil boring TRC-SB-2 was advanced, west of and adjacent to the subsurface drainage pipe, toapproximately 21 feet bgs. One discrete soil sample, collected from 9 to 11 feet bgs,

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued) **U000409472**

wasselected for laboratory analysis. Groundwater was encountered at approximately 11 feet bgs inTRC-SB-2.Soil boring location TRC-SB-1/MW15 was converted into a permanent monitoring well and soil boring location TRC-SB-2 was patched at the surface with concrete. VOCs and SVOCs were not detected in any of the soil samples at concentrations above the SCLs for Fuel Oil Contaminated Soil found in Table 3 of CP-51. One round of Quarterly groundwater sampling;The first round of quarterly groundwater samples were collected from existing permanent monitoring wells TRC-MW1, TRC-MW3, TRC-MW4, TRC-MW-5, TRC-MW6, TRC-MW7, TRC-MW8, TRCMW9,and TRC-MW10, and from newly installed permanent monitoring well TRC-MW15 on July 26,2012, July 30, 2012 and August 2, 2012. LNAPL was present in monitoring wells TRC-MW2, TRCMW11, TRC-MW12, TRC-MW13, and TRC-MW14 and these wells were therefore not sampled. Thethickness of LNAPL in these monitoring wells could not be accurately gauged due to the viscosity of the LNAPL.An obstruction (debris) was encountered in TRC-MW9 on July 26, 2012, which was cleared by TRC on July 27, 2012 using one-inch PVC well screen. The well was redeveloped by TRC on July 30, 2012 and an inspection of the well and purge water indicated that the well was suitable for sampling. TRC-MW9 was sampled on August 2, 2012.The results of the analysis of groundwater sampling indicate that MTBE was the only VOC detected at a concentration exceeding the corresponding Class GA Value. MTBE was detected at a concentration of 8.3 ug/l in well TRC-MW8, which slightly exceeds the Class GA Value of 5 ?g/L for MTBE. Monitoring well TRC-MW8 is upgradient of the Site and TRC concludes that the concentration of MTBE in the well is likely attributable to an off-site source and not to an on-site release. No other VOCs were detected in any of the groundwater samples at concentrations exceeding Class GA Values. SVOCs were not detected in any of the groundwater samples at concentrations exceeding Class GA Values.With the exception of a marginal exceedance of MTBE in TRC-MW8, which is attributable to an off-site source or regional conditions, VOCs and SVOCs were not detected in groundwater samples collected. Therefore, TRC recommends that upgradient monitoring wells TRC-MW6 and TRC-MW10 will not be sampled during subsequent quarterly groundwater sampling rounds. Four months of concrete vault and boiler room pump pit inspections; Four months of monitoring well gauging; and Four months of light non-aqueous phase liquid (LNAPL) recovery events.The concrete vault north of the school building, the boiler room pump pit, and the groundwatermonitoring well network were inspected and gauged for the presence of LNAPL on July 26, August 2, August 9, September 5, September 26, and October 18, 2012 by TRC. LNAPL was present during these events in the concrete vault and monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, based on observations noted using a bailer, monitoring well TRC-MW11 was observed to contain only minimal amounts of LNAPL. LNAPL was not present in monitoring wells TRC-MW1, TRC-MW3 through TRC-MW10, TRC-MW15 and in the boiler room pump pit.LNAPL Product RecoveryPeriodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012.LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 on July 26, August 2,August 9, September 5, September 26, and October 18, 201. During the recovery events, the thickness of the LNAPL could

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued) **U000409472**

not be accurately determined due to the high viscosity of the LNAPL; however, based on observations noted using a bailer, the thickness of the LNAPL was estimated to be less than 6 inches. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck.The procedure for removal of LNAPL at the Site consisted of the following: The contents of the bottom of the concrete vault were removed below the elevation of thesubsurface drainage pipe. This allowed LNAPL present in the pipe to flow into the concretevault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containingLNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14). Since monitoring well TRC-MW11 was observed to contain only minor amounts of LNAPL, an oil absorbent sock was placed in this well for product recovery. The oil absorbent sock was removed and replaced during each recovery event and containerized in a 55-gallon steel drum which is staged on site.Approximately 15,604 gallons of LNAPL and water has been removed from the concrete vault andmonitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) fromJuly through October 2012. Table 5 presents the amount of LNAPL and water recovered during each extraction event. The following activities are planned by TRC during the second quarter.- Quarterly inspections and product removal of the concrete vault and monitoring wells TRCMW2,TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 will continue. Progress Report #2 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in January 2013.- The entire monitoring well network will be gauged during subsequent quarterly events. Quarterly sampling of the monitoring well network (with the exception of upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL) will continue. Progress Report #2 will include groundwater sampling results from the next round ofgroundwater sampling, which was performed in October 2012.AD03/04/2013: Received a project progress Report # 2. DL the report to eDocs. Will review. AD04/08/2013: Reviewed the report. It states that TRC performed field activities at the site between October 18, 2012 and January 25, 2013. During this period, the following activities were completed:- Two rounds of quarterly groundwater sampling (October 2012 and January 2013);- Concrete vault and boiler room pump pit inspection (January 2013);- Monitoring well gauging (January 2013); and- LNAPL recovery event (January 2013). Quarterly Groundwater Sampling:Groundwater samples were collected from 8 permanent monitoring wells: TRC-MW1, TRC-MW3, TRCMW4, TRC-MW5, TRC-MW7, TRC-MW8, TRC-MW9, and TRC-MW15 on October 17 and 18, 2012 and on January 21 and 22, 2013. LNAPL was present in 5 monitoring wells: TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 and therefore, these wells were not sampled.The results of the analysis of groundwater sampling indicate the VOC methyl tert-butyl ether (MTBE) was the only VOC detected at a concentration exceeding the corresponding Class GA Value during the October 2012 and January 2013 sampling events in well TRC-MW8:MTBE - 12ppb in October 2012 - 5.1ppb in January 2012Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging:The concrete vault north of the school building, the boiler room pump pit, and the groundwatermonitoring well network were inspected and gauged for the presence of LNAPL on January 21, 2013 by TRC. LNAPL was present in the concrete vault and in 5 monitoring wells: TRC-MW2, TRC-MW11, TRCMW12, TRC-MW13, and TRC-MW14. LNAPL was not present in the boiler room pump pit or inmonitoring wells TRC-MW1, TRC-MW3 through TRC-MW9,

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued) **U000409472**

and TRC-MW15.The thickness of the LNAPL cannot be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 on January 21, 2013. An oil/water interface probe was used to measure the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until the sound indicated the presence of water, then raising the probe until the oil indicator sounded.LNAPL Product Recovery:Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14 on January 21, 2013, consistent with the NYSDEC-approved RAP and RAP Addendum. During the recovery event, the thickness of the LNAPL in the concrete vault could not be accurately determined due to the high viscosity of the LNAPL. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck.The procedure for removal of LNAPL at the Site consisted of the following:- The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck.- The vacuum truck was then used to pump oil and water from the monitoring wells containingLNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14). The oil absorbent sock present in TRC-MW11 was saturated with LNAPL and was removed and replaced. The saturated sock was containerized in a 55-gallon steel drum which is staged on site. Approximately 3,650 gallons of LNAPL and water was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) on January 21, 2013. A total of approximately 40 gallons of LNAPL and water were removed from each monitoring well and approximately 3,490 gallons of LNAPL and water were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal.Approximately 19,254 gallons of LNAPL and water has been removed from the concrete vault andmonitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2013. Table 3 presents the amount of LNAPL and water recovered during eachextraction event.Although accurate measurements of LNAPL thicknesses in the wells were not able to be obtained during previous events, based on measurements obtained during the January 2013 extraction event, previous observations made via bailing and also during the extraction events, TRC states that the LNAPL thicknesses in the wells appear to be decreasing.TRC will continue with quarterly inspection and LNAPL removal from the concrete vault and monitoring wells. Progress Report #3 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in April 2013. AD05/24/2013: Received the following e-mail from TRC:"Ainura, Attached is Progress Report #3 for Spill Case No. 0413160 (Automotive Trade High School).Please review and contact me with any questions or comments.Thank you, Charles GuderSenior Project Manager"DL the report to eDocs. Will review. AD08/30/2013: Reviewed the report. It states that TRC performed field activities at the Site between April 9 and April 19, 2013. During this period, the following activities were completed:- Quarterly groundwater sampling;- Concrete

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued) **U000409472**

vault and boiler room pump pit inspection;- Removal of ancillary tank gauges and piping from the boiler room;- Monitoring well gauging; and- LNAPL recovery.Quarterly Groundwater Sampling;Groundwater samples were collected from monitoring wells TRC-MW1, TRC-MW2, TRC-MW3, TRC-MW4, TRC-MW5, TRC-MW7, TRC-MW8, TRC-MW9, TRC-MW11, TRC-MW14, and TRC-MW15 on April 18 and 19, 2013. TRC did not collect a groundwater sample from monitoring wells TRC-MW2, TRC-MW11 and TRC-MW14 during previous sampling events (October 2012 and January 2013) due to the presence of LNAPL in the monitoring wells. LNAPL was not present in these wells during this sampling event. In accordance with procedures detailed in the NYSDEC-approved RAP and RAP Addendum, sampling of upgradient monitoring wells TRC-MW6 and TRC-MW10 were discontinued after the initial quarterly groundwater sampling event. In addition, LNAPL was present in monitoring wells TRC-MW12 and TRC-MW13, therefore, these wells were not sampled. The results of the analysis of groundwater sampling indicate there were no VOCs or SVOCs detected at concentrations exceeding their corresponding Class GA Values.Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging: - The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on April 9, 2013 by TRC. Also on April 9, 2013, remnant gauges and piping associated with the closed-in-place 20,000-gallon UST were removed and wall pipe openings were sealed with cement.LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13. LNAPLwas not present in the boiler room pump pit or in monitoring wells TRC-MW1 through TRC-MW11,TRC-MW14, and TRC-MW15. As indicated previously, LNAPL was previously measured in monitoringwells TRC-MW2, TRC-MW11 and TRC-MW14 during the previous gauging events (October 2012 andJanuary 2013). The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW12 (0.07') and TRC-MW13 (0.1') on April 9, 2013.LNAPL Product Recovery:Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRC-MW13 on April 9, 2013. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck.Approximately 3,600 gallons of water mixed with LNAPL was removed from the concrete vault andmonitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on April 9, 2013. A total ofapproximately 25 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 3,550 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Although accurate measurements of LNAPL thicknesses in the wells were not able to be obtained during previous events, three wells which previously contained LNAPL do not currently contain LNAPL and observations made during bailing and the extraction events indicate that LNAPL thicknesses in the wells are decreasing.TRC is planning the following activities for the fourth quarterly LNAPL removal and groundwater sampling event:- Quarterly inspection and LNAPL removal from the concrete vault and monitoring wells. An additional vacuum truck will be used during the next LNAPL

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued) **U000409472**

removal event to ensure LNAPL present in the building underdrain pipe will flow out of the pipe and be removedfrom the vault. - Progress Report #4 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2013.- The monitoring well network will be gauged during the 4th quarterly event. Quarterly sampling of the monitoring well network (with the exception of upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL) will be performed during thisevent. No response needed. AD09/06/2013: Received a Progress Report # 4 for the site. DL the report to eDocs. Will review. AD10/15/2013: Reviewed the report. It states that between July 19 and July 24, 2013 TRC conducted at the site following field activities:-Quarterly groundwater sampling;-Concrete vault and boiler room pump pit inspection;-Monitoring well gauging; -LNAPL recovery.Groundwater samples were collected from permanent monitoring wells TRC-MW1 through TRC-MW5,TRC-MW7 through TRC-MW9, and TRC-MW11 through TRC-MW15 from July 22 through July 24,2013. Monitoring wells TRC-MW12 and TRC-MW13 contained LNAPL at minimal thicknesses (approximately 0.03 feet) when gauged on July 19, 2013; however, following vacuum extraction, measurable LNAPL was not detected, and these wells were sampled. The results of the analysis of groundwater sampling indicate that there were no VOCs or SVOCs detected at concentrations exceeding their corresponding Class GA Values.Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging:The concrete vault north of the school building, the boiler room pump pit, and the groundwatermonitoring well network were inspected and gauged for the presence of LNAPL on July 19, 2013 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13.LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW1 through TRCMW11, TRC-MW14, and TRC-MW15.The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW12(0.03') and TRC-MW13(0.03) on July 19, 2013 with an oil/water interface probe.LNAPL Product Recovery:Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRC-MW13 on July 19, 2013 using a vacuum truck.The procedure for removal of LNAPL at the Site consisted of the following:The contents of the concrete vault were removed below the elevation of the building underdrainpipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and waterwas then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13). The oil absorbent sock present in TRC-MW11 was removed and was placed in a 55-gallon steel drum on-site. A new oil absorbent sock was replaced in this well.Approximately 5,626 gallons of water mixed with LNAPL was removed from the concrete vault andmonitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on July 19, 2013. A total ofapproximately 25 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 5,576 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water waste was transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 28,480 gallons of water mixed with LNAPL have

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued) **U000409472**

been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to July 2013. In accordance with the NYSDEC-approved RAP and RAP Addendum, quarterly groundwater monitoring, inspections, and product recovery have been completed for a period of one year. The source of LNAPL at the site - the former 20,000-gallon UST, has been closed-in-place in accordance with 6 NYCRR Part 614. Approximately 28,480 gallons of groundwater/LNAPL mixture have been removed from the concrete vault and monitoring wells. At the initiation of the LNAPL removal program, measurable LNAPL was present in five monitoring wells (TRC-MW2, TRC-MW11, TRCMW12, TRC-MW13, and TRC-MW14). As of July 2013, there is measurable LNAPL in only two (2) monitoring wells (TRC-MW12 and TRC-MW13), at minimal thicknesses (approximately 0.03 feet).According to TRC, the results of groundwater sampling conducted to date show that, with the exception of the concentration of MTBE detected in well TRC-MW-8 during one sampling round, VOCs and SVOCs have not been detected at concentrations above Class GA Values. Therefore, the remaining residual LNAPL in the area of the closed-in-place UST and in the building under drain system is not impacting groundwater at the Site.TRC recommends the following:- Based on the analytical results, sampling of the monitoring well network is no longer required.- Bi-annual inspection and gauging of the monitoring well network should be performed. Absorbent socks should be placed (and replaced, as necessary) in monitoring wellscontaining measurable LNAPL.- Bi-annual (twice yearly) inspection and LNAPL removal from the concrete vault should continue until LNAPL is no longer observed for two consecutive six month periods.AD

Remarks: OLD TANK THAT WAS INSTALLED AND WANTED IT TO BE REOVED. THEY TOOK TESTS AND FOUND THAT THE TANK HAS LEAKED. THE TANK HAS FAILED MANY TIMES BEFORE. TOOK TESTS FROM THE SOIL. HAS NOT BEEN CLEANED OR REMOVED. OUTSIDE UNDERGROUND TANK. 20,000 GAL CAPACITY.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 11/04/2011
Facility name: RITE AID #10580
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"TRANSFERRED FROM Y.KRIMGOLD.Also, refer to spill # 9607376 & 9401167. 12/14/04-Spill Case is trnsferred to I. Islam. The site is under remediation by LiRo Engineers. - II4/22/05- Reviewed the quarterly monitoring report (Nov./04 - Jan./05). The monitoring data show persistently high level of both soil and groundwater contamination. LiRo claims that the long history of the site for operation as a manufactured gas plant (MGP) may be the cause of this. However, a letter has been issued in order for LiRo to consider alternative measure(s) to remediate the site. The monitoring report has been installed in the eDoc Folder. - II5/13/05- Afsar Samani of DDC raised the MGP issue of this site in the meeting with DEC on 5/4/05 as LiRo has written them either to increase the cost for remediation of the MGP related contaminants at the site or get the Key Span and/or other responsible agency handle the MGP site through DEC. Koon Tang is exploring with the Central office as to the finding of responsible agency to handle the former MGP site remediation.- II. 5/31/03- Joe Moloughney of Central Office confirmed via email that this site would be remediated under the KeySpan Consent Order for MGP sites. This site has been assigned with # 224055 as the MGP site.

BROOKLYN NORTH 01 DOS -DDC (Continued) **S102148163**

Therefore, the spill is closed.- II
Remarks: also ground water affected - reprts says that site is contaminated with petro and heavy metals. Also see spill # 9401167.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D009
Waste name: MERCURY

Waste code: D010
Waste name: SELENIUM

Waste code: D024
Waste name: M-CRESOL

Waste code: P001

RITE AID #4782 (Continued) **1014926849**

Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste code: P075
Waste name: NICOTINE, & SALTS

Violation Status: No violations found

DER Facility ID:	272130
DEC Memo:	Tipple was at the site at 6:40 AM and discovered the spill.Detailed work outline was discussed with Bayside and Classic Fuel to clean up both the yard area and the street.08/10/06: This spill is transferred from Mr. Koon Tang to Q.Abidi.Called Pat at (718)372-9800 and talked to Ms. Dana regarding status of the spill. She said that when Mr. Pat will come she will find about it and she will convey my message to Pat. Mr. Pat will call me back. -QA09/22/06: On September 21, received a closing confirmation letter from Mr. Albert Cirino (Model Petroleum Transportation INC.). According to Mr.Cirino the spill was on concrete. No water and no land were contaminted by the spill. the spill is cleaned. Also talk to Bayside Terminal manager Mr. Sergio, He said they clean their yard. Also talk to Mr. John (718)388-1515 he said yard is asphaltand asphalt is sealed, it is not open dirt. John spoke on phone that they picked up each & every pocket of the product. so according to letter of Albert Cirino and Conversation with John and Terminal Manager Sergio DEC Staff closed the spill. -QA

Tank ID:	011
Tank Location:	ABOVEGROUND ON SADDLES LEGS, STILTS, RACK, OR CRADLE
Install Date:	11/89
Product:	UNKNOWN
Tank Status:	In Service
Tank Type:	Steel/carbon steel
Tank Internal:	None
Tank External:	1
Pipe Location:	Aboveground
Pipe Type:	STEEL/IRON
Pipe Internal:	None
Pipe External:	Painted/Asphalt Coating
Second Contain:	Excavation/Tranch Liner
Leak Detection:	In-tank System
Overfill Protection:	High Level Alarm
Dispensing Mthd:	Suction
Test Date:	11/89
Date Closed:	Not reported
Status of Data:	Complete
Capacity (gal):	8000
Lat/Long:	40|43|29 / 73|57|37
Federal ID:	Not reported
Inspected Date:	09/29/1997
Inspector:	AS

DEC Memo: 07/02/08 - LZARCADIS submitted a report dated June 26, 2008, documenting wells' decommisssioning.01/23/08 - LZAs advised by the Regional Spill Engineer, the spill case is closed and the presence of MGP contamination at the site referred to Gardiner Cross, Central Office, Remedial Bureau C, for further investigation. An NFA letter was sent out (eDods).11/23/07 - ZielinskiARCADIS BBL submitted a report, dated November 13, 2007, containing groundwater analytical results of sampling conducted on October 17, 2007. A sheen was detected in MW-18(an off-site well). Benzene was detected above groundwater standards limit (0.7 ppb) in twelve wells. The highest concentration was noticed in MW-14R(390 ppb), MW-11(180 ppb), B-2(110 ppb), MW-15(34 ppb), MW-19(35 ppb).Toluene was detected above the limit (5 ppb) in MW-11(17 ppb), MW-14R(21 ppb), B-1(16 ppb), and B-2(11 ppb).Ethylobenzene was detected above the limit (5 ppb)in the following wells: MW-9(5.7 ppb), MW-11(9.2 ppb), MW-14R (35 ppb), MW-19(29 ppb), B-1(13 ppb), and B-2(12 ppb).Total xylens were detected above the limit(5 ppb) in MW-9(20 ppb), MW-11(6.4 ppb), MW-14R(130 ppb), MW-15(8.4 ppb), B-1(46 ppb), and B-2(100 ppb).MTBE was detected above the limit (10 ppb) at MW-5 (11 ppb), MW-6(48 ppb), MW-12(79 ppb), and MW-14R(21 ppb).Acenaphtalene, napthalene, benzo(a)anthracene, benzo(b)fluoroanthene, and benzo(k)fluoranthene were detected above groundwater limits at MW-19(an off-site well). Acenaphthene was detected in MW-9 (20 ppb). 09/19/07 - ZielinskiA letter requesting a one round groundwater sampling for the presence of SOVs, SVOCs, and MTBE was sent to ARCADIS BBL. 09/06/07 -ZielinskiHistorical information on spill # 9804544, 1 North 12th Street, Brooklyn, NY August 28, 1997: well gauging, conducted for Star Enterprise, reveals 0.81 feet of free product in MW-10.October 30, 1997: in its letter to NYSDEC, Star Enterprise declares that it "will retain responsibility for cleanup of hydrocarbons existing at the facility, prior to the sale of the facility, " and will prepare a site investigation and remediation plan.November 1, 1997: Bayside Fuel Oil Depot Corp. purchases Texaco NY Terminal.November 1997: the removal of USTs at the site.January 16, 1998: sampling by Handex reveals the presence of free product in MW-10 (0.16 feet) , and contamination in MW- 6 MTBE (6,370 ppb) and naphthalene (21 ppb). May 1998: the Technical Analyses and Proposed Remedial Actions for Texaco Facility No. 58079, Brooklyn, NY, is prepared for Star Enterprise by Environmental Systems and Technologies, Inc. Findings: unsaturated zone thickness ranges from 2 to 12 feet; groundwater flows north-northeast toward the East River and the Bushwick Inlet; MW-10 (1.17 feet of LPH); MW-7 (0.04 feet of LPH); MW-6 MTBE (13,000 ppb), benzene (494 ppb); soil contamination below NYSDEC guidance values. Conclusions: the primary focus of remediation should be on removal of LPH and installation of additional wells at vicinity of MW-10.July 10, 1998: Star Enterprise notifies about a spill of an unknown cause, dated February 23, 1996; the spill receives No. 9804544.July 27, 1998: a Stipulation Agreement (SA), signed by Region 2 Regional Spill Engineer, provides that Texaco Refining and Marketing, Inc., is responsible for cleanup of the spill. The cover letter, however, indicates Star Enterprise as the respondent of the SA. The SA requires Texaco Refining and Marketing, Inc. submit a corrective action plan and quarterly progress reports. October 1998: an Investigation Report, prepared by Handex for Star Enterprise, shows results of sampling conducted on July 29, 1998; soil contamination

BAYSIDE FUEL OIL DEPOT CORPORATION - N 1 (Continued) **1000351174**

was found near MW-13 (BTEX 754,700 ppb), no MTBE detected, TPH-DRO (Total Petroleum Hydrocarbons-Diesel Range) (2,800 ppm), THP-GRO (9,800 ppm); near MW-14 (BTEX 343,900 ppb), no MTBE, detected TPH-DRO (5,560 ppm), TPH-GRO (18,400 ppm). Groundwater contamination: MW- 10 (0.58 feet of LPH); MW-13 (0.09 feet of LPH); MW-6 BTEX (3,410 ppb). Depth to water: MW-11 (1.94 feet below grade); EPA-3 (7.51 feet below grade). November 1998: Handex prepares a report of behalf of Texaco Refining and Marketing, Inc., which reveals free product at MW-10 (0.40 feet) on September 22, 1008; and at MW-13 (0.67 feet) on September 28, 1998. The results of soil sampling; MTBE not detected, BTEX detected only near MW-16 (1.7 ppb) .January 19, 1999: since the results of investigation by Handex, submitted on November 4, 1998, indicate free product in the velocity of MW-10 and dissolved phased petroleum in the vicinity of MW-16, NYSDEC requests that Star Enterprise submit a proposed CAP in accordance with the SA.April 5, 1999: on behalf of Motiva Enterprise, LLC, Handex submits a remediation plan for the former Star Enterprises facility. The plan includes the use of enhanced fluid recovery (EFR) system, soil-vapor extraction , and removal of free product from MW-6, MW-10, and MW-13.The EFR events will be conducted once a month for six consecutive months. Groundwater samples will be collected twice a year from all wells where free product is not present.November 24, 1999: Handex is submitting, on behalf of Motiva Enterprise, a site status report. Groundwater sampling was conducted in May 1999 and EFR events conducted in May and June 1999. The EFR program was terminated because of the presence of LPH in MW-14 and MW-16.February 17, 2000: NYSDEC, reviewing the November 4, 1999, report determines that the CAP was not successful in the remediation at the site, as required by the SA. NYSDEC states that Motiva Enterprise has failed to submit a proposed plan to complete the cleanup. NYSDEC requests that Motiva Enterprise submit a progress reportJuly 27, 2000: on behalf of Motiva Enterprise, LLC, Handex submits a quarterly progress report which asserts that additional monitoring proposed in the investigation plan were not installed because of the presence of the underground utilities. Soil contamination shows exceedances of SVOCs near MW-17, MW-18, and MW-19 and the presence of free product in MW-10, MW-13, MW-14, and MW-16.August 20, 2001: a letter from Scolaro, Shulman, Cohen, P.C., reveals that NYSDEC agreed to the discontinuance of enhanced fluid recovery in June of 1999 after LPH appeared in MW-14 and MW-16. The letter informs that on April 22, 1999, NYSDEC approved the CAP submitted on July 16, 1998.December 17, 2001: Handex, on behalf of Motiva Enterprise, submits a semiannual monitoring report that reveals the presence of LPH in MW-6, 7, 10, 13, 14, 15, 18, and 19 (from traces to 0.60 feet-MW-10). Groundwater contamination was detected in MW-13 BTEX (7,706 ppb); B-2 MTBE (1,280 ppb).April 1, 2002: Anthony Sigona of NYSDEC in his memo informs that the current owner of the site (Bayside Fuel Oil Depot) has not been directly involved in the cleanup; the cleanup continues under direction of Equiva Services, LLC, which acquired Texaco Refining & Marketing; LPH have dropped to levels no greater that 0.1 feet; dissolved BTEX and MTBE are present. May 30, 2002: TransGas Energy applies for a Voluntary Cleanup Program assistance. The cover letter says that the site is adjacent to a former coal gasification or manufactured gas plant located on the south side of North 12th Street. August 20, 2002: Blasland, Bouck & Lee, Inc., (BBL) on behalf on Chevron Environmental Management Company (CEMC) submits results of June 25, 2002, groundwater sampling; LPH was observed in MW-7, 10, 15, and 16

BAYSIDE FUEL OIL DEPOT CORPORATION - N 1 (Continued) **1000351174**

with the highest number of 0.13 feet at MW-16. Detected groundwater contamination; MW-13 xylenes 93,040 ppb), benzene (2,120 ppb).August 22, 2002: a letter from Joseph Lentol, Assemblyman, Kings Country District, asserts that Texaco merged with Motiva (most likely between July 1998 and August 2002); the DEC files do not reveal Motiva as the company responsible for the cleanup.September 25, 2002: Anthony Sigona of NYSDEC in his letter to Chevron Product Company indicates that since Chevron has merged with Texaco Refining & Marketing , Inc., NYSDEC willdetermine whether Chevron is authorized to implement the remediation project on behalf of Texaco. If so, Chevron is required--under the CA--submit a feasibility study and estimated cleanup schedule for approval. November 25, 2002: Blasland, Bouck & Lee, Inc., (BBL) on behalf on Chevron Environmental Management Company (CEMC) submits a corrective action plan. The plan evaluates remediation options: natural attenuation, soil vapor extraction or bioventing (installation of wells to pump air out or into the soil), and excavation and a number of remediation methods for excavated soil(disposal and treatment at an asphalt plant, thin spreading, on-site or off-site thermal desorption, bioremediation/biopile remediation, and disposal in a landfill). BBL proposes the excavation (area 25'x50' extending about 2' into the water table, next to MW-10, 13, 14, and 16) and off-site disposal as the remediation method. December 27, 2002: NYSDEC approves a BBL corrective action plan of November 25, 2002, and its implementation schedule. January 8, 2003: a letter from Chevron Product Company informs that Chevron /Texaco Corporation assumes environmental responsibilities associated with Texaco Refining and Marketing, Inc., as a result of the merger on October 9, 2001. Attached to it a certificate reveals that Chevron Corp. has changed the name to ChevronTexaco Corporation.March 5, 2003: Randall Austin in his e-mail informs that during excavation of an UST-discovered recently at the site--strong odors were generated and entered an adjacent property, occupied by City Storage. As a result, 3 people were sick and 25 people were evacuated. The contractor covered the excavated area with plastic sheeting and overfilled it with clean sand. March 10, 2003: NYSDEC sends a letter to Chevron Products Co. requesting that because of excessive vapors present on March 5, the CAP must be modified and submitted for DEC approval. The modification must address containment of vapors from contaminated soil.March 11, 2003: Blasland, Bouck & Lee, Inc. (BBL), on behalf on Chevron Environmental Management Company submits November 2002 groundwater sampling and bimonthly gauging results. LPH were detected in MW-10 (0.02 feet); MW-16 (0.12 feet). Benzene was detected at B-1 (120 ppb); B-2 (45.3 ppb); MW-6 (72.4 ppb); MW-11 (70,6 ppb); MW-13 (1,800ppb); MW-14 (155 ppb). Toluene was discovered in B-1 (18.7 ppb); MW-13 (597 ppb). Ethylbenzene, total xylene, and MTBE were detected in B-1, MW-6, and MW-13. March 14, 2003: Windels, Marx, Lane & Mitterdorf, LLP, representing TransGas Energy Systems (TGES), LLC, sends to City Storage/ Citi Postal a Notice of Intent to Sue as a result of TGES's position that the Bayside property was polluted by significant amounts of waste from a former Manufactured Gas Plant (MGP)-a parcel that City Storage occupies.March 2003?: a drafted and undated letter by DEC Deputy Commissioner James Ferreira to Windels Marx, Lane & Mitterdorf, LLP, responds to their March 14, 2003, letter. Ferreira states that TransGas Energy Systems entered into a voluntary cleanup agreement with DEC to investigate and remediate the Bayside property. The property is also on DEC's "Addendum to Hazardous Substance Waste Disposal Site Study" of

BAYSIDE FUEL OIL DEPOT CORPORATION - N 1 (Continued) **1000351174**

December 1998 , and is listed as B.U.G./Williamsburg Works site, presently owned by Keyspan. In response to a Notice of Intent to Sue, Ferreira addresses also alleged contamination of the Bayside property from MGP property, located on two parcels between North 11th and 12th Streets, and subsequent discharge into the Bushwick Inlet. He writes that the CWA allows for the initiation of citizen suits only for point-source discharges to the surface waters .Year 2003: a draft of an Order on Consent, R2-20030401-90(CO), indicates that Chevron Product Company, was the Respondent of this proposed CO. There is no proof that this order has been executed: a signed CO exists neither in the Regional Enforcement Coordination database nor in the DER's files.April 1, 2003: in its letter to NYSDEC, Chevron Environmental Management Company (CEMS) summarizes results of a meeting between these entities: NYSDEC will prepare a drafted consent order; April 7 is a deadline of a revised CAP, which include a method of sampling C&D debris stockpiled at the site; BBL will submit a review comments on a report prepared for TransGas Energy Systems to Shaminder Chawla of NYSDEC.April 2, 2003: on behalf of CEMS, BBL submits a revised corrective action plan. The plan provides that C&D debris will be disposed after analytical results are available; the UST will be left in place and abandoned. The excavation area will be capped and covered with cleanfill. Odors will be monitored by a PID meter in accordance with a Community Air Monitoring Plan. A summary report will be prepared.April 3, 2003: BBL reviews a TRC Environmental Corporation's (TRC) Phase II Baseline Environmental Assessment Report for the Bayside Fuel Oil site (former Chevron facility). BBL agrees to TRC's conclusions that a significant amount of coal tar and petroleum contamination migrated on the Bayside Property and impacted soil and groundwater. The depth of contaminated soil is limited to 13 feet or less. Shallow petroleum contamination is commingled with MGP contamination from the Williamsburg Works site. Deeper soil and groundwater are almost exclusively affected by MGP contamination.April 4, 2003: Anthony Sigona comments on the revised CAP and the Community Air Monitoring Plan (CAMP), prepared by BBL, dated April 2, 2003. Sigona writes that the CAMP must address vapor and dust suppression techniques; PID must be calibrated to 10 ppm for isobutelyne, air monitoring must be recorded every 15 minutes at a number of locations. The revised CAP should include a schedule for submission of a site investigation plan in order to address any contamination documented by the TRC Environmental Corporation's Phase II Baseline Environmental Assessment Report for the Bayside Fuel Oil Site. April 25, 2003: BBL concurs with NYSDEC comments of April 4. May 2, 2003: a letter from Chevron Product Company, commenting on a drafted CO, denies its responsibilities for the spill and identifies Star Enterprise as the respondent. Also, Chevron doubts the bona fides of the Stipulation. According to Chevron, Star is responsible for surface contamination; deeper soil layers have been affected by the MGP.May 6, 2003: David Rubinton of NYSDEC responses to Chevron's letter of May 2, 2003. He rebuts a Chevron's claim that Texaco Refining and Marketing , Inc., was not the responder of the stipulation. Rubinton writes that the current Stipulation will have to be replaced and a Consent Order will be necessary. May 20, 2003: Anthony Sigona, in his letter to Chevron Products Company, approves a revised CAMP, dated May 13, 2003, upon inclusion of stringent levels of detectable hydrocarbons and monitoring of indoor air quality. May 22, 2003: BBL submits a CAMP, revised according to the May 6 NYSDEC comments.May 23, 2003: BBL sends to NYSDEC results of waste

BAYSIDE FUEL OIL DEPOT CORPORATION - N 1 (Continued) **1000351174**

characterization sampling of the excavated C&D debris. None of the constituents analyzed were detected except for lead. May 23, 2003: Anthony Sigona requests that the CAP and the CAMP be implemented within seven business days. June 17, 2003: Deputy Commissioner, James Ferreira, responses to a citizen suit notice concerning alleged contamination from the Williamsburg MGP property affecting the Bayside site. The property is owned by Citi Storage/Citi Postal and Steinhardt Management /Fifty Kent Avenue Associates LLP. NYSDEC has plans to pursue Keyspan (the former owner) for the remediation of the property, located on two parcels between North 11th and 12th Streets. July 2, 2003: BBL submits a corrective action report, as required by NYSDEC in its letter of May 20, 2003.The report indicates that C&D debris had no excessive concentrations of SVOCs, VOCs,. Only lead was detected at 0.91 ppm (TCLP limit is 5.0 ppm). C&D debris was disposed at CWM Chemical Services, Model City. The UST was left in place and filled with concrete slurry. The existing sheeting and sand cover remain in place. July 23, 2003: Chevron sends a letter to Sigona in response to his letter of July 14 (not in the DEC files). Chevron indicates that the corrective CAP has been approved by NYSDEC. Chevron also responds to Sigona's request concerning the submission of a site investigation plan (to address petroleum contamination documented by the TRC Environmental Corporation's Phase II Baseline Environmental Assessment Report, dated December 2002). Chevron, before the submission of such a plan, needs to receive DEC's final comments concerning the TRC report. July 23, 2003: Sigona sends a commentary letter in response to Chevron today's letter. He says that while NYSDEC recognizes that there is evidence that coal gasification waste might have migrated onto CPC 's former site; there is also evidence that CPC or its predecessors have discharged petroleum at this site. By August 1, 2003, CPC must submit a proposal for additional borings and well installations as well as Remedial Investigation Work Plan in accordance with DER-11. Section 3, Paragraph 3.3.August 29, 2003: BBL submits a Site Investigation Plan for the former Star Enterprise facility, in accordance with DEC Stipulation Agreement, dated July 27, 1998. The investigation will be conducted according to DER-10 and a site-specific Health and Safety Plan/Community Air Monitoring Plan(approved by NYSDEC on April 2, 2003). The plan includes test borings, soil analyses, well installations, and groundwater samplings. September 10, 2003: Sigona sends comments to Chevron Product Company concerning BBL's Proposed Site Investigation Work Plan, dated August 29. NYSDEC requires that the results of the proposed BBL Work Plan be implemented in accordance with an approved schedule referenced in an executed Order on Consent (not in DEC files). April 14(?), 2004: commenting on the CAP, dated April 15, 2004, Sigona requests that Chevron submits a revised CAP by June 30, 2004, including a justification for a manual gauging and bailing instead of selecting of other remedial strategies. Earlier, NYSDEC decided to cease temporarily high-vacuum extraction events in order to investigate alterative remedial strategies.August 12, 2004: Blasland, Bouck & Lee, Inc., (BBL) on behalf on Chevron Product Companysends a revised Corrective Action Plan. Anthony Sigona approves the PSH Recovery Plan. A final remediation report must comply with DER #10; quarterly groundwater monitoring must contain petroleum constituents, dissolved oxygen, pH, alkalinity and hardness. September 16, 2004: Chevron Environmental Management Company sends a letter to NYSDEC summarizing the results of agreement between NYSDEC and Chevron on future environmental

BAYSIDE FUEL OIL DEPOT CORPORATION - N 1 (Continued) **1000351174**

response actions at the site. BBL, the Chevron consultant, will perform bimonthly bailing and recovery of PSH; BBL will prepare an Exposure Assessment, focused on shallow zone impacts associated with the site (less than 20 feet below a land surface) by the end of year 2004. A one round of groundwater samples, including BTEX and MTBE ,will be included in the Exposure Assessment.December 27, 2004: BBL submits results of the September 2004 groundwater sampling conducted at 20 monitoring wells. Benzene was detected in B-1 (100 ppb); MW-1 (6 ppb); MW-5 (2 ppb): MW-6 (41ppb); MW-8 (61 ppb); MW-9 (9 ppb); MW-12 (3 ppb); MW-14R (380 ppb); MW-15 (120 ppb); MW-18 (31 ppb); MW-19 (59ppb). Toluene was detected in B-1 (15 ppb); MW-9 (16 ppb); MW-14R (57 ppb). Ethylbenzene was detected in B-1 (16 ppb); MW-9 (45 ppb); MW-14R (110 ppb); MW-18 (140 ppb); MW-19 (63 ppb). Total xylenes were detected in B-1 (64 ppb); MW-9 (45 ppb); MW-14R (280 ppb); MW-15 (11 ppb); MW-19 (10 ppb). MTBE was detected in MW-6 (67 ppb). PSHs were observed in EPA-3 (sheen); MW-9 (0.01 feet); MW-11 (film); MW-12 (film). Conclusions; four wells contained detectable PSH; the plume is stable and has been delineation to the central portion of the site; natural attenuation is occurring on the site.December 27, 2004: the Human Health Exposure Assessment, prepared by BBL, concludes that BTEX and MTBE are present in groundwater at concentrations exceeding NYSWQS. However, the groundwater at this site is not potable, and potential exposures would most likely be limited to direct contact with groundwater and inhalation of indoor air vapors. Potential exposure encountered during excavation could be mitigated through the use of properly trained personnel and protective equipment. Since available soil and soil vapor data is limited, they have not been evaluated. September 2, 2005: BBL submits a report on the second quarter 2005 bimonthly gauging as specified in the DEC-approved CAP. No SPH was detected in any of 21 monitoring wells during any of 8 gauging events. January 31, 2006: BBL submits a report on the bimonthly gauging as specified in the DEC-approved CAP, from August 2005 through December 2005. PSH was detected in MW-18 on December 8, 2005 (0.01 feet); 21 wells were gauged during 9 events.August 7, 2006: BBL submits a report on the twice-a-month gauging from January 2006 through March 2006; 21 wells were gauged on 5 occasions; no PSH was detected.October 6, 2006: BBL sends a report concerning gauging from April 2006 to July 2006; 21 wells were gauged, and no PSH was detected on any of 8 events. Chevron Environmental Management company proposes quarterly gauging and twice-a-year reporting. November 7, 2006: BBL, an ARCADIS Company, submits a report on the twice-a-month gauging as specified in the DEC-approved CAP, from August 2006 through September 2006; 21 wells were gauged on 4 occasions; no SPH was detected. December 14, 2006: Leszek Zielinski of NYSDEC approves the semiannual gauging and groundwater elevation measurements. The absence of PSH had been observed since December 8, 2005, when 0.01 foot of free product in Well MW-18 was found. The data sufficiently demonstrates that asymptotic conditions have been reached. The department approvs BBL's request to perform quarterly gauging of the monitoring wells for the presence of PSH. Similarly, the department approved a request concerning the semiannual reporting on a groundwater elevation and a PSH thickness at these wells. January 4, 2007: ARCADIS BBL submits a report on the bimonthly well gauging from October 2006 through December 2006. PSH (0.09 feet) was detected in MW-18 on December 11, 2006.21 wells were gauged during 5 events.August 22, 2007: ARCADIS BBL submits a report on the bimonthly well gauging from January 2007

BAYSIDE FUEL OIL DEPOT CORPORATION - N 1 (Continued) **1000351174**

through May 2007. PSH was observed in MW-06 (0.01 feet) in February 2007; MW-18 (0.01 feet) on February 8, 2007, and (0.01 feet) on May 15, 2007. Wells were gauged 4 times in this period. Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAO"This site cleanup has been consolidated under Spill No. 9804544.On July 16, 1998, DEC SIGONA RECEIVED PROPOSED site investigation plan. Letter sent to STar Enterprise on 7/17/98 approving plan. Stipulation Agreement sent to Star for signature on 7/10/98. In response to a complaint over elevated vapors on March 5th, 2003, filed under Spill Investigation No. 0211984, the DEC issued a verbal Order to Cease and Desist all remedial activity at the site pursuant to the Blasland, Bouck & Lee, Inc. (BBL) corrective action plan (CAP), dated November 25, 2002. The DEC confirmed that the excessive vapors generated by the excavation of petroleum contaminated soils at the site under the November 25th CAP, were shown to impact worker health and safety at the affected site at CitiStorage. As a direct result of these vapor problems associated with the implementation of the November 25th, 2002 CAP, the DEC has determined that it has become necessary to modify of the CAP conditionally approved by DEC in a letter to CPC, dated December 27, 2002. The CAP must now be modified to continue to satisfy paragraph III of the DEC's Stipulation Agreement with Texaco Refining & Marketing, Inc., dated July 27, 1998. DEC's comments regarding Blasland, Bouck & Lee, Inc. (BBL) revised Community Air Monitoring Plan (CAMP), dated May 22, 2003, to address emission of odors, vapors and dust during the remedial work proposed in the revised CAP. The DEC accepts the proposed CAMP which has addressed the comments in our May 20, 2003 letter to CPC. CPC must now implement the Blasland, Bouck & Lee, Inc. (BBL) revised corrective action plan (CAP), dated April 2, 2003, and revised CAMP, dated May 22, 2003.4/22/2004 - Spill case is reassigned to Zhao.

Remarks: Ground water monitoring revealed the presents of petroleum in groundwater star enterprise is developing a remediation plan with DEC (Sigona).

Site Description:	The TransGas Energy (TGE) Facility is a project for a new energy facility located on the East River waterfront between the Greenpoint and Williamsburg sections of Brooklyn. TGE proposed to construct and operate an 1100-megawatt gas-fired plant on the Brooklyn waterfront near Bushwick Inlet between the communities of Greenpoint and Williamsburg. For over 100 years, the Site has been operated as a fuel oil storage and distribution facility. Site soils and groundwater are contaminated with Petroleum spill contaminants, MGP Waste and heavy metal contamination. TGE entered the Department?s Voluntary Cleanup Program (VCP) in December 2002. The current owner of the Site is the Bayside Fuel Oil Depot. Under Bayside Fuel and previous owners (which include Socony Mobil, Texaco Refining and Marketing and others), the Site has been operated as a fuel oil storage and distribution facility for over 100 years. The Phase II assessment was completed in January 2003 and confirmed widespread groundwater and soil contamination with MGP waste and petroleum related contaminants. RI is on-going.The VCP Agreement was terminated in 2009 for lack of progress. There is an existing oil spill stipulation (Spill No. 9804544) with Texaco Refining and Marketing that has resulted in ongoing recovery of free-product and contaminated-groundwater. See also site no. 224055 (Williamsburg Works MGP) for further information.
Env Problem:	Previous studies at the Site confirm widespread petroleum contamination with MGP involvement. For example, fuel oil and naphthalene odors are reported in boring logs as deep as 60 feet, and in July 2002 TRC Environmental (TGE?s consultant) found heavy staining and MGP waste in a boring 20 feet below grade and reported the occurrence to NYSDEC as a spill (No. 0203677). In addition to organic pollutants, a 1997 investigation also found soil samples with elevated levels of lead. The Phase II assessment was completed in January 2003 and confirmed widespread groundwater and soil contamination with MGP waste and petroleum related contaminants. Heavy staining and odors (coal tar) observed from 20 feet depths to top of clay at 60 feet depths. VOCs and PAH exceed RSCOs below 20 feet depth. Benzene concentrations below 20 feet depth observed up to 864,000 ppb. Off-site benzene detected upto 128,000 ppb.Free product observed (wells B4, MW7). On-site groundwater impacted from water table to top of clay by petroleum and coal tar related compounds. Benzene detected throughout the site at concentrations of 6.5 ppb to 29,500 ppb (in MWB-11). MTBE ranged from 1.2 to 329 ppb and naphthalene ranged from 1.6 to 579 ppb.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"3/14/2001 - Store front building with 3-4 apartments above.2-275 gallon #2 oil tanks in the basement service the building.Scaggs & Walsh Oil Company made a delivery (no sign of overfill) Later that day the bottom of one of the tanks (looks like corrosion) gave way and approx 100 gallons went to the basement floor and a drywell floor drain.NYFD on scene emptied most of the 275 gallon tank into overpack drums. Scaggs & Walsh arrived on the scene and pumped out whatever remained. Scaggs & Walsh's insurance would not cover the loss because the tank is the property of the building owner and the tank failed due to corrosion. Scaggs & Walsh hired Milro Associates after a verbal discussion with the building owner (Robert Bak 718-628-9700) that the cost of the clean up was the responsibility of the building owner.3/16/2001 - Sangesland called

ADAMS DELI (Continued) **S104953397**

Milro to find the cleanup status. Paul (at Milro) said between 3/14 and 3/15 a 5'x8' section of the floor was opened up and dug down 2' and 2 cubic yards of contaminated soil was removed. Milro is not working today (3/16) because Scaggs & Walsh is installing new oil tanks. Milro will return on Monday 3/19 to continue excavation. 3/20/2001 Paul at Milro says the excavation is approx 5' x 10' x 3' deep. Because of access problems they can't really excavate any more and he'll probably spend one more day on site. Paul said he would PID the samples first and if they don't look bad, he'll back fill before the soil samples come back from the lab. 4/5/2001 End point sample from excavation was tested for: TCLP Volatiles 8021/STARS (All results were "Non-Detect") TCLP Polynuc, Arom. Hydrocarbons (BN) 8270 - "Non-Detect"Spill closed 4/5/2001

Remarks: spill in inside deli's basement fd on the scene

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"4/12/04-Vouight-Spill transferred from Sullivan to Rommel as per Rommel.Contacted present owner. Manny Shurka (212) 832-9100. He has no info on followup tank test.He bought site in 1997. All tanks closed in 1999. If tanks were operated for two years after tank test failure, then tanks can be assumed to have been OK in 1997. Tanks were not suction dispensers. They used submersible pumps. So, depending on where the tank test failure leak was, there could have been a release. Check with Manny if he did an environmental assessment when he bought the property or if Getty did one when they sold the property.8/17/12 Spill re-assigned to T. Demeo as per RSE. bf

DEC Memo:	100 eckert street.During a regular delivery to 100 eckert, the owner of 101 eckert asked the driver for a delivery to his house. That homeowner actually used "Consumers oil" and screwed up the various oil company names. Homeowner said he had a 550 gal tank (it was really a 275gal) At 240gal the tank overfilled.3gal came out on cement driveway, 2 gal on solid sealed cement floor in basement. All cleaned within 1 hour.
Remarks:	STORAGE TANK OVERFILL DUE TO WRONG DELIEVRY AND IS ALL CLEANED UP

DEC Memo:	01/27/2006 Kuldeep received the Fax from Brumer, but again information not adequate and need more follow up.01/23/2006 Kuldeep sent a letterfor more information.01/09/2006 Kuldeep Gupta- Facility Faxed on -01/06/2006 copy of consent Order.Region 2 Nick Lombardo on 01/09/2006 Faxed Report of 5000 gallon Tank Test report of 01/05/2004.01/06/06 Kuldeep Gupta talked to Ms. Jill Huey and she need a letter in writingwhat document we need. She wanted to fax it at 1-718-486-6862. DEC Faxed the letter as requested. Kuldeep discussed with Philip Lodico Senior Attorney DECand found Consent order signed on 03/24/2003 for not this spill.Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE"Does not appear on PBS database. Called Jill Huey. She stated that she received a Consent Order to bring the facility in compliance with state laws. The tank is 5000 gallons. 3/11/2003 ars.DEC Sigona sent TTF notice on March 14, 2003.9/11/06 This case was transfered from Albany to Region 2. Zhune spoke to Jill Huey (ph: 718-9052) She doesn’t want phone calls. She wants every thing by writing. 9/11/06 A TTF letter was sending to :Jill Huey 498 Leonard Street Brooklyn, NY 1122209/18/06 Ms. Huey sent a package of documents the passing tank test from 2003 was missing. 09/19/06 I sent a letter requesting her the tank test results from 2003. 09/22/03 Ms. Huey sent a package of 8 pages including the passing tank test results from 2003, letters

BRUMAR SHEET METAL INC (Continued) **S108076226**

stated the fallowing: The system test passed. After the system test failed in October due to a vent bad line, we decided to replace all pipes just to be sure we would pass. Also we would like to convey to your department that no contamination was detected in our system.What was the cause of the tank test failure on March 3, 2003?Water in tank issue. Piping needed to be replaced was replaced and systems test passed as a result of replacement. 09/27/06 This case was closed for V. Zhune in accordance with J. Vought.

Remarks: RECCOMEND CLEAN TANK DISCONNECT PIPING AND RETEST

Contact Phone: 7186360800
DEC Memo: Sangesland spoke to Ezgy (As-Gee). (See eDocs for Phase 2 Report) She said the property is a 2 story industrial building being sold to a developer who will tear it down for a new residential building. City has placed an "e-designation" on the property because it's changing from industrial to residential. Problem is associated with leaking from a 5,000 gal buried oil tank.Hydro Tech was hired by the potential buyer and found contamination. Hydro Tech will continue to work on the site and come up with a plan to solve the spill problems and close them out.6/12/13-Vought-Received call from and spoke to OER Chawla (212-442-3007) and the groundwater is 12-13'bg and proposed full excavation to the water table as part of redevelopment however contamination extends down to 30'bg. They are willing to do additional remedial action but would not like to excavate into groundwater and developer needs to decide by today or he will walk away. Three other developers walked away from site (was previously HydroTech). Former use of site is a plating site. Site was discussed with DEC Cozzy as per Chawla and Cozzy noted that it did not qualify for State BCP and Cozzy did talk to Demeo re site as per OER Chawla. Vought spoke to DEC Demeo and this spill transferred from Demeo to Patel for followup.06/12/13-Hiralkumar Patel.little 'E' desgination for Hazmat ----------alternate address: 498-502 Leonard StreetPBS #: 2-608752. as per PBS record, the site has oe 5,000 gal #2 oil UST, in-service, installed in Jan. 1929. tank system was tested on 01/20/2010.other spills: 0212132, 1206982spill # 0212132 was reported on 03/10/2003 due to tank test failure. tank system failed test due to bad vent line. lines were changed and system passed. no contamination found. case closed.spill # 1206982 was reported on 10/16/2012 due to tank test failure of 5,000 gal #2 oil UST. case is still open.2:02 PM:- left message for Mr. Chawla at NYC OER. asked him to submit available reports.2:39 PM:- received email from William Wong from NYC OER including link to reports.William H. WongPh. (212) 341-0659Fax (212) 788-1482email: WiWong@dep.nyc.gov reviewed available
information:*-*1) 07/30/2012: Phase I Environmental Site Assessment Report:- Block: 2698 / Lot: 11- subject property is approx. 7,400 sq.ft. in area and consits of 2-story commercial building that is approx. 8,460 sq.ft. in area- subject property is being used as welding shop and office- the building has no basement- building is heated by an oil-fired boiler- no stains or spills were identified in the vicinity of the boiler- elevation of the site is approx. 15 ft above mean sea level- one 5,000 gal #2 oil UST is located in the southwestern of the building- no evidence of ASTs, former ASTs or former USTs were observed- no subsurface drainage structures, such as drains, leaching pools, cesspools, or drywells were observed at the site- it appears that the subject property was developed prior to early 1900s with one 3-story and two 1-story buildings and stable. more buildings were developed in the following years at the subject property. these buildings were demolished prior to 1978. the subject property was then redeveloped with one 2-story commercial building- sanborn map 1942-1965 shows one 2-story and

BRUMAR SHEET METAL INC (Continued) **S108076226**

seven 1-story building used for carpet dyeing and cleaning. a
gasoline tank is located on the southwestern portion of the site
---------2) 08/17/2012: Phase II Environmental Site Assessment:- UST
found in southwestern of the property and is approx. 12 ft long and 6
ft wide- installed four borings (SP-1 through SP-4) in vicinity of
the existing UST- borings were installed to 12 ft bg- general soil
type consists of fill material- one soil sample was collected from
each boring- found VOC contamination in soil samples- found high PID
readings in all boringsPID values (in ppm)depth
(ft)

12/13/2012: DEC Demeo sent letter requiring documents regarding tank
test failure.4) 02/12/2013: Phase I Environmental Site Assessment:-
proposed plan is to demolish the existing structure and construct a
multi-story residential building that includes a 65 ft by 74 ft
basement- the building was purchased in 1979 and turned into a steel
manufacturing company, but this is not indicated on the map
----------5) 06/24/2013: Remedial Investigation Report:- Phase
II conducted by Hydrotech in Oct. 2012 identified the presence of
elevated SVOCs, metals and pesticides in surficial soil samples
collected from the depth of 0-2 ft bg and elevated VOCs, SVOCs,
metals and pesticides in soil samples collected from 10-12 ft bg- in
Oct. 2012, Hydrotech installed 13 wells on the site and adjacent
sidewalk. groundwater table elevations were measured between 14.77
and 15.71 ft ---------- stratigraphy of the site from surface
down consists of a layer of historic fill material from approx. 0 to
12 ft bg, sand, gravel and silty with heavy petroleum impacts from
12-16 ft bg, visible petroleum staining from 16-30 ft bg in the area
of the UST and an impacted layer of highly compressible organic peat,
clay and silt from 16-28 ft bg and highly compressible layer of
clay/silt at approx. 28-34 ft bg- schools within 0.2 miles to the
south ---------- in Feb. 2013, GRANT installed five soil borings
(SB-01 to SB-05) surrounding the UST in the southwest portion of the
site and only "visual inspection" of the borings were performed (no
samples were collected) ---------- in Apr. 2013, GRANT installed
seven soil borings (SB-06 to SB-12) across the entire site and
collected 19 soil samples; 7 of 19 soil samples were analyzed for
finger printing- borings SB-01 through SB-12 exhibited visual
evidence of a petroleum discoloration layer from approx. 4 to 30 ft
bg and free product observed from approx. 10 to 12 ft bg- free
product noted on between 12 and 24 ft bg in borings SB-02, SB-03,

BRUMAR SHEET METAL INC (Continued) **S108076226**

SB-04 and SB-05, these borings were located around the UST ---------- elevated PID readings were observed ranging from 455 ppm to 895 ppm in borings SB-7 through SB-12- in Apr. 2013, GRANT installed 3 temporary wells (TWP-01 to TWP-03) towards the northwestern, northeastern and southeastern portions of the site, respectively- temporary wells were installed to a depth of 20 ft bg, with 10 ft of screen (means there were no screen above water table) ---------- in Apr. 2013, GRANT installed 3 soil vapor probes (SVP-01 to SVP-03) and collected 3 samples- depth to groundwater was present at approx. 10 ft bg ---------- groundwater flow direction is generally from the south towards the north ---------- found mostly sec/n/tert-Butylbenzene in soil samples- high metals found in samples*-*3:45 PM:- spoke with Mr. Chawla. he mentioned that results of soil and groundwater samples have already discussed with DEC Cozzy and got approval. Mr. Chawla mentioned that current developer has applied to enroll in city's VCP cleanup. due to findings of high metal concentration, OER asked for excavation to 12 ft bg. informed him that based on submitted environmental data, the proposed excavation to 12 ft bg looks ok. informed him that the department may require groundwater monitoring via wells around property. he will send complete report for work done in 2013.12/04/13-Hiralkumar Patel.10:30 PM:- spoke with Mr. Chawla. he mentioned that building developer has changed plan and now they are planning to excavation to one foot above water table, instead of 12-13 ft (at water table) as proposed earlier. due to change in proposed excavation depth, NYC OER will meet with property owner/developer to discuss remedial method to address remaining contamination underneath the proposed excavation depth. Mr. Chawla mentioned that DEC Cozzy has reviewed and approved plans to address metals in subsurface.Mr. Chawla mentioned that based on new proposed excavation depth, OER requires endpoint soil sampling and installation of vapor/moisture barrier and SSDS. they will review soil-vapor data to determine if active or passive SSDS needed. Mr. Chawla will send further details after meeting with property owner.12/06/13-Hiralkumar Patel.10:46 AM:- spoke with Mr. Chawla. discussed about free product in groundwater. Mr. Chawla will submit a RAWP which discuss about installation of wells. asked him to submit property owner's contact info, missing appendices of Feb. 2013 Phase I and investigation report for work done by HydroTech in Oct. 2013.discussed with DEC Jane regarding metal/PCBs in soil/groundwater samples. she and DEC Cozzy have discussed data with Mr. Chawla and NYC OER will manage remediation of metal/PCB contamination.11:20 AM:- spoke with Mr. Fung, property owner. he mentioned that they are planning to build a four (4) story apartment building with one-level basement. the basement floor will be at 7.5 ft bg. they will excavate site to 10 ft bg for foundation work. currently, there is a vacant one-story warehouse at the site. scheduled a site inspection at 10:30 AM on 12/09/13.East Star Realty LLC. **property owner**1740 East 27th StreetBrooklyn, NY 11229Attn.: Tin See FungPH. (917) 662-3803email: jacktinfung@gmail.com12/09/13-Hiralkumar Patel.10:20 AM:- visited site. met Mr. Fung. found multiple wells on-site. the tank is is located under the floor, in area of one of the rolling door. found fill port and vent pipe at the foundation wall. suggested Mr. Fung to pump out the tank and seal the fill port to prevent any misdelivery and possible spill from tank. asked Mr. Fung to gauge all the wells and implement IRM, if product exists in well. he will contact his

BRUMAR SHEET METAL INC (Continued) **S108076226**

environmental contractor.found RAWP on NYC OER website. abstract of RAWP:- proposed plan to demolish the existing structure and construct a multi-story residential building that is expected to include a 65 ft by 74 ft cellar- the proposed building is planned to constructed starting from the property line along the length of Leonard St and extending east- depth to groundwater was present at approx. 10 ft bg- HydroTech installed thirteen (13) monitoring wells- wells were surveyed and groundwater table elevations were measured between 14.77 and 15.71 ft- groundwater flow direction is generally from the south towards the north- soil excavation below the water table is anticipated for the area surrounding the UST in the southwest portion of the site- will collect endpoint samples- will install a vapor barrier and an active SSDS beneath the proposed building11:13 AM:- spoke with Stephen Morse at Grant Engineering. inquired him about spill remediation work plan, that he mentioned as attachement F in RAWP for NYC OER. Steve mentioned that such work plan is not ready yet. discussed about well gauging and implementation of IRM. Steve will talk to Mr. Fung and try to conduct well gauging prior to meeting with NYC OER on 12/13/13.Stephen MorseGrant EngineeringPh. (212) 464-8689email: smorse@grantpllc.com11:25 AM:- left message for Mr. Chawla.12/10/13-Hiralkumar Patel.11:40 AM:- left message for Steve inquiring about well gauging, prior to upcoming meeting on 12/13/13.12/17/13-Hiralkumar Patel.1:17 PM:- left message for Steve.1:18 PM:- left message for Mr. Chawla.12/20/13-Hiralkumar Patel.10:01 AM:- spoke with Steve. they met with NYC OER on 12/13/13 and discussed remedial action plan. Steve mentioned that owner has not hired his firm to gauge wells and remove any product in well(s).10:05 AM:- spoke with Mr. Fung. informed him that the Department requires gauging of all existing wells and immediate removal of any product in well(s). he will talk to Steve.1:04 PM:- received call from Andrew from Grant Engineering inquiring about what work needs to be done. informed him that the Department requires well gauging and removal of any free product from wells, until permanent remediation system is installed. informed him that well gauging must be done by end of 12/27/13. also recommended removing oil from the UST.Andrew RizkGrant EngineeringPh. (212) 464-8689 Ext. 2email: arizk@grantpllc.com01/08/14-Hiralkumar Patel.10:01 AM:- received call from Andrew. they gauged 12 out of 13 wells installed for the subject project. one well was installed across the site which is inside construction zone and was not accessible for gauging. out of 12 wells, free phase product found in 3 wells. about 4 inch product found in one of the well and less than 1 inch product found in remaining two wells. Andrew will submit memo, once he gets previous well survey data from record. Andrew confirmed that the on-site tank was also pumped out last week. informed Andrew that the department requires implementation of interim remedial measures until permanent remedial system in in operation.01/09/14-Hiralkumar Patel. received email from Andrew (at 6:59 PM on 01/08/14) including well gauging data. total of 13 wells (MW-1 through MW-13) were installed previously by Hydrotech. well MW-7 is located on west sidewalk of Leonard St, across from the site. well MW-7 was inaccessible due to the presence of green construction fence directly over top of the well. out of 12 remaining wells, product found in three wells (MW-1, MW-2 and MW-8) between 2 and 4 inches.01/13/14-Hiralkumar Patel.12:49 PM:- left message for Mr. Fung.12:50 PM:- left message for Mr. Chawla.01/27/14-Hiralkumar Patel.11:12 AM:- received email from Mr. Chawla including owner's letter and OER briefing. property owner Mr.

BRUMAR SHEET METAL INC (Continued) **S108076226**

Fung stated that the entire site will be excavated down to 13 ft bg (into groundwater table). Mr. Chawla included copy of ORC application plan.4:09 PM:- sent email to Mr. Chawla and informed him that the Department has not received any ORC treatment work plan and such plan is not approved prior to reviewing tank removal report with endpoint sample results. email copied to Mr. Wong at OER.01/28/14-Hiralkumar Patel.9:12 AM:- left message for Mr. Chawla.9:41 AM:- received call from Mr. Chawla and Mr. Wong from NYC OER. Mr. Chawla mentioned that they received a revised RAWP and ready to issue Notice to Proceed letter. he wanted to know any requirements from DEC, prior to sending letter to property owner. revised RAWP will be forwarded for review.12:29 PM:- received email from Mr. Chawla including link to RAWP Stipulation List.abstract of RAWP Stipulation List to NYC OER:- entire site will be excavated to 13 ft bg, with additional excavation in locations where further pockets of contamination is observed- collection and analysis of 22 endpoint samples from the bottom of excavation will be collected- a minimum of 20-millimeter vapor barrier will be installed beneath te structure's slab and along foundation wall- dewatering will be performed- excavation of the impacted soil will be performed following the removal of existing tanksabstract of site-specific groundwater treatment and monitoring plan dated 01/21/14:- remaining product from 5,000 gal tank was pumped from the tank on 12/27/13- proposes to mitigate the contamination in three stages: 1) the existing site will be remediated via purging of product from the existing wells on a monthly basis, 2) site will be excavated to approx. 13 ft bg, or deeper in locations where contamination is present and the open excavation will be treated with chemical application, and 3) monitoring wells and contingency injection wells will be installed in the cellar level of the proposed development to allow for future chemical injections, if necessary- prior to construction, the assessment of groundwater quality will include the collection of groundwater samples from the existing wells01/29/14-Hiralkumar Patel.12:46 PM:- sent letter to Mr. Fung requiring bi-weekly monitoring of wells, product removal from impacted wells and monthly submission of well monitoring reports. informed him that the department only approves tank removal work (as listed in appendix 1 of RAWP Stipulation List submitted to NYC OER) and required submission of tank removal report. also informed him that the department may require additional investigation, after reviewing the tank removal report, prior to any comment on in-situ remediation, if needed. letter emailed to Mr. Fung, Mr. Chawla, Mr. Wong, Steve and Andrew.12:53 PM:- spoke with Mr. Fung and informed him about letter sent in email. he will discuss with Grant Engineering.**bi-weekly well gauging and product removal, monthly report for well monitoring until excavation begins.****requires tank removal report, prior to any comment on in-situ remedial methods.****free product noted in borings around the UST.*****02/12/13 Phase I missing all figures and appendices.****report missing for investigation done in Oct. 2012 by Hydrotech.****product in well MW-1 which is close to UST.**

DEC Memo:	05/10/07-Vought-Off hours responder. Vought called Winters and left message to return call to cell phone. Vought called Vijax and spoke to Anthony Rotello and cause of spill was bad gauge. Spill came out of gauge and onto concrete floor. No sewers or drains affected. Rotello confirmed that spill amount less than five gallons. Gauge will be replaced. No spill out of vent pipe. Vought received call from resident (Ms Winter) is satsified with cleanup and confirmed that spill on concrete and no sewers or drains affected. Vought provided contact info in case additional issues arrise. Spill closed by Vought.

Updated By:	mobarrie

Site Description: 101-105 West Street is located in the Greenpoint area of Brooklyn, NY 10310, Block 2556, Lot 58. The site is a 0.2-acre parcel used as a construction material storage yard. It is located between Kent Street and Java Street, on the west side of West Street. A commercial property borders the site to the east. The intended use of the site remains to be a construction material storage yard. The surrounding uses are mainly residential with some commercial divisions. Contamination at the site was predominantly in the soil and represented by Semi Volatile Organic Compounds and metals, and resulted from historic fill and uncontrolled dumping of oil and oil-related products from trucks loading construction materials. The Remedial Investigation work plan was approved in 1999 and the RI was completed in 2000. The groundwater is 8-10 feet below ground. The soil is sandy and it is covered with 3-4 feet of fill material. The Remedial Work Plan was approved in 2001 and the field remedial work was completed in 2002. The remedy involved excavation of the entire site and off site disposal. Clean backfill material has been placed in the former excavation. Remedial work at the site is completed.

Env Problem: The contaminants of concern in soil at the site were Semi Volatile Organic Compounds (SVOCs)and heavy metals. The groundwater has not been impacted by the contaminants. In 1998, the Pase I and Phase II Environmental Site Aassessment have revealed that the contaminants of concern in soil were above TAGM 4046 RSCO. The SVOCs had excedences ranging from non detected to Benzo(a)anthracene 43ppm, benzo(a)fluoranthene 1500ppm, benzo(b)fluoranthene 41ppm, benzo(k)fluoranthene 26ppm, benzo(a)pyrene 41ppm, Chrysene 38ppm,Dibenzofuran 12ppm. Some of the havy metal excedences were Arsenic 52ppm, Selenium 5.6ppm, Chromium 49ppm, Cadmium 12.5ppm, Lead 1930ppm,Zinc 1490ppm, Mercury 3.5ppm. The source was presumed to be in the fill material and also produced by uncontrolled dumping.
During the remedial phase, the site has been excavated and the end point samples showed that the concentrations of the contaminats levels were very close to TAGM 4046 RSCO. The excavation has been backfilled with clean soil. The remediation was completed in 2002.

Health Problem: Soils contaminated with metals and semi-volatile organic compounds were identified at this site. Contaminated soils have either been

101-105 WEST STREET (Continued) **S108524782**

excavated and disposed of offsite or are covered by a concrete slab or the onsite building, thereby minimizing the potential for direct contact exposures. Groundwater has not been impacted, therefore there is no potential for ingestion exposures. Volatile organic compounds were not detected at this site therefore, inhalation via soil vapor intrusion is not a potential exposure pathway .

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

HESS#32516 (Continued) **1000263799**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	DEC Piper reviewed test reults. Though it shows a passing line afterwards, there is no indication what repairs were made to which line and evidence of product.DEC Piper spoke w/ Hess Mike MAtri. As per him flex line failed, line was replaced and retested . Passed. Small amount of producted drained into secondary containment and was tested as well. Containment was tight. Closed. E-Docs if Warranted.
Remarks:	PBS No: 2-297550Contractor tested line... line failed. Small amount of gasoline is in contained STP sump. Clean up is completed, line repair is completed.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SUN"12/23/05- Andersen - Reviewed quarterly report dated 11/7/05. Eight MW sampled on September 23, 2005. Max BTEX 729ppb (MW5), max MTBE 352ppb (MW3). SVE system shut down May 5, 2005 due because low influent vapors. RAP required for remaining contamination.12/29/05: RAP required letter sent. RAP due 2/9/06.1/26/06: 1/25/06 meeting with Quantum, NYSDEC, and ET. A sensitive receptor survey and soil vapor survey will be performed, and then site closure will be considered. A kiosk vapor abatement system is in place.2/2/06: Reviewed the fourth 2005 quarterly report. Max BTEX 497 ppb (MW5), max MTBE 351 ppb (MW6). A sensitive receptor survey will be prepared.6/30/06: Meeting on 6/28/06 with Hess, Quantum, NYSDEC, EnviroTrac and GSC. Will submit request for closure. Sub slab vapor sampling conducted.7/25/06: Received the results of sub-slab sampling and a sensitive receptor survey. Two sub slab samples were collected from beneath the kiosk on site. MTBE and BTEX were not detected above method detection limits. The sensitive receptor survey revealed that residential houses with basements are located within 1,000 ft of the site. Closure was requested.10/6/06: Emailed Dawn Coughlin to followup on quarterly report. Received email from Ed Russo: "the site was sampled on August 15, 2006. Results indicatedconcentrations that we feel warrant closure, especially due to thepositive results of the soil-gas sampling and sensitive receptor survey.The report was just finalized yesterday, so you should be receiving itby the middle of

HESS#32516 (Continued) **1000263799**

next week."11/1/06: Received closure request. Max benzene 158ppb in MW3, MTBE 338 in MW3. Continued groundwater sampling required. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. 1/23/07: Received update report. Wells samples on 11/8/06. Max BTEX 63 (MW3), max MTBE 222 (MW6).4/20/07: Reviewed update report. Max BTEX 12.3 ppb (MW1). As reportedin the sensitive receptor survey, soil vapor sampling showed soil gas MTBE and BTEX concentrations ND. ND concentrations in downgradient wells. NFA issued.

Remarks: SOIL FOUND IN TANK PULL - SOIL BEING STODE PILED.

DEC Memo: Tank test failure. PBS file shows tank in service, but next tank tes due prior to the date of this spill. PBS registration expired in 2000. Need to follow up.9/22/06 left message for attorney found on deed to contact Williamsburgh Square LLC (new owner as of 2003). address:154 N. 7th St., Brooklyn 11211. deed had no individual's name (only corporation). bf4/30/08 Sent Old TTF letter to:Jerry LebedowiczWilliamsburg Square LLC52-47 Browvale LaneLittle Neck, NY 11362Address obtained from tank closure application. bf5/2/08 Received message from J. Lebedowitz to call him back. bf5/5/089 Received call from J. Lebedowitz tank was closed. Athena Environmental sampled after tank was removed. bf6/18/08 Yesterday, recieved message from Spiro of (Name not clear) Environmental Services. He requested call back to (718)784-7490. I called the number today, but number is not in service at this time and no further informatuion is available. Review of PBS file shows tank was closed in 2008. They should have closure report. Called Jerry Lebedowicz and left message to call me back. His number (from PBS application) is (718)784-7490. Mr. lebedowicz hand-delivered sampling results from Athenica Environmental Services. One contaminant was above soil clean-up objectives to protect gw quality: chrysene (690 ppb) in sample B-3. Faxed nfa letter to Mr. Lebedowicz. Fax: (718)229-7111. Also mailed letter to him at address above. NFA. bf
Remarks: 3K TANK FAILED PETRO TITE WITH A LEAK RATE OF -.161GPH.

Acres:	.270
HW Code:	224177
Record Add:	04/19/2013
Record Upd:	10/30/2013
Updated By:	BXANDERS

Site Description: Location: The site is located in an urban area at 135 Kent Avenue in the Borough of Brooklyn, Kings County, NY. The site is bordered to the north by North 6th Street, to the west by Kent Avenue, to the south by a vacant 2-story warehouse (see BCP site no. C224159), and to the east by a three story building which appears to consist of a garage on the first floor with residential above. Single and multi-family residential is located across North 6th St. and newly-constructed multi-story residential towers are located across Kent Avenue.Site Features: The Site currently consists of a 11,000 sq. ft. (0.27 acre) 2 story brick building with commercial units on the first floor and residential units on second floor. Current Zoning/Use(s):The site is currently zoned M1-2 (manufacturing) with an R6A (residential) overlay. The site is located within the Greenpoint-Williamsburg Rezoning District, and is surrounded by mixed commercial and residential uses. The Site has a NYC Restrictive Declaration (similar to E-Designation) for Hazardous Materials (E-138) and Air Quality (E-227).Past Site Use(s):The Site was previously occupied by a warehouse which operated as a commercial dry cleaner supplies distribution facility (Cleaners Sales & Equipment Corp.). This facility operated from about 1958 to 2002. Cleaners Sales & Equipment Corp. has a USEPA ID no. NYR000113480 for hazardous waste generation (tetrachloroethylene, or PCE). Furthermore, the site is a registered Chemical Bulk Storage Facility (CBS No. 2-000353 for a 5,000 gallon aboveground PCE storage tank) and Petroleum Bulk Storage facility (PBS No. 2-608579 for a 3,000 gallon closed-in-place underground storage tank.Site Geology and Hydrogeology:Soil borings installed on a neighboring property identified fill materials consisting of medium-grained sand with some gravel and brick fragments to a depth of approximately 8 feet below grade. Beneath the surface fill layer is sand and gravel to a depth of at least 28 feet below grade. Groundwater is present at a depth of approximately 12 feet below grade. Groundwater flows generally to the west-southwest towards the East River, which is located approximately 550 feet west of the site.Borings done in the sidewalk on N 6th St showed sand to 28 feet followed by a clay layer and then silty sand at 35 feet. Groundwater was at 17 feet below ground surface.This site has been accepted into the Brownfield Cleanup Program and, therefore, investigation and remediation will occur under that program. The site Index is C224177.

Env Problem: Nature and Extent of Contamination: Recent sampling was conducted as part of the Remedial Investigation for the adjacent BCP site. Soil vapor samples were collected from immediately in front of the loading dock for the former cleaner supply facility, which identified PCE at

CLEANER SALES & EQUIPMENT CORP. (Continued) **S103942699**

a concentration of 25,300,000ug/m3, and TCE 10,400g/m3 and cis-1,2-DCE at 7,060 ug/m3.Significant Threat:Based upon the soil vapor sampling results there is a potential for inhalation of the site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures. The NYSDOH made an evaluation of significant threat for this site.The site was accepted in the Brownfield Cleanup Program (BCP) and the Index # is C224177.

Health Problem: Volatile organic compounds related to the site in the groundwater may move into soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures.

BROWNFIELDS:

Program:	BCP
Site Code:	484026
Site Description:	Location: The site is bounded to the north by North 6th St., to the west by Kent Avenue, to the south by BCP C224159, and to the est by mixed commercial/residential buildings.Site Features: The site is currently developed with a 2-story commercial/residential building (measuring approx. 125 ft x 100 ft). The first floor of the building is divided into individual tenant spaces operated by a coffee shop, deli, furniture store, clothing store, and storage area. A small sub-grade utility room exists beneath part of the first floor, where a boiler historically operated. One possible dry well and two cleanout accesses, all with dirt bottoms, exist in the floor of the utility room. The second floor consists of 11 residential units.Current Zoning/Use: The site use is commercial and it is included in an M1-2/R6A (Manufacturing with a Residential Overlay) mixed use district. The subject property was assigned an E-designation for hazardous materials and air quality as part of the Greenpoint Williamsburg Rezoning. Historical Use: Cleaner Sales & Equipment Corp., a dry cleaning fluid distribution facility and laundry supply distributor, operated onsite from approximately 1958 to October, 2002. Site Geology and Hydrogeology: USGS reports indicate the depth of the bedrock expected to be approximatively 100 feet below ground surface (fbsg). Based on the local topograpy, groundwater most likely flows in the west-southwest direction toward East River, located 500 feet from the subject site. The depth to the groundwater is expected to be 8 to 10 fbsg.
Env Problem:	Nature and Extent of ContaminationLimited information about site contamination has been obtained through investigations performed on an ajacent site, and investigations performed on the sidewalk in front of the site by NYSDEC (see site no. 224177).a) Contaminants - The primary contaminants of concern are tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE), 1,2-dichloroethene (DCE) and vinyl chloride (VC). In May and June 2013, NYSDEC performed limited investigation on the sidewalk in front of 135 Kent Ave. and

CLEANERS SALES & EQUIPMENT (Continued) **1006810542**

identified these contaminants in soil, groundwater, and soil vapor.b) Area/depth extent: The extent of the contamination has not been determined yet.c) Concentrations: Soil: PCE concentrations were detected at concentrations as high as 1.6 ppm (compared with Unrestricted Use Soil Cleanup Objective of 1.3 ppm); VC was detected at concentrations as high as 0.064 ppb (compared with UUSCO of 0.02 ppm).Groundwater: PCE concentrations were detected as high as 870 ppb (compared with Ambient Water Quality Standard of 5 ppb); TCE was found at up to 33 ppb (compared with AWQS of 5 ppb), and DCE was found at up to 20 ppb (compared with AWQS of 5 ppb).Soil vapor: PCE was identified at a concentration of 25,300,000 ug/m3, TCE at 10,400 g/m3 and DCE at 7,060 ug/m3.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all

KIEN IMPORT CORPORATION (Continued) **1000164221**

Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Registry ID: 110004334872

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: This site lies underneath the elevated Brooklyn - Queens Expressway (I-278) along Meeker Avenue between Metropolitan and Union Avenues in the Williamsburg Section of Brooklyn. It is believed that during the construction of the BQE, waste material and debris from the former Ansbacher Color & Dye Factory may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete.A Preliminary Site Assessment was completed during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.
Not reported
Env Problem: The primary contaminants of concern at this site are arsenic, lead, mercury and cyanide.Investigations indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals.The site does not constitute a significant threat to the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.
Health Problem: Residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt, thereby preventing direct contact. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Groundwater in the area is not used, since public water is available. Off-site sampling of

BQE/ANSBACHER COLOR & DYE FACTORY (Continued) **S106780917**

surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants.

Site Description: Location:The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features:On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which has started in 2011. Current Zoning:The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the past ten years, the neighborhood has transformed into a predominantly residential area. Historical Use:The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. In 1999 RGJ contractor closed in place 14 USTs used to store VOCs. RGJ reported soil contamination around the USTs. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001, after Con Edison, the owner of the adjacent property discovered Volatile Organic Compounds (VOCs) under their parking lot and sued Fyn Paint Co. The investigation at the site revealed soil and groundwater highly contaminated with VOCs. After multiple phase investigations and negotiations, starting in January 2007, an IRM/pump and treatment of the groundwater was installed and operated. The RAWP was approved in

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

2009, and an excavation of the contaminated soil around six of the USTs constituting the source of VOCs was completed in 2010. Additional remedial design for a dual phase extraction system is being negotiated. In November 2011, RCRA Closure field work started under EPA supervision and it continued through 2012 performed by the Volunteer's consultant. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of a layer of antropogenic fill material (0-12 feet and the rest to 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. This site is being remediated under a Voluntary Cleanup Agreement (see site no. V00380).

Env Problem: Nature and Extent of Contamination:a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are highly contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes.b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and ConEd parking lot. c) concentrations: Groundwater monitoring conducted at the site revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in few of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In July 2011, the RCRA closure work plan was approved and in November 2011, EPA started the RCRA site investigation as a response to the Department?s request for emergency action. RCRA closure activities continued through 2012.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features:On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning:The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use:The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Env Problem: Nature and Extent of Contamination:a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes.b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2013.A Remedial Design for a dual phase extraction system was approved.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Record Upd: 10/31/2013
Updated By: MJKOMORO
Site Description: Location:The Site is located across multiple addresses in the Greenpoint section of Brooklyn, NY. The addresses for the Site include 257, 259, 263, & 269 Freeman Street and 230, 238, 242 Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site.Site Features:The original Site encompassed five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site.Current Zoning/Uses:The area (and properties) is zoned M3-1 which includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment.- 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories- 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses:In the early 1900?s the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations ceased in 2003.Site Geology and Hydrogeology:Shallow boring logs indicate the Site overlies historic fill. The soil type below the fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeastMiscellaneous:There are no PBS, CBS records for the multiple addresses of the Site.
Env Problem: The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is

FORMER NEY SMELTING AND REFINING COMPANY (Continued) **S113916765**

largely underlain by a concrete slab.The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from TCLP analyses were all below hazardous waste thresholds.Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present.

Updated By:	JAMORAS

Site Description: Location:The site is located in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features:The site is completely covered by multiple buildings of varying construction and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plan is ~1/2 mile north of the site. Current Zoning/Use(s):The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, etc.). Historical Use(s):The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. This investigation was conducted in several phases, and was completed in the Summer of 2009.Site Geology and Hydrogeology:The site is underlain by a fill unit (0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (~138.5' below ground surface).Groundwater is approximately 11-25' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site.

Env Problem: Nature and Extent of Contamination:- GroundwaterThe primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000 ppb, and in deep groundwater at concentrations up to 120,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 730,000 ppm (73%) in deep monitoring wells. Trichloroethene (up to 5,000 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each).- SoilPCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm).-Soil Vapor and Indoor AirConcentrations of PCE in soil vapor have been found up to 8,200,000 ug/m^3, and in indoor air up to 170 ug/m^3. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m^3, and in indoor air up to 12 ug/m^3.Significant Threat:The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater.

Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area anddata evaluated as they become available.

Site Description: Location:The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The approximately 1 acre site is described on the county tax map as Block No. 2487, Lots No. 1, 10, 12, 72 and 78. Site Features:The dimensions of the site are approximately 240 feet by 200 feet. The building consists of a number of smaller buildings that have been joined together. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To the west is a park and to the northwest is a paved lot which is used for truck storage.Current Zoning/Use:The Site zoned M1-2/R6 which designates the site as manufacturing with a residential overlay. It is currently owned by 49 Dupont Realty Corporation and is used for storage of plastic wrapping and resin pellets.Historical Use:The site has been in existence since 1887. It has been used for manufacturing, as an office, for storage, and for shipping and receiving. Prior to the late 1940s, the site and the surrounding lots were used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. The subject property was developed for plastic manufacturing purposes in the late 1940s to early 1950s, and has remained relatively unchanged since that time. From 1983 to 2004, NuHart and Company made vinyl siding and sheeting at the site. After 2004, NuHart removed all of their equipment and offices. There are 12 underground storage tanks (USTs) located on the Site. According to records, these tanks were emptied and closed as part of an Interim Remedial Measure (IRM). There are also two large aboveground silos on site. The Petroleum Bulk Storage (PBS) number is 2-608875, and the Chemical Bulk Storage (CBS) number is 2-000444. Liquid plasticizers stored included bis(2-ethylhexyl)phthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate.Site Geology and Hydrogeology:Measurements of the groundwater elevation indicated groundwater flow is generally north and west towards the East River.
Env Problem: Nature and Extent of Contamination:The plasticizers bis(2-ethylhexyl)phthalate, Di-n-Octyl phthalate, as well as high boiling, paraffinic, petroleum oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in

FORMER NUHART PLASTIC MANUFACTURING (Continued) **S110487589**

soil. From 1983 to 2004 NuHart and Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000 ppm of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. According to the Interim Investigation Report dated April 2010, a large plume of plasticizer NAPL mixture consisting of phthalates and paraffinic petroleum was identified under the western end of the factory where the plasticizer USTs were located. A small plume of NAPL consisting primarily of phthalate was identified beneath Lot 12 near one of the plasticizer tanks. The large plume has migrated off-site in a northwesterly direction under the sidewalk. Previous interim remedial measures (IRMs) implemented under the spill program involved cleaning the floors of the factory, cleaning out the USTs, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and recovery equipment. NAPL recovery has been ongoing since 2007. As of December 2008, the total NAPL recovered was 8,356 gallons.Gauging data from April 2010 indicates the thickness of the NAPL ranges from 0.15 feet to 4.87 feet.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil since it is under the ground surface, however, if the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. Also, the potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby structures via soil vapor intrusion needs to be evaluated.

Hazardous Waste Summary:
Waste code: D001

RADIAC RESEARCH CORP. (Continued) **1000245435**

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Corrective Action Summary:

Event date: 11/29/1985
Event: RFA Completed

Event date: 02/10/1993
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 12/28/2000
Event: RFA Determination Of Need For An RFI, RFI is Not Necessary;

Event date: 12/28/2000
Event: RFA Completed

Event date: 09/24/2009
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 09/24/2009
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Site Description: The Site is located at 460 Kingsland Avenue in the northernmost section of Brooklyn within a commercial/industrial area and is approximately 3.5 acres in size. It is bordered by Newtown Creek to the east, Kingsland Avenue to the west, Greenpoint Avenue to the

460 KINGSLAND AVENUE (Continued) **U003074537**

north (adjacent to Newtown Creek WPCP), and the Former ExxonMobil Brooklyn Terminal (Mobil Brooklyn Refinery) to the south. Topographic elevations at the Site are approximately 7 feet above mean sea level (amsl) within the southeastern portion of the Site and gradually rise to approximately 11 ft amsl within the northwestern portion of the Site.The Site is currently vacant but was most recently used as a trucking distribution hub. The site has two abutting one-story buildings divided into storage and office space. Exterior areas are paved and used for delivery and shipping purposes, as well as the staging of delivery vehicles. The Site was historically operated as part of the former Mobil Brooklyn Refinery (SOCONY), which itself was a continuation of petroleum refining and storage operations that were prevalent in Greenpoint since the mid-Nineteenth Century. As part of the earlier petroleum refining and storage operations, the southern region of the Site was used for petroleum bulk storage purposes whereas improvements in the northern region of the Site included a distillery and a boiler works storage yard. Under former operations, the Site also served as a petroleum bulk storage yard that included three petroleum bulk storage tanks, two chemical bulk storage tanks containing acids, and an API-type oil/water separator along the southern Site boundary. The site was reportedly used by Mobil?s Technical Services Division (TSD) for study of petroleum product uses.After refinery operations at the former Mobil Brooklyn Refinery ceased in 1966, the Site was sold in 1967 and redeveloped with the existing commercial building in 1968 and occupied by miscellaneous trucking operations. In addition, fifteen underground storage tanks containing diesel fuel, heating oil, and waste oil were maintained during the operation of the commercial/transfer facilities and were removed in 1994. A spill (#9402812) reported during the tank removal initiated site investigation and characterization activities. In addition, ExxonMobil has performed some investigation of the site as part of the remediation of the former Mobil Brooklyn Refinery.The initial investigation activities indicated petroleum-impacted soils existed within the shallow subsurface beneath the Site and that free-phase petroleum product was also located within the shallow subsurface. More recent sampling seeking to close the open spill identified PCB contamination in shallow soil under the asphalt pavement and indicated limited groundwater contamination from PCBs exists.

Env Problem: Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present.Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL" ALSO SEE LATER, CLOSED SPILL REPORT NO. 9403747.10/10/95: This is additional information about material spilled from the translation of the old spill file: HEAVY FUEL OIL.03/29/04Related to Mobil Greenpoint spillTransferred from Miller to Rommel.10/12/04Received call from John Harrison, EcolSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells

460 KINGSLAND AVENUE (Continued) **U003074537**

installed at the property and along the perimetr of the property in order to compare background contamination with the site contamination. AZ1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?)(they are in the same building as Galasso Trucking).I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner)516-965-7766. He will ask him to contact me ASAP. AZ4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.)516-965-7766. He will file for FOIL and have his consultant contact me. AZ6/13/2006 I left a message for John Urda (DEC Legal)requesting his assistance with this case. AZ6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company(212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ7/27/2006 Left a message for Steve Russo (Sive, Paget & Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information:borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, mointoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of actin in a week. AZ8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New York 10022(212) 421-2150 confirming the additional items that should be submitted to DEC:1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that "we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly." AZ4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E. Hampston will likely to request some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see if there is deeper contamination. I reviewed

460 KINGSLAND AVENUE (Continued) **U003074537**

the Exxon proposals and discussed the work plan with Ed. I suggested increasing the number of wells (they initially suggested 3 wells), advancing wells at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil plume maps. AZ11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and received on August 21, 2007. Nine soil borings and three new shallow aquifer wells wells and three new regional aquifer monitoring wells were completed. SVOC and metals were detected at concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface beneath the property. with the highest concentrations present in the vicinity of SB-4, SB-7, SB-9. PCBs were also detected at three soil borings with the highest concentrations observed at SB-6. Although petroleum staining was observed throughout the shallow subsurface, only globules of free product were observed at two locations that were associated historic petroleum storage operations. There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location within the sallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level. According to the report, data indicated that the free product plume present within the regional aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to the north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and remediation of the site. AZ1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ8-12-2008 The owner is proceeding with the sale of the property. The existing building will be demolished for a "clean fill" recycling operation. As part of the demo, they intend to dig out around the building footprint, and want to know if this will be enough to close the UST spill. I recommended taking the end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on the previous investigations), the excavation area and proposed sampling locations should be submitted to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ10-27-2008 I have received an e-mail from Ed Hampston who forwarded a request for spill closure by Leggette, Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ10-29-2008 Conference call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in front of the building at the locations of the former USTs (diesel, waste oil and heating oil tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the background concentrations. DEC (Mike Mulqueen 2-27-1995) requested further investigation and remediation. AZ1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon Mobil to address PCB contamination. AZ2/4/2009 A meeting was held among Alex Zhitomirsky, John Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin representing Mr. Galasso. Phil Galasso and Michael Bogin presented

460 KINGSLAND AVENUE (Continued) **U003074537**

information that appears to support their conviction that PCB contamination and remaining petroleum contamination plums are part of a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hempston and Allan Michaels) will call a meeting with Exxon Mobil so the other party can present their case. If information presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed. According to Ed Hampston, all further activities for this site will be tracked under spill #8800244 (this is the spill Central Ofiice has PIN attached). Ed Hampston intends to create a P site for 460 Kingsland. AZ

Record Upd: 12/16/2003
Updated By: kstang
Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

Updated By: MJKOMORO
Site Description: LOCATION: The Greenpoint Manufacturing and Design Center (GMDC) property is located at 1155-1205 Manhattan Avenue which is an urban area of Brooklyn (Kings County) in New York City. SITE FEATURES: The property is nearly entirely covered by structures, with only one small area covered with other impervious material located along the northern edge of the property along Newtown Creek. There are eight contiguous four to six-story building on the property. The property borders Newtown Creek on the north side. CURRENT ZONING/USE: This property is currently in use for many separate commercial uses, primarily by small businesses and artisans. The surrounding uses are varied - the property adjacent to the west is indicated as having residential and commercial use but appears commercial; the properties to the east across Manhattan Avenue are indicated as being factory/industrial uses, but appear to be commercial with residential above. HISTORICAL USE(s): The property has a long

S & G WOODWORKING INC (Continued) **1008892201**

industrial/commercial history, but went through an extensive remedial effort overseen by local agencies in the 1990's. The property owners have done significant renovations on the buildings and have conducted at least two recent investigations which identified limited groundwater contamination, but did not identify any significant soil contamination.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Only two (of ten) temporary groundwater sampling wells located in the basement of the structure at 1155 Manhattan Avenue showed evidence of contamination. Each contained one chlorinated VOC slightly above standards. Tetrachloroethylene was identified at 21ppb; chloroform was identified at 12 ppb. Groundwater standards are 5 ppb and 7 ppb respectively. Soil samples from these borings were below unrestricted standards for the same compounds. Samples taken from permanent wells did not identify any VOC contamination. Based on professional judgment, the slight exceedances of groundwater standards, adjacent to the Newtown Creek Superfund Site, do not constitute a significant threat to the environment. No further investigations are warranted at this time. Site designation was changed from "P" to "N."

Updated By: JAMORAS
Site Description: Location:The site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of Vandervoort Avenue between Anthony and Lombardy Streets. Site Features:The site is completely covered by one (1) two-story and three (3) one-story brick buildings. The site is surrounded by other commercial and industrial properties. Sergeant William Dougherty Playground is located immediately north of the site across Anthony Street, and the eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area is located one block south of the site.Current Zoning/Use(s):The site is zoned for manufacturing. The site is currently used as a granite warehouse and showroom at 95 Lombardy Street, and a paper distribution office and a kitchen cabinet warehouse/showroom at 46 Anthony Street.Historical Use(s):The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a metal fabricator and painting facility from the 1930's to the late 2000's, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). This investigation was conducted in several phases, and was completed in the Summer of 2009.Based on an extensive records search and several inspections, it was determined that waste paint, waste oil, waste degreasers, and waste water precipitate were generated at the property during site operations. Numerous floor drains with unknown outfall locations existed within the property, and were identified as potential injection wells. In addition, an underground storage tank that was used as a dip tank and for storing degreasing products was located in the northwest corner of the site. Several pipes that originated from the dip tank discharged to a floor drain in the loading dock area.Site Geology and Hydrogeology:The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site.
Env Problem: Nature and Extent of Contamination:- GroundwaterThe primary contaminant of concern at the site is trichloroethene (TCE). TCE has been found on-site in shallow groundwater at concentrations up to 66,000 ppb, and in deep groundwater at concentrations up to 70,000 ppb, well above Part 703.5 class GA standards (5 ppb). Concentrations of tetrachloroethene (up to 8,000 ppb) and 1,2-dichloroethene (3,200 ppb) have also been found above their respective Part 703.5 class GA standards (5 ppb each). The plume of TCE-contaminated groundwater has migrated at least 400' off-site.- Soil Vapor and Indoor AirConcentrations of TCE in soil vapor have been found up to 4,100 ug/m^3, and in indoor air up to 13 ug/m^3. Significant Threat:The

95 LOMBARDY ST./ACME ARCH. PRODS., INC. (Continued) **U003652054**

	site poses a significant environmental threat due to ongoing releases of TCE from source areas into soil and groundwater.
Health Problem:	Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area anddata evaluated as they become available.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/25/2013

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013
Date Made Active in Reports: 01/28/2014

Next Scheduled EDR Contact: 07/21/2014
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Data Release Frequency: No Update Planned

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 04/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 07/21/2014
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2014

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Facility Register

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 04/09/2014

State and tribal leaking storage tank lists

LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Date of Government Version: 02/17/2014
Date Data Arrived at EDR: 02/19/2014
Date Made Active in Reports: 04/02/2014
Number of Days to Update: 42

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US HIST CDL: National Clandestine Laboratory Register
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Data Release Frequency: Biennially

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Subject: Limited Phase II Subsurface Investigation
190 Banker Street
Brooklyn, Kings County, New York 11222
AEI Project No. 332760
RIMS # 14-003142-03-2

AEI Consultants (AEI) is pleased to provide this report which describes the activities and results of the Limited Phase II Subsurface Investigation (Phase II) performed at the above referenced subject property (Figures 1 and 2). This investigation was completed in general accordance with the authorized scope of services outlined in our authorized proposal number 38016.

1.0 SITE DESCRIPTION

The subject property, which consists of an industrial building, is located on the western side of Banker Street in a mixed commercial and residential area of Brooklyn, New York. The property totals approximately 0.41 acres and is improved with a two-story building totaling approximately 20,250 square feet. The subject property is currently occupied by a subset of Acme Smoked Fish Corporation. On-site operations include rack washing, refrigeration of packaged goods, and dry products storage. In addition to the subject property building, the property is improved with on-street parking

The general land use in the vicinity of the subject property is industrial, commercial, and residential.

The subject property is relatively flat at an elevation of about 9 feet above mean sea level. The regional topographic gradient direction slopes toward the west and, therefore, the direction of groundwater flow beneath the subject property is inferred to be to the west. The East River is located approximately 0.35 miles to the west of the subject property.

Based on a review of the United States Department of Agriculture (USDA) Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as Urban Land. The Urban Land designation indicates that more than 85 percent of the original soils have been disturbed or covered by paved surfaces, buildings or other structures. Because of the variability of the soil material, on-site investigation would be required to determine the specific soil composition at the subject property.

Refer to Section 4.1 below for additional information on the site geology and groundwater conditions.

2.0 BACKGROUND

A Phase I Environmental Site Assessment (ESA) was performed by AEI as detailed in a report dated May 20, 2014 (AEI Project Number 330202). As detailed in the Phase I Environmental Site Assessment, the subject property building was constructed for use as an iron and steel works facility from at least 1928 until 1951. From 1960 to at least 1985, the property was used as a machine shop with manufacturing purposes. The specific operations which were performed during this timeframe are unknown. AEI was also unable to identify the specific hazardous materials and equipment historically used on the subject property. AEI identified one (1) 3,000-gallon No. 2 Fuel Oil underground storage tank (UST) in the regulatory database which is believed to be associated with the historic use of the property. The exact location of this former UST is unknown; however, the UST was closed and removed on January 1, 1993. No spills or releases were reported in association with this UST. AEI was unable to acquire documentation of this UST closure. No significant staining was observed throughout the subject property and there is no other evidence of contamination. In addition, AEI did not identify any evidence such as a fill port or vent pipe which would indicate the presence of a former UST. As such, AEI recommended the performance of a Limited Phase II in order to determine if the property has been adversely impacted by the former industrial operations and onsite UST.

3.0 INVESTIGATION EFFORTS

AEI was requested to perform additional investigation, including the collection of soil samples, to evaluate if the historic industrial operations and former onsite UST had adversely impacted the property. AEI was directed to not collect or analyze groundwater samples.

3.1 Health and Safety Plan

A site-specific health and safety plan was prepared, reviewed by onsite personnel, and kept onsite for the duration of the fieldwork.

3.2 Permitting and Utility Clearance

Drilling permits for the sidewalk based borings were obtained from the New York City Department of Transportation (NYCDOT) for this investigation. The public underground utility locating service Dig Safely New York was notified to identify public utilities in the work area. Private utility locating was conducted by Ground Penetrating Radar Services, Inc. (GPRS) of New York, New York to identify underground utilities on the subject property.

3.3 Geophysical Survey

On August 21, 2014, a geophysical survey was conducted by GPRS of. The purpose of the survey was to evaluate the potential presence of the reported former heating oil UST. The geophysical survey was conducted using ground penetrating radar (GPR) on the sidewalk areas

on either side of the subject property building. The results from the geophysical survey indicated no potential onsite USTs.
The client should be aware of the inherent limitations of geophysical surveying methods and that above and underground utilities and other man-made or natural features (i.e. automobiles, debris piles, tree roots, reinforced concrete, certain soil conditions, etc), if in the area of the survey, may decrease the effectiveness of the survey. The client should be aware that the lack of a detection of a feature from a geophysical survey does not mean that the feature does not exist only that it was not detected.

3.4 Drilling and Soil Sample Collection

On August 21, 2014, six (6) soil borings (AEI-B1 through AEI-B6) were advanced on the subject property (Figure 2). The borings were advanced by Tri-State Drilling, Inc. of Garden City, New York using a track mounted direct push drill rig. The borings were advanced to depths of approximately 12 feet below ground surface (bgs). The location and purpose of each boring are listed below:

- Borings AEI-B1 and AEI-B2 were advanced along Gem Street in the sidewalk on the southwestern side of the subject property building in the area the former heating oil UST was most likely located. AEI utilized the location of the heating piping into the building in conjunction with the location of the current aboveground storage tank (AST) containing heating oil.
- Borings AEI-B3 through AEI-B6 were advanced in a grid-like pattern within the subject property building to determine if the historical industrial operations had adversely impacted the subsurface of the subject property.

The borings were advanced using two-inch outer diameter rods and samples were collected by advancing the rods with acetate sample liners in approximately four intervals. After each interval, the core was retrieved, core barrel disassembled, and the sample liner was removed and transferred to the onsite geologist. A target depth of 16 feet bgs or first encountered groundwater was proposed for each boring during this investigation. Groundwater was encountered between 10 and 11 feet in each boring; therefore, borings were only advanced to 12 feet bgs.

The soil borings were logged using the Unified Soil Classification System. A photo ionization detector (PID) was used to screen soil samples in the field and the PID readings for each sample were included on the boring logs (Appendix A). A total of six (6) soil samples were collected using Encore sampling devices and glass jars. Soil samples were collected as follows:

- Soil sample AEI-B1 was collected from approximately 9 feet bgs which corresponded to the highest PID reading recorded for this boring. PID readings in soil columns ranged from 17.5 to 35 parts per million (ppm). No petroleum odor or staining was observed in soil columns from boring AEI-B1. Groundwater was encountered at approximately 10 feet bgs.
- Soil sample AEI-B2 was collected from approximately 9 feet bgs which corresponded with the highest PID reading recorded for his boring (54.5 ppm). A petroleum odor was noted in soils at depths between 9 and 10 feet bgs. PID readings in the soil columns ranged from 3.6

to 54.5ppm. No staining was observed in the soil column at Boring AEI-B2; groundwater was encountered at approximately 10 feet bgs.

- Soil sample AEI-B3 was collected from approximately 5 feet bgs which corresponded with the highest PID reading of 60.7ppm. Petroleum odors were noted between 4 and 6.5 feet in boring AEI-B3 and PID readings ranged from 19.9 to 60.7ppm. No staining was observed in the soil column of Boring AEI-B3 and groundwater was encountered at approximately 11 feet bgs.
- Soil sample AEI-B4 was collected from approximately 10 feet bgs. PID readings ranged from 2.2 to 12.0ppm; therefore soil sample AEI-B4 was collected from just above the water table. No petroleum odor or staining was observed in the soil columns of Boring AEI-B4 and groundwater was detected at approximately 11 feet bgs.
- Soil sample AEI-B5 was collected from approximately 10 feet bgs. PID readings ranged from 2.0 to 11.1ppm; therefore soil sample AEI-B5 was collected from just above the water table. No petroleum odor or staining was observed in the soil columns of Boring AEI-B5 and groundwater was detected at approximately 11 feet bgs.
- Soil sample AEI-B6 was collected from approximately 8 feet bgs which corresponded to the highest PID reading recorded for this boring (23.7ppm). PID readings in soil columns ranged from 3.1 to 23.7ppm. No petroleum odor or staining was observed in soil columns from boring AEI-B6 and groundwater was encountered at approximately 10 feet bgs.

Down-hole equipment was decontaminated using a triple rinse system containing detergent.

3.5 Boring Destruction

Following completion of sample collection and removal of tooling, the borings were backfilled with drill cuttings and hydrated bentonite chips and completed at the surface with concrete to match the surrounding conditions.

3.6 Laboratory Analyses

The soil samples were labeled and placed into a cooler with ice following sampling. The samples were transferred under appropriate chain-of-custody documentation to Alpha Laboratories, Inc. (Alpha) of Westborough, Massachusetts. Laboratory analytical documentation is provided in Appendix B.

Laboratory analysis of soil samples AEI-B1 and AEI-B2 (exterior borings) consisted of the following:

- Volatile Organic Compounds (VOCs) CP-51 List by EPA Method 8260
- Semi-Volatile Organic Compounds (SVOCs) CP-51 List by EPA Method 8270

Laboratory analysis of soil samples AEI-B3 through AEI-B6 (interior borings) consisted of the following:

- Volatile Organic Compounds (VOCs) CP-51 List by EPA Method 8260
- Semi-Volatile Organic Compounds (SVOCs) CP-51 List by EPA Method 8270
- Priority Pollutant 13 Metals (PP13) by EPA Method 6010

3.7 Investigation Derived Wastes

No investigation derived waste was created during this investigation.

4.0 FINDINGS

For the purpose of providing context to the data obtained during this investigation, analytical results are compared to available regulatory screening levels. The New York State Department of Environmental Conservation (NYSDEC) has the responsibility for overseeing soil and groundwater cleanups which are managed under a variety of different regulatory programs. The results of this investigation were reviewed along with the New York Commissioners Policy 51 Soil Cleanup Objectives (NY CP-51) and the New York Unrestricted Use Soil Cleanup Objectives (UUSCO).

4.1 Geology and Hydrogeology

Soil encountered in each of the borings generally consisted of coarse sand mixed with fill comprised of sand, gravel, brick, concrete, and glass (Appendix B).

Groundwater was encountered in borings AEI-B1, AEI-B2, and AEI-B6 at a depth of approximately 10 feet bgs. Groundwater was encountered in borings AEI-B3, AEI-B4 and AEI-B5 at a depth of approximately 11 feet bgs. Groundwater was not sampled as part of this investigation, per scope of work.

4.2 Soil Sample Analytical Results

The following information is a summary of the soil sample analytical test results (Appendix C). This information has also been included in Table 1.

VOCs/SVOCs:

- Low concentrations of toluene were detected in soil samples AEI-B1 (0.00037 mg/kg), AEI-B2 (0.0003 mg/kg), AEI-B4 (0.00059 mg/kg), AEI-B5 (0.00032 mg/kg), and AEI-B6 (0.00028 mg/kg). None of these concentrations are above the corresponding NY CP-51 or UUSCO for toluene (0.7 mg/kg).
- Low concentrations of benzene were detected in AEI-B4 (0.00083 mg/kg). This concentration is not above the corresponding NY CP-51 or NY UUSCO value of 0.06 mg/kg for this compound.
- Low concentrations of naphthalene were detected in soil samples AEI-B3 (0.35 mg/kg) and AEI-B4 (0.0022 mg/kg). These concentrations did not exceed the NY CP-51 or the NYUUSCO for this compound (12 mg/kg). It should be noted that naphthalene was detected in both the VOC analysis and the SVOC analysis. Naphthalene generally eludes more as an SVOC which accounts for the different concentrations detected in the soil samples analyzed for both VOCs and SVOCs (see Table 1). No naphthalene concentrations were detected above the corresponding NY CP-51 or NYUUSCO in the VOC or SVOC analysis.
- Several SVOCs were detected in each soil sample (AEI-B1 through AEI-B6). These SVOC's included: acenaphthene, fluoranthene, naphthalene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluroanthene, chrysene,

acenaphthylene, anthracene, benzo(ghi)perlyene, fluorine, phenanthrene, dibenzo(a,h)anthracene, indeno(1,2,3-cd)pyrene, and pyrene. Of the compounds detected, only two were detected above comparative standards. Dibenzo(a,h)anthracene, was detected above its corresponding NY CP-51 and NY UUSCO value (0.33 mg/kg) at a concentration of 0.41 mg/kg in soil sample AEI-B3. Indeno(1,2,3-cd)pyrene was detected as a concentration of 1 mg/kg in soil sample AEI-B4 and at a concentration of 0.59 ng/kg in soil sample AEI-B6, which is above its corresponding NY CP-51 and NYUUSCO values of 0.5 mg/kg, respectively.

PP13 Metals:

- Several metals including antimony, arsenic, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, and zinc were detected in soil boring AEI-B3 through AEI-B6. Of the metals detected, arsenic, copper, lead, mercury, and zinc were detected above their corresponding NYUUSCO (there is currently no corresponding NY CP-51 for PP 13 Metals). The following exceedences were detected:
    - Arsenic was detected in soil sample AEI-B4 at a concentration of 34 mg/kg, exceeding its NYUUSCO of 13 mg/kg.
    - Copper was detected in soil sample AEI-B4 at a concentration of 79 mg/kg, above its NYUUSCO of 50 mg/kg.
    - Lead was detected in soil samples AEI-B3 (150 mg/kg), AEI-B4 (500 mg/kg), and AEI-B5 (240 mg/kg), all above its corresponding NYUUSCO of 63 mg/kg.
    - Mercury was detected in soil samples AEI-B3 (1.1 mg/kg), AEI-B4 (0.79 mg/kg), AEI-B5 (0.19 mg/kg), and AEI-B6 (0.97 mg/kg), all above its corresponding NYUSSCO of 0.18 mg/kg.
    - Zinc was detected in soil samples AEI-B3 (110 mg/kg) and AEI-B4 (150 mg/kg), above its NYUUSCO of 109 mg/kg.

No other VOCs, SVOCs, or Metals were detected.

5.0 SUMMARY AND CONCLUSIONS

AEI has completed a Limited Phase II at the subject property. The purpose of the Phase II at the subject property was to determine if the property has been adversely impacted by the former industrial operations and onsite UST as revealed in a Phase I Environmental Site Assessment by AEI dated May 20, 2014.

A total of six borings (AEI-B1 through AEI-B6) were advanced at the subject property for the collection of soil samples. Groundwater was neither sampled nor analyzed per scope of work. The results of this investigation were compared to the NY CP-51 levels and NYUUSCO. The following compounds were detected above their corresponding NY CP-51 and/or NYUUSCO: dibenzo(a,h)anthracene (AEI-B3), indeno(1,2,3-cd)pyrene (AEI-B4 and AEI-B6); arsenic (AEI-B4), copper (AEI-B4), lead (AEI-B3, AEI-B4 and AEI-B6), mercury (AEI-B3, AEI-B4, AEI-B5, and AEI-B6), and zinc (AEI-B3 and AEI-B4). The results of the metals' contaminants relative to the sampled locations suggests their presence across the entire subject property interior is likely.

The concentrations of the above-discussed compounds represent a reportable release to the NYSDEC. However, based on the nature of contamination present and the building configuration, there does not appear to be an immediate threat to human health. The building slab was intact and free of sumps, or other potential conduits. The slab therefore protects the

onsite workers from direct contact with the soil. The absence of volatile organic compounds being present in concentrations at or near the agency's cleanup standards reduces the risk for vapor intrusion. However, an assessment of soil gas and indoor air would be required to independently verify this condition. Potential risk to receptors is further reduced by the use of public potable water supply at the subject property.

The User of this report should be aware that if future plans for the subject property include redevelopment and disturbance of the soil, the findings of this report should be taken into consideration. Given the presence of the identified contaminants, a soil management plan should be created to handle the transportation and/or disposal of any excavated soils.

Further, if the subject property owners or representatives desire an agency approval equivalent of no further action for the subject property, then an NYSDEC Spills case should be opened for the subject property. AEI can provide instruction on the notification process, and/or directly contact the agency on behalf of the property to commence the process, if requested. In order for the site to achieve case closure, the data and reports will require NYSDEC review and approval. The User should be aware that the NYSDEC may require further delineation and/or remediation of the reported contamination in order to approve closure of this case.

6.0 REPORT LIMITATIONS AND RELIANCE

This report presents a summary of work completed by AEI Consultants. The completed work includes observations and descriptions of site conditions encountered. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide the requested information, subject to scope of work for which AEI was retained and limitations inherent in this type of work, but it cannot be assumed that they are representative of areas not sampled. This report should not be regarded as a guarantee that no further contamination beyond that which could have been detected within the scope of this investigation is present beneath the subject property. Undocumented, unauthorized releases of hazardous material, the remains of which are not readily identifiable by visual inspection and are of different chemical constituents, are difficult and often impossible to detect within the scope of a chemical specific investigation.

Any conclusions and/or recommendations are based on these analyses and observations, and the governing regulations. Conclusions beyond those stated and reported herein should not be inferred from this document. These services were performed in accordance with generally accepted practices, in the environmental engineering and construction field, which existed at the time and location of the work. No other warranty, either expressed or implied, has been made.

This investigation was prepared for the sole use and benefit of TD Bank, N.A. All reports, both verbal and written, whether in draft or final, are for the benefit of TD Bank, N.A. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms & Conditions executed by TD Bank, N.A. on July 17, 2014. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

If there are any questions regarding our investigation, please do not hesitate to contact AEI at (561) 826-8696.

Sincerely,
AEI Consultants

Project Name: 190 BANKER ST
Project Number: 332760

Lab Number: L1419137
Report Date: 08/28/14

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 190 BANKER ST **Lab Number:** L1419137
Project Number: 332760 **Report Date:** 08/28/14

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L1419137-03: The analysis of Volatile Organics by EPA Method 5035/8260 Low Level could not be performed due to the elevated concentrations of non-target compounds in the sample.

Metals

The WG716313-4 MS recovery for mercury (390%), performed on L1419137-03, does not apply because the sample concentration is greater than four times the spike amount added.

The WG716313-3 Laboratory Duplicate RPD, performed on L1419137-03, is outside the acceptance criteria for mercury (74%). The elevated RPD has been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Michelle M. Morris

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
E	- Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
G	- The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

Report Format: DU Report with 'J' Qualifiers

Project Name:	190 BANKER ST	**Lab Number:**	L1419137
Project Number:	332760	**Report Date:**	08/28/14

Data Qualifiers

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised April 15, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/11/2017 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 10 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 6 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/15/2017 has revealed that there are 19 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 09/25/2017 has revealed that there are 3 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 10/31/2017 has revealed that there are 31 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 23 NY UST sites within approximately 0.25 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS UST site within approximately 0.25 miles of the target property.

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF UST site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 10/31/2017 has revealed that there are 47 NY Spills sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

spillno: 9407468
Site ID: 152295
Site ID: 99242

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 67 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.
