Site Name:

Proposed Ballys Casino - Ring
450 Hutchinson River Parkway
Bronx, NY 10465
EDR Inquiry # 7720624.11

Client Name:

Langan Engineering, Inc.
360 W. 31st Street
New York, NY 10001
Contact: Kaitlyn Gioia

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Appendix G Resumes of Environmental Professionals

BRIAN GOCHENAUR, QEP

ASSOCIATE PRINCIPAL

ENVIRONMENTAL SCIENTIST

Mr. Gochenaur is an environmental project manager with 20 years of experience in environmental due diligence, site investigation and remediation, fuel oil storage tank investigation and removal, soil vapor intrusion assessments, in-situ remedial technology, spill closure, vapor barrier and sub-slab depressurization system design and construction, emergency response, environmental and geotechnical site investigations, and health and safety monitoring. He has extensive experience with the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup, Voluntary Cleanup and Spill Programs and New York City Department of Environmental Protection (NYCDEP) "E" Designated and New York City Voluntary Cleanup Program (BCP) sites. His areas of expertise include Phase I Environmental Site Assessments, Phase II Site Investigations, and environmental consulting and oversight on large scale construction projects.

SELECTED PROJECTS

- 440 Washington Street, E-Designated services, New York, NY
- 3514 Surf Avenue, Tall Residential and Retail Building, Brooklyn, NY
- ARO 242 West 53, Tall Residential Building, New York, NY
- NY Aquarium Shark Exhibit, Soil Characterization and Excavation Oversight, Coney Island Neighborhood, Brooklyn, NY
- 60 West Street, Site Investigation and Redevelopment, Brooklyn, NY
- 535 4th Avenue, BCP Auto Repair Cleanup and Redevelopment, Brooklyn, NY
- 1525 Bedford Avenue, BCP Gas Station Cleanup and Redevelopment, Brooklyn, NY
- 220 Eleventh Avenue, Residential Building, New York, NY
- 432 Rodney Street, Residential Building, Brooklyn, NY
- 563 Sackett Street, Brooklyn, NY
- 362 West 125th Street, Residential Building, New York, NY
- Bedford Armory Redevelopment, Brooklyn, NY
- 268 West Street, BCP Redevelopment of Former Commercial and Industrial Site, New York, NY
- 110 125th Street, Soil Excavation and Remediation, New York, NY
- Former Roseland Ballroom Redevelopment, Soil Characterization and Excavation Oversight, New York, NY
- 42 Crosby Street, "E" Designated Site Investigation and Remediation, New York, NY
- New York School Construction Authority, Various Locations, In-House Environmental Consulting, Five Boroughs of New York City
- EZ Serve Portfolio, GE Capital, Various Phase II Site Investigations, FL, GA, LA, and MS
- Beth Elohim Child Daycare Center, Lead Based Paint Abatement, Brooklyn, NY
- Price Battery, Environmental Protection Agency (EPA) Lead Fallout Superfund Site, Hamburg, PA

EDUCATION

B.S., Environmental Science
University of Florida

PROFESSIONAL REGISTRATION

Qualified Environmental Professional (QEP) certified by the Institute of Professional Environmental Practice

40-Hour OSHA (HAZWOPER)

- Clark Portfolio, GE Capital, Various Phase II Locations, MI, IL, ID, and OH
- Tops Plaza Portfolio, Prudential Real Estate Investors, Various Phase II Locations, NY
- Cingular Wireless Portfolio, Cingular Wireless, Various Locations Phase I and II Locations, WA
- Queens Center Mall Expansion, Remedial Oversight, Elmhurst, NY
- Soka Gakkai International-USA, Cultural Center, Brooklyn, NY
- 1752 Shore Parkway, Environmental Remediation, Brooklyn, NY
- Bedford Union Armory, NYS Brownfield Cleanup Program, Brooklyn, NY
- NYCEDC Manhattan Greenway – Harlem River, New York, NY
- 445 Gerard Avenue, Residential Building, Bronx, NY
- Towne Gardens North, Residential Building, Buffalo, NY

LAMEES ESMAIL, EIT

PROJECT ENGINEER

ENVIRONMENTAL ENGINEERING

Ms. Esmail is a civil and environmental engineer with four years of experience supporting environmental oversight and remediation projects in New York City. She has performed environmental field work including preparing daily inspection reports, photo documentation of work, and reviewing contractor submittals. She currently performs site research, manages field oversight, reviews/approves contractor submittals, prepares reports, and is involved with remedial design, implementation and project management.

Prior to joining Langan, Ms. Esmail gained three years of experience supporting environmental permitting and erosion and sedimentation control primarily for linear overhead transmission line projects. Types of permits included state land disturbance approvals and Army Corps of Engineers Section 10 Pre-Construction Notifications. Ms. Esmail also has experience aiding with the siting of new substation properties, using ArcGIS and AutoCAD to compile data for potential sites.

Engineer in Training (EIT) in NC

SELECTED PROJECTS

- Con Edison Partial Replacement of 345KV Feeders M51 & M52 Feasibility Study, New York, NY
- 220 Eleventh Avenue, Hudson Arts Building, New York, NY
- 50 Hudson Yards, Supertall Office Building, New York, NY
- 215 North 10th Street, Brooklyn, NY
- 320 West 135th Street, New York, NY
- 163 Varick Street, New York, NY
- 39 West 23rd Street, New York, NY
- 1 Huron Street, Brooklyn, NY
- Bedford Armory, Brooklyn, NY
- 1607 Surf Avenue, Brooklyn, NY
- 414 Gerard Avenue, Bronx, NY
- 445 Gerard Avenue, Bronx, NY
- 326-350 Rockaway Avenue, Brooklyn, NY
- 197-201 Canal Street, Staten Island, NY
- 475 Bay Street, Staten Island, NY
- Astoria Steel, Queens, NY
- 99 Hudson Boulevard, New York, NY
- 4650 Broadway, New York, NY
- 12-57 57th Street, Brooklyn, NY
- 805-825 Atlantic Avenue, Brooklyn, NY
- Various Phase I Environmental Site Assessments (ESAs) in NYC

SELECTED PUBLICATIONS, REPORTS, AND PRESENTATIONS

Esmail, L., “Transmission Line Erosion Control and Construction Specifications”, Duke Energy Progress Transmission Erosion and Sedimentation Control Seminar, Raleigh, NC, November 2016.

KAITLYN GIOIA

SENIOR STAFF SCIENTIST

ENVIRONMENTAL ENGINEERING

Ms. Gioia is an Environmental Scientist with the New York City team. Ms. Gioia graduated in 2016 from Adelphi University with a B.A. in Environmental Studies. Ms. Gioia's experiences include project management, leading field work, exposure to an assortment of environmental pollutants, remedial action procedures, & Phase I and Phase II Environmental Assessments. Ms. Gioia has performed Asbestos Hazard and Emergency Response Act (AHERA) inspections and evaluations in schools and State Pollutant Discharge Elimination System (SPDES) sampling for power plants and commercial facilities.

SELECTED PROJECTS

- 80-100 Flatbush Avenue, Brooklyn, NY
- 250 Water Street, New York, NY
- 35-01 & 35-09 Northern Boulevard, Long Island City, NY
- 23-15 44th Road, Long Island City, NY
- South Randalls Due Diligence, New York, NY
- 595-647 Smith Street, Brooklyn, NY
- Willets Point Redevelopment, Flushing, NY
- President Street Properties, Brooklyn, NY
- 475 Bay Street, Staten Island, NY
- Confidential Project, Queens, NY
- 137 Kings Highway, Brooklyn, NY
- 111 Willow Avenue, Bronx, NY
- 560 Degraw Street, Brooklyn, NY
- 122 Fifth Avenue, New York, NY
- Insurance Claim Oversight, White Plains, NY*
- Subrogation Potential Investigation, Lindenhurst, NY*
- Brookhaven National Lab, Brookhaven, NY*
- Far Rockaway Vault Sampling, Far Rockaway, NY*
- East Islip School District AHERA Inspection, East Islip, NY*
- UPRS SPDES Sampling, Uniondale, NY*
- 550 Stewart Avenue Phase I and II, Garden City, NY*
- Riverhead to Canal Cable Expansion, Riverhead, NY*
- Noise Dosimetry Study, Queens, NY*
- School District Lead in Water Sampling, Yonkers, Kings Park, and Baldwin, NY*
- Potable Water Sampling, New York, NY*
- DCF Remediation Oversight, Malverne, West Hempstead, and Port Washington, NY*
- AOP Pilot Testing, Garden City Park, Franklin Square, and Port Washington, NY*

EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) prepared this Phase II Environmental Site Investigation (ESI) report on behalf of Bally's Corporation (Bally's) for a section of the Hutchinson River Parkway, referred to as Ring Road, located within Ferry Point Park, Bronx, New York (the "site"). The Phase II ESI was conducted to investigate the recognized environmental conditions (REC) identified in Langan's Phase I Environmental Site Assessment (ESA), dated September 12, 2024.

Site Location and Description

The site is an approximately 9.61-acre, U-shaped section of Ferry Point Park, that primarily serves as a park thoroughfare and public recreation space and is identified on the New York City Bronx Borough Tax Map as part of Block 5622, Lot 1. The site is bound by Schley Avenue, the Hutchinson River Parkway, and service roads to the north; Bally's Golf Links at Ferry Point golf course to the east; Ferry Point Park and the Bronx-Whitestone Bridge to the south; and Ferry Point Park to the west. Between the western and eastern legs of the U-shape formed by the site lies public parking areas for Ferry Point Park and the Bronx-Whitestone Bridge Metropolitan Transit Authority (MTA) Building.

The site is improved with an uninterrupted, circular roadway, referred to as Ring Road. Ring Road is a one-lane, one-way, asphalt-paved roadway and is bordered on either side by concrete curbing, metal guardrails, and grass shoulders. The remainder of the site includes vegetated areas and footpaths associated with Ferry Point Park. The section of Ring Road comprising the site totals about 1 mile.

The site is at an elevation of approximately 16 feet above mean sea level (msl) and slopes gently downward toward the west-southwest. The regional topography slopes downward toward the west-southwest and Westchester Creek, which is located approximately 320 feet west of the site. The site is located within an urban area characterized by multiple-story commercial, residential, and industrial buildings as well as parking lots and vacant land.

Site History

A review of historical records indicate that the site and adjacent areas were undeveloped and predominantly marsh- and swampland from the 1890s to the 1930s, and the majority of the area was part of Westchester Creek and the Baxter Creek Inlet (now the East River) before infilling and development of Ferry Point Park in the 1940s. By 1947, the site and surrounding area had been infilled to create new land, and Ring Road had been constructed. General improvements to the site were completed by 2015, and the site remains relatively unchanged through present-day.

Proposed Development

Improvements to the site, including the widening of Ring Road, are contemplated by Bally's as part of the proposed development of the associated gaming facility. The proposed site improvements total about 4.1 acres of the 9.61-acre site. The improvements will include a a roadbed, a parking lane, and sidewalks which will provide passive and active space to users of Ferry Point Park. Additional site development outside the 4.1-acre area, such as a bike/pedestrian lane and park landscape improvements, may be included in later stages of the design. Excavation depths to facilitate the redevelopment of Ring Road are expected to extend from 1 to 5 feet below grade surface (bgs).

Field Investigation

The Phase II ESI was conducted in general accordance with the New York City Department of Environmental Protection (NYCDEP)-approved Phase II ESI Work Plan, dated October 1, 2024. The Phase II ESI was completed between February 25 and March 11, 2025, and included the completion of a geophysical survey, advancement of 42 soil borings, installation of 10 temporary groundwater monitoring wells, and collection and laboratory analysis of soil and groundwater samples.

Findings and Conclusions

The following is a summary of Phase II ESI findings and conclusions:

- Anomalies indicative of potential underground storage tanks (UST) were not identified during the geophysical survey.
- Non-native fill, generally consisting of brown to orangeish or grayish brown, fine-grained sand with varying amounts of fine sub-angular gravel, silt, clay, fibrous vegetation, coal, coal ash, glass, construction debris, metal, and wood, was identified throughout the site to depths ranging between 3 feet bgs to the borehole terminus at 8 feet bgs. Native soil was identified beneath the fill layer in 18 of the 42 soil borings and extended to the borehole terminus of 8 feet bgs. Native soil ranged from gray to dark gray clay with varying amounts of fine sand, fine subangular to subrounded gravel, and fibrous vegetation in the western and eastern parts of the site, and grayish brown to brown, fine-grained sand with varying amounts of clay, fine subangular to subrounded gravel, and fibrous vegetation in the southern part of the site.
- Volatile organic compounds (VOC), pesticides, herbicides, and polychlorinated biphenyls (PCB) were not identified in soil samples at concentrations exceeding the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Code, Rules and Regulations (NYCRR) Part 375 Restricted Use Restricted-Residential (RURR) Soil Cleanup Objectives (SCO). Perfluorooctanoic acid (PFOA) and

perfluorooctanesulfonic acid (PFOS) were not identified in soil samples above the NYSDEC Part 375 Remedial Programs Guidelines for Sampling and Analysis of PFAS RURR Guidance Values (date April 2023).

- SVOCs and metals were identified in non-native fill at concentrations exceeding RURR SCOs throughout the site. The highest concentrations of SVOCs were located at SB41 from the 0 to 2 feet bgs, and are likely related to former backfilling of Ferry Point Park and the eastern-adjoining Bally's Golf Links at Ferry Point golf course. These concentrations of SVOCs and metals are typically found in non-native fill throughout New York City and are not indicative of a release of hazardous materials.
- Groundwater was encountered in monitoring wells at depths ranging from about 3.5 to 6.7 feet bgs. Groundwater elevations and flow direction likely vary with tidal influence due to the site's proximity to the East River. Groundwater flow direction is generally expected to be to the west-southwest, towards Westchester Creek and the East River.
- SVOCs and dissolved metals (iron, magnesium, manganese, sodium, and thallium) were identified at concentrations exceeding the NYSDEC Division of Water Technical and Operation Guidance Series 1.1.1 Ambient Water Quality Standards and Guidance Values (SGV) for Class GA (drinking water) in groundwater. Iron, magnesium, manganese, sodium, and thallium are naturally-occurring compounds common in brackish groundwater along waterfront sites in New York City. SVOCs identified in groundwater samples above the NYSDEC SGVs are likely due to entrained sediment in the sample from non-native fill.
- PFOA and PFOS were identified at concentrations exceeding the NYSDEC SGVs in groundwater; however, an on-site source was not identified. The concentrations of PFOA and PFOS are generally higher in groundwater samples collected along the eastern part of the site and are consistent with concentrations found in New York City.

Recommendations for site development can be found in the Remedial Action Plan which is being submitted under separate cover.

1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) prepared this Phase II ESI report on behalf of Bally's Corporation (Bally's) for a section of the Hutchinson River Parkway, referred to as Ring Road, located within Ferry Point Park, Bronx, New York (the "site"). The site is an approximately 9.61-acre, U-shaped section of Ferry Point Park, that primarily serves as a park thoroughfare and public recreation space and is identified on the New York City Bronx Borough Tax Map as part of Block 5622, Lot 1. The Phase II ESI was conducted to investigate the recognized environmental conditions (REC) identified in Langan's Phase I Environmental Site Assessment (ESA), dated September 12, 2024.

The Phase II ESI was conducted in general accordance with the New York City Department of Environmental Protection (NYCDEP)-approved Phase II ESI Work Plan, dated October 1, 2024. The Phase II ESI was completed between February 25 and March 11, 2025, and included the completion of a geophysical survey, advancement of 42 soil borings, installation of 10 temporary groundwater monitoring wells, and collection and laboratory analysis of soil and groundwater samples.

This report is organized as follows:

- Section 2.0: Describes the site background
- Section 3.0: Presents the Phase II ESI methodology
- Section 4.0: Presents the findings of the Phase II ESI
- Section 5.0: Presents conclusions based on the findings
- Section 6.0: Presents the report limitations

2.0 BACKGROUND

2.1 Site Location and Description

The site is an approximately 9.61acre, U-shaped section of Ferry Point Park, that primarily serves as a park thoroughfare and public recreation space and is identified on the New York City Bronx Borough Tax Map as part of Block 5622, Lot 1. The site is bound by Schley Avenue, the Hutchinson River Parkway, and service roads to the north; Bally's Golf Links at Ferry Point golf course to the east; Ferry Point Park and the Bronx-Whitestone Bridge to the south; and Ferry Point Park to the west. Between the western and eastern legs of the U-shape formed by the site lies public parking areas for Ferry Point Park and the Bronx-Whitestone Bridge Metropolitan Transit Authority (MTA) Building.

The site is improved with an uninterrupted, circular roadway, referred to as Ring Road. Ring Road is a one-lane, one-way, asphalt-paved roadway and is bordered on either side by concrete curbing, metal guardrails, and grass shoulders. The remainder of the site includes vegetated areas and footpaths associated with Ferry Point Park. The section of Ring Road comprising the site totals about 1 mile.

The site is at an elevation of approximately 16 feet above mean sea level (msl) and slopes gently downward toward the west-southwest. The regional topography slopes downward toward the west-southwest and Westchester Creek, which is located approximately 320 feet west of the site. The site is located within an urban area characterized by multiple-story commercial, residential, and industrial buildings as well as parking lots and vacant land. A site location map is provided as Figure 1 and a site plan is included as Figure 2.

2.2 Site History

A review of historical records indicate that the site and adjacent areas were undeveloped and predominantly marsh- and swampland from the 1890s to the 1930s, and the majority of the area was part of Westchester Creek and the Baxter Creek Inlet (now the East River) before infilling and development of Ferry Point Park in the 1940s. By 1947, the site and surrounding area had been infilled to create new land, and Ring Road had been constructed. General improvements to the site were completed by 2015, and the site remains relatively unchanged through present-day.

2.3 Proposed Development

Improvements to the site, including the widening of Ring Road, are contemplated by Bally's as part of the proposed development of the associated gaming facility. The proposed site improvements total about 4.1 acres of the 9.61-acre site. The improvements will include a roadbed, a parking lane, and sidewalks which will provide passive and active space to users of Ferry Point Park. Additional site development outside the 4.1-acre area, such as a bike/pedestrian

lane and park landscape improvements, may be included in later stages of the design. Excavation depths to facilitate the redevelopment of Ring Road are expected to extend from 1 to 5 feet below grade surface (bgs).

2.4 Recognized Environmental Conditions

Langan's Phase I ESA identified the following RECs:

REC 1 – Current and Historical Use of the Adjoining and Surrounding Properties

Historical adjoining and surrounding property use includes a municipal solid waste landfill (1950 - 1960s), a United Parcel Service (UPS) facility with petroleum and chemical bulk storage (1985 - present), and an MTA bridge support facility with petroleum bulk storage (1951 - present). Documented and undocumented spills or releases of petroleum products or hazardous substances associated with these properties may have adversely affected groundwater and/or soil vapor on the site.

REC 2 – Non-Native Fill

Non-native fill is expected to underly the site above native soil. Non-native fill in New York City may contain contaminants, particularly metals and semivolatile organic compounds (SVOC), at concentrations that exceed applicable state and/or federal standards. Non-native fill does not trigger a regulatory reporting requirement, but may require implementation of special soil handling, management, and off-site disposal procedures if disturbed during development of the site.

2.5 Soil and Geology

General geologic and geotechnical information about the site was obtained by reviewing available United States Geological Survey (USGS) Geologic Maps and historical topographic maps. New York City soil stratigraphy is generally characterized by layers of fill and native soil overburden above metamorphic bedrock. The site predominantly consisted of marsh- and swampland from the 1890s to the 1930s, and the majority of the site was part of Westchester Creek and the Baxter Creek Inlet (now the East River) before infilling and development of Ferry Point Park in the 1940s. According to the U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) Soil Survey Geographic (SSURGO) data for Summit County, soils at the site consist primarily of urban land with tidal marsh stratum, and lesser amounts of Greenbelt loam, Greatkills gravelly sandy loam, and North Meadow sandy loam. Urban Land refers to soils that have been altered by human activities thus making them unidentifiable. Typically, these soils have been mixed with other materials, such as brick, concrete, and demolition debris of unknown origin (non-native fill).

According to the USGS Bedrock and engineering geologic maps of New York County and parts of Kings and Queens Counties, New York, and parts of Bergen and Hudson Counties, New Jersey (Baskerville, C.A., 1994), the site is in the Pelham Bay Member, which consists of sillimanite-grade gneisses. According to previous geotechnical investigations in the surrounding area, subsurface conditions generally consist of a layer of miscellaneous fill, overlying natural, soft, silty, clayey, peat and sands, which overly glacial till. Bedrock is expected to be about 80 to 120 feet below current grade. Geological surface features (e.g., rock outcroppings) were not observed on the site.

2.6 Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeological network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeological and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of non-native fill, and variability in local geology and groundwater sources or sinks. Based on a review of USGS topographic maps and previous reports for the area, groundwater is tidally influenced and is estimated between 2 and 20 feet bgs.

Surface water bodies are not present within the boundary of the site. The nearest surface water bodies are Westchester Creek and the East River. Groundwater flow can be influenced by several factors such as surface water bodies, wetlands, hydrogeologic and anthropogenic variables. However, based on topographic gradient and proximity to Westchester Creek and the East River, it is expected that groundwater generally flows to the west-southwest.

Groundwater in the Bronx is not used as a potable (drinking) water source. The potable water supply is provided to the site by the City of New York and is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

The current Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM), dated December 5, 2007, include advisory flood zone boundaries and advisory base flood elevations. Preliminary FIRM Community Panel Numbers 3604970104F and 3604970112F indicate that the site falls within Zone X and Zone AE. Zone X is considered to be an area of 0.2% annual chance floodplain; an area of 1% (100-year-flood) annual flood chance with average depths of less than one foot with drainage areas less than one square mile; and/or an area protected by levees from 1% annual chance flood. Zone AE is considered a Special Flood Hazard Area, which is determined to be within the 1% annual chance floodplain. The corresponding base flood elevations shown on the map for areas of the site within Zone AE range from elevation (el) 13 to 14 in reference to the National Geodetic Vertical Datum of 1929.

3.0 FIELD INVESTIGATION

The Phase II ESI field work was completed between February 25 and March 11, 2025 and included completion of a geophysical survey, advancement of 42 environmental soil borings, installation of 10 temporary groundwater monitoring wells, and collection and laboratory analysis of 84 soil and 10 groundwater samples. Additional samples were also collected and analyzed for quality assurance/quality control (QA/QC) purposes. A sample collection summary is provided in Table 1 and a site plan is shown on Figure 2. Photographs of the field investigation are provided in Appendix A. The investigation was completed in general accordance with the NYCDEP-approved Phase II ESI Work Plan.

3.1 Utility Mark-Out and Geophysical Survey

Prior to beginning the field investigation, the New York One Call Center was contacted for Code 753 utility mark-outs. A geophysical investigation was also implemented by NOVA Geophysical Services (NOVA) of Douglaston, New York on February 25, 2025. The survey used ground-penetrating radar (GPR) and electromagnetic detection equipment to identify potential underground storage tanks (UST) and locate buried utilities and substructures in the vicinity of each boring location. Borings were relocated as necessary to avoid subsurface utilities and other subsurface impediments. The geophysical survey report is provided in Appendix B.

3.2 Soil Investigation

A total of 42 soil borings (SB01 through SB42) were advanced by Lakewood Environmental Services Corp. (Lakewood) of Smithtown, New York. Boring locations were selected to provide sufficient site coverage and to evaluate the potential impacts associated with the findings of the Phase I ESA. Langan field personnel were on site to document subsurface field observations and collect soil samples. Soil borings were advanced using a PowerProbe 9100P track-mounted drill rig and hand tools to depths ranging from 8 to 15 feet bgs.

For ground protection in parkland, Lakewood placed plywood on the ground surface to access any boring locations on the grass. Additionally, borings were off-set as necessary to avoid the critical root zone of trees and ensure roots were undamaged. Borings were not advanced within the dripline of parkland trees.

Soil samples were collected continuously from surface grade to the final depth of each boring into 4-foot-long Macro-Core samplers equipped with dedicated acetate liners. The geophysical survey identified water and electric lines in the vicinity of soil borings SB05, SB26, and SB27; therefore, soil samples from the three borings were precleared to 5 feet bgs using a hand auger prior to advancement to final depth. Recovered soil from the hand auger was placed on polyethylene sheeting in 1-foot intervals for characterization and sampling. Langan visually

classified soil samples for soil type, grain size, texture, and moisture content. Each sample was screened for visual, olfactory, and instrumental evidence of a chemical or petroleum release. Instrumental screening for the presence of organic vapors was performed using a handheld photoionization detector (PID) equipped with a 10.6 electron volt (eV) lamp. Soil boring logs documenting these observations are included in Appendix C. Following sample collection, all borings were backfilled with non-impacted soil cuttings to surface grade, and patched to restore the location to its original condition.

Soil Sample Collection and Analysis

A total of 84 soil samples (plus five duplicate and five matrix spike/matrix spike duplicate [MS/MSD] QA/QC samples) were collected for laboratory analysis. In addition, five field blanks, five per- and polyfluoroalkyl Substances (PFAS) field blanks, and five trip blanks were collected and/or analyzed for QA/QC purposes. Two soil samples were collected from each soil boring: a surface soil sample (from the 0-2 foot bgs interval), and a subsurface soil sample (from the two-foot interval beneath the proposed maximum excavation depth of 5 feet bgs). Grab samples submitted for volatile organic compound (VOC) analysis were collected directly from the acetate liners into laboratory-supplied Terra Core soil samplers. The remaining sample volume was homogenized and placed into laboratory-supplied containers for additional analyses. The sample containers were labeled, placed in a laboratory-supplied cooler, and packed on ice (to maintain a temperature of 4 ± 2°C). The samples were relinquished, under standard chain-of-custody protocol, to a courier for delivery to York Analytical Laboratories (York), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory in Richmond Hill, New York.

Soil samples collected were analyzed for the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Code, Rules and Regulations (NYCRR) Part 375-list Target Compound List (TCL) VOCs by United State Environmental Protection Agency (USEPA) method 8260, Part 375/TCL SVOCs (including 1,4-dioxane) by USEPA method 8270, pesticides and herbicides by USEPA method 8081, polychlorinated biphenyls (PCB) by USEPA method 8082, and Target Analyte List (TAL) metals (including hexavalent and trivalent chromium) and total cyanide by USEPA methods 6010, 7471, 7196, and 9010. One soil sample from each temporary monitoring well location was also analyzed for NYSDEC-List PFAS by USEPA method 1633.

The approximate soil boring locations are shown on Figures 3A to 3D and a sample collection summary is provided as Table 1.

3.3 Groundwater Investigation

Ten soil borings (SB01, SB07, SB10, SB15, SB20, SB27, SB31, SB34, SB38, and SB42) were converted into temporary groundwater monitoring wells constructed of 1-inch-diameter threaded polyvinyl chloride (PVC) casing and 10 to 15 feet of 0.02-inch slotted well screen set to final depths of either 12 or 15 feet bgs. The monitoring wells were constructed so that the well screen straddled the observed groundwater table between 3.5 and 6.7 feet bgs. Temporary monitoring well construction logs are included in Appendix D.

Groundwater Sample Collection and Analysis

Groundwater samples were collected following well installation between February 27 and March 11, 2025. Samples were collected in accordance with the protocols described in the USEPA's low-flow groundwater sampling procedure ("USEPA Low Stress Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring Wells", dated July 30, 1996 and revised September 19, 2017) to allow for collection of a representative sample. Monitoring wells were gauged for static water levels and purged, and physical and chemical parameters (e.g., pH, conductivity, turbidity, dissolved oxygen, temperature, and oxidation-reduction potential) were generally collected until purged groundwater was no longer turbid. If poor recharge was observed during purging, a groundwater sample was collected once the water level returned an adequate well volume for sample collection. Groundwater sampling logs are included in Appendix D.

Ten groundwater samples (plus to one duplicate and one MS/MSD QA/QC sample), were collected for laboratory analysis. In addition, one field blank, one PFAS field blank, and six trip blanks were collected for QA/QC purposes. Sampled were collected into laboratory-supplied glassware, packed with ice to maintain a temperature of 4 ± 2°C, and transported via courier service to York under chain-of-custody protocol.

Groundwater samples were analyzed for Part 375/TCL VOCs by USEPA method 8260, TCL SVOCs by USEPA method 8270, pesticides and herbicides by USEPA method 8081, PCBs by USEPA method 8082, total and dissolved (field filtered) metals by USEPA methods 6010, 6020, and 7471, hexavalent and trivalent chromium by USEPA method 7196, total cyanide by method SM 4500, 1,4-dioxane by USEPA method 8270 SIM, and NYSDEC-List PFAS by USEPA Method 1633.

Samples collected for dissolved metals analysis were filtered in the field using a dedicated filter. Upon completion of groundwater sampling at each well location, purged groundwater was returned to the temporary monitoring well in accordance with the protocol approved by NYCDEP via correspondence on February 19, 2025.

4.0 OBSERVATIONS AND RESULTS

4.1 Geophysical Survey

Prior to intrusive sampling, NOVA conducted a geophysical survey on February 25, 2025. NOVA used GPR and electromagnetic detection equipment to identify potential USTs and locate buried utilities and anomalies across accessible regions of the site. Anomalies resembling potential subsurface utilities (such as electric, water, telecommunications, and gas) were identified throughout the site. Anomalies indicative of potential USTs were not identified during the geophysical survey. Boring locations were cleared of subsurface structures or utilities and were relocated away from anomalies resembling subgrade utilities, as needed. The geophysical survey identified water and electric lines in the vicinity of soil borings SB05, SB26, and SB27; therefore, the locations were precleared with a hand auger prior to advancement with a drill rig. A copy of the geophysical survey report is included as Appendix B.

4.2 Subsurface Observations

Non-native fill was encountered in all borings throughout the site. The non-native fill material generally consists of brown to orangeish or grayish brown, fine-grained sand with varying amounts of fine sub-angular gravel, silt, clay, fibrous vegetation, coal, coal ash, glass, construction debris, metal, and wood to depths ranging between 3 feet bgs to the borehole terminus at 8 feet bgs. Native soil was identified beneath the fill layer in 18 of the 42 soil borings. Native soil in the western and eastern parts of the site generally consists of gray to dark gray clay with varying amounts of fine sand, fine subangular to subrounded gravel, and fibrous vegetation to the borehole terminus. Native soil in the southern part of the site cosists of grayish brown to brown, fine-grained sand with varying amounts of clay, fine subangular to subrounded gravel, and fibrous vegetation to the borehole terminus. Visual, olfactory, and instrumental evidence of petroleum and chemical impacts were not apparent in any of the borings.

Groundwater was encountered at depths ranging from about 3.5 to 6.7 feet bgs. No evidence of petroleum or chemical impacts (e.g., odor, staining, or PID readings above background) were apparent in purged groundwater. Groundwater elevations likely vary with tidal influence due to the site's proximity to the East River.

4.3 Soil Sample Results

Soil sample analytical results were compared to the NYSDEC Title 6 NYCRR Part 375 Restricted Use Restricted-Residential (RURR) Soil Cleanup Objectives (SCO). Soil sample analytical results are summarized in Figures 3A to 3D, and presented in Table 2. Laboratory analytical reports are included in Appendix E.

Ranges of compounds detected at concentrations above the RURR SCOs are provided in the table below. VOCs, pesticides, herbicides, and PCBs were not detected at concentrations above RURR SCOs. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were not detected above the NYSDEC Part 375 Remedial Programs Guidelines for Sampling and Analysis of PFAS RURR Guidance Values (date April 2023).

Analyte	RURR SCOs	Minimum Detected Concentration above SCOs		Maximum Detected Concentration above SCOs		Number of Sample Exceedances
SVOCs						
Benzo(a)anthracene	1	1.06	SB04_0-2	14.4	SB41_0-2	6
Benzo(a)pyrene	1	1.05	SB04_0-2	11.4	SB41_0-2	7
Benzo(b)fluoranthene	1	1.01	SB04_0-2	9.64	SB41_0-2	6

Barium	400	810	SB27_5-7	810	SB27_5-7	1
Lead	400	421	SB05_0-2	1,130	SB27_5-7	2
Mercury	0.81	1.32	SB05_5-7	3.29	SODUP02_022825	4

Notes:

1. Concentrations are shown in milligram per kilogram (mg/kg).
2. Soil sample SODUP02_022825 is the duplicate of parent sample SB10_5-7.

4.4 Groundwater Sample Results

Groundwater results were compared to the NYSDEC Division of Water Technical and Operation Guidance Series 1.1.1 Ambient Water Quality Standards and Guidance Values (SGV) for Class GA (drinking water). Analytical results from groundwater sampling are summarized in Figure 4, and presented in Table 3. Laboratory analytical reports are included in Appendix E.

Ranges of compounds detected at concentrations above the NYSDEC SGVs are described in the table below. VOCs, pesticides, herbicides, and PCBs were not detected at concentrations above the NYSDEC SGVs.

Analyte	NYSDEC SGVs	Minimum Detected Concentration above SCOs		Maximum Detected Concentration above SCOs		Number of Sample Exceedances
SVOCs

Notes:

1. Concentrations are shown in microgram per liter (µg/L).
2. Groundwater sample GWDUP01_031025 is the duplicate of parent sample TMW34_031025.

5.0 FINDINGS AND CONCLUSIONS

The following is a summary of Phase II ESI findings and conclusions:

- Anomalies indicative of potential USTs were not identified during the geophysical survey.
- Non-native fill, generally consisting of brown to orangeish or grayish brown, fine-grained sand with varying amounts of fine sub-angular gravel, silt, clay, fibrous vegetation, coal, coal ash, glass, construction debris, metal, and wood, was identified throughout the site to depths ranging between 3 feet bgs to the borehole terminus at 8 feet bgs. Native soil was identified beneath the fill layer in 18 of the 42 soil borings and extended to the borehole terminus of 8 feet bgs. Native soil ranged from gray to dark gray clay with varying amounts of fine sand, fine subangular to subrounded gravel, and fibrous vegetation in the western and eastern parts of the site, and grayish brown to brown, fine-grained sand with varying amounts of clay, fine subangular to subrounded gravel, and fibrous vegetation in the southern part of the site.
- VOCs, pesticides, herbicides, and PCBs were not identified in soil samples at concentrations exceeding the RURR SCOs. PFOA and PFOS were not identified in soil samples above the RURR Guidance Values.
- SVOCs and metals were identified in non-native fill at concentrations exceeding RURR SCOs throughout the site. The highest concentrations of SVOCs were located at SB41 from the 0 to 2 feet bgs, and are likely related to former backfilling of Ferry Point Park and the eastern-adjoining Bally's Golf Links at Ferry Point golf course. These concentrations of SVOCs and metals are typically found in non-native fill throughout New York City and are not indicative of a release of hazardous materials.
- Groundwater was encountered in monitoring wells at depths ranging from about 3.5 to 6.7 feet bgs. Groundwater elevations and flow direction likely vary with tidal influence due to the site's proximity to the East River. Groundwater flow direction is generally expected to be to the west-southwest, towards Westchester Creek and the East River.
- SVOCs and dissolved metals (iron, magnesium, manganese, sodium, and thallium) were identified at concentrations exceeding the NYSDEC SGVs in groundwater. Iron, magnesium, manganese, sodium, and thallium are naturally-occurring compounds common in brackish groundwater along waterfront sites in New York City. SVOCs identified in groundwater samples above the NYSDEC SGVs are likely due to entrained sediment in the sample from non-native fill.
- PFOA and PFOS were identified at concentrations exceeding the NYSDEC SGVs in groundwater; however, an on-site source was not identified. The concentrations of PFOA

and PFOS are generally higher in groundwater samples collected along the eastern part of the site and are consistent with concentrations found in New York City..

Recommendations for site development can be found in the Remedial Action Plan which is being submitted under separate cover.

6.0 LIMITATIONS

This report was prepared on behalf of Bally's Corporation expressly for a section of the Hutchinson River Parkway, referred to as Ring Road, located within Ferry Point Park, Bronx, New York, and for the objectives defined herein. Langan cannot assume responsibility for the use of this report for any property other than the specific site addressed in this report, or by any third party without specific written authorization from Langan.

The findings, conclusions, and opinions provided in this report are based on subsurface conditions ascertained from the analysis of a limited number of samples. Actual conditions encountered may differ substantially from those presented herein and should be brought to our attention whereby we may determine how such changes may affect our conclusions, opinions, and recommendations.

Areas of Concern (AOC):
REC 1 - Current and Historical use of Adjoining and Surrounding Properties
REC 2 - Non-native Fill

Notes:
1. Soil and groundwater samples were analyzed for New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules and Regulations (6 NYCRR) Part 375-list compounds.
2. VOC = volatile organic compound
3. SVOC = semivolatile organic compound
4. PCB = polychlorinated biphenyl
5. TCL = Target Compound List
6. TAL = Target Analyte List
7. QA/QC = quality assurance/quality control
8. NA = not applicable
9. REC = recognized environmental condition
10. PFAS = Per- and Polyfluoroalkyl Substances
11. REC = recognized environmental condition
12. DTW = depth to groundwater
13. Sample depths are provided in feet below grade surface. Groundwater depths are provided in feet below the top of well casing.

Table 2
Phase II Environmental Site Investigation Report
Soil Sample Analytical Results

Proposed Bally's Casino – Ring Road at Ferry Point Park
Bronx, New York
Langan Project No.: 170773001

Notes:
CAS - Chemical Abstract Service
NS - No standard
mg/kg - milligram per kilogram
NA - Not analyzed
RL - Reporting limit
<RL - Not detected
Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Restricted Use Restricted-Residential Soil Cleanup Objectives (SCO).

Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Remedial Programs Guidelines for Sampling and Analysis of Per- and Polyfluoroalkyl Substances (PFAS) Restricted Use Restricted-Residential Guidance Values (April 2023).

Qualifiers:
D - The concentration reported is a result of a diluted sample.
J - The analyte was detected above the method detection limit (MDL), but below the RL; therefore, the result is an estimated concentration.
P - The relative percent difference (RPD) between the results for the two columns exceeds the method-specified criteria.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.

Exceedance Summary:
10 - Result exceeds Restricted Use Restricted-Residential SCOs

Table 3
Phase II Environmental Site Investigation Report
Groundwater Sample Analytical Results

Proposed Bally's Casino – Ring Road at Ferry Point Park
Bronx, New York
Langan Project No.: 170773001

Notes:
CAS - Chemical Abstract Service
NS - No standard
ug/l - microgram per liter
NA - Not analyzed
RL - Reporting limit
<RL - Not detected
Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 Codes, Rules, and Regulations (NYCRR) Part 703.5 and the NYSDEC Technical and Operation Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA Water and published addenda (herein collectively referenced as "NYSDEC SGVs").

Qualifiers:
D - The concentration reported is a result of a diluted sample.
J - The analyte was detected above the method detection limit (MDL), but below the RL; therefore, the result is an estimated concentration.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.
B - The analyte was found in the associated analysis batch blank.

Exceedance Summary:
10 - Result exceeds NYSDEC SGVs

Analyte	NYSDEC Part 375 Restricted Use Restricted-Residential SCOs
SVOCs	
Benzo(a)anthracene	1
Benzo(a)pyrene	1
Benzo(b)fluoranthene	1
Benzo(k)fluoranthene	3.9
Chrysene	3.9
Dibenz(a,h)anthracene	0.33
Indeno(1,2,3-cd)pyrene	0.5
Metals	
Arsenic	16
Barium	400
Lead	400
Mercury	0.81

Exceedance Summary:

10 - Result exceeds Restricted Use Restricted-Residential SCOs

Notes:
1. Imagery provided through Langan's subscription to Nearmap.com. Flown on 06/16/24.
2. All locations are approximate.
3. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the official compilation of the New York Codes, Rules and Regulations (NYCRR) Part 375 Restricted Use Restricted-Residential (RURR) Soil Cleanup Objectives (SCOs).
4. Only sample results where an analyte was detected above RURR SCOs are shown.
5. Analytes detected above RURR SCOs are bold and shaded.
6. SVOCs = Semivolatile Organic Compounds
7. Sample depths refer to feet below grade surface.
8. Sample concentrations are presented in milligram per kilogram.
9. D = The concentration reported is a result of a diluted sample.
10. J = The analyte was detected above the method detection limit (MDL), but below the reporting limit (RL); therefore, the result is an estimated concentration.
11. U = The analyte was analyzed for, but was not detected at the level great than or equal to the RL; the value shown in the table is the RL.

Re: Geophysical Engineering Survey (GES) Report
Ferry Point Park Ring Road
10 Hutchinson River Parkway,
Bronx, New York 10465

Dear Ms. Haley,

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site located at Ferry Point Park Ring Road: 10 Hutchinson River Parkway, Bronx, NY (the "Site").

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify utilities, underground storage tanks and other substructures at the project site on February 25th, 2025.

The equipment selected for this investigation was a GSSI UtilityScan 350 MHz ground penetrating radar (GPR) with a shielded antenna Sensors and Software Noggin 250 MHz GPR with a shielded antenna and a RadioDetection RD7100 Electromagnetic utility locator. A GPR system consists of a radar control unit, control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition

rate of 250/350 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulse into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit in order to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

GEOPHYSICAL METHODS

The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

DATA PROCESSING

In order to improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing work flow is briefly described in this section.

Step 1. Import Raw RAMAC data to standard processing format

Step 2. Remove instrument noise *(dewow)*

Step 3. Correct for attenuation losses *(energy decay function)*

Step 4. Remove static from bottom of profile *(time cut)*

Step 5. Mute horizontal ringing/noise *(subtracting average)*

The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

PHYSICAL SETTINGS

NOVA observed the following physical conditions at the time of the survey.

Weather: sunny

Temperature: 48° F

Surface: Asphalt/ Concrete/ Grass

Survey Parameters: A GPR grid scan was conducted within the survey areas as shown on the survey plan. The approximate line spacing of the grid survey was approximately 5'. Additional GPR data was collected over features of interest.

Limitations: The geophysical noise level (GNL) at the site was high due to being in an urban environment as well as other unknown anthropogenic sources.

RESULTS

The results of the geophysical engineering survey (GES) identified the following at the project site:

- The GES identified anomalies consistent with those of utilities (Electric, Water, Telephone, and Gas). The exact locations are shown in the survey plan.

- The GES confirmed that all identifies utilities ran throughout the perimeters of the park as well as the adjacent roadway.

- The GES identified electric lines located along the western side of the project area approximately 2 feet below ground surface.

- The GES identifies multiple utilities: electric, telephone, and gas lines running parallel to each other along the eastern portion of the project site.

- Boring locations on the east side of the survey area were moved from the grass area to the asphalt road. This is due to electric and telephone lines in close vicinity on the grass, as well as a gas line on the other side of the road.

- NOVA adjusted some of the boring locations away from identified subsurface utilities and marked them in the vicinity.

- NOVA cleared and marked all proposed boring locations at the site.

If you have any questions, please do not hesitate to contact the undersigned.

Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.
Project Manager

PVC	1-inch	No. 2 Sand	
TYPE OF SCREEN	**DIAMETER**	**TYPE OF WELL PACK**	**TYPE OF SEAL MATERIAL**
PVC No. 20 Slot	1-inch	No. 2 Sand	N/A

METHOD OF INSTALLATION

PowerProbe® 9100P Drill Rig was used to advance the boring to approximately 12 feet bgs. A one-inch (1") PVC temporary monitoring well was installed which consisted of 10 feet of 20 slot (0.020-inch) well screen, and a solid 1" PVC riser. Well screen was installed from approximately 2 to 12 feet bgs with riser from 2 feet bgs to surface. No. 2 clean sand was used to fill the annulus around the screen to grade surface. The temporary monitoring well was removed after sampling. The borehole was backfilled with No. 2 sand and soil cuttings to surface grade, and restored to it's original surroudings.

PVC	1-inch	No. 2 Sand	
TYPE OF SCREEN	**DIAMETER**	**TYPE OF WELL PACK**	**TYPE OF SEAL MATERIAL**
PVC No. 20 Slot	1-inch	No. 2 Sand	N/A

METHOD OF INSTALLATION

PowerProbe® 9100P Drill Rig was used to advance the boring to approximately 12 feet bgs. A one-inch (1") PVC temporary monitoring well was installed which consisted of 10 feet of 20 slot (0.020-inch) well screen, and a solid 1" PVC riser. Well screen was installed from approximately 2 to 12 feet bgs with riser from 2 feet bgs to surface. No. 2 clean sand was used to fill the annulus around the screen to grade surface. The temporary monitoring well was removed after sampling. The borehole was backfilled with No. 2 sand and soil cuttings to surface grade, and restored to it's original surroudings.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 27, 2025 and listed below. The project was identified as your project: **170773001**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25B1548

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By **Date:** 03/07/2025

Sample and Data Qualifiers Relating to This Work Order

QR-02	The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-LCS-L	The LCS recovery for this PFAS compound was below control limits.
P	This qualifier indicates the compound detected exhibited greater than 40% between the quantitation and confirmatory columns.
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 28, 2025 and listed below. The project was identified as your project: **170773001**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25B1634

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By **Date:** 03/10/2025

Sample and Data Qualifiers Relating to This Work Order

PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
P	This qualifier indicates the compound detected exhibited greater than 40% between the quantitation and confirmatory columns.
S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
PF-LCS-L	The LCS recovery for this PFAS compound was below control limits.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
S-08	The recovery of this surrogate was outside of QC limits.
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference

Wet — The data has been reported on an as-received (wet weight) basis

Low Bias — Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on March 03, 2025 and listed below. The project was identified as your project: **170773001**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25C0068

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By **Date:** 03/12/2025
