ATTACHMENT 11 – STATEMENT OF FINDINGS

Brooklyn Yards – Zoning Lot 3
Brooklyn, NY

Special Permit Pursuant to 74-681
Applicant's Discussion of Findings

74-681
Development within or over a railroad or transit right-of-way or yard

(a) In all districts, when a development or enlargement, including large-scale developments pursuant to Section 74-74, 78-00 et seq. or 79-00 et seq. is located partially or entirely within a railroad or transit right-of-way or yard and/or in railroad or transit air space, the City Planning Commission may permit:

******

(1) that portion of the railroad or transit right-of-way or yard which will be completely covered over by a permanent platform to be included in the lot area for such development or enlargement;

******

(b) As a condition for granting a special permit, the Commission shall find that:
(1) the streets providing access to all uses pursuant to paragraph (a) above are adequate to handle traffic resulting there from;

The streets that border Zoning Lot 3 (Block 5509, Lots 41 and 57) are adequate to handle traffic resulting from the Proposed Development. Zoning Lot 3 fronts on 60th Street, an 80-foot-wide street allowing two-way traffic, to the south; 16th Avenue, an 80-foot-wide street allowing two-way traffic, to the east; and has approximately 17 feet of frontage on 59th Street, a 60-foot-wide one-way street, to the north. Parking for the Proposed Development would be located on Zoning Lot 3, accessed by a curb cut on 16th Avenue. This attended outdoor parking lot would have 40 parking spaces with adequate reservoir space to prevent queuing on 16th Avenue. As described in more detail in the Environmental Assessment Statement (EAS), at the peak a.m., midday and p.m. hours, the proposed parking lot would experience, respectively, approximately 14 trips out and three trips in; 7 trips out and 11 trips in; and 9 trips out and 9 trips in. Neither the proposed parking lot nor any intersection within the EAS study area would experience an incremental increase of 50 or more project-generated vehicle trips during the peak hours.

The Proposed Development, including the portion on Zoning Lot 3, is not expected to negatively affect traffic conditions in the surrounding area. As discussed in detail in the EAS, the portion of the Proposed Development would generate 97 a.m. peak hour vehicle trips, 46 midday peak hour vehicle trips and 91 p.m. peak hour vehicle trips. No intersection in the vicinity of the Project Area is projected to experience an incremental increase of 50 or more trips at any point in the day as a result of the Proposed Development, and therefore no significant adverse traffic impacts are expected to occur as a result of this ZR Section 74-681 Special Permit, or the Proposed Actions as a whole.

Additionally, Zoning Lot 3 is well-situated near public transit, reducing dependency on private automobiles, thereby reducing the amount of traffic that would be generated by the Proposed Development on Zoning Lot 3. Two subway stations are located within a short walk of Zoning Lot 2 – the 62nd Street station is located two blocks southwest of Zoning Lot 3, at New Utrecht Avenue, with service on the D line between Coney Island and Norwood/205th Street in the Bronx via Manhattan; and the New Utrecht Avenue station is located three blocks southwest of Zoning Lot 3, with service on the N line between Coney Island and Astoria via Manhattan. The B9 bus line runs along 60th Street, with stops at 14th, 15th and 16th Avenue and provides service between Bay Ridge and Kings Plaza. The B16 bus stops approximately .5 miles northeast of Zoning Lot

3, at 14th Avenue and 56th Street, and provides service between Prospects-Lefferts Garden and Fort Hamilton.

As discussed in detail in the EAS, the evening/overnight parking demand for the Proposed Development as a whole is expected to peak at 146 spaces, and daytime demand (at the peak hour between 9 and 10 a.m.) is expected to peak at 145 spaces. An open, 40-space accessory parking lot would be provided within the Proposed Development, and therefore approximately 106 vehicles would not be accommodated on-site overnight and 105 vehicles would not be accommodated during the daytime peak hour. Residents would likely use on-street parking within ½-mile radius of the Project Area. As indicated in the EAS, with 636 available curbside spaces within the ½-mile radius of the Proposed Development during the midday and 602 available curbside spaces within ½-mile radius of the Proposed Development overnight, peak parking demand could be absorbed by available on-street spaces within the parking study area.

In addition, the Applicant has identified nine curb cuts no longer in use (i.e., they do not lead to any parking or loading) and that could be opened up for on-street parking by the Department of Transportation. Furthermore, private parking garages in nearby buildings (including 1667 61st Street, 1421 61st Street and 1133 58th Street) have available monthly parking spaces that would be available to residents of the Proposed Development. Therefore, it is not expected that the Proposed Development would result in a significant adverse impact to on-street parking conditions.

Parking demand for the Proposed Development, which was calculated pursuant to CEQR Technical Manual guidance, is not reflective of a neighborhood with this amount of immediate access to transportation and an abundance of alternative off-street parking. The existence of numerous forms of transit and neighborhood walkability result in a transit-rich and pedestrian-friendly environment that reduces the demand for private automobile ownership and parking. CEQR Technical Manual guidance also does not account for commute-to-work patterns in the Development Site's surrounding area, where approximately 30 percent (three times the City-wide average) of workers walk to work. Therefore, the availability of on-street parking spaces for residents, businesses and community facilities in the surrounding area would not be adversely affected.

(2) the distribution of floor area and the number of dwelling units or rooming units does not adversely affect the character of the surrounding area by being unduly concentrated in any portion of such development or enlargement, including any portion of the development or enlargement located beyond the boundaries of such railroad or transit right-of-way or yard;

The Proposed Development would include two new buildings on Zoning Lot 3, one of which would be residential. The Zoning Lot 3 residential building would be six stories/75 feet and would contain a 54,565 square feet of residential floor area. This residential floor area would be located on the southern portion of Zoning Lot 3, in order to take advantage of the zoning lot's wide 60th Street frontage while ensuring adequate space for parking and a curb cut that would be offset from street intersections. The proposed residential building on Zoning Lot 3 would sit directly opposite 60th Street from the new six-story development at the northwest corner of 60th Street and 16th Avenue and would mirror the surrounding context.

The proposed two-story, 4,604 square foot commercial building on Zoning Lot 3 would be located at the southwest corner of 59th Street and 16th Avenue, matching nearby context of one-to two-story commercial and community facility buildings on 16th Avenue, including the police precinct located at the northwest corner of 59th Street and 16th Avenue, and would serve as a transition from 16th Avenue to the two to four-story residential buildings on 59th Street. The distribution of floor area between the two proposed buildings on Zoning Lot 3 would also serve to screen the proposed outdoor parking from the street, except in the location of the parking lot's proposed curb cut.

(3) all uses, developments or enlargements located on the zoning lot or below a platform do not adversely affect one another;

The Applicant intends to construct all or portions of two new buildings and a parking lot on a platform located above the existing right-of-way of the Bay Ridge line of the Long Island Railroad (the "LIRR ROW") that runs below-grade on Lot 41, a 20,857 square-foot portion of Zoning Lot 3. The buildings on Zoning Lot 3 would contain a total of 54,565 square feet of residential floor area and 4,604 square feet of commercial floor area and the outdoor parking lot on Zoning Lot 3 would contain 40 accessory residential parking spaces serving the Proposed Development.

The Proposed Development would transform tax Lot 41 from an open railroad cut and vacant strip of at-grade land that currently bisects Borough Park and the surrounding neighborhoods into an active part of the community that reflects the evolution of the area from low-density industrial use to a growing mixed-use community. The proposed platform over tax Lot 41 would lead to development of the adjacent tax Lot 57 by creating a usable street frontage on 60th Street. The proposed platform itself would insulate proposed residential uses from the noise and activity of the existing railroad and future additional transportation below-grade.

The above-grade development, including the platform itself, has been carefully engineered to adhere to clearances provided to the Applicant by the Metropolitan Transit Authority (the "MTA") such that the Proposed Development, including any below-grade structural elements, would not interfere with the MTA's existing or future operations. The LIRR ROW is currently used approximately once daily for freight travel. The Proposed Development would not interfere with freight travel and would accommodate proposed future rail alignments or possible rail expansions, such as the MTA's proposed Interborough Express.

> ***(4) if such railroad or transit right-of-way or yard is deemed appropriate for future transportation use, the site plan and structural design of the development does not preclude future use of, or improvements to, the right-of-way for such transportation use.***

The structural system for the proposed platform and the Proposed Development has been carefully designed so as not to preclude current or future transportation use on Zoning Lot 3. The Applicant is engaged in an ongoing dialogue with the MTA to modify certain deed restrictions and negotiate certain easements necessary to effectuate the Proposed Development. The MTA has provided the Applicant with proposed clearances necessary for the expansion of the use of the LIRR ROW, as well as the appropriate locations for structural elements that would support the Proposed Development, which has informed the design of the Proposed Development. Prior to commencement of construction, the MTA must review and approve plans and specifications for the Proposed Development, which would confirm that the site plan and structural design do not preclude existing or future use of, or improvements to, the LIRR ROW.
